Hausa belongs to the Chadic group of the Hamitic, or, as it is now often called, Afro-Asiatic, family of languages, being the only language of the group that is spoken by more than a few hundred thousand speakers. Structurally it is extremely reminiscent of some Indo-European languages, both in its clause structure and word order and in the use it makes of grammatical categories such as dative and subjunctive. Its sound system, however, is in some ways peculiar, especially in the use it makes of glottalization to give distinctions of meaning. All the four basic consonants, P,T, K, and S, occur in voiceless, voiced and glottalized varieties, and most of these can be either palatalized or labiovelarized as well, at least in the older dialects of Katsina and Sokoto. Medially, however, these latter distinctions are generally speaking allophonic. Basically it has only two vowels, A and I/U, but the pronunciation of these varies considerably according to phonetic environment (in the case of I/U, also from dialect to dialect), and developed from them by the addition of H or the semivocalic Y and W are the long vowel and diphthongal sounds *aa*, *ai*, *au*, *ii*, *uu* (the last four as in Arabic and *aa* as with *fatḥa* plus *alif*), and also, in syllables of a restricted pattern, *ee* and *oo*. Various forms of consonant-vowel and vowel-consonant harmony operate in the syllable (including the spreading of glottality beyond the domain of the initiating consonant, as with the emphatic consonants in Arabic), and there is also both complete and partial (*umlaut*) vowel harmony in successive syllables of both single words and closely connected word groups, also many instances of vowel *ablaut*, both grammatical and dialectal. The syllable is always of CV, CVV, or CVC structure, the first C including the glottal stop (comparable with Arabic *hamza*, but not written in the Roman orthography, except where it occurs medially, mainly in Arabic loanwords), and the typical word is a disyllable. The fact that no word begins with a vowel effectively prevents such interverbal elisions and crases as are typical of many African languages, in all but the most rapid speech, whilst giving to Hausa speech a rather staccato quality. Syllables have one of two significant tones, 'high' and 'low', this alternance serving to distinguish both lexical items and grammatical forms. Falling tones also occur in some special cases. Tone is minimally distinctive in many pairs of words, but the fact that neither it nor vowel length is indicated in the standard orthography often makes the elucidation of a Hausa text rather difficult for one who is not deeply read in the language. There is normally a progressive downdrift in the clause, which may be arrested, however, by a succession of high toned syllables; but this downdrift may be reversed by interrogative and other special intonations. Unlike the case with many African tone languages, both lexical and grammatical tones are relatively invariable, and there are no 'displaced tones' or 'tonal perturbation'. Stress is a secondary feature, generally linked to tone and vowel length and rarely in itself discriminatory. Ideophones and interjections tend to fall outside the normal pitch range, having either exceptionally high or exceptionally low tones.

Morphologically and syntactically, almost all Hausa words can be divided into the following categories: nouns, verbs, ideophones and particles. The first two normally consist of a root or base, simple or extended to a maximum of four syllables, and a termination, in most cases purely vocalic. Ideophones and particles cannot be so analysed and many of these have consonantal endings, the final consonant, however, having a restricted range corresponding to the range of coda consonants within words of all classes. Prefixes and suffixes are few, mainly the feminine suffix -(*i*)*yaa*/-(*u*)*waa*, the 'ethnic' prefix *bà*- (e.g. *Bà-haush-èe* 'a Hausa man', fem. *Bà-haush-ìyaa*, pl. *Haus-aa-waa*), and a *ma*- prefix, which, as in Arabic, is employed to form verbal derivative nouns. Perhaps the most striking feature of the language is the contrast between the morphology of the verb and that of the noun. The former is organized in a homogeneous, all-embracing, system of seven 'grades' (these having varied, often rather subtle, semantic correlates) each grade occurring in from one to four distinct forms, depending on purely syntactic criteria, and making a total of twelve forms in all. Any of these twelve forms may further be pluralized or intensified in meaning by a reduplication of (the first syllable of) the root. Morphologically these verbal forms differ from one another only in their termination and/or their tone pattern; there are none of the affixes that are common—and functionally comparable—in other African languages. The tense (better described as an aspect) system is expressed outside the verb proper by means of various forms of subject pronoun (in several persons and tenses distinguishable only in spoken, not in written, Hausa), whose presence (like that of the subject prefixes in Bantu languages) is normally obligatory in all but the imperative. Conversely the noun presents a complex and heterogeneous system of inflexion, employing all morphological devices from simple tonal or terminal vowel change (as with verbs) to infixation, suffixation, reduplication, or a combination of two or more of these. The main function of such inflexion is to indicate plurality: there are at least eight classes of noun plural, with three or more subclasses in each, and the choice between each of these is determinated by a whole complex of criteria in the singular form: tone pattern, radical structure phonology, terminal vowel and even sometimes etymology and meaning. Many nouns have two or more different plural forms in use even in the same locality, whilst many other nouns have none. There is also a great variety of nominal forms derived from verbal roots, but these do not as a rule pluralize. Etymologically unrelated verbs and nouns not infrequently have phonically identical bases, but these very rarely share a common form, *i.e.*, termination plus tone pattern, the verbal forms, which are grammatically determined, taking priority over the nominal.

In common with other Hamitic languages, Hausa has a system of three genders, masculine, feminine and plural, the last being, in cases where there is sex reference in the singular, notionally as well as grammatically common. The masculine-feminine dichotomy cuts right across the singular-plural class system, there being both masculine and feminine nouns in almost all the eight classes (contrast Arabic). Most, but by no means all, nouns ending in -*a*(*a*) are feminine and the others almost all masculine, and names of animals, as in French, are as a rule, assigned exclusively to one or other gender (except for domestic animals, which usually have distinct words for the two sexes). But there is a class of adjectival nouns which exhibit all three forms (except that, where the masc. form ends in -*aa*, this form is common to the feminine), these concording with the gender of the noun they qualify or refer to.

Gender concords also operate in the preverbal tense-marking, and other forms of personal pronoun (with masc./fem. distinction in both the 2nd and 3rd persons singular), in demonstratives and specifiers (but not numerals), in the genitive copula (agreeing with the head noun) and in the identity particle equivalent to '(it) is', where the system of agreement is very complex. A curious feature of the language is that, where the male and female of a species are designated by different words, the plural form of the latter is common in meaning. Thus 'ewes' signifies sheep, 'hens' poultry, 'mothers' parents and 'daughters' children; exceptions are 'men' and 'women', and 'stallions', not 'mares', signifying horses.

Tenses are relatively few in number, by African standards, but their usages, especially in combination with one another and with the many conjunctional particles, are as complex as anything in French or Latin. In the indicative tenses there is a partial distinction between those used in general and those used in relative constructions, the latter including not only relative clauses proper, but also certain types of question and of emphatic statement. This binary system is very similar to that of Fula and some other quite unrelated languages, as is also the usage of the subjunctive. There are fewer negative tenses than affirmative ones, and these are common to both systems. Other modes of the verbal notion, such as inception, continuance, repetition, priority, isolated occurrence etc., are conveyed by means of a set of auxiliary verbs. Word order is more flexible than in English, various types of inversion and front-shifting being common, and subtler shades of meaning can be conveyed by the insertion in the clause of special particles similar to those of Ancient Greek and Modern German. Various forms of ellipsis, often involving suppression of the verb, are also common, both in spoken and written Hausa, these giving the language at times a very terse and almost 'telegraphese' quality. It has a wealth of proverbs, idioms and stylistic variants and is capable of rendering almost any Western thought or idiom. Much poetry is written in the language, this being characterized by dialectal forms and other special conventions. The prosody is based upon that of Arabic poetry.

Hausa possesses a very large vocabulary, of mixed origin. Most of its basic verbal roots (some three thousand in number) are of indigenous origin (though a number of these show a remarkable phonic resemblance to Germanic verbs of similar meaning), as are its numerous ideophones. But, as is to be expected of a traders' and a Muslim's language, many of its nouns are palpably loanwords from other languages. These include a great number of Arabic words, not only in the specialized spheres of religion, literacy, politics, justice, war, trade, crops, dress, horse equipment etc., but also words for such general concepts as 'affair, plan, discussion, argument, skill, just, generous, treacherous, brave, etc.' There are also at least a hundred Arabic verbs in everyday use, covering such general notions as 'understand, agree, promise, test, destroy', these being mostly taken over in either the first or the second form, but adapted, like the Arabic nouns, into the Hausa phonological and morphological systems (Hausa glottalized consonants, for example, substituting for the emphatic ones of Arabic, and Arabic loan nouns invariably having regular Hausa plural forms). Arabic loans represent a number of different historical layers, routes and media of borrowing, sometimes everyday and learned forms of the same Arabic word co-occurring in the language (*e.g.*, *laïfii* and *'aibùu* 'fault, blemish'). It is interesting to note that many Arabic words have been taken into Hausa that have not been taken into Swahili, and *vice versa*. One or two more literary constructions, *e.g.* the 'cognate accusative', would also appear to have been borrowed from Arabic. Recently, since the European occupation of West Africa, however, the language has become swamped by loanwords from English and French, in their respective areas (these again being assimilated to native models), and borrowing from Arabic appears to have virtually ceased.

Bibliography: Standard dictionaries of the language are: G. P. Bargery, *A Hausa-English dictionary and English-Hausa vocabulary*, London 1934; R. C. Abraham, *Dictionary of the Hausa language*, London 1949. Grammars: C. T. Hodge, *An outline of Hausa grammar*, Baltimore 1947 (supplement to *Language*, xxiii/4 (1947)); R. C. Abraham, *The language of the Hausa people*, London 1959; C. H. Kraft, *A study of Hausa syntax* (*Hartford studies in linguistics*, no. 8), 3 vols., Hartford, Conn. 1963. The influence of Arabic upon Hausa has not been exhaustively studied; the following may be consulted: J. H. Greenberg, *Arabic loan-words in Hausa*, in *Word*, iii (1947), 85 ff.; idem, *Hausa verse prosody*, in *JAOS*, lxix (1949), 125 ff.; idem, *An Afro-Asiatic pattern of gender and number agreement*, in *JAOS*, lxxx (1960), 317 ff.; idem, *Linguistic evidence for the influence of the Kanuri on the Hausa*, in *Journal of African History*, i (1960), 205 ff.; F. Hiskett, *The historical background to the naturalization of Arabic loan-words in Hausa*, in *African Language Studies*, vi (1965), 18 ff. (F. W. Parsons)

iii. — Hausa Literature

Hausa literature falls into three main categories, or perhaps it is nearer the mark to distinguish two traditions, and a subsequent process of synthesis which is currently in progress. But for convenience we shall pursue our discussion under the following heads: (a) the folk literature; (b) the literature of Islam; (c) modern literature.

(a) The folk literature. This is in fact an oral literature at the ultimate provenance of which we can only guess. It is highly improbable that it was ever recorded in writing before the commissioning of such work by European enquirers. As in all folk literature, the term "folk" does not mean "simple", and whatever aspect we study—provenance, interpretation or classification—we are aware of a complex convolution of ideas, motives and themes around which it is impossible to draw precise boundaries of time, type or origin.

The tales may conveniently be classified as tales about animals, tales about people and historical tales, though clearly such a classification is arbitrary and there are constant blurred edges where the division is not precise.

The concept behind the animal stories, probably the earliest chronological stratum of this folklore, is that all the animals once lived together in amity, but the tricks of the spider and the thefts and deceits of the hyena sowed discord and forced them

apart. The lion was king before man overcame him with his poisoned arrow—thus the Hausa proverb *Dan Adam abin tsoro*—"Man is a thing to be feared". In these stories the characters of the animals are stereotyped. The spider is a slick trickster, the hyena a cunning but gullible thief usually caught out by her vanity. The he-goat is the most intelligent of the animals, the jackal the most learned, and so on. The plots are elementary and have little regard for cause and effect, or for natural laws. The audience expects that the animals will behave according to their well-known characters. What delights is to see these expectations fulfilled. The animal characters function at the same level of intelligence and motivation as humans. When man figures in these stories his rôle is that of a being on terms of equality with the animal world except when his superior skills enable him to triumph. This notion of man's immanence in the world of nature is to be contrasted with the developing concept of his transcendence over and apartness from the animals, which appears in the more complex stories about people. We therefore suppose that these animal stories form an early stratum which has its roots certainly in a pre-monotheistic and not improbably in a pre-social era.

The tales about people appear to reflect the increasing complexity of man's relationship to his environment, and the development of his own society. Creation and cosmology myths now become common. Typically, giant pagan ancestors of the Barbushe type (Palmer, *The Kano Chronicle*, in *Sudanese Memoirs*, iii, Lagos 1928, 97 ff.) meet, wrestle, and leap so high in the sky that their fighting causes the sound of thunder. More subtly, the woman with many mouths appears, and stories of the "Pandora's Box" type offer their explanations of good and evil. Possibly such stories as that of the man who married the monkey woman, and the women who grew spider's eyes mark an awareness of group differentiation and incipient tribalism.

Of particular importance in these stories is the character of Auta, the "Baby of the Family", who is at first simply the enviable character blessed with luck, but who subsequently becomes the hero and *deus ex machina* of the later historical stories.

The historical stories seem to be an extension of the cosmology and creation myths, for the Barbushe-type ogres who figure in them are certainly associated with the first confrontation between the autochthons and the early immigrants. The subsequent growth of city states we find represented in such typical stories as No. 8 in Rattray, *Hausa Folk-lore*, i, where Auta is credited with the building of the first walled town. By far the richest stratum of the historical tales concerns Islam—and not unexpectedly so, since this is, apart from the advent of the Europeans, the last major social disturbance to have activated the folklore process. Here the conflict between Islam and paganism is sometimes overt, as in the story *Ba sarki sai Allah*, in Tremearne, *Hausa superstitions and customs*, London 1913, no I. Elsewhere paganism is represented by some custom abhorrent to Islam, for instance dog-eating as in *HSC*, 30; cannibalism in many examples and most interestingly in *HSC*, 76 and 96, where the pre-Islamic custom of burying live victims with the king is overcome by Islam. Frequently, as in *HFL*, i, 8, Auta becomes the hero of Islam, and the hunter ancestors—for instance the Girringas in *HSC*, 98—represent paganism.

The sources for these tales are many. Predictably, we find the familiar and timeless themes of universal folklore—Cinderella; Jack the Giant-Killer; the jealous step-mother; the child-eating witch, and so on. Their appearance should in no way surprise us, since they merely serve to confirm what we already know from historical and archaeological evidence, that Africa has been constantly in touch with the great currents of human culture. These classical themes usually appear as a core around which chronologically later events and experience have left their own deposits. Thus most typically in *HSC*, 3, where the Cinderella core is embedded in the Indian story of a miraculous fish (with possibly also a reference to Ḳur'ān, XII, 31). The Oedipus core is also common, and is often associated with the legendary figure of "the king of Agades" (*HSC*, 64), a character of some significance in view of the persistent traditions of immigration into Hausaland from Agades, by which we understand the Saharan north.

Again predictably, the *Arabian Nights* figure in this folk literature in instances too numerous to list. Suffice it to record Aladdin, Ali Baba, the Isle of Women among other familiar characters and themes from the *Nights*. To the *Nights* also may be attributed tales of bawdy humour in which jealous husbands are cuckolded and foolish lovers are discomfited. But such robust humour is ubiquitous and of great antiquity, and it would be unwarranted to conclude that the *Nights* were necessarily the direct or the sole source.

The style of these tales tends to short staccato sentences where grammatical structures are simple and literary conceits few. On the other hand idiom is vivid and varied, as is to be expected in tales meant to be told. There are few Arabic loan words, and those that do occur are either basic Islamic terms or thoroughly naturalized. Many stories begin with some such conventional opening as *Ga ta nan, ga ta nan* and end with the formula *Shi ke nan, kungurus kan kusa*. In these folk tales Hausa humour is catholic and at times broad. Fun is poked at the pompous. The slave is also a frequent butt for ridicule. But on the whole the Hausa are amused less by simple incongruity and more by the spectacle of human gullibility, by him who is the victim of his own short-comings and by him who is hoist by his own petard.

(b) The literature of the Islamic period. This literature, written initially in the *ajami* script, is almost entirely in verse. Also, apart from a few contemporary compositions, it is religious. Popular tradition has it that poetry in Hausa was first composed and written down by ʿĪsā, son of ʿUthmān b. Fūdī (Usumanu dan Fodio). So far, nothing leads us to dispute this tradition and we therefore accept that Hausa first started to be used in formal composition at the end of the 18th or in the early 19th century.

There are four main categories of this verse: (1) *Begen Annabi*—eulogy of the Prophet Muḥammad; (2) *Wa'azi* (Arabic *waʿẓ*)—the threat of eternal punishment and the promise of divine reward; (3) *Tauhidi* (Arabic *tawḥīd*)—Muslim theology, the 'science of the unity'; (4) *Fikihu* (Arabic *fiḳh*)—Muslim law. The first is primarily devotional. The remaining three had a twofold purpose. Firstly, that of the evangelical Fulani, to reach the common people with a message of salvation. Secondly, in the post-djihād era, the purpose of the propagandist, to uphold the Muslim hierarchy by the sanctions of Islam. These two purposes provide us with the very *raison d'être* of such a literature in Hausa rather than in Arabic.

Our present evidence strongly indicates that the poetry grew out of the religious and theological

tensions associated with the Fulani *djihād*, its immediate prelude and its aftermath. It is to be regarded as an extension of the theological and devotional writings in Arabic, which had a much earlier origin. To some extent it reflects the inadequacy of Arabic literacy in the Sudan at a point when the intellectual battles of the day could no longer be confined within the circle of those fully literate in Arabic. An important consequence was to make Hausa no longer purely a vernacular, but to give it a status as a language of learning of the second rank, as we see clearly from the testimony of Baba (Mary Smith, *Baba of Karo*, London 1964, 132).

Of the four categories, *Begen Annabi* is certainly the most pleasing by Western standards, since it attempts to express the emotions of personal religious experience in terms of human devotion. Its imagery is closely influenced by detail from the *sīra* literature, from the infancy legends of Muḥammad, and by incidents from *Ḳur'ān* and *ḥadīth*. The most impressive example—moving and sincere—is a *takhmīs* by ʿĪsā b. ʿUthmān on an original by the Shaihu. Unfortunately, it is still unpublished.

Wa'azi at its best can be fine apocalyptic ranting, full of the fiery colour and sulphurous imagery of the mediaeval Muslim hell, and its counterpart of lush and fleshy delights in Paradise. A memorable example is the poem known as *Wakar jan mari*—'The song of the red leg irons' also attributed to ʿĪsā b. ʿUthmān, and as yet unpublished.

Tauhidi is the most intellectual of Hausa writing. The unpublished work *Ku san samuwar Jalla* is an example of high quality. This presents the arguments for God's existence, His unity, omnipotence and so on, in Hausa verse, but with extensive use of Arabic philosophical terms in various degrees of naturalization. It will be clear that such an exercise requires considerable command of the original Arabic disciplines and is the product of a high order of intellect.

Fikihu is aesthetically unattractive, but certainly not without interest to the European reader, for it is a rich source of information on pre-Islamic custom. To the Muslim it is of paramount importance, for upon this and upon *tauhidi* depend his chances of salvation. Correspondingly, those who can write this verse hold the salvation of the masses in their hands and their authority in the Muslim hierarchy is thus considerable.

These categories of learned poetry are the main channel whereby the esoteric Arabic vocabulary, known initially only to an élite, passed through the process of naturalization into common speech. A high proportion of this vocabulary has not yet reached the vernacular, but the poetry remains popular and by a process of constant enquiry and the scholia of the *malams* [*q.v.*] the borrowing of this class of learned Arabic words into Hausa is still proceeding.

In addition to these learned categories there is popular poetry such as *yabo*— "praise song"; *zambo*—"satire", and the incantations of the *bori* practitioners. These categories are not normally written and therefore belong to the oral literature.

The learned poetry is metrical and the metres conform to the classical Arabic metres, although it appears that certain minor variants are allowed to the Hausa poet which would be improper to his Arab counterpart. Among the most popular metres are *al-ṭawīl*, *al-kāmil*, and *al-wāfir*. Tone plays no part in this metrical system.

The popular poetry is also metrical, and while it does not conform to the Classical Arabic metres it appears to have been influenced by them. Certainly, to all intents and purposes it too is quantitative, but it may be that remnants of an earlier qualitative—that is a tonal—system have survived marginally in some of this poetry. This, however, has yet to be convincingly demonstrated.

(c) Modern literature. By this we mean works printed in *boko* (Roman characters), the great bulk of which has been produced over the course of the last fifty years. To some extent it is an artificial development, having been initially the introduction of missionaries, European administrators and the Western education system. Subsequently it was nurtured by Departments of Education and such quasi-government organizations as the Northern Regional Literature Agency. Its dissemination has been closely linked to the growth of government sponsored education. It has been written, in the main, by men who have passed through the primary and secondary schools created or supported by the Administration. But as more Northern Nigerians began to feel at home in both the world of Islamic Africa and the world of the secular West, so a synthesis became apparent in which the two earlier traditions were drawn together to emerge in a new form of literature influenced by, but certainly not slavishly following Western patterns.

Our purpose is best served by a brief analysis of certain outstanding examples of this literature, for it is still not yet sufficiently extensive to allow of further general conclusions. *Shaihu Umar* (Sir Abubakar Tafawa Balewa, Zaria 1955) is the story of a boy and his widowed mother who fall foul of the slave raiders. It has a carefully constructed plot in which a series of incidents and blows of fate arbitrate the lives of these people, who are shown as the helpless victims of their own social and political institutions. It is a story of great human sympathy, of charity and social concern and is at first sight far removed from our traditional *genres*. Yet the institutions which support the plot are those of traditional Muslim learning, slavery, the life of the Sarki's court and Hausa kinship custom. Indeed it portrays the Islamic life of the Western Sudan at its dramatic *fin de siècle*, immediately prior to the beginning of the European Administrations. Even the hyena, that ancient rascal of a remote indigenous traditions, enters the story at one point to intervene drastically in the hero's life.

Gandoki of Alhaji Bello (first printed Zaria 1934 and subsequent undated editions) is a very different tale. Here the plot is rudimentary and without chronological discipline. It starts with a vivid picture of experiences in the fighting which took place against Lugard's columns at the turn of the century, and the central character is a roistering pagan-slaying boastful warrior who clearly has the blood of the Nagwamatse in his veins. Then suddenly the story moves into the fantasy world of jinns and ogres and the hero moves through a series of marvellous adventures in which the author's debt to the *Arabian Nights* is evident. Yet despite the clearly Islamic influences, both literary and moral—for Gandoki is a devout Muslim—it is clear that the ogres and pagan enemies whom he slays or enslaves have stepped out of the Barbushe cycle, for they are the giant elephant hunters and bogey-men of the cosmology and early history myths. Once again our traditions have converged, but to produce a very different though equally entertaining result.

Magana jari ce of Alhaji Abubakar Imam (fifth

edition, Zaria 1960) is justly famous. This, a much larger work than the previous two, is a series of short stories based largely on the animal cycle but borrowing such exotic themes as "The Pied Piper", which it then presents delightfully in an African setting, and numerous themes from the *Nights*. The whole is connected by the parrot who is both narrator and hero, in that he has to invent his tales in order to prevent the young prince from rushing headstrong to his doom at the hands of the jealous vizier. The parallel with the *Nights* is obvious, but the parrot is also the spider trickster of the animal tales and certainly reminiscent of Abū Zayd, the witty, unscrupulous, improvising *rāwī* of the *Maḳāmāt*. The work is a mine of information on Hausa custom, is immensely rich in linguistic material and is unquestionably a classic of Hausa literature. Perhaps more overtly than our two previous examples it combines the three traditions which we have described and illustrates their leavens at work.

Clearly Hausa literature is now at a point where past tradition and recent intellectual experience provide the materials for important and exciting new developments. One such is represented by the recent works of Malam Shuʾaibu Makarfi, *Zamanin nan namu* (Zaria 1959) and *Jatau na Kyallu* (Zaria 1960). These are full length plays on such moral and social themes as juvenile delinquency, mercenary mothers and prostitutes, written in the latest idiom of the Kano streets and market-place, full of English and other neologisms, but interspersed with unctuous asides and moralizing (in verse) by a *mai shela* or 'herald' who performs a function very similar to that of the chorus in a Greek tragedy.

Bibliography: (a) In addition to works mentioned in the text, *Labarun Hausawa da makwabtansu*, Zaria 1932, i-ii; Edgar, *Litafi na tatsuniyoyi na Hausa*, Lagos 1924, i-iii; Shön, *Magana Hausa*, ed. Robinson, London 1906. (b) The only collections of learned poetry at present available are Robinson's *Specimens of Hausa literature*, Cambridge 1896, a rather haphazard collection in an archaic orthography and indifferent translation; also *Wakokin Hausa*, Zaria 1957, Hausa texts transcribed into Roman script, a better selection than Robinson but marred by certain errors and misreadings of the *ajami* manuscripts; M. Hiskett, *The 'Song of Bagauda': a Hausa king list and homily in verse—I*, in *BSOAS*, xxvii (1964), an edited Hausa text, with English translation in *BSOAS*, xxviii (1965). For a discussion of the significance of the poetry, M. Hiskett, *The historical background to the naturalization of Arabic loan words in Hausa*, in *ALS*, vi (1965); for metre Greenberg, *Hausa verse prosody*, in *JAOS*, lxix (1949); M. Hiskett, *The 'Song of Bagauda'—III*, in *BSOAS*, xxviii (1965). (c) No critical work on modern Hausa literature has yet been written. Catalogues of NORLA and their successors, Gaskiya Press, Zaria give lists of titles of Hausa novels, etc., which are currently available.

(M. Hiskett)

See further NIGERIA.

ḤAWĀLA, literally "draft", "bill", is the cession, i.e., the payment of a debt through the transfer of a claim. If A has a debt to B and a claim against C, he can settle his debt by transferring his claim against C to the benefit of B. In this case A is the transferor (*al-muḥīl*), B the creditor (*al-muḥtāl*) who accepts the cession, C is the cessionary (*al-muḥtāl ʿalayhi*). It would however be incorrect to consider the *ḥawāla* merely from the viewpoint of a cession: it is first of all a means of payment to release the *muḥīl* from a debt, therefore, besides the task of the cession it fulfils that of the declaration and assignment as well (R. Grasshoff, *Das Wechselrecht der Araber. Eine rechtsvergleichende Studie über die Herkunft des Wechsels*, Berlin 1899, 60). It is not identical with the *suftadja* [*q.v.*]; this is on the contrary a pure transaction of issuing a bill, a special form of the *ḥawāla*, "distinguished by the fact that the *muḥtāl ʿalayhi* is absent at the conclusion of the contract between the *muḥīl* and the *muḥtāl*" (Grasshoff, *op. cit.*, 64). According to the *fiḳh* books the following prerequisites are necessary to validate a cession: the transferor and his creditor must conclude a contract, the transferred debt must be a fixed obligation and the transferor's debt must be in agreement with that of the cessionary in kind, manner and conditions of payment.

The *ḥawāla* occurs rather often in Arabic papyri, usually in the form of "written obligation" (*dhukr ḥaḳḳ*); cf. A. Grohmann, *Arabic papyri in the Egyptian Library*, i, Cairo 1934, no. 48_7 and p. 116; ii, Cairo 1936, no. 102_8 and p. 118; A. Dietrich, *Arabische Papyri aus der Hamburger Staats- und Universitäts-Bibliothek* (=*Abhandlungen für die Kunde des Morgenlandes*, xxii/3), Leipzig 1937, no. 4_4. The cessionary may be represented through an agent (*wakīl*), as in the Papyrus no. 13_6 (for it see p. 84) in A. Dietrich, *Arabische Briefe aus der Hamburger Staats- und Universitäts-Bibliothek*, Hamburg 1955.

The word *ḥawāla* entered Europe through the commerce of the Italian Levant in the form *aval* to indicate the guaranty of a draft. In modern Arabic *ḥawāla* means draft, cheque or assignment.

(A. Dietrich)

ḤAWĀLA, as a financial term, assignation; in Islamic finance, an assignation on a *muḳāṭaʿa* [*q.v.*] effected by order of the ruler in favour of a third party. The term is applied both to the mandate for the payment and to the sum paid. It is already established in these senses in ʿAbbāsid finance (see F. Løkkegaard, *Islamic taxation in the classic period*, Copenhagen 1950, 63-5). In the ʿAbbāsid empire, *ḥawāla* was widely used in both state and private finances to avoid the dangers and delays inherent in the transport of cash. The mandates were known as *suftadja* [*q.v.*] or *ṣakk* [*q.v.*]. Thus we know that the tax-collectors (*ʿummāl*) of Ahwāz, Fārs and Iṣfahān transmitted the revenue which they collected to the central government by *suftadja*. In the encashment of the *suftadja* and in all matters relating to *ḥawāla*, the primary rôle was played by the *djahbadh* [*q.v.*] (see R. Grasshoff, *Die Suftaǵa und Ḥawāla der Araber*, Göttingen 1899; W. J. Fischel, *Jews in the economic and political life of medieval Islam*, Royal Asiatic Soc. Monographs, vol. xxii, London 1937, 3-35).

Ḥawāla appears in wide use in Saldjūḳ finance (H.

Horst, *Die Staatsverwaltung der Gross Selǧūqen und Ḫorazmšāhs*, Wiesbaden 1964, 74-5; O. Turan, *Selçuklular tarihi ve Türk Islâm medeniyeti*, Ankara 1965, 277-8). It is thought that in some circumstances it took the form of the direct collection of state revenue from the peasantry (cf. A.K.S. Lambton, *Landlord and peasant in Persia*, Oxford 1953, 73), but this is far from characteristic of *ḥawāla*. For the Ilkhānid and post-Ilkhānid period in Persia, the sources are sufficient to show in some detail the features of *ḥawāla* at this time (Rashīd ad-Dīn Faḍl Allāh, *Djāmiʿ al-tawārīkh*, ed. Bahman Karīmī, ii, Tehrān 1338s., 1024-40, 1068-75; Abdollah ibn Mohammad ibn Kiyā al-Māzandarānī, *Die Resālä-ye Falakiyyä*, ed. W. Hinz, Wiesbaden 1952, index s.v. *ḥawālat*; Muḥammad b. Hindūshāh Nakhdjawānī, *Dustūr al-kātib fī taʿyīn al-marātib*, i/1, ed. A. A. ʿAlīzāde, Moscow 1964, 294-302). From the entries relating to *ḥawāla* (*ḥawālat*) in Ilkhānid financial registers, it is clear that *ḥawāla* consisted in the making of payments by order from the farm (*māl-i muḳāṭaʿa*, the *aṣl-i māl* given in the register) due from a tax-farmer (*ʿāmil*). These assignations were always recorded in the monthly and yearly accounting registers of the central *dīwān* (*daftar-i taḥwīlāt* and *daftar-i djāmiʿ al-ḥisāb*) under the two main headings of *al-muḳarrariyya* and *al-iṭlāḳiyya*. Under *al-muḳarrariyya* fell the regular (*muḳarrar*) payments made every year by order of the sovereign from the *dīwān-i aʿlā* to *ḳāḍīs*, *shaykhs*, *sayyids*, students, financial officials and *yāmdjīs* (the staff of the *manāzil*), or for public works. Under *al-iṭlāḳiyya* fell payments made to members of the court, palace servants, and the military. This fundamental distinction is doubtless related to the separation of military and civil administration in the Īlkhānid state. All these assignations on the provincial tax-farmers (*ʿummāl*) were made by *barāt*, *yāftadja* or *ḥawāla* (*Resālä-ye Falakiyyä*, 162-65). (Agents who came to collect money for the central treasury were known in this period as *ilči*). When the term of his contract (*ḍamān*) expired, the tax-farmer (*ʿāmil*) submitted these *barāts* and *yāftadjas* for auditing to the *ṣāḥib-dīwān*, and received a *ḥudjdjat* showing the result (*ibid.* 65).

Muḳāṭaʿa and *ḥawāla* were the basis of Īlkhānid finance. But widespread malpractice led Ghāzān Khān to attempt a number of reforms. In the reign of his predecessor Gaykhātū, the revenue accruing from the tax-farms was squandered in the provinces, and as a result assignations were not honoured there (*Djāmiʿ al-tawārīkh*, ii, 1083). In these circumstances the unpaid military resorted to direct exaction from the peasantry, driving them from their land and destroying sources of revenue. Ghāzān Khān first carried out a general survey to determine the sources of revenue of each locality. Then he reformed the method of collection (*ibid.*, 1031-4). Revenue was now collected directly by state officials, and the military were paid directly, and in cash, from the state treasury. Finally, the state lands were distributed to the military as *iḳṭāʿ* [*q.v.*]. The replacement of *muḳāṭaʿa* and *ḥawāla* by a system in which the state collected revenues and made payments directly was hard to maintain in a mediaeval state. Under the conditions of the time it was very difficult and very expensive to build up the necessary organization, and to transport, store and encash revenues collected in kind. Of Ghāzān Khān's reforms, only the allocation of state revenue as *iḳṭāʿ* to military personnel resident in the villages had any chance of success. That the reforms had no lasting effect is clear from Nakhdjawānī's complaints of fiscal malpractice with regard to *muḳāṭaʿa* and *ḥawāla* (*Dustūr al-kātib*, 297-8). According to Nakhdjawānī, assignations were made on the *tamghawāt* [see TAMGHĀ] in the provinces (cf. *Djāmiʿ al-tawārīkh*, ii, 1048). Later Khʷādja Ghiyāth al-Dīn and Mawlānā Shams al-Dīn laid down the principle that these revenues should be collected by *muḥaṣṣils* [*q.v.*] of the *dīwān*, and that allowances should again be paid directly from the treasury. But these reforms also lapsed (on the later history of *muḳāṭaʿa* and *ḥawāla* in Īrān, see *Tadhkirat al-mulūk*, ed. V. Minorsky, London 1943, 79).

In the Ottoman empire, as in other Islamic states, *muḳāṭaʿa* and *ḥawāla* were the basis of the financial system. The rich material preserved in the Ottoman archives makes it possible to establish the system in detail and to shed light on obscure points in its earlier history (particularly important are the *muḳāṭaʿāt defterleri* and the *māliyye aḥkām defterleri* in the Başvekâlet Arşivi Umum Müdürlüğü). The main source of revenue which was exploited by *muḳāṭaʿa* and on which assignations were made was the *khawāṣṣ-i hümāyūn* [see KHĀṢṢ], which came under the administration of the *defterdār*. In general payments were made at the place where the revenue was collected through assignations on the tax-farmer. The system was favoured by such factors as the difficulty of transporting cash and the slowness with which revenue accumulated from the taxation of commercial transactions, particularly in the towns. Thanks to entries made in the *muḳāṭaʿāt* registers of the central government, the *defterdār* was in a position to exercise close control over the administration of these revenues in distant provinces. Another group of revenues — including the *aʿshār*, which were payable in kind — was assigned to the military as *tīmār* [*q.v.*]. The timariot collected these revenues directly. However, as in the case of Ghāzān Khān's reforms, this system of enfeoffment must be seen as a departure from the *ḥawāla* principle. Revenues in this category were no longer the subject of *ḥawāla* transactions; in the Ottoman system they constituted an entirely distinct branch of the administration under the *nishāndjī* [*q.v.*].

The *ʿāmil* (tax-farmer), who took on a *muḳāṭaʿa* for a given term (usually three years), made payments in accordance with the assignations of the central government, to those in whose favour they were drafted. The payments were always made with the cognizance of the *emīn* [*q.v.*] and *ḳāḍī*, the government's supervisory agents, and entered in their registers. The payments were always in cash. The *ḳāḍī* gave the tax-farmer a *ḥudjdjet* which stated the amount of the payment, to whom it was made, by what order, on what date, and from which *muḳāṭaʿa*. A copy was entered in the *ḳāḍī*'s register. The *ḥudjdjet* would then be submitted in the accounting which took place when each instalment of the *muḳāṭaʿa* fell due. If on the other hand the payment was not made, a *mektūb* stating the reason for this was given to the bearer of the assignation. The *ḳāḍīs*' registers are among our most valuable sources for *ḥawāla* transactions.

The mandate for the *ḥawāla* is a *ḥükm* of the sultan. It specifies how much is to be paid, to whom, and from what source. *Ḥawāla* orders are of three main types: (1) orders made out directly in favour of claimants, used for the payment of allowances (*sālyāne*, *ʿulūfa*, *mawādjib*) to the military in the provinces; (2) assignations placed at the disposal of an *emīn* to cover purchases made in connexion with provincial public works or for the palace (see R. An-

hegger and H. İnalcık, *Ḳānūnnāme-i Sulṭānī ber mūceb-i ʿörf-i ʿOsmānī*, Ankara 1956, 35); (3) orders for the surrender to the sultan's emissary (*ḳul*) of sums for the state treasury (*Khizāne-i ʿĀmire*).

The various *muḳāṭaʿāt* in a region tended to be ear-marked for particular claimants, and their claims regularly met from the same source. It was for this reason that the central financial administration was organized into departments with such names as *Anadolu muḳāṭaʿasi, maʿden muḳāṭaʿasi, büyük ḳalʿa muḳāṭaʿasi.*

From the 11th/17th century onwards, we find the revenues of tax-farms being transferred to the central treasury by bill of exchange (*poliče*) through the services of *ṣarrāf*s established in the main towns. *Ḥawāla* nevertheless continued to be used. It lost its importance when tax-farming (*muḳāṭaʿa*) was abolished after the declaration of the Tanẓīmāt in 1839. The Tanẓīmāt introduced a policy of fiscal centralization. State officials appointed to the provinces with extensive powers collected revenue directly. After paying salaries and meeting other local expenses locally, the *muḥaṣṣil* sent the balance to the central treasury (see H. İnalcık, *Tanzimatın uygulanması ve sosyal tepkileri*, in *Belleten*, xxviii/112 (1964), 629).

In *fiḳh*, *ḥawāla* was the subject of a separate *kitāb*. In the *fatwā* collections of the Ottoman *muftī*s, the *kitāb al-ḥawāla* sometimes includes *fatwā*s on *ḥawāla* transactions involving the state, as well as those relating to transactions between private individuals, or between individuals and *waḳf*s (see *Fatāwā-yi Abu'l-Suʿūd*, Topkapı Sarayı MS Ahmed III 786, ff. 251-2; *Fatāwā-yi Yaḥyā Efendi*, MS Ahmed III 788, ff. 141-3).

In Ottoman Turkish, *ḥawāla* has the further sense of a tower placed at a vantage-point; *ḥawāla* towers were sometimes built for blockading purposes near castles which were likely to put up a long resistance. This method was used in the blockade of Bursa in the early 8th/14th century. Meḥemmed II contemplated using Rūmeli Ḥiṣārī as a *ḥawāla* to blockade Constantinople if resistance continued. Ottoman *ḥawāla*s have left traces in Balkan toponymy. One such *ḥawāla* is that built by Meḥemmed II near Belgrade, now known locally as Avala.

Bibliography: in the article. (H. İNALCIK)

ḤAWĀRĪ, apostle. The word is borrowed from Ethiopic, in which language *ḥawāryā* has the same meaning (see Nöldeke, *Beiträge z. sem. Sprachwissenschaft*, 48). The suggested derivations from Arabic, attributing to it the meaning "one who wears white clothing" etc., are incorrect. Tradition delights to endow the earliest Islamic pioneers with foreign bynames which were familiar to the "people of the Book". Abū Bakr is called *al-Ṣiddīḳ*, ʿUmar *al-Fārūḳ*, al-Zubayr b. al-ʿAwwām *al-Ḥawārī*. Moreover, the collective term *al-Ḥawāriyyūn* occurs, denoting twelve persons who at the time of the "second ʿAḳaba" are said to have been named by Muḥammad (or those present) as *naḳīb*s of the inhabitants of Medina "to be the sureties for their people, just as the apostles were sureties for ʿĪsā b. Maryam, and as I myself (Muḥammad) am surety for my people". Christian influence is also found elsewhere in the account of the "second ʿAḳaba", where the total number of those present is put at 70 or 72, apparently on the analogy of the account in the Gospels of the 70 or 72 apostles (Luke, X, 1, 17). Of these 12 *Ḥawāriyyūn*, nine are said to have belonged to the Khazradj and three to the Aws. Their names were said to be: — Saʿd b. ʿUbāda, Asʿad b. Zurāra, Saʿd b. al-Rabīʿ, Saʿd b. Abī Khaythama, Mundhir b. ʿAmr, ʿAbd Allāh b. Rawāḥa, al-Barāʾ b. Maʿrūr, Abu 'l-Haytham b. al-Tayyihān, Usayd b. Ḥuḍayr, ʿAbd Allāh b. ʿAmr, ʿUbāda b. al-Ṣāmit, Rāfiʿ b. Mālik. According to another version, however, the *Ḥawāriyyūn* belonged exclusively to the tribe of Ḳuraysh and were: — Abū Bakr, ʿUmar, ʿUthmān, ʿAlī, Ḥamza, Djaʿfar, Abū ʿUbayda b. al-Djarrāḥ, ʿUthmān b. Maẓʿūn, ʿAbd al-Raḥmān b. ʿAwf, Saʿd b. Abī Waḳḳāṣ, Ṭalḥa b. ʿUbayd Allāh, al-Zubayr b. al-ʿAwwām (cf. al-Thaʿlabī, *Ḳiṣaṣ al-anbiyāʾ*, Cairo 1290, 344). These accounts again make it clear to what an extent the rivalry between Anṣār [*q.v.*] and Muhādjirūn [*q.v.*] has influenced tradition.

The tradition concerning these twelve Muslim apostles has perhaps, like so many others, arisen as a deduction from a statement in the Ḳurʾān (III, 45, LXVI, 14): Jesus says "Who are my *Anṣār* for God('s cause)?" And the *Ḥawāriyyūn* answer "We are the *Anṣār* of God", etc. The parallel with Muḥammad's own position is here clear enough, and it is evident that, alongside of the Muslim Anṣār, the need was felt for Muslim *Ḥawāriyyūn*.

On the subject of the disciples of Jesus statements will be found in various Muslim writers, for the most part deriving from passages in the Gospels; see ʿĪSĀ and MĀʾIDA.

ḤAWĀSHĪ [see ḤĀSHIYA].

HAWĀZIN, a large North Arabian tribe or group of tribes. The genealogy is given as: Hawāzin b. Manṣūr b. ʿIkrima b. Khaṣafa b. Ḳays b. ʿAylān (see ḲAYS ʿAYLĀN, ʿADNĀN, AL-ʿARAB (Djazīrat), vi). Properly speaking Hawāzin includes the tribes of ʿĀmir b. Ṣaʿṣaʿa [*q.v.*] and Thaḳīf [*q.v.*], but the term is sometimes restricted to what is more correctly ʿUdjz Hawāzin, "the rear of Hawāzin", comprising Djusham b. Muʿāwiya b. Bakr, Naṣr b. Muʿāwiya b. Bakr and Saʿd b. Bakr [*q.v.*]. Among the places reckoned to belong to Hawāzin were: Amlaḥ, ʿAds al-Maṭāḥil, al-Dardā, al-Ḍabʿān, and Fayf al-Rīḥ; the wadis Awṭās, Liyya, Turaba, Zabya (so *Muʿdjam*, but variants in al-Hamdānī); the waters Dhu 'l-Ḥulayfa and Tiyān and the mount al-Muḍayyiḥ. Before Islam, Hawāzin along with B. Muḥārib worshipped the idol Djihār at ʿUkāẓ; the *sādin* came from a family of B. Naṣr of Hawāzin.

Early history. For a time Hawāzin paid tribute to Ghaṭafān (under Zuhayr b. Djadhīma of ʿAbs), but they became independent on Zuhayr's death. Hostility continued, however, and there were many battles, sometimes between most of Ghaṭafān on the one side and most of Hawāzin (often in alliance with Sulaym) on the other, sometimes between individual tribes, such as Fazāra and Djusham. Hawāzin was also bitterly hostile to Ḳuraysh, against whom it had fought the wars of the Fidjār. The underlying cause was the trade rivalry between Mecca and al-Ṭāʾif, since the inhabitants of the latter town, Thaḳīf, were either part of Hawāzin or in close alliance. One war began with a quarrel between an ally of Ḳuraysh (belonging to Kināna) and a man of Hawāzin. The second and more famous war of the Fidjār arose from the killing of ʿUrwa al-Raḥḥāl (of Kilāb of ʿĀmir b. Ṣaʿṣaʿa) by Barrāḍ b. Ḳays (client of Ḥarb b. Umayya of Ḳuraysh). Though Ḳuraysh had to retire to Mecca on several occasions, they seem to have had the best of the fighting in the end. Peace was made

with Hawāzin, but al-Ṭā'if passed into the control of the section of Thaḳīf known as the Aḥlāf, who were subordinate to Mecca.

Relations with Muḥammad. In general Muḥammad had good relations with ʿĀmir b. Ṣaʿṣaʿa. A small section of Saʿd b. Bakr (to which tribe his wet-nurse Ḥalīma [*q.v.*] had belonged) became Muslims at an early date, though others fought against him at Ḥunayn. Otherwise he had little contact with Hawāzin till after his triumphant entry into Mecca in 8/630. While still settling the affairs of Mecca, he heard that Mālik b. ʿAwf (of Naṣr) was concentrating a force of Hawāzin and Thaḳīf only a day or two's march away and was thus threatening both Mecca and the Muslims. Because of the old enmity between Ḳuraysh and Hawāzin 2000 Meccans joined Muḥammad when he marched to meet this threat. The battle took place at Ḥunayn, and, while Thaḳīf took refuge in al-Ṭā'if, Hawāzin was routed and lost all their possessions. Muḥammad treated Mālik b. ʿAwf very generously, however, restoring his wife and children, making a gift of camels, and recognizing him as chief of Hawāzin. The tribe had to make a payment of *siʿāya*, presumably for the restoration of the captured women and children. Mālik then helped Muḥammad against his former allies of Thaḳīf.

Later history. During the *Ridda*, Hawāzin are said to have suspended the payment of *ṣadaḳa* to Medina, but they did not take up arms against Abū Bakr. This was doubtless because of the consideration shown them after their defeat.

ḤAWḌ, the basin at which on the day of the resurrection Muḥammad will meet his community. This idea is not found in the Ḳur'ān, but in Tradition, which supplies a great variety of details of which the following are the more important.

Muḥammad is called the precursor (*farat*) of his community On the day of the resurrection the latter, in the first place the poor who have not known the pleasures of life, will join him near the basin. So far as one can judge, the question is one of admittance: Muḥammad pleads with Allāh for his Companions, but he is told: Thou dost not know what they have done since thy death. Some have gone back on their steps (Bukhārī, *Djanā'iz*, bāb 73; *Musāḳāt*, bāb 10; *Riḳāḳ*, bāb 52; Aḥmad b. Ḥanbal, ii, 132; al-Ṭayālisī, no. 995).

The descriptions of the basin raise questions of cosmological topography. Its dimensions equal the distance between Djarbā' and Adhruḥ (variants: Ayla-Ṣanʿā'; ʿAdan-ʿUmān; al-Madīna-Ṣanʿā' etc.) and its jars are numberless as the stars. Its waters are white as milk and sweet as honey. It is filled by two spouts from Paradise, one gold, the other silver. Some traditions connect the basin with the river of Paradise, al-Kawthar [*q.v.*], but these associations are secondary, Kawthar having become the proper name of a river of Paradise only at a later date. The representation of the throne of Muḥammad as being above the basin is also part of the topography of Paradise ("a garden of Paradise"). Details taken from the Bible are fairly numerous, like the very common tradition that he who drinks of the waters of the reservoir will never thirst (cf. St. John's Gospel, iv, 14).

It is hardly possible to assign a definite place to the reservoir among the eschatological sites. According to a canonical tradition (Tirmidhī, *Ḳiyāma*, bāb 9; Aḥmad b. Ḥanbal, iii, 178), Muḥammad said that if he is not found near the *ṣirāṭ* he should be sought near the *mīzān* or else near the basin. In the creed known as *Fiḳh Akbar II* the basin comes immediately after the balance (art. 21).—Neither Ghazālī, in *al-Durra al-fākhira*, nor the author of the *Kitāb Aḥwāl al-ḳiyāma* mentions the basin. In the *Iḥyā'* it comes between the intercession and the descriptions of Hell and Paradise, without there being any connexion with the one or the other. This uncertainty, which connects the basin sometimes with Paradise, sometimes with the trials at the Last Judgment, has given rise to the idea of two basins.

Basin; al-Ghazālī, *Iḥyā'*, Cairo 1302, iv, 478. (A. J. WENSINCK)

ḤAWḌ (pl. *aḥwāḍ*, *ḥiyāḍ*) is the Arabic, and hence Persian, Turkish (mod. *havuz*) and Urdu word for cistern or artificial tank for storing water. It is used also for a drinking trough or wash-basin. In India the word has sometimes been used for any tank built or excavated by the Sultan for public utility. For our purpose here, we shall discuss only the architectural cisterns.

The history of the cistern must be as old as the real beginning of Islamic architecture, which began with the construction of the early mosques: water being needed for ablution before the performance of prayer, the cistern was from the first as necessary a feature as the other elements of the mosque. Very little information is preserved about the earliest ablution tanks. Probably they were first built in the *ṣaḥn* of the mosque, for when the mosque of Aḥmad b. Ṭūlūn was first opened for prayer (265/879), one of the criticisms made of it was that it lacked any place for ablution in its *ṣaḥn*, to which the builder replied that he had purposely omitted it because of the uncleanliness which it brought, but that he would have one built behind the mosque. As the people complained of the tank being outside the mosque proper, it can be presumed that this was contrary to what they had been accustomed to. In later times, examples of ablution cisterns are found most frequently in the *ṣaḥn*, but sometimes outside the mosque. This preference may also be in part due to the Turks who, under Byzantine influence, regarded the domed interior of the mosque as the sanctuary proper, while the outside court, corresponding to the Byzantine *atrium*, was not looked upon as the *ṣaḥn* had been in early Islam. The typical Turkish ablution tank is an octagonal reservoir covered by an octagonal pavilion resting on columns and arches, with wide eaves and a low dome. The present octagonal tank covered by a square pavilion in the *ṣaḥn* of the Great Mosque of Damascus shows Turkish influence. The square double-storeyed domed edifice over the octagonal tank in the *ṣaḥn* of the Mosque of Ibn Ṭūlūn was, however, built before the Turkish conquest of Egypt by Sultan Lādjīn in 696/1296, and may be likened to other multi-storeyed cisterns of Alexandria. In India the mosque-tanks are usually

open, and are generally square or rectangular in plan.

Simultaneously with ablution tanks, fountain-cisterns were also developed in Islamic architecture, at first in mosques, and then also in palaces and gardens. The earliest extant example of such a cistern appears to be the one underneath the westernmost domed edifice in the *ṣaḥn* of the Great Mosque of Damascus. It was octagonal with a little parapet all round, and a jet—probably in imitation of the *phiale* which sometimes stood in the *atria* of the Byzantine churches—in the middle. The octagonal cistern in the *ṣaḥn* of the Great Mosque of Ḥarrān was, in all probability, a fountain-cistern, as was that in the *ṣaḥn*s of the Great Mosque of Sāmarrā (234-7/848-52) and of the Mosque of Ibn Ṭūlūn, the latter being described by Ibn Duḳmāḳ as a great basin of marble, 4 cubits in diameter, with a jet of water in the centre, over which was a gilt dome on ten marble columns, and round which were sixteen marble columns with a marble pavement. This was later rebuilt by Lādjīn. Once thus developed, the fountain-cistern is often found in mosques of later dates along with the ablution tank—generally separate, but sometimes combined in one.

This cistern was, however, particularly developed in Īrān and under its influence in India. A pool of water set in a plantation was popular not only in the pre-Islamic lay-out of gardens in Īrān, but was also a frequent motif in the ornamentation of pottery and metalwork. In the rapid expansion of the Islamic period, this theme of plants and water took an extraordinary form in architecture. In shape, Iranian tanks vary greatly. Most frequent is the rectangular tank, but square, octagonal and cross-shaped pools also are not uncommon. The beautiful tank at the shrine of Niʿmat Allāh Māhān combines the octagon and the cross, the octagon serving as fountain at the intersection of the cross, the arms of which have diagonally cut corners to parallel this octagon. More elaborate and very characteristic are the ogee pools, often polygonal. In the big tanks, the water is usually still and the cistern is by preference filled to the very brim. But running water also had its place, trickling or leaping through the channels, according to the terrain, or dropping in musical cascades, and there were numerous fountains, some five hundred, for example, in the Hazār Djarīb. In India, the design of the tanks was copied almost exactly, but more often with multiple and varied jets in the middle. The best examples of such tanks are to be noticed in the garden of the Tādj Maḥall (second quarter of the 11th/17th century) in Āgra and in the Shālīmār Bāgh (1047/1637-8) in Lahore.

There are other forms of the fountain-cistern, not in the open, but in pleasure-houses. We hear in the Thousand and One Nights of a pool in a wonderful domed building decorated with "all kinds of pictures in gold and ultramarine, and it had four doors, to which one ascended by five steps; in the midst of it was a pool, to which one descended by steps of gold, those steps being set with minerals. In the midst of the pool was a fountain of gold, with images, large and small, from the mouths of which the water issued; and when the images produced various sounds at the issuing of the water, it seemed to the hearer that he was in paradise". To this group belongs the recently discovered Saldjūḳ Ḥawḍ-khāna at Rayy—a small vaulted building with a pool inside, octagonal in plan, and sunk below the ground level.

Large cisterns, especially for drinking water, fed by the nearest *wādī* or river or by rain-water, were also built by Muslim rulers. Of these, two kinds may be distinguished; open and covered or monumental. Several of the first variety have been discovered in Tunisia. The two largest, built by Abū Ibrāhīm Aḥmad between 246-8/860-3, are about a kilometre from the north gate of Ḳayrawān and receive the water of the *wādī* Mardj al-Līl when it is in flood. They are polygonal, one being composed of seventeen straight sides and the other of forty-eight sides, with a round buttress at each corner internally and externally, and, in addition, an intermediate buttress externally in the centre of each side. The masonry is of rubble covered with a very hard coating of cement. The larger cistern had an octagonal tower in the middle which Abū Ibrāhīm used to visit occasionally in a boat. Most of the other cisterns in Tunisia, such as ʿAyn al-Ghurāb, Fisḳiyat al Arad, Fisḳiyat Eddaliyā, Fisḳiyat al-Haguia and Ḥanshir Fortunat, are round, with buttresses placed internally and externally along the circular walls.

Open cisterns are found in India and some of them, such as the Ḥawḍ-i Shamsī and Ḥawḍ-i Khāṣṣ in Delhi, Ḥawḍ-i Shamsī in Badāʾūn, and the great tank of Djahāngīr al-Sheikhupura near Lahore, are very famous. Most of these tanks are now ruined, and the Ḥawḍ-i Khāṣṣ no longer contains water. They are of stone masonry (except the last, which is of brick) and are either square or rectangular in plan with stairs on all four sides, and they once contained a pavilion in the centre. The pavilion in the tank of Djahāngīr—an octagonal three-storeyed building approached by a causeway—still exists. The Ḥawḍ-i Khāṣṣ, covering over seventy acres of land, was built by Sultan ʿAlāʾ al-Dīn Khaldjī in 695/1295, and when fallen into decay was re-excavated and repaired by Fīrūz Shāh. The repairs were so extensive that Tīmūr ascribes the tank itself to Fīrūz Shāh.

Similar open tanks, not so much for drinking water as for ornamentation, are also found in other parts of the sub-continent. The emphasis here is less on the tank than on the central structure, which was intended as a pleasant place to sit in and while away an hour. Such are the platforms in the Anūp Talāo in Fatḥpur-Sīkrī (976-94/1568-85), the Djalamaṇdir or water-pavilion in front of the Sāt Manzil (991/1583) in Bīdjāpur and the double-storeyed building in front of the painted pavilion (probably 10th/16th century) at Kumatgī.

Of the monumental variety, we have a good example in the cistern of Ramla, built during the reign of Hārūn al-Rashīd in 172/789. It forms an irregular four-sided figure which tapers from 24 m. on the north side to about 20.50 m. on the south and consists of subterranean excavation, lined with strong retaining masonry walls and divided into six aisles by five arcades of four arches each, running from east to west and resting on cruciform piers. On the east-west arcades rest rubble tunnel-vaults, reinforced by three arcades running from north to south, which also, like the former, spring from wall-piers. A staircase runs down the north side to the bottom of the cistern, which has a well-preserved pavement. A series of holes averaging 55 cm. square pierced in the vault of each bay enabled twenty-four people at the same time to draw water by means of ropes and buckets. This suggests that the whole area above the cistern was originally levelled-up and paved. The cistern of Sīdī Bū ʿUthmān in Morocco, apparently of the 6th/12th century, and that of the fortress of Saône, in Syria, of the Crusading period, belong to this type.

Another interesting example of this group, different in plan but probably an imitation of the Syrian tradition, is to be seen in the Alcazaba of Merida in Spain. It is a T-shaped building of stone masonry and consists of three parts: an entrance passage with doors for entrance and exit (head of the T), galleries or corridors of ascent and descent with a partition wall in the middle, and the water chamber (stem of the T). All the three parts are covered by tunnel-vaults, that of the corridors sloping towards the water chamber, whose vault is divided into two lengths, the lower covering the part next to the staircase, and the higher the remainder. The chamber was evidently filled by an inlet in the lower part of the wall, but that is not visible from the surface. The exact date of the cistern is unknown, but it is supposed that it was made sometime between the 1st/7th and the 4th/10th century.

Some of the most interesting extant examples of covered cisterns in India are to be seen in the water towers in Bīdjāpur [*q.v.*] (10th/16th and 11th/17th centuries). They are lofty square buildings of stone masonry, and were used both as distributing centres with pipes leading away from them, and as traps to intercept silt and prevent the pipes being choked, as well as to relieve the pressure in the pipes.

Muslim rulers were always mindful about the elaborate arrangement of water—whether in their mosques and tombs or in their palaces and cities. To them it was not only a need of life, but also a religious necessity and the most exquisite refinement of luxury—the idea of paradise—in a thirsty land.

ḤAWḌ, usual spelling HODH (*ḥawḍ* > *ḥōḍ* = a horsetrough, made of leather mounted on a wooden frame), name of the natural depression situated in south-eastern Mauritania in the angle of the Senegal and Niger basins. It is bounded on the north by an escarpment, *Dhar Tichitt* (*ẓahr tishit*), stretching from Tichitt to Aratane and marking the limit of the Adafer plateau. In the north-east the escarpment which curves round above Oualata (Dhar Oualata = *ẓahr Walata*) and Nema, forms the boundary of the table-land of Djouf (Djawf). The western boundary of the Hodh is much less clearly marked; after a point facing towards Bassikonnou and Nara it takes in Timbedra and then turns back towards Tichitt through Aïoun el Atrous (*ʿUyūn al-ʿAtrūs*).

The Hodh thus consists of a plateau and, below the escarpment, a plain which in turn is divided into two regions, in the south a region of grazing lands and wells, Labiar (*al-Biʾār*), and in the North the Aouker which has been overrun by sand.

Its climate is midway between that of the Sahara and that of the Sahel. There are three distinct seasons: the rainy season lasts from July to September, the hot dry season from March to July, the dry cool season from October to March. The abundant rainfall gives the grazing land a savannah vegetation which attracts both caravans and herds.

History.—As a result of its situation on the edge of the desert, the Hodh has been a disputed region throughout its long history. According to certain traditions the Fulani of Macina originated there. The kingdom of Awdaghost (which included the northern Hodh) is said to have been established by the Lamtūna Berbers (5th/11th century) and afterwards conquered by the negro Soninké sovereigns of Ghāna (990), whose capital, Koumbi Saleh, is in the Hodh. The Almoravids of Yaḥyā b. ʿUmar are said to have captured Awdaghost in 1054 and Ghāna in 1076.

The death of Abū Bakr b. ʿUmar (480/1087) seems to have allowed Ghāna to recover her independence, but the sovereign's authority can hardly have extended beyond the Aouker and the Bassikounou. In 1203, Soumangourou Kanté, king of the Sosso, seized Ghāna. The pagan garrison routed the Muslim Soninké at Oualata (1224). In 1240, Soundjata Keïta destroyed the city of Ghāna.

Arab invasions occurred in the Sahara towards the end of the 8th/14th century, at a time when the berberization of the population was becoming increasingly intensive. The Soninké towns of Chétou and Birou became, in Berber, *Tishit* and *Iwalaten* (Oualata). The Maʿkil Arabs, especially the Ḥassān branch, supplied the Berbers with *condottieri* who were the chief figures of the wars of that period. The Hodh is situated at the extreme limit of the range of the Arab tribes coming from the north who, after being checked by the Senegal, turned their course eastwards. It was therefore to some extent only the

fringe of the Arab invasion that penetrated to this region.

At the beginning of the 9th/15th century, the Awlād Dāwūd b. Muḥammad dominated the Hodh. At the beginning of the following century they were replaced by their kinsmen the Awlād Dāwūd b. ʿArrūḳ who, falling back on the Niger, in the middle of the 11th/17th century gave way to the Awlād Muḥammad—Awlād Mbārek, who had been compelled to move westwards under pressure from the Trārza and the Brākna. At the beginning of the 19th century the Awlād Nāṣir drove back the Awlād Mbārek to the East.

Only in about 1850 was the political supremacy of the Ḥassān Arabs replaced by that of the Mas̲h̲dūf, almost pure Berbers though Arabic-speaking, who succeeded in imposing themselves as a result of their alliance with al-Ḥād̲j̲d̲j̲ ʿUmar and his Toucouleurs, who captured Nioro (1850).

After 1890, French penetration made itself felt. Nioro was occupied on 1 January 1891. Two years later, Archinard conquered Macina and the Nara region. The final occupation of the Hodh was carried out by Colonel Roulet who, starting from Timbuctu, entered Oualata without firing a shot.

In the matter of the religious confraternities, the Ḳādiriyya *ṭarīḳa* was propagated in the 12th/18th century, while in the 19th century the Tid̲j̲āniyya, under the influence of al-Ḥād̲j̲d̲j̲ ʿUmar, was more influential. But what was to be of considerable importance in this region was the "differentiated Tid̲j̲ānism" introduced by a *s̲h̲arīf* of the Touat, Muḥammad wuld Aḥmad wuld ʿAbd Allāh (or al-S̲h̲arīf al-Ak̲h̲ḍar) and his successor S̲h̲ayk̲h̲ Hamalla, whose father was *s̲h̲arīf* of Tichitt and whose mother was a Toucouleur, and who had brought together a powerful contingent of Moorish tribes linked for administrative purposes to the districts of Nioro, Kiffa, Timbedra, Nara and Nema. The Hamallists were the instigators of the incidents of Kaëdi (1930) and Nioro-Assaba (1940).

In 1940, almost all the tribes had been penetrated by Hamallist propaganda, which preached an actively bellicose Islam and, with its xenophobic attitude, gathered all the dissidents of eastern Mauritania and western Sudan. A numerous marabout federation, the Tenouajib, members of whom were recorded in Kayes, Yélimané, Nioro, Kiffa and Tamchakett, had shown itself hostile to this propaganda, preserving instead a strict Ḳādirī orthodoxy. On the occasion of the 1940 armistice the Hamallists thought the moment had come to suppress their Tenouajib rivals and seize their possessions. But, after their violent attempt, thirty-three of the assailants, among whom was the eldest son of S̲h̲ayk̲h̲ Hamallah, were condemned to death and shot in Yélimané. S̲h̲ayk̲h̲ Hamallah was deported, first to Algeria and later to France, where he died during the German occupation.

If Marty could regard Nioro as the Mecca of the Sudan, it is certain that the Hodh was in practice the principal starting point for Islam in the direction of the negro countries. It remains a place of importance. It was for that reason that the Governor-General of A.O.F. decided, in October 1944, to set up the district (*cercle*) of the Hodh, with ʿUyūn al-ʿAtrūs as its centre; the administration of Mauritania had proved the necessity of this step.

This fact involved modification of the frontier. For a very long time the Hodh had been divided between Mali and Mauritania. Under these agreements it became wholly Mauritanian, and has remained so with the coming of independence.

ḤAWFĪ, type of popular poetry peculiar to Algeria. It consists of short poems of between two and eight verses which are sung by girls or young women while amusing themselves on swings or at country excursions. These songs are all anonymous and sung to the same tune, which consists of two very simple melodic phrases. The origin of the *ḥawfī* is obscure; its etymology offers no explanation. The genre is more commonly called *taḥwīf*, which means the act of singing the *ḥawfī*. The prejudice of the Arabic anthologists against popular poetry, with the exception of *zad̲j̲al*, deprives us of material for criticism in this field. Ibn K̲h̲aldūn (ed. Quatremère, iii, 429) connects the *ḥawfī* with the *mawwāl* without giving any explanation; this testimony is all the more uncertain as in the Būlāḳ edition the term *ḳūmā* is substituted for that of *ḥawfī* in the passage in question; F. Rosenthal, in his translation of the *Muḳaddima* follows this reading (iii, 475, note 2).

W. Marçais (*Tlemcen*, 209) hesitates to "identify the modern *ḥawfī* of Tlemcen with the *ḥawfī* of Ibn K̲h̲aldūn". He does, however, try, but with all reserve, to find some connexion between the *ḥawfī* and the *mawwāl*. According to him the two genres have the same number of verses and use the same metre, *basīṭ*. Starting from this he thinks that he is able to trace an evolution of the *ḥawfī* which, at first obeying the rules of classical scansion, gradually detached itself from the *mawwāl*. "At a comparatively modern date, the original rules of the form being lost, the admirers of *ḥawfī* ... continued to add, though sometimes in a rather lame fashion, to the classical tune of these poems, successions of rhyming lines".

This proof is not at all convincing, especially as Ibn K̲h̲aldūn's attitude that all poetry in the vernacular is the result of the degeneration of an earlier classical genre has distorted the approach to the problem. This has necessarily made still more difficult the problems which arise as soon as the study of the evolution of poetic genres is approached.

In fact it appears in the context that Ibn K̲h̲aldūn has not tried to establish a direct link between the Andalusian or Mag̲h̲ribī and the eastern genres, but that he has merely emphasized what they have in common—namely that they are popular genres, a fact which he emphasizes again when he speaks of the Egyptian imitation of the *mawwāl* of Bag̲h̲dād.

Nor is the scansion which W. Marçais suggests for the verses of the *ḥawfī* any more plausible, for his attempt to find in them a metre of the *basīṭ* type forces him to resort to completely unjustifiable

subtleties. Syllabic scansion must be applied here, and any other method can only result in the establishment of irregular schemes.

Another hypothesis, which at first sight seems more attractive, seeks to find the origin of the *ḥawfī* in Andalusian strophic poetry. S. Bencheneb sees it as "a debased and popularized form" of this Andalusian poetry and adds that "from the point of view of metre, the *ḥawfī* represents an intermediate stage between the quantitative and the syllabic measure" (*Ch. Escarpolette*, 91).

This is in fact to re-state, from the starting point of the *muwashshaḥ*, the very same principle of evolution which we have just rejected. The rigidity and the learned diversity of the structures of Andalusian strophic poetry, its use of a quantitative metre, its themes and its vocabulary all exclude any link with the *ḥawfī*. It would be very difficult to regard it even as deriving from the *zadjal*, which also obeys very strict rules of structure. It is not clear, moreover, what this intermediate stage of the metre can be. In the *ḥawfī* the metre is syllabic, and furthermore it plays only an unimportant part. It must not be forgotten that the *ḥawfī* is exclusively sung. It is the musical stress which controls the whole poem and the very simple structural arrangement are intended only to enhance the harmonies which this stress produces.

The *ḥawfī* poems, written in dialect, consisting of a small number of verses which lend themselves to syllabic scansion and possess no notable structural characteristic, seem quite simply to derive from local popular inspiration. We must adhere to this conclusion so long as no convincing proof of their Andalusion or eastern origin is put forward.

Swing games accompanied by songs are widely found throughout the Maghrib. They are attested notably at Tangier, Rabat-Salé and at Fez. But the term *ḥawfī* is reserved for the songs sung at Tlemcen and in the Algérois (Algiers and Blida). S. Bencheneb considers that "the *ḥawfī* of Algiers, Blida or elsewhere is independent of that of Tlemcen", but there does not seem to us to be any convincing argument to prove this independence. If the two types have had a common source, Andalusian or eastern, it is hardly permissible to speak of a parallel development. But if, as is the case in the present state of our knowledge, this derivation cannot be established, then there are too many similarities between the *ḥawfī*s of the two regions to justify such a sharp differentiation. The establishment of the texts has enabled us to find very many common features in the *ḥawfī*s of Tlemcen and those of Algiers and Blida: common poems, isolated verses used by both, the same numbers of verses, the same use of rhymes and above all the use of the same melody. Certainly the *ḥawfī*s of Tlemcen are more numerous and have more varied themes, but this could arise merely from a greater popularity of the genre at Tlemcen.

In another field, that of the *buḳāla* [*q.v.*], some exchanges have taken place. S. Bencheneb has noted an interesting fact in this connexion: at Mostaganem *ḥawfī* poems of Tlemcen are sung during ceremonies at which the omens are consulted; it was only later that "in certain towns and certain milieus original poems ... replaced the *ḥawfī* poems which used to be sung by women in order to learn their fate. Thus the genre *buḳāla* must be derived from the *ḥawfī*". The establishment of the texts of the *ḥawfī* has allowed the relationship between the two genres to be seen fairly clearly. Several poems are common to both, and isolated verses, themes, images and expressions are found in both. Although the *buḳāla* is not sung, it is clear that the structure of several of its poems would permit them to be adapted to the tune of the *ḥawfī*. There should nevertheless be mentioned the greater thematic and linguistic richness of the *buḳāla*. This similarity cannot, however, lead to any serious conclusion concerning the origin of the two genres, and we can merely state again that they both belong to a popular literature which developed parallel with works in literary language throughout the whole of the Arabic-speaking area.

We have collected 83 poems, 61 of which are of Tlemcen origin. But it must be mentioned that several of these poems are sung indifferently at Tlemcen, Blida or Algiers with variants which are not always due to the use of a different dialect. These 83 poems are divided thus: (a) 12 distichs, of which 8 are from Algiers; (b) 15 tercets, of which 13 are monorhymes and 2 rhyming ABB with internal rhymes; 8 of these are from Algiers; (c) 34 quatrains of which 23 are monorhymes and 9 rhyme AABB; (d) 11 poems of 5 verses, seven of which are monorhymes, 3 rhyming AAABB and 1 AAAAB; (e) 8 poems of 6 verses which consist of: 5 poems made up of two monorhymed tercets, 1 of three distichs with different rhymes, 2 made up of one monorhymed quatrain and one distich; (f) 5 poems of 7 verses which divide variously into quatrains, tercets and distichs; (g) 1 poem of 8 verses made up of two monorhymed quatrains. We have included in this list 3 poems which are in reality variants. The study of the arrangement of the internal rhymes shows that they are much less numerous than in the *buḳāla* and are arranged in a less contrived fashion. It is rather a case of seeking for musical assonances able to sustain the melody of the *ḥawfī*.

The themes of the *ḥawfī* of Tlemcen are more varied than those of the *ḥawfī* of Algiers; whereas the latter is almost entirely devoted to love and the description of the gardens where swing games are played, the *ḥawfī* of Tlemcen has the following themes: (a) Poems devoted to Tlemcen, its surroundings or to certain of its districts. It should be noted that the *ḥawfī* of Algiers has nothing similar except for one poem devoted to Sidi Ferruch. (b) Religious themes: sometimes about the Prophet, his daughter and ʿAlī, sometimes celebrating the Tlemcen saints. In this connexion there should be mentioned a definite sympathy for the great figures of Shīʿism which is found also in several *buḳāla* poems. Here too the Algerian *ḥawfī* has no theme of similar inspiration. (c) Themes of love: these preponderate as much at Tlemcen as in the Algérois. They sing of the lover and the happiness or the torment he gives. The *ḥawfī* of Tlemcen includes in addition dialogues between lovers and love-songs put into the mouth of a young man. (d) Themes concerning different aspects of social life at Tlemcen: the life of a young woman, her relations with her mother and her mother-in-law, an account of the attributes of the members of the family, etc.

The literary quality of these poems is very uneven. Some are excellently constructed from the point of view of the sentiments expressed and in the choice of expressions and images. The use of floral themes in the description of girls is often a very happy one. Themes of grief or nostalgic sadness are particularly suitable to the melody of the *ḥawfī*. Other poems are more prosaic, but they all faithfully reflect some aspect of life at Tlemcen and, especially, of the spirit of its inhabitants. In spite of the upheavals which social life in Algeria has undergone, the *ḥawfī* is still

popular, although the young women of today take rather less interest in this genre which delighted so many of their forbears.

We have been unable to collect any information on the melody of the *ḥawfī*; we have however had it written down in musical notation. Evidence, already unreliable enough in the matter of the texts, is here completely lacking, and it is all the more regrettable since a scientific approach to the problems of popular poetry, and often of classical poetry also, is impossible without the recognition of the primary rôle which the melody plays in it; the problems of structure themselves cannot be solved without a full appreciation of it. Nor can the question of the origins be approached until an exhaustive recension has been made of Maghribī compositions in dialect.

Renaud in *Hespéris*, 1938/1, 39) of Ibn al-Bannāʾ al-Marrākushī [*q.v.*].

(J. E. Bencheikh)

ḤĀWĪ, snake-charmer or itinerant mountebank, from *ḥayya*, snake. The plural is *ḥuwā* (so Lane) or more generally *ḥāwiyyūn*. In Egypt certain members of the Gipsy tribes (see nūrī) act in this capacity. The *fellāḥīn* often have recourse to them, particularly when afflicted with various forms of skin-disease (*karfa*) or eczema (*ḳūba*). The general procedure of these quacks is to recite some rigmarole over a glass containing olive-oil and the white of an egg, and then to spit into it. The slimy mixture is thereafter applied as an ointment. Certain members of the dervish fraternities, such as the Rifāʿiyya and the Saʿdaniyya, also play their part in the folk-medicine of the Nile Valley as snake-charmers and viper-enchanters. The reason why their services are requisitioned is because of the popular belief that skin-diseases are due to the viper blowing its poison into the body, and these men claim to possess the necessary authority to counteract the poisonous infection.

ḤĀWĪ, "pertaining to air". Al-Khalīl said and repeated: *al-alif al-layyina, al-wāw, al-yāʾ* are *hawāʾiyya*, that is to say *fi 'l-hawāʾ*, "in the air [exhaled]" (*Le Monde Oriental*, xiv (1920), 44-5). For Sībawayhi (ii, 454, l. 21 f.), *al-alif* is *al-ḥarf al-hāwī*, to be understood, according to the *Sharḥ al-Shāfiya* (iii, 261, l. 14, 264, l. 4), as *dhu 'l-hawāʾ* "which has some [exhaled] air". These two expressions, *hawāʾiyya* and *hāwī*, might be thought to be synonymous, but there is a nuance.

Al-Khalīl (*ibid.*, 44, l. 17-8) expresses himself thus on the subject of the *ḥurūf* mentioned above: "they are *fi 'l-hawāʾ*, in the air [exhaled], they have therefore no region of articulation (*ḥayyiz*) to which they might be assigned, unless it is the *djawf*, the hollow of the chest". Therefore, without *makhradj*, either in the throat or mouth, these *ḥurūf* are *fi 'l-hawāʾ*: the air is so to speak *their place of existence*. Sībawayhi grants them a *makhradj* (see J. Cantineau, *Cours*, 19-20 or H. Fleisch, *Traité*, § 44b, d, g); but he insisted on the amplitude (*ittisāʿ*) of this *makhradj* which makes them precisely *ḥurūf al-līn* [see ḥurūf al-hidjāʾ, genesis of the *ḥurūf*]. The widest is that of the *alif* and it offers its fullest width *li-hawāʾ al-ṣawt* "for the air of the *ṣawt*" (Sībawayhi, ii, 454, l. 22). He is therefore considering *the abundance of the air* passing with the *ṣawt* within the full width (*ittisāʿ*) of the *makhradj*; he attributes this name *al-hāwī* to *alif* as being the most eminent, leaving *wāw* and *yāʾ*, with less extensive *makhradj*, under their appellation *layyina*.

Bibliography: in the text; see also hamza (*hamza madjhūra*) and ḥurūf al-hidjāʾ. For a general discussion of the phonetics of Arabic see makhāridj al-ḥurūf. (H. Fleisch)

ḤAWĪZA, also known by the diminutive Ḥuwayza, town situated in the swamp country east of the Tigris between Wāsiṭ and al-Baṣra. It apparently also lent its name to the surrounding area. The original town was supposedly founded by Shāpūr II, and was later rebuilt in Islamic times by one Dubays b. ʿAfīf b. al-Asadī during the reign of the Caliph al-Ṭāʾiʿ (363/974-381/991). Thus the town is not mentioned by any of the early geographers. The population included many Nabataeans, presumably bearers of the original Aramaic culture which survives in that region until today. According to Mustawfī it was one of the most flourishing cities of Khūzistān (8th/14th century). The surrounding land was fertile, and corn, cotton, and sugar cane grew abundantly there.

HAWKING [see bayzara].

ḤAWRA, a town in Ḥaḍramawt under the eastern wall of Wādī al-Kasr, just north of the confluence of the three valleys of ʿAmd, Dawʿan [*q.v.*], and al-ʿAyn. The town is dominated by a large castle and a watchtower on the heights above. The population, reckoned by Ingrams to number 1,500, has a strong Indonesian infusion. The leading citizens are of the family of Bā Wazīr; there are also descendants of Badr Bū Ṭuwayriḳ, the founder of Kathīrī power in Ḥaḍramawt. Ḥawra is, nevertheless, a Ḳuʿayṭī enclave in Kathīrī territory, lying south-west of Shibām, the principal Ḳuʿayṭī centre in Wādī Ḥaḍramawt.

In al-Hamdānī's time (4th/10th century) Ḥawra was a large town inhabited by two branches of the tribe of Kinda. The modern tribe of Nahd north of Ḥawra claims descent from Kinda; it is probably distinct from al-Hamdānī's tribe of Banū Nahd, a division of ʿAns established in what is now southern ʿAsīr. In 1224/1809, during the second invasion of Ḥaḍramawt by the Wahhābīs of Nadjd, called *Aṣḥāb al-bushūt* ("the Men of the Cloaks") by Ibn Hāshim, Ḥawra was one of the places they pillaged.

ḤAWRA [see AL-D͟HIʾĀB].

HAWRĀMĀN, AVROMAN, a mountainous region of the southern Zagros lying west of Sanandad͟j (Senna) on the western border of Īrān. It extends for approximately 50 km. south-east from a point 46° 0′ E., 35° 30′ N., to the river Sīrwān. The Hawrāmān mountain (Avroman Dagh, 2626 m.) forms a northern extension of the S͟hāhō range, from which it is separated by the Sīrwān. Parallel to both ranges, east of the river, is the Kō (or Kūh-i) Sālān (2597 m.). The chief products of the area are various orchard fruits, walnuts, gall-apples and mastic.

The population is a branch of the Gūrān [*q.v.*] and numbers perhaps 10,000 persons, still distinguished by their language and to some extent dress from the surrounding Kurds. The members of the Bagzāda family trace their descent, in the first instance, back through three centuries. Many take the title Sān, *i.e.*, Sulṭān. The principal tribal division is between the Hawrāmān-i Luhōn, south-west of the main range, and Hawrāmān-i Tak͟ht to the north and east. The latter is further divided into Tak͟ht proper of the Ḥasan-Sānī family (with S͟hār-i Hawrāmān as its chief village), Dizlī of the Bahrām-Bagī, and in the east Razāw of the Muṣṭafā-Sānī. The leading Luhōnī village is Nawsūda. Others are Pāwa, the home of a divergent dialect, lying on the western flank of mount S͟hāhō, and Had͟jīd͟j, the easternmost village of Luhōn on the Sīrwān; the inhabitants of both these are known throughout the Near East as wandering pedlars.

At the beginning of the present century all branches of the Bagzāda family extended their sway over a number of non-Hawrāmī villages (notably Biyāra and Tawēla, both in ʿIrāḳ and seats of Naḳs͟hbandī S͟hayk͟hs), bringing their total holdings to over seventy villages. Since 1350/1931 most of them have been dispossessed by the Persian authorities and exiled.

In 1915 three parchments, dating from 88 B.C., 22-1 B.C. and 53 A.D. respectively, were discovered in the area. These 'Avroman Documents', written in Greek and Parthian, relate to the ownership of local vineyards.

ḤAWRĀN, region of southern Syria bounded to the east by the volcanic massif of the D͟jabal al-Durūz, to the north by the plateau of the Lad͟jāʾ and the Damascus plain, to the west by D͟jawlān [*q.v.*] and to the south by the Yarmūk, a region which corresponds roughly to the administrative area, or *liwāʾ*, of the same name and which extends for about 100 kilometres from north to south and 75 from east to west. The term Ḥawrān was applied formerly to the whole of the basaltic region which separates Syria from Transjordania and thus included the D͟jabal al-Durūz and the Lad͟jāʾ. The low plateau (an average of 600 metres above sea-level) which forms the "heart" of the Ḥawrān (known as Nuḳra, "hollow"), and the slopes of the mountain as well are covered with arable land produced by the decomposition of volcanic rock; water from the many springs rising on the side of the massif, together with the relatively frequent rainfall, allows the growing of cereals.

Ḥawrān has been inhabited from a very early date. Its small towns and villages are mentioned in the Tell el-Amarna letters and in Deuteronomy (III, 4-5), but the region at that time was generally known as Bas͟hān. Occupied by the Hebrews during the second half of the second millennium B.C., its possession was disputed by the kingdoms of Israel and Damascus; it was finally devastated and conquered by the Assyrians, who remained masters of it for a century (732-610 B.C.). During the following centuries, Achaemenid domination assured Ḥawrān a long period of peace, during which towns developed and the country became extensively Aramaized. The Hellenistic and Roman periods were less settled: at the time of the decline of the Seleucid empire a number of small autochthonous states grew up around the Ḥawrān which became the scene of their battles. It was mainly the Nabataeans, of Arab origin, who infiltrated into the Ḥawrān and settled permanently in the south, at Busrā and Ṣalk͟had, while the Idumeans were entrusted by the Romans with maintaining order in the areas of Trachonitis (Lad͟jāʾ), Auranitis (D͟jabal Ḥawrān) and Batanea (the plain of Ḥawrān). It was in 106 A.D. that the Romans annexed Ḥawrān, the southern part of which became part of the new province of Arabia, while the rest, which was first attached to the province of Syria, later also became gradually attached to Arabia.

The Roman period was characterized by the development of towns and large villages, inhabited mainly by Aramaeans and Jews, and by the increasing infiltration of Arab elements, Nabataean and Safaitic. This infiltration continued to increase during the Byzantine period, when new groups, sometimes from southern Arabia, penetrated into Ḥawrān and the neighbouring steppes, gaining control of the edges of the desert. Some took service with the Byzantines. These, the G͟hassānids, supplanted the Banū Ṣāliḥ in about the 5th century A.D. They were semi-nomads who made in Ḥawrān permanent encampments, the most famous of which was that of al-D͟jābiya [*q.v.*]. The country then became profoundly arabized, while at the same time Christianity spread.

Ḥawrān was finally conquered by the Muslims in Rad͟jab 13/September 634 after the battle of the Yarmūk which halted the Byzantine counter-offensive. Its population seems to have supported the Umayyads and, after their fall, rose under the leadership of a certain Ḥabīb b. Mūsā in a revolt which was suppressed by ʿAbd Allāh b. ʿAlī [*q.v.*], the uncle of the ʿAbbāsid caliph.

During the ʿAbbāsid period Ḥawrān suffered particularly from the incursions of the Carmathian bands [see ḲARMAṬĪ]. Then, in the period of the Crusades, the country was the scene of battles and many raids by the Crusaders who came periodically to pillage the area, attempting to seize its main fortresses, or crossed it on their way to attack Damascus. But Ḥawrān also suffered from the activities of Zangī [*q.v.*], when he was attempting to take Damascus. It was in 614/1217 that the Crusaders made their last appearance in Ḥawrān. Soon afterwards, in 642/1244, the north of the country was ravaged by the K͟hʷārazmians who had been sum-

moned by the Ayyūbid rulers, and then, in 658/1260, the Mongols appeared there, before their defeat by the Mamlūks at ʿAyn Djālūt [*q.v.*].

In the 6th-7th/12th-13th centuries, Ḥawrān was divided into the two districts of Ḥawrān proper, corresponding to the Auranitis of antiquity, and of al-Bathaniyya, corresponding to Batanaea, both of them belonging to the province of Damascus. It was then a prosperous region, with numerous villages, with a large production of cereals, and with a partly Christian population.

During the Mamlūk period the region was composed of the two *wilāyas* of Ḥawrān, with its capital at Buṣrā, and al-Bathaniyya, capital Adhriʿa, together with the *niyāba* of Ṣalkhad whose powerful fortress was commanded by an *amīr* of high rank. To it there was probably added a district corresponding to the Ladjā', with its capital at Zurʿ. At this time the country was crossed by the *barīd* [*q.v.*] route from Damascus to Ghazza, while the pilgrim caravans set off from Buṣrā. But the region was, in the 8th/14th century, troubled by the infiltration of nomad groups belonging to the Banū Rabīʿa who gradually settled there.

The Ottoman period saw the penetration of a further nomad group belonging to the Banū Rabīʿa, that of the ʿAnaza, who drove towards the west the nomads who had arrived earlier and penetrated into the settled area, spreading disorder and insecurity. The inhabitants of the villages were forced to pay a "brotherhood tax" and there arose between the rival groups, particularly at the beginning of the 19th century, battles to which the *pasha* of Damascus had to put a stop. In the 12th/18th century the pilgrim route was moved further to the west, the pilgrims no longer assembling at Buṣrā but at al-Muzayrib, where from this time an annual fair was held.

The 18th and 19th centuries witnessed also the settlement in the Djabal Ḥawrān of the Druzes who had originally been dwelling in southern Lebanon. During the 18th century these mountain people drove the original inhabitants down onto the plain and their presence formed a new element of unrest. While, in about 1844, the Rwāla tribe appeared in Ḥawrān and entered into conflict with the ʿAnaza, the Druzes who had remained in Lebanon and who had been implicated in the massacres of 1860 also fled to the Djabal Ḥawrān, driving out the last remaining non-Druze inhabitants. During the final years of the 19th century, the Ottomans incorporated Ḥawrān in a larger province which, in addition to the Djabal Ḥawrān and Nuḳra, comprised, Djaydūr, Djawlān, ʿAdjlūn and the Balḳā. This new province served as a base for expeditions intended to subdue the Druzes, and it was at this time that colonies of Circassians were introduced into the country. Though unable to pacify the country entirely, the Ottomans nevertheless restored security in the plain, where the nomads ceased to demand from certain villages the payment of the brotherhood tax. The construction in 1904 of the Ḥidjāz railway [*q.v.*] put an end to the gathering of pilgrims at al-Muzayrib and to the annual fair there. This railway played a strategic rôle in the 1914-18 war, particularly during the retreat of the Turkish army in September 1918.

Occupied by the troops of the *amīr* Fayṣal for nearly two years, Ḥawrān revolted in July 1920 when French troops entered Damascus. Another insurrection, by the Druzes in 1925, was suppressed with more difficulty. Nevertheless the Druze and Ḥawrān region experienced under the French mandate a period of relative security and prosperity during which the settled population was protected from the demands of their nomad neighbours.

In the state of Syria, Ḥawrān, restored to its usual limits, formed a *liwā'* having its capital at Adhriʿa and made up of two *ḳaḍā's*—Adhriʿa and Azraʿ. Its population in 1933 was 83,000, 77,000 of them dwelling in 110 villages, some of which, such as Adhriʿa, Nawā, Buṣrā and Azraʿ, are in fact small towns. The population is heterogeneous: together with the Druzes, living mainly on the mountain, and the Sunnī Muslim Ḥawrānī peasants, there are found Circassians, nomads in the process of becoming settled, and some Orthodox or Catholic Christians, generally grouped on the edge of the mountain.

Ḥawrān is now a busy and prosperous region. It is the "granary of Syria", it is crossed by the road and railway which link Damascus and Jordan, and it is frequented by the nomads who come there after the harvest to exchange wool and butter for the various commodities they need.

ḤAWSHABĪ (pl. Ḥawāshib), a South Arabian tribe and sultanate. The land of the tribe, north of Aden in the western British Protectorate of South Arabia, is a rough quadrilateral with one of the shorter sides abutting on the Yaman, whence the land extends southeastwards to the Faḍlī sultanate [*q.v.*], which cuts it off from the sea. North of the Ḥawshabī sultanate are the ʿĀmirī and ʿAlawī states [*qq.v.*], while to the south lies the ʿAbdalī state [*q.v.*] of Laḥdj with its dependent Ṣubayḥī tribe [*q.v.*]. The Ḥawshabī sultanate is of strategic importance for its command of the main route from Aden to Taʿizz in the southern Yaman and its control of the upper reaches of Wādī Tuban, the principal source of water for Laḥdj. The capital, al-Musaymīr, is less than 100 km. from Aden and about 80 from Taʿizz. On the right bank of Tuban, it consists of little more than the sultan's rude stone palace and a cluster of huts. The Ḥawshabī tribe may number some 10,000 souls.

The Ḥawāshib are identified by al-Hamdānī (4th/10th century) as a branch of Ḥimyar living on Djabal Ṣabir (not far west of their present home) with the Sakāsik and the Rakb, all under a Ḥawshabī chief. The implication in *EI*[1] that the modern tribe is of "pure Ḥimyarite descent" is not, however, accurate, as among its members today a strong African strain is evident.

Although the Ḥawāshib concluded their first agreement with the British in 1255/1839, they did not sign a protectorate treaty until 1313/1895. The Anglo-Ottoman convention of 1332/1914 defined

inter alia the boundary between the Ḥaws͟habī territory and the Yaman, but the collapse of the Ottoman Empire introduced a new situation, and in recent years both the Mutawakkilite Kingdom of the Yaman and the Yaman Arab Republic have claimed the Ḥaws͟habī territory as part of "occupied south Yaman". The Ḥawās͟hib have at times clashed with their stronger neighbour Laḥd͟j; at other times they have recognized the suzerainty of the ʿAbdalī ruler (see, for example, the text of the pledge of allegiance in 1312/1895 in al-ʿAbdalī, pp. 177-9, with the names of many *ʿāḳils* of the Ḥawās͟hib). In 1382/1963 the Ḥaws͟habī sultan, Fayṣal b. Surūr, joined the Federation of South Arabia.

(G. RENTZ)

ḤAWṬA, enclave, enclosure, is the name given in southern Arabia to a territory generally placed under the protection of a saint which thus is considered sacred. The term belongs to classical Arabic and in fact means "precaution". Nevertheless, inherent in the root *ḥ w ṭ* is the technical meaning given to this word by the Arabs in the south: it does in fact express the action of surrounding, of encircling, but also that of defending, of guarding and, by extension, of preserving; whence the substantive *ḥawṭ*: a red and black twisted cord which a woman wears round her hips to protect her from the evil eye (*LA*, s.v. *ḥ w ṭ*).

There exist many *ḥawṭa*s in southern Arabia. W. Thesiger found several while travelling from Salala to the Ḥaḍramawt across the interior. He particularly mentions one at Mug͟hs͟hin, on the edge of al-Rubʿ al-K͟hālī, to the north-east of Ẓufār (*Arabian Sands*, 97). The most important *ḥawṭa* of Arabia is probably that of ʿInāt, to the south-east of Tarīm: it contains the remains of the famous Sayyid Muḥsin b. Sālim, of the family of the *s͟hayk͟h* Abū Bakr, the greatest saint of the Ḥaḍramawt. Second in importance is the *ḥawṭa* situated in the region of the upper Wāḥidīs: here is buried another great saint, the *faḳīh* ʿAlī b. Muḥammad. Lahd͟j, capital of the territory of the ʿAbādil, is also called *Ḥawṭa* because several saints are buried there.

The sacred nature of the *ḥawṭa* is attested by a certain number of tabus which protect its fauna and flora. W. Thesiger states that at Mug͟hs͟hin it is forbidden to kill the hares. Also his companions warned him of the dangers involved if one cuts the branches or the trees in a *ḥawṭa*—an act which would result in many disasters, and even in death, for its perpetrator (*op. cit.*, 97). R. B. Serjeant speaks of the respect (*iḥtirām*) due to the *ḥawṭa*, which is hailed by a cry called *taʿs͟hīra* (*Ḥaram and Ḥawṭah*, 44), known to the early Arabs. These, on arriving near to a place where they suspected there was an epidemic, placed their hands behind their ears and uttered ten loud cries in succession, hoping thus to exorcize the evil. In the case of the *ḥawṭa*, the *taʿs͟hīra* expressed the fear inspired by this holy place, which Serjeant has no hesitation in comparing with a *ḥaram*. It does indeed possess the same main privileges, notably the security assured to all its inhabitants, protected as they are by the law of God and of His representative, the patron saint of the *ḥawṭa*. It is in fact a place of refuge and sanctuary. The prohibition of all killing within the holy enclosure is a strict one and the violation of this rule is considered a very serious offence. In order to expiate this crime, the guilty tribe must execute one of its members, though not necessarily the murderer himself. The comparison with the *ḥaram* can be taken further. Like the *ḥaram*, the *ḥawṭa* is composed essentially of two concentric sections which are not equally sacred. The first of them encloses the remains of the saint who founded it and over whose tomb a cupola has been erected. All around this sacred nucleus extends a wide area whose borders, well- or ill-defined, mark the extreme limit of the *ḥawṭa*. Beyond this line the ground is no longer sacred.

In spite of these points which the *ḥaram* and the *ḥawṭa* have in common, it is difficult to consider the latter as a true sanctuary. It has in fact been created by the initiative of an individual: a man belonging to a family famed for its sanctity declares to be sacred, one might say tabu, an area of ground over which he intends to exert his jurisdiction. But his action depends for its effectiveness on the agreement of the neighbouring tribes who must first sanction this decision. Indeed it is they who will have to defend the *ḥawṭa* and ensure that it remains inviolate, so that without their agreement arrangements made unilaterally can have no effect. Serjeant cites the case of a member of the family of the Sayyids who, having had no success in his politico-religious offices, had to leave his native region and found another *ḥawṭa* elsewhere.

Thus a *ḥawṭa* may be considered as halfway between the *ḥaram*, a place where a holy power manifests itself, and the *ḥimā* [*q.v.*], a territory under the protection of a powerful overlord. The *ḥawṭa*, which contains no relic when it is created, possesses one finally when its patron dies.

Once the security of an area declared *ḥawṭa* is admitted and assured, merchants, peasants and others arrive and settle there, by agreement with the founder, who then bears the title of *munṣib*, dignitary, and who is accorded certain polito-religious privileges known as *d͟jāh*. Under his authority, the *ḥawṭa* may become a meeting place for the tribes, a market, a centre of exchange where religion and commerce often flourish side by side.

Bibliography: W. Thesiger, *Arabian Sands*, London 1959; R. B. Serjeant, *Ḥaram and Ḥawṭah, the sacred enclave in Arabia*, in *Mélanges Ṭāhā Ḥusayn*, Cairo 1962, 41-58.

(J. CHELHOD)

AL-ḤAWṬA, the name of a number of towns in Arabia, the more important of which will be cited here. Those lying in the southern part of the peninsula contain the shrines of famous saints (see the article immediately preceding). Ḥawṭat al-Ḳaṭn, under the south wall of Wādī Ḥaḍramawt some 20 km. west of S͟hibām, belongs to the Ḳuʿayṭī sultanate of al-S͟hiḥr and al-Mukallā, the paramount state of the eastern British Protectorate of South Arabia, and the palace there has served as the residence of the Ḳuʿayṭī governor of the S͟hibām province. Bent has described the structure: "Like a fairy palace of the Arabian Nights, white as a wedding cake, and with as many battlements and pinnacles, with its windows painted red . . . behind it rise the steep red rocks of the encircling mountains". Some of the inhabitants of the town are members of Yāfiʿ, the Ḳuʿayṭī sultan's tribe.

The town of al-Ḥawṭa in the upper basin of Wādī Mayfaʿa, also in the eastern Protectorate, is not far

north of ʿAzzān, the capital of the Wāḥidī sultanate of Bal-Ḥāf, within whose domains it falls. Landberg's information on this town of al-Ḥawṭa is digested in *EI*[1], ii, 295-6. In the Lower ʿAwlaḳī sultanate, a state of the western Protectorate, the village of al-Ḥawṭa lies on the coast near the mouth of Wādī Aḥwar and the inland town of Aḥwar, the capital of the sultanate. The seat of the ʿAbdalī sultan of Laḥdj [*q.v.*], the premier chief in the western Protectorate, is the large town of al-Ḥawṭa al-Djafāriyya, which takes its name from the shrine of the saint Muzāḥim Bal-Djafār, whose *ziyāra* is celebrated in the month of Radjab.

The tribe of Tamīm [*q.v.*] has been established in central Nadjd since pre-Islamic times. One of its centres is the valley called by al-Hamdānī (4th/10th century) Baṭn al-Faḳī, and now known as Wādī Sudayr, northwest of al-Riyāḍ. The valley runs down the eastern slope of Ṭuwayḳ and empties into al-ʿAtk [*q.v.*]. Among the settlements of Tamīm there al-Hamdānī lists al-Ḥāʾiṭ, which is probably identical with the modern al-Ḥawṭa (Ḥawṭat Sudayr) in the middle section of the valley, between al-Rawḍa and al-Djanūbiyya. The population of al-Ḥawṭa does not, however, hail exclusively from Tamīm, as there are elements of Banū Zayd and Banū Khālid present. Tamīm has another centre south of al-Riyāḍ in the region of ʿUlayya where Wādī 'l-Ḥawṭa also runs down the eastern slope of Ṭuwayḳ. Wādī 'l-Ḥawṭa is roughly parallel to Wādī Birk [see AL-AFLĀDJ], which lies just south of it. In the middle section of Wādī 'l-Ḥawṭa is al-Ḥarīḳ or Ḥarīḳ Naʿām (Naʿām is the name given by al-Hamdānī to the valley). Farther down, the valley makes a sharp turn and runs northwards under the name of Wādī 'l-Sawṭ (mentioned by al-Hamdānī) to empty into Wādī 'l-Sahbāʾ [see AL-KHARDJ]. Just before the turn is al-Ḥawṭa itself, also called Ḥawṭat Banī Tamīm, a group of oases of which the main ones are al-Ḥilla and al-Ḥilwa. Other Arabs live side by side with Tamīm. Close ties link the people of Tamīm in the two Ḥawṭas.

In neither of the Ḥawṭas of Nadjd is there any indication of the existence of a shrine. The men of Tamīm in these parts are noted for their fanatical devotion to the teachings of Muḥammad b. ʿAbd al-Wahhāb [*q.v.*], himself a member of this tribe, who vigorously attacked the cult of saints and popular reverence for shrines. In 1918 the late King ʿAbd al-ʿAzīz Āl Suʿūd told Philby: "... the folk of Hauta and Hariq are ignorant and difficult, wild and truculent; leave them to one side and come not near unto them".

ḤAWWĀʾ (Eve), wife of Ādam [*q.v.*]. This name does not appear in the Ḳurʾān, which speaks only (VII, 18/19-22/23 and XX, 120 f.) of the "spouse" guilty jointly with her husband of the disobedience which cost them expulsion from Paradise. The only mention of this name in Arabia in pre-Islamic (?) times was in a verse of ʿAdī b. Zayd, if its authenticity is reliable. The Muslim writers after the revelation of the Ḳurʾān all give the name of Ḥawwā to the spouse of the First Man. The biblical etymology of Ḥawwā (Genesis, III, 20: "mother of all living") is cited in the name of Ibn ʿAbbās (Ibn Saʿd, *Ṭabaḳāt* i/1, 16), and it is known also (*ibid.*) that her name in "Nabataean" was *ʾththa* (the word for "wife" in Aramaic.) The legendary details concerning the first couple [see also ĀDAM, HĀBĪL WA-ḲĀBĪL] are most often adapted from Rabbinical sources and the Syriac "Cavern of Treasures". Ḥawwā was created in Paradise from a left rib removed from her husband while deeply asleep,—a painless operation, as otherwise no man would feel affection for his wife. Adam gave her the name Ḥawwā, because she was formed from a living being. Adam issued from the dust and Ḥawwā from a bone: man with age becomes more and more handsome, and woman more and more ugly. The espousals of the first couple were celebrated with the assistance of God and the angels. According to a tradition, Adam tasted the forbidden fruit only after having been intoxicated by the wine which Ḥawwā made him drink. Ten punishments, among them menstruation, pregnancy and the sufferings of childbirth, remind the daughters of Eve of the fault of their first ancestress. They received, however, as consolation, the assurance that every pious woman, devoted to her husband, would have a place in Paradise, as compensation for the grievous suffering of parturition. If she dies in childbirth, she takes her place among the martyrs and is united with her husband in the hereafter. A legend tells also how Adam and Eve dressed themselves when they found themselves naked after their sin: in wool spun by the woman and woven by the man. Their life after the expulsion began by a long separation [see ĀDAM] but, according to a different tradition, as soon as they had left Paradise, the husband and wife made the pilgrimage to Mecca fulfilling all the ceremonies, and Ḥawwā had her first menstruation there, after which Adam stamped his foot on the ground and the well of Zamzam sprang forth, allowing his wife to proceed with her ritual purification. Ḥawwā died two years after Adam and was buried beside him.

Muslim Neoplatonism and mysticism, Sunnī as well as Shīʿī, make of Ḥawwā (as of Adam) entities of their metaphysical hierarchy (intellect-soul, form-matter); in Ismāʿīlī esoterism, Ḥawwā is a symbol of "the spiritual and mystical signification which *is* Paradise" (H. Corbin).

ḤAWWĀʾ [see ḤĀWĪ and RUḲYA].

AL-ḤAWWĀʾ [see NUDJŪM].

HAWWĀRA (also Huwwāra; now Howwāra or Hewwāra), name of a Berber people. Disregarding the legends which give them a Yemenī origin, we must remember that ancient Arabic authors do not agree about their place in the Berber family. The Muslim geographer al-Iṣṭakhrī (340/951) regards them as members of the Butr branch of the Berbers, whereas most Berber and Arabic genealogists, whose

opinions are given in the *History of the Berbers* of Ibn Khaldūn (8th/14th century), regard them as a tribe forming part of the al-Barānis branch, believing them to be descended from Hawwār b. Awrīgh (Ibn ʿIdhārī: Awzīgha) b. Burnūs. It must be said, however, that according to the Berber genealogist, Sābiḳ b. Sulaymān al-Maṭmāṭī, and Ibn Ḥazm [*q.v.*], at least a part of the tribes considered to belong to the Hawwāra, that is to say the descendents of Addās, son of Zadjdjīk, drew their origin from the Butr Berbers, thus agreeing with the opinion of al-Iṣṭakhrī. The tribes of the Hawwāra and other Berber tribes related to them were very numerous. The principal ones were: the Addāsa (Tāsā?), the Andāra, the Awtīta (Huṭīṭa), the Baṣwa, the Gharyān, the Harāgha, the Banū Īrmazyān (Marmazyān), the Ḳaldīn (Ḳaldīn), the Kamlān, the Karkūda, the Lahān or Lahāna (Luhān, Luhāna), the Maghar, the Malīla, the Maslāta (Masallāta), the Mindāsa or Mindās (Mandāsa, Mandās), the Misrāta (Miṣrāṭa), the Razīn (Rāsīn), the Saṭaṭ, the Tarhūna (Tarhuna), the Wannīfan (Wannīfa), the Warfalla (Warfal), the Wargha, the Warsaṭifa (Warsaṭīf), the Washtāta, the Yaghmorāsen (Ghomrāsen?), the Zakkāwa and the Zanzafa.

In the earliest days, say Ibn Khurradādhbih (232/846-7) and al-Masʿūdī (345/956), the Hawwāra lived in the country of Ayās (Oea), that is, Tripolitania, "a country which then belonged to the Rūm/Byzantines". They continued to live there, along with other Berber tribes, such as the Nafūsa [*q.v.*], the Zenāta [*q.v.*], the Mazāta [*q.v.*] and the Lawāta [*q.v.*], at the time of the Muslim conquest. It seems that in the later decades of the 1st/7th century, at the time of the great movements of the Berber peoples, in flight from the invaders and resettling in the west of Ifrīḳiya and in the Maghrib under the leadership of Kusayla [*q.v.*] and afterwards under that of Kāhina [*q.v.*], several Hawwārī fractions left Tripolitania, and spread throughout North Africa. Other Hawwāra followed this first wave of emigration at the time of the Khāridjī rebellion against the orthodox Arabs, a rebellion which broke out about the year 122/740 and in which practically all the Berbers took part. The Hawwāra, who had been converted to Islam at the end of the 1st/7th century or the beginning of the 2nd/8th, embraced with fervour the doctrines of the Khāridjī sect, becoming in turn Ṣufrīs [*q.v.*], Ibāḍīs (-Wahbīs) [*q.v.*] and finally Nukkārīs [*q.v.*], and took part in every revolt of this sect from the rising of the Ṣufrīs ʿUkāsha and ʿAbd al-Wāḥid al-Huwwārī (124/742), and that of the Ibāḍī Abu 'l-Khaṭṭāb ʿAbd al-Aʿlā b. al-Samḥ al-Maʿāfirī (140/757-8 [*q.v.*]), to the revolt of Abū Yazīd Makhlad b. Kaydād (331-5/943-7) and the rising of 342/953. Because of these revolts, Hawwārī fractions were obliged to make several further migrations, from east to west and *vice versa*. It is during this period too that some of the Hawwāra, who acknowledged the sovereignty of the Aghlabid *amīrs*, settled in Sicily, while others found their way into the Ahaggar. As a result of these migrations, the Hawwāra proper and other tribes regarded as Hawwārī, by infiltrating amongst the autochthonous Berbers, occupied some fairly extensive areas, where they lived as farmers in the mountainous massifs, or as nomads in flat country, obeying their own chiefs. These chiefs usually recognized the nominal supremacy of the various great Muslim dynasties of North Africa and even of Muslim Spain, while sometimes organizing themselves into little independent states. Later, the Hawwāra, weakened towards the middle of the 4th/10th century by the pressure of the Fāṭimids and, in the first part of the 7th/13th century, by that of the Ḥafṣid *amīr*, Abū Zakariyyāʾ, ceased to play any part in political affairs. The greater part of the nomadic Hawwārī tribes of Ifrīḳiya had already by the time of Ibn Khaldūn been completely assimilated by the pastoral Arabs, whose language and way of life they had adopted. They paid tribute to the latter and also to the Ḥafṣid sultans. As for the Hawwārī peoples who lived in central Maghrib, Ibn Khaldūn says that they "graze flocks of sheep, but, burdened by taxation, no longer show that pride and independence for which they were at one time noted, when their warriors were famous for their victories. Now scattered and weakened, they have fallen into degradation". Only the Hawwāra of Morocco seem to have enjoyed a more prosperous situation in the 7th-8th/13th-14th centuries and in the following centuries. In the first part of the 8th/14th century they even became very powerful in the Tamesna district. Many Hawwārī tribes, formerly so powerful, disappeared leaving no trace, and there are no more than a few place names to witness to the existence of these peoples who from the 2nd-4th/8th-10th centuries played such an important part in the history of Ifrīḳiya and the Maghrib.

We may now consider the Hawwārī tribes in the 3rd-10th/9th-16th centuries, that is, the period on which, thanks to the writings of Arabic historians and geographers, we have the most complete and detailed knowledge.

Barḳa and Egypt. According to Ibn Khaldūn, the Hawwāra of Barḳa came to cultivate their crops on the land between Alexandria and old Cairo. Another fraction of this tribe took part in the conquest of Egypt by the Fāṭimid army in 358/969 and were given by the Fāṭimid caliphs a tract of land where the Hawwāra chiefs played some political rôle (see below).

Tripolitania and Fezzān. In Tripolitania, which was the ancient homeland of the Hawwārī tribes, from about the middle of the 2nd/8th century mention is made of an *arḍ Hawwāra* ("country of the Hawwāra"). According to the Arab geographers of the 3rd-6th/9th-12th centuries, the eastern boundary of this land ran through Tawargha (Tauorga) and Waddān (in the oasis of al-Djufra), even through Zāla (Zēlla), an area in ancient times belonging to the Mazāta, eastern neighbours of the Hawwāra. The western boundary first passed through the city of Tripoli (one gate of this city was called Bāb Hawwāra), and then, in the 8th/14th century, west of the oasis of Zanzūr (Zenzūr), where the Hawwārī fraction of the Banū Madjrīs lived. The southern boundary of the country occupied by the Tripolitanian Hawwāra was formed by the Fezzān. Among the Hawwāra tribes who inhabited the *arḍ Hawwāra* the Karkūda should be mentioned, whose name is apparently related to that of the ancient town of Ḳarḳūza (Gargūza), lying south-west of Zanzūr and mentioned by Tidjānī. The Misrāta, whose chief centre was the little town of Suwayḳat Ibn Mathkūd, occupied the most eastern part of the coastal zone of the "country of the Hawwāra". They devoted themselves, according to Ibn Khaldūn and Leo Africanus, to trade with Egypt, the Bilād al-Djarīd and the "country of the Blacks". The name of Wādī Magher (Wādī Mager, to the south-east of Zliten) doubtless has its origin in that of the tribe of the B. Maghar, which is mentioned in this part of Tripolitania in the year 681/1282. The home of the

Malīla is not known. The Ibāḍī chronicles refer to the existence of this tribe in Tripolitania in the 2nd/8th century. The Lebda region—according to Ibn ʿAbd al-Ḥakam the most ancient settlement of the Hawwāra—was occupied by the tribe of the Maslāta (Massallāta), whose name survives in that of the present Djebel Msellāta. This tribe was still rich and powerful in the 10th/16th century. Earlier, towards the interior, Arabic sources note the presence of the Tarhūna, who led a nomadic life in the present homonymous district, and also that of the B. Gharyān (mentioned in the 7th/13th century). The Hawwārī tribe of the B. Washtāta, who disappeared at an early date from Tripolitania, have left their name in Uestat, a little fort to the south of Gaṣr Tarhūna. Further towards the interior, in the neighbourhood of Benī Ulīd and of Bū Ndjem, wandered the B. Warfalla (today Ōrfella). This latter tribe, with the Misrāta and the Marmazyān, formed in the 3rd/9th century the eastern branch of the Tripolitanian Hawwāra, called Lahān (al-Luhān). In 245/859 this branch was in rebellion against the Aghlabid government. We must also add that to the east of the *arḍ Huwwāra*, in the heart of the Mazāta country, lived the Hawwārī tribe of the Mindāsa.

The Tripolitanian Hawwāra, who were the chief support of the Ibāḍī *imāms*, Abu 'l-Khaṭṭāb al-Maʿāfirī and Abū Ḥātim al-Malzūzī (d. 155/772), remained for a long time faithful to Ibāḍī doctrines, except for a Malīla fragment, who were Sunnī, and the inhabitants of the Kirza (Ghirza) district, probably Warfalla, who were still pagan in the 5th/11th century. They became orthodox only towards the 5th-6th/11th-12th centuries, except, however, those living in the Gharyān district and some neighbouring areas, who were still Ibāḍīs in the 8th-9th/14th-15th centuries.

At Fezzān, Arabic sources mention the existence at the beginning of the 4th/10th century up to the end of the 6th/12th century, of a small Ibāḍī-Berber state, whose capital was Zawīla [*q.v.*] and which was ruled by the Hawwārī dynasty of the B. Khaṭṭāb. A Hawwāra tribe, namely the B. Ḳaldīn, lived in the Fezzān town of Tamermā in the 5th/11th century.

Tunisia. In the south-east of Tunisia, in the neighbourhood of the town of Gabès and in the south-Tunisian Djebel, lived the Hawwārī tribe of the Zanzafa, which already by the beginning of the 2nd/8th century is noted as professing Ibāḍī doctrines and obeying a Rustamid governor. Further to the north-east, round about Tozeur, the Saddāda oasis perhaps owes its name to the Saṭaṭ Hawwārīs. Between Gabès and Sfax, at al-Maḥras, in the time of Tidjānī there lived a Hawwāri fraction, who came there at a time difficult to specify, probably about the 6th-7th/12th-13th centuries, from Tripolitania. In the time of Leo Africanus they spoke the same Berber dialect as the inhabitants of Djerba, with whom they were in contact. Some isolated Ibāḍī Hawwāra established here in the 8th/14th century are mentioned by Ibn Khaldūn. Another Hawwāra group lived, according to Ibāḍī sources, at Bāṭin al-Mardj in the 3rd/9th century, in the northern zone of the Tunisian Sāḥil. West of this region there was, at that time, an Ibāḍī population made up of Hawwāra and Mazāta, established in the plain of Ḳayrawān, the *Faḥṣ Ḳayrawān* of the early Arabic sources. These seem to be Hawwārī groups whose ancestors came from Tripolitania, in about 141/758, with ʿAbd al-Raḥmān b. Rustam, governor of Ifrīḳiya for the Ibāḍī *imām*, Abu 'l-Khaṭṭāb al-Maʿāfirī. Later on these Hawwāra groups were joined by the B. Kamlān, a Hawwārī tribe from the region south of Constantine, brought to the plain of Ḳayrawān in 315/927 from Hodna, near the later al-Masīla, by the Fāṭimid prince, Abu 'l-Ḳāsim. They appear again in this district in the year 332/944, in revolt against the Fāṭimid al-Manṣūr, in the ranks of the army of the famous Nukkārī chief Abū Yazīd Makhlad b. Kaydād, of whom, together with their *confrères* south of Constantine, they became the most faithful followers. Another group of the B. Kamlān, from Zāb, settled at Ḳayrawān, after the defeat of Abū Yazīd. Abu 'l-Ḳāsim established some Hawwāra also in the Djabal Zaghwān, a canton to the south of the city of Tunis. Further to the west, the whole *Haut-Tell* of Tunisia was in the Middle Ages the classical homeland of Hawwārī tribes. They appear already in 124/742 in the neighbourhood of Bādja (Béja), whither they came with the Ṣufrī chief ʿAbd al-Wāḥid al-Hawwārī. It is in the same region that Arabic sources mention the Hawwāra as being in revolt against the Aghlabid *amīr* Ibrāhīm b. Aḥmad in 268/882. A Hawwārī tribe, the B. Sulaym, lived in the area to the north of Béja in the 8th/14th century. Two other Hawwāra fractions, namely the B. Wargha (Wergha) and the B. Washtāta (Ūshtāta), have survived to this day in the Tunisian *Haut-Tell*. In the 8th/14th century the B. Wannīfan inhabited the district between the plain of Marmādjna (Marmādjanna, now Bermajna, along the banks of the Oued Sarrath) and the neighbourhood of Tébessa. They are mentioned at this time also at Bulṭa (Bilṭa), in the province of Bādja. One fraction still survives, under the name of Ūnīfa, near Kēff. In the 5th/11th century, in the district of Sabība (Henshīr Sbība), there was, among other Hawwāra fractions, a branch of the B. Kamlān, whose territory still stretched some way to the west, in the direction of Tébessa and Djebel Awrās. The Baṣwa tribe in the 8th/14th century occupied the lands between Téboursouk and Zaghwān, while the Ḳayṣar tribe appeared from the year 624/1227 in the plain of Ebba (Ubba) as well as in the area between this place and Lorbeus.

Algeria. In Algeria in the 1st-2nd/7th-8th centuries there were several Hawwārī tribes and fragments, distributed between two regions: to the south of Constantine and to the east of Oran. The Hawwāra are already mentioned there, at Zāb, in 124/742. It is here too that several Hawwāra groups (among others the B. Kamlān) are later (in 250/864) found in revolt against the Aghlabid government. Other Hawwārite groups came to settle in the Zāb around 342/953, after the defeat which the Fāṭimid ruler al-Muʿizz inflicted on the Ibāḍī Hawwāra of the Djebel Awrās. They were still living there in the 5th/11th century, north of the town of Tahūda, and still faithful to Ibāḍism. Al-Yaʿḳūbī also describes Hawwārī fractions (among others the Saghmār) in the western Zāb. It is probably from the Zāb that certain Hawwāra groups found their way to the Wēd Sūf and the Wēd Rīgh, where they are described by Ibāḍī sources towards the 6th/12th century. Certain Hawwārī tribes and fractions inhabited, along with other Berber peoples, the Aurès (Awrās) massif and the area to the east of this, towards the town of Tébessa. Ibāḍī Hawwāra are already found there towards the end of the 2nd/8th century, at the beginning of the reign of the Rustamid *imām*, ʿAbd al-Wahhāb b. ʿAbd al-Raḥmān. A hundred years later they are again mentioned as dwelling there, by al-Yaʿḳūbī. At the time of the revolt of Abū Yazīd Makhlad b. Kaydād (whose mother was descended

from the Hawwāra), the B. Kamlān of the Aurès and other Hawwārī fragments who had settled in this area and been converted to Nukkārism by this chief remained to the end faithful to the doctrines which he preached. It is only in 342/953 that the B. Kamlān and the Malīla of the Aurès submitted to al-Muʿizz. Among the Hawwārī tribes of the Aurès were also the Lahān, who, according to Ibn Ḥawḳal, lived at Dūfāna (today ʿAyn Dūfāna, on the road from Batna to Khenshela). Survivors of the ancient Hawwāra people still lived in the Aurès in the 8th/14th century, but dominated by the Lawāta. It seems that the northern boundary of the South Constantine territories once inhabited by the Hawwārī tribes was ʿAyn Mlīla (about 50 km to the south of the town of Constantine), whose name comes from that of the Malīla fragment. A Hawwāra population also still existed at Tifesh in the 9th/15th century. To the west of Batna, between this town and Ngaous, the name of Huwwār (Howwār), the eponym of the Hawwārī tribes, survives in that of Téniet Hoggar (Thaniyyat Hoggār, "Gorge of Hoggār"), the change from *ww* to *gg* being a normal phenomenon in Berber phonetics. To the north-west of the Aurès a fragment of the B. Kamlān is frequently mentioned by Arabic authors as inhabiting, in 315/927, the plain of Hodna, in the region of the later al-Masīla. The Hawwāra are described there again in the 5th/11th and 6th/12th centuries. Part of the mountainous chain which extends to the north of Hodna was occupied in the time of al-Bakrī by the powerful Berber tribe of the B. Yaghmorāsen, regarded as belonging to the Hawwāra, and numbering 60,000. Their chief town, Ghadīr Warrū has been identified as the present Bordj Redīr (Bordj Ghadīr), south of Tocqueville. It seems that the B. Yaghmorāsen were identical with the Hawwāra living at al-Ghadīr (= Ghadīr Warrū?), and submitting to Fāṭimid rule in about 335/946-7, according to Ibn Ḥammādo. East of Oran and on the western boundaries of the former department of Algiers, Arabic sources describe the presence of Ibāḍī Hawwāra in the neighbourhood of Tāhert [*q.v.*] around the end of the 2nd/8th century. Perhaps these were the same groups which had gone from Tripolitania to Ḳayrawān with ʿAbd al-Raḥmān b. Rustam and accompanied their chief in his flight to the Maghrib, establishing themselves near the capital of the Rustamid *imāms*. In the time of the *imām* ʿAbd al-Wahhāb b. ʿAbd al-Raḥmān b. Rustam (168/785-5 to 208/823-4) the Hawwāra were in revolt against this chief and occupied the valley of the Mina (tributary of the Chelif), where they had organized a small state under the local dynasty of the B. Masāla. The centre of this state was situated, towards the end of the 3rd/9th century, on the territory of Hillil and Relizane. In all probability the state of the B. Masāla included also the Ḳalʿat Hawwāra [*q.v.*], today Ḳalʿat B. Rāshid, lying in the mountains between Relizane and Mascara and in later centuries the headquarters of the Hawwāra of the Mina. Some other Hawwārī fractions established themselves, probably in the 2nd/8th century, on the plateau of Sersū and in the massif of Wānsherīsh (Ouarsenis). Among the Hawwāra of Oran were also a fraction of the Misrāta, whose name survives in that of the caves of Mesrāta near Ḳalʿat B. Rāshid, and a branch of the Mindās, which has given its name to the plateau on the right bank of the Mina (mentioned by Ibn Khaldūn) and to the present village of Mendez to the south-east of Relizane.

Ahaggar (Hoggar). This region owes its name to the Touareg tribe of the Ahaggar [*q.v.*], whose name preserves that of the Hawwāra (Howwār > Hoggār). A fragment of the latter "crossed the sands", says Ibn Khaldūn, and settled next to the tribe of the Lamṭa, "wearers of the veil", who lived near the town of Kawkaw (Gao) in the "country of the Blacks". Ibn Baṭṭūṭa—who in 754/1353 crossed the country of this tribe (which he calls Hukkār < Hoggār) while travelling from Takaddā (in Aïr) to Tawāt (Touat)—says that its members wore veils on their faces. The history of the Ahaggar before the 8th/14th century is unknown. However, it seems that the arrival of this tribe in the territory which they now occupy must have been connected with the defeat inflicted on the Hawwāra of the Aurès by the Fāṭimid ruler al-Muʿizz in 342/953 and with the dispersal of the "assemblies" of these rebels, some of whom, Ibn Ḥammādo tells us, fled as far as the "country of the Blacks". We have mentioned above a place, west of the Aurès, called Thaniyyat Hoggār, which might be the point from which the Hawwāra of the Aurès set out for the Ahaggar in the second half of the 4th/10th century. Yāḳūt [*q.v.*], quoting the lost geographical work of al-Muhallabī (364-85/975-96), mentions an important state, with its "capital" Aksintilā, situated in the middle of Ifrīḳiya and ruled by a chief of the Hawwāra tribe. This account, in other particulars extremely far-fetched, may relate to the beginning of the Hawwārī confederation of the Kəl Ahaggar.

Morocco. Nothing is known for certain about the history of the Hawwārī tribes of Morocco, traces of which, however, are to be found in this country from the 3rd/9th century, and certain groups of which have survived in various regions of the country to this day. It seems possible that the Hawwāra came to Morocco with the Berbers of Ifrīḳiya and of the central Maghrib, who, according to the author of *al-Bayān al-mughrib*, went to Tangier with the Muslim governor of that city, the future conqueror of Spain, Ṭāriḳ b. Ziyād. Today a Hawwāra fraction is to be found in the plain of Tafraṭa in the east of Morocco, on the right bank of the Mulūya, and, further to the north, to the east of the lower course of this river. The name of the town of Malīla (Melilla), already attested in the 4th/10th century, derives from that of the homonymous Hawwāra people. In the 10th/16th century the B. Razīn are found in the Rif and in the 5th/11th century, between Tangier and Ceuta, a township named Huwwāra. In the interior of the Rif, east of the upper course of the Oued Ouergha (whose name derives from that of the Hawwārī Wargha) and in the neighbourhood of the powerful Dsūl tribe (Tasūl in Arabic sources) are today to be found the homes of the Hewwārat al-Ḥadjar. It was this Hawwāra fraction whose land was divided and fell to the Idrīsid prince Dāwūd (with that of Tasūl) in 213/828-9. The Hawwārī fragment of the B. Ziyād, a branch of those Hawwāra, who lived at the town of Zulūl (Zalūl), appeared in the 5th/11th century near the town of Azīla, not far from another branch of this tribe, namely the Hawwārat al-Sāḥil ("Hawwāra of the coast"). There were also Hawwāra among the Berber groups inhabiting the Fez region. We know this from al-Bakrī, who describes another Tarhūna fragment there. A place named Washtāta, mentioned by the same geographer as being near Fez, is known to be connected with the homonymous Hawwārī tribe. The province of Tāmesna, in the west of Morocco, was occupied in the 7th/13th century by the Hawwāra and the Zenāta, faithful followers of the Marīnid rulers. In the time of Leo

Africanus these peoples comprised 260,000 warriors. Another considerable branch of the Hawwāra lives to this day on each side of the lower course of the Wād Sūs. In the time of al-Idrīsī (549/1154) the people of Aghmāt, a town to the south of Marrākush, who carried on trade with the "country of the Blacks", belonged to the tribe of the Hawwāra. Finally, in the time of Leo Africanus, some Hawwāra lived also in the Sidjilmāsa district.

Spain. Some Hawwāra fragments left northern Morocco at an early date for Spain (with Ṭāriḳ b. Ziyād, according to Ibn Khaldūn). They established themselves there in remote areas, where they enjoyed almost complete independence with regard to the Umayyad *amīrs*. A Hawwārī family called B. Zennūn (B. Dhi 'l-Nūn) was dominant in the Shantabariyya (Santaver) district, where it is mentioned in the year 158/775 as being in revolt against the Umayyad *amīr* ʿAbd al-Raḥmān I. Some Hawwāra lived at Shantabariyya, according to al-Iṣṭakhrī (340/951) and the B. Zennūn dynasty was still in existence in the 5th/11th century. In the immediate vicinity of Shantabariyya, east of this area, the B. Razīn, another Hawwārī fragment from the north of Morocco, settled at an early date. They occupied the plain named after them Sahlat Banī Razīn—Albarracín on modern maps. Obscure in the first centuries of the Umayyad period, this family acquired a certain importance in the second half of the 4th/10th century, and after the downfall of the Caliphate of Cordova became independent. To judge by the place-names of the region, there were also Hawwāra in the neighbourhood of Valencia, where the author of *al-Bayān al-mughrib* mentions a place named Sāḳiyat Huwwāra. The present name of this locality, Mislata, probably comes from that of the Hawwārī Maslāta tribe.

Sicily. It seems from Arabic sources and Christian documents, as well as from the evidence of place-names, that there were also Hawwārī fractions in Sicily. The Hawwāra of Ifrīḳiya took part in the Aghlabid conquest of the island in 212/827. They remained there for a long time. In 592/1196 there were still Hawwāra in Palermo. Among other Hawwārī tribes represented in mediaeval Sicily, the Misrāta, the Malīla, the Karkūda and the Andāra should be mentioned. It seems that at least a part of these immigrants remained faithful to Ibāḍism. Indeed, the 6th/12th century Ibāḍī author, al-Wisyānī speaks of Ibāḍī in Sicily, probably of Hawwāra origin, as being in touch with their co-religionists in North Africa. According to another Ibāḍī source, the *Dhikr asmā' baʿḍ shuyūkh al-wahbiyya* (6th-7th/12th/13th centuries?), Ḳaṣr Yānū (Castrogiovanni) in Sicily constituted the northern limit of the territory occupied by the Ibāḍīs.

Egypt and the Sudan. An important historical rôle was played by Hawwāra of Egypt, a completely arabized group. Their first centre was in the Buḥayra, where they became the dominant tribe. Some Hawwāra were settled in Upper Egypt by Barḳūḳ (c. 782/1380-1), their chief, Ismāʿīl b. Māzin, being granted the *iḳṭāʿ* of Girgā [*q.v.*]. His successor, ʿUmar (d. 799/1396-7) was the eponym of Banū ʿUmar, the ruling clan for the next two centuries. Under the next chief, Muḥammad Abu'l-Sunūn, a period of agrarian prosperity began, connected with the development of sugar-planting. Meanwhile, Hawwāra were expanding in Upper Egypt, and, in 815/1412-3, they attacked and devastated Aswān, then held by Banū Kanz, an Arabo-Nubian clan. The authority of the Mamlūk sultanate was represented in the Hawwārī territory by the governor of Ḳūṣ and Akhmīm, but with the Ottoman conquest of Egypt (922-3/1516-7) this appointment lapsed. The ruling chief, the *amīr* ʿAlī b. ʿUmar, was recognized as the governing authority in Upper Egypt: he is described in Ibn Iyās as "administrator of the districts of Upper Egypt" (*mutawallī djihāt al-Ṣaʿīd*), as well as "chief of the Arabs of Upper Egypt" (*shaykh ʿUrbān al-Ṣaʿīd*). The rule of Banū ʿUmar lasted for about sixty years, but ultimately became intolerable to the Ottoman administration. In 983/1576, Banū ʿUmar were formally deprived of their powers,

and a certain Sulaymān Bey (? Djānbulād) was appointed governor of Upper Egypt. In the 12th/18th century, there was a revival of Hawwārī power, associated with the tribal chief, the *amīr* Humām b. Yūsuf. He overshadowed the transient governors of Upper Egypt, who were distracted by the factional politics of the neo-Mamlūk régime. Under Humām, Upper Egypt enjoyed a period of comparative tranquillity and prosperity. Djabartī depicts him as a paragon of Arab shaykhly virtues—openhanded, hospitable and loyal. A less favourable memory of the domination of Hawwāra has been transmitted by Burckhardt, who speaks of extortion practised on merchants, and the reduction of the Copts to servile status. Humām and his tribe belonged to Niṣf Ḥarām, the group associated with the neo-Mamlūk Ḳāsimiyya faction. After the collapse of the Ḳāsimī ascendancy in Cairo (1142/1730), remnants of the defeated faction took service with Humām, and were assimilated to the local people. Towards the end of his life, Humām played a critical part in Egyptian politics by the support he invariably gave to grandees who had been ousted from power in Cairo. He had particularly close relations with Ṣāliḥ Bey, the last Ḳāsimī notable, who was exiled by Bulut-ḳapan ʿAlī Bey (1178/1765). When ʿAlī himself sought asylum in Upper Egypt (1180/1767), Humām effected a reconciliation between him and Ṣāliḥ, enabling the two beys to defeat their opponents, and retake Cairo. After ʿAlī had procured the assassination of Ṣāliḥ, in 1182/1768, Humām assisted the dead grandee's followers to capture Asyūṭ, and hold it against the governor of Upper Egypt nominated by ʿAlī. The rebels and Hawwāra were ultimately defeated, and Humām fled, to die near Isnā (8 Shaʿbān 1183/7 December 1769). With his death, the political supremacy of Hawwāra came to an end, but they retained their social and economic importance until the time of Muḥammad ʿAlī Pasha. After the extirpation of the Mamlūks in Upper Egypt, Ibrāhīm Pasha proceeded to confiscate the *iltizām*s and other sources of the wealth of the old régime (1813). The descendants of Humām were broken by this policy, and their tribesmen were subsequently absorbed into the masses of the peasantry.

In the Sudan two distinct groups are connected with Hawwāra of Egypt. The Hawāwīr are a nomadic tribe, having their territory in the steppe, west of the Nile. They probably represent a southerly wave of Hawwārī expansion from Egypt. The Djallāba (*i.e.*, pedlars) Hawwāra have immigrated into Kordofan and Dār Fūr within the last three centuries, admittedly as traders, as their name suggests. Their designation as Hawwāra may imply no more than an original domicile in territory dominated by this tribe.

(P. M. Holt)

ḤAWZ, pl. *aḥwāz* (coll. *ḥwāz*): (1)—Territory, suburb, environs of a large town, in North Africa and especially in Morocco, where the word appeared at the beginning of the 10th/16th century: attested for Fās in Leo Africanus (*Description de l'Afrique*, trans. Epaulard, i, Paris 1956) and for Marrākush in manuscript documents (*Sources inédites*, 1st series, Portugal, ii, Paris 1939 [P. de Cénival] and v, Paris 1953 [R. Ricard]). It was already employed in Muslim Andalusia with the same meaning, and has given rise to the Spanish *alfoz*, district (L. Brunot, *Textes arabes de Rabat*, ii, Glossary, Paris 1952). In Tunisia, the word was known under the Ḥafṣids, but with a fiscal sense (R. Brunschvig, *Ḥafṣides*, ii, Paris 1947). (2)—With the article, al-Ḥawz denotes exclusively the region of Marrākush, the Haouz, a wide embanked plain drained by the *wādī* Tansift and its tributaries, and by the *wādī* Tassawt. Notwithstanding the hills of the Djabīlāt, it is a monotonous and for the most part arid country, almost entirely covered with a scrub of thorny jujube trees where grazing is possible. However, the geographical situation has endowed the plain with all the elements needed for prosperity. These were brought into service by the Almoravids, who founded Marrākush in 462/1070, provided water for their capital by excavating the *khaṭāṭir* [see ḲANĀT] and built a bridge over the *wādī* Tansift. Under the succeeding dynasty, the Almohads, Marrākush became the metropolis of the Muslim West, and the whole of south Morocco experienced great prosperity. It seems to have been towards the end of the 6th/12th century that al-Ḥawz was distinguished from al-Gharb [*q.v.*], for the division of the plains of Atlantic Morocco into two parts corresponds with the zones imposed on the nomadic Arab tribes introduced into Morocco by the Almohad sultan Abū Yaʿḳūb al-Manṣūr [*q.v.*]. "To the Rīyāḥ fell the Gharb, to the Djusham the Ḥawz", (A. al-Nāṣirī, *Kitāb al-Istiḳṣā*, ii, Casablanca 1954; Fr. tr. I. Hamet, in *AM*, xxxii (1927)). It may also be concluded that it was at this period that began the erosion of the Berber Tāmasnā (a wide coastal strip that straddled the *wādī* Umm al-Rabīʿ) which today has completely disappeared. The fall of the Almohads, the transfer by the Marīnids of the capital to Fās, the continual attempts to secede did not prevent the Ḥawz from remaining one of the richest provinces in Morocco for another century. But the arrival from the South of the Arab bands of the Maʿḳil brought anarchy, a rift between the Berber mountains and the plain now held by the Arabs, and finally the general ruin of a region in which the populace, aided by their marabout saints, thought only of means to resist the political and fiscal manœuvres of the sultans, whether in the North or the South. In the western half of the Ḥawz, the Portuguese interventions were destined to provoke a sharp revival of the holy war. Under the Saʿdids and ʿAlawīs, the history of the Ḥawz becomes identical with that of Morocco. Today the region is inhabited by the great Arab tribe of the Rehamna (*Raḥāmina*) and by numerous groups brought there, from the most diverse regions, at the wish of the sultans, though still to some extent preserving their own particular characteristics. Those living along the foothills (*dīr*) of the Atlas, without forgetting Arabic, now understand Berber (L. Galand, *Un type de frontière linguistique arabe et berbère dans le Haouz de Marrakech*, in *Orbis*, iii/1, Louvain 1954). On the functions of the so-called *makhzan* tribes (ʿAbda,

Aḥmar, Raḥāmina, Manābaha, Ḥarbīl) and of the Guich of the Ḥawz, see DJAYSH; E. Aubin, *Le Maroc d'aujourd'hui*, Paris 1904; Lt.-Col. Voinot, *Les tribus guich du Haouz Marrakech*, in *Bull. du cinquantenaire de la Société de géographie et d'archéologie d'Oran*, 15 April 1928. A small tribe from the Ḥawz, the Awlād Abī Sibaʿ (O. Bousebaa) has won a great reputation for its thick woollen carpets (P. Ricard, *Corpus des tapis marocains du Haut Atlas et du Haouz de Marrakech*, Paris 1927).

Certain Moroccan Jews bear the name of *Ḥawzī*.

Bibliography: In addition to the references given in the text: G. Deverdun, *Marrakech, des origines à 1912*, Rabat 1959, vol. ii of which (in the press) contains a full bibliography on southern Morocco. (G. DEVERDUN)

HAY'A, in the sense of "astronomy" [see ʿILM AL-HAY'A].

HAY'A (A.), synonym (see *LA*; *TA*) for 'shape' (*shakl*) and 'form' (*ṣūra*), and also for 'state' (*ḥāl*) and 'quality' (*kayfiyya*). Al-Kindī states that, according to Hippocrates, one of the meanings of the word 'nature' applies to the configuration (*hay'a*) of the human body. In the *Rasā'il Ikhwān al-Ṣafā'* we find: *hay'at al-arkān*: the configuration of the elements; they use this word also to discuss the thesis of the materialists who think that the Living and All-powerful Being is a body, since he exists in a configuration that is distinguished by accidents, such as life, power, knowledge (*ʿalā hay'a makhṣūṣa bi-aʿrāḍ*; ii, 55). In this sense, *hay'a* is the geometric shape of a body insofar as it reveals a metaphysical reality, form, which fashions it from inside. The idea of *hay'a* is bound up with that of a form and that of a motion, which is itself regarded as a form: "The term 'form' is used for any configuration (*hay'a*) and for any action upon a receptive (*ḳābil*) object, whether single or compound, so that motions and accidents are forms (*ṣuwar*)" (Ibn Sīnā, *Shifā'*, ii, 282). Avicenna distinguishes motion, as defective (*nāḳiṣa*) form, from completed (*tāmma*) geometric shape, such as the square or the circle. The Ikhwān al-Ṣafā' have analogous ideas: there is constitutive form (*ṣūra muḳawwima*) like length, breadth, depth (for a body), and perfective form (*ṣūra mutammima*), such as shape (*shakl*): triangle, square, pentagon, circle etc., and motion (ii, 21). Here *shakl* is used to describe the result of motions that produce such and such a shape, whether in nature or in art. *Hay'a* is completed form, considered not by itself, but in relation to the motion that, in it, completes constitutive form. *Hay'a* is more alive and more dynamic; *shakl* is static. That is why the word *hay'a* is applied in particular to the bodies of animals and men, which certainly contain curves and angles, but whose configuration is more than an arrangement of geometric shapes.

From this meaning it is an easy step to that of 'predisposition', which is more frequent in the technical language of philosophy. It is found in Avicenna, and it is related to another term from the same root: *tahayyu'*: 'aptitude', often used in conjunction with *istiʿdād*. A text of the Ikhwān al-Ṣafā', concerning the development of the soul during gestation, is particularly clear; it speaks of "the aptitude (*tahayyu'*) and predisposition (*istiʿdād*) that are stamped (*yanṭabiʿ*) into the soul, which are first form and potentially apt to become form in actuality by acquiring the aptitude (*ʿind al-tahayyu'*) for receiving moral characteristics, moral actions, the various types of knowledge, education . ." (i, 9). We are here concerned with the configuration assumed by the soul in the interval between its reality as first form in potentiality and its completion in moral characteristics etc. This intermediate situation is well indicated in the phrase in which *tahayyu'* is framed by the two particles *li-* (for, in order to): "*al-ṣūra al-ūlā bi-'l-ḳuwwa li-taṣīra ṣūra bi-'l-fiʿl ʿind al-tahayyu' li-ḳubūl al-akhlāḳ* . . .". There is then a *hay'a* of the soul, just as there is of the body. Aptitude or predisposition is inherent in *hay'a*. In fact, the first meaning of the verb *tahayya'a* in Arabic is: 'to assume one's *hay'a*' (*akhadha lahu hay'atahu*), and it is from this meaning that it takes on that of 'to be predisposed towards'. Avicenna says that one of the causes of the excitement of desire is a discontent (*ḍadjar*) arising from one *hay'a*, and the wish to change to another *hay'a*. He speaks also of particular causes that particularly distinguish one *hay'a*, to the exclusion of another (*takhṣīṣ hay'a dūn hay'a*) and make it the object of desire (*Shifā'*, ii, 288). The dynamism that distinguishes every *hay'a* becomes consciousness and desire in the soul.

A very special use of this term, which derives from the Arabic translation of Aristotle's *Metaphysics*, should be noted. The word *hay'a* is used to express in Arabic ἕξις or *habitus* (*malaka*). At first sight, this meaning appears very far removed from the preceding ones; but it may be derived from them, and may retain some connexion with them. It would seem that we should start from the force of the Vth form *tahayya'a*: 'to qualify oneself by the particular configuration that one assumes': the *fāʿil* acts on a *munfaʿil* which reacts on it. Aristotle, in the first place, defines ἕξις: "οἷον ἐνέργειά τις τοῦ ἔχοντος καὶ ἐχομένου" (*Met.*, 1022b 4). The illustration that he draws from clothing is well represented by the Arabic Vth form: one who wears a garment (action) is clothed by that garment (reaction). *Habitus* lies between action and reaction. The definition of this *hay'a* is translated: *ka-annahā fiʿlu-mmā li-'lladhī hiya lahu wa-huwa lahā*. Ibn Rushd comments: "It is the action of an agent on an object that undergoes the action . . . Aristotle says: 'When something acts and something else undergoes its action, the fact of undergoing the action (*infiʿāl*) is between the two'; this means: . . . when one thing carries out an action and acts upon another thing which undergoes its action, the *hay'a* is the state (*ḥāla*) that occurs between them. If the *hay'a* is considered with respect to the agent, it is called action; if it is considered with respect to the patient (*munfaʿil*), it is called passivity (the fact of undergoing the action)". This commentary is not very clear, for it is based on an approximate translation. But, short of being a truism, it can have only one meaning: that the *hay'a* unites two characteristics, one active, the other passive, and as an intermediary transfers the action that is carried out to the patient, and the action that is suffered to the agent, the two actions mingling into one. It should be remembered that *hay'a* is an intermediate state, of the same type as a motion, which allows an object moving towards actuality to receive a qualification that it possessed in potentiality. We meet, once again, the lexicographical meanings of *ḥāl* and *kayfiyya*.

A second meaning of ἕξις is that of 'disposition' according to which a being is in a good or a bad condition' (διάθεσις, καθ' ἣν ἢ εὖ ἢ κακῶς διακεῖται τὸ διακείμενον, *Met.* Δ 1022b 10). Διάθεσις is rendered *waḍʿ*. Averroes's commentary: "*Hay'a* is used of the state (*ḥāla*) that is produced as a consequence of a composition (*tarkīb*, instead of the *waḍʿ* of the translation). It is the *hay'a* by virtue of which the

composition of a thing is good or bad. For example, health ... is a *hay'a* which results from a composition, that of the organs and the humours". This *hay'a* is good or bad, either in itself, or with regard to another *hay'a*. This meaning comes close to that which we have encountered in Ibn Sīnā, concerning the disposition from which desire springs.

Finally this term enters into the nomenclature of a branch of astronomy (*ʿilm al-nudjūm*) which is called *ʿilm al-hay'a* [*q.v.*]. According to the definition of the Ikhwān al-Ṣafā', it is "the knowledge of the hieratic order of the spheres, the number of the heavenly bodies,, the divisions of the zodiac and its stars, their distances, sizes and motions". It is perhaps because *hay'a* is used of the organic human body, the microcosm, that the term is applied to the macrocosmic order.

ḤAYĀT (A.), life. The Ḳur'ān mentions life in very many verses. God is Himself living (*ḥayy*), see II, 255; XL, 65, etc. Al-Ṭabarī writes, in his *Tafsīr* (ed. Dār al-Maʿārif, v, 386): "This word *ḥayy* describes Him who has perpetual (*dā'ima*) life and a permanent existence (*baḳā'*) without any initial or terminal limit, for everything that is not He, although it be living, has a life that begins at a definite point and ends at a fixed limit". On this, he says, all the commentators are agreed. They differ on other questions. For some God is Himself spoken of as living because He Himself provides for the maintenance of His creatures and allots every creature its portion. He is therefore living by virtue of His management (*tadbīr*) of the Universe, not by virtue of Life. For others He is living by virtue of Life, which is one of His attributes. Others again say that it is one of His names. Al-Zamakhsharī states that *ḥayy*, in the technical language of the theologians, describes one who has knowledge and power (*Kashshāf*, Cairo 1948, i, 291). The question of the Life of God enters into general discussions on the divine attributes. A critical account is to be found in the *Fiṣal* of Ibn Ḥazm (Cairo 1317, ii, 153 f.). In the *Mafātīḥ al-ghayb*, Fakhr al-Dīn al-Rāzī, taking up Avicenna's distinctions between necessary and possible being, shows that God is the only necessary being, but that, contrary to Ibn Sīnā's contention, the existence of the possible being does not necessarily follow from the existence of the necessary being in itself, that is to say that creatures do not necessarily proceed from God; they are created by Him, in His Wisdom and His Freedom. This is the sense that should be given to *ḥayy* (ii, 307 f.).

The Ḳur'ān also mentions life in this world (*al-ḥayāt al-dunyā*) in order to contrast it in a religious and moral sense with the after-life. Life on earth, as a creation of God and considered in itself, is full of beauties; but it is nothing in comparison with the next life (Sūra III, 185), and the error of the unbelievers is to cling exclusively to it. Whether the attractiveness (*tazyīn*) with which life on earth is invested in the eyes of the unbelievers is the effect of an illusion for which man is responsible, or the result of an action of God, is a problem that normally sets Muʿtazilīs and Ashʿarīs, Ḳadarīs and Djabarīs at odds with one another (cf. Fakhr al-Dīn al-Rāzī, *Mafātīḥ al-ghayb*, ii, 198 f.; commentary on II, 212). Life in this world, compared with life in the next, is something that is purely for use (*matāʿ*; Sūra XIII, 26; XL, 39), that is to say, according to the *Tafsīr al-Djalālayn*, a thing of little value which is enjoyed for a certain period of time and which disappears. It is diversion and play (*lahw wa-laʿib*) beside the real life (XXIX, 64; cf. Blachère, *Le Coran*, ii, 535, note on *al-ḥayawān* as an intensive of *ḥayāt*). The True Life is the "abode of permanence" (*dār al-ḳarār*). The life of this world may seduce one (*gharra*; VI, 70, XXXI, 33, XLV, 34, etc.). A parable summarizes these ideas. It compares life in this world to the rain that fertilizes the fields; then, when man believes that he himself has the power to cultivate the fruits of the earth, God sends His *amr*, that is to say, according to the *Tafsīr al-Djalālayn*, His judgment and His chastisement, and He mows down the crops, and it is as if they had never existed (X, 24). Consequently, life on earth and all that is connected with it is a gift of God which must be used with gratitude and piety, not for its own sake, but in order to expend it in good works and thus orientate it towards the future Life. Islam does not approve of contempt for life. Nevertheless the *dunyā* is an object of reproach, insofar as it "cuts" the path that leads to God. Nor is it merely loosely condemned, for life on earth is attended with values that remain associated with man in the next life (cf. Ghazālī, *Iḥyā'*, 3rd part, Būlāḳ ed., 151 f.).

As for life in the biological sense of the word, it is a frequent theme in the Ḳur'ān. There is a kind of Ḳur'ānic embryology, for example XXIII, 12-4; XXXII, 7-8; LXXVII, 20. Al-Rāzī comments: "A human being is generated from a seed which is itself generated from the fourth of the excretions produced by the digestion (*min faḍl al-haḍm al-rābiʿ*, that is to say the spermatic fluid). This is generated as a consequence of the consumption of food, which is of animal or vegetable origin. The animal derives from the vegetable, and plants are generated from very pure earth and water" (iv, 188). The end of verse 14 of Sūra XXIII: "Then we developed him in a second creation", is interpreted as referring to the development of the human being after his birth, during his infancy and his youth, the creation of understanding (*fahm*) and reason (*ʿaḳl*), until his death. The text reads: *ansha'nāhu*, "We developed him", because God established the development of the spirit (*inshā' al-rūḥ*) in man. Al-Rāzī (*ibid.*) points out that this is proof of the error of al-Naẓẓām, who thinks that man is spirit and not body, and of the mistake of the *falāsifa*, who say that man is indivisible and that he is not a body. In fact, man is a compound (*murakkab*) of both attributes.

Certain Muslim philosophers may have been inspired by these verses in their representation of life as a development away from matter, proceeding by way of organic life to spiritual life. Several passages in the *Rasā'il Ikhwān al-Ṣafā'* and in Ibn Ṭufayl also give the impression that the idea of some kind of evolution is not unknown to them. For Ibn Bādjdja (Avempace), in his *Risālat al-Ittiṣāl*, natural heat (*al-ḥarr al-gharīzī*) exists before all the other parts of the body; it is the instrument of the instruments; all the parts of the body function with reference to it; it exists in all the animals that have blood, and it is also found in the animals that have no blood; it is called the motive force (*al-ḳuwwa al-muḥarrika*) it is form (*ṣūra*), and this form is the prime mover, the natural spirit (*al-rūḥ al-gharīzī*). In the womb the embryo has organs that make it resemble a plant: this is what is created in the first place; it is nourished, and grows, like a plant. On emerging from the womb, the human being makes use of the senses and resembles an irrational animal. It moves in space and

has desires: this occurs only because of the arrival of the spiritual form (*al-ṣūra al-rūḥāniyya*) which appears in the "common sense" and the imagination. At this level of life the imaginative form (*al-ṣūra al-mutak͟hayyila*), as the imaginative force (*al-ḳuwwa al-k͟hayāliyya*), is the prime mover. Below this there is the impulsive nutritive force (*al-ḳuwwa al-g͟hād͟hiya al-nazūʿiyya*) and the sensory force for propagating the species (*al-ḳuwwa al-munmiya al-ḥissiyya*). Animality begins with sensory spiritual form, the first degree of the spiritual forms. Below this is the vegetable kingdom, and it is disputed whether plants are living creatures; this problem is made more acute by the relationship of *ḥayāt* and *ḥayawān*. The plant-man in the womb is potentially an animal, for the natural spirit that is in it is capable of receiving spiritual form. The natural spirit that is in plants is incapable of doing so. The reason for this is a difference in the mixture of the humours (*al-imtizād͟j*). Beyond the senses and the imagination comes thought (*al-ḳuwwa al-fikriyya*), when intelligibles, which are potential in the sensory, become actual.

We can recognize in this structure the broad outline that the commentaries have taken from the Ḳurʾān. But for the *falāsifa* this development is not due to a series of disconnected creative acts of God. The Aristotelian idea of potentiality introduces a dynamism into nature itself. Moreover philosophical doctrine, in the tradition of Plato and Aristotle, connects life essentially with the soul. For example, al-Kindī (*Rasāʾil al-Kindī al-falsafiyya*, ed. Abū Rīda, Cairo 1950, i, 226) sees life as an accident that happens to the body, since the living being disappears when life is extinguished, while the body retains its corporeity. The natural heat or natural spirit which is in the heart of the animal is not itself life; it is merely a disposition by virtue of which the animal can receive life (*uʿiddat fīhi li-yanāla bihā 'l-ḥayāt*). Al-Kindī gives two versions of the Aristotelian definition of life: the (first) entelechy of a natural body (with organs) capable of receiving life (which has life in potentiality): (1) *tamāmiyya d͟jirm ṭabīʿī d͟hī ālāt, ḳābil li-'l-ḥayāt*; and (2) *istikmāl awwal li-d͟jism ṭabīʿī d͟hī ḥayāt bi-'l-ḳuwwa*.

Thus the conceptions of life in Islam offer us a particularly clear example of the interpenetration of Greek ideas and Ḳurʾānic images, even though the *falāsifa*, by transposing disconnected creative acts of God into terms of the continuity of natures, have altered the fundamental Islamic meaning.

Bibliography: Further to that given in the article, there may be mentioned Abū Ḥayyān al-Tawḥīdī, *Risālat al-Ḥayāt*, ed. I. Kaylānī, in *Trois épîtres* ..., Damascus 1951, Fr. tr. Cl. Audebert, in *BEt.Or.*, xviii (1963-4), 147-95.

(R. Arnaldez)

ḤAYĀTĪ-ZĀDE, Ottoman family of physicians and *ʿulamāʾ*, the prominent members of which are:

(1) Muṣṭafā Feyḍī, said to have been a convert from Judaism (born Mos͟he ben Raphael Abravanel) and to have acted as interpreter during the interrogation of the 'Messiah' S͟habbĕtay Ṣebī ([*q.v.*], see also dönme), became *reʾīs al-aṭibbāʾ* [see ḥekīm-bas͟hī] in 1080/1669-70 and died in 1103/1691-2. He is the author of a '*k͟hamsa*' entitled *al-Rasāʾil al-mus͟hfiyya fi 'l-amrāḍ al-mus͟hkila*, on the nature, symptoms and treatment of various diseases, based on the Latin works of various European writers of the 16th century and the first half of the 17th century (Fernelius, Fracastor, Mercado, Fonseca, etc.); the five treatises concern (1) Hypochondriac affection, (2) true hypochondria, (3) syphilis, (4) *plica polonica*, and (5) malignant fever (MSS: British Museum, Add. 5984 (see Rieu, *CTM*, 125 f.), Istanbul, Topkapı Sarayı (see Karatay, nos. 1799-1801), etc.).

(2) His son, Meḥmed Emīn, also a physician, followed at the same time the *ʿilmiyye* career and was for seven months in 1746/1159 S͟hayk͟h al-Islām (Danişmend, *Kronoloji*, iv, 537).

(Ed.)

HAYĀṬILA, Arabic broken plural from Hayṭal, the name given by Islamic writers to the (H)ephthalites or White Huns, the Ye-Ta of the Chinese authors, a steppe people from Mongolia who settled along the Oxus during the fourth or fifth centuries A.D. and formed one, or perhaps several, powerful kingdoms. The first Huns to appear in K͟hurāsān, some twenty-five years earlier than the arrival of Huns in Europe, were the Chionites of Ammianus Marcellinus (XVI, 9, 4; XVII, 5, 1; XVIII, 6, 22). Their name may consist of the Pers. *xiyōn* 'Hun' + Gk. tribal ending -ῖται; though W. B. Henning (*ZDMG*, xc (1936), 17) regarded the termination of ʾΕφθαλῖται as a Sogdian plural form. The Chionites attacked the eastern frontier of Iran *ca.* A.D. 350, but when opposed by Shapur II they came to terms, and eventually under their king Grumbates they joined his expedition against Roman Mesopotamia. At the siege of Amida (A.D. 359) the son of Grumbates was killed, and the body cremated, a striking detail which tallies with archaeological data for the European Huns (Nándor Fettich, *La trouvaille de tombe princière hunnique à Szeged-Nagyszéksós*, 105); from the Bishkent valley in Tād͟jikistān; and for Ḳaras͟hahr according to the *Chou shu*. Subsequent movements of certain 'Kidarite Huns' can be traced in Bactria and Gandhara, but the use of this designation by Priscus for the fifth century may involve an anachronism. The name, at least, derives from that of their first king, Kidara, well attested in the late fourth century by coins, and also in Chinese annals (cf. W. M. McGovern, *The early empires of Central Asia*, 408).

According to Ghirshman, the Chionites (who may indeed include the Kidarites) were identical with the (H)ephthalites; but sinologists such as McGovern and Enoki believed the latter were a fresh horde who descended on Tuk͟hāristān during the fifth century A.D. and drove the Kidarites into Gandhāra. Eastern invaders repulsed from Iran by Bahrām V in A.D. 427 may have been from either group. But it was specifically to the Hayāṭila that Fīrūz resorted for aid to gain the throne of Iran from his brother Hormizd III in A.D. 457. Later he turned against the Hayāṭila and attacked them, but was defeated and captured by their king, called Ak͟hs͟hunwār by al-Ṭabarī or K͟hus͟hnavāz by Firdawsī. He obtained his release by leaving his son Ḳubād as a hostage, but later ransoming him returned to the attack, and charged his cavalry into a hidden ditch to perish with all his men. According to Ṭabarī, i, 879, his opponent had the bodies interred in tumuli (*al-nawāwis*). The classic account of the (H)ephthalites in this context is by Procopius, *Wars*, I, 3, who claims that though Huns by name and race, they did not live as nomads,

were of fair complexion and regular features (a detail scarcely corroborated by paintings at Bāmīyān) and practised inhumation of the dead, up to twenty of his boon-companions being buried with each chief. This contrasts with the cremation found amongst the Chionites. The Sāsānian Ḳubād owed his restoration in A.D. 488 or 9 to (H)ephthalite support. In A.D. 557 Khusraw Anūshirwān allied himself with the Khan of the Turks, called Sindjibū or Σιλζίβουλος in the Arabic and Byzantine sources, to crush the (H)ephthalites. The fullest account is that of Firdawsī, who names the vanquished ruler Ghātfar. This is apparently the Κάτουλφος of Menander Protector (*FHG*, IV, 206 and 225), who is called Wazar or Waraz in Ṭabarī, i, 859. After a fierce battle the Hayāṭila were dispersed, and their lands partitioned between the Turks and the Sāsānians. To the same period belongs the enigmatic ruler *npky MLKʾ*, whose name appears thus in Pahlavi script on coins of the Kābul area, and who may also have minted at Andarāb. The extent to which the kingdom of Zābulistān [*q.v.*], south of the Hindu Kush, was distinct from that of the Hephthalites in Bactria is disputable. Even after the arrival of the Arabs in Khurāsān during 31/651, (H)ephthalite survivors from Harāt took part in resistance to ʿAbd Allāh b. ʿĀmir in Ḳūhistān (Ṭabarī, i, 2886), while as late as 85/704 others are mentioned with 'Tibetans' and 'Turks' during confused fighting in the rebellion of Mūsā b. ʿAbd Allāh b. Khāzim (Ṭabarī, ii, 1153). Yāḳūt, s.v. Bādghīs, calls this district the 'headquarters of the Hayāṭila' (*Dār mamlakat al-Hayāṭila*), a reminiscence of the tribe's participation in the wars of the local chief Ṭarkhān Nīzak against the Arab governors, in particular Ḳutayba b. Muslim. Earlier, the main centre of the Hayāṭila was probably at Ḳunduz.

Unless it survives in Khaldjī Turkish (see below), the language of the Hayāṭila is entirely unattested, like that of the European Huns. The 'Iranian' hypothesis of Ghirshman and Enoki—based on the coin legends in cursive Greek script, though these are sometimes difficult to decipher— has now been overtaken by the discovery of earlier inscriptions at Surkh Kotal which prove the language in question to have been the local Iranian dialect of Bactria. For the speech of the Hayāṭila themselves, the 'Turkish' hypothesis, supported by Minorsky's evidence, now holds the field. According to the *Chou Shu*, the Hayāṭila practised polyandry. Eastern Hun military equipment, probably Kidarite, is represented on a silver dish (O.M. Dalton, *The treasure of the Oxus*[3], 1964, 53, no. 201), and included a straight sword, possibly two-handed, and a compound bow, but no stirrups. The view that such modern tribes as the now Pashtu-speaking Ghilzai-Khaldjī of Afghanistan, or the Turkish-speaking Khaladj of Iran represent descendants of the Hayāṭila was shown by Minorsky to have the authority of al-Khuwārizmī, *Mafātīḥ al-ʿulūm*, 119. To connect the Persian-speaking Djāghurī of Afghanistan would also be attractive, but in all cases the links are very tenuous.

ḤAYAWĀN "the animal kingdom", Arabic word derived from a Semitic root (cf. Hebrew חיה) implying a notion of life (*ḥayāt* [*q.v.*]). It is attested only once in the Ḳurʾān (XXIX, 64), where it means "the true life" and is used of the other world; the dictionaries state that a spring of Paradise is also called by this name, but the most usual meaning of *ḥayawān*, used as a singular or a collective, is an animal or animals in general, including man, who is more precisely called *al-ḥayawān al-nāṭiḳ*.

1. Lexicography. The fauna of the Arabian peninsula has been covered under AL-ʿARAB, DJAZĪRAT— v, and it is probable that it has scarcely changed since pre-Islamic times, except for the disappearance of the lion which occurred long ago, and the more recent disappearance of the ostrich; even in the peninsula however the ancient terminology, as found in the classical lexicographical works, has not always survived; furthermore, in the other Arabic-speaking countries, the indigenous or imported fauna, while it has common Mediterranean characteristics, does not have a nomenclature which is absolutely identical with that of ancient Arabia, for dialect terms have been formed or borrowed from local languages (see for instance V. Monteil, *Faune du Sahara occidental*, Paris 1951), and furthermore the same word may be applied in different regions to different animals [see esp. FANAK]. In general, however, for the better-known animals, the terminology is very similar throughout the Arabic-speaking countries.

As regards the classical period, this vocabulary formed the subject, as early as the 2nd-3rd/8th-9th centuries, of a series of monographs dealing particularly with domestic animals (horse, camel, etc.), and the Arabic dictionaries have carefully recorded it; a lexicographical work such as the *Mukhaṣṣaṣ* of Ibn Sīduh gives to animals a space proportionate to their importance in the life of the Arabs (vi, 135-viii, 186), and the richness of the Arabic vocabulary to describe certain species of animals has long been recognized. This wealth is due partly to the fact that investigators have collected terms belonging to various archaic dialects, partly to the multiplicity of metaphors used by the poets, and finally to a highly developed differentiation between the animals according to age, sex, ability to reproduce, colour of fur or plumage, formation of limbs, lips etc.; thus it is that Fr. Hommel, *Die Namen der Saügethiere bei den südsemitischen Völkern*, Leipzig 1879, records more than 120 words for the horse and more than 160 for the camel. However, the number of really specific terms varies, in accordance with various factors, from one to four:

(a) Most wild animals are indicated by one single term, if we exclude synonyms or the names of varieties which are difficult to identify (*ʿuḳāb* "eagle", fem.; *ṭāʾūs* "peacock", masc.; etc.).

(b) Two terms are used for: (1) wild animals which live in flocks: a collective noun and a noun of unity used for either sex (*naml* "ants"/*namla* "an ant"), but the noun of unity, characterized in this case by the same suffix as the feminine, tends to be felt as indicating the female (*ḥamām* "pigeons"/*ḥamāma* "a pigeon" > "a female pigeon"); (2) wild or domestic animals in which the sexes are distinguished: the masculine form is reserved for the species and for the male when the feminine form comes from the same root (*kalb* "dog"/*kalba* "bitch"); when the

opposite is the case, the word for the female, though grammatically feminine, has a masculine form and often indicates both the female and the species (*ḍabuʿ* (fem.) "hyena"/*dhikh* (masc.) "male hyena").

(c) Three terms are used for a certain number of species: a collective noun, a noun of unity used regardless of sex, and a term to indicate the male of certain animals who live in flocks (*naʿām* "ostriches"/ *naʿāma* "an ostrich" of either sex/*ẓalīm* "male ostrich"). In cases such as *ḥimār* "donkey" / *ḥimāra* and *atān* "female donkey", *ḥimāra* seems to be a secondary fem. and not a noun of unity for either sex (cf. Hebrew *ḥamōr*/*atōn*).

(d) For some domestic species which live very close to the Bedouins, four terms can be found: one for the species, one for the individual regardless of sex, one for the female and a fourth for the male (*ibil* "camels" / *baʿīr* "one animal of the herd" / *nāḳa* "female camel" / *djamal* "(male) camel"). In this category the name of the species is generally masculine in form but treated grammatically as feminine (*e.g.*, *ibil*, *ghanam*, etc.) because of the preponderance of females over males.

Examination of a certain number of names of animals shows that the name of the female is independent of that of the male and that the formation of the feminine by the addition of the suffix *-t* > *-a* is secondary; this "particularizing" suffix serves basically to form the nouns of unity used for either sex (*baghla* means a he-mule as well as a she-mule) but, the females being always more numerous than the males among the animals which live in herds, the noun of unity comes to be confused with the noun for the female (*e.g.*, *dadjādja* "one fowl of the poultry yard" > "hen"). On this question, see Ch. Pellat, *Sur quelques noms d'animaux en arabe classique*, in *GLECS*, 25 May 1960.

Among the great number of names found in the lexicographical or zoological works, the existence should be noted, along with specific or metaphorical terms, of appellations formed like the *kunya* [*q.v.*] or the *maʿrifa* [see IBN] of humans: *umm ḥubayn* "chameleon", *ibn āwā* "jackal", etc.; these metonymical forms, widely used throughout the centuries especially in Arabic dialects (see Dozy, *Suppl.*, s.vv. *ibn*, *abū*, *umm*), have sometimes ended by supplanting the corresponding specific term, but this cannot be considered as a systematic personification of the animals in question, for a number of plants have similar names; we might rather consider them as euphemisms used with prophylactic intent or as a kind of pet-name, notably for example when such an attractive creature as the sparrow is called *Abū Muḥriz*, *Abū Muzāḥim*, *Abū Yaʿḳūb*, etc.

2. Animals among the pre-Islamic Arabs. All the same the Bedouin, like other peoples, attributed to animals the qualities and the faults of humans, as is proved by a number of proverbs which are undoubtedly pre-Islamic. These proverbs almost all appear in the form of an elative followed by the name of the animal; thus generosity is attributed to the cock (*askhā min lāfiẓa*), perfidy to the lizard (*akhdaʿ min ḍabb*), stupidity to the bustard (*aḥmaḳ min ḥubārā*), boldness to the lion (*adjraʾ min al-layth*), etc. (see the collections of proverbs, and especially the index to the proverbs in the *K. al-Ḥayawān* of al-Djāḥiẓ).

It has been noticed moreover that a certain number of tribes of ancient Arabia bear the names of animals: Asad "lion", Ḳuraysh "shark", etc. and it has been suggested that they might have a totemic significance; on this subject, W. R. Smith (*Kinship and marriage in early Arabia*, London 1903) collected some factual details about survivals of animal cults, prohibitions of certain foods and other indications, and inferred from them the existence of a totemic system among the early Arabs; his theory has not on the whole, however, been accepted by ethnologists, and it is possible that the importance which the Bedouins of necessity attach to animals of every kind does not arise at all from totemism but is simply a form of animalism (see J. Henninger, in F. Gabrieli (ed.), *L'antica società beduina*, Rome 1959, 85-6 and references there given). It is perhaps worth recalling here that the early Arabs portrayed the souls of the departed in the form of a bird (*hāma*), usually a sort of owl, which flew for some time around the tomb and on occasion cried out for vengeance (see I. Goldziher, in *Globus*, lxxxiii (1903), 3 ff., analysed by G.-H. Bousquet, in *Arabica*, 1960/3, 257-60). Although the Prophet rejected this belief (*lā ʿadwᵃ wa-lā hāmatᵃ wa-lā ṣafarᵃ*), it has lived on under Islam in various forms [see ṬAYR].

The Ḳurʾān (V, 102/103, VI, 139/138 ff.) inveighs against the practices of the *djāhiliyya* which consisted of consecrating certain animals to certain gods, or of applying a taboo to certain camels, sheep and other animals among the herds. The animalism of the early period included also, as well as the *baliyya* [*q.v.*], various sacrifices, concerning which it suffices to refer to the comprehensive work of J. Chelhod, *Le sacrifice chez les Arabes*, Paris 1955; a number of them, however, have been retained in Islam [see DHABĪḤA] and Muslims today still perform sacrifices on many occasions (see, *e.g.*, A. Jaussen, *Coutumes des Arabes au pays de Moab*, 337-63). Animals were and still are associated with the practice of sympathetic magic such as *istimṭār* [*q.v.*]; even quite recent zoologists expatiate happily upon the method of interpreting the sight of one or another animal in a dream [see TAʿBĪR AL-RUʾYĀ], also on the magic properties of the different organs, of which sorcerers make great use [see SIḤR]. Fabulous animals inhabited the deserts [see GHŪL], and it was often in animal form that the *djinns* [*q.v.*] approached humans. Animals such as camels, horses, cows, sheep, greyhounds, cats and bees possess *baraka* [*q.v.*], but dogs, cats and others also possess the evil eye (on all these questions see E. Westermarck, *Pagan survivals in Mohammedan civilization*, London 1933, *passim*).

3. The creation of animals. Apart from the proverbs mentioned above, the folklore of early Arabia, in the form in which it has reached us, contains hardly any animal stories (see below); at the most we find legends explaining the creation or the modification of certain animals. Thus the mouse (*faʾra*) was a miller's wife or a Jewess who was metamorphosed; similarly certain lizards were formerly tax-gatherers, etc. (see al-Djāḥiẓ, *Tarbīʿ*, 197 and references). This question of animal metamorphoses (*maskh*) retains a certain importance, even under Islam, while the Ḳurʾān, apparently, solved the problem; for it states repeatedly that animals were created by God (II, 159/164, XXXI, 9/10, XLII, 29, XLIII, 11/12, XLV, 3/4) "[starting] from a liquid" (XXIV, 44/45) and that, of every thing, God "created a pair" (LI, 49). To the word *dābba* (pl. *dawābb*), which is used here instead of *ḥayawān* and refers more especially to riding animals and domestic animals, is opposed, in the verses intended to emphasize the Divine solicitude, the term *anʿām*, the herds, of which God sent down "eight (single) pairs" (XXXIX, 8/6; see also XXV, 51/49, XXXVI,

71); camels deserve a special mention for "they were created by Him for you" (XVI, 5).

However, early beliefs concerning the temporary or permanent metamorphoses of certain humans into animals are confirmed by such verses as "Those whom Allāh has cursed, against whom He has been angry, of whom He has made monkeys and pigs" (V, 65/60) or "We have said (to those who have broken the Sabbath): "Be despicable monkeys!' " (II, 61/65; see also VII, 166). There were two problems for commentators to solve: the first was to find out to what events the verses quoted above referred, and the second to examine the fate reserved for these creatures who had been metamorphosed. It goes without saying that the replies to the first question were various; al-Kisāʾī, for example (*Ḳiṣaṣ al-anbiyāʾ*, 274 f.), considered that the monkeys were Israelites who had undergone metamorphosis in the time of David for having caught and cooked fish on a Saturday, and that the pigs (*op. cit.*, 307) are contemporaries of Jesus who did not believe in him. The same Kisāʾī, following other authors, thinks that the animals resulting from these metamorphoses multiplied, while others on the contrary think that they died without issue, that is to say that God had created independently the species in question (see al-Djāḥiẓ, *K. al-Ḥayawān*, iv, 68). The belief in creation by metamorphosis or in the modification of certain animals is still current (see, *e.g.*, H. Massé, *Croyances et coutumes persanes*, Paris 1938, i, 185 ff.). To *maskh* is closely linked the question of metempsychosis, at least for the unorthodox sects and the theologians who admit the transmigration of souls into the bodies of animals [see ḤULŪL, TANĀSUKH]. We should note in passing that the Beast [see DĀBBA] is associated in Muslim eschatology with the Last Judgement and that a Ḳurʾānic verse (VI, 38): "No creature is there [crawling] on the earth, no bird flying with its wings, but they are nations like unto yourselves.... Then to their Lord they shall be mustered", permits commentators to consider that the animals too will experience the Resurrection and the Last Judgement [see ḲIYĀMA]. Furthermore, the Ḳurʾān, which mentions some dozen different species, contains five *sūra*s named after animals: the Cow (II), the Bee (XVI), the Ant (XXVIII), the Spider (XXIX), and the Elephant (CV)—the largest and the smallest creatures thus being included.

4. Animals and Muslim law. Islam concerns itself with animals in many other connexions, and there is hardly a chapter of Muslim law which does not deal with them. Domestic animals are subject to the *zakāt* [*q.v.*]; the sale of animals [see BAYʿ, TIDJĀRA] is bound by restrictions in connexion with the legality of the consumption of their flesh (*e.g.*, it is forbidden to sell pigs; however it is permitted to sell leeches, though it is forbidden to eat them); the question of their barter against other animals (see J. Schacht, *Origins*, 108) or of a contract for delivery with prepayment [see SALAM] is also debated; ritual sacrifices are the subject of precise instructions as is the killing of animals intended for eating [see DHABĪḤA]; to this chapter is connected that of hunting and game [see ṢAYD] and, secondarily, of furs [see FARW]; the prohibitions imposed on pilgrims in a state of *iḥrām* form another legal question [see ḤADJDJ and IḤRĀM], while some traditions of the Prophet lead to the posing of the question whether, outside the state of *iḥrām*, it is legal to kill certain animals and, on occasion, to eat their flesh. Thus the fundamental problem is reached, which concerns on the one hand food, and on the other the use for other purposes of one or another portion of a forbidden animal. In what follows we shall concern ourselves with the juridical status (*ḥukm*) of the various species of animals.

The Ḳurʾān enumerates on several occasions the prohibitions concerning the eating of the flesh of an animal which has not been ritually slaughtered, concerning the spilt blood, and the pig (V, 4/3; see also II, 168/173, VI, 146/145, XVI, 116/115), but in the last verse it provides for the lifting of the prohibitions in a case of absolute necessity (on the question of the pig, see KHINZĪR; for the spilt blood, we remember that the early Arabs, when they were dying of thirst in the desert, sometimes resigned themselves to slaughtering a camel and drinking its blood [*madjdūḥ*; see *Arabica*, 1955/3, 327]). Traditions of the Prophet and Islamic jurisprudence concede this *ḍarūra*, but in general they are much stricter, for they impose prohibitions upon species of which nothing is said in the Ḳurʾān, but without, it seems, restoring pre-Islamic practices (on which at present we possess only inadequate data). In fact the juridical schools have endeavoured, in a completely empirical way, to put an end to the uncertainty which existed in the early period of Islam (see I. Goldziher, *Muh. St.*, ii, 74) and to draw up lists of animals the consumption of which is lawful (*ḥalāl*), prohibited (*ḥarām*) or reprehensible (*makrūh*), without reaching absolute agreement (the *Ḥayāt al-Ḥayawān* of al-Damīrī, used with caution, is the most useful manual on this, for the author indicates the legal classification of each species according to the various schools).

In order to arrive at the *ḥukm*, several general criteria, Ḳurʾānic or based on tradition, have been applied by all the schools. Thus, by virtue of V, 97/96 "Permitted to you is the game of the sea and the food of it", all fish are lawful and their flesh may be eaten without ritual slaughter; however, some marine or aquatic animals are declared *ḥarām* or *makrūh*, or are still the subject of discussions, for they come within the sphere in which other criteria are applied; thus the frog, which would normally be *ḥalāl*, is regarded as *ḥarām* because the Prophet forbade the killing of it (see below). Moreover, some *fuḳahāʾ* zealots, in their meticulous search for anything impure, condemn the eating of those aquatic animals which have names resembling those of unlawful land animals ("dog of the sea", "pig of the sea", "ass of the sea"; their zeal leads them to prohibit an animal which has the same name as a forbidden animal even in a language other than Arabic, as with the ass, which in West Africa has the same name as the pig, cf. A. Gouilly, *L'Islam dans l'Afrique occidentale française*, Paris 1952, 205), or those which have the same shape (especially the eel, which is the same shape as the serpent). They go so far as to declare unlawful all marine creatures which have not got the shape of fishes (Ḥanafīs), with the explanation that the Ḳurʾānic text authorizes fishing, but not necessarily the eating of everything caught (al-Marghīnānī, *Hidāya*, ms. Paris ar. 6763, fol. 248 v.). Special cases are the scatophagous fishes, fishes found inside the belly of another fish, and above all the *ṭāfī*, dead fish floating in the water, which is lawful only for the Mālikīs and the Shāfiʿīs, though the Ḥanafīs permit the *ṭāfī* if it has been killed by an accident and has not died a natural death, which leads to a discussion of whether death from heat or cold is to be considered as natural (al-Marghīnānī, *op. cit.*, fol. 249 v.). The crustaceans are often

unlawful or reprehensible, as is the whole class of animals with shells.

By virtue of the verses (V, 6-7/4-5) "The good things (*ṭayyibāt*) are permitted you", we find included in the chapter of what is *ḥalāl* those animals whose flesh is esteemed for its flavour (chickens, sheep, etc.); conversely, the peacock and other animals are declared *ḥarām* because of the bad quality of their flesh. By the same token *istiḳdhār* or *istikhbāth*, *i.e.*, the habit of consuming unpleasant food, causes animals possessing it to be classed among those which are *ḥarām*: *e.g.*, scarab beetles. In this field there is a certain amount of indecision and not a little subtlety: the stork for example, which would be *ḥalāl*, is regarded as *ḥarām* because it eats snakes. Snakes themselves are *ḥalāl*, but eating them classes the stork among the carnivores. Indeed, among the Traditions of the Prophet which are also invoked, there is one (see Abū Dāwūd, xxvi, 32; Zayd b. ʿAlī, *Corpus iuris*, no. 538), which was to serve also as the basis for a division into *bahāʾim* and *sibāʿ* (see below), and according to which all carnivores are forbidden whether they are mammals equipped with fangs (*dhu nāb*) or birds provided with claws (*dhū mikhlab*); but it is not universally accepted, and the Mālikīs (see al-Ḳayrawānī, *Risāla*, ed. and tr. Bercher, [3]Algiers 1949, 299) permit the eating of the flesh of birds of prey, while the Awzāʿīs (see al-Damīrī, s.v. *al-bāzī*) consider that no bird is *ḥarām*. All the jurisconsults regard the cat, the dog, the wolf, the crocodile etc. as *ḥarām*, and travellers report with disgust any cases of eating dogs which they witness (see, *e.g.*, al-Muḳaddasī, *Description de l'Occident musulman*, Algiers 1950, 61 and n. 172); the fox is generally considered as lawful, the jackal and the wild cat are the subject of disagreement, and the hyena is lawful, except for the Mālikīs, who pronounce it *makrūh*. (The Prophet, questioned on the lawfulness of the hyena, is said to have replied: "But who eats the hyena?"; see al-Damīrī, s.v. *arnab*; Ibn Mādja, xxviii, 15; al-Tirmidhī, xxiii, 4). The classification of the elephant is disputed, for although it is a herbivore, it possesses means of defence which are termed *nāb* in Arabic.

According to another *ḥadīth* the Prophet is said to have forbidden the killing of bees (because God made a revelation to them [see NAḤL]), ants (for the same reason [see NAML]), frogs (because they were close to God when the Throne was upon the water and because their croaking is a praise to God), hoopoes (because of the part which one of them played with Solomon [see HUDHUD]), and finally the *ṣurad* (magpie) which was the first to fast; it follows that it is also forbidden to eat the flesh of these animals, although opinions do not altogether agree on this. Swallows and bats are the subjects of the same prohibition because the Prophet forbade the killing of them for similar reasons, but the jurisconsults are far from agreeing on the authenticity of the *ḥadīth*s about them. Conversely, certain animals are *ḥarām* because the Prophet ordered them to be killed for their impious conduct; these *fawāsiḳ* are the kite (*ḥidāʾa*), the black and white crow (*abḳaʿ*), the scorpion, the mouse and the *ʿaḳūr* dog; the kite and the dog are already included in another prohibition; the other varieties of crow are lawful, while the prohibition concerning the mouse extends to all rodents with the exception of the jerboa, which in any case is sometimes classed among the *ḥasharāt* or insects, which are considered as *ḥarām*, except by the Mālikīs; thus the scorpion is already forbidden under this heading, but the idea of *ḥasharāt* is rather confused, for among them is found the lizard (which is *ḥalāl*) and the hedgehog (*ḥalāl* among the Shāfiʿīs); on the other hand, locusts [see DJARĀD], which form a supplementary food for the Bedouin, are not forbidden by any school, even if found dead (this, with fish, is one of the two *maytas* which according to one *ḥadīth* are lawful). But some insist that they must have been intentionally killed and their heads cut off. (Yet against this may be cited ʿAlī, who is reputed to have said *kulhu kullahu* "eat them all", when shown a heap of locusts some of which were already dead; al-Marghīnānī, *op. cit.*, fol. 249 v.). Reptiles are in general considered unlawful or reprehensible, except among the Mālikīs who merely apply the criterion of harmfulness and authorize the eating even of poisonous snakes if the poisonous part has been cut off. The lizard (*ḍubb*), however, is often recognized as lawful, by virtue of some *ḥadīth*s which state that the Prophet abstained from them merely because of personal dislike, but some others say that this species represents a tribe of the Banū Isrāʾīl which had been metamorphosed, and this leads to their being prohibited (al-Bukhārī, lxx, 10, 28; Abū Dāwūd, xxvi, 27; al-Dārimī, vii, 80; Ibn Saʿd, i/2, 111 f., etc.; cf. al-Ghazālī, *Iḥyāʾ*, ii, 93). Animals which are considered to have no liquid blood are in general regarded as lawful, since blood is what constitutes the impurity of animals which have not been ritually slaughtered (al-Ghazālī, *Iḥyāʾ*, ii, 83). Many, however, are forbidden (except by the Mālikīs) because of the disgust which is felt for them and which causes them to be classed among the *khabāʾith*, "unclean foods", discouraged by the Ḳurʾān (VII, 156/157). This vicious circle, from the logical point of view, is moreover applied to other foods and allows all prohibitions to be canonized. This is particularly true for the *ḥasharāt al-arḍ*, (sometimes *khashāsh*), a term which embraces in a variable and inconsequential way the small animals which live on the ground, and are in general forbidden or reprehensible, in spite of a *ḥadīth* (Abū Dāwūd, xxvi, 29a; cf. Damīrī, s.v.). They include scorpions, all kinds of insects, and worms. Concerning the latter there is much disagreement, for it is difficult not to eat them accidentally with other foods. Some schools make efforts to distinguish those which have been engendered by the food itself from those which have not, those which are alive or dead, those which have *rūḥ* or not (cf. discussion by al-Djazīrī, *Kitāb al-Fiḳh*, ii, 3 and n. 1).

In general birds without talons are permitted, but certain of them are the subjects of discussion, and receive different classifications according to the schools; this is the case notably with the parrot and the owl.

It goes without saying that a certain number of animals have not received any classification, because it has not occurred to anyone to eat their flesh. Similarly for very rare species the question has not been solved because it has not arisen; thus al-Damīrī mentions that nobody has been concerned with the rhinoceros, which he himself considers at first sight to be *ḥalāl*; the case of the giraffe is disputed; and finally the monkey is regarded as *ḥarām* except by the Mālikīs; here there intervenes, as in the case of the *nisnās* (see Ibn al-Ukhuwwa, *Maʿālim al-ḳurba*, ed. R. Levy, London 1938, 105, tr. 34) the new idea of a resemblance between animals and humans, which, by a kind of natural law, prevents people eating these creatures without a formal prohibition being necessary (Ibn ʿAbd al-Barr, *apud* al-Damīrī, s.v. *ḳird*, where is found moreover a *ḥadīth* condemning the eating of monkeys).

Among domestic animals, while the camel, the ox, the sheep etc. present no problem, the equidae give rise to disagreements; the horse is lawful for the S̲h̲āfiʿīs and the Ḥanbalīs, while the other schools consider it *makrūh*; the domestic ass is *ḥarām*, except for the Ḥanbalīs who regard it as *makrūh*, while the wild ass is *ḥalāl* for all schools except the Ḥanafīs. The mule, arising from a crossing of two differently classified species, is prohibited, except that, at least for those who regard the horse as *ḥalāl*, the offspring of a horse and a wild she-ass is permitted.

In contrast to the other schools, the Ẓāhirīs, and particularly Ibn Ḥazm [*q.v.*], remain faithful to their fundamentalist criterion and base themselves on Ḳurʾān, VI, 119 "... seeing that He has distinguished for you that He has forbidden you", to reject prohibitions which are not found in the Ḳurʾān.

The S̲h̲īʿīs do not differ radically from the Sunnīs; although they differ from them on points of detail, they nevertheless base their decisions on identical criteria. Thus the *ḳāḍī* al-Nuʿmān (*Kitāb al-Iḳtiṣār*, ed. Muḥ. Waḥīd Mīrzā, Damascus 1376/1957, 95-6), who sets forth the doctrine of the Ismāʿīlīs, points out that God has forbidden the eating of carrion, spilt blood and pork (Ḳurʾān, V, 4/3) and that the Prophet declared unlawful carnivores with fangs and birds with talons (see above); he adds that the hyena and the fox are forbidden, and that the eating of the lizard, the hedgehog, insects (*ḥas̲h̲arāt*), snakes and all the small reptiles or insects included under the name of *k̲h̲as̲h̲ās̲h̲* is to be discouraged; only locusts caught alive while in flight are permitted. However, the S̲h̲īʿīs include among the flesh which is forbidden or reprehensible that of several particular birds (the lark etc.) and that of two new categories: birds which hover more than they fly, and birds which lack both a gizzard and other organs (Querry, *Droit musulman*, ii, 232 ff.). The Ismāʿīlīs authorize the eating of horse-meat only in the case of an animal useless for any work, and they forbid absolutely the flesh of mules and domestic donkeys; also *ḥarām* are animals which habitually eat excrement (*d̲j̲allāla*), unless they have been fed a certain time on herbage. It is also *ḥarām* to consume the milk or the eggs of forbidden animals, but abstention from eating certain parts of permitted animals—the glands, the spleen, the genitals etc.—is also recommended. Among aquatic animals those which have no *ḳis̲h̲r*, *i.e.*, scales (cf. Leviticus, XI, 9, Deut. XIV, 9) are forbidden, as are those which are not alive when caught. In cases of necessity, however, all these prohibitions are waived.

These general considerations leave the way open for argument, especially in the case of animals which are difficult to classify; an example is the cat-fish (*d̲j̲irrī*; see H. Laoust, *Profession de foi d'Ibn Baṭṭa*, 136-8). Divergences appear as well among the S̲h̲īʿī sects; thus Ibn Baṭṭūṭa (ii, 352; tr. Gibb, ii, 468) relates that for the Ḥanafī inhabitants of Sinope (Ṣanūb) the best way of assuring themselves that a traveller and his companions adhered to Sunnism was to offer them a hare, for the Rāfiḍīs do not eat the flesh of this animal (though the Ismāʿīlīs do).

To the question of the legality of killing certain animals is added the forbidding of pilgrims in the state of *iḥrām* [*q.v.*] to shed blood, from which arises the problem of how one is to deal with vermin; the question arises also in connexion with prayer [see ṢALĀT].

At another level arises the question of the way in which animals are to be treated; for example it is permitted to kill a cock, but the Prophet forbade reviling it because it performs the religious function of awakening the Faithful at the time of prayer; the same rule applies to fleas "who awakened a prophet". In general Muslims are counselled to treat animals, and particularly their mounts, well, for they will have to give account in the next world of any cruelty which they have inflicted on them in this (on behaviour towards animals, see G.-H. Bousquet, *Des animaux et de leur traitement selon le Judaïsme, le Christianisme et l'Islam*, in *St. Isl.*, ix (1958), 31-48; H. Ritter, *Das Meer der Seele*, Leiden 1955, ch. xxii).

The problem presented by the use of the parts of animals regarded as *ḥarām* is a complex one which cannot be given here the full treatment which it deserves (al-Damīrī gives precise details on this topic). By way of example, among the Mālikīs (al-Ḳayrawānī, *op. cit.*, 297), the Muslim who has had of necessity to eat the flesh of an animal not ritually slaughtered may not use its skin as a prayer rug, nor may he sell it. Similarly, before the skins of wild beasts (*sibāʿ*) may be used as prayer rugs, or sold, it is necessary for them to have been ritually slaughtered. Although pigs are forbidden in the Ḳurʾān, the Mālikīs allow the use of hogs' bristles.

It is hardly possible within the limits of this article to enlarge on the subject of the lawfulness of animals, the complexity of which in Islamic law is due to what the doctors consider to be the insufficiency of the Ḳurʾānic regulations. Prohibitions concerning food being considered necessary—as is proved by the fact that later "prophets" hastened to enact more of them [see, *e.g.*, ḤĀ-MĪM]—the schools, in order to develop the system outlined in the verses at the beginning of this section, applied various criteria (on which they are not always unanimous), so that in order to present this intricate subject more completely, it would be necessary to list all the animals and to indicate for each one the *ḥukm* adopted by each of the different schools. It would also be instructive to compare these classifications with the Biblical regulations (Leviticus, XI, 1-47; Deuteronomy, XIV, 4-21; see also Isaiah, LXV, 4, LXVI, 3, 17) and with the criteria laid down: it is lawful to eat ruminant quadrupeds with cloven hoofs (this excludes the horse, the donkey, the camel, the rabbit, the hare and the pig), also aquatic animals equipped with fins and scales; birds which are held in abomination and reptiles which are lawful are listed separately. The prohibitions set forth in the Old Testament are regarded in the Ḳurʾān (IV, 158/160) as a punishment inflicted on the Jews for their iniquity and their disobedience to God, and the Holy Book of Islam had no reason to be so severe, but the scruples of the *fuḳahāʾ* led them to adopt a more rigorous position and to restrict the alleviations from which Muslims could benefit. In certain cases custom supersedes a legal ruling which is considered to be too liberal: thus, the coney (*wabr*) is in general considered lawful, in contrast to the Biblical regulation, but it is the object of prohibitions based on custom, for example among the Egyptian Bedouin (see G. W. Murray, *Sons of Ishmael*, London 1935, 90), or among the settled communities of Southern Arabia (see Freya Stark, *The southern gates of Arabia*, Penguin ed., London 1945, 67 f.).

5. Animals in literature. Several animal species occupy a notable place in pre-Islamic Arabic poetry. To give an idea of the extent of this, in vol. i of *al-Mad̲j̲ānī 'l-ḥadīt̲h̲a* of F. al-Bustānī, Beirut 1945, which provides a representative survey of this poetry, are mentioned, under various names, about

80 animals among which camels [see IBIL], horses [see FARAS], ostriches [see NAʿĀM] and lions [see ASAD] are the most frequent (M. M. D. al-Nowaihi has studied this question in an unpublished thesis presented at London in 1942: *Animals in ancient Arabic poetry* [excluding the horse and the camel]; a thesis entitled *Le chameau dans la poésie arabe antéislamique*, by E. K. Zakharia, is in course of preparation at Paris).

In Arabic poetry in the Islamic period, animals of the desert naturally tend to occupy a less important place, even among the classical and neo-classical writers, although these continue to describe their camels and to boast of their journeys across the empty spaces; in spite of the abundance of new sources of inspiration, the "modernists" did not hesitate to display their linguistic knowledge in *ṭaradiyyāt* [*q.v.*] in which they built up artificially an extraordinarily rich vocabulary. Some of them wrote charming verses on pet animals, especially Muḥ. b. Yasīr (see Ch. Pellat, *Muḥammad b. Yasīr al-Riyās̲h̲ī wa-as̲h̲ʿāruh*, in *Machriq*, 1955, 289-338) or al-Ḳāsim b. Yūsuf b. al-Ḳāsim (see D. Sourdel, *Vizirat*, 229 and index), who composed elegies on goats, cats, birds (see K. A. Fariq, *An ʿAbbāsid secretary-poet who was interested in animals*, in *IC*, xxiv (1950), 261-70). During the following centuries the crow [see G̲H̲URĀB] and the lion retain their place in literature (for they symbolize respectively the sadness of separation, and strength and boldness), while new species appear: *e.g.*, the elephant and the giraffe. Descriptions of nature induce new themes and original symbols, and the poets describe the ugliest animals as well as the pleasantest; the pigeon [see ḤAMĀM], the nightingale [see BULBUL], the peacock [see ṬĀʾŪS] are used as symbols, not only in Arabic, but also in Persian and in Turkish literature. The poets of the Muslim West concerned themselves very much with pets, ignoring the camel, which they scarcely knew (see H. Pérès, *Poésie andalouse*, 235-47).

In the field of prose the situation is quite different. No stories of animals are found in pre-Islamic Arabia, which in any case did not, generally speaking, possess a very highly developed folklore [see ḤIKĀYA], and the fables attributed to Luḳmān [*q.v.*] date for the most part from after the beginning of Islam. The translation of *Kalīla wa-Dimna* [*q.v.*] was thus something of a revelation, but it remained a masterpiece which was occasionally imitated but never surpassed. First should be mentioned the verse rendering of these fables by Abān al-Lāḥiḳī [*q.v.*], then that by Ibn al-Habbāriyya [*q.v.*] in his *Natāʾid̲j̲ al-fiṭna fī naẓm Kalīla wa-Dimna*; next the imitations of Sahl b. Hārūn [*q.v.*] in his *K. T̲h̲aʿlā wa-ʿAfrā* and his *K. al-Namir wa ʾl-t̲h̲aʿlab* (a ms. of which has just been identified in Tunis; see ʿA. al-Mhīrī, in *Ḥawliyyāt al-D̲j̲āmiʿa al-Tūnusiyya*, i (1964), 19-40), of Ibn Ẓafar [*q.v.*] in his *Sulwān al-muṭāʿ fī ʿudwān al-atbāʿ*, as well as the *K. al-Ṣādiḥ wa ʾl-bāg̲h̲im* of Ibn al-Habbāriyya and the *Fākihat al-k̲h̲ulafāʾ* of Ibn ʿArabs̲h̲āh [*q.v.*]. None of these works appears to have gained the same success as *Kalīla wa-Dimna*, and it may be said that Arabic literature still awaits its La Fontaine.

We note also that a certain number of animals are introduced in the *Thousand and one nights* and that in it the theme of metamorphosis is widely used (see N. Elisséeff, *Thèmes et motifs des Mille et une nuits*, Beirut 1949, 93, 142-4, 193 and *passim*; M. I. Gerhardt, *The art of story-telling*, Leiden 1963, 305 ff.).

Apart from *d̲j̲inns* and *g̲h̲ūls* (see above) there exists also a certain number of fabulous animals, mainly birds [see ʿANḲĀʾ, RUK̲H̲K̲H̲, SĪMURG̲H̲].

In the folklore of certain regions of the Muslim world animal stories are most numerous; in North Africa, in particular, they form an important element of the native Berber literature and show numerous affinities with the corresponding western tales; here it is the jackal [see IBN ĀWĀ], half way between the wolf and the fox, which is the central figure (see H. Basset, *Essai sur la littérature des Berbères*, Algiers 1920, 240 ff.). In the dialectical Arabic of North Africa, the perceptible Berber influence is added to the eastern borrowings drawn principally from *Kalīla wa-Dimna*; apart from the jackal, the most usual figures are well-known animals: the donkey, the ox, the ram, the he-goat, the hen, the dog, the cat, as well as the fox, the gazelle, the hyena and the lion. Most of the manuals and collections of texts in dialect Arabic reproduce some of these stories (see Bibl. of the art. ḤIKĀYA). (CH. PELLAT)

6. Animals in art. Representations of animals occupy only a restricted place in the art of the Islamic countries, limited by the tendencies towards non-representationalism and decorative abstraction which typify this art and which, though varying considerably from one region and one period to another in their development, contribute in large measure to the originality of Muslim civilization [see FANN]. For it was primarily religious restrictions which led to the prohibition of all representations of living beings and which explain their total absence from public buildings such as mosques. Such restrictions, however, in no way prevented painted or sculptured compositions of a secular character from taking their inspiration from nature, and in particular from fauna, even when they avoided too precise a delineation of physical form, or from frequently testifying, within the bounds of Islamic culture, to the continuance or revival of very ancient traditions.

A systematic inventory of the zoomorphic figures thus used and their main types has not yet been undertaken. The diversity of the various fields in which such an inquiry would have to be conducted, from architectural ornament to illustrations of manuscripts and ranging through all the luxury articles produced by craft-work, suffices to show its importance. But the results obtained would no doubt vary greatly according to the nature and material of the objects under consideration [see ʿĀD̲J̲, BILLAWR, etc.]. It would also reveal the differences of treatment accorded to each species of animal, based on ideas derived either from literature or from daily observation as well as symbolic and magic significance [see ASAD, FĪL, etc.]. This point has been made clear in the all too rare studies of any profundity based on certain iconographic animal motifs, such as, for example, the unicorn or the ibex devouring a snake (cf. R. Ettinghausen, *Studies in Muslim iconography, I, The unicorn*, Washington 1950, and *The "Snake-eating Stag" in the East*, in *Late and mediaeval studies in honour of Albert Mathias Friend Jr.*, Princeton 1955, 272-86).

Even before other investigations of this kind are undertaken, it may be stated that certain animal figures, employed as much for their ornamental qualities as for the different connotations that they might convey and often associated with the glorification of royal power, made their appearance in Islamic art as early as the Umayyad period. Certain elements of the bestiary were thus incorporated in the sculptures carved in half-relief on the façade of the

palace of Mshatta [*q.v.*], while subjects of the same order, though more familiar, were painted on the vaulting of the bath at Ḳuṣayr ʿAmra [*q.v.*], and the principal mosaic of the castle of Khirbat al-Mafdjar [*q.v.*] had as its theme two facing gazelles grazing and a lion attacking one of them, on each side of a majestic tree. Mention must also be made of the realistic representation of a galloping horse and wounded deer in a fresco of Ḳaṣr al-Ḥayr al-Gharbī [*q.v.*], for in these experiments we can see the first illustrations of a taste which was subsequently to prove enduring in the Muslim world. For a long time, indeed, the decoration of palaces and rich mansions sought to find a place for a whole stock of more or less stereotyped animal motifs taken from the Sāsānid or Hellenistic East, and later associated with the life of luxury and pleasure lived by the new holders of sovereign power.

The same reasons explain the frequency of these motifs on articles of furniture connected with the daily routine of princely life and, whether ceramics or metal artefacts or even precious fabrics, characterized alike by the need to ensure the glory, happiness and good fortune of the patrons who had ordered them. For this reason, particular preference was shown for representations of those animals which had long been utilized as the symbols of royal power (the lion, the bird of prey, etc.), which might evoke the sovereign's pastimes (hunting scenes), or which had been endowed with some beneficent properties of talismanic and astrological origin (signs of the Zodiac). These images provided the craftsmen with the essential elements for linear decorations (painted, engraved, or worked on a flat surface) which generally combined interlaced floral and geometrical forms with bands embellished with strings of quadrupeds or birds, as well as medallions decorated with figures exactly repeated or sometimes symmetrically facing each other. They also formed the subject of the rarer sculptures in relief imitating the silhouettes of well-known animals especially for ewers and incense-burners.

Examples of this kind remain relatively rare during the earliest centuries of Islam, from which period we can cite only the bronzes influenced by Sāsānid tradition, such as the group to which belongs the so-called aiguière of Marwān II. But their number steadily increased with the development of ʿAbbāsid civilisation and its growing receptivity to foreign customs, some of which were tainted with heterodoxy. A significant proof of this is afforded by the Buwayhid articles of goldsmith's work or textiles which, with due observance of the aesthetic laws of stylization and repetition, were decorated with such animals as felines, ibexes, elephants, eagles, peacocks and even griffins (analyses of these motifs in G. Wiet, *Soieries persanes*, Cairo 1947). But we can also take as an example the ivory boxes made in Muslim Spain in the 4th/10th century [see ʿĀDJ] and Egyptian Fāṭimid sculptures in crystal, ivory or wood (see particularly G. Marçais, *Les figures d'hommes et de bêtes dans les bois sculptés d'époque fâtimite conservés au Musée arabe du Caire*, in *Mélanges Maspéro III*, 1935-40, 241-57), not forgetting the dishes and bowls of faïence with lustre decoration that were made at that time in different parts of the Muslim world.

Of these various instances in which animal decoration takes a prominent place, some employ a range of figures of "heraldic" style, to be found principally in ʿIrāḳ or Iran, and whose Sāsānid antecedents can be recognized without difficulty: simplified interpretations of these motifs appear even in the most common types of ornamented pottery (see, for examples from the 5th/11th century, sherds found at Bust and studied in J.-C. Gardin, *Lashkari-Bazar II. Les trouvailles*, 45-9 and index). Other figures reveal the appearance of touches of a delicate realism which, in their veracity of detail or sense of movement, renew the handling of classical subjects and give an authentic freedom of posture to the animals carved on Egyptian panels or painted with rapid strokes on pottery of the same origin (cf. the remarks of R. Ettinghausen, *Early realism in Islamic Art*, in *Studi Orientalistici in onore di Giorgio Levi Della Vida*, i, Rome 1956, 250-73). But it was above all in Saldjūḳid or later art, in the 5th/11th and 6th/12th centuries and from the time when the expansion of the new Turkish empires had opened up the way in the Near East to increased Iranian and Asiatic influences, that the effects of this realism made themselves felt most forcefully.

It was then that the most remarkable animal-shaped metalwork objects known in the Islamic countries were produced, objects which, in recent years, successive exhibitions devoted to Iranian art have made it possible to bring together and compare. At the same period, on public buildings in Upper Mesopotamia and Anatolia, there appeared numerous representations of animals, carved in stone or stucco and intended primarily to serve as talismans, sometimes inspired by an astral symbolism then very widespread (motif of knotted dragons, selected signs of the Zodiac) (cf. M. van Berchem, *Amida*, Heidelberg 1910, 78 ff., and D. S. Rice, *Medieval Harran*, in *Anatolian Studies*, ii (1952), 65-6). With these we may compare the types of contemporary coinage, especially the Artuḳid and Dānishmendid, which provided similar motifs—in earlier periods, only a medal of the ʿAbbāsid caliph al-Mutawakkil had borne on the obverse the figure of a dromedary (cf. T. Arnold, *Painting in Islam*, Oxford 1928, pl. LIX d) —while a later echo is to be found in the "lions of Baybars" which were to mark, as though with a coat-of-arms, the principal constructions and foundations of this Mamlūk sultan.

In the same period too zoomorphic figures were utilized in linear ornamentation to decorate the walls of public buildings or on specimens of the minor arts (see the analyses of decorations of this type, with excellent drawings, in the studies of D. S. Rice devoted to specimens of Islamic metal-work inlaid with silver). The masterpieces which owe a large proportion of their interest to such manifestations belong as much to Iran or Saldjūḳid Anatolia as to Syria and Egypt (first under the Ayyūbids, then the Mamlūks), and not forgetting the region of Mosul (for its workshops of bronze-workers, see AL-MAWṢIL). But it must be noted that only the provinces of Khurāsān witnessed the development of those astonishing types of zoomorphic inscriptions, restricted to objects in metal, which have quite recently attracted attention and which made use of the silhouettes of animals either to delineate the actual characters, or else to "animate" them by outlining them within the interlaced foliage which formed the background (see D. S. Rice, *The Wade Cup in the Cleveland Museum of Art*, Paris 1955, 21-33). No doubt this must be regarded as the most perfect example of the adaptation of fauna to the requirements of the arabesque to be found among the typical aspects of ancient art in Islam.

It was moreover in the Iranian or Indo-Iranian arts that, during the later periods, the taste for

animal motifs continued to serve as a pretext for ornamental stylizations that are full of freshness and delicacy, while in the other regions of the Muslim world they were gradually abandoned. Ṣafawid brocades and carpets thus provide, up to a recent period, an illustration of the resources of this at once graceful and conventional repertory, which research in the Mongol period had successfully revived, but which thereafter was to remain unknown to Muslim artisans working elsewhere than in Persia.

Side by side with these zoomorphic elements of Islamic decoration, we must also not overlook the representations of animals multiplied, though in quite a different spirit, by Muslim painters and miniaturists, who very frequently took their models from the animal world and succeeded in giving interpretations of markedly ornamental character, yet sometimes not devoid of exactness or even realism.

Indeed, even in an ancient period, at the time of the rise of what it has recently been suggested should be called "Arab painting" (cf. R. Ettinghausen, *Arab painting*, Geneva 1962), and which corresponds more precisely with a flowering that took place in post-Saldjūḳid Irako-Mesopotamian or even Syro-Egyptian culture (from the end of the 6th/12th to the 8th/14th century), the actual nature of the works illustrated, books of *adab* including collections of fables or technical treatises sometimes touching on zoology, further encouraged the very particular popularity that representations of animals then enjoyed. By way of example it will suffice to refer to the illuminated copies of the *Kalīla wa-Dimna* of Ibn al-Muḳaffaʿ which have survived (copies in Paris, B.N., Ar. 3465 and 3467; Munich, Staatsbibl. C. arab. 616; Cairo, Nat. Lib., Pers. lit. 61; Oxford, Bodl. Libr., Pococke 400) as well as copies of the two *K. Manāfiʿ al-Ḥayawān* edited by Ibn Bakhtīshūʿ (in Persian; New York, Morgan Lib., M. 500; Washington, Freer Gall. No. 27-5) and by Ibn al-Durayhim al-Mawṣilī (Escorial, Ar. 898), without overlooking the *K. al-Bayṭara* of Aḥmad b. al-Ḥusayn b. al-Aḥnaf (Istanbul, Topkapı Saray, Ahmet III 2115) or the *Kashf al-asrār* of Ibn Ghānim al-Maḳdisī (Istanbul, Süleymaniye, Lala Ismail 565) and the *K. al-Ḥayawān* of al-Djāḥiẓ (see O. Löfgren, *Ambrosian fragments of an illuminated manuscript containing the zoology of al-Ǧāḥiẓ*, Uppsala-Leipzig 1946).

But in these various works, to which might be added the "genre scenes" with figures of familiar animals found occasionally in other illustrated manuscripts of the same period (see, for example, the scenes known as "the herd of camels", "the departure of the caravan", or "the discussion near a village" in a MS of the *Maḳāmāt* of al-Harīrī: Paris, B.N., Ar. 5847), it is of particular interest to note a stylistic continuity which makes it permissible to speak of a style of portrayal of animals peculiar to the pictorial art thus represented. This style might essentially be defined as the "combination of shrewd perception of the animal's special qualities with a natural way of presenting them" (R. Ettinghausen, *Arab painting*, 136).

In point of fact, in the earliest known copy of *Kalīla wa-Dimna*, of the beginning of the 7th/13th century (MS Paris, B.N. ar. 3465), it is easy to see what care has been taken to give life and expressiveness to animal forms, little by little escaping from the conventionalism inherent in the traditional Iranian style, which incidentally is reflected in the balance of each picture. The apogee of this tendency is ultimately found in such a typical work of the so-called Baghdād school as the MS Ḥarīrī-Schéfer previously referred to, signed by a certain al-Wāsiṭī in 634/1237. It can be seen to disappear finally with the rise of the formalism that was to characterize Mamlūk painting, while it was to be reborn in a new form in the truly Persian schools of painting which were to take shape after the rupture brought about by the Mongol conquest. These schools were indeed to preserve the feeling of the animal's movement, even when in place of the earlier attempts at realism they substituted the return to a more ornamental conception of the different subjects treated and when their masterpieces took shape under the inspiration of extremely varied aesthetic sensibilities (in addition to the classical works on the subject, see the recent work of B. Gray, *Persian painting*, Geneva 1961).

Thus it is possible to confer upon the Muslim miniaturists, considered as a whole, the well-deserved epithet of "master animal-painters", a title which it would seem difficult to reconcile with the regulations restricting the freedom of the creative imagination in that civilization, but which none the less justly emphasizes one of the most attractive aspects of art in Islam.

Bibliography: There is no comprehensive study devoted to this question. Various individual studies have been referred to in the text. For further study of certain of the aspects discussed above, reference should be made to K. A. C. Creswell, *A Bibliography of the architecture, arts and crafts of Islam*, London 1961, to which may now be added E. J. Grube, *Three miniatures from Fusṭāṭ in the Metropolitan Museum of Art*, in *Ars Or.*, v (1963), 89, 95, and H. Goetz, *Indo-Islamic figural sculpture*, *ibid.*, 235-41.

(J. Sourdel-Thomine)

7. Zoology among the Muslims. On the scientific plane, one might have thought that the works devoted to animals by Aristotle [see ARISṬŪṬĀLĪS], the founder of rational zoology, would have allowed those Arab scholars who were willing to use the results of Greek learning to make great progress in the knowledge of the animal kingdom and to introduce zoology among the disciplines cultivated by the Muslims, on a level with, for example, scientific geography, mathematics or medicine. But, in spite of Yaḥyā b. al-Biṭrīḳ's translation of Aristotle's *Historia animalium* (2nd-3rd/8th-9th centuries), zoology has never been a very popular discipline and the increasingly limited place which it occupies in the various theoretical classifications of the sciences is significant in this respect. In the classification of Aristotle it forms an integral part of "physics", linked with psychology, and it is still found with the soul (*nafs*) among the physical and natural sciences (*al-ʿilm al-ṭabīʿī*) in al-Fārābī's *Iḥṣāʾ al-ʿulūm*, ed. ʿUthmān Amīn, Cairo 1949, 99 (see L. Gardet and M.-M. Anawati, *Introd. à la théol. mus.*, 106); it appears as an independent science among the Ikhwān al-Ṣafāʾ (Gardet-Anawati, 109), is classed among foreign sciences in the *Mafātīḥ al-ʿulūm* of al-Khwārizmī (Gardet-Anawati, 111), but is no longer found in the *Iḥyāʾ* of al-Ghazālī (Gardet-Anawati, 117), or in the *Prolegomena* of Ibn Khaldūn (Gardet-Anawati, 123-4). It does not seem either to have interested al-Ḳalḳashandī, who does not cite any work of zoology proper among *Les classiques du scribe égyptien* (G. Wiet, in *St. Isl.*, xviii, 50-3).

This growing indifference to zoology shown by Arab thinkers and writers is very difficult to explain

when one considers the interest taken in animals by Muslim law, but is probably due in great part to the absence of organized research and specialist works of truly scientific character, although zoological gardens (*ḥayr al-waḥsh*) in which the rarest and fiercest species of animals had been assembled at great expense (see A. Mez, *Renaissance*, 383; Eng. tr., 404-5, where also organized combats are mentioned) ought to have aroused the curiosity of scholars and encouraged them to undertake thorough studies. But zoology among the Muslims remained at the literary, or perhaps one may say the religious stage; it cannot even be called descriptive in the works of those authors who have made efforts to give some order to previously discovered facts and to produce alphabetical catalogues. The innocent cause of this deficiency is very probably al-Dj̲āḥiẓ [*q.v.*], the author of a monumental *Kitāb al-Ḥayawān* in seven volumes, the confessed aim of which is not the scientific study of the animal species but the demonstration of the existence of the Creator through the observation of His creation (ii, 109 ff., iii, 209 ff.) and the glorification of the Divine Wisdom which has created nothing completely useless or harmful: dangerous or malicious animals (which it is permissible to kill, i, 307-8) are in fact a trial (*miḥna*) imposed on men by God (iii, 300). Al-Dj̲āḥiẓ is perfectly well acquainted with Aristotle and allows himself on occasion to criticize him (*e.g.*, vi, 17) and quotes from him quite extensively (see Ṭ. al-Ḥādjirī, *Takh̲rīdj̲ nuṣūṣ aristaṭāliyya min Kitāb al-Ḥayawān li 'l-Dj̲āḥiẓ*, in *Madj̲allat Kulliyyat al-Ādāb*, Alexandria 1953 ff.), but he is convinced that he has no need of recourse to Greek ideas, given that practically all that is found in the zoological works of the "philosophers" is known already to the Bedouins (iii, 268); thus, though an admirer of the *Ṣāḥib al-Manṭiḳ*, he deliberately ignores Aristotle's principles of classification, admittedly rather negative and difficult to grasp (see *Parties des animaux*, tr. J.-M. Le Blond, Paris 1945, i, 66), in order to adhere to a rudimentary empiricism.

After having stated (i, 26) that created things are divided into three categories: *muttafiḳ* (similar), *mukh̲talif* (different), *mutaḍādd* (opposite), al-Dj̲āḥiẓ, after some hesitation as to the place to give to the stars, the four elements, etc., distinguishes on the one hand inorganic (*dj̲amād* = inert) and on the other organic matter (*nāmⁱⁿ* = growing). He then divides the organic section into two "kingdoms": animal (*ḥayawān*) and vegetable (*nabāt*); the animal kingdom is in turn subdivided into four branches according to the way in which the animal moves: walking (*mā yams̲h̲ī*), flying (*mā yaṭīr*), swimming (*mā yasbaḥ*), crawling (*mā yansāḥ*); this classification, which is based simply on current observation, is the same as the Biblical division (I Kings, IV, 33: "[Solomon] spake also of beasts, and of fowl, and of creeping things, and of fishes") and corresponds to one of the Platonic criteria of classification. Starting from these "classes", al-Dj̲āḥiẓ experiences some embarrassment, for not only does he admit that his own division is not a rational one since he is obliged to exclude the ostrich from the "class" of birds while including the bat, but he has to give up the attempt to adopt too rigid subdivisions because of inability to pass from the particular to the general in defining the fundamental attributes of the species and the genera. Finally, he mixes functional criteria and habits of life to determine the species, and though he has a vague idea of what were to be the "orders", "families" and "genera" in the modern systematic classification, he adheres in general to the species which he divided into the four categories mentioned above:

1. animals which walk: men (*nās*), the *bahā'im* (*i.e.*, non-carnivorous quadrupeds, either domestic or wild), the *sibāʿ* (fierce animals, *i.e.*, carnivores, domestic or wild), insects (*ḥas̲h̲arāt*) without wings.

2. animals which fly: of these there are only three "orders": (a) carnivorous birds (*sibāʿ*) which in turn are subdivided into "noble" (*aḥrār*, *i.e.*, large birds of prey such as the eagle, the vulture, etc.), "common" (*bug̲h̲āth*, less equipped with means of defence), and little birds which feed on insects; (b) the birds which are *bahā'im*, *i.e.*, in general the grain-eaters which protect themselves by fleeing; (c) the *hamadj̲*, winged insects.

In the course of his work he distinguishes many different species of reptiles, but he does not suggest any classification. Similarly he does not venture to classify the fish (among which he includes intentionally mammals such as the whale), and in any case he says that he has not found in early poetry enough reliable evidence, the accounts of sailors being untrustworthy (vi, 16).

The *Kitāb al-Ḥayawān*, which is a work of *adab* of religious character and not of natural science, is characterized by the greatest disorder. Its sources are varied, but the most important are the literary data collected by the investigators of the 2nd and 3rd/8th and 9th centuries, enriched by oral traditions, by information obtained from conversations and current observation, and also by little experiments performed by the author himself or by his Muʿtazilī friends, *e.g.*, that which concerns the effect on animals of spirituous drinks (ii, 228-9), or his researches on spontaneous generation (iii, 348), of which he is a convinced supporter (iii, 372, v, 371, etc.) against those who deny it and claim that an animal can be begotten only by an animal (v, 349). Al-Dj̲āḥiẓ takes a particular interest in hybrids and devotes to the mule [see BAG̲H̲L] a treatise which follows the *K. al-Ḥayawān*. On another plane, following the method of Aristotle, who links zoology with the study of the soul, he scatters throughout his work pertinent notes on the psychology of animals (*e.g.*, vi, 69 ff. on pride) and, considering the influence of environment to be of major importance, he sketches a doctrine of evolution which is not without interest. In all, nearly 350 animals are examined in a manner more or less profound but always unsystematic, and to find one's bearings use must be made of the excellent index to the edition of ʿAbd al-Salām Hārūn; it is thus possible to gauge the zoological knowledge of the early Arabs and to gain an idea of the opinions which they held on certain animal species. Being a good Muʿtazilī, who submits everything to the criterion of reason, al-Dj̲āḥiẓ makes an effort in passing to demolish some legends (e.g. ii, 14) and mingles with the traditions which he relates thoughts of his own which, if they were not so chaotically expressed, would earn him an honourable place between Aristotle and Buffon.

While his *Bayān* has been to a certain extent systematized and presented in a more orderly form by al-ʿAskarī [*q.v.*] in his *K. al-Ṣināʿatayn*, the *K. al-Ḥayawān* and zoology in general have hardly inspired later writers. At the time when *adab* flourished, Ibn Ḳutayba [*q.v.*] in his *ʿUyūn al-akh̲bār* (tr. L. Kopf, *The natural history*, etc., Paris and Leiden 1949) and a little later Abū Ḥayyān al-Tawḥīdī [*q.v.*] in his *Imtāʿ* (tr. L. Kopf, in *Osiris*, xii (1956), 390-466) devoted some space to animals but without bothering about scientific classification. Similar

treatment is given in the popular encyclopaedias of which the *Mustaṭraf* (ch. lxii) of al-Ibs̲h̲īhī [*q.v.*] is a typical example. The Ik̲h̲wān al-Ṣafāʾ, on the other hand, set out clearly, at the end of the second part of their *Rasāʾil*, the hierarchy of created things which comprises, in ascending order: minerals, plants, animals, man, the heavenly bodies; in each of these categories the highest rank is close to the lowest rank of the next category; thus the palm-tree, which belongs to the highest rank among the vegetables, is very little removed from the snail (*ḥalazūn*), which possesses only the sense of touch because the Divine Wisdom does not endow an animal with organs of which it has no need. The top of the scale among animals is occupied by the monkey, who is close to the uncivilized human, placed on the lowest rung of the next subdivision. Man constitutes a separate category because he alone possesses all the privileges which are granted only separately to animals.

It was not until the 7th/13th century that al-Ḳazwīnī (d. 682/1283 [*q.v.*]) made systematic use of earlier ideas and inserted a treatise on zoology in his *ʿAd̲j̲āʾib al-mak̲h̲lūḳāt*; he divides living things into three "kingdoms", places animals at the top of the scale and attaches considerable importance to their methods of defence which he uses as the criterion of classification:

1. animals which repel their enemies by their strength, such as the lion or the elephant;
2. those which protect themselves by fleeing, *e.g.*, the gazelle, the hare, birds;
3. those which are equipped with a special means of defence, like the hedgehog;
4. those which live in a protective fortress (*ḥiṣn*), *e.g.*, rats or snakes.

But he then divides animals into seven categories: (1) man; (2) *d̲j̲inns*; (3) "mounts" (*dawābb*: horse, mule, donkey); (4) domestic animals (*naʿam*); (5) wild animals; (6) birds; (7) insects, reptiles, etc. In the last three parts of his treatise, he devotes to animals notes in alphabetical order in which some general and completely non-scientific remarks are followed by the magic or medicinal properties (*k̲h̲awāṣṣ*) of the different organs of the animal. In comparison with al-D̲j̲āḥiẓ, this was a distinct decline.

The same can be said, on the truly scientific plane, of the *Ḥayāt al-ḥayawān al-kubrā* of al-Damīrī (d. 808/1405 [*q.v.*]), who does not put forward a new classification but limits himself to reproducing (s.v. *ḥayawān*) that of al-D̲j̲āḥiẓ, but brings together usefully, in alphabetically arranged notes, philological remarks, various traditions, the juridical status of the animal concerned (with the arguments of the jurists of the various schools), the proverbs to which it has given rise, the magical or medicinal properties of its different organs, and finally the interpretation of dreams in which it appears.

On occasion physicians or naturalists such as Ibn Bak̲h̲tīs̲h̲ūʿ (*K. Manāfiʿ al-ḥayawān*, see above, § 6), Ibn al-Bayṭār [*q.v.*] or al-Anṭākī [*q.v.*] took an interest also in animals, but the only branches of zoology which have really been the subject of profound and systematic studies are hippology [see FARAS], farriery [see BAYṬĀR, K̲H̲IYĀLA] and also ornithology in its application to hawking [see BAYZARA].

Outside the strictly Arabic field, so far as is known to the writer, no original work is found. A. Adnan Adıvar (*Osmanlı Türklerinde ilim*, Istanbul 1943, 15, 76, 91) mentions only one Turkish translation of the *Ḥayāt al-ḥayawān*, with some additions, by a contemporary of al-Damīrī, Meḥmed b. Süleymān (MS Topkapı Sarayı, Revan Köşkü, 1664), the *Tuḥfat al-zamān wa-k̲h̲arīdat al-awān* of the Turkish encyclopaedist Muṣṭafā b. ʿAlī al-Muwaḳḳit, which contains a system of zoology based on al-Damīrī and al-Ḳazwīnī, and finally a Persian translation of the *Ḥayāt al-ḥayawān* made for Selīm I by Ḥakīm S̲h̲āh Ḳazwīnī. Finally, a book of zoology, *K̲h̲awāṣṣ al-ḥayawān*, was compiled in the 12th/18th century by the Persian writer Ḥazīn [*q.v.*].

Bibliography: Apart from the references in the text, A. Malouf, *Arabic zool. dict.*, Cairo 1932, is a useful manual for the identification of the names of animals; glossaries for particular areas are found in A. Hanoteau and A. Letourneux, *La Kabylie et les coutumes kabyles*, Paris 1893, i, 208 ff. (the fauna of Kabylia); J. B. Panouse, *Les mammifères du Maroc*, Tangiers 1957, 191 ff.; V. Monteil, *Faune du Sahara occidental*, Paris 1951. See also A. Mez, *Renaissance*, 429-31 (Eng. tr. 455-8) and *passim*; D. Santillana, *Istituzioni*, Rome n.d., index, ii, 665; J. J. Rivlin, *Gesetz im Koran, Kultus und Ritus*, Jerusalem 1934; Maswani, *Islam's contribution to zoology and natural history*, in *IC*, xii (1938), 328-33; on a fragment of a hitherto unknown work on zoology, see A. J. Arberry, in *JRAS*, 1937, 481-3. On the so-called "Twelve animal" calendar, see TAʾRĪK̲H̲ and L. Bazin, *Remarques sur les noms turcs des "Douze animaux" du calendrier dans l'usage persan*, in *Mélanges H. Massé*, Tehrān 1963, 21-30.

(CH. PELLAT)

ANIMAL STORIES IN PERSIAN LITERATURE

In looking for the origin of the animal story in Persian literature, we are handicapped by the virtual absence of secular works prior to the 4th/10th century. The earliest extant literary sources in which animal stories occur (if we except the surviving fragments of Rūdakī's (d. 329/940-1) *Kalīla wa-Dimna* and *Sindbādnāma*) are Abu 'l-Maʿālī Naṣr Allāh's translation of the former, made in 538-9/1143-5, and Ẓahīrī Samarḳandī's version of the latter, composed in 556-7/1160-1. Of these, while *Kalīla wa-Dimna* is certainly from India, the *Sindbādnāma* has been convincingly demonstrated by B. E. Perry (*The origin of the Book of Sindbad*, Berlin 1960) to be of Persian origin, though probably not earlier than the 2nd/8th century. The *Hazār afsāna*, the presumed Persian original of the *Alf layla wa-layla*, can be traced back to roughly the same period. The Pahlavi translation of the Sanskrit *Pañčatantra* can on the other hand be quite safely assigned to the 5th century A.D., and even Ibn al-Muḳaffaʿ's Arabic version of this is earlier than the *Sindbādnāma*. Is this, then, when and how the animal story entered into Persian literature? According to Ibn al-Nadīm, author of the *Fihrist* (c. 400/1008), "the first who made separate compilations of *k̲h̲urāfāt* and made books in which to put them and laid them up in libraries and in some gave speaking parts to beasts were the early Persians" (Maḳāla 8, Fann 1, translated by D. B. Macdonald, *The earlier history of the Arabian Nights*, in *JRAS*, 1924, 364-5). In the context, the last term refers to the first two Persian dynasties, and the passage is at any rate evidence that by the 4th/10th century the view was current that the telling of stories about animals was buried deep in Persian tradition. Theodor Benfey (*Pantschatantra*, Vol. I, p. xxi, Leipzig 1859) put forward the theory that fables in which animals play the rôle of human beings are of Indian origin, while

those in which they act as animals are "Aesopic", that is, Near Eastern.

In the classical Persian literature the animal tale is introduced primarily to illustrate moral or mystical points, notable examples being the *Ḥadīḳat al-ḥaḳīḳa* of Sanāʾī (d. 525/1130), the *Tafsīr* of Abu'l-Futūḥ Rāzī (d. 538/1143), the *Asrār-nāma* and the *Ilāhī-nāma* of ʿAṭṭār (d. *ca.* 627/1229), and above all the *Mathnawī* of Djalāl al-Dīn Rūmī (d. 672/1273-4). More directly in the tradition of the earliest animal story collections are the *Marzbān-nāma* of Warāwīnī (622/1225), the *Ṭūṭī-nāma* of Nakhshabī (730/1330), the 8th "garden" of Djāmī's *Bahāristān* (893/1487) and the *Anwār-i Suhaylī* of Ḥusayn Wāʿiẓ Kāshifī (d. 910/1504-5). These are followed by the *Laṭāʾif al-ṭawāʾif* of Fakhr al-Dīn ʿAlī Ṣafī (d. 939/1532-3), the *Djāmiʿ al-tamthīl* of Muḥammad Djabalarūdī (1054/1644), and other similar collections that have no particular moral intent. Aside from all this, there still remains much fresh material to be recovered from the current oral literature.

We may tentatively classify the animal tales of Persian written and oral literature as follows:

(i) Moral tales, in which animals behave much as human beings, and serve as types.

(ii) Tales in which both animals and humans are involved, the animals often showing human characteristics such as speech.

(iii) Adventure stories and romances, in which humans play the major rôles, while animals appear in helpful or hostile capacities, usually with magic powers.

(iv) Stories involving mythical animals.

In the oral literature, as against the written, the last two categories are the more common. Examples include the Ḥātim Ṭāʾī, Rustam, Ḥusayn-i Kurd, and Shīrūya cycles.

The list of animals that figure in the tales is extensive. Many are identified with particular characteristics. The lion is the symbol of majesty, both tyrannical and beneficent; the bear is stupid, selfish and kindly, the wolf simple and kindly, the fox cunning, the jackal shrewd, the peacock and the hoopoe vainglorious, the parrot worldly-wise, the elephant clumsy and gullible. However, even unclean animals like the dog and the pig may be found playing sympathetic rôles.

Bibliography: Apart from the texts and references mentioned above, the following folk-tale collections may be consulted for examples of animal stories: Amīr Ḳulī Amīnī, *Dastānhā-yi amthāl*, Iṣfahān 1945; A. Christensen, *Contes persans en langue populaire*, Copenhagen 1918; Ḥusayn Kūhī Kirmānī, *Pānzdah afsāna-i rūstāʾī*, Tehrān 1955; D. L. R. and E. O. Lorimer, *Persian tales*, London 1919; Ṣubḥī Muhtadī, *Afsānahā*, Tehrān 1945, 1946; idem, *Afsānahā-yi kuhan*, Tehrān 1949, 1954. See also H. Massé, *Les versions persanes des contes d'animaux*, in *L'âme de l'Iran*, Paris 1951, 127-49. (L. P. Elwell-Sutton)

Animals in Turkish traditions

In various Turkish languages, the Turkicized forms of the Arabic *ḥayawān* (*hayvan, ayvan, ayban*, etc.) indicate the animal species, excluding man; the Kīrghīz word *djanībar*, with the same meaning, is made up of a Persian element, *djān* (soul) and a Turkish element, *bar* (there is, has); *djanavar* (= *canavar*) in the Turkish of Turkey (from the Persian *djānwar*, "possessing a soul") has a more particular meaning: wolf, wild boar, fierce animal, wild beast, monster; the words *djanlī*, *djandīḳ*, etc. derived from the Persian *djān*, and *tirig, diri, tīnlīġ*, etc., from Turkish roots, are used to indicate all animate beings, including man.

Many Turkish tribes had animal names; others, as for example the 24 clans descended from Oghuz Kaghan, each had a bird emblem; many Turkish personal names are derived from names of animals; furthermore a large number of beliefs and practices, which are today tinged by Islamic features, are survivals of an animal cult which formed one of the important elements of the religions of the Turks before they were converted to Islam. The wolf has a specially important place in these: according to an account attested in a 7th century A. D. Chinese source, the Tou-K'iu were descended from the union of a she-wolf with a man [see ergenekon]; vestiges of an ancient wolf cult are still attested in Anatolian folklore (see Ali Rıza, *Anadolu'da Bozkurt*, in *Halk Bilgisi Haberleri* (= *HBH*), i, 1930, 200 f., ii, 1930, 32 f.). The bear is also the main subject of many stories which are related today (at least in Turkey) as true adventures, but which are nevertheless the scarcely discernible remains of ancient myths (see P. N. Boratav, *Histoires d'ours en Anatolie*, in *FFC*, no. 152, Helsinki 1955). In the same category of survivals of an animal cult can be classed the stories of eponymous heroes reared by a lioness (see *Kitāb-i Dede Ḳorḳut*, ed. and tr. E. Rossi, Vatican 1952, 193; Abū Bakr b. ʿAbd Allāh b. Aybak, *Kanz al-durar*, Istanbul, Topkapı Sarayı, ms. Ahmed III 2932, vol. vii, 173 f.).

Among the accounts in oral tradition concerning animals (animal stories of the fable type and stories of marvels with animal heroes are treated separately in the article ḥikāya), a number, aetiological in type, are part of the international repertoire; among them are those which form part of the cycle of the Flood and those which are related to the Hoopoe of Solomon. The source of these must be Biblical and Ḳurʾānic traditions (commentaries and apocrypha). But a great number of aetiological legends concerning various animals are certainly either original creations of Turkish folklore or original re-castings of themes borrowed from the traditions belonging to the countries which the Turks had occupied. The horse occupies first place, through its importance in narrative literature; there are recounted legends concerning its supernatural origins: a race of horses said to be descended from a stallion which inhabited the depths of the waters, one of winged steeds, or a race of horses whose ancestor, tamed by an eponymous hero, was called the "horse of fire" (for this last race see Abū Bakr, *op. cit.*, vii, 180 f.). In the epics and other heroic tales, the horse is represented as a devoted companion of the hero; it is endowed with speech and is able to converse with its master in order to give him advice and warn him of dangers. The veneration of the horse seems to have conferred on it, in certain circumstances, an aura of saintliness. The tomb of the horse of Sultan ʿOthmān II at Üsküdar became a place of pilgrimage; it was known as At-Ewliyāsī ("Saint of the horses") and sick horses were brought to it (see *Istanbul Ansiklopedisi*, s.v. At Mezarı).

From a more general point of view, popular superstitions attribute to certain animals magical powers because they are considered capable of embodying evil spirits [see djinn]. The metamorphosis of men into animals and, less frequently, of animals into men, belongs, apart from the repertory of stories of the fantastic, to the field of miracles performed by saints.

Some animal species have their patron saints; these usually take the form of the animals which they protect. The superstitions, legends and practices connected with these supernatural beings can be traced for the most part to rites belonging to hunting and the beliefs attached to them. Originally the guardian spirit was identical with the animal itself; this explains the designation, among the Kirghiz for example, of the animal species by the name of the patron saint: Oysul Ata (<Uways al-Ḳaranī), patron saint of camels, also "camels", Kambar Ata, patron saint of horses and "horse", etc. In Turkey the stag is still considered sacred and the patron saint of stags (sometimes a woman) is believed to strike the hunters who pursue them (see Y. Z. Demircioğlu, *Yürükler ve köylülerde hikâyeler, masallar*, Istanbul 1934, 115 f., 120 f.). There are also legends describing saints metamorphosed into stags or riding on them (cf. the legend of Abdāl Mūsā, in S.N. Ergun, *Türk şairleri*, Istanbul n.d., i, 166-9, and that of Geyikli Baba, in A. Gölpınarlı, *Yunus Emre ve tasavvuf*, Istanbul 1961, 10-3).

The saints also possess the power of charming animals, including wild animals and fabulous beasts such as dragons. There is a wealth of legend providing edifying examples of their kind actions towards domestic and wild animals. The ox, being used for ploughing, has acquired, more particularly in the rural districts of the ʿAlawī-Bektashīs, an especial veneration; several episodes of the legendary biography of Ḥādjdjī Bektash are stories inspired by this notion (*Vilâyetnâme* of Ḥādjdjī Bektash, ed. Gölpınarlı, 53 ff., 83, tr. E. Gross, Leipzig 1927, 90, 93; *Vilâyetnâme* of Ḥādjim Sulṭān, ed. R. Tschudi and G. Jacob, Berlin 1914, 28, 32). Shepherds are considered to have certain supernatural powers, generally interpreted as proofs of sanctity; many stories of folklore stress the intimate understanding between them and their animals and a part of their magic powers was manifestly due to the animals.

Turkish art—even in the Islamic period—has been fairly rich in animal themes. In weaving, embroidery and knitting a number of stereotyped figures are stylized representations of animals. On one kind of prayer rug—the most ancient types of this ritual accessory—the only decorative element is the reproduction of animal skins: sheep, stag, goat, bear. It appears that this type represents the transitional stage between the use of an actual animal skin and that of a prayer rug with ornamental figures of a secular character (see Yusuf Durul, *Türkmen, Yürük, Afşar halı ve kilim motifleri üzerinde bir araştırma*, in *Türk Etnografya Dergisi*, ii (1957), 65-6, pl. XL and XLI).

In the imagery of popular anonymous works and in the works of known artists (of drawings, paintings and miniatures), animals are depicted as often by motifs which are stylized, often to the point of being abstract, as by a very realistic representation situated in the context of everyday life: scenes of hunting, stock-rearing, training, etc. (see S. Eyuboğlu and M. Ş. Ipşiroğlu, *Sur l'Album du Conquérant*, Istanbul n.d.; Malik Aksel, *Anadolu halk resimleri*, Istanbul 1960).

Bikkul, *Topkapı Sarayında has ahır*, in *Güzel Sanatlar*, vi (1949), 118-31; Oktay Aslanapa, *Turkish arts*, Istanbul n.d.; H. Z. Koşay, *Hayvancılık*, in *Türk Etnografya Dergisi*, iii (1958), 5-59; for the legends, beliefs and practices relating to the animal world, see the series of reviews of the Turkish periodical *Türk Folklor Araştırmaları* by P. N. Boratav, in *Oriens*, x (1957) onwards, and the same author's bibliographies at the end of the chapters *L'épopée et la "ḥikâye"* and *Le conte et la légende*, in *Ph.T.F.*, ii, 38-44 and 62-7.

(Pertev Naili Boratav)

ḤAYḌ, menstruation. The laws of purity concerning menstruation are less complicated and less severe in Islam than in Judaism, but much more so than in Christianity. A discharge which exceeds the legal duration fixed by the doctors of the Law for the menses is called *istiḥāḍa*; these irregular losses involve only minor impurity, *ḥadath* [*q.v.*]. Contact with a woman who is menstruating does not result in impurity (contrary to the laws of Judaism) and although the Ḳurʾān (II, 222) forbids sexual relations with her, the violation of this taboo is not penalized in this world. Menstruation being one of the circumstances which, involving a major impurity, invalidate the state of purity, a *ghusl* [*q.v.*] (complete washing of the body) with water which is legally pure is necessary to re-establish that state of purity in which the performance of the *ṣalāt* etc. is valid. To those in this state of major impurity, in addition to the consequences of *ḥadath*, the following prohibitions apply: they may not recite the Ḳurʾān (except for one or two verses only to ward off the Devil) nor remain in the mosque (or even walk through it). Furthermore the Ramaḍān fast and the *ṣalāt* performed by those menstruating are not valid, and the fast is even forbidden to them. The regulations concerning the *nifās* (lochia) are almost the same as those concerning menstruation: thus the *ghusl* of the woman who has given birth takes place when there is no more discharge, the fixed interval of forty days (*Leviticus*, *Zend-Avesta*) being unknown, at least in theory. The casuistical differences between the various schools on this subject may be omitted here.

The *ḥayḍ* plays an equally important part in family law: it determines the prescribed period of waiting (*ʿidda*) before a widow or a divorced wife may remarry. It determines also the legitimacy of certain children (the theory of the child asleep in the womb), *fiḳh* conceding that long periods of gestation may occur.

Bibliography: The collections of *ḥadīth*s (cf. Wensinck's *Handbook*) and the books of *fiḳh* all discuss the question, near the beginning (see ḤADATH).

(G. H. Bousquet)

ḤAYDAR, "lion" [see AL-ASAD]; by-name given, particularly by the Shīʿīs, to ʿAlī b. Abī Ṭālib [*q.v.*].

ḤAYDAR, Shaykh, the 5th Ṣafawid *shaykh* in line of descent from Shaykh Ṣafī al-Dīn Isḥāḳ, the founder of the Ṣafawid *ṭarīḳa*. The son of Djunayd [*q.v.*] and Khadīdja Begum, the sister of the Aḳ Ḳoyunlu ruler Uzun Ḥasan, Ḥaydar succeeded his father as head of the Ṣafawid *ṭarīḳa* at Ardabīl in 864/1460.

Ḥaydar, by his marriage to Ḥalīma Begī Āghā (or Marta; better known as ʿAlamshāh Begum), the daughter of Uzun Ḥasan and Despina Khātūn, the latter the daughter of Calo Johannes, the Emperor of Trebizond, maintained the close alliance with the Aḳ Ḳoyunlu which had been formed by his father Djunayd. Ḥaydar was thus at once the nephew and the son-in-law of Uzun Ḥasan, and the brother-in-law of Yaʿḳūb, who ruled the Aḳ Ḳoyunlu empire from 883-96/1478-90.

With the overthrow of the Ḳara Ḳoyunlu empire by Uzun Ḥasan in 872/1467, the Aḳ Ḳoyunlu-

Ṣafawid alliance, based as it was solely on considerations of political expediency, broke down as Ṣafawid political and military ambitions came into conflict with those of the Aḳ Ḳoyunlu. Before making a trial of strength with the Aḳ Ḳoyunlu, however, Ḥaydar decided to blood his forces against the "infidels" of Circassia and Dāghistān—probably the Christian Alāns (Ossetes) living north of the Darial pass (Bāb al-Lān), and the Kabard Circassians. To reach these regions, Ḥaydar, like his father in 863/1459, had to cross the territory of the Shīrwānshāh. He led three expeditions against the Čerkes: in 888/1483 (thus Hinz, based on Ḥasan-i Rūmlū, *Aḥsan al-tawārīkh*; the *Tārīkh-i ʿālam-ārā-yi Amīnī* has 891/1486: see V. Minorsky, *Persia in A.D. 1478-1490*, London 1957, 69; 117 ff.); 892/1487; and 893/1488. The Shīrwānshāh Farrukhyasār seems to have allowed the first two Ṣafawid expeditions to cross his territory unopposed, but in 893/1488, when Ḥaydar turned Ṣafawid arms against Farrukhyasār himself, and sacked the town of Shamākhī, Farrukhyasār appealed for help to his son-in-law, the Aḳ Ḳoyunlu sultan Yaʿḳūb. The detachment of troops sent by Yaʿḳūb, under the command of Sulaymān Bidjan-oghlu, was the decisive factor in the defeat of the Ṣafawids on 29 Radjab 893/9 July 1488 at Ṭabarsarān on the river Rūbās, south-west of Darband. Ḥaydar was killed; his body was recovered in 915/1509 by Shāh Ismaʿīl I and interred in the Ṣafawid mausoleum at Ardabīl. Ḥaydar thus died only a short distance from the place where his father Djunayd had been killed thirty years earlier, but the essential point of difference between the Ṣafawid expedition of 863/1459 and that of 893/1488 is that, whereas the former was repulsed by the unaided efforts of the troops of Sharwān (Shīrwān), in the latter case Aḳ Ḳoyunlu intervention was required. This suggests that Ṣafawid strength in 893/1488 was greater than in 863/1459, and this is borne out by subsequent events. Yaʿḳūb's action gave formal recognition to the fact that from this time on the Ṣafawids constituted the principal threat to the Aḳ Ḳoyunlu empire.

Ḥaydar left three sons by ʿAlamshāh Begum: ʿAlī, who succeeded him as head of the Ṣafawid *ṭarīḳa*; Ibrāhīm; and Ismaʿīl (later Shāh Ismaʿīl I). It was Ḥaydar who devised the distinctive Ṣafawid red headgear (*tādj*), with twelve gores or folds (*tark*) commemorating the twelve Shīʿī imāms. This earned his followers the soubriquet of *ḳizilbash* or "redheads" —a term of abuse in Ottoman mouths, but used with pride by the Ṣafawids.

Bibliography: The Persian and Turkish MSS listed in W. Hinz, *Irans Aufstieg zum Nationalstaat im fünfzehnten Jahrhundert*, Berlin and Leipzig 1936, and pp. 72-89 of this work; V. Minorsky, *Persia in A.D. 1478-1490*, London 1957, 61, 65-82, 117-9. (R. M. Savory)

ḤAYDAR b. **ʿALĪ** Ḥusaynī Rāzī, Persian historian, b. ca. 993/1585, date of death unknown; author of a large history of the world, which in the manuscripts is sometimes called "*Madjmaʿ*" and sometimes "*Zubdat al-tawārīkh*", and is generally known as "*Taʾrīkh-i Ḥaydarī*". The work is arranged according to geographical divisions in five *bābs*: 1. the Arab world; 2. Persia; 3. Central Asia and the Far East; 4. the West; 5. India, each of which is arranged chronologically. They deal with political history and frequently reach into the time of the author, so that occasionally otherwise inaccessible accounts have been preserved. (Ch. Rieu's view that the work is nowhere original is based on an error.) A second part which was to deal with philosophers, learned men and poets was apparently not written (in any event it is not known.) The work does not contain a dedication to a prince and only portions of it have been published; otherwise it has been used only in manuscript form. Its value lies particularly in the information it gives on Central Asia.

Bibliography: Storey, i/2/1, 124, 1241 (Manuscripts, partial editions); Richard Gosche, *Über die Chronik des Haidar Ben Ali* ..., (monograph with selections), in manuscript, see Rieu, *CPM*, iii, 887b. (W. Barthold-[B. Spuler])

ḤAYDAR ʿALĪ KHĀN BAHĀDUR rose to power in Mysore (Mahisur) during the second half of the 18th century. His family claimed descent from the Ḳuraysh and to have migrated to India from Mecca at the end of the 10th/16th century. He was born in 1721 at Dodballāpur, 27 miles north-west of Bangalore. When he was five years of age his father, Fatḥ Muḥammad, a soldier of fortune, lost his life while in the service of the Nawāb of Sira. Left an orphan, Ḥaydar was brought up by his cousin, Ḥaydar Ṣāḥib, an officer in the Mysore army.

Ḥaydar first entered the service of ʿAbd al-Wahhāb, brother of Nawāb Muḥammad ʿAlī of Karnāṭaka, and then secured a small command in the Mysore army. Having distinguished himself in the siege of Devanhullī (1749), he received the title of *Khān* from Nandjarādj, the *dalawāyī* (commander-in-chief) and the most powerful man in Mysore. He then fought in the Carnatic wars, and Nandjarādj, much impressed by his abilities, made him *fawdjdār* of Dindigul (1755). In 1758 Ḥaydar was rewarded with the fort and district of Bangalore for reconciling Nandjarādj with the Rādjā and discharging the arrears of pay to the soldiery. He then received the title of *Bahādur* for repelling a Marāṭhā invasion; and when shortly after Nandjarādj retired from politics (June 1759), he took his place. But in August 1760 his *dīwān*, Khande Rāo, with the support of the Rādjā, plotted his overthrow. Ḥaydar, however, defeated Khande Rāo and put him into a cage. But he forgave the Rādjā and allowed him to continue as a figurehead on the throne.

Ḥaydar's energy and ambition, and his conquest of Sira, Bidnūr, Sundā and the Malabār (1761-6) aroused the hostility of his neighbours. Between 1764 and 1772 the Pēshwā Madhav Rāo thrice invaded Mysore and annexed some of the districts. But he died in 1772, and Ḥaydar, taking advantage of this, occupied all the Marāṭhā territory south of the Kistnā.

On 12 November 1766 the English and the Niẓām formed an alliance to overthrow Ḥaydar, and jointly invaded Mysore. But Ḥaydar managed to win over the Niẓām, and with his help carried the war into the Carnatic. Although after a year the Niẓām deserted him, he fought alone and succeeded in concluding a favourable peace (4 April 1769). But the English refusal to help him against the Marāṭhās and to enter into a fresh treaty made him hostile towards them and drew him closer to the French. The English attack on Māhe, a French possession under his protection, furnished him with a *casus belli*; and in July 1780 he invaded the Carnatic, ravaging the countryside and conducting a vigorous compaign against the English. But he died on 7 December 1782 at Narasingarāyanpeṭ, near Chittoor, leaving his eldest son, Tīpū Sulṭān, to continue the war.

Ḥaydar was tall, robust and of fair complexion.

Brave and resourceful, he never despaired in defeat. Though illiterate, he was an able ruler. He was harsh but just, ruthless to his enemies but kind to his friends. He appointed Hindūs to positions of responsibility, endowed temples and, in deference to Hindū sentiment, retained the Rād̲j̲ā on the throne of Mysore, himself remaining only as *dalawāyī* and Nawāb of Sira, a title conferred on him by Baṣālat D̲j̲ang and confirmed by the Mughal Emperor.

(Mohibbul Hasan)

ḤAYDAR MĪRZĀ (his real name was Muḥammad Ḥaydar; as he himself says, he was known as Mīrzā Ḥaydar; Bābur calls him Ḥaydar Mīrzā), a Persian historian, author of the *Taʾrīk̲h̲-i Ras̲h̲īdī*, born in 905/1499-1500, died in 958/1551 (for his descent see dūg̲h̲lāt); through his mother he was a grandson of the Čag̲h̲atāy K̲h̲ān Yūnus and a cousin of Bābur. Most of our knowledge of his life is gleaned from his own work; Bābur (ed. Beveridge, p. 11) devotes a few lines to him; the Indian historians Abu 'l-Faḍl and Firis̲h̲ta give some information about his later years.

After the assassination of his father (914/1508) he had to flee from Buk̲h̲ārā via Badak̲h̲s̲h̲ān to Kābul, which he reached in 915/1509. Received like a son by Bābur, he took part in the victorious campaigns against the Özbeks and in the reconquest of Buk̲h̲ārā and Samarḳand, but abandoned his benefactor in 918/1512, betook himself to Farg̲h̲āna to the Mongol prince Saʿīd K̲h̲ān, received from him the title Gurgān (son-in-law) and accompanied him against Kās̲h̲g̲h̲ar and Yārkand. In the Mongol empire as restored by Saʿīd K̲h̲ān he held a prominent position; by the K̲h̲ān's orders he carried out several campaigns to distant lands like Badak̲h̲s̲h̲ān, Kāfiristān, Ladak and Tibet. On the K̲h̲ān's death in 939/1533 and the accession of his successor ʿAbd al-Ras̲h̲īd, who was no friend of the house of Dūg̲h̲lāt, Ḥaydar Mīrzā had to leave the country and go over to the Tīmūrids, against whom he had fought as recently as 936/1529-30 in Badak̲h̲s̲h̲ān. In 948/1541 he succeeded in conquering Kas̲h̲mīr and founding a practically independent kingdom for himself there, although his coins were struck first in the name of the native prince Nāzuk S̲h̲āh and later in the name of the Emperor Humāyūn; in 958/1551 he was slain during a rising of the native population.

It was while ruler of Kas̲h̲mīr that Ḥaydar composed his work, which was called after his former sovereign ʿAbd al-Ras̲h̲īd. The second part, which describes the vicissitudes of the author's life and the events of his own time, was written as early as 948-50/1541-4, the first (history of the house of Čag̲h̲atāy from the accession of K̲h̲ān Tug̲h̲luḳ Tīmūr in 748/1347-8) not till later (951-3/1541-4). As Bābur testifies, the author had received a good literary training, and this is also apparent in his work; the book had a great success not only among Ḥaydar's compatriots (it was twice translated into Eastern Turkish) but in other countries also (India, Turkestan and Persia) and was used as an authority by all later geographers and historians who have discussed Chinese Turkestan and the events of the 10th/16th century. The historical narrative as well as the geographical sections inserted in it (descriptions of various provinces, towns, etc.) give a wonderful picture of the conditions of his time. In Russia extensive excerpts from the *Taʾrīk̲h̲-i Ras̲h̲īdī* have been published, in particular by Velyaminov T̲s̲ernov (*Issledovanie o kasimovskikh̲ t̲s̲aryak̲h̲ i t̲s̲arevičak̲h̲*, ii, 130 f.) and C. Salemann (*Mélanges Asiatiques*, ix, 321 f.); while in Western Europe the work is known particularly through the English translation made by E. Denison Ross and edited with notes by N. Elias (*The Taʾrīk̲h̲-i Ras̲h̲īdī of Mīrzā Muḥammad Ḥaidar Dug̲h̲lāt*, London 1895; cf. the review by W. Barthold in *Zapiski vost. otd. ark̲h̲. obs̲h̲č.*, x, 215 ff.). See also Elliot, *History of India*, v, 127 ff. No complete edition of the text has yet been published. In addition to the *Taʾrīk̲h̲-i Ras̲h̲īdī*, Ḥaydar Mīrzā has been identified as the author of a narrative poem in eastern Turkish, apparently composed during winter campaigns in Tibet and Badak̲h̲s̲h̲ān in 935/1528; the concluding section, which was added later, is dated Rad̲j̲ab 939/Jan.-Feb. 1533. The work is preserved in manuscript in the Martin Hartmann collection in Berlin. The author is not named, but has been identified on internal evidence (Ahmet-Zeki Validi [Togan], *Ein türkisches Werk von Ḥaydar-Mirza Dughlat*, in *BSOS*, viii/4 (1937), 983-9).

Bibliography: in the article; see further Storey, 273-6 and 1273.

(W. Barthold*)

ḤAYDAR-OG̲H̲LU, more correctly Ḳara Ḥaydar-Og̲h̲lu, **MEḤMED**, sometimes given the title of "Beg". His father, Ḳara Ḥaydar, is mentioned in the sources simply as a brigand; according to Ewliyā Čelebi (*Seyāḥatnāme*, iv, 472-3, and cf. Naʿīmā, iv, 240) he took to the mountains in about 1050/1640 and began to plunder caravans in the passes between Eskis̲h̲ehir and Izmir (Smyrna). During the Grand Vizierate of Ḳara Muṣṭafā (and hence before 1052/1643, when the vizier was executed), a *nefīr-i ʿāmm* against Ḳara Ḥaydar was proclaimed in Anatolia, *i.e.*, the civilian population was impressed in the hunt. He was surrounded near Uluborlu and killed.

The first mention of the son in the sources (Naʿīmā, *loc. cit.*) refers to the autumn of 1057/1647, but he was presumably active before this, engaged in brigandage in the passes between Ankara, Ṣaruk̲h̲an and Ḥamīd-eli, *i.e.*, on the main caravan routes from Persia, the Arab countries and Izmir to Bursa and Istanbul. His headquarters were at Söğüd-ḍag̲h̲ï (north of Eskis̲h̲ehir), and all the notorious bandits of the day were in his following (Ewliyā encountered them at Balïḳ-ḥiṣār near Ankara and mentions their names, ii, 418-26); the most prominent of them was Ḳatïrd̲j̲ï-og̲h̲lu [*q.v.*]. These brigands, called in the sources *es̲h̲ḳiyāʾ* and *d̲j̲elālī* [*q.v.*, in Supp.], were from time to time joined by substantial numbers (700, in 1058/1648) of the vagabond troops of Anatolia called *sekbān*, *sarud̲j̲a* (*sarïd̲j̲a*), or more generally *levend* [*qq.v.*]; when they could not find employment with a pas̲h̲a or in the service of the state, these wandering soldiers would attach themselves to a rebel leader and support themselves by brigandage (see Ç. Uluçay, *Saruhan'da eşkiyalık ve halk hareketleri*, Istanbul 1944; M. Akdağ, *Celâlî isyanları, 1550-1603*, Ankara 1963; M. Cezar, *Osmanlı tarihinde Levendler*, Istanbul 1965). At one point Ḥaydar-og̲h̲lu, wishing to enter the service of the state with his following, asked for appointment

as a *sandjaḳ-begi*; but in spite of the substantial bribe which he sent to the Grand Vizier (Naʿīmā, iv, 249, 347), this was refused. Thereupon he attacked the great Pilgrim caravan between Akshehir and Ilghun. He was in control of all the roads, and obliged the local people, peasantry and notables, to enter his service. The vizier Ibshir Muṣṭafā Pasha [*q.v.*], *beglerbegi* of Karaman, was then appointed *serʿasker* and ordered to suppress Ḥaydar-oghlu in co-operation with the *beglerbegi* of Anatolia, Ibrāhīm Pasha (by a firman dated Dhu 'l-Ḳaʿda 1057/ December 1647, see Ç. Uluçay, *op. cit.*, doc. 120; cf. Naʿīmā, iv, 270). All the troops of all categories which were left in Anatolia (the absence of so many on the campaign in Crete had left the brigands a clear field) were put under his command. Although Ibshir Pasha hemmed in Ḥaydar-oghlu at Söğüd-daghi, he was unable to capture him (letter to Istanbul of 25 Ṣafar 1058/21 March 1648), and the brigand escaped because Ibshir Pasha received new orders to march against the rebellious *wālī* of Sivas, Varvar ʿAlī Pasha [*q.v.*] and because of the momentous events at the capital—the deposition of Sultan Ibrāhīm. The new sultan, Meḥemmed IV, sent against Ḥaydar-oghlu the young and inexperienced new *beglerbegi* of Anatolia, Aḥmed Pasha, who was defeated near (Afyon-)Ḳaraḥiṣār (Shaʿbān 1058/ August-September 1648) and killed by Ḳatirdji-oghlu. The pasha's untrustworthy *ṣarudja* and *sekbān* troops went over to Ḥaydar-oghlu. Ḥaydar-oghlu's prestige and power now became the main preoccupation of the authorities: Ketendji ʿÖmer Pasha-zāde Meḥmed Pasha was appointed *beglerbegi* of Anatolia and given unlimited powers (*istiḳlāl*) as commander of the operations against him; in the firman of appointment he was warned that the capture of the brigand was *aḳṣā-yi murād-i humāyūn*, and all the available troops of Anatolia and Karaman and the *sandjaḳ* of Bolu were placed at his disposal (for the firman, dated 1 Ramaḍān 1058/19 September 1648, see Uluçay, doc. 124; his letter to the *ḳāḍīs* of Ṣarukhan, doc. 123). A renewed offer by the brigand to submit if he was granted an office was again rejected, whereupon he plundered Ḳaraḥiṣār, and then marched upon Isparta. Near there he was ambushed and wounded and taken prisoner by the *mütesellim* of the *sandjaḳ* of Ḥamīd-eli, Abaza (in Ewliyā: Ḳodja) Ḥasan Agha (Naʿīmā, iv, 374-5 and, a slightly different version, Ewliyā, ii, 474). He was brought before the Grand Vizier in Istanbul who ordered him to be hanged at Parmaḳ-ḳapi (details in Ewliyā, ii, 474-9).

Even in his lifetime Ḳara Ḥaydar-oghlu, like other brigands, was romanticized as a popular hero who had taken to the mountains to avenge his father's death. A *türkü* on him written by Kātib ʿAlī was set to music and widely sung (see Ç. Uluçay, *Üç Eşkiya türküsü*, in *TM*, xiii (1958), 87-90).

Bibliography: In the text.

(Halil İnalcik)

ḤAYDARĀBĀD (*a*) the name of a city in the Deccan (Dakhan) of India, situated 17° 22′ N., 78° 27′ E., now the capital city of the Indian state of Āndhra Pradēsh, and formerly the capital successively of the later Ḳuṭb Shāhī kings of Golkonḍā, of a Mughal *ṣūba* after Awrangzīb's conquest of the Deccan, of the Niẓām, and of the state of Ḥaydarābād after the independence of India; (*b*) the name of a former state of the Indian Union, now absorbed within the provinces of Āndhra Pradēsh, Mahārāshtra, and Mysore (Mahisur); formerly the territory of H.E.H. ('His Exalted Highness', a British title conferred in 1918) the Niẓām.

a. Ḥaydarābād City

The site of the present city was selected in 997/1589 by the fifth Ḳuṭb Shāhī dynast, Muḥammad Ḳulī Ḳuṭb Shāh, on the right bank of the river Mūsī, a tributary of the Krishna, some 11 km. east of the fortress of Golkonḍā [*q.v.*], and at first given the name of Bhāgnagar after a Hindū dancing-girl named Bhāgmatī, one of the sultan's concubines. A city quickly grew up on this site, since there was no room for expansion in the overcrowded Golkonḍā where, moreover, the water-supply was inadequate. The exact date of the transfer of the seat of government from Golkonḍā to Ḥaydarābād is not known, although this seems to have taken place within a dozen years of the foundation; Ḥaydarābād was not at first fortified, Golkonḍā remaining as the citadel of the capital. At this time North India was in the hands of the Mughals, and envoys from Akbar were well received in 999/1591; the Ḳuṭb Shāhī sultan sent valuable presents to Akbar which were accepted as tribute, and his domains were left unmolested. The new city prospered, some of its finest buildings dating from this time (see below), until the intervention of the Mughal prince (later the emperor) Awrangzīb in the dispute between Mīr Djumla [*q.v.*] and ʿAbd Allāh Ḳuṭb Shāh in 1065/1655 when Ḥaydarābād was plundered before the sultan bought peace; but the peace was uneasy, and Ḥaydarābād again fell to the Mughals under Awrangzīb four years before the great siege of Golkonḍā in 1098/1687. After the conquest Ḥaydarābād became the residence of the *ṣūbadārs* of the Deccan, under the last of whom, Čin Ḳilič Khān, Niẓām al-Mulk, the governor Mubāriz Khān commenced the fortification of the city by a stone wall. After the important and decisive battle of Shakarkheldā [*q.v.*] in 1137/1724, by which the Niẓām al-Mulk crushed the plan of his deputy Mubāriz Khān to usurp power in the province, Ḥaydarābād became the capital of the now independent Deccan province under the Niẓām al-Mulk, who received the title of Āṣaf Djāh from the Mughal emperor Muḥammad Shāh; the titles Niẓām al-Mulk and Āṣaf Djāh henceforth became hereditary in his family. The new province which Āṣaf Djāh thereby acquired—roughly co-extensive with the modern state of Ḥaydarābād before its dissolution, plus the northern province of Barār and the so-called Northern Sarkārs—is described below. The political history of the city thereafter is little different from that of the state. The city has grown continually as it became the centre of an increasingly organized state, its suburbs soon spreading on both sides of the river Mūsī far beyond the old city walls completed by the first Āṣaf Djāh. The central district of the state, called Aṭrāf-i balda, is the *ṣarf-i khāṣṣ* or 'crown' assignment around Ḥaydarābād city itself, and was constituted, with the other districts, in 1865; the municipality of Ḥaydarābād, with four divisions in the city proper and five in the suburbs (now much extended), was created in 1869; the suburbs include the important cantonment of Sikandarābād ('Secunderabad'), named after Mīr Akbar ʿAlī Khān Sikandar Djāh, the sixth Niẓām, which now has its own city corporation. Ḥaydarābād is an important communications centre (road, rail and air), with a modern hospital, important museums, one of the best equipped astronomical observatories in India, and the flourishing ʿUthmāniyya (Osmania) University (1918). With a population of well over a million, it is the sixth largest city in India. Textiles,

including fine velvets, carpets, red earthenware, glass and paper are produced by industries within the city, and excellent cigarettes are made in Ḥaydarābād from local tobacco.

Monuments. — The old city is surrounded by a bastioned wall, completed by the first Āṣaf Dj̲āh, with thirteen gates and a number of smaller posterns. The city is connected to the northern suburbs by four bridges, the oldest of which (*Purānā pul*) was built by Muḥammad Ḳulī Ḳuṭb S̲h̲āh in 1001/1593. The same ruler was responsible for the buildings in the central focal point of the city, notably the Čār mīnār, Čār kamān, Čār sū kā ḥawḍ, all around a crossing of four roads leading to the four quarters of the old city; also the Dār al-s̲h̲ifāʾ, ʿĀs̲h̲ūr-k̲h̲āna, and Dj̲āmiʿ masdj̲id. The Čār mīnār, 'four minarets', is a triumphal archway, 30 m. square in plan, its ground storey consisting of four great arches of 10.8 m. span, each facing a cardinal point; above this is an arcaded triforium running round the building supported on carved corbels, with a smaller arcade and a perforated marble screen above it; at each corner stands a minaret 55.8 m. in height from the ground level, each decorated with a double arcaded balcony at the level of the triforium supported by a continuation of the corbel course; a further single arcaded balcony encircles each shaft above roof-level (this is the characteristic feature of the Ḳuṭb S̲h̲āhī architecture); and each minaret is topped by yet another such balcony supporting a round kiosk with an ogee dome foliated at its base in the Bīdj̲āpur [*q.v.*] manner. The small rooms inside the upper storey are said to have been used for instruction by *s̲h̲ayk̲h̲s*; but, from the strictly ceremonial and royal nature of the use of this building under the Ḳuṭb S̲h̲āhīs and Āṣaf Dj̲āhīs, this story may be doubted. (See *Annual Report Arch. Dept. Hyderabad State 1917-18 AD* (*1327 F.*), Plate IIa; *ibid*, *1918-19*, 3-4 and plans on Pl. III-IV.) The Čār kamān, 'four bows', (*ARADHyd 1918-19* (*1328 F.*), 4), are four wide arches near the Čār mīnār built over the four roads leading to the four quarters of the city, near to which stands the Čār sū kā ḥawḍ, 'carfax cistern'; near this once stood Muḥammad Ḳulī's Dād maḥall, 'palace of justice', destroyed by a powder explosion in 1771 (described by the French traveller Tavernier in 1062/1652). West of this complex is the Makka masdj̲id, the principal mosque of the city, commenced by ʿAbd Allāh Ḳuṭb S̲h̲āh, continued by his successor Abu 'l-Ḥasan, the last Ḳuṭb S̲h̲āhī sultan, and completed at Awrangzīb's order; the *līwān*, with two large domes, is 67.5 m. long and 54 m. deep, standing behind a vast *ṣaḥn* 108 m. square; the tombs of Niẓām ʿAlī K̲h̲ān and later Āṣaf Dj̲āhīs stand in the mosque. The old remains of a contemporary *ḥammām* stand in its courtyard. In the north of the old city is the ʿĀs̲h̲ūr-k̲h̲āna, 'room of the tenth [of Muḥarram]', still in use for the Muḥarram ceremonies, with fine Persian faience decorating its walls. The Dār al-s̲h̲ifāʾ, also built by Muḥammad Ḳulī Ḳuṭb S̲h̲āh, is in the north-east quarter of the city, a large building with arcaded chambers for the care of the sick, lying all round a paved quadrangle, formerly in use also as a school for the Yūnānī system of medicine; a mosque, built at the same time, stands opposite its entrance. Many other buildings of Ḳuṭb S̲h̲āhī times stand in the city and suburbs, notably the Tolī masdj̲id of the time of ʿAbd Allāh Ḳuṭb S̲h̲āh (inscription in *miḥrāb* giving date of 1082/1671 by *abdj̲ad*); description in *ARADHyd. 1916-17 AD* (*1326 F.*), 3 ff., Plate IIb and c, plan on Plate IIIa; also the mosque and other buildings of the S̲h̲ayk̲h̲pet suburb, see *ARADHyd. 1936-37 A.C.* (*1346 F.*), 2 ff., with an inscription of 1043/1633, cf. *EIM*, 1935-6, 21-2 and Pl. XIII. Between Ḥaydarābād and Golkoṇḍā, on the ʿUt̲h̲mān Sāgar road, surmounting two small hills, are the *bārādarī* of Tārāmatī, a Hindū concubine of Muḥammad Ḳulī Ḳuṭb S̲h̲āh, and the elegant but incomplete (no minarets) mosque of 'Pēmmatī', d. 1073/1662, for which see *ARADHyd. 1924-25 AD* (*1334 F.*), 2-4 and Plates III-VI. Of the other Ḳuṭb S̲h̲āhī monuments the Gos̲h̲a maḥall stands north of the old city, a palace built by the last sultan with an extensive pleasure-park for the *zanāna* and an ornamental tank, now dry and used for football matches. The Dāʾira-yi Mīr Muʾmin is a burial ground east of the city consecrated by a S̲h̲īʿī saint who came to Ḥaydarābād from Karbalāʾ in the reign of ʿAbd Allāh Ḳuṭb S̲h̲āh; the cemetery, now used for Sunnīs as well as S̲h̲īʿa, contains many fine tombs and gravestones, including the fine domed tomb of the Mīr himself in Ḳuṭb S̲h̲āhī style (for which see GOLKOṆḌĀ *ad fin.*).

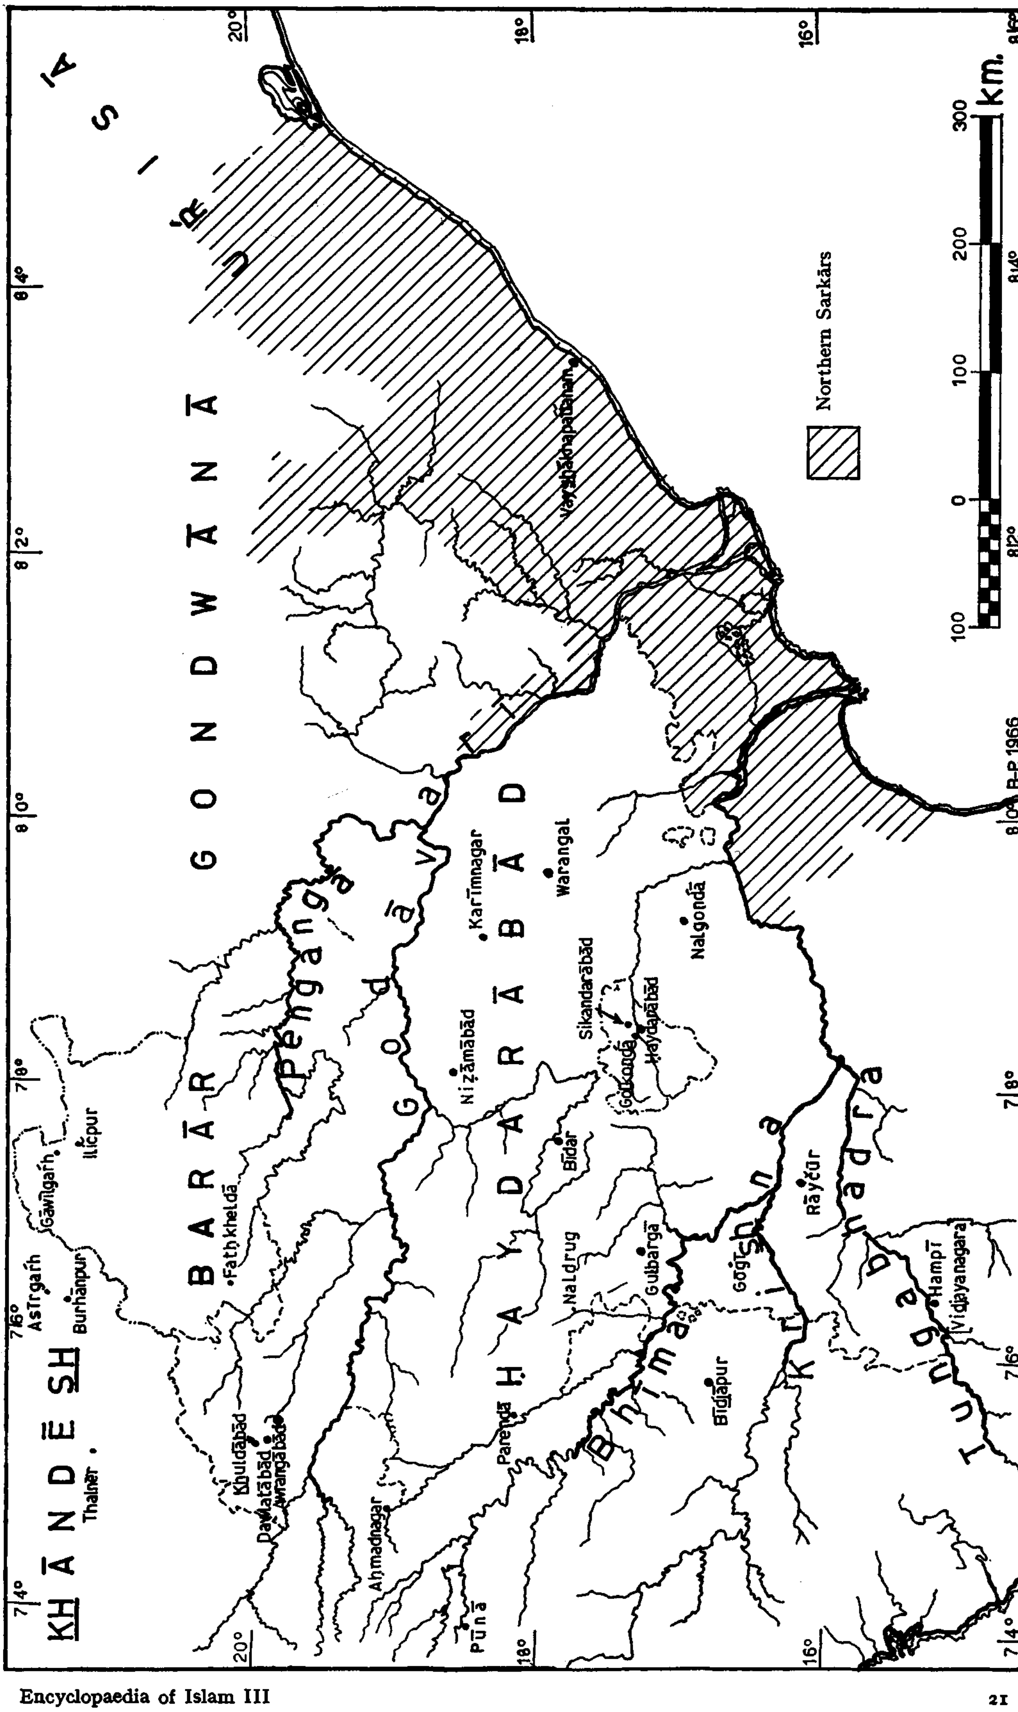
There are also in and around Ḥaydarābād many palaces and other buildings of the Āṣaf Dj̲āh dynasty, from the Purānī Ḥawelī of the first Niẓām, the Čawmaḥalla palace in the centre of the city which is the principal city residence of the Niẓāms, modelled on a royal palace in Tehrān, the palace of Sir Salar Jung now used as a museum, to the late 19th century Falaknumā palace outside the city on the south-west, with a Corinthian façade, Louis XIV reception hall, and other exotic features.

The city water supply depends on tanks, to which modern waterworks are now attached, excavated in former times. The Ḥusayn Sāgar, about 8 sq. miles (2100 hectares), lies between Ḥaydarābād and Sikandarābād, the road between the two cities running along the *band* on its east; it was originally excavated by Ibrāhīm Ḳuṭb S̲h̲āh in 983/1575 as a reservoir for Golkoṇḍā and was filled by a channel cut from the Mūsī. South-west of the city is the Mīr ʿĀlam tank, built by French engineers in the Niẓām's service early in the 19th century, while the Mīr Dj̲umla tank to the south-east, now no longer used, was constructed in 1035/1625.

Of European monuments the old British Residency of 1803-8, now a women's college, and the tomb of the French soldier M. (Michel Joachim Marie) Raymond (corrupted locally to 'Mūsā Raḥīm'!), d. 25 March 1798, are worth notice.

b. Ḥaydarābād State.

When the old sultanates of the Deccan [see DAKHAN] fell one by one to the Mug̲h̲al emperors S̲h̲āh Dj̲ahān and Awrangzīb in the 11th/17th century (the Niẓām S̲h̲āhī sultanate of Aḥmadnagar, to which the former ʿImād S̲h̲āhī sultanate of Barār and the Barīd S̲h̲āhī sultanate of Bīdar had already been attached, in 1042/1633; the ʿĀdil S̲h̲āhī sultanate of Bīdj̲āpur in 1097/1686; and the Ḳuṭb S̲h̲āhī sultanate of Golkoṇḍā in 1098/1687) their lands eventually became one great Mug̲h̲al province—except for those tracts which had been taken by the Marāṭhās [*q.v.*]—under a single *ṣūbadār*, uniting in this office the governorships of the former six Deccan provinces (the five sultanates mentioned above, plus K̲h̲āndēs̲h̲), with headquarters at Awrangābād. The confusion in the affairs of the Mug̲h̲al empire after the death of Awrangzīb in 1118/1707 was certainly reflected in the affairs of the Deccan *ṣūba*, until the appointment in 1132/1720 of Ḳamar al-Dīn Čīn



Ḳilič Khān, entitled Niẓām al-Mulk, set the internal administration in order (he had indeed been *ṣūbadār* of the Deccan some six years earlier, but had then had insufficient time at his disposal to reorganize the province). This noble, the ablest man in the Mughal empire, was after two years recalled to Dihlī to become chief minister, but retained his Deccan appointment, leaving Mubāriz Khān to govern as his agent at Ḥaydarābād. The latter, instigated by Niẓām al-Mulk's enemies, opposed him on his return to the Deccan to combat a Marāthā invasion, but was decisively defeated at the battle of Shakarkheldā [*q.v.*; later named Fatḥkheldā] on 22 Muḥarram 1137/11 October 1724, the date usually taken as the beginning of Niẓām al-Mulk's dynastic rule over the Deccan, although his independence had been virtually complete two years earlier when he led the opposition against the Mughal kingmakers, the Sayyid brothers of Bārha. After his victory he marched for Ḥaydarābād, which he made his capital; the Mughal emperor Muḥammad Shāh, wise enough not to oppose him further, sought rather to conciliate him by the award of the further hereditary title of Āṣaf Djāh.

Āṣaf Djāh had soon to recognize the power of the Marāthās in the Deccan, to whom the Mughal emperor had in 1130/1718 granted the right to levy the cess known as *čawth*, one-fourth of the land revenue; their demands were met by Āṣaf Djāh's agreement to pay this tribute from his own treasury—thus excluding the Marāthā tax-collectors from the necessity of entering his dominions—while abolishing the unauthorized *sardeshmukhī* and *rāhdārī* extortions [for these taxes see MARĀTHĀS]. The agreement was concluded on behalf of Shāhū, the Marāthā ruler; but the Marāthā Peshwā Bādjī Rāo, now rising to a position of great power, pursued a more aggressive policy towards Āṣaf Djāh, who in 1140/late 1727 invaded Mahārāshtra against him. Bādjī Rāo's light guerilla cavalry eventually completely out-manœuvred Āṣaf Djāh, who did not receive the expected support from the Peshwā's rivals, and the campaign ended with the cession of several border forts to the Marāthās. Local conflicts, however, continued, until eventually by a secret agreement between Āṣaf Djāh and the Peshwā the Marāthās left the Deccan undisturbed except for the levy of *čawth* on condition that Ḥaydarābād remained neutral during the Marāthā invasions of the Mughal empire to the north; but at last, when the Marāthās were at the gates of Dihlī, Āṣaf Djāh went to the aid of the Mughals. In the years he was away from the Deccan (1150-3/1737-40) he gained no success in the north, and returned to find not only increased Marāthā depredation in his own dominions but a plan on behalf of his son Nāṣir Djang to usurp the Ḥaydarābād government. The rebellion was suppressed, and Āṣaf Djāh turned his attention to Arkāt («Arcot») in the Madras district (usually erroneously described by European writers as the "Carnatic"; see KARNĀTAKA), where the local Nawwāb, having failed to pay compensation to the Marāthās and tribute to Ḥaydarābād, had been supplanted by a powerful Marāthā army and his province had virtually fallen into anarchy. Āṣaf Djāh in 1156/1743 expelled the Marāthās, deposed the Nawwāb and installed his own agent as the new Nawwāb, and returned to Ḥaydarābād laden with treasure.

The first Āṣaf Djāh died in 1161/1748, having by his character, integrity and capacity made the single viable state of Ḥaydarābād out of the old disorganized medley of the Mughal Deccan provinces. His dominions had been enriched by his patronage of theologians, scholars and poets (he himself left two volumes of Persian poetry); among his buildings are the city walls of Burhānpur and Ḥaydarābād, the canal at Awrangābād, and the city of Niẓāmābād. For further details of his life, including his career before coming to the Deccan, see NIẒĀM AL-MULK.

On Āṣaf Djāh's death the succession was disputed between his second son Nāṣir Djang, and his daughter's son Muẓaffar Djang; the latter was supported by the French under Dupleix, and on Nāṣir Djang's death in 1164/1750 he obtained the throne, engaging many French mercenaries for his army. But Muẓaffar Djang was killed within two months, and the French support was transferred to Ṣalābat Djang, Āṣaf Djāh's third son. His succession was opposed by the Marāthā Peshwā Bālādjī Rāo, who supported Āṣaf Djāh's eldest son, the mild and scholarly Ghāzī al-Dīn Khān, who had been his father's representative at the Mughal court—doubtless hoping thereby to be able to rule the Deccan as his deputy. Ghāzī al-Dīn marched from Dihlī with a strong Marāthā escort; but Bussy, the commander of Ṣalābat Djang's French contingent, entered into a treaty with the Peshwā by which the latter would defend the Deccan against all comers in exchange for the cession of much of Khāndēsh and other western districts. Ghāzī al-Dīn's death by poison in late 1165/1752 secured Ṣalābat Djang's succession—but to a reign in which he was a puppet in the hands of a succession of unscrupulous regents (although the best of them, Ṣamṣām al-Dawla Shāh Nawāz Khān, the author of the Mughal biographies in the *Ma'āthir al-umarā'*, in his four years of office 1167-70/1753-7, brought financial stability out of the previous insolvency), and in which he was completely dependent for protection on his French mercenaries. Shāh Nawāz Khān was overthrown by French intrigue, and in the ensuing confusion the Marāthās again attacked the west; Niẓām ʿAlī Khān, the fourth son of Āṣaf Djāh, obtained the regency and negotiated a treaty with the Marāthās in which further western districts were ceded to them, including the fort of Naldrug [*q.v.*]. The British successes in the Seven Years' War under Clive in the "Carnatic" (*i.e.*, the Madras coast) caused the French influence in Ḥaydarābād to decline, and a promise of British support to Niẓām ʿAlī Khān caused the dismissal of most of the French troops. Ḥaydarābād's sudden military weakness caused a further full-scale Marāthā invasion, with the early loss of Aḥmadnagar and Udgir and later invasion of the central districts; in the peace treaties of 1173/1760 much of Awrangābād province, Bidjāpur district, Bīdar district, and the forts of Asīrgaṛh, Dawlatābād, Bidjāpur and Burhānpur were ceded to the Peshwā; but within a year the Marāthās had been utterly defeated at Pānīpat [*q.v.*], the Peshwā Bālādjī Rāo had died and been succeeded by a minor son, and internal dissensions had reduced the southern Marāthā power to frailty. Niẓām ʿAlī Khān had in turn invaded Mahārāshtra and regained nearly half of the previous losses; on his return he imprisoned Ṣalābat Djang and assumed the government himself at the end of 1175/July 1762, his reign of over forty years at last bringing peace and stability to the state of Ḥaydarābād.

In 1178/1765 the coastal districts north of Madrās (the "Northern Circars" [*i.e.*, *sarkārs*] of the older histories) were ceded to the British by the Mughal emperor, having been previously under French administration. Niẓām ʿAlī considered these tracts to be a portion of his dominions, and in the following

year advanced to recapture them, but without success; the British negotiated a treaty whereby they retained the districts and undertook to maintain a body of troops for employment by Ḥaydarābād whenever required; the treaty was extended in 1768 to include the Nawwābs of Arkāt in the obligations to assist the Niẓām. In 1790, when war broke out between Tīpū Sulṭān [*q.v.*] and the British, a tripartite offensive and defensive agreement was concluded between Ḥaydarābād, the Marāthās, and the East India Company, who shared the land ceded by Tīpū when he sued for peace. In 1798 by further treaty the Company agreed to assign a subsidiary force of infantry and artillery to the Niẓām, who was to pay a subsidy of 24 lākhs of rupees for its maintenance; later a contingent of cavalry was added; but Ḥaydarābād was aided also by mercenary troops under French, American and Irish commanders, the Frenchman, Raymond, by his able suppression of an attempted revolt by the heir-apparent ʿAlī D̲j̲āh, having attained a position of some eminence; he died, however, in 1798, but the presence of so many French troops was a source of anxiety to the British, who were able to compel their surrender and their dismissal from the Niẓām's territories; their excellent equipment, together with the foundries and arsenals established in Ḥaydarābād by Raymond, fell into the Ḥaydarābād contingent's hands. This force was soon in action with the East India Company against Tīpū Sulṭān at S̲h̲rīrangapattanam ("Seringapatam") near Mysore; after the victory most of the conquered territory was divided between the Company and the Niẓām; a further treaty shortly afterwards fixed the river Tungabhadrā as the frontier between the Niẓām's and the Company's territories. In 1802 a commercial treaty provided for the admission of Ḥaydarābād produce into British territory, and *vice versa*, on payment of a 5 per cent duty.

In 1803 Niẓām ʿAlī's health was failing, and the Marāthā rād̲j̲ās Holkar and Sindhiā, dissatisfied alike with the reinstatement by the British of Bād̲j̲ī Rāo II as Pes̲h̲wā and the possible accession in Ḥaydarābād of the pro-British heir-apparent Sikandar D̲j̲āh, prepared to invade the Niẓām's dominions. The British and Ḥaydarābād campaign under Wellesley against the dissident Marāthā forces culminated in the battles of Āse ("Assaye") and Argāwn which crushed the southern Marāthā ambitions and secured the safety of the Niẓām's dominions. Sikandar D̲j̲āh duly succeeded as Niẓām in the same year; during his reign of twenty-six years the Pes̲h̲wā was overthrown (1818) and the British, who had thereby technically succeeded to the right of exacting *čawth*, released the Niẓām from the obligation to pay it. Sikandar was succeeded in 1829 by his son Nāṣir al-Dawla, who reigned for twenty-eight years with a rare spirit of religious toleration. The notable events of his reign included the suppression in 1839 of a Wahhābī [*q.v.*] conspiracy, in which the late ruler's brother Mubāriz al-Dawla was implicated; serious S̲h̲īʿī-Sunnī riots in 1847, which did not abate until the Niẓām's government made a pro-Sunnī settlement; the assignment in 1853 of the districts of Barār, ʿUt̲h̲mānābād (Naldrug) and the Rayčūr *dōʾāb* to the British who in turn agreed to maintain a British auxiliary force, not part of the Niẓām's army, of 5000 infantry, 2000 cavalry, and four field batteries of artillery, and to release the Niẓām from the unlimited obligation to provide service and assistance in the event of war; and, perhaps the most significant event in the modern history of Ḥaydarābād as a state, the accession of Nawwāb Sālār D̲j̲ang [*q.v.*] as minister in 1853.

When Nāṣir al-Dawla died in May 1857 his eldest son Afḍal al-Dawla succeeded to the throne at a critical period in Indian history, for it was feared that if Ḥaydarābād joined the Sepoy Mutiny the whole of Bombay and Southern India would follow suit; but Ḥaydarābād adhered to the British cause, and in consequence of the Niẓām's services in the revolt the districts of ʿUt̲h̲mānābād and the Rayčūr *dōʾāb* were restored and the "assigned districts" of Barār became a British trust territory. Nāṣir al-Dawla died in 1869 and was succeeded by his three-year-old son Mīr Maḥbūb ʿAlī with (Sir) Sālār D̲j̲ang as regent and administrator. The latter set about constituting Ḥaydarābād as a model state with an administrative system parallel to that of the British territories in India, his immediate task being to improve the finances of the state by suppression of the extortion of the local Arabs and Rohillas, by abolishing the system of revenue-farming and establishing a new revenue survey and settlement operated by government collectors, by abolishing revenue payments in kind, and by continued efforts to restore government credit from the local money-lenders (*sāhūkārs*); corruption among government officials was ruthlessly stamped out, and four young nobles of integrity were appointed to the judicial, revenue, police and "miscellaneous" ministries under the guidance of Sālār D̲j̲ang, who at first retained direct control over the army, treasury, postal, diplomatic and other departments; later the revenue ministry took over, besides the land revenues, customs, forests, posts (including a postage stamp department from 1869), the mint (many private mints were suppressed; the *ḥālī sikka* rupee was introduced as the standard coin of the realm in 1854, its rate of exchange against the British rupee fluctuating considerably at first, but greatly stabilized with the introduction of the new *maḥbūbiyya* rupee in 1904. See further SIKKA), and the treasury. The "miscellaneous" department had care of public works, including irrigation, the coalfields, education (schools were set up in the chief village of each *taʿalluḳ*; by 1872 there were already 125 such schools outside the capital, which had a further 16 including the Church of England school (1834) and the Oriental College (= *Dār al-ʿulūm*) of 1854, which acted as a teachers' training college; higher education was provided at the Anglo-Vernacular school of 1857, renamed Hyderabad College in 1880 and affiliated to Madras University, and at the Civil Engineering College established in 1869 in connexion with the Public Works department), workshops and stores, and later also the municipalities and the medical department (many dispensaries were established throughout the state, with surgeons and dispensers at all district headquarters; almost all of these were trained at the Ḥaydarābād medical school established in 1846 under the direction of successive surgeons to the British Resident—the first, MacLean, having already trained 16 Muslims as surgeons and physicians by the time he retired in 1854); this department later took on responsibility for the State Railway opened in 1874. Sir Sālār D̲j̲ang died in 1883, leaving a sound and generally efficient administration which was modified only in detail by his successors; the experience gained under him was the basis of the official code (*ḳānūnča-i mubārak*) promulgated in 1892 for the guidance of the prime minister, reinforced the following year by the establishment of a council composed of all the ministers of the state. Mīr Maḥbūb ʿAlī K̲h̲ān attained his majority in

1884, and was succeeded by his son, the present Niẓām Mīr ʿUthmān ʿAlī Khān Bahādur Fatḥ Djang, in 1911. Under both these rulers the process of modernization of the state continued, with notable improvements in sanitation, education, communications and other public works; further departments parallel to those of British India were introduced, including a government department of publications, and the excellent department of archaeology which, besides assuming responsibility for the preservation of the archaeological monuments of the state, undertook an extensive programme of research and publication in which much attention was given to Hindū and Buddhist material (for example the caves at Adjantā, Elurā [q.v.] and Awrangābād; the corpus of Telugu inscriptions, etc.) as well as to Muslim history and monuments. Muslim learning in a wide field was represented by the Ḥaydarābād journal *Islamic Culture* (1927). The political boundaries of the state remained more or less unchanged, except that administratively the Assigned Districts of Barār were leased in perpetuity to the British government in 1902 at an annual rental of 25 lākhs of rupees; while the titular sovereignty of the Mughal emperor at Dihlī had been theoretically recognized by Ḥaydarābād until the deposition of the last emperor in 1858, and recognized by the inscriptions on coinage from the Ḥaydarābād mint, the paramountcy of the government of India was not recognized in Ḥaydarābād until it was explicitly asserted by Lord Reading in 1926. The British title of "Exalted Highness" was conferred on the Niẓām in 1918 in recognition of Ḥaydarābād's contribution to the allied war effort, and in 1936 Barār was added to his title, the heir-apparent being styled "Prince of Berar".

At the time of the partition of India into the new dominions of India and Pākistān the Niẓām's government opted for accession of the state to Pākistān; the state was, however, forcibly integrated into the Indian Union in 1948, although maps published in Pākistān continued to show Ḥaydarābād as a part of Pākistānī territory for long afterwards. The Indian States Reorganization Commission's recommendations resulted in an Act whereby from 1 November 1956 the former state of Ḥaydarābād was redistributed on a linguistic basis between Bombay [now Mahārāshtra] (Marāthī), Mysore (Kannada) and Āndhra (Telugu), Ḥaydarābād city becoming the capital of Āndhra Pradesh. The Muslim population was much depleted by emigration to Pākistān, although there has been no official discrimination against Muslims in the new predominantly Hindū state; Ḥaydarābād is still an important Islamic cultural centre, with Urdū the common language of Muslim intercourse.

For the later history of the state, especially the reforms of Sir Sālār Djang: Syed Hossain Bilgrami and C. Willmott, *Historical and descriptive sketch of His Highness the Nizam's dominions*, 2 vols., Bombay 1883-4; *Gazetteer of Aurangabad*, Bombay 1884; on these are based the various series (Main and Provincial) of the later editions of the *Imperial gazetteer of India*, with revised information being continually added from Census reports and the communications of local administrative officers. Of biographies by officials resident in Ḥaydarābād that of Col. Meadows Taylor, *Story of my life*, 2 vols., London 1877, is notable. See also bibliography to SĀLĀR DJANG.

Further material relevant to Ḥaydarābād will be found in the following articles: AWRANGĀBĀD, BERĀR, BĪDAR, BĪDJĀPUR, DAKHAN, DAWLATĀBĀD, ELURĀ, GOLKONDĀ, GULBARGĀ, KARNĀTAKA, ḲUṬB SHĀHĪS, MARĀTHĀS, NALDRUG, PARENDĀ, RAYČŪR, UDGIR, WARANGAL. On the coinage, land tenures, and language, see respectively SIKKA; TENURE OF LAND; URDŪ. See also the general articles on India under HIND. (J. BURTON-PAGE)

ḤAYDARĀBĀD (Sind), a town in the former province of Sind (West Pakistan) situated between 25° 23′ N. and 68° 20′ E. and covering an area of 36 sq. miles, is the third largest city in West Pakistan after Karachi and Lahore, pop. (1961) 434,537 (of which the Muslims numbered 422,786). Built on the site of the ancient Nīrūńkoť, which fell to the arms of Muḥammad b. Ḳāsim al-Thakafī at the time of the first Muslim conquest of Sind in the 2nd/8th century, the town is of comparatively recent origin, having been founded in 1182/1768 by Ghulām Shāh Kalhōŕā, the then ruler of Sind, whose capital Khudābād in the district of Dādū had been partially destroyed by floods in 1171/1757. He constructed a large brick-fort, covering 36 acres, on a ridge locally known as Gandjo Ťakar and renamed the town Ḥaydarābād (after ʿAlī b. Abī Ṭālib, also known as Ḥaydar). Ghulām Shāh died in 1187/1773 and was buried in the Hīrābād quarter of the town near the modern Central Jail, in the complex known as the Tombs of the Mīrs. The town passed into the possession of the Tālpurs in 1198/1783, on the overthrow of the Kalhōŕā dynasty, who also made it their capital. The new ruler Fatḥ ʿAlī Khān made many changes and rebuilt the town after his own liking. The Tālpurs continued to rule till 1259/1843 when, after the battle of Miyānī, the town passed into the possession of the British along with the entire province of Sind. For strategic, political and commercial reasons the new rulers transferred the capital to the port of Karachi, which gained in prosperity at the cost of Ḥaydarābād.

The old town, built in a haphazard way, consists of narrow lanes and bystreets lined with dingy, old-fashioned, many-storeyed houses. A peculiar feature of these houses is that they carry on their roof-tops strange-looking contraptions for catching the sea-breeze blowing from Karachi. These wind-catchers deceived Sir Charles Napier, during his victorious march on Sind, into taking them for small guns. The main street known as Shāhī Bāzār is slightly wider but is crowded at all hours of the day. The citadel built by Ghulām Shāh is now practically in ruins; it was inhabited till recently by Muslim refugees from India who have now been moved to the new colonies constructed for them. In earlier days the fort was surrounded by a ditch, now completely filled with debris, which separated it from the old town (for a full description of the town and the fort as they stood in 1836, see the *Gazetteer of the Province of Sind*, "B" volume II, Hyderabad District, Bombay 1920, 40-4). In April 1906, an explosion in the ammunition stored in the fort destroyed many buildings and shops both within the fort and outside. Thereafter the fort was handed over to the civil authorities. In the compound of the blown-up magazine were buried many British officers who fell in the battles of Miyānī and Dubba.

Among the notable buildings in the town are the tombs of the Mīrs, the former rulers of Sind, at the northern extremity of the ridge on which the town stands. While the tombs of the Kalhōŕās are fine specimens of Sindhī architecture, those of the Tālpurs are a poor imitation of modern styles. All the tombs are richly decorated with coloured tiles set in geometric and floral patterns, but both the colours and designs are of inferior workmanship. Under the Tālpur rule, the tombs of their vanquished rivals, the Kalhōŕās, suffered greatly from neglect; indeed they still lie neglected although they are now in the midst of a very busy district and are protected under the Ancient Monuments Preservation Act. With the moving of the University of Sind to this town in 1954 and in 1962 of the Sindhī Adabī Board, established by the Government for the development of Sindhī language and literature and for the publication of works in Persian or Arabic by earlier authors of Sindhī origin, it has become a prospering centre of cultural activities. The town also houses the recently established Shāh Walī Allāh Academy, devoted to research on the philosophy of Shāh Walī Allāh [see AL-DIHLAWĪ] and his contribution to Islamic religious and theological thought.

The town has considerably expanded in recent years and two new suburban townships—Laṭīfābād and the Industrial Trading Estate—have sprung up, adding to the amenities of the town. The languages spoken are Urdu and Sindhī, and the population consists of many ethnic elements, such as Balōčis, Sayyids, Rādjpūts, pure Sindhīs of Djāṭ and Mēd origin and the Mewātīs.

ḤAYDARĀN, an ancient place-name in south-east Tunisia—which may be located in the neighbourhood of Gabès on the road leading from that town to Ḳayrawān—where, on 11 Dhu 'l-Ḥidjdja 443/14 April 1052, the Ṣanhādja forces under the command of the Zīrid *amīr* al-Muʿizz b. Bādīs were annihilated by the Hilālī hordes, to whom the Fāṭimid caliph in Cairo had handed over Ifrīḳiya as a reprisal for its recognition of the ʿAbbāsid caliph of Baghdād. There were not two battles at Ḥaydarān, taking place, at one year's interval, on the same day and in the same place, as a misinterpretation of a passage in the *Bayān* of Ibn ʿIdhārī has suggested. After fondly entertaining the hope of enrolling the Banū Hilāl and minimizing the importance of an invasion whose causes are perhaps as much demographic as political, the Zīrid staked all to stop the barbarian flood. Ḥaydarān commemorates the collapse of the Zīrid power, the end of the civilization typified by Ḳayrawān and the start of a new era for the whole Maghrib, which thereafter, progressively from East to West, was to suffer from an increase in nomadism so serious that its effects are still visible today.

(H. R. IDRIS)

ḤAYFĀ, modern Haifa, a port at the foot of Mount Carmel. The name does not occur in the Bible, but appears frequently in the Talmud and in later Jewish sources, and is mentioned by Eusebius as ʿΕφα. In the early Muslim centuries Haifa was overshadowed by ʿAkkā [*q.v.*], and is first described by Nāṣir-i Khusraw, who was there in 438/1046. He speaks of the palm-groves and numerous trees of this village (*dih*), and mentions the nearby sands of the kind used by Persian goldsmiths and called by them Makkī sand. He also found shipwrights who, he said, made the large, sea-going ships called Djūdī (*Safar-nāma*, ed. and Fr. trans. Ch. Schefer, Paris 1881, text 18, trans. 60; ed. Kaviani, Berlin 1340 s., 26; English version in *PPTS*, iv, 13).

The Crusaders on their way south at first by-passed Haifa. They soon turned their attention to this useful port, perhaps still containing a shipyard, and *ca.* Shawwāl 493/August 1100, after a siege of about a month, captured Haifa with the help of a Venetian fleet. According to Albert of Aix (vii, 22-5, *RHC.Occ.*, iii, 521 ff.) the population were Jews, who inhabited this place with a special grant from the Fāṭimid Caliph, for which they paid tribute, and who defended it in arms, with the help of Muslim troops. After the capture, the Jewish and Muslim garrison and population, apart from a few who escaped, were assembled and massacred.

Under Frankish rule Haifa acquired some importance, and was often a subject of dispute between the Frankish barons. Idrīsī, whose account belongs to this period, describes it as an excellent anchorage and as the port of Tiberias (ed. Gildemeister, in *ZDPV*, viii (1885), Supp.). During the wars between the Crusaders and the Muslims, the fate of Haifa, like other ports on the Palestine coast [see ARSŪF, ḲAYSARIYYA, YĀFA], was linked with that of ʿAkkā.

In 583/1187, after the fall of ʿAkkā, Haifa, with other places, was occupied by Saladin's forces (Bahāʾ al-Dīn b. Shaddād, *al-Nawādir al-Sulṭāniyya*, ed. G. Shayyal, Cairo 1964, 79; Abū Shāma, *Rawḍatayn*[1], ii, 88; Muḥammad al-Ḥamawī, *al-Taʾrīkh al-Manṣūrī*, ed. P. A. Gryaznevič, Moscow 1960, fol. 92 b; Ibn Wāṣil, *Mufarridj al-kurūb*, ed. G. Shayyal, ii, Cairo 1957, 202. In view of the evidence of the Muslim sources, the statement of some Frankish sources, repeated by most modern Western historians of the Crusades, that Haifa was captured *before* the fall of ʿAkkā must be rejected (see W. B. Stevenson, *The Crusaders in the East*, Cambridge 1907, 250). In 587/1191, anticipating the Frankish recovery of ʿAkkā, Saladin demolished the walls and fortifications of Haifa, before abandoning it to the Franks. Haifa now remained in Frankish hands, and was refortified by King Louis IX of France *ca.* 1250-1. In 663/1265 it was abandoned by its inhabitants before the advance of Baybars, who razed its fortifications to the ground. It was later recovered by the Franks, and was finally reconquered by the Mamlūk Sultan al-Ashraf Khalīl in 690/1291, after the reconquest of ʿAkkā.

In the Mamlūk period Haifa was affected by the general policy of keeping the Palestine coast in a state of devastation, as a precaution against a return by the Crusaders. Ḳalḳashandī mentions it only as a ruin (*Ṣubḥ*, iv, 155 = Gaudefroy-Demombynes, *La Syrie à l'époque des Mamelouks*, Paris 1923, 124). The first Ottoman survey registers of the conquest [see DAFTAR-I KHĀḲĀNĪ] do not list Haifa among the inhabited places. At about the same time Pīrī Reʾīs, in his description of the Palestine coast, mentions only a ruined castle (U. Heyd, *A Turkish description of the coast of Palestine in the early sixteenth century*, in *IEJ*, vi/4 (1956), 206 and 210-1). By 1019/1611, however, a Turkish document speaks of Frankish merchants who "used to come" to the port (*iskele*) of Haifa. They had stopped coming because of molestation, which was therefore to cease (U. Heyd, *Ottoman documents on Palestine 1552-1615*, Oxford 1960, 129). In this period Haifa seems to have formed part of the possessions of the Ṭarabay [*q.v.*] family. In 1032/1623 it was besieged by Fakhr al-Dīn II Maʿn [*q.v.*], who offered to raise the siege if Aḥmad Ibn Ṭarabay would undertake not to attack the Ṣafad area. The latter, however, preferred to destroy Haifa rather than risk its falling into the hands of his enemy (I. Ben-Zvi, *Ereṣ-Yisrāʾēl we-yishūvāh biyyēmē ha-shilṭōn ha-ʿOthmānī*, Jerusalem 1955, citing E. Roger, *La terre sainte*, Paris 1664, 76-7; P. Carali, *Fakhr al-Din II*, i, Rome 1936, Italian 80, Arabic 83; Aḥmad al-Khālidī, *Lubnān fī ʿahd al-amīr Fakhr al-Dīn* . . ., ed A. J. Rustum, Beirut 1936, 197-8). More frequent mention by travellers confirms the increasing use of Haifa during the 17th and 18th centuries, though the population seems to have remained very small. During the late forties or early fifties of the 18th century Haifa and its surroundings came into the possession of Shaykh Ẓāhir al-ʿUmar [*q.v.*]. In Shawwāl 1174/May 1761 ʿOthmān Pasha, the Ottoman governor of Damascus, having been authorized by the Sultan to annex Haifa and its surroundings to his province, sent thirty soldiers on a French ship from Beirut to Haifa, with orders to seize the village and fortress by a sudden attack. Forewarned by his spies, Shaykh Ẓāhir was able to drive the ship away by gunfire. After this incident he destroyed the existing village and built a new one, some two kilometres to the north-east, to which he transferred the inhabitants. He called the new village *al-ʿimāra al-djadīda*, the "new construction", but it came to be known as Ḥayfā al-djadīda, new Haifa. It was defended by walls with round towers on the three land sides and by a rectangular, two-storey fortress, armed with guns, overlooking the village and the harbour. Mikhāʾīl Ṣabbāgh remarks that this fortress was built allegedly for defence against infidel (?Maltese) pirates, but actually against possible attacks from Nābulus. It was called Burdj Abū Salām or Burdj al-Salām. Some ruins remain on the hill which is still called al-Burdj. (U. Heyd [then חייט], *Dāhir al-ʿUmar* (in Hebrew), Jerusalem 1942, 29-30, 39-40, 94, citing Nuʿmān Ḳasaṭlī, *Mulakhkhaṣ taʾrīkh al-Zayādina*, in *Madjallat al-Djinān*, 1877, 851; ʿAbbūd al-Ṣabbāgh, *al-Rawḍ al-zāhir fī taʾrīkh Ḍāhir*, Ms in American University Library, Beirut, fol. 9a and b; Mikhāʾīl Niḳūla al-Ṣabbāgh, *Taʾrīkh al-Shaykh Ẓāhir al-ʿUmar al-Zaydānī = Documents inédits pour servir à l'histoire du patriarcat melkite d'Antioche*, iv, ed. P. Constantin Bacha, Ḥarīṣā n.d. [? 1927], 45-6).

The new village built by Shaykh Ẓāhir was the nucleus of modern Haifa. After his fall it was ruled by Djazzār Aḥmad Pasha, and in 1799 was captured by the French, who, however, abandoned it after their failure to take ʿAkkā. In 1837 it was captured by Ibrāhīm Pasha of Egypt, and in 1840, with ʿAkkā, suffered damage when the two ports were bombarded by Turkish, British, and Austrian ships.

The gradual silting up of the port of ʿAkkā had resulted in a diversion of traffic to Haifa, which began to grow in size and importance. The Jewish population was increased by newcomers from Morocco, Turkey and later from Europe. A new element was the Templars, a group of German Protestants from Württemberg who settled in Haifa in 1868. Though their purpose in coming was pious, they inaugurated the modern economic development of Haifa. They built roads, introduced four-wheeled carriages, and established regular passenger services to ʿAkkā and Nazareth. Among other activities, they built a steam-mill, planted vineyards, and introduced modern agricultural methods. Another group of religious settlers were the Bahāʾīs [*q.v.*], the followers of Bahāʾ Allāh [*q.v.*] who died in exile near ʿAkkā in 1892. The tomb of his precursor the Bāb [*q.v.*] and of his son ʿAbd al-Bahāʾ, known as ʿAbbās Efendi, are in a mausoleum on the slopes of Mount Carmel; Haifa is the administrative centre of the Bahāʾī religion.

In 1886 work was begun on a government carriage road from Haifa to Tiberias and Djanīn; in 1898, on the occasion of the visit of the German Emperor and Empress, a pier was built, and a carriage road was constructed from Haifa to Jaffa. Despite these developments the population remained small. Towards the end of the 19th century Turkish estimates put it at about 6000 souls, most of them Muslim; by the outbreak of war in 1914 they had risen to between 10,000 and 12,000, of whom about half were Muslims, and the rest Catholic and Orthodox Christians, with a few hundred each of Jews and of German Templars (for a Turkish impression of the German and Jewish settlers, and their work, see Bereketzāde Ismāʿīl Ḥaḳḳī, *Yād-i māḍī*, Istanbul 1332/1914, 132 ff.). In late Ottoman times Haifa was the seat of a *ḳaḍāʾ* in the *sandjaḳ* of ʿAkkā in the *wilāyet* of Bayrūt.

On 23 September 1918 Haifa was occupied by British troops and, as part of the mandated territory of Palestine, entered on a phase of intensive growth and development. A new era in the economic life of

the town had already begun with the opening, in 1905, of the Darʿa-Haifa branch of the Ḥidjāz railway [*q.v.*]. This, by linking Haifa with Damascus and Ḥawrān as well as with Arabia, had given a great impetus to its development as a port. The low freight charges, made possible by the gift capital of the Ḥidjāz railway, gave it an immediate advantage over both Jaffa and Bayrūt. In 1918 a new line linked Haifa with Southern Palestine and Egypt; the port was improved in 1921, and a major expansion completed in 1933, by which date the tonnage entering Haifa harbour had quadrupled in ten years. The completion of the oil pipeline from ʿIrāḳ in 1933 and of the refinery in 1939 also contributed greatly to the economic growth of the city. These developments helped and were helped by a considerable Arab immigration into the city, and, especially in the thirties and forties, by the immigration of large numbers of Jews, chiefly from central and eastern Europe. Censuses held under the Mandate show the following population figures: 1922: 9,377 Muslims, 8,863 Christians, 6,230 Jews, 164 others; 1931: 20,324 Muslims, 13,824 Christians, 15,923 Jews, 332 others. By the end of the Mandate, in 1948, the population of Haifa was estimated at 120,000, two-thirds of whom were Jews and the rest Arabs.

On 21 April 1948 the general commanding British troops in Haifa informed Arab and Jewish leaders that he was going to concentrate his forces in the port area and the roads leading to it, and withdraw them from the rest of the city. This announcement was followed by a swift struggle, which left the city in Jewish hands, and, after abortive negotiations for a surrender, by the departure, by sea to ʿAkkā and Lebanon or overland to Nazareth, of the greater part of the Arab population. The circumstances of this departure remain obscure and controversial (for varying accounts, see ʿĀrif al-ʿĀrif, *al-Nakba*, i, Beirut 1956, 206-23; R. E. Gabbay, *A political study of the Arab-Jewish conflict*, Geneva-Paris 1959, 94-5; J. and D. Kimche, *Both sides of the hill*, London 1960, 115-6, 118-24; G. Kirk, *The Middle East 1945-1950*, London 1954, 261-3; Walid Khalidi, *The fall of Haifa*, in *Middle East Forum*, December 1959, 22-32; Muḥammad Nimr al-Khaṭīb, *Min athar al-nakba*, n.p. [? Damascus] 1951; N. S. Lorch, *The edge of the sword*, London and New York 1961, 97-100; H. Sacher, *Israel, the establishment of a state*, London 1952, 241-5; R. D. Wilson, *Cordon and search*, Aldershot 1949, 167 ff. and 190).

At the present time (1965) there is an Arab population of about 10,000 in Haifa, including Muslims, Druzes, Bahāʾīs, and Christians. Most of the Muslims live in the Wādī Nisnās quarter, on the slopes of Mount Carmel. The Great, or Djarayna Mosque, damaged during the fighting in 1948, was repaired and brought into use again in June 1949. The Carmel village of Kabābīr, inhabited by Aḥmadiyya [*q.v.*], is now also within the city limits of Haifa.

(Ed.)

ḤĀYIL or **ḤĀʾIL**, chief town (pop. 20,000 in 1385/1965) of the district of Djabal Shammar in Central Arabia, former capital of the Rashīdī dynasty of Nadjd, after 1340/1921 a provincial capital of the enlarged realm of the House of Suʿūd (since 1351/1932 the Kingdom of Saudi Arabia). Djabal Shammar, bounded on the north by the basin of the Great Nafūd, forms the natural northwestern limit of Nadjd, although residents of the Ḥāʾil area sometimes refer to al-Ḳaṣīm as the northernmost district of Nadjd proper. Ḥāʾil, situated at an altitude of 979 metres near the eastern edge of the granite massif of Adjaʾ, lies at the heart of the *dīra* of Shammar [*q.v.*] (of Ṭayyiʾ of the classical historians), dominant tribe of the area. The hill of Samra, also known locally as al-Mawḳida, bounds the town on the east; the ridge Umm Arḳab forms a barrier on the north. The name Ḥāʾil was first applied to the *wādī* that runs near the edge of the settlement, itself originally known simply as al-Ḳurayya. Ḥāʾil was mentioned by the poets Imruʾ al-Ḳays and Ṭarafa b. al-ʿAbd. Sprenger identifies Ḥāʾil with the Arre Kome of Ptolemy.

The Shammarī inhabitants of Ḥāʾil submitted to Wahhābī [*q.v.*] rule in 1201/1786-7, and the early years of the 13th/19th century were marked by disputes between the Houses of Ibn ʿAlī and Ibn Rashīd for local authority. The forces of Ibrāhīm Pasha, commander of the Turco-Egyptian expeditionary force, exacted tribute from Ḥāʾil after the fall of al-Dirʿiyya [*q.v.*] in 1233/1818. Occupation troops entered the town again in 1253/1837. In 1251/1835 the House of Rashīd became firmly established as rulers of Ḥāʾil under the suzerainty of Āl Suʿūd. Independent Djabal Shammar reached the height of its power under Muḥammad Ibn Rashīd, ruler of Ḥāʾil between 1289/1872 and 1315/1897. The town then had a population of about 20,000 in four quarters around the market square, al-Mashaba. On the northeast was Barzān fortress, the construction of which was begun by Muḥammad Ibn ʿAlī early in the 13th/19th century. The Lubda quarter was on the south; al-Maḳīẓa on the west; and Afnān on the northwest. Commerce was in the hands of 80 merchant families from al-Nadjaf in Iraq. At the mosque in Barzān was the religious law school of al-Marshadī, and the Lubda quarter had a similar institution. Muḥammad b. Bānī, an armourer at Ḥāʾil during this period, was famous throughout Arabia for his decorated weapons. Ḥāʾil and its environs were stricken by an epidemic *ca.* 1288/1871, when many of the townsmen died. Doughty estimated the population to be only about 3,000 at the time of his visit in 1294-1877. After the death of Muḥammad in 1315/1897, large parts of the town were destroyed during a period of dynastic disputes that weakened the House of Rashīd. The successors of Muḥammad received active assistance from the Turks against ʿAbd al-ʿAzīz Ibn Suʿūd, who finally took Ḥāʾil on 1 Rabīʿ I 1340/2 November 1921.

The economy of Ḥāʾil is based on small-scale farming and commerce. Staples long grown in the area, such as dates and grains, have been supplemented by a wide variety of vegetables and citrus fruits. Ḥāʾil lay on the pilgrim track from Iraq, but the economic benefits of this traffic were often lost owing to the lack of public security in the district before 1340/1921. Overland pilgrim traffic was diverted, *ca.* 1383/1963, to the north through the district of

al-Djawf [*q.v.*]. Muḥammad Ibn Rashīd was known for the quality of his horses; he kept some 500 head in the Ḥāʾil area as cavalry mounts and for export. Horses were no longer raised there in significant numbers in 1385/1966.

Important quarters in the modern town, in addition to those mentioned above, are al-Djudayyida, al-Zabāra, and al-Wusayṭā. The garden suburb of al-Suwayfila is now contiguous with Ḥāʾil, and the formerly barren tract known as al-Nuḳra, between Ḥāʾil and Ḳufār, is cultivated. The Amīr of Ḥāʾil in 1385/1966 was ʿAbd al-ʿAzīz b. Musāʿad b. Djilūwī, who was installed *ca.* 1341/1923 by ʿAbd al-ʿAzīz Ibn Suʿūd. He administers an area of some 160,000 square kilometres including the towns of Ḳibā, Taymā, and Khaybar.

al-ḤAYMA, a district in the Yaman mountains southwest of Ṣanʿāʾ. The district, which is divided into al-Ḥayma al-Khāridjiyya (Outer or Western al-Ḥayma) and al-Ḥayma al-Dākhiliyya (Inner or Eastern al-Ḥayma), straddles the main route to Ṣanʿāʾ from the seaport of al-Ḥudayda. Ascending from Tihāma, one passes through the district of Ḥarāz [*q.v.*] to reach al-Ḥayma. Manākha, the capital of Ḥarāz, lies *ca.* 2300 m. above sea level. Eastwards the way drops some 800 m. into the sink or graben of Mafḥaḳ ,named after the main town of Outer al-Ḥayma. Glaser identifies Hamdānī's Dhāt Djirdān with Mafḥaḳ, where Harris speaks of "the strange fortress . . . grandly situated on a pinnacle of rock some five hundred feet above the valley". Approaching Inner al-Ḥayma, the way rises again; Sūḳ al-Khamīs (Khamīs Madhyūr) is over 2300 m. and Ḳarn al-Waʿl ("the Horn or Peak of the Mountain Goat", not "deer-antlers" or "Deer-Horn" as in *EI*[1], ii, 220, and iv, 144) to the north is over 2900 m. The main town of Inner al-Ḥayma, al-ʿUrr (pronounced al-ʿIrr), which has been identified with Hamdānī's al-Ṣayad, is not far west of Ḥaḍūr Shuʿayb [*q.v.*], the great mountain dominating the separate district of Ḥaḍūr.

In the north al-Ḥayma extends to the upper basin of Wādī Surdud, and in the south to the land of Anis and Wādī Sahām. In the east the land of Banū Maṭar lies south of the district of Ḥaḍūr. Among the northern valleys of al-Ḥayma are al-Rabūʿ, Mafḥaḳ al-Shamālī, and Ṣayʿam, all of which flow into Surdud. In the south Marḥab, which runs down from Djabal al-Manār near Sūḳ al-Khamīs, and Mafḥaḳ al-Djanūbī flow into Sahām.

Contrary to the statement in *EI*[1], ii, 220, a good deal of coffee is grown in al-Ḥayma. Harris describes one scene there: "What a wonderful valley it was, full of coffee-groves, and luxuriating in all the glories of gorgeous vegetation, amongst which banana-leaves could be plainly distinguished, waving their great green heads!" Glaser considered that the best coffee of al-Ḥayma came from the region of al-ʿUrr. Rathjens and von Wissmann mention fig trees, peaches, and large sycamores to provide shade. These two authors and Deflers give other details on the flora.

The district of al-Ḥayma is believed to be Hamdānī's land of the Akhrūdj, an offshoot of Hamdān. Today the district is regarded as a stronghold of Zaydism, even though the Ismāʿīlīs of the tribe of Yām in Nadjrān [*q.v.*] penetrated there during their advance on Ḥarāz in the 19th century. In the last years of the Mutawakkilite Kingdom of the Yaman and the first years of the Yaman Arab Republic, the People's Republic of China built a paved highway from al-Ḥudayda through al-Ḥayma to Ṣanʿāʾ.

ḤAYR [see ḤĀʾIR].

ḤAYS [see Supplement].

ḤAYṢA BAYṢA, nickname of the Arab poet Shihāb al-Dīn Abu 'l-Fawāris Saʿd b. Muḥammad b. Saʿd al-Ṣayfī al-Tamīmī. He was born c. 492/1098-9 and died at Baghdād on 6 Shaʿban 574/11 January 1179. He studied *fiḳh* under al-Wazzān al-Shāfiʿī at Rayy and *ḥadīth* under Abū Ṭālib Ḥusayn b. Muḥammad al-Zaynabī and others, but turned to poetry and belles-lettres and gained fame by the elegance of his style. At Ḥilla he eulogized the Banū Mazyad. Then he went to Baghdād. In his odes he praised the caliphs, *e.g.*, al-Mustarshid, al-Muḳtafī, and al-Mustaḍīʾ, but also the Saldjūḳ sultans, *e.g.*, Maḥmūd b. Muḥammad and his brother Masʿūd b. Muḥammad, after whose death he was imprisoned for a while by order of al-Muḳtafī. He enjoyed the patronage of the vizier Anūshirwān b. Khālid and especially of the latter's rival ʿAlī b. Ṭarrād al-Zaynabī. He also eulogized other grandees of his time, *e.g.*, al-Djawād Muḥammad b. ʿAlī, the Atābeg Ghāzī b. Zangī, and the Begteginid ʿAlī Küčük.

As a writer Ḥayṣa Bayṣa is a representative of the florid style in vogue in Arabic poetry and ornate prose from the 5th/11th century. His *Dīwān* and his *Rasāʾil*, now lost, were studied by al-Samʿānī—probably in the thirties of the 6th/12th century—under the author's guidance. Ibn al-Athīr, *al-Mathal al-sāʾir* (Būlāḳ 1282 A.H.), 251, 14 greatly admires the opening of one of Ḥayṣa Bayṣa's poems in honour of Ghāzī b. Zangī.

Ḥayṣa Bayṣa was very proud of his Arab lineage, claiming descent from Aktham b. Ṣayfī [*q.v.*]. He dressed himself like a Bedouin chief, riding on horseback through the streets of Baghdād fully armed. He also affected Bedouin speech, pronouncing the *ḳāf* like *g*; he was fond of obsolete words—he got his nickname from the expression *fī ḥayṣa bayṣa* "in straits and distress"—and addressed everyone in the classical language with all its grammatical niceties. The biographers give instances of the affected style of his private letters which made them nearly unintelligible to the addressee. These weaknesses made him an easy target for the satire of his enemies, *e.g.*, the physician Ibn al-Ḳaṭṭān (d. 558/1163).

Bibliography: Ibn Ḥadjar, *Lisān al-Mīzān*, iii, 19 ff.; Ibn al-Athīr, xi, 300; Ibn Abī Uṣaybiʿa, i, 233 (in the article on Hibat Allāh b. al-Faḍl); Ibn Khallikān, no. 254; Subkī, *Ṭabaḳāt al-Shāfiʿiyya*, iv, 221; Damīrī s.v. *baʿūḍ*; Brockelmann S I 441;

ʿA. Dj. Āl Ṭāhir, *al-Shiʿr al-ʿarabī fi 'l-ʿIrāḳ wa-bilād al-ʿAdjam fi 'l-ʿaṣr al-saldjūḳī*, Baghdād 1961, i, 207-20 and index. A large selection from Ḥayṣa Bayṣa's poems and letters is to be found in ʿImād al-Dīn al-Iṣbahānī's *Kharīdat al-ḳaṣr*, section on ʿIrāḳ, i, ed. Muḥ. Bahdjat al-Atharī, Baghdād 1355/1955, 202-366, and extracts from his *Dīwān* appear in MS 4314 of the Rampur library (= 3046 of the Institute of Arabic manuscripts).

(J. W. Fück)

HAYṬAL [see HAYĀṬILA].

AL-**HAYTHAM** B. **ʿADĪ** AL-ṬĀʾĪ, Abū ʿAbd al-Raḥmān, author of historical works (*akhbārī*) born at Kūfa ca. 120/738 in a family originally from Manbidj, died at Fam al-Ṣilḥ in 206, 207 or 209/821, 822, or 824. Of his life it is known only that he attended the ʿAbbāsid court more or less regularly from the reign of al-Manṣūr to that of al-Rashīd, that he was imprisoned by the latter after a criticism of al-ʿAbbās b. ʿAbd al-Muṭṭalib that his wife's family had slanderously attributed to him, and that al-Amīn freed him on his accession. It is known also that he had disputes with poets, notably Abū Nuwās, who is said to have addressed satirical verses to him in which he accused him of having forged a false genealogy for himself. On the whole, he is blamed for an improper curiosity, and students of Tradition have no confidence in him, because he is thought to have fabricated *ḥadīth*s; al-Djāḥiẓ himself, who, however, quotes him quite often in his works (see *Ḥayawān* and *Bayān*, index), seems to consider him as proverbial for the lack of authenticity of his stories (*K. al-Bukhalāʾ*, ed. Ḥādjirī, 203); but of course he numbers him amongst the Khāridjīs. Nevertheless, al-Haytham is a source for al-Yaʿḳūbī, al-Ṭabarī, al-Masʿūdī and other historians. The author of the *Murūdj al-dhahab* considers him well-informed on the history of the Arabs and quotes him frequently, along with Ibn al-Kalbī, Abū Mikhnaf and other authors of the 2nd/8th century, most of whose works have been lost. The *Fihrist* (Cairo ed., 145-6) and Yāḳūt (*Irshād*, vii, 261 ff. = *Udabāʾ*, xix, 304 ff.) credit al-Haytham with some fifty works, which can be divided into several groups but which all relate to one branch of history:

Ancient history (*K. Buyūtāt al-ʿArab*; *K. Ḥilf Kalb wa-Tamīm*, etc.); general and Islamic history (*al-Taʾrīkh murattab ala 'l-sinīn*; *Taʾrīkh al-Furs wa-Banī Umayya*; *K. al-Dawla*, etc.); genealogy (*Nasab Ṭayyiʾ*, etc.); biographies (*K. al-Muʿammarīn*; *K. Wulāt al-Kūfa*; *K. ʿUmmāl al-shuraṭ li-umarāʾ al-ʿIrāḳ*; *Ṭabaḳāt al-fuḳahāʾ wa 'l-muḥaddithīn*, etc.); monographs (*Akhbār Ziyād b. Abīh*; *Akhbār al-Ḥasan al-Baṣrī*; *K. Khawātim al-khulafāʾ* etc.); polemic between cities (*K. Fakhr ahl al-Kūfa ʿalā ahl al-Baṣra*); *mathālib* (*K. al-Mathālib al-ṣaghīr*; *K. al-Mathālib al-kabīr*; *K. Mathālib Rabīʿa*; *Asmāʾ baghāyā Ḳuraysh fi'l djāhiliyya*, etc.). Not one of his works has survived.

Bibliography: besides the sources quoted in the article: *Aghānī*, index; Ibn Ḳutayba, *Maʿārif*, ed. ʿUkāsha, 384 (p. 533, he deals with another Haytham); ʿAskalānī, *Lisān al-mīzān*, vi, 209-11; Wüstenfeld, *Geschichtsschreiber*, no. 44; Brockelmann, S I, 77, 213.

(Ch. Pellat)

HAYŪLĀ, a technical term taken from the Greek ὕλη, "matter" as opposed to "form", *ṣūra* (εἶδος), or more precisely "primary matter" in the philosophical sense. The corresponding Arabic word is *mādda*; the sense that is sometimes very close to that of *ʿunṣur*, "element", should also be noted. In the 3rd/9th and 4th/10th centuries, the term *hayūlā* is current in translations from the Greek, and in the researches and systems that draw their inspiration from these. According to the taste of the various schools and authors, *hayūlā* is sometimes substituted for *mādda*, and sometimes distinguished from it, as "primary matter" is distinguished from "secondary matter"; frequently, however, the two terms are considered as being virtually synonymous. In its slightly differing connotations, *hayūlā* belongs to the vocabulary (1) of the Shīʿī (particularly Ismāʿīlī) thinkers, and (2) of the "Hellenistic Philosophers" (*falāsifa*). We find it again in the treatises of *ʿilm al-kalām* which discuss the arguments of both of these groups.

A complete survey would be very extensive. The following constitute some points of reference:

1. In Abū Bakr al-Rāzī, *al-hayūlā* is the third of the "Five Eternals (*i.e.*, Principles)", in its strict sense of "primary matter" (*Rasāʾil falsafiyya*, ed. P. Kraus, Cairo 1939, i, 195 ff.).—A recension and summary of al-Tāzī's arguments was made in Persian by Nāṣir-i Khusraw, and in Arabic by Fakhr al-Dīn al-Rāzī. The "Second Eternal", the Universal Soul (*al-nafs al-kulliyya*), shook and agitated Matter in order to produce the world—without success; it needed the help of the "First Eternal", *al-Bāriʾ*, the Creator (*op. cit.*, 308). Matter is then subjected to Form.

2. Emanatist world-views, particularly in Shīʿism, take up the theme of Primary Matter, emanating or radiating from the Supreme Principle, and eternal. In Ḳarmaṭī cosmology, as well as, for example, in the *Kitāb al-Yanābīʿ* of the Ismāʿīlī Abū Yaḳʿūb al-Sidjistānī (4th/10th century), *al-hayūlā* is the third emanating Principle. According to al-Sidjistānī, it is when the First Intelligence imagines its "Follower", the Universal Soul, that Matter comes into being. The last "is powerless to manifest itself by itself; it needs the help of Form, that is Nature, since Matter is by definition that which can manifest itself only with the help of something else" (text and trans. *apud* H. Corbin, *Trilogie ismaélienne*, Tehran-Paris 1961, 62/85). We find an analogous cosmogonical process in Ibn Sīnā, but here *al-hayūlā* is replaced by the Celestial Body.

Three characteristics seem to be inherent in this Ismāʿīlī Matter: (a) it is pure virtuality vis-à-vis Form (cf. also Mullā Ṣadrā Shīrāzī, 4th/10th century); it can "manifest itself" only by means of Form; (b) it has, as it were, a positive desire for Form; (c) it nevertheless keeps its autonomous position as the third emanating Principle. Nāṣir-i Khusraw says that when all the souls of the sublunary world have found their true Homeland again, not only the Universal Soul, as Abū Bakr al-Rāzī would have it, but Matter also "will be liberated, released from its subjection to Form, just as it was in pre-eternity" (H. Corbin, introduction to the *Kitāb Djāmiʿ al-ḥikmatayn* of Nāṣir-i-Khusraw, Tehran-Paris 1953, 133). The "desire for Form", constitutive of Matter, therefore remains, as it were, ambivalent: it is a positive desire to be manifested in Being, but a desire that is also a subjection.

A tradition attributed to Empedocles had a great effect on the elaboration of Ismāʿīlī systems (cf. Asín Palacios, *Abenmasarra y su Escuela*, Madrid 1914, chap. V, 54 ff.). In the extracts of pseudo-Empedocles reproduced by the *Kitāb al-Milal wa 'l-niḥal* of al-Shahrastānī (ed. Cairo 1320, ii, 168), the first, and thus the most noble "Thing Caused" is called *al-ʿunṣur*, "(primordial) Element", simpler than Intelligence, Soul, Nature and the Mixtures

(*murakkabāt*) that are "beneath it", but not completely simple (the Creator alone, *al-mubdiʿ*, is absolutely simple), since it is compounded of love and discord. It may, however, be called "The First Simple Intelligible", *awwal al-basīṭ al-maʿḳūl*.

This *ʿunṣur*, the First of the Five Emanations (the same theory is found in the summary of Thales given by al-Shahrastānī, *op. cit.*, 158), seems to have done much to foster the idea of a primordial spiritual or intelligible Matter (*al-hayūlā al-rūḥāniyya*). We find the influence of this again in Mullā Ṣadrā Shīrāzī in Iran, in Ibn ʿArabī, and in Ibn Masarra in Andalus. In this sense, too, ʿAbd al-Karīm al-Djīlī calls God the *hayūlā* of the Universe.

3. The *Rasāʾil Ikhwān al-Ṣafāʾ* give us, as it were, an abridged (and sometimes rather clumsy) version of the Ismāʿīlī views on Primordial Matter. The *risāla* on "matter, form, time and place" (ed. Cairo 1347/1928, ii, 4 ff.) reaffirms clearly that the principle of individuation (contrary to the Aristotelian tradition) comes not from matter but from form. "All bodies are of one single genus—which is of one single substance and one single matter. Their differences come from form; this is why some are purer and nobler than others" (*op. cit.*, 6). It is *ṣūra*, not *hayūlā*, that is changeable and volatile (cf. *risāla* on "Intellect and the Intelligible", iii, 230-2).

The *risāla* on "Matter and Form" (ii, 4-5) explicitly states that *hayūlā* can be understood in four ways: (a) "the Matter of art", *hayūlā al-ṣanāʿa*, every substance that serves as material for the craftsman; (b) "Physical Matter" or "the Matter of nature", *hayulā al-ṭabīʿa*, that is the "four elements" of which all sublunary bodies are composed, and to which they return when they decay; (c) "the Matter of the Whole", *hayūlā al-kull*, "the absolute (*muṭlaḳ*) body from which the Cosmos emanates"; (d) "primary Matter" (or, here, rather "primordial Matter"), *al-hayūlā al-ūlā*, defined as simple, intelligible "substance" (*djawhar*), not perceptible to the senses, and as the "form" (*ṣūra*) of all Selfhood (*huwiyya*). The term *hayūlā*, then, is used for "secondary matter" (already formed), as well as for "primary matter"—or rather the Ikhwān al-Ṣafāʾ do not refer to this classical distinction; their idea of *hayūlā ūlā* is not that of "pure potentiality". In fact, the hierarchy of four "Matters" that they evoke causes them to say that every existing thing is, in different respects, both "form" and "matter"; each one of the four classes of *hayūlā* is "form" with respect to the class above it. "... The Absolute Body is form in Primordial Matter ... The latter is a spiritual form emanating from the Universal Soul, which is itself a spiritual form emanating from the Universal Intellect, which emanates from the Creator" (*Rasāʾil*, iii, 230). According to the Ismāʿīlī idea of "form" (see above), all form, even spiritual form, can disappear, since it is limitation. The Creator (*al-mubdiʿ*) alone remains (*op. cit.*, 231), and every existing thing returns to Him (*op. cit.*, 232).

This hierarchy of the four connotations of *hayūlā*, as synthesized by the Ikhwān al-Ṣafāʾ, accords closely with the hierarchy subsequently adopted by Ibn ʿArabī. It is, in fact, probably its source, or one of its sources. In the *Futūḥāt*, a descending, no longer ascending, enumeration reproduces the essentials of this hierarchy, with one notable addition. A fifth connotation appears, mentioned first because it refers to the highest reality: *hayūlā* as intelligible matter, whether it be created or uncreated, coexistent with Being itself, and "The Reality of Realities", *ḥaḳīḳat al-ḥaḳāʾiḳ* (see analyses and ref. *apud* Asín Palacios, *op. cit.*, 112-3).

4. Although it is Emanatist, the system of the *falāsifa* does not, in its turn, follow the Ismāʿīlī cosmogonies. Primary Matter loses its position, both as Primordial Element and First Emanation (lines of thought influenced by pseudo-Empedocles), and as Third Emanation (cf. al-Sidjistānī), in favour of an idea that is properly philosophical; primary matter is a pure potentiality (*ḳuwwa*), actuated only by form.

The words *mādda* and *hayūlā* both belong to the vocabulary of *falsafa*. The expression *al-mādda al-ūlā* for "primary matter" is frequent in al-Fārābī; it is found also in Ibn Sīnā (*e.g.*, *Shifāʾ*, *al-Ilāhiyyāt*, Cairo 1390/1960, 279). In his *Risāla fi 'l-ḥudūd* (*apud Tisʿ rasāʾil*, Cairo 1326, 84, French trans. A.-M. Goichon, *Introduction à Avicenne*, Paris 1933, 81) Ibn Sīnā gives *mādda* and *hayūlā* as exactly synonymous, while at the same time appearing to reserve for *mādda* the connotation of "secondary matter" (he does, however, use *hayūlā*, too, in this latter sense). Immediately after this he defines *ʿunṣur* (primordial element) as "the first principle of [those things which are] subjects of inhesion: that which, taken absolutely, denotes primary matter, *al-hayūlā al-ūlā*" (*op. cit.*, 84-5/82). *Al-ʿilla al-ʿunṣuriyya* in the sense of "material cause" should also be noted (*Shifāʾ*, *loc. cit.*, 278; *Nadjāt*, Cairo 1357/1928, 211). We are a long way here from the *ʿunṣur* of pseudo-Empedocles and "spiritual matter". What is more, in the *falāsifa*, it is no longer form that is the principle of limitation, and thus of individuation, but matter as being quantified: determinate in Ibn Sīnā (*Ishārāt*, ed. Forget, Leyden 1890, 46), indeterminate in Ibn Rushd.

Thus, in contrast to Ismāʿīlī cosmogonies, we find in the *falāsifa* (in a very Platonic and Neoplatonic manner) a kind of depreciation of *hayūlā* (or *mādda*). Al-Fārābī, in his *Maḳāla fī maʿānī al-ʿaḳl*, calls primary matter (here *al-mādda al-ūlā*) "the basest of objects" (ed. Dieterici, *Philos. Abhand.*, Leyden 1890, 46). In his sketch of an ontologically ascending hierarchy (*ibid.*), he proceeds from the lowest degree, which is primary matter, to the second, which is Nature (*ṭabīʿa*). This "is corporeal form residing in primary matters"; the text has *mawādd hayūlāniyya*, thus uniting in one single expression the two roots, Arabic and Greek. The superior degrees of being rise towards separate existences (*i.e.*, separate from all matter).

Matter is the place or receptacle (*maḥall*) of form. Ibn Sīnā says: "If it is by itself a receptacle, with no composition, it is called absolute primary matter, *al-hayūlā al-muṭlaḳa*" (*Nadjāt*, 300). *Hayūlā* (or *mādda*) and its correlative/opposite *ṣūra* are the terms used to express Aristotelian Hylemorphism, or rather a Hylemorphism remodelled on Neoplatonic lines. Matter exists for form, and, in sublunary beings, form for matter (*e.g.*, al-Fārābī, *al-Madīna al-fāḍila*, ed. Dieterici, Leyden 1895, 20-1; the term used is *mādda*, but in one example, *mādda wa hayūlā*: similarly in *Maʿānī al-ʿaḳl*, 46). Ibn Sīnā, in another connexion, stresses the interaction of matter and form, giving priority to form: "It is untrue that matter (*mādda*) is in some way the cause of form. Form alone is that by means of which matter necessarily exists" (*Shifāʾ*, *Ilāhiyyāt*, 85). It follows from this that "form is anterior to matter (*hayūlā*); not that it always exists potentially of itself; but (in composition) it is actuated only by means of matter (*mādda*)" (*ibid.*, 88). On the following page (89): "Form exists only in matter (*hayūlā*)". It should be

noted here that the world of "material forms" (*ṣuwar māddiyya*, a common expression) is not confined to the corporeal world. Primary matter, *hayūlā*, can receive forms other than corporeal (*Is͟hārāt*, 98). Ibn Sīnā appears here to allude to the world of Celestial Souls, showing also, perhaps, some influence of the S͟hīʿī "spiritual matter". The world of Separate Intellects, however, is usually represented as free from all matter.

In the famous *Risāla fi 'l-ʿis͟hḳ* (ed. Mehren, Leyden 1894, 5-7), it is the term *hayūlā* that denotes the first of the three simple Selfhoods that have no existence of themselves: matter, form, accident. They too are pervaded by the impulse of *ʿis͟hḳ*, of "desire"; it is with an "innate" (*g͟harīzī*) desire, we might say "an ontological desire", that matter desires form, without which it does not exist, and form desires matter, as its substratum. We find here again the positive desire for form that we have already found in Ismāʿīlī systems.

Many other references to the *falāsifa* could be given. We should note in Ibn Sīnā (an Aristotelian line of thought, influenced by Alexander of Aphrodisias?) the idea of a "material intellect", *al-ʿaḳl al-hayūlānī*, conceived of as pure potentiality vis-à-vis all knowledge, and so called because "of its resemblance to primary matter, which by itself possesses no form, while being the subject for all existing forms" (*Nad̲j̲āt*, 165). The expression is not found in al-Kindī, or in the *Maʿānī al-ʿaḳl* of al-Fārābī. We find it again in Ibn Rus͟hd.

5. To represent the idea of "matter", *ʿilm al-kalām* normally uses *mādda*. *Hayūlā*, however, occurs many times in the As͟hʿarīs and the later Māturīdīs, who summarize and refute *falsafa*. From them the term passes into the normal philosophical vocabulary. Of very many examples which could be given, here are three. Al-D̲j̲uwaynī (*Irs͟hād*, ed. and trans. Luciani, Paris 1938, 13/32) introduces *hayūlā* in connexion with the (refuted) thesis of the *mulḥida* ("heterodox"). He says that they call substances (*d̲j̲awāhir*) "*hayūlā*" or "*mādda*", and accidents "form" (*ṣūra*). The ideas in questions are represented better by the "modern" As͟hʿarīs. In his *Muḥaṣṣal* (Cairo n.d., 83), Fak͟hr al-Dīn al-Rāzī gives a clear summary of the thought of Ibn Sīnā; bodies are composed of matter and form (*hayūlā* and *ṣūra*); *hayūlā* is the receptacle of form. Finally, in his *Taʿrīfāt* (ed. Flügel, Leipzig 1845, 279), al-D̲j̲urd̲j̲ānī defines *hayūlā* as "a Greek word" denoting "foundation" (*aṣl*) and "matter" (*mādda*). He says that the "technical sense" is "substance" (*d̲j̲awhar*) which, in a body, is in a state of receptivity to everything that happens to the body; *hayūlā* is the "receptacle of corporeal and specific forms". (The notion of *d̲j̲awhar* is itself open to discussion at this point.)

(L. Gardet)

ḤAYY, Arabic name for the "clan", that is to say of the primary grouping in nomadic life, excellently described by Nöldeke as one of warriors who bivouac at the same encampment and move about together. The bond between its members is regarded as a blood relationship, and entails their collective responsibility for any murder committed by a fellow-tribesman, as well as the imperative obligation to avenge bloodshed. An alliance between two clans is cemented by magico-religious rites involving the mingling of blood, and the swearing of an oath while dipping the right hand into a vessel originally filled with blood is taken from this ceremonial. These facts, brought to notice by Robertson Smith in 1885 in his famous work on kinship and marriage in ancient Arabia, still entirely retain their validity, but his interpretation of the Semitic social institutions as being totemism was challenged as early as 1886 by Nöldeke in his critical study of the work. Although this theory of totemism today appears to have lost some of its attraction, the hypothesis of a matriarchal period preceding the patriarchal one is supported by numerous arguments. The terminology for the sections of tribes includes several names of parts of the body, such as *baṭn* "stomach", *fak͟hid͟h* "thigh", etc., which are explained by Robertson Smith, not without probability, as metaphors originally signifying the uterine parent, and then, after the change to the patriarchal system, the male organs symbolized by the knees, kidneys or thighs. Comparable features will be found in Germanic and Indo-European vocabularies. Even the term which designates kinship in the clan indicates clearly enough that this must previously have been one of maternal filiation, for *raḥim* is nothing but the name of the uterus. As for the word *ḥayy*, it seems natural to include it in the same series, noting that the root *ḥyw*, clearly apparent in *ḥayawān* "animal" and in the Ḳur'ānic spelling of *ḥay[w]āt* "life", certainly attained this abstract sense only after having previously borne a concrete meaning that is revealed by the substantive *ḥayā'* "vulva", from which the secondary abstract meaning of "modesty, shame" also derives. This symbol of fecundity must have been common Semitic. However, in Hebrew the corresponding root *ḥayāh* has only the meaning "to live", but the name of Eve, the mother of the human race, Ḥawwāh, which is explained in Genesis (III, 20) by a Piel form "who gives life", could well represent the concrete starting point of the same semantic derivation.

In certain modern dialects the word *ḥayy* denotes a quarter in a town or settlement, more precisely a quarter inhabited by the same ethnic or tribal element [see MADĪNA, MAḤALLA].

(J. Lecerf)

ḤAYY B. YAḲẒĀN, the name of the principal character of two philosophical allegories, one by Ibn Sīnā, *Ḳiṣṣat Ḥayy b. Yaḳẓān*, and the other by Ibn Ṭufayl, *Risālat Ḥayy b. Yaḳẓān fī asrār al-ḥikma al-mus͟hriḳiyya* (L. Gauthier's vocalization; Hourani gives it as *mas͟hriḳiyya*). Until the end of the 19th century the *Risāla* of Ibn Ṭufayl was much better known than Ibn Sīnā's short work, the contents of which if not the title were unknown. The similarity in titles led to the belief that there was a

close kinship of thought, and at times that the one was a translation of the other. Mehren, *Traités mystiques*, i, 7-8, translates the title given in 1299/1882 to the *Risāla* published in Istanbul: "*Traité Ḥayy ben Yaqẓān sur la philosophie orientale, que l'Imam Abou Djafar ben Thofeil a tiré des ouvrages précieux du grand maître Abou Ali ben Sînâ*", the last page containing a note: Ibn Khallikān attributes this treatise to Ibn Sīnā; "perhaps he wrote it in Persian, and so we may have an Arabic translation of it, made by Ibn Thofeil". De Goeje, in Leiden, was the first to notice, on examining a manuscript, that Ibn Sīnā's work was in fact written in Arabic and that the title was all it had in common with the other. Its authenticity is now indisputable and it figures in all the bibliographies, but the text was only established and published two centuries after that of Ibn Ṭufayl.

I. — *Ḳiṣṣat Ḥayy b. Yaḳẓān*, by Ibn Sīnā, who wrote it while imprisoned in the fortress of Ferdadjān, probably in 414/1023, as it seems likely that his captivity took place between 412/1021-2 (when the Būyid prince Samāʾ al-Dawla succeeded his father Shams al-Dawla, who, at the time of his death, still had Ibn Sīnā as his doctor) and 414/1023-4 (when the town of Hamadān was captured by ʿAlāʾ al-Dawla, whose minister he was). The *Account of Ḥayy b. Yaḳẓān* is mentioned by Djuzdjānī in his bio-bibliography of Ibn Sīnā, which is repeated by all the Arabic notices. Ibn Sīnā's work inspired the poetic allegory *Ḥayy ben Meḳīṣ*, by the Spanish Hebrew author Abraham ibn ʿEzra (1092-1167).—Critical editions: 1) Mehren, *Traités mystiques*, i, 1889, the text preceded by a kind of paraphrased résumé which is not a translation, and accompanied by extracts from the commentary written in Arabic by Ibn Zayla, a disciple of Ibn Sīnā. 2) Corbin, 1952, with a translation which does not follow the Arabic text exclusively, but takes into account the Persian translation and even the Persian commentary. These accompany the text and are also printed *in extenso*; both were written at the request of prince ʿAlāʾ al-Dawla in the five years following Ibn Sīnā's death, by an anonymous writer who may be Djuzdjānī (Corbin, *Avicenne et le récit visionnaire*, ii, 151). The division into paragraphs by the Persian commentator gives great clarity to a text which in itself is very difficult. The French translation does not attempt to render the text either integrally or exclusively; moreover, the copious notes which accompany it and the *Étude sur le cycle des Récits avicenniens* profess to elucidate it almost exclusively by means of Iranian and gnostic traditions, often of much later date than Ibn Sīnā. However, Suhrawardī wrote that he saw no allusions to these in the *Account of Ḥayy b. Yaḳẓān* and that Ibn Sīnā had no knowledge of ancient Persian sources (Corbin, *Le Récit d'initiation et l'hermétisme en Iran*, in *Eranos Jahrbuch*, xvii, 124 and 135, and *Cycle des Récits avicenniens*, 48-9).

Mehren manifestly did not understand the *Account*, which he judged to be written in "an obscure and involved rhetorical style", with "a terminology so mystical" that the meaning is lost. Indeed, the paraphrase conveys almost no meaning and does not give any hint of any of the sources which reveal themselves to the attentive reader. His lack of knowledge of the doctrine expounded in Ibn Sīnā's main works was for him an insurmountable obstacle.

To the reader familiar with Ibn Sīnā, however, the *Account* brings a wealth of echoes of themes already discussed, to such a point that the French translation published by A.-M. Goichon in 1959 is illustrated with a continuous commentary drawn from these very works of philosophy and medicine, thereby following the Persian commentator's advice. Indeed, the latter concluded his work with these words: "It must be realised that a simple statement has been given here of each of the questions discussed in this epistle. A complete exposé of them can be found in the major works. The Master Avicenna has himself discussed them ..." (following Corbin's translation).

Adhering as closely as possible to the Arabic text, this new translation was checked by comparing all the ideas expressed, phrase for phrase and often word for word, with the passages in the great works that they called to mind. This method allows the meaning of the *Account of Ḥayy b. Yaḳẓān* to be fully appreciated, both in the general sense and in detail. It is then seen to be a poetic narrative, related in form to the celebrated *Poem of the Soul* and similarly based on a philosophic doctrine which, beneath the decorative imagery, remains very precise.

This philosophical meaning was confirmed by research into the sources. These were discovered in Aristotle, Plato, Porphyry, Galen, Ptolemy, Fārābī, in the Ḳurʾān, in popular Semitic and Iranian legends and the Arab geographers. But certain chapters are specifically Avicennist, in particular the three most beautiful ones which conclude the *Account*.

The unity of the work can then be grasped: it is that of the theory of forms taught by Ibn Sīnā. Alike given by the active Intellect which is the last of the pure Intelligences, the material forms constitute the terrestrial world, whilst on the other hand the intelligible forms permit the knowledge of the universe peculiar to the human spirit which, with their help, can pass beyond the attainments of the senses. The material forms of the astral bodies and those of the pure Intelligences are above the active Intellect and the sublunar world, but can also be known. The *Account of Ḥayy b. Yaḳẓān* is thus found to include the Avicennist theory of knowledge even as far as its loftiest reaches, the Prime and Necessary Being.

The name given to the work is then easily explained. *Ḥayy b. Yaḳẓān* is the proper name of the active Intellect; "Living", since Ibn Sīnā places perfection in life in intelligence and action, "son of the Wakeful One", because he emanates from the penultimate pure Intelligence which knows neither sleep nor inattention. This name is closely connected with the theory of creative emanation professed by Fārābī and Ibn Sīnā. The active Intellect is also, through knowledge surpassing the perceptible world, the soul's guide towards its prime Principle, the Being that shines forth over all others.

We now give an outline of the *Account*:

The human soul, mastering its sensual faculties, comes with these, as it were while walking, to the edge of intellectual knowledge. A splendid Sage, whose beauty is unassailable by time, appears before it, and the soul desires his acquaintance. He is the first to speak (it is he who gives the intelligibles), a conversation develops; the Sage gives his name—Living, son of Wakeful. "My profession", he said, "is to travel through all the countries of the world, to be able to embrace them all in an exhaustive knowledge (it is he who possesses all the intelligibles). My face is always turned towards my Father (the Wakeful), and I have received from him the keys to all knowledge". Looking at his interlocutor, the soul

with its human nature, he tells it that its features reveal it to be the possessor of the best of the natures in the terrestrial world; but it must beware of its evil companions. These are the taste for carnal pleasures, violence and giddy imagination, that retails both true and false. It is, however, impossible to remain aloof from these on earth; it is necessary at least to compel them to obey, to preserve a balance, and not to let them take control.

With this warning, the soul reflects and is then quite ready to learn how to keep these difficult companions under restraint. It would be very happy to travel like the Sage. He replies that, in its present condition, it can only make a journey punctuated with halts. And the soul replies by questioning him about the regions that he knows and about which he has undertaken to acquire complete information.

He then sketches out for the soul a metaphysical geography of the world. One of the regions, bounded by the East and the West, is well known and a subject of study; it is there that forms are to be seen in matter, it is the world as ordinarily presented to man. The latter can only penetrate into the other two regions by means of a strength not entirely natural to him, since it must have the help of the active Intellect. Ibn Sīnā here makes use of popular geographical data about the terrible Ocean which none can cross, and describes it as the home of matter, the region in the West where the material forms come for refuge, to lose themselves, just as the sun disappears over the horizon. Symmetrically, the East is the place of origin of the light which the forms, whether material or intelligible, carry with them. A description which takes its features from the mountain of Ḳāf reveals the land of the intelligibles, reached by the human spirit after a dreadful ascent. To walk above the abyss, to climb ever higher towards more perfect forms, is possible only by means of a vigour renewed by fresh, ever-flowing water from a spring near the motionless source of the living Being. The two commentators have seen logic in this ever-moving water with which the human intelligence was to revivify itself; as for the source of the living Being, it is motionless because the intelligible form, which is in the active Intellect at the origin of the material form, is quite certainly removed from all mobility. With the help of logic, the reasoning soul can traverse the deserts and darkness of the unknown, the sea of matter, and scale the mountains of the intelligibles. After the darkness of the unknown the soul, still fortified by logic, reaches a great light. It is the light arising from the explanations given by Ḥayy b. Yaḳẓān.

Under the symbolical form of a band of émigrés fighting against the inhabitants, the Sage explains to the soul the incessant changing of forms in matter. Many of the terms recur in the *Epistle on Love*, the *Poem of the Soul*, the soul which little by little becomes accustomed to being in contact with "the ruin deserted" by previous forms, which has become its body.

The forms are the light which creeps into the obscurity of matter, given, according to the latter's requirements in its dark preparation, by the luminous active Intellect. It is for this purpose that Ḥayy b. Yaḳẓān must know all beings and all circumstances perfectly. But the corruptible world can only be a ruin temporarily decked out. "Every animal and every plant has come by night into this country", for every form comes invisibly. "Joy and beauty are taken from a distant place", the place whence come the forms which are the light, whether material in beings, or intelligible in the spirit.

Between this living, immaterial Orient and the world of corruptible matter is located the world of incorruptible matter, that of the astral bodies, nearer than our own to the "window of light". It is the Region of stability and peace, for there the forms are not driven away from matter. The heavens are described as spaces populated with inhabitants whose features express the physical characters of the astral bodies according to Ptolemy. The Empyrean, the ninth sphere, is described as the dwelling of the pure Intelligences. "Beyond there is no more inhabited land". The elements are outstripped, the vast earth, the mass of water, winds imprisoned, flaming fire . . .

How can these forms, which have just been shown us under their aspect of substantial forms, be possessed by intelligence as intelligible forms? They are first captured by the five senses, then handed over to the general or common sense which is as it were a guardian responsible for the five paths taken by the watchers for news. It hands over all its prizes to the memory; this places them at the disposal of the intelligence, which gives fecundity to the intelligible forms (that is to say universality), if imagination has not previously spoilt them. Like a sun, intelligence rises between the senses and the imagination, despite the satanic rule that they enact upon it, insinuating themselves through the breath into man's inmost parts. If it succeeds in holding them in a harmonious, submissive state, intelligence lives in a sense in the realm of the angels. It mounts upwards to regard the pure Intelligences themselves, the primordial creation through the medium of which being descends from the prime necessary Being, down to the very lowest creatures. The soul contemplates the Intelligences, each in its own immutable place, grouped round the supreme King like children around their father, in a region without matter.

Above all these, and above all expression, is the King, the prime and necessary Being, in an absolute unity, with none of the divisions that our language attributes to him, "all countenance through his beauty, all hand through his generosity", so dazzling that he is veiled by his own radiance. Some men, those the best, leave the baseness of this world to make their way in solitude towards him.

Here the Sage, the active Intellect, directlyi ntervenes; he reveals that to awaken a human soul to these lofty realities is his own way of serving the King, and adds: "If you wish, follow me towards Him". This invitation is the last episode in the *Account*.

The links between this work and Ibn Sīnā's other writings appear to be extraordinarily numerous, close and precise. If certain translations have failed to grasp them, it is because they have minimised or paraphrased the unexpected terms, while they are in fact the key to the passage in which they occur. On consideration, it is impossible to see a dream, a fancy or theosophy, in these pages; one can only admit that they present the philosopher's thought in a new and poetic, but faithful and coherent, form. A philosopher is not forbidden to be a poet. On several occasions Ibn Sīnā showed that he had the ability to be one, and he did not remain dryly didactic, but enriched by his own sensibility the discoveries of his intelligence. The highest knowledge open to the human soul, that of the pure Intelligence which is the King creator, is expressed with a tone of undeniably personal emotion, which is repeated

when the other works speak of knowledge through the depth of the heart, the *sirr*. This is the point that is the most profound, the closest to mysticism in the true sense, in Avicennan literature. It is to be noted that, in the *Account of Ḥayy b. Yaḳẓān*, the poem of the intelligibles concludes before the union with God, which in fact surpasses them.

At the beginning of the minor work *Fi 'l-ḳaḍā' wa 'l-ḳadar*, Ibn Sīnā refers to a s̲h̲ayk̲h̲ who resembles Ḥayy b. Yaḳẓān and who may not be far removed from being this character himself.

II. — *Risālat Ḥayy b. Yaḳẓān fī asrār al-ḥikma al-mus̲h̲riḳiyya*, written by the Andalusian philosopher and doctor Ibn Ṭufayl, the protector of Ibn Rus̲h̲d, very probably between 565/1169 and some years before 581/1185, the date of the author's death. The *Risāla* is his best known work and the only one to survive intact today. List of the manuscripts and editions: 1) Gauthier, *Ibn Thofaïl*, 43-51; 2) Gauthier, *Ḥayy ben Yaqdhân*, 2nd ed., XXII-XXXIII, completing the brief list included in the ed. of 1900. The *Risāla* was published for the first time in 1671, with a Latin translation, by Edward Pocock at Oxford (reprinted 1700), followed immediately by two English translations and one Dutch made from the Latin, and also a German one in 1726. Translations from the Arabic text: Hebrew, by an unknown author, with Hebrew commentary by Moses of Narbonne in 1349; then from the text established by Pocock: English, Ockley, London 1708 and 1731; German, Eichhorn, Berlin 1783; Castilian, Pons Boigues, Saragossa 1900 (repr. Cairo 1905). It is possible that Defoe's *Robinson Crusoe*, the first part of which appeared is 1719, owed something to Ockley's translation of Ibn Ṭufayl. Another English translation by P. Brönnle appeared in London in 1904 (revised A. S. Fulton 1929). Three editions of the text alone in Cairo 1882, 1921; two in Constantinople, one in Beirut (1936). Critical edition of the text with French translation: Gauthier, Algiers 1900, followed by a new edition of the text, improved by the use of new manuscripts and accompanied by a new translation, Algiers 1936. Russian translation, Kuzmin, St. Petersburg 1920; Spanish, González Palencia, Madrid 1934, from the text established by Gauthier.

Without any doubt, Ibn Ṭufayl borrowed the title from Ibn Sīnā; but curiously enough, it was to introduce a philosophical thesis entirely contrary to that writer's. We have just seen that the very name of Ḥayy b. Yaḳẓān and his rôle were inspired by the theory of emanation, which makes the active Intellect the last of the separate Intelligences. By attributing to it the gift of the intelligibles to the human soul, Ibn Sīnā deprived the latter of its highest intellectual function, namely the abstraction of the intelligibles. Ibn Ṭufayl, says González Palencia in his introduction (22-3), teaches that one cannot apply to separate essences either our categories of thought or our ways of reasoning, and he raised the question of the unity of human intellect. In our opinion, Ibn Ṭufayl went further; for he returns to the name which denotes the active Intellect to attribute it to a man. This man, the *Philosophus autodidactus* as Pocock called him in the title of his translation, succeeds precisely in discovering, quite alone, the sciences and philosophy, and clearly by means of abstraction. That is to say, he appears as "the incarnation in man of the active Intellect", as Gauthier puts it (*Ibn Thofaïl*, 89), or better still as the personification of the specifically human active Intellect. Its true function is thus restored to man's intelligence. This is a fundamental change in the doctrine described above, presented in the form of imaginative writing. This work sums up the controversies which continued for two centuries in the West; for it implies the theory that St. Thomas Aquinas put forward nearly a hundred years later, that the perfection of human nature requires that the active intellect should not be external to man (*In Aristotelis librum de Anima commentarium*, §§ 730 and 734).

The prologue to the *Risāla* refers expressly to Ibn Sīnā in regard to the choice of this name and those of Asāl and Salamān which occur in the narrative. On some particular points it refers to his doctrine and to that of al-G̲h̲azālī, which are studied and compared with "opinions expressed in our own time", as words which have made it possible to isolate the truth (1936 ed., 6-7). Four long textual quotations from the *Is̲h̲ārāt* (ed. Forget, 202-4, French trans. 493-7) leave no doubt that Ibn Ṭufayl approved of Ibn Sīnā's exposé of the Ṣūfīs' states, their asceticism and the beginnings of ecstasy, and probably also the ending of his *Account of Ḥayy b. Yaḳẓān* which, however, is not quoted verbatim. This harmony of views is all the more evident in that the freedom with which he handles his source is also more marked, as well as the dissatisfaction which Fārābī and the *S̲h̲ifā'* inspire in him, no less than the Andalusian scholars (trans. 10-11 f.). No kind of allusion to any esoterism in Ibn Sīnā is made.

Ibn Ṭufayl's story has often been summarized, among others by Carra de Vaux, *EI*[1], art. IBN ṬUFAIL, and more briefly by Gauthier himself (*Ibn Thofaïl*, 62-3) as follows:

"On a deserted Indian island situated on the equator, and thus under particularly favourable conditions, from amidst the ferment of the surrounding clay a child was born, with neither father nor mother. According to another version, the author tells us, he was brought to the island by a current, in a chest which the mother, a persecuted princess dwelling on a neighbouring island, had been compelled to entrust to the waves to save her child's life. This child was Ḥayy b. Yaḳẓān. He was adopted by a gazelle which suckled him and acted as his mother. He grew up, observed and reflected. Possessing a superior intelligence, he was not only able to supply all his needs with ingenuity but, through a combination of observation and reasoning, he soon discovered by himself the highest physical and metaphysical realities. The philosophical system which he finally evolved, which was naturally that of the *falāsifa*, led him to try to find in mystical ecstasy the intimate union with God which constitutes at once the plenitude of knowledge and sovereign, continual, eternal felicity. Withdrawing to a cave where he succeeded in fasting for forty days on end, he trained himself to separate his intellect from the external world and from his own body by exclusive contemplation of God, to unite himself with his Lord; in this he finally succeeded. At that moment, he met Asāl, a devout man who had come from the neighbouring island to devote himself in peace to the ascetic life on this little island which he believed uninhabited. Asāl teaches language to this companion as singular as unexpected, and he is astonished to find in the philosophic system discovered by Ḥayy b. Yaḳẓān a transcendent interpretation of the religion that he himself professes, as well as of all the revealed religions. He takes him to the neighbouring island which is ruled by the devout king Salamān, and commissions him to disseminate the

sublime verities that he has discovered. But the project fails. Our two philosophers finally have to recognise that pure truth does not at all suit the vulgar, enslaved by the senses; to penetrate those materialistic intelligences, to act upon those rebellious wills, it is obliged to clothe itself with the symbols that constitute the revealed religions. They therefore left these poor people for ever, recommending them faithfully to observe the religion of their fathers; and they returned to their desert island, to live the superior and truly divine life which very few are privileged to achieve" (*Ibn Thofaïl*, 62-3; another more detailed resumé, 101-13). Ḥayy, Asāl and good king Salamān represent respectively Philosophy, Theology and simple Faith (*Ibn Rochd*, 20).

The book can also be divided, under a more schematic form traced out by G. F. Hourani (*The principal subject* ..., 40), as follows: 1. The author's introduction, sources of knowledge on mystical philosophy. — 2. Unassisted, Ḥayy progresses from the most elementary knowledge to the loftiest mystical state. — 3. Harmony of Ḥayy's philosophy with the religion which Asāl claims to be revealed. — 4. Attractions of the external aspects of religion for the majority of men. — 5. The author's conclusion.

According to Gauthier, the book's essential purpose is to show "the harmony between religion, principally the Muslim religion, and the philosophy of the *falāsifa*" (*Ibn Thofaïl*, 89, repeated in *Ibn Rochd*, 20). Every reader seems to have interpreted the work in his own way. Munk: a simple treatise of natural philosophy; Pocock: the history of an autodidactic philosopher, whose life traverses the whole ascent possible for human reason; Renan: Ṣūfī mysticism (cf. *Ibn Thofaïl*, 64-6); Mehren: intuition can lead man to the same development as civilization, etc.

Gauthier's interpretation was rejected by E. García Gómez, who discovered a popular story bearing some analogies with Ibn Ṭufayl's work; he claimed to find in it a proof of a source common to both Ibn Ṭufayl and B. Garcian who, in the 17th century, wrote an allegorical novel in which Gauthier sees an imitation of Ibn Ṭufayl. The opinion expressed by García Gómez would change the whole perspective of the novel; but this hypothesis does not explain the references to the philosophers clearly indicated by Ibn Ṭufayl, still less the numerous passages inspired by their works and those of the physicians, without any indication of source but still very recognizable.

Gauthier's thesis is challenged on grounds more in keeping with the subject by G. F. Hourani, who points out (*The principal subject*, 42) that the prologue, following Ibn Sīnā, announces the description of a mystical state, which in fact is dealt with in the second part, that of Ḥayy's progress, and presented at the end of the book as the object of all his desires, since he abandons men in order to come back to it.

To the reader, it certainly seems that the book's purpose is to show the capacity of the human intelligence. It is capable not only of discovering the sciences and the existence of the soul, but also of sensing God, beyond the corruptible world, and of attaching itself uniquely to Him when He has been found. The journey made by Ḥayy is necessarily described in terms of the scientific knowledge and philosophy then understood, and at the same time an answer is given to the great preoccupation of the *falāsifa*, by confirming the harmony between philosophy and religion. It is a kind of consummation of the experience of Ḥayy b. Yaḳẓān, but it is very difficult to believe that the latter had been imagined in order to provide proof of it. The result however, when acquired, was to be compared by Gauthier and Hourani with the more exclusively philosophical theory of this harmony as expounded by Ibn Rushd, particularly in the *Faṣl al-Maḳāl*.

Bibliography: I. — Ibn Sīnā. Manuscripts noted particularly by Anawati, *Essai de bibliographie avicennienne*, 1950, no. 219, and Mahdavi, *Bibliographie d'Ibn Sina*, 1954, no. 65. — A. F. Mehren, *Traités mystiques*, fasc. I, Leiden 1889, *L'allégorie mystique Hayy ben Yaqzân*, preceded by an article with the same title in *Muséon*, 1886. — *Risālat Ḥayy b. Yaḳẓān*, 91-113 in the collection *Djamiʿ al-badāʾiʿ*, Cairo 1917, Istanbul 1937, 41-53 in that of Aḥmad Amīn, *Ḥayy ibn Yaḳẓān li-'bn Sīnā wa-'bn Ṭufayl wa 'l-Suhrawardī*, Cairo 1952; but the very short work published under this name and attributed to Suhrawardī is in reality the 'Story of the exile from the West', *Ḳiṣṣat al-gharība al-gharbiyya*, written to supplement what he considered to be a lacuna in the *Ḥayy b. Yaḳẓān* of Ibn Sīnā, which makes no mention of the great Mount Sinaï in the esoteric sense. — Critical text, Persian translation, Persian commentary, French translation by H. Corbin, *Le récit de Hayy ibn Yaqzan*, vol. i of *Avicenne et le récit visionnaire*, Tehran 1952, followed by vol. ii, *Étude sur le cycle des récits avicenniens*, 1954. — A.-M. (A.-M. Goichon)

ḤAYYA (A.) "snake", generic name of the ophidians, embracing all kinds of reptiles (*mā yansāḥ*) from the most poisonous to the most harmless, the viper (*afʿā*) appearing to be the most clearly distinguished species among them. Terms such as *ḥanash*, *aym*, *thuʿbān*, *aswad*, *raḳshāʾ*, *ṣill*, etc. are given in classical Arabic to species which are not always easily identifiable from the descriptions in the early zoological works, there being a certain amount of confusion in this field; and present-day terminology is still far from being precise even in dialects and for the species which actually live in the Arabic-speaking countries (see *e.g.*, V. Monteil, *Faune du Sahara*

occidental, Paris 1951, 81-8); it is desirable that some fresh researches should be made.

There are various ideas on the origin of the snake: some present it as a creature of Satan, others as the result of a metamorphosis, while others hold that it was created by God, Who, when He drove it from Paradise, made it fall at Iṣfahān or at Sid̲j̲istān (whence the great number of vipers in this region). The word *ḥayya* appears only once in the Ḳurʾān—in the description of Moses's staff being changed into a serpent (XX, 21/20).

There naturally exist in folklore monstrous or fabulous serpents, the most enormous of which is probably the *tinnīn* (see al-D̲j̲āḥiẓ, *Tarbīʿ*, s.v.); here it need be noted only that these animals have an important place in popular beliefs, for they are one of the forms in which *d̲j̲inn*s most often choose to appear.

The *ḥayya* enjoys an extraordinarily long life, never dying a natural death; twice a year, in spring and autumn, it casts its skin and gains fresh strength. When mating, snakes curl themselves one round the other; the female lays 30 eggs (the same as the number of her ribs and of the days of the month), but only a few are hatched because ants gather on the eggs and destroy most of them. The eggs are of elongated shape and of various colours. The female stays with the eggs until the young are hatched, while the male constantly crawls round about.

The tongue of the snake is so deeply split that some believe it to have two tongues. Snakes feed on birds, mice, frogs, young chickens and pigeons, eggs, meat, grass, etc., but never on dead animals, and if no food is available they can live on air. They swallow food without chewing and break down any bones in their stomachs by coiling themselves tightly round a tree. They need no drink, but once having started to drink they may absorb an excessive amount of liquid and die of it; they are particularly fond of milk.

They have eyes like nails, fixed and immobile in their heads, which grow again if torn out in the same way as their fangs, or their tails if cut off. A snake which has become blind or has come blinded from below ground regains its sight by rubbing its eyes against fennel. They are attracted by fire but flee from naked men. They possess extraordinarily strong backs and, although they have neither claws not limbs with which to cling, they are able to withstand a man's attempts to drag them from their holes unless he charms them. All snakes except the viper can swim, but they are unable to climb up walls.

The snake is friendly to the spider, the fox and some other animals, but is very hostile to man, pigs, and weasels. Cats, wolves, eagles, hedgehogs, pigs, etc. all eat snakes and sometimes die of it; in pre-Islamic times some tribes ate them, and this custom is a favourite theme of the satirical poets. In Islam it is as meritorious to kill a snake as to kill an infidel.

Snakes are widely used in medicine. Widely varying interpretations are put upon their appearance in a dream.

For protection against snakes and their poison [see SUMM], there exist various forms of incantation [see RUḲYA] used by the *rāḳī* or *raḳḳāʾ*, who may also be a snake-charmer (*ḥāwī* [*q.v.*] or *ḥawwāʾ*).

Bibliography: D̲j̲āḥiẓ, *Ḥawayān*, index; Damīrī, *Ḥayāt al-ḥayawān*, s.v.; Ḳazwīnī, *ʿAd̲j̲āʾib*, s.v.; these works contain material which might profitably be used as the basis for a monograph.

ḤAYYĀN B. **K̲H̲ALAF** [see IBN ḤAYYĀN].

HAZAD̲J̲ [see ʿARŪḌ].

HAZĀRA [see Supplement, and ĪRĀN-Languages].

HAZĀRA, name of a district in West Pakistan, lying between 33° 44′ and 35° 10′ N. and 72° 33′ and 74° 6′ E. at the base of the western Himalayas with an area of 6,292 sq. miles, and a population of 1,050,374 (1961), of whom the overwhelming majority, *i.e.*, 99.98%, are Sunnī Muslims, with many accretions and deviations from othodoxy as the entire population is under the influence of the local *mullās*. In shape the district is like a long tongue, 120 miles in length, extending from the south-west to the north-west, its tip, the Kāg̲h̲ān valley, running up between Kas̲h̲mīr and the mountainous regions that drain into the Upper Indus. This Kāg̲h̲ān valley with the hamlet of Balakote was the scene of a battle in 1831 between the forces (*mud̲j̲āhidīn*) of Aḥmad Barēlwī [*q.v.*] and the Sikhs, in which the former were routed and their leader killed.

The etymology of Hazāra is obscure; it is said to be the Persian version of the Mongol *ming* and refers to the 'thousands' in which the invading Mongol armies were divided (cf. Hazārad̲j̲āt). In 802/1399 Tīmūr [*q.v.*], on his way back from his invasion of India, settled a number of Ḳārlug̲h̲ Turks in this district (cf. Abu'l Faḍl, *Āʾīn-i Akbarī*, Engl. transl. by Blochmann, Calcutta 1870, 454; *Tūzuk-i D̲j̲ahāngīrī*, Engl. transl., Rogers and Beveridge, ii, 126). However, during the Mug̲h̲al times a large part of this country was known as the Pakhlī Sarkār, whose inhabitants were mostly Turks. Their descendants, although greatly diminished in number, still exist up to this day. In pre-Muslim times the country was a stronghold of Buddhism, with the ancient city of Taxila as one of the flourishing centres. Three rocks with Asoka's famous edicts inscribed on them can still be seen one mile from Mānsehra. From the 1st/7th to the 6th/12th century this country remained under Hindu domination. Ruins of ancient villages and settlements, forts, stupas and citadels are still found scattered all over the land. In the time of the Chinese traveller Hiuen Tsang it was known as Wu-lāshi, by which name it is frequently mentioned in *Rādjatranqinī*. It is inhabited by various tribes, some of them doubtless of exotic origin, like the Tarīns and Mas̲h̲wānīs. Finding their own country too small, the Afg̲h̲ān and Paṭhān tribes living beyond the Indus, especially the Swātīs, invaded and occupied the area sometime in the 11th/17th century. The Ḳārlug̲h̲ Turks were dispossessed and driven out. In this game of inter-tribal possession and dispossession, the Gūd̲j̲ars [*q.v.*], one of the ancient tribes living in the area, were great sufferers. They were dispossessed by the Pathan tribes of Tarīns and Utmānzais. There are no written records relating to this period when the law of the survival of the fittest was in full operation and a weaker tribe was harassed, attacked and consequently displaced by a stronger tribe. Unable to defend itself the weaker tribe called in its neighbours for help in return for land, consequently losing its possessions to the rescuers. Real history in this district, however, begins with the invasion of the Pand̲j̲āb by Aḥmad S̲h̲āh Durrānī in 1166/1752, when close attention was paid to a reorganization of the local administration. This was again tribal in character, the chiefs of the various tribes living in the area being made responsible for the collection of land revenue in return for allowances fixed by the Kābul government. With the enfeeblement of Durrānī rule, these chiefs became unruly and shook off Kābul suzerainty. Notable among them were Saʿādat K̲h̲ān, chief of the Swātīs, who founded Gaṛhī Saʿādat, later called Gaṛhī Ḥabībullāh, one of the scenes of battle between the *mud̲j̲āhidīn* of

Sayyid Aḥmad Barēlwī and the Sikhs; Dja'far Khān, chief of the Khānpur Gakkhaṙs [*q.v.*] from 1789-1801; Gulshīr Khān, head of the Tanawlīs, and Nadjīb Allāh Khān, chief of the Tarīns who held sway over a great part of the Hazāra plain up to 1799 and later his widow Bafī Bēgam till the beginning of the Sikh rule in 1818.

Taking advantage of internal dissensions, the Sikh governor of Rawalpindi, Makhkhan Singh, invaded Hazāra, occupied the country and built a fort at Sarāy Ṣāliḥ (Serai Saleh). Emboldened by the Sikh occupation of Kashmīr, Makhkhan Singh pressed the Tarīn chief, Muḥammad Khān, also for revenue. This was resented by the tribe, who attacked the Sikh force, overcame their resistance and murdered the governor. The defeated Sikhs vacated the fort of Sarāy Ṣāliḥ and retired to the stronghold of Attock built by the emperor Akbar. This reverse was followed by a number of skirmishes between the Hazāra tribes and the Sikhs, in which the Sikhs practically always lost. The repeated Sikh reverses brought prince Shēr Singh, eldest son of Randjīt Singh, the Sikh ruler of the Pandjāb, to the scene: he established himself in the Harīpur plain and built a fort at Tarbela. Not satisfied with the measures taken by Shēr Singh, Randjīt Singh deputed Harī Singh Nalwa, the governor of Kashmīr, to subdue the refractory tribes. Harī Singh, known for his ferocity, fell on the tribes and cut them down mercilessly. Nalwa celebrated his victory by building a fort at Nawāṅshahr and then marched on to lower Hazāra. As a reward for his exploits Randjīt Singh conferred on him the governorship of the country. His rule, which lasted from 1822 to 1837, was marked by unprecedented barbarity and is still remembered by the residents with horror. It was during the governorship of Harī Singh, founder of the town of Harīpur which now houses the biggest telephone equipment manufacturing factory in Pakistan, that the followers of Aḥmad Barēlwī infiltrated into the district and rose against the oppressive Sikh rule, but were defeated and crushed (1828) and finally routed in 1831 at the historic battle of Balakote. That very year Harī Singh brought the semi-independent tribes of the Gakkhaṙs, and the Ḍhunḍs under his control. Gradually Harī Singh succeeded in subjugating the entire country and bringing under his sway the various tribes who had refused to recognize his authority. His rule ended with his death at the battle of Djamrūd, at the mouth of the Khaybar pass, in 1837. The Sikhs, however, continued to hold Hazāra till 1847 when it was ceded to the British by Rādja Gulāb Singh, ruler of Kashmīr, in exchange for a part of Djammū district. In May 1847 a British officer, Maj. James Abbott, was deputed to administer and organize the country. For a number of years he remained in Hazāra, occupying positions of control and responsibility. He established a fine administration ushering in an era of peace and prosperity for the country. As a tribute to his services the flourishing hill-station of Abbottābād was founded in 1853 and named after him. "Among the people of Hazāra he left a name which will not die". The country-wide military revolt of 1857 also had its repercussions in this district but the disturbance was soon brought under control. Thereafter it remained practically peaceful except for the agrarian riots of 1868 and 1888 in the Agror valley. It suffered great scarcity in the widespread famine of 1783, and again in 1877-8, 1896-7 and 1899-1900, the last two being not so severe as the previous ones. Hazāra has made considerable progress during the post-Independence period and with the construction of new roads and marked improvement in the means of communications a new era of increased prosperity has been opened for the district. With the merger of the feudal states of Phūlṙa and Amb in 1950 with the district and the establishment of the new capital of Pakistan at Islāmābād in 1959, the district is likely to develop rapidly.

(only for the etymology of Hazāra); Ghulām Rasūl Mihr, *Sargudhasht-i Mudjāhidīn*, Lahore 1956, 463-84; Mahtāb Singh, *Tawārīkh-i Mulk-i Hazāra*, Ethé 506: Becher, *Mutiny report* (*Hazara*), MS. in the Central Record Office, Peshawar.

(A. S. Bazmee Ansari)

HAZĀRASP (Persian: "a thousand horses"), a town in Khwārizm, near the left bank of the Oxus [see ĀMŪ DARYĀ] at the outlet of a navigable canal, a day's journey from Khīwa and 10 *farsakh* from Gurgandj (Ḥamd Allāh Mustawfī, *Nuzha*, 179 ff.). The town had wooden gates and was surrounded by a moat (Muḳaddasī, 289), which almost entirely enclosed it, so that in 616/1219 there was only one entrance. Hazārasp was a strong fortress, and at the same time an important trading centre with large bazaars, lying on the trade route from Āmul on the Oxus to Khwārizm (Yāḳūt, iv, 471 = Beirut 1957, v, 404). As a result of its military importance, Hazārasp was fought over at various times in the Middle Ages: in Muḥarram 408/June 1017, Maḥmūd of Ghazna defeated the Khwārizmians here and occupied their country; in Djumādā I-II 542/October-November 1147 the town was besieged by Sandjar in his struggle with the Khwārizm-shāh Atsïz [*q.v.*] (Djuwaynī, ii, 8 f.). In 599/1203 the Khwārizm-shāh Muḥammad II defeated the Ghūrids [*q.v.*] who had advanced up to this point, and forced them to retreat (Ibn al-Athīr, xii, 122; Zak. Ḳazwīnī, ii, 55). After the Mongol invasion the town declined in importance. It continued to exist, however, and today is a *ḳïshlaḳ* and the centre of the Hazārasp area in the district of Khorezm/Özbegistān, on the road from Čārdjūī to Urgenč, with a railway station; cotton is produced, and vines, melons, vegetables and silkworms are cultivated in the district.

HAZĀRASPIDS, one of the local dynasties characteristic of Persian mediaeval times, which after the downfall of the Saldjūḳ empire succeeded in maintaining their position in the hot, humid and mountainous regions of Iran throughout the Mongol period and to some extent into Tīmūrid times, and

which thus contributed to the preservation of a native Persian individuality even under foreign dynasties.

From their capital Īdhadj [*q.v.*], the Hazāraspids ruled over eastern and southern Luristān [*q.v.*] from about 550/1155-6 to 827/1424, though the extent of their domains varied greatly. They were descended from a Kurdish chieftain, Faḍlōē, and were known also as the "Faḍlawī dynasty" after him. The tribes grouped around this chieftain had left Syria (when?) and after wandering through Ādharbāydjān had reached the district round Ushturān-Kūh in Luristān in the early 6th/12th century. Here in about 550/1155-6 Faḍlōē's descendant in the ninth generation Abū Ṭāhir (no. 1 below) gained independence from the Salghūrids [*q.v.*] in the area round Kūh-i Sīlūya, and assumed the title "Atabeg" [*q.v.*]. His son Malik Hazārasp, however (no. 2), after whom the dynasty is named, makes his appearance in history only at the beginning of the 7th/13th century. By driving out the Shul tribe [*q.v.*] and extending his domain to just west of Iṣfahān, he became the real founder of the small principality. He was clever enough to remain neutral between the ʿAbbāsid Caliph al-Nāṣir [*q.v.*] and the Khwārizm-Shāh Muḥammad II [*q.v.*]. In this he was helped by the not inconsiderable forces (infantry and cavalry) which he had been able to assemble round him from Iranian and Arab tribes also recently arrived in the area. On the other hand, his successor Takla (no. 5), having won many victories over the Salghūrids, finally quarrelled with the Mongols; Hülägü had him executed in Tabrīz in 655/1257. But in this case as in others the Īlkhāns [*q.v.*] left the local dynasty undisturbed. It was obliged from that time on to bow to their authority, contribute troops and from time to time render homage to successful Īlkhān rulers (such as Arghun in 1284 and Gaykhatu in 1291). In return the Hazāraspids were granted various territories, including Khūzistān. When Afrāsiyāb I (no. 8) tried to go even further and seize Iṣfahān, Hamadān and Fārs (690/1291), he finally paid for the attempt with his head in 1296. His successor (no. 9), who grew up at the Īlkhān court, adapted himself remarkably well to their wishes, paid an annual tribute of 91,000 *dīnārs* and even tried to introduce Mongol laws in his territory, without, however, falling out with the *ʿulamāʾ* and the dervishes, on whom he bestowed lavish presents. Nor did he discontinue local customs, according to the description given by Ibn Baṭṭūṭa (ii, 30 ff.; tr. Gibb, ii, 287 ff.) of his visit to the country.

After the disintegration of the Īlkhān empire (736/1335) Luristān was repeatedly subjected to attacks by the Muẓaffarids [*q.v.*]. They made many incursions, and also interfered in disputes between individual members of the family. More dangerous were the attacks of Tīmūr, who finally in 798/1395-6 carried off Pīr Aḥmad (no. 14) and two of his brothers to Samarḳand. But it was not until about 827/1424, after renewed troubles, that his grandson Ibrāhīm [*q.v.*] b. Shāhrukh ended the Hazāraspid dynasty.

Many details in the history of the Hazāraspids are uncertain, and there are many contradictions in the accounts passed down, so that all sorts of chronological problems arise. The following list of rulers can therefore be given only with reservations:

1) Abū Ṭāhir [Ibn ʿAlī] ibn Muḥammad, 543/1148-9 to 556/1161.

2) Malik Hazārasp, son of the above; the dynasty is named after him. Mentioned from about 600/1203-4. The date of his death is given as 626/1228-9 or 650/1252-3.

3) ʿImād al-Dīn, d. 646/1248-9, son of no. 2.
4) Nuṣrat al-Dīn Kalḥa, d. 649/1251-2, brother of no. 2.
Nos. 3 and 4 only appear in Ghaffārī (cf. below), fol. 137 f.; in other sources Malik Hazārasp's reign is reported as continuing until 650 (cf. above).

5) Tikla (Takla), son of Hazārasp, mentioned from 655/1257; executed probably in 657/1259.

6) Shams al-Dīn Alp Arghūn, brother of no. 5, 657/1259 to 673/1274-5.

7) Yūsufshāh I, son of no. 6, 673/1274-5 to about 687/1288.

8) Afrāsiyāb I, son of no. 7, about 687/1288 to 27 Dhu 'l-Ḥidjdja 695/26 October 1296.

9) Nuṣrat al-Dīn Aḥmad, brother of no. 8, beginning of 696/end of 1296 to 730 or 733/1329-30 or 1332-3.

10) Rukn al-Dīn Yūsufshāh II, son of no. 9, 733?/1332-3? to 740/1339-40.

11) Muẓaffar al-Dīn Afrāsiyāb II (Aḥmad), son (or brother, according to Ibn Baṭṭūṭa, ii, 30 f.) of no. 10, 740/1339-40 to 756/1355.

12) Nawr-i Ward, son of no. 11, ruled only briefly, 756/1355.

13) Shams al-Dīn Pashang, cousin (or nephew) of no. 12 (? presumably a descendant of Yūsufshāh II), 756/1355 to 780/1378-9.

14) } Civil war between his sons: Malik Pīr Aḥmad, 780/1378 to 811/1408-9 (with interruptions)
15) } Malik Hūshang, soon killed.

16) Abū Saʿīd, son of Pīr Aḥmad, 811/1408-9 to about 820/1417.

17) Shāh Ḥusayn, son of no. 16, about 820/1417 to 827/1424.

18) Ghiyāth al-Dīn, grandson of Hūshang, 827/1424; deposed by the Tīmūrids, who thus put an end to the dynasty.

HAZĀRFANN [see ḥusayn hezārfenn].

ḤĀZĪ [see kāhin].

ḤĀZIM b. Muḥammad b. (al-)Ḥasan b. Khalaf b. Ḥāzim al-Anṣārī al-Ḳarṭādjannī Abu 'l-Ḥasan, poet, grammarian and theorist of rhetoric, born in 608/1211 in Cartagena, in a family of Awsī ancestry. From his father, who was *ḳāḍī* of the town, he received an education oriented towards grammar, the Arabic language, tradition and Mālikī *fiḳh*; he continued his studies in Murcia,

and then in Seville and Granada and came under the influence of al-Shalawbīn [*q.v.*], who inspired him to study Greek philosophy through the medium of the works of the philosophers writing in Arabic, above all Ibn Sīnā. After his father's death (632/1234), he went to Marrākush where he shared in the literary activity in the entourage of the Almohad caliph al-Rashīd (630-40/1032-42); he then crossed the Maghrib to take up the position of secretary in the chancellery of the Ḥafṣid Abū Zakariyyāʾ I (625-47/1228-49). His immense learning in the fields of grammar and rhetoric, his "reasoned knowledge (*dirāya*), even more profound than his erudition (*riwāya*)" (Ibn Rushayd) won him great authority among his contemporaries and disciples, among whom were such figures as Abū Ḥayyān al-Andalusī, Ibn Saʿīd, Ibn Rushayd, al-Tidjānī and many others. He died in Tunis on 24 Ramaḍān 684/23 November 1285.

The work of Ḥāzim al-Ḳarṭādjannī is concerned with three main fields. His poetic writings, partly preserved in manuscript (especially Escorial, 382, 454) and in contemporary or later works (see *Bibl.*) deals with the customary subjects and reveals the influence of al-Mutanabbī, so evident in Muslim Spain; in particular, it includes panegyrics of the sovereigns of Marrākush and Tunis, the longest (1006 verses) and most remarkable of which is his *urdjūza* known under the name *al-Maḳṣūra* and dedicated to the Ḥafṣid al-Mustanṣir (647-75/1249-77); "among the conventional themes, which include abandoned encampments and the descriptions of storms and camels, amid this long "pastiche", the creative flame sometimes springs up, as [E. García Gómez] notes; the eulogy of the Ḥafṣid caliph, his victories, his palaces and his armies, is too imprecise, but it has strength and grandeur; youthful regrets about Spain are felicitously combined with the lament for captive Spain and the appeal to the caliph, who alone would be able once again to wrest it from the Christians" (cf. R. Brunschvig, *Ḥafṣides*, ii, 407); E. García Gómez, *Observaciones sobre la "Qaṣida Maqṣūra" de Abū l-Ḥasan Ḥāzim al-Qarṭājanni*, in *al-Andalus*, 1933, 81-103 has drawn attention to the documentary value of this poem, which contains interesting autobiographical facts and details of a historical and geographical nature; it has been the subject of several commentaries, the only one of which to have survived being that of al-Gharnāṭī (*Rafʿ al-ḥudjub al-mastūra ʿan maḥāsin al-Maḳṣūra*, Cairo 1344/1925, 2 vols.; the text of the *Maḳṣūra* is also contained in ms. Escorial 382).

In the field of grammar, Ḥāzim is the author of an unfinished didactic poem and of an attack on the *Muḳarrib* of Ibn ʿUṣfūr [*q.v.*] entitled *Shadd al-zunnār ʿalā djaḥfalat al-ḥimār*; this work is lost.

Lastly, it is as a theorist of rhetoric that Ḥāzim is particularly deserving of interest. He is the author of a *Kitāb al-Tadjnīs* and of a treatise on prosody, which have not survived, of a *Kitāb al-Ḳawāfī* and, above all, of the *Minhādj al-bulaghāʾ wa-sirādj al-udabāʾ* (= *al-Manāhidj al-adabiyya*), only the last three parts of which survive; these have recently formed the subject, on the basis of the unique manuscript of the Zaytūna (now in the Library of the Univ. of Tunis), of a critical edition by M. H. Belkodja (Tunis 1966); the third *manhadj* had already been published by ʿA. Badawī in *Mélanges Taha Husain*, Cairo 1962, 85-146. In this work, each part is curiously divided into *maʿlam*s and *maʿraf*s themselves sub-divided into paragraphs called alternately *iḍāʾa* and *tanwīr*; the use of this elaborate terminology is an indication of Ḥāzim's inclination towards a logical and subtly graded categorization, an extended analysis with a view to the elaboration of an original theory. Compared with similar treatises of Arab rhetoric, the *Minhādj al-bulaghāʾ* is notable for the place held in it by Aristotle, whom Ḥāzim knew mainly from the chapters on the art of oratory and poetry in the *Shifāʾ* of Avicenna, and for the efforts of the author to try to apply the theory of Greek philosophy to Arabic literature; in this respect, the *Minhādj* occupies a very special place in the history of literary criticism.

Bibliography: In addition to the references in the text: Ibn al-Abbār, *Takmila*, ii, 633, no. 1650; Ibn Saʿīd, *al-Ḳidḥ al-muʿallā*, Cairo 1959, 20-1, no. 3; ʿAbdarī, *Riḥla*, ms. Zaytūna (Tunis) 5093, 155b-157b; Ibn Rushayd, *Riḥla*, ms. Escorial 1735 etc., *passim*; Tidjānī, *Riḥla*, ed. ʿAbd al-Wahhāb, Tunis 1377/1958, 184; Ibn al-Khaṭīb, *Iḥāṭa*, ed. ʿInān, i, 208; Damāminī, *al-Ḥawāshī al-hindiyya*, i, 189-90; Suyūṭī, *Bughya*, 214; idem, *Itḳān*, Cairo 1278, ii, 119-20; idem, *Muzhir*, i, 188-9; idem, *Iḳtirāh*, Delhi 1313, 11; Zarkashī, *al-Burhān fī ʿulūm al-Ḳurʾān*, Cairo 1957-9, i, 59, 60, 311, 491, ii, 101, 408, iii, 71, 105, 288, 314, 407; Ibn al-Ḳāḍī, *Durrat al-ḥidjāl*, ed. Allouche, Rabat 1934-6, i, 137, no. 381; Maḳḳarī, *Azhār al-riyāḍ*, iii, 171-82; idem, *Analectes*, index; Ḥādjdjī Khalīfa, ii, 323, 352-3; ʿAyyāshī, *Riḥla*, ed. Fās, ii, 254; al-Wazīr al-Sarrādj, *al-Ḥulal al-sundusiyya*, Tunis 1287, 219, 303; Ibn Makhlūf, *Shadjarat al-nūr*, Cairo 1350, 197, no. 667; M. ʿAllām, *Abu'l-Ḥasan Ḥāzim al-Ḳarṭādjannī wa-fann al-Maḳṣūra fi'l-adab al-ʿarabī*, in *Ann. Fac. Lettres ʿAyn Shams*, 1951, 1-31; M. H. Belkhodja, ed. of the *Minhādj al-bulaghāʾ*, Tunis 1966, with an introduction from which the present notice has been taken. (ED.)

ḤAZĪN, MUḤAMMAD B. ABĪ ṬĀLIB, known by the name Shaykh ʿAlī Ḥazīn, claimed to be a descendant of the *shaykh* Zāhid-i Gīlānī who was spiritual director to the *shaykh* Ṣafī al-Dīn, ancestor of the Ṣafawids. His father had left Gīlān to settle in Iṣfahān, where Ḥazīn was born in 1103/1692. In 1722 the Afghān invasion condemned him to a wandering existence for some years: he travelled to Mecca, went to Baghdād, and thence to Persia; but political and military events made him decide to emigrate to India (1734) where he spent the rest of his life in spite of his distaste for that country, to which he devoted only two of the 48 chapters of his *Memoirs* (*Taʾrīkh-i aḥwāl*, ed. with English tr. by F. C. Belfour, London 1830). He died in Benares in 1180/1766, esteemed alike by the Muslims, the Hindus and the British. His *Memoirs* are notable for the ease and relative simplicity of the style and contain a profusion of significant material relating to the events and leading men of that troubled period. They are markedly superior to his other works: his *Dīwān*, consisting of a variety of poems, in style lies midway between the classical style and the so-called Indian style [see SABK-I HINDĪ]; besides the *Tadhkirat al-muʿāṣirīn* (on the contemporary Persian poets), he also wrote a treatise on farriery (*Faras-nāma*) and a treatise on zoology (*Khawāṣṣ al-ḥayawān* or *Tadhkira Ṣaydiyya*).

HAZĪRĀN [see TAʾRĪKH].

HAZMĪRIYYŪN, Moroccan religious bro-

therhood, founded by the two brothers Abū Zayd ʿAbd al-Raḥmān and Abū ʿAbd Allāh Muḥammad, sons of ʿAbd al-Karīm al-Hazmīrī. The Hazmīra to which they belonged formed part of the confederation of the six tribes of the Dukkāla.

The first of these brothers died, at a very great age, at Fez, in 706 or 707/1306-8 and the second, at Āghmāt, in 678/1280, at the age of 60. In view of these dates, the brotherhood can have been founded at the earliest only during the second quarter of the 7th/13th century.

Ibn Ḳunfudh al-Ḳusanṭīnī (740-810/1339-1407), in his *Uns al-faḳīr*, listed the principal brotherhoods which existed in Morocco during the period in which he was conducting there his researches on the saint Abū Madyan Shuʿayb and his disciples, *i.e.*, between 759/1358 and 777/1376. He counted six main ones: the *ṭāʾifa* of Abū Shuʿayb of Azemmour, the Shuʿaybiyyūn; the Ṣanhādjiyyūn which, in the *ribāṭ* of Tīṭ, situated about 12 km. south-west of Mazagan, comprised the Banū Āmghār; the Māgiriyyūn, the *ṭāʾifa* of Abū Muḥammad Ṣāliḥ, founder of the *ribāṭ* of Āsfī (Safi), who was himself one of the Banū Māgir; the Ḥudjdjādj, whose members had to have performed the Pilgrimage to the Holy Places; the Ḥāḥiyyūn, settled in the Atlas to the south of Marrākush. The last one mentioned, and the most recent, was that of Abū Zayd al-Hazmīrī. The author specifies that it was that of the Ghamātiyyūn (its centre was indeed at Āghmāt).

The first two of these brotherhoods grew out of the teaching of Abū Shuʿayb Ayyūb, who died at Azemmour in 561/1165, and his disciple Abū Yaʿzā who is said to have lived for some 130 years (438-572/1046-1176). In view of the fact that the Ḥāḥiyyūn and the Hazmīriyyūn were inspired by the teaching of Abū Muḥammad Ṣāliḥ, himself a direct disciple of Abū Madyan, and that the Ḥudjdjādj were created and organized to fulfil the precepts of the great saint of Āsfī, who considered that he must encourage his fellow Berbers to perform the Pilgrimage to Mecca, it may be concluded that of the six brotherhoods listed by Ibn Ḳunfudh, four are connected with the school of Abū Madyan.

In the actual case of the Hazmīriyyūn and of the other brotherhoods linked to Abū Muḥammad Ṣāliḥ, it is clear that the main object of these corporations was to Islamize the Berbers, who were too much inclined to form their own and even local brand of Islam, and to keep them in contact with the sources of orthodox Islam. It is worthy of note that the promoters of this missionary movement represented a generation of cultured Berbers who had a sound knowledge of Arabic and who were very different from Abū Yaʿzā, for example, who was an uncouth and completely illiterate Berber. Abū Muḥammad Ṣāliḥ had travelled in the East and spent twenty years at Alexandria. Abū Zayd and his brother Abū Muḥammad taught at Āghmāt and their *ḥalḳa* was very well attended. The famous Ibn al-Bannāʾ of Marrākush was one of the disciples of the first of these in Ṣūfī matters: mounted on his mule, he came most regularly to consult his master at Āghmāt whenever he needed explanations from him on geometry (*handasa*) or other subjects. Ibn Ḳunfudh relates that another such person who was interested in prosody (*ʿilm al-ʿarūḍ*) was able, much to his surprise, to obtain the information he needed from Abū Zayd.

Abū Zayd enjoyed as great a reputation for holiness as for scholarship. We hear of his travelling to Marrākush, secured to his mount as a precaution because of his great age, surrounded by his servants and by a crowd of devotees who thronged round him, each of them trying to rub his face with a piece of his clothing. His fame must have reached the sultan, since he ventured to go to the ruler, who at this time was the Marīnid Abū Yaʿḳūb Yūsuf, in order to induce him to raise the blockade of Tlemcen. His mission having been unsuccessful, he was making a retreat in the mosque of the Ṣābirīn at Fez when news reached him of the death of the sultan and the raising of the siege. But he did not have time to return to his native Āghmāt, as he died almost immediately after this.

His tomb is at Bāb al-Futūḥ, in the central section of the burial ground which is known as *rawḍat al-anwār* because of the large number of saints buried there.

Abū ʿAbd Allāh seems to have led a more secluded life than this brother, but its piety and the harsh mortifications which he inflicted on himself earned him a reputation which survived long after his death. Ibn Ḳunfudh visited his tomb, perhaps in about 769/1367-8, when he was *ḳāḍī* in the country of the Dukkāla. "Crowds flock to it" he says "to obtain the divine blessing". These pilgrimages, it seems, continued well after the 9th/15th century. Among the important pilgrims who were faithful to the memory of Abū ʿAbd Allāh al-Hazmīrī were the Saʿdī sultan Manṣūr al-Dhahabī (d. 1603), and the ʿAlawī sultan Sīdī Muḥammad b. ʿAbd Allāh (d. 1790).

The brotherhood of the Hazmīriyyūn probably continued to exist until the 9th/15th century, that is until the period when the teaching of al-Shādhilī, taken up by al-Djazūlī, was to grow into the Marabout movement and Sharīfism, resulting in the formation of new brotherhoods, based in various ways on Djazūlism. The earlier pre-Shādhilī brotherhoods, bereft of their missionary zeal and fearing the return of the heresies, which had in fact contributed widely to the Isalmization of the rural population, had fulfilled their rôle in history and prepared the way for the many popular religious movements which were to have a profound influence on Moroccan history during the following centuries.

Bibliography: On the biography of the two saints and their *manāḳib* there exists a manuscript work of one Ibn Tīdjlāt, of whom nothing is known apart from the fact that he was a *faḳīh* who was still living at Marrākush in 719 or 720/1320, and who may therefore have known the two men. It is entitled *Athmad al-ʿaynayn wa nuzhat al-nāẓirayn fī manāḳib al-akhawayn Abī Zayd wa Abī ʿAbd Allāh al-Hazmīriyyayn*, and ʿAbd al-Salām Ibn Sūda mentions that there is a copy in the library of the Fāsiyyīn (see *Dalīl muʾarrikh al-Maghrib al-aḳṣā*, Tetuan 1950, 209); on the documentary value of this manuscript and the bibliography of these two saints, see E. Lévi-Provençal, *Les historiens des Chorfa*, Paris 1922, 223-4. In addition see ʿAbbās b. Ibrāhīm *al-Iʿlām bi-man ḥall Marrākush wa Āghmāt min al-aʿlām*, Fez 1937, iii, 162-92; the text of Ibn Ḳunfudh, *Uns al-faḳīr wa ʿizz al-ḥaḳīr*, established by Muḥammad al-Fāsī and A. Faure has just been published (Rabat 1965); there are several manuscript copies of it in the Rabat Public Library and one in the Ḳarawiyyīn.

HEADGEAR [see LIBĀS].

HEBRON [see AL-KHALĪL].

HEGIRA [see HIDJRA].

ḤEKĪM-BASHI̊, (ḤAKĪM-BASHĪ), "Chief of the Physicians", in the Ottoman Empire the title of the chief Palace physician, who was at the same

time head of the health services of the state : besides being in charge of all the Palace physicians, surgeons, oculists, pharmacists, etc., he exercised supervision over all the physicians of the Empire, Muslim or non-Muslim; it was he who appointed and dismissed all physicians, surgeons and pharmacists, who kept a check on them, who examined aspirants to these professions, and who appointed and promoted worthy candidates.

Physicians were employed in the Palace, whether permanently or temporarily, probably from the earliest times. In the reign of Meḥemmed II the skill of Ḳuṭb al-Dīn Aḥmad, the former physician of Abū Saʿīd the Timurid, procured his appointment as head of all the physicians of the Ottoman court, who at that time included Shukr Allāh Shirwānī, Khʷādja ʿAṭāʾ Allāh ʿAdjamī, Lārī, and others. His daily stipend was 500 *aḳčes*, which remained in later years the usual salary of the Ḥekīm-bashī; there were also the perquisites of official gifts of summer and winter garments, and personal gifts as well.

The Ḥekīm-bashī counted as one of the officers of the Khāṣṣ-oda. He resided in the Bash Lala Ḳulesi, built under Meḥemmed II [see SARĀY]; he was to some extent subordinate to the Bash Lala (Chief Preceptor of the sultan, see LALA). When the sultan fell ill, his was a most important responsibility; if his patient died, he was usually dismissed. The medicines which he prescribed were made up under his supervision by the Palace pharmacists in the pharmacy situated in the Bash Lala Ḳulesi; they were placed in vessels sealed by the Ḥekīm-bashī and the Bash Lala and administered to the royal patients as required.

From the time of Meḥemmed II onwards, such famous and skilled holders of the post as Yaʿḳūb Pasha [*q.v.*], Lārī Čelebi, Akhī Čelebi and Ghars al-Dīn-zāde were also highly favoured intimates of the Sultan. In later years, on the eve of the (solar) New Year (21 March), the Ḥekīm-bashī made a special electuary called Newrūziyye, which he presented to the Sultan and to the high officers of the Palace and of the government. One indication of the high esteem which they enjoyed is that their status and comfort were increased by the grant of *arpaliḳs* [*q.v.*] in the form of fiefs usually situated near Edirne, Tekir-daghī and Gelibolu.

From the 10th/16th century onwards, the Ḥekīm-bashī was known also as Reʾīs al-aṭibbāʾ (for his *elḳāb*, see Ferīdūn, *Munshaʾāt al-salāṭīn*² i, 12). Archive documents of this period show that he controlled the appointments, transfers and promotions of the Chief of the Palace surgeons (Djerrāḥ-bashī) and the surgeons, physicians, herbalists (*ʿashshāb*) and compounders of beverages (*sherbetdji*), by submitting recommendations to the *Dīwān*; he also attended to the staffing of the hospitals of Bāyezīd I at Bursa and of Meḥemmed II at Istanbul, and to the appointment of physicians to such institutions as the Palace of Ibrāhīm Pasha and Ghalaṭa-sarāyī [*q.v.*], filling vacancies when necessary with *kul-oghullari* [*q.v.*] who had "practised the art of herbalism in Frengistān and the Arab lands" or "acquired the art of surgery in Frengistān". When he retired, he continued to receive his stipend.

The Ḥekīm-bashī belonged in principle to the *ʿilmiyye* career; he was sometimes promoted to the rank (*pāye*) of *defterdār* or vizier. In the 11th/17th century the post was still of importance : according to a *rūznāmče* register of 1013/1604 and the *risāle* of ʿAyn-i ʿAlī, the Ḥekīm-bashī then had under him over 20 Muslim and over 40 Jewish physicians; Ewliyā Čelebi records (i, 530) that in the middle of this century the Ḥekīm-bashī held a *mewlewiyyet* [*q.v.*] of 500 *aḳčes* and had a hundred servants.

Thereafter the post became less important; at the end of the 12th/18th century it began to be reckoned as one of those depending on the Aghas of the Dār al-Saʿādet and came completely under their influence, the holders of the post being frequently changed. From 1836 onwards appointments to the post were made from the *mülkiye* branch of the administration. The title was changed in 1844 to Ser-Ṭabīb-i Sheh-riyārī, and with the establishment of the Ministry of Medical Affairs (Ṭibbiyye) in 1850 the holder's duties were limited to those of private physician to the Palace.

HERSEK-ZĀDE, AḤMED PASHA, (b. 860/1456, d. 932/1517), whose Slavonic surname was HERCEGOVIĆ, Ottoman statesman, Grand Vizier of the sultans Bāyezīd II and Selīm I, was the youngest and favourite son of the duke Stjepan Vukčić-Kosača (1405-66), a great Bosnian vojvoda and lord of south-east Bosnia; from his title "*herceg* (duke) of St. Sava" his domains were named Hercegovina and his descendants Hercegović. Aḥmed Pasha's mother was named Barbara; she was the daughter of a certain "dux de Payro" (d. 1459). Aḥmed Pasha was born in Herceg-Novi (Castel Nuovo) in early May 1456 or mid-July 1459. He spent his childhood there and was for some time at school in Dubrovnik. In Christian countries he was known as Prince Stjepan. Under that name he is found in his native country until the end of 1472. After having quarrelled with his brother the *herceg* Vlatko

because the latter had seized his share of their father's estate, he went to Istanbul, embraced Islam and received the name of Aḥmed, under which name he is mentioned for the first time in 1474. As early as 882/1477 he is mentioned in a firman of Meḥemmed II as the "servant of my kingdom Aḥmed Beg". The reason for his going to Turkey and embracing Islam is shrouded in tales and legends which have been diligently recorded by Ewliyā Čelebī (*Seyāḥatnāme*, iii, 4, vi, 421, 423-4; see also J. Radonić in *Vatroslav Jagić-Festschrift*, Berlin 1918, 406-14). In the following year (883/1478) he is found in the retinue of Meḥemmed II in the Albanian campaign as the sultan's *mīr-i ʿalem*.

Before 14 December 1481 he was married to the princess Khündī Khātūn, daughter of Bāyezīd II, and became first *sandjaḳbegi* of Bursa and then *beglerbegi* of Anatolia. In this capacity he fought against Prince Djem (Djumādā I 887/July 1483) and helped his father-in-law to strengthen his position on the throne. As *beglerbegi* of Anatolia he was appointed, in the first ten days of Rabīʿ I 891/7-16 March 1486, as commander-in-chief of the expedition whose aim was to avenge the Turkish defeat in Syria (889/1484), in which the sultan's son-in-law, Ferhād Beg, had been killed, and to take from the Mamlūks of Egypt the towns of Adana and Tarsus; but he was defeated, wounded, captured (Ṣafar 891/6 February-6 March 1486) and taken to Cairo (Dhu 'l-Ḳaʿda 891/November 1486). In Muḥarram 892/January 1487 he was released from captivity and sent back to Turkey. Already at the end of the following month he is mentioned as vizier. Before 3 Rabīʿ II 893/17 March 1488 he had become *kapudān pasha*, for on that date he led the Ottoman fleet in an operation, carried out in co-operation with the land forces, against the Mamlūk army, but his fleet was all but destroyed in a storm, and also the Ottoman land forces were defeated at Agha Čayïrï (8 Ramaḍān 893/16 August 1488). After this unfortunate expedition, Aḥmed Pasha remained on his *tīmār* at Gallipoli until the autumn of 1489, when he was again appointed *beglerbegi* of Anatolia. When the Mamlūks besieged Ḳayṣari [*q.v.*], Aḥmed Pasha, in Rabīʿ II 895/February-March 1490, was sent against them for the third time as commander-in-chief. The outcome of this campaign is not absolutely clear, but it is certain that Aḥmed Pasha was not taken prisoner by the Mamlūks either then or at any time later, but only on the one occasion in 1486, and it is to his captivity at that period that the Arabic inscription in Cairo published by Van Berchem (see *Bibl.*) relates. In the spring of 1493 and in Djumādā II 901/February 1496 Aḥmed Pasha is referred to as *beglerbegi* of Anatolia. On 4 Radjab 902/8 March 1497, or some days later, he became for the first time Grand Vizier; but in the following year (after 19 August 1498) he was dismissed and appointed *kapudān pasha* and *sandjaḳbegi* of Gallipoli. In this capacity he took part in the following year in the attack on Aynabakhtī [*q.v.*], which was taken on 19 Muḥarram 905/26 August 1499. In the spring of 1500 he became vizier and in this capacity, in the autumn of 1501, commanded the Ottoman fleet in the fighting against France and the defence of Midilli [*q.v.*]. Shortly before December 1502 he again became Grand Vizier, concluded a treaty of peace with Venice (13 Djumādā II 908/14 December 1502) and a truce with Hungary (25 Ṣafar 909/20 August 1503). He remained in office until 18 Rabīʿ II 912/7 September 1506, in a period of great difficulty and unrest, when the country was afflicted by famine and plague, and also by general insecurity on sea and land. It is probable that he was subsequently again appointed *kapudān pasha* and *sandjaḳbegi* of Gallipoli, although he is mentioned in the sources in this office only in the spring of 1509, with the title of vizier. In September 1510 he became effectively vizier and in Rabīʿ II 917/July 1511 he became for the third time Grand Vizier (upon the death of Khādim ʿAlī Pasha), but at the end of Djumādā II 917/end of September 1511 he was dismissed at the insistence of the Janissaries, who had mutinied and who regarded him as the chief obstacle to the accession to the throne of prince Selīm. Before that, they had looted his residence and he only just escaped with his life. As the new Grand Vizier, Ḳodja Muṣṭafā Pasha, was very soon executed (918/1512), Aḥmed Pasha, who was then Second Vizier, was again appointed Grand Vizier and in that capacity took part in Selīm I's victorious campaign against Persia (battle of Čaldirān [*q.v.*]). He remained in office until 9 Ramaḍān 920/28 October 1514, when he was dismissed and sent into retirement. As his successors, Dukagīn-zāde Aḥmed Pasha and Khādim Sinān Pasha, very soon incurred the displeasure of the ruthless and hot-tempered Sultan Selīm, Aḥmed Pasha became Grand Vizier for the fifth and last time on 29 Radjab 921/8 September 1515. Seeing how easily the officers of Selīm I could lose their lives, he attempted to avoid the appointment, pleading old age, illness, and exhaustion, but consented at the insistence of the sultan and the other viziers. Suffering torments from rheumatism, he rarely attended the *dīwān* but dealt with affairs in his own house. The following incident demonstrates that it was by no means easy for him to serve Selīm. At the end of April 1516 the news was received at the Porte that the Ṣafawīs were besieging Diyārbakr. On learning this, the sultan became extremely angry and vented all his wrath on his viziers. Then Aḥmed Pasha suffered one of the worst days of his life: the sultan summoned him to the *dīwān* and in anger seized him by the throat and began to strike him about the head so that all his turban became unwound. He was immediately deprived of his office and his liberty, and, together with the vizier Pīrī Pasha, escorted to Yedi Ḳule (23 Rabīʿ I 922/26 April 1516), but, on the intervention of the new Grand Vizier, Khādim Sinān Pasha, both of them were pardoned and set free on the same day. At the time of Selīm's campaign against Egypt Aḥmed Pasha was *muḥāfiẓ* of Bursa, and after the victory went to Cairo to congratulate him. On 9 Djumādā II 923/23 June 1517 he was received in a last audience by the sultan and given a reward. He died on 2 Radjab 923/21 July 1517 while returning from Egypt in the Ḳïzïl Čol mountains on the borders of Dhu 'l-Ḳadr. He was buried beside the mosque which he had built in the village of Dil, near Yalova, which is called Hersek after him. Here he built also an *ʿimāret* and an aqueduct. His mosque in the village of Dil was a masterpiece of Ottoman architecture. He built another mosque in the village of Rūs near Keshan (in the *sandjaḳ* of Gallipoli); he made over a number of villages to his *waḳf*s.

Having spent forty years in the service of three important sultans, Aḥmed Pasha played a prominent role in the Ottoman empire. Even while he was the sultan's *mīr-i ʿalem* he had so much influence with Meḥemmed II that through his invervention Gedik Aḥmed Pasha was released from prison. He enjoyed still greater prestige with his father-in-law, Bāyezīd II. He was remarkable for his wise and independent

opinions in the *dīwān*, which he bravely maintained even before Selīm I. He was a friend and protector of the republic of Dubrovnik. His foreign contemporaries also thought highly of him. The Venetian ambassador, Andrea Gritti, describes Aḥmed Pas̲h̲a as "*valentissimo di buon animo e ingenuo*". He was a courageous, but not very successful, general. He excelled as a skilled diplomat and politician.

Aḥmed Pas̲h̲a had a daughter named Humā (who died after 1551) and two sons, Alī Beg and Muṣṭafā Beg, both of them born before 1509, in which year they were circumcised. ʿAlī Beg distinguished himself as a lyric poet and wrote under the *mak̲h̲laṣ* S̲h̲irī. He is mentioned until 1545, and Muṣṭafā Beg until 1582. With him the Muslim branch of the Hercegović family died out.

HEYBELI ADA [see MARMARA].

HEZĀRFENN [see ḤUSAYN HEZĀRFENN].

HEZĀRG̲H̲RAD, Ottoman name of Razgrad in north-east Bulgaria, on the Beli Lom. A prehistoric settlement, it is the site of the classical Abritus, in whose ruins a Slavo-Bulgar township grew up. No details are known of its fate during the Ottoman expansion; it was probably occupied in the course of Čandarlï ʿAlī Pas̲h̲a's campaign of 790/1388. It begins to be mentioned only towards the middle of the 10th/16th century as a village, variously named Yeñid̲j̲e, Hezārg̲h̲rad-i D̲j̲edīd and Kayad̲j̲ïk, belonging to the *ḳaḍāʾ* of Černovi (Červen). The Ottoman name Hezārg̲h̲rad is a deformation of a pre-Ottoman name Hrazgrad. With three other villages it was, in the 10th/16th century, incorporated in the *waḳfs* of the Grand Vizier Dāmād Ibrāhīm Pas̲h̲a.

In the second half of the 10th/16th century it is mentioned as a *ḳaṣaba* [*q.v.*], the administrative centre of a *ḳaḍāʾ* in the *sand̲j̲aḳ* of Nicopolis. The town and the district around contained a significant population of Turkish colonists, *yürüks* [*q.v.*] among them. In the middle years of the century there were over 400 Muslims in the town (Turks, and also many converted Bulgarians), and about 1300 Christian Bulgarians. In 1050/1640 there were in the town 800 Bulgars (and 10 Catholics, immigrants from Dubrovnik). In 1069/1659 there were no more than some 350 Bulgars, while the Muslim population had increased to 7000 (with 30 Catholics). Later there were also some Jewish and Armenian inhabitants.

Situated in a fertile district, Hezārg̲h̲rad rapidly became a vigorous commercial town, where numerous crafts flourished, one of the chief centres for the export of raw hides to Dubrovnik. There were over 300 shops in its commercial quarter. A code of regulations for its market was in existence in the 10th/16th century (Paris, Bibl. Nat., MS a.f.t. 85, fol. 118 v). In the 19th century there was in the town a Government saltpetre factory.

A pleasant town, it contained several mosques, the best known being those of Ibrāhīm Pas̲h̲a and Meḥmed Pas̲h̲a. There were 12 *k̲h̲āns*, some *medreses*, a clock-tower, baths, fountains, and a bridge over the river. The sources mention two churches in the 11th/17th and 19th centuries. The town suffered many disasters, attacks by brigands, and massive emigration between the 16th and 19th centuries. The Bulgarian inhabitants of the town played an active part in the political and religious struggles for independence in the 19th century.

(B. Cvetkova)

HIBA, one of many Arabic words used to express the concept of "gift", and the preferred legal term for it, see following article.

The giving of gifts, that is, the voluntary transfer of property, serves material and psychological purposes. In the pre-history of man, it probably antedates the contractual payment for goods and services. In Islam, it has retained its inherited functions as an important component of the social fabric and has exercised a considerable influence on political life. Literature (in the narrow sense of the term) tells us more about gifts than it does about commercial transactions.

A Muslim definition of "gift", attested for the 5th/11th century and reported by the Ottoman jurist Ibn Nudjaym, speaks of it as "something to which no condition is attached" (in contrast to bribes, cf. E. Tyan, *Histoire de l'organization judiciaire*, Leiden 1960, 289; F. Rosenthal, *op. cit.* (below), 136, n. 8). The latent or obvious purposiveness of all gifts was, however, fully realized. In one of the many attempts made to distinguish between the different Arabic words for "gift", which were arbitrary from the etymological point of view and rarely obtained the sanction of usage, *hiba* is considered the transfer of property from a more highly placed person to one on a lower level of society (and, therefore, also as applicable to God's gifts to man); *hadiyya*, on the other hand, implies an effort on the part of a person on a lower level of society to get into the good graces of a recipient of a higher social status (and the word, therefore, is not and cannot be used in connexion with God) (Abū Hilāl al-ʿAskarī, *al-Furūḳ al-lughawiyya*, Cairo 1353, 138, but contrast, for instance, Ibn Ḳutayba, *ʿUyūn al-akhbār*, Cairo [reprint] 1964, iii, 38, who finds no inherent distinction of social levels in *hadiyya*). The purposiveness of giving is above all indicated by special linguistic usage. Thus, the Arabic vocabulary knows a meaning of the root *m.n.n* (*minna*, *mannān*) which implies an objectionable insistence by the giver upon the obligations created for the recipient as a result of gifts received. The Ḳurʾān, LXXIV, 6, using the verb *istakthara*, warns against giving (*m.n.n*) in the expectation of receiving a larger gift in return, this being the widely, if not generally, accepted interpretation of the passage (cf. al-Ṭabarī, *Tafsīr*, Cairo 1321, xxix, 80 f.; *Wörterbuch der klassischen arab. Sprache*, 64b). The third and tenth conjugations of *gh.z.r* are noted as special terms for the procedure, which, in the minds of some lexicographers, is a custom preferably associated with strangers, in accordance with an alleged *ḥadīth* (cf., for instance, Ibn al-Athīr, *Nihāya*, Cairo 1322, iii, 181; *LA*, vi, 326, and the commentators on *sūra* LXXIV, 6).

Generosity was acknowledged to be one of the primary virtues of the pre-Islamic Arabs, among whom it naturally found its principal expression in hospitality, and the generosity shown in Islam to guests remained a custom much remarked upon. The ideal of a wasteful, spendthrift generosity as exemplified by Ḥātim al-Ṭāʾī [*q.v.*] was to some degree counteracted by the Aristotelian definition of generosity (*ḥurriyya*, *sakhāʾ*) as a subdivision of moderation (*sōphrosynē*, *ʿiffa*), involving the prudent balancing of income and spending; in this sense, the giving of gifts as an expression of generosity required taking into account the appropriate size of the gift and the deserving character of the recipient (cf., for instance, Abu 'l-Ḥasan [al-ʿĀmirī], *Saʿāda*, ed. M. Minovi, Wiesbaden 1957-8, 87 f.; Miskawayh, *Tahdhīb*, Cairo 1322, 8). However, the philosophical virtue blended well with the traditional appreciation of the liberal spender. The admiring reports in literature of anecdotes about outstanding generous men (*djawād*) and their acts of generosity (*djūd*) never ceased to interest Muslim readers. The lively discussion of the opposite vice, stinginess (*bukhl* [*q.v.*]), is merely another way of illustrating the Muslim esteem of generosity. To pre-Islamic and Classical tradition, Muslim religious tradition further added the concept of generosity shown to the needy, charity (*ṣadaḳa* [*q.v.*]), as a virtue of great merit.

The giving of gifts was viewed as an activity among equals and an expression of friendship. Characteristically, Ibn Ḳutayba discusses the subject of gifts within the larger context of friendship, and in the eyes of the religious authorities, the giving of gifts helps toward the establishment of better personal and communal relations. Gifts were exchanged on joyous personal occasions, such as weddings or circumcisions. Special occasions for the exchange of small gifts among relatives and friends were various holidays, among them the *ʿīd al-fiṭr* [*q.v.*] as well as the festivals of *nawrūz* and *mihrdjān* [*qq.v.*] (Mez, *Renaissance*, 400 ff.). The latter festivals were, however, also used at times as occasions on which the people had to present major "gifts" to their ruler. Gifts on festive occasions, as well as other gifts, were often accompanied by appropriate verses deemed worthy of preservation in literature, or by messages in artistic prose.

From the personal sphere of generosity and friendship, where the motivation was primarily psychological, there was a short step to the—broadly speaking—politically motivated giving of gifts by or to persons holding positions of authority in the community. The higher a person was placed within the power structure, the more he was expected to dignify his status and secure his position by frequent manifestations of largesse. The lavish gifts of caliphs and powerful *wazīrs* are often mentioned and commented upon. They were correctly interpreted as a sign of firmly established power and political success. Obviously, such "gifts" were as a rule expected forms of remuneration. The rich rewards bestowed upon poets and artists, and the unhappy occasions on which such rewards were not forthcoming, were the result of the sponsorship of the arts felt to be part of the duties of the government. Gifts by rulers were in a way the more spectacular extension of regular government spending, and they fascinated writers and readers more than the routine character of the latter.

Gifts to persons in positions of authority were usually proffered for the purpose of engaging or rewarding their services. At times, this came to be customary procedure, and officials (occasionally even those in the highest places) depended on it for their income. It was an obvious source of moral corruption and political decay, and was, in turn, nourished by them. It is difficult for us to judge how much harm was done in Muslim history by what in one setting was but a generally accepted and approved method of doing business, and, in another, a cancer corroding the very structure of society. However, the great dangers inherent in the acceptance of gifts by officials in the course of their official duties and, in particular, by officials of the judicial administration were often noticed and complained about. The borderline between gifts that, however undesirable, were legally permissible, and forbidden bribes (*rashwa* [*q.v.*]) was hard to define in theory and even more difficult to preserve in practice. The problem was realized and constantly investigated. The solutions suggested show awareness of its urgency, but, as is only natural, they were not really effective (cf. F. Rosenthal, *Gifts and bribes*, in *Proceedings of the American Philosophical Society*, cviii (1964), 135-44; al-Ghazālī, *Iḥyāʾ*, Cairo 1352/1933, ii, 136-8; Kātib Chelebi (Ḥādjdjī Khalīfa), *The balance of truth*, trans. G. L. Lewis, London 1957, 124-7).

Finally, the exchange of gifts occupied an important role in international relations as a custom regularly observed wherever diplomatic contact took place. Gifts were exchanged between Muslim rulers

and between Muslim and non-Muslim rulers through their ambassadors or through persons who functioned, or presumed to function, as such; usually, participants in the lower ranks were not left out. The value of the gifts was determined by considerations of the status and the prestige of both giver and recipient, as well as by political expediency and the purpose to be achieved. The descriptions of diplomatic gifts often mention unusual objects and permit us to gauge the value attached to rare luxury items and other possessions. More important, they throw some light upon economic conditions and regional products in the countries of giver and recipient and upon their relative standing as to wealth and industrial development.

As in the societies preceding Islam and contemporary with it, the personal giving of gifts came under the scrutiny of the law (see below). The propriety of diplomatic gifts and of gifts to officials was occasionally questioned by jurists. Rules were proposed to govern the tender and acceptance of such gifts. Presumably, they were disregarded most of the time (cf. Rosenthal, *op. cit.*, and, for an apparently complete copy of Taḳī 'l-Dīn al-Subkī, *Faṣl al-maḳāl fī hadāyā al-ʿummāl*, Ms. Chester Beatty 4870, fols. 1-5).

In addition to human giving, we find the concept of God as the giver of gifts, which concerned Muslim theology. All existence, including that of man himself, is a gift of God's kindness (*niʿma*), and so are all special benefits, talents, and achievements of man. Ṣūfism quite generally tends to describe every spiritual breakthrough by the mystic toward the achievement of his mystic striving as being given by God, and every material manifestation of saintliness in the form of miracles as possible only through some divine gift (*mawhiba*). While God's gifts are unselfishly given and cannot be matched or requited in any way, human beings are expected to show their gratefulness (*s̲h̲ukr* [*q.v.*]) by obeying the divine commands and doing what is right in the eyes of God; yet, their gratefulness can never exhaust the depth of their obligation to their Maker. The role of God as the unique Giver requires mention here, because it does have implications for the attitude toward human giving. It propounds an example that cannot be reached by man. He has the choice of either imitating it as the ideal of true, moral giving, or of using it in order to condone as human frailty the moral failures often accompanying human giving.

i.—THE CALIPHATE

The giving of presents was a practice which permeated all levels of mediaeval Islamic society, its aim being to cement the bonds of obligation and dependence which ran through the structure of that society. At the highest level, the exchange of presents was an integral part of diplomacy. In ch. xxi of the *Siyāsat-nāma*, Niẓām al-Mulk refers briefly to the diplomatic use of presents, and Fak̲h̲r-i Mudabbir Mubāraks̲h̲āh devotes a whole chapter of his treatise on war and statecraft to the despatching of ambassadors and the gifts which they should bear (*Ādāb al-mulūk*, India Office MS 647, *bāb* xii, fols. 46b-52a). Also, the general works on secretarial practice (*kitāba*) often refer to the letters which should accompany presents or which should be sent in thanks for them. Thus Hilāl b. al-Muḥassin al-Ṣābi''s *G̲h̲urar al-balāg̲h̲a* has a chapter on *hadāyā* (cf. W. Björkman, *Beiträge zur Geschichte der Staatskanzlei im islamischen Ägypten*, Hamburg 1928, 14-15). Ḳalḳas̲h̲andī gives several examples of the correspondence involved on the occasion of gifts of robes of honour, horses, hunting falcons, game, fruits, etc. (*mukātabāt al-tahādī wa 'l-mulāṭafa*) and when seeking gifts (*istihdā'*), in his *Ṣubḥ al-aʿs̲h̲ā*, viii, 339 ff., 351-6, ix, 100-24.

The most important non-Islamic power with which the Caliphs had to deal was, of course, Byzantium. The Emperors themselves had long appreciated the value of careful diplomacy, of impressing envoys by the splendour of their court and of using costly gifts to mollify opponents; and for the luxury textiles and mechanical contrivances which were the staple presents, the Emperors had the productions of the state workshops to call upon (cf. W. Ensslin in *Byzantium, an introduction to East Roman civilization*, ed. Baynes and Moss, Oxford 1948, 306-7). The Caliphs, for their part, exerted themselves equally to impress Christian ambassadors. The Frankish chronicler Einhard speaks of the rich gifts sent to Charlemagne by Hārūn al-Ras̲h̲īd in the course of their celebrated diplomatic exchanges, involving the textiles and aromatics of the Islamic world and such exotica as an elephant and a water clock (*Vita Karoli Magni*, ed. and tr. L. Halphen, Paris 1923, 47). In 305/917-18 al-Muḳtadir staged an especially lavish reception in his palace for the envoys of Constantine Porphyrogenitus, in the course of which rich gifts were exchanged (cf. Ḳāḍī Ibn al-Zubayr, *Kitāb al-d̲h̲ak̲h̲ā'ir wa 'l-tuḥaf*, 130 ff.). Many of the Bag̲h̲dād-Constantinople diplomatic exchanges revolved, as did this last mission, around the making of truces on the Anatolian frontiers and the ransoming of prisoners. Just over a century later, Constantine Monomachus in 441/1049-50 sent an embassy with presents to the Sald̲j̲ūḳ Sultan Ṭog̲h̲rïl seeking for peace and for the ransoming of the Georgian prince Liparit Orbeliani; when Ṭog̲h̲rïl, on the intercession of the Marwānid ruler Naṣr al-Dawla Ibn Marwān, released Liparit without a ransom, the Emperor sent further presents and allowed the construction of a mosque in Constantinople (Ibn al-At̲h̲īr, ix, 380).

When the Caliphs and other Islamic rulers delegated their military or civil authority to subordinate rulers or governors, presents were invariably bestowed on the recipient of the office, as a material sign of the grantor's favour. In an age when dress was so decisively an indication of official or social status, and when wealth was often stored in the form of textiles, it is not surprising that richly-embroidered or bejewelled robes of honour are the most constant element in these presents [see K̲H̲ILʿA]. Such centres of manufacture as Damascus, Bag̲h̲dād, Mawṣil, Iṣfahān, Rayy, Nīs̲h̲āpūr and Marw, all produced luxury textiles for these robes, and in some cases, rulers had special workshops producing luxury goods for court consumption or for bestowal as gifts; Nars̲h̲ak̲h̲ī mentions the *bayt al-ṭirāz* at Buk̲h̲ārā, whose products were taken each year to Bag̲h̲dād in lieu of taxation (*The history of Bukhara*, tr. Frye, 19-20; see also ḤARĪR and ṬIRĀZ).

In 284/897 al-Muʿtaḍid was compelled to invest ʿAmr b. Layt̲h̲ with Transoxania in succession to the Ṭāhirids, who had exercised an overlordship in that region. He sent with the investiture diploma seven robes of honour, a crown set with sapphires and other gems, eleven horses with golden accoutrements and bejewelled caparisons, and chests of clothing and luxury articles (Gardīzī, *Zayn al-ak̲h̲bār*, ed. Nāẓim, 17). In 369/979 ʿAḍud al-Dawla demanded from al-

Ṭāʾiʿ that he should be crowned in Baghdād, should have further honorific titles and should be given robes of honour. The feeble Caliph had to assent to the Būyid Amīr's coronation at Baghdād, and invested him with the robes and two swords; three days later he further sent a linen tunic, a gold dish and a crystal vessel and goblet (Ibn al-Djawzī, *al-Muntaẓam*, vii, 98-100). In 513/1119 the supreme Saldjūḳ Sultan Sandjar appointed his nephew Maḥmūd b. Muḥammad ruler of ʿIrāḳ and Djibāl and, in addition to the usual robes of honour, sent a horse with luxurious equipment and an elephant with a bejewelled litter (Rāwandī, *Rāḥat al-ṣudūr*, 170). The presents sent by the Caliph al-Mustarshid in 527/1133 to Masʿūd b. Muḥammad, when he recognized him as Sulṭān in the western Saldjūḳ lands, included seven ceremonial *durrāʿas* or tunics of various materials and colours, one being in the ʿAbbāsid colour of black, a jewelled crown, two arm bracelets (*siwār*), a gold collar, two swords and two banners (Ṣadr al-Dīn Ḥusaynī, *Akhbar al-dawla al-Saldjūḳiyya*, 102). Victorious military commanders were honoured in the same way when they entered the capital; on Muḥammad b. Sulaymān al-Kātib's return from Raḳḳa and a victorious campaign against the Ḳarmaṭīs, al-Muktafī presented him and other commanders with robes of honour, a gold collar and two arm bracelets (ʿArīb, 3, under 291/904; cf. Mez, *Renaissance*, 131; Eng. tr., 133).

The bestowal of lesser honours, those of a social rather than a military or political nature, was likewise accompanied by presents. In 321/933 al-Ḳāhir made Ibn Muḳla a *nadīm* or boon-companion in the Caliphal entourage, and at the same time gave him robes of honour, began calling him by his *kunya* or his patronymic, and added further gifts of a silver-gilt dish of ambergris, perfumes and musk, a second dish, a crystal decanter and goblet and a silver washbowl. Five years later, the Turkish general Bečkem was honoured in similar terms when he became al-Rāḍī's *nadīm* (Miskawayh, in *Eclipse of the ʿAbbasid Caliphate*, i, 258-9, 396, tr. iv, 293-4, 440).

On the other hand, the grant of honours and awards from the Caliph usually involved the recipient in much reciprocal expense. Even when the secular authority of the ʿAbbāsids was at a low ebb, such as the period of Būyid and early Saldjūḳ domination in the 4th/10th and 5th/11th centuries, their moral and spiritual influence was still very important. They alone could legitimize *de facto* power, and for the privilege of this approval, the provincial ruler who sought an investiture diploma (*ʿahd*, *manshūr*) or a grant of honorific titles (*alḳāb*) had to be prepared to pay. The sale of honours and the seeking of presents were, indeed some of the means by which the Caliphs augmented their meagre resources during these lean years. According to Hilāl al-Ṣābiʾ, the requiring of presents from those who had been invested with office or who had received some honour from the Caliphate was a comparatively recent practice, dating only from the period of Caliphal penury, *i.e.*, from early Būyid times; but in his own time, presents were required not only for the Caliph but for the secretaries and the court retinue (*Rusūm dār al-khilāfa*, ed. M. ʿAwwād, Baghdad 1383/1964, 100).

Much protocol was involved in the exchange of presents, and a definite tariff, according to the occasion, was recognized. This tariff (*rasm*) is mentioned in the Ghaznavid historian Bayhaḳī's *Taʾrīkh-i Masʿūdī*, when Sultan Masʿūd discussed with his vizier Maymandī the presents which were to be sent from Ghazna to Baghdād to greet the new Caliph al-Ḳāʾim; in return, the Sultan sought confirmation of his claim to his father's conquests and diplomatic support against the Ḳarakhānids (a sidelight on the diplomatic value of presents is that Masʿūd wanted to extract from the Caliph a promise that robes of honour and presents should never be sent direct to the Ḳarakhānids but only through his own intermediacy). It was agreed that the Caliph personally should receive 20,000 *mans* of indigo and his court circle 5,000 *mans*, and personal presents were also given to the Caliphal envoys (details in Bosworth, *The imperial policy of the early Ghaznawids*, in *Islamic Studies*, i/3 (1962), 65). Ṭoghrïl's acquisition of the title *Malik al-Mashriḳ wa 'l-Maghrib* in 449/1058, the date of his first meeting with the Caliph in Baghdād, cost him 50,000 *dīnārs*, 50 of the finest available Turkish *ghulāms* with appropriate horses and arms, a quantity of cloth, etc.; for his marriage at Tabrīz in 454/1062 with al-Ḳāʾim's daughter, presents had to be distributed not only to the Caliph himself, but also to his chief wife, to the *walī al-ʿahd* ʿUddat al-Dīn (the later al-Muḳtadī) and to the princess's own mother (Ibn al-Athīr, ix, 436-7; Bundārī, 22).

It was the custom to exchange gifts at such festivities as weddings (cf. the munificence of al-Ḥasan b. Sahl when his daughter Būrān married al-Maʾmūn at Fam al-Ṣilḥ, described in, *e.g.*, Ṭabarī, iii, 1081-5, Thaʿālibī, *Laṭāʾif al-maʿārif*, ed. de Jong, 73-4, Ḳāḍī Ibn al-Zubayr, 98-101, and Niẓāmī ʿArūḍī Samarḳandi, *Čahār maḳāla*, Browne's revised tr., 21-2), circumcisions and the old Iranian festivals of Nawrūz and Mihrdjān, the observance of which early became general in the central and eastern parts of the Caliphate. We hear, too, of personal gifts from subjects to rulers; doubtless some private advantage was often sought. A Zoroastrian *mōbedh* presented a flask of precious ointment to al-Mutawakkil; and a landowner of the Ghazna district, one Mānk ʿAlī, had the custom of annually presenting the Ghaznavid Sultans with pickles, savouries, dried meats and fine cloth (Masʿūdī, *Murūdj*, vii, 229; Bayhaḳī, ed. Ghanī and Fayyāḍ, 128-9).

The goods and products most frequently given as presents have emerged through the examples given above, with fine textiles, aromatics and spices, and jewels, to the fore. However, the gifts sent westwards by governors and rulers on the eastern fringes of the Islamic world usually included some of the specialities of those eastern regions and even of the Indian and Chinese worlds beyond. Very prominent were Turkish slaves from the Central Asian steppes, greatly in demand for the new professional armies of the Caliphs and provincial rulers [see GHULĀM i. The Caliphate, and ii. Persia]. From the 3rd/9th century onwards, the tribute and presents forwarded by the Ṭāhirid governors of Khurāsān and then by the Sāmānid Amīrs of Khurāsān and Transoxania always included large numbers of Turkish slaves. In a very detailed list in Bayhaḳī, 416-17, of the presents sent to Hārūn al-Rashīd by ʿAlī b. ʿĪsā b. Māhān (governor of Khurāsān 180-91/796-807) are 1,000 each of Turkish male and female slaves, and other Central Asian specialities mentioned in it include hawks and falcons for hunting, Badakhshān rubies, Nīshāpūr turquoises and Ṭukhāristān horses. Particularly interesting is the inclusion of 200 pieces of Chinese porcelain (*čīnī faghfūrī*), which already at this early date were making the long and hazardous journey across Asia (on this product see P. Kahle, *Chinese porcelain in the lands of Islam*, in *Opera minora*, Leiden 1956, 326-61). Elephants sporadically appeared in

ʿIrāḳ and Persia in early ʿAbbāsid times as presents from Makrān, Sind and the eastern parts of Afghānistān; beasts captured in the Kābul region were sent by the Ṣaffārids, and Maḥmūd of Ghazna regularly sent them to the Caliph among presents from the plunder of his Indian campaigns. Finally, it may be noted that the presents which were despatched to Baghdād from the corners of the Islamic world were not all exotic and luxury articles; in 327/938 al-Rāḍī, hard pressed in his capital, was glad to receive from the Ḥamdānid ruler of Mawṣil Nāṣir al-Dawla al-Ḥasan boatloads of flour, barley and livestock (Miskawayh, in *Eclipse*, i, 405, tr. iv, 449).

Bibliography: given in the article. Reference may also be made to the section on the giving of presents in Spuler, *Iran*, 367-9, and also to the section in Hilāl al-Ṣābiʾ, *Rusūm dār al-khilāfa*, 100-3, headed "The presents which should be offered to the Caliph when a person is invested with an office or honoured with being called by his *kunya* or with honorific titles", with examples from the Būyid period. Of outstanding interest is the *K. al-Dhakhāʾir wa 'l-tuḥaf* of the Fāṭimid official Ḳāḍī Abu 'l-Ḥusayn Aḥmad b. al-Zubayr, ed. Muḥ. Ḥamīd Allāh, Kuwait 1959, which dates from *ca.* 463/1071. *Inter alia*, the author describes here famous offerings of gifts amongst rulers in pre-Islamic and Islamic times, with many examples from ʿAbbāsid and Fāṭimid history.

ii — Mamlūk Egypt

The presentation by Muslim rulers of costly and often exotic gifts to European heads of state, for long a common practice, accounted in large part for the mediaeval western view of Islam as a world of luxury and splendour. This view was nourished nowhere more abundantly than in Mamlūk Egypt, whose rulers staged lavish receptions for foreign envoys and outdid themselves in bestowing upon them expensive presents to be carried back home to their sovereigns (see Heyd, *Histoire du commerce*, ii, 679 n. 7; and *BSOAS*, xxiv (1961), esp. 202, n. 3). Despite the well-known laconism of Muslim chroniclers regarding foreign embassies to Cairo, they almost invariably mention the exchange of gifts (*hadiyya*), accompanied usually by some estimate of their value (*e.g.*, Ibn Taghrībirdī, vi, 599, vii, 6, 112-13, 215-16; idem, *Ḥawādith*, 471-3, 699; Ibn Iyās, *Badāʾiʿ*, iii, 17, 25, 62, 145-46, 248, 292-93, iv, 55, 257, 269, 284, v, 9-11). In the archival material more detailed descriptions are to be found, either in the texts of letters or in separate lists appended to these (*e.g.*, al-Ḳalḳashandī, *Ṣubḥ*, viii, 122; Alarcón y Santón—García de Linares, *Documentos*, nos. 146, 149; Capmany y de Montpalau, *Memorias*, iv, 73-5). Such descriptions appear also in the diaries and "relazioni" of European envoys, often in great detail (*e.g.*, Catellaci, in *Arch. Stor. Ital.*, Ser. 4, viii (1881), 173 ff.; Iorga, *Notes et extraits*, iii, 119 (Cron. Zancaruola); Schefer, *Voyage d'Outremer*, 147-226). The importance of these gifts was such that omission of them attracted attention and appears to have been a calculated insult, as in the Mamlūk embassy to Venice in 913/1507 (*BSOAS*, xxvi (1963), 516 n. 3).

Possibly the most celebrated instance of gifts from a Mamlūk sultan to a European ruler was Ḳāitbāy's dispatch in 892/1487 of an embassy to Lorenzo de' Medici, of which there are several contemporary Florentine accounts in prose and one, somewhat later, in oil by Giorgio Vasari in the Palazzo Vecchio at Florence (see *Documents from Islamic Chanceries*, ed. S. M. Stern, Oxford 1965, 39-41, 43 and Frontispiece). In this case it was the bizarre collection of animals (especially a giraffe) which aroused the curiosity and aesthetic sensibilities of the Florentines.

Among the correspondence of the Mamlūk sultans with other rulers, both Muslim and Christian, one finds examples of special requests for gifts, apparently of articles obtainable only in the lands of the proposed donor; such are the letters from the Tīmūrid Shāh Rukh in 833/1429 requesting copies of Ibn Ḥadjar's commentary to Bukhārī's *Ṣaḥīḥ*, and of Maḳrīzī's *Sulūk* (*Nudjūm*, vi, 650); and from Sultan Shaʿbān to Galeazzo Visconti in 768/1366 seeking white gerfalcons (Iorga, iv, 6-11; and art. bayzara). A more unusual instance of this is the letter from James II of Aragon to the Mamlūk sultan al-Malik al-Nāṣir Muḥammad b. Ḳalāʾūn asking for some relics of St. Barbara reputed to have been among his treasures (Golubovich, *Biblio. Terra Sancta*, iii, 233; and cf. A. S. Atiya, *Egypt and Aragon*, 42-52).

In addition to rare animals and unusual wares from the further Orient the gifts of the Mamlūk sultans to foreign envoys and their principals included precious and elaborate stuffs of local manufacture, presented sometimes as cloth not made up, sometimes as robes of honour [see khilʿa], a practice also observed at European courts in diplomatic relations with Mamlūk Egypt (see Mayer, *Mamluk costume*, 63-4; and *BSOAS*, xxvi (1963), 518 n. 2).

Occasionally the gifts brought to Cairo by foreign envoys played a decisive rôle in determining the amount of attention the Sultan and/or his officials might be prepared to devote to an embassy, as in 918/1512 when the Venetians, French, and Ṣafavids among others were contenders for the favours of Ḳānṣūh al-Ghūrī (Schefer, *loc. cit.*; Sanuto, *Diarii*, xv, 193-208; Ibn Iyās, iv, 225 ff. who remarks (pp. 268-9) that at that moment there were no fewer than 14 ambassadors in Cairo!), or in 894/1489 when Florence was eclipsed in the eyes of the dragoman Taghrīberdī by Venetian wealth and prestige (cf. *Docs. Isl. Chanc.*, p. 44).

iii. — In the West

1. The term *hadiyya* is commonly used with the restricted meaning of "a sumptuous gift solemnly offered to a sovereign", either by another sovereign (his equal or a vassal) or by a group of some kind, or —much more rarely—by an individual of high rank.

The circumstances in which such gifts were offered or exchanged were many: embassies intended to form political, economic or matrimonial links, or sent to deliver congratulations on the occasion of an accession or a great victory. In the rare cases of presents being offered by individuals, these were important dignitaries (minister, chamberlain, etc.) wishing to retain or to regain the favour of their sovereign; this was the case notably, at the court of the Umayyads of Cordova in the 4th/10th century, with the *wazīr* Abū ʿUmar Aḥmad Ibn Shuhayd and ʿAbd al-Raḥmān III and with the *ḥādjib* al-Muṣḥafī and al-Ḥakam II (see E. Lévi-Provençal, *Hist. Esp. mus.*, index s.v.). These gifts nearly always consisted of several articles and included both objects of great value and curiosities (*ṭuraf, tuḥaf, gharāʾib*) peculiar to the country of the sender.

In the former category we find gold and silver, either in ingots, as coins, or made up into vessels; pearls and precious stones; sumptuous cloths (brocades, etc.) in the piece or made up into gar-

ments; carpets, arms and armour (notably the famous shields of leather made from the skin of *lamṭ* [*q.v.*], a type of antelope peculiar to the western Sahara); harness; state tents; furs; perfumes; ambergris, musk; thoroughbred horses; falcons; slaves. More rarely there were presented copies of the Ḳur'ān, of historic value or richly bound and ornamented with precious stones. In an exceptional case we hear of the prince of Genoa sending to the Marīnid sultan Yūsuf b. Yaʿḳūb, in 691/1292, "a tree in gilded metal bearing birds which an ingenious mechanism made to sing", similar to that which had been made for the ʿAbbāsid caliph al-Mutawakkil (see Ibn Abī Zarʿ, *Rawḍ al-ḳirṭās*, lith. Fās 1305, top of p. 281). Among the curiosities are found particularly African animals: elephants, giraffes, zebras, lions, civet-cats, parrots speaking various languages.

The reception of these gifts and of their bearers was an occasion of great ceremony. The exotic animals were paraded in a procession for the people to admire. When such gifts were offered by Christian rulers, the Muslim recipients chose to regard them as tribute. In fact these *hadiyya*s were considered by the European states as essentially intended to enable them to obtain favourable commercial treaties, to protect themselves against the Barbary corsairs, and to facilitate the ransom of prisoners. In addition to clocks and watches and Chinese porcelain, the Muslims particularly appreciated cannons and muskets, gunpowder, sulphur and lead, wood and rope for building and the rigging of warships, although the export of such items to the infidels had many times been prohibited by the Papacy.

The practice of sending these *hadiyya*s of tribute disappeared only during the first half of the 19th century, following the French occupation of Algiers (1830) and the defeat of the Moroccans in the wādī Īsli (1844).

2. In Morocco especially, and particularly, it appears, from the time of the beginning of the ʿAlawid dynasty, the *hadiyya* was an obligatory gift made to the sultan by his subjects; from being the spontaneous homage of gratitude and of vassal status it ended as a supplementary tax.

Particularly at the time of the two canonical feasts and of that of the *mawlid* (coll. *mūlūd*), but also on the occasion of certain festivities (a sultan's accession, his solemn entry into a town, etc.), the inhabitants of town and country had to offer to their sovereign, together with their homage and their good wishes, a *hadiyya*, the nature and the amount of which were fixed by the government.

In the towns, the costs of the *hadiyya*, in money and in kind, were divided by the governor among the quarters of the town and the guilds. The Jewish community had its own *hadiyya*, often consisting of items of gold or silver work. In the rural areas, the *ḳā'id* of each tribe was charged with the division and with the collecting of the sum imposed. To it were very often added local products: sumptuous cloths, carpets, horses, slaves, etc. The whole was taken to the town where the sultan was residing at the time by delegates (*haddāya*), escorted by their *ḳā'id*.

The presentation of the *hadiyya*s to the sultan began on the day following each of the three feasts and lasted for several days. It took place in the open and was the occasion for picturesque ceremonies, often described by European travellers.

iv. — PERSIA

The exchange of presents on the occasion of ambassadorial visits is a very ancient custom, common throughout the Orient; it survived into Islamic times in Persia and indeed is continued today, even if in a different form more adapted to modern diplomatic practice. There is now a distinction between different classes of gifts, with precisely defined terminology: presents to equals (*hadiyya*), from inferiors to superiors (*pīs͟hkas͟h*), and from superiors to inferiors (*inʿām*, usually of money) (E. G. Browne, *A year amongst the Persians*, London 1950, 73 ff.). Firdawsī appears still to use *hadiyya* indiscriminately for any kind of present (F. Wolff, *Glossar zu Firdosis Schahname*, Berlin 1935, s.v. *Hadye*; the term *hiba* does not appear here). At least from the Mongol period onwards, presents from governors etc. are described as *pīs͟hkas͟h* [*q.v.*], a form of tribute. In the Ṣafawid chronicles, there are descriptions of rulers' accessions to the throne and similar ceremonies, where *pīs͟hkas͟h wa tuḥaf wa hidāyā-yi mulūk-i aṭrāf* were offered (Firdawsī knows *tuḥfa* only in the sense of "rarity, marvel"). *Bilāk* (T. *belek*, cf. Maḥmūd al-Kās͟hg͟harī, *Dīwān lug͟hāt al-Turk*, ed. Kilisli Rifʿat, i, 322; pseudo-Arabic plural *bilākāt*) is also found as a description of presents from the Tīmūrids to the Ak Koyunlu. *Hadiyya* (and also *tuḥaf*) has become the normal expression for the exchange of presents on diplomatic missions. The fact that at the Ṣafawid court these gifts were recorded by the *pīs͟hkas͟h-niwīs* (*Tad͟hkirat al-mulūk*, ed. Minorsky, *GMS*, n.s. xvi, London 1943, 156) simply indicates a broadening of this clerk's duties.

Islamic rulers practised this exchange of gifts not only on the signing of treaties and at their accession, but also on family occasions such as the circumcision of a son. Niẓām al-Mulk had an already quite Machiavellian conception of the principal purpose of diplomatic missions: it was to profess subservience to the opponent by the presentation of rich gifts, lull him into security, and reconnoitre his strength or weakness in the event of a war (*Siyāsat-nāma*, ed. Schefer, 90, tr. 133; tr. Schowingen, 198; tr. Darke, 98-9, 101).

The type of presents exchanged between Islamic rulers varied little from the early Middle Ages until modern times: jewellery, brocade and other costly stuffs, which were given to the Caliph by the famous Byzantine mission of 937 A.D., continually recur in the lists of presents given by Persian rulers too; also included were money, weapons, perfumes, saddle-horses, slaves, and many other things. The Turks quickly adopted Iranian customs: Tog͟hrïlbeg, on the occasion of one mission to the Caliph, sent 10,000 *dīnār*s, precious stones and precious cloths. A famous exchange of gifts was that between Maḥmūd of G͟hazna and Ḳadr K͟hān: Maḥmūd presented gold and silver dishes, precious stones (or pearls), "Bag͟hdād" vessels, beautiful clothing and carpets, weapons (battle-axes and Indian swords), horses with costly trappings, ten elephants, camels with luxuriously appointed litters, sandalwood and ambergris, leopard-skins, falcons and eagles, and slave girls. Ḳadr K͟hān responded with a large sum of money, horses, slave-girls, falcons and products of Turkestan (weasel, squirrel and fox pelts) and, significantly, *objets d'art* of Chinese origin (brocade, articles made

of horn, etc.). Similar presents were given by the Īl-k͟hāns to foreign rulers: money, armour, precious stones, cheetahs, silverware, musk, and garments of green and white wool. No doubt some symbolic significance attached to a throne of rattan-wood (*čūb-i k͟hayzurān*) with canopy (*sāyabān*), which an Ak Koyunlu ruler received from India. The renowned Kūh-i-Nūr diamond came briefly to the Ṣafawid Court in 1544 when Humāyūn [*q.v.*] sought refuge in Persia. Costly Frankish robes and other European products came into the possession of the Ṣafawids before 1600, principally from the Turks. Arab horses, always much coveted, were given by the Ṣafawid S͟hāh to the Ottoman mission in 968/1560-1, as well as the usual robes of honour (*k͟hilaʿ* [*q.v.*]) and gilded saddles and harness. For India, Persia was a transit country useful as a source of Arab horses; S͟hāh ʿAbbās I once sent the Emperor Akbar (as well as costly stuffs) 100 stallions and mares of Arab and Georgian stock. From the Indian court came elephants and exotic beasts (tigers, leopards, gazelles, rhinoceroses, parrots and hippopotamuses), but also (perhaps originally from Europe?) optical instruments, as well as armour set with jewels. A valuable sabre presented by Akbar must have had symbolic significance (victory over the enemies of the Ṣafawids). Even in the very lively diplomatic exchanges with European courts after 1600 A.D., the Ṣafawids confined themselves to the traditional list of presents (slaves naturally did not figure here). Anthony Sherley was commissioned by the S͟hāh to take to various European rulers presents of sabres, bows and arrows, turban silk, belts of pure linen and broad woollen belts. The Persian embassy to Louis XIV in 1715 presented 106 small pearls, 280 turquoises and two gilded boxes of mummy balm [see MŪMIYĀ].

From the Crusades onwards, Europeans were well acquainted with oriental customs and preferences, and also, through trade with the East, they were well provided with objects suitable for presents. We therefore find that in the lists of presents of European missions to the Īl-k͟hāns, apart from tents, leopards and hunting dogs, precious stones, etc., there are included silk, purple dye, velvet, canopy material, and parasols decorated with precious stones. When in the Ṣafawid period relations between Europe and Persia were renewed and intensified to a hitherto unparalleled extent, technical equipment found its way to Persia along with the presents previously customary. Moreover, gifts began to be chosen more to suit individual tastes; specialities of particular countries gained prominence; and firearms were on some occasions delivered in numbers which already approximated to a kind of 'military aid'. The embassy from Philip III of Spain in 1617 brought to S͟hāh ʿAbbās I brocade, dishes and vessels of silver-gilt, harness and armour, but also surgical instruments, locksmiths' and carpenters' tools (the S͟hāh was in some way a forerunner of the Czar Peter the Great in his interest in carpentry), as well as portraits of the Infanta of Spain and the Queen of France (European paintings also came into Persia by way of the Armenians of D͟julfa). Portraits were then very often offered by other embassies too. From France came spy-glasses, crystal chandeliers and crystal mirrors, and (the result of Far East trade) porcelain from China, veils from India, and tea; but there were also cannons of the most modern design, and carpets of silk and gold thread from the Savonnerie factory (near Paris). A coach and four, which the East India Company wished to present to the S͟hāh in 1621, was not greatly welcomed in Persia, where there were no roads; on the other hand the S͟hāh accepted with enthusiasm 1,500 arquebuses from the same mission, whereas he criticized armour as unserviceable in war. A Russian mission also had little luck later with a carriage drawn by six horses, which was brought only with the greatest difficulty from D͟julfa to Iṣfahān. More welcome were the valuable Russian sables and the barrels of vodka, which the S͟hāh greatly appreciated. An embassy from Holstein brought among other things amber caskets. The gifts offered by the Dutch ambassador in 1652 were equally conventional, if more luxurious: 2,000 ducats (only gold coins were accepted, as Tavernier states; silver coins, not to speak of forged coins, the S͟hāh rejected), scarlet cloth, a large mirror, ambergris and amber boxes, Hindustani metal bowls, Japanese lacquer wares and exotic birds. Clocks in costly cases were also favourite articles for presents. The Russian embassy of 1817 had already fallen in with the standards of the other European countries in its choice of presents. The gifts included a set of cut-glass, a set of St. Petersburg porcelain, toilet mirrors, a clock in the form of an elephant, guns, pistols and sabres from the renowned arms factory of Tula, two wall mirrors, diamonds and rings, as well as the traditional sables. The gifts of the British mission of 1812, on the other hand, seem to have been chosen more to suit the personal tastes of Fatḥ ʿAlī S͟hāh: several coaches (kindly received but never used), a pianoforte (the Ṣafawids had once received an organ from Moscow), a large mahogany dining table and 70 mirrors. Most of these, however, were broken on the difficult journey from Būs͟hīr to Tehrān.

Christian clergy, too, who were sent as envoys of the Pope or of their Orders, did not present themselves at the Ṣafawid Court without presents, but in these cases even less costly gifts were accepted with indulgence. A Capuchin presented nautical and astronomical instruments (a compass and an astrolabe), a Dominican a clock and "*petites nippes de peu de valeur*" (as Chardin puts it). A Carmelite mission from the Pope had the extreme naïveté to present S͟hāh ʿAbbās I with a costly crucifix, at which, however, the S͟hāh took no offence. Ṣafī I received from the Vicar-Provincial of the Carmelites an edition of the Psalms in an Arabic translation, together with a few water-melons, and from the Bishop of Bag͟hdād a portrait of Urban VIII. Innocent XII sent S͟hāh Sulṭān Ḥusayn in 1700 Venetian brocade, striking clocks, a few pictures, mirrors with filigree frames, a microscope and a magnifying glass, and a block-and-pulley. Organs, spectacles and lifting-gear, also intended for the S͟hāh, were left behind in Aleppo. An Archbishop, on the other hand, presented himself before Nādir S͟hāh in the traditional manner with a splendidly bridled horse as a gift.

The presentation of gifts was accompanied by a solemn ceremonial. Here it was of the utmost importance to make as great an impression as possible. Thus the presents of Philip III of Spain in 1617 were borne in by not less than 600 servants. Individual missions would arrive in the Persian capital with a baggage train including hundreds of persons. On the other hand, the relatively few presents given by ʿAbbās I to Anthony Sherley were transported on 32 camels. For the Persian embassy to Louis XIV things were simpler: the interpreter carried the presents (pearls and turquoises) in a casket which, like the ambassador's credentials, was

wrapped in gold brocade. On Persian soil the ambassadors and their often numerous retinue were entertained at the expense of the Shāh, and provided with saddle- and baggage-horses. On top of this there would be personal presents, for the ambassador himself usually a robe of honour, horses with trappings, and other gifts, and for his suite presents of more or less value according to rank. Provincial governors were also in the habit of honouring passing ambassadors with presents. Johann Cunaeus, on returning to Holland, was permitted to keep robes of honour and sabres, and one of 15 horses given to him, and for the other gifts he received compensation on account of the expenses incurred by him personally. At the beginning of the 19th century ambassadors were already receiving decorations (the Lion and Sun Order), but in addition still received the traditional robes of honour.

v. — Ottoman Empire

The giving of presents had some curious ramifications in the Ottoman Empire. During the centuries in which their armies stood at the gates of Central Europe, the Sultan and his viziers were well aware of their power. Accordingly they could expect considerable sums of money to be spent on providing the "presents" which were offered to them by ambassadors.

The justification for expecting such presents was to be found in the case of the Turks (as with other Muslims) in their regarding foreign ambassadors as guests of the Sultan and the Government. Since they were given hospitality and entertainment, it was expected at the Ottoman Court that they would pay their respects with "guests' presents". It was also considered necessary that foreign ambassadors should receive presents. These included gifts for the ruler of the land to which the envoy was returning after the discharge of his mission (see elči and, for a general discussion of diplomatic practice, safīr). The usual presents for this purpose were fine materials and clothing, finely wrought bows, and spices. The ambassador himself almost invariably received the *khilʿa* [*q.v.*], which had the same significance as a European Order.

The presents brought by the envoys also consisted in the majority of cases of examples of their native arts and crafts, or the natural products or animals of their homeland. In the case of Western and Central Europe, typical gifts were goldsmiths' work, textiles, richly ornamented clothing, or chandeliers. Great Britain would also send mastiffs, and Poland greyhounds. The Slav countries, Poland and Russia, would often present "Nordic wares" as they were called, and as they were known to Arab geographers of the early Middle Ages: furs, especially sables, falcons and other birds, walrus tusks for making trinkets, and also medicines; but equally they included products of native industry: chandeliers, clocks, dishes and so on. The extensive collection of porcelain in the present-day Topkapı Sarayı Museum (especially celadon) originates largely from presents from China at the time of the Manchu dynasty (1644-1912).

It is a fundamental truth of human nature that these presents should be prized not only for their ideal, but also for their material value, and that the circle of those who expected such gifts should grow continually. In the course of time it embraced not only the Grand Vizier and his ministerial colleagues but many dignitaries, the Agha of the Janissaries, the Governors of particular provinces, especially those which the ambassadors had to traverse on their journeys to and from the Court, but most important of all the interpreter of the Sublime Porte [see tardjumān] and his assistants, upon whom ambassadors unversed in the language were almost entirely dependent. According to Islamic social custom, any gifts explicitly destined for ladies were unacceptable, and indeed their existence was hardly acknowledged in diplomatic life at the Ottoman Court at that time. Naturally one might indulge the hope that some present or other might come into their possession by indirect means, and arouse their interest in the donor's country.

As ambassadors came into direct contact with the leading Government officials and even the Sultan only at the presentation of their credentials, at official meetings and on taking leave, whilst at the same time they must attempt somehow to exert some influence during their sojourn of months or even years at the Sublime Porte if they were to safeguard the interests of their own countries, "presents" proved a useful means of attracting notice. They could indeed play a decisive rôle, and many a vizier

or interpreter was not above demanding presents—even with threats. These gifts naturally involved the envoy in considerable expense, and it was understandable in view of the frequent changes among the influential officials, especially in the 11th/17th and 12th/18th centuries, that many ambassadors delayed for a time before sending a present. It was always possible that a newly-appointed official might be very quickly relieved of his office, as in the case of Surnāzen Meḥmed Pasha, who was Grand Vizier for only four hours on 6 March 1656. On the other hand, such a swift reversal of fortune did not occur, as in if the case of Aḥmed Köprülü [see KÖPRÜLÜ] five years later, it could have highly unpleasant consequences for the dilatory ambassador (French in this case).

It goes without saying that under such circumstances these so-called "presents" acquired more and more the character of bribes for officials, and that the representatives of the various Powers continually tried to outdo one another in the extravagance and frequency of their gifts. Equally there can be no doubt that the interests of the Ottoman Empire were not always served by this custom (as on the Pruth in 1711; see BALTADJÎ, at end). The side-effects of present-giving, therefore, undoubtedly contributed to the ruin of the Ottoman Empire and the decline of its moral standards.

Bibliography: B. Spuler, *Die europäische Diplomatie ... in Konstantinopel ...*, II, in *Jahrbücher für Kultur und Geschichte der Slaven*, N.F. xi (1935), 192-6 (with bibliography of sources and lists of presents); R. Mantran, *Istanbul dans la seconde moitié du XVII^e siècle*, Paris 1961, 513-83 (scattered references, with bibliography).

(B. SPULER)

HIBA, gift *inter vivos*, transfers the ownership of a thing during the lifetime of the donor, and with no consideration payable by the donee. The term *ṣadaḳa* is used to designate charitable donation, which does not require offer and acceptance and which, moreover, is always irrevocable. As for the term *hadiyya*, this is preferably applied to the donation of a movable object, given as a present; according to certain Shāfiʿīs it would be valid even without acceptance on the part of the donee.

Gift is a contract. It is formed, say the scholars, by *idjāb wa-ḳabūl*, by offer and acceptance; though this mutual agreement, however indispensable (barring exceptional circumstances), does not have the same juridical value in all the schools.

(a) According to the Ḥanafīs and the Shāfiʿīs, mere acceptance by the donee not only does not transfer ownership as in sale, it does not even create any obligations binding on the donor. Transfer of ownership is effected only by the donee's taking possession, when this has been authorized by the donor. Until this taking of possession (*ḳabḍ*), the donee can neither compel the donor to deliver the subject of the gift, nor put himself in possession against his wishes. The death of the donor or of the donee before possession is taken terminates the agreement. It is true that the Shāfiʿīs admit subrogation of the heirs in the rights of the propositus, but since the latter had no right at all, this subrogation does not lead to a situation very different from that resulting from the Ḥanafī solution.

(b) In Mālikī law, mutual agreement or, if preferred, the acceptance of the donee added to the offer of the donor, creates a true contract which, even if it does not transfer ownership—this is acquired only by *ḳabḍ*, taking possession—does procure some very great advantages for the donee. Indeed the latter has the right to compel the donor to effect delivery of the thing given, and consequently the transfer of ownership, a right which then passes to the heirs of the donee if the latter dies before taking possession. It should be added that in Mālikī law the donee could dispose of the thing given, even before delivery, in case of the donor's decease, provided he took care to have his act officially recorded by the *ḳāḍī*.

(c) Of the four Sunnī schools it is the Ḥanbalī alone which attributes to the mutual agreement the effect of transferring ownership, at least when it is a question of gifts of things which are not measured by capacity or weight (Ibn Ḳudāma, *Mughnī*, v, 591). Where the latter are concerned (precious metals, foodstuffs, grain), taking possession again becomes indispensable.

Since gift is a "necessarily impoverishing" act, it can be performed only by individuals whose capacity is complete. Hence it is forbidden even to the semi-incompetent, the prodigal, the weak-minded, even if attended by his guardian (*walī*). But it is permissible for the person of full capacity to donate *inter vivos* the whole of his property, despite the fact that such an act is morally reprehensible if it is aimed at depriving prospective heirs or at favouring some over others. To this rule the jurists add three qualifications, the first two common to all schools, the third peculiar to the Mālikīs. The bankrupt (*muflis*) cannot dispose by gift of goods acquired by him before the sentence of interdiction. Gifts made by an individual at the point of death (*fī maraḍ al-mawt*) are assimilated to bequests. In other words a person suffering from a fatal disease, or one who finds himself in danger of death, although enjoying all his mental faculties, cannot give more than a maximum of one third of his property, with the further condition that the donee should not be one of the heirs. Finally, in Mālikī law the married woman, although considered fully competent as in the other schools, is not entitled without her husband's authorization to give more than one third of her possessions, the husband alone being entitled to contest the validity of a gift in excess.

Broadly speaking, everything susceptible of being sold can be donated. However, this assimilation applies fully only in Shāfiʿī and Ḥanbalī law. The Ḥanafīs are stricter in gift than in sale, prohibiting as a general rule the gift of undivided property (*mushāʿ*) when it is divisible by nature; this is an important reservation, for a share in property indivisible by nature (slave, animal, tiny house) can always be donated, the taking of possession, of course, being total in such cases (*Hidāya*, iii, 164). The Mālikīs, on the other hand, display a more liberal attitude towards gift than towards sale, authorizing the gift of something future, uncertain, or insufficiently defined as to kind, quality or value. In their view the exigencies of the law with respect to sale are dictated by an anxiety to avoid risk and illicit profit; they lose their *raison d'être* in the case of acts of liberality, since these call for no consideration from the side of the donee.

Revocation of gifts: this is a point where the differences between the schools seem quite arbitrary, despite the efforts of the jurists to explain these differences in the light of certain *ḥadīths* which the proponents of the two conflicting doctrines invoke, in opposite directions of course. Thus on the one hand we have the Ḥanafī doctrine, according to which the donor is normally entitled to revoke his gift (barring impediments), unless he is related to the donee within the degrees where marriage is forbidden, or is the

spouse of the donee; and on the other hand, the contrary doctrine according to which every gift is normally irrevocable unless it is made by the father (Ḥanbalī doctrine), by the father and possibly the mother (Mālikī doctrine), by any male ascendant (Shāfiʿī doctrine), in which cases it can be revoked, barring impediments.

The right to revoke, more or less liberally accorded by the various schools in terms of the quality of the donor, disappears in the presence of one of the following impediments:

(a) The death of the donor, revocation being a right attaching to the person, or the death of the donee, since the property then passes from his ownership;

(b) Alienation by the donee of the thing given, with or without consideration;

(c) Its loss or destruction, whether due to the passage of time, to accident, or to the act of the donee himself;

(d) Changes produced in the thing given also create an obstacle to revocation. It is not necessary that these changes be such as to have modified the nature of the thing, or even its physical appearance; it is enough for an animal to have grown bigger or fatter, a slave to have become more handsome, a house to have been whitewashed, etc. One would suppose that this kind of impediment would be most often invoked in order to render a gift irrevocable.

(e) In three schools, the Mālikī, Ḥanbalī and Shāfiʿī, revocation is impossible where it could harm the creditors of the donee; for the first two of these schools, everyone who became a creditor after the gift would be damaged by the revocation, since in allowing credit to the donee he took into account the totality of his assets; all this severely restricts the field where revocation applies in the Mālikī and Ḥanbalī systems. It should be remembered that *ṣadaḳa*, charitable donation, is always irrevocable, in the opinion of all jurists.

Besides gift proper (*hiba*), the essential characteristics of which have just been outlined, there are certain special forms of donation about which a few words may be said, if only to establish the degree to which they are valid.

ʿUmrā, as defined by the Ḥanafī, Shāfiʿī and Ḥanbalī schools, is gift with full ownership but as a life interest, the donee undertaking to restore the property on his death, at the latest. The condition is treated as void and the *ʿumrā* assimilated to an ordinary gift. But in the Mālikī school, *ʿumrā* is a gift of the usufruct and as such valid; thus it becomes very hard to distinguish from *ʿāriyya* or loan for use.

As for gift with consideration, *hiba bi-sharṭ al-ʿiwaḍ*, whereby the donee undertakes to compensate the donor, this is treated by most schools as a simple sale or barter, and consequently subject to the rules governing contracts of transfer for valuable consideration. The Ḥanafīs give it a hybrid character : an act of liberality in view of the conditions of its formation, a sale in view of its effects; the transformation coming about at the moment of taking possession; this is why gift for consideration is never revocable.

With the exception of India, Pakistan and the Muslim countries of the Arabian Peninsula, where gift is still governed by the rules of *fiḳh* without modification, most of the Muslim countries which have embarked on the process of codification have moved the whole subject into their civil codes of obligations and contracts (not including personal status). In Egypt, for instance, gift is regulated by arts. 486 to 504 of the Civil Code of 1948; in Syria by arts. 454 to 472 of the Civil Code of 1949. Although in this they have broadly followed the rules of Islamic law, the withdrawal of gift from the domain of personal status, where it was traditionally placed, has been accompanied by many changes in the rules of Ḥanafī law. Indeed it is in the countries of Ḥanafī persuasion that this phenomenon is especially apparent. For instance, nearly all these countries have purely and simply abandoned the restrictive and complicated ruling of their school relative to the gift of undivided or jointly-owned property. The Sudan gave the lead on this point with its Judicial Circular no. 13 of 1913. Likewise, there is a tendency no longer to demand taking possession as a condition of validity, provided the gift is effected by an authentic deed (Egyptian Civil Code art. 490; Syrian Civil Code art. 458). Lastly, the Mālikī principle that the donor binds himself immediately to ensure delivery of the thing given has been substituted in most places for the Ḥanafī rule under which no obligation rests on the donor before possession is taken (Egyptian Civil Code art. 493; Syrian Civil Code art. 461).

(K. V. ZETTERSTÉEN)

ḤIBR [see KITĀBA].

ḤIBRĪ, *makhlaṣ* of ʿAbd al-Raḥmān b. Ḥasan (b. Edirne 1012/1603-4, d. Serez 1087/1676), historian of Edirne. His father, 'Sal-bash' or 'Khabbāz-zāde' Ḥasan Efendi, held a series of posts in the *ʿilmiyye* career, dying in 1039/1630 as a *müderris* at the Ṣaḥn in Istanbul (ʿAṭāʾī, 733). Ḥibri, after studying at his native Edirne and at Istanbul, followed the same career: he held a series of posts as *müderris*, mostly at Edirne, but after 1070/1659 was appointed *ḳāḍī* of various places, the last being Serez, where he is buried.

His minor works are (1) a version in Turkish, entitled *Riyāḍ al-ʿārifīn*, of the "40 *Ḥadīth*s" of Ḥusayn Wāʿiẓ [see KĀSHIFĪ] (see Abdülkadir Karahan, *Islam-Türk edebiyatında Kırk Hadis*, Istanbul 1954, 228-30); (2) a book of *muḥāḍarāt* entitled *Ḥadāʾiḳ al-djinān*, composed in 1040/1630-1 (see F. E. Karatay,

Topkapı Sarayı .... türkçe yazmalar kataloğu, ii, Istanbul 1961, no. 2728); (3) a concise History of the Ottomans, from the beginnings to the reign of Ibrāhīm I, with lists of viziers, etc., entitled *Defter-i akhbār*; it is of some importance for the events of his own time (see *Ist. küt. tarih-coğrafya yazmaları katalogları*, i/2, Istanbul 1944, no. 40); (4) and (5) short accounts of Murād IV's conquests of Baghdād and Rewān (A. S. Levend, *Ġazavāt-nāmeler* ..., Ankara 1956, 111); (6) a *risāle* on the times of prayer, composed in 1067/1656-7; (7) a small *dīwān*.

He is remembered for his *Anīs al-musāmirīn*, completed in 1046/1636-7 (but added to in later years), a history and description of his native town. In the tradition of earlier 'histories of cities' in Arabic and Persian literature (but apparently for the first time in Ottoman literature, if a few panegyrics of Istanbul are excluded), he describes in detail the mosques and other public buildings and records the famous men of the town. It was used by Ḥādjdjī Khalīfa for the relevant section of his *Djihānnümā* (tr. J. von Hammer, *Rumeli und Bosna*, Vienna 1812, 1-15), and was revised and considerably expanded by Bādī Aḥmed Ef. (d. 1908) as *Riyāḍ-i belde-i Edirne* (unpublished: 3 vol. autograph MS in the library of the Selimiye mosque, Edirne). The so-called *Taʾrīkh-i Djewrī Čelebi*, 2 parts, Istanbul 1291-2, appears to consist, in part at least, of extracts from the *Anīs al-musāmirīn* and the *Defter-i akhbār* (see Babinger, 214).

Bibliography: Hammer-Purgstall, x, 691-2: Bursalı Meḥmed Ṭāhir, *ʿOthmānlı müʾellifleri*, iii, 97-8 (Bādī Aḥmed Ef. at iii, 31); Babinger, 212-4; Tayyib Gökbilgin, *Edirne hakkında yazılmış tarihler ve Enîs-ül müsâmirîn*, in *Edirne (armağan kitabı)*, Ankara 1964, 77-117 (full biography and summary of contents of the work).

ḤIDĀʾ [see ghināʾ].

ḤIDĀD [see ʿidda, libās].

HIDĀYAT, ṢĀDIḲ (b. 17 February 1903; d. 9 April 1951) was perhaps the most revolutionary of modern Persian writers. The variety of his literary output is represented by works of diverse interest, but it is essentially as a writer of fiction, especially of the short story, that he enjoys his real position. His daring experiments in technique and in thought have exercised a powerful influence on the development of modern Persian fiction.

Apart from his early education, Hidāyat does not seem to have pursued any regular course of studies. He held various minor jobs at different times including one as translator in the Faculty of Fine Arts at Tehran University. His first book, *Fawāʾid-i giyāh-khʷārī* (Benefits of vegetarianism), was published in 1928 in Berlin by the journal *Iranschähr* (Iranschähr Publications Series 2, No. 21). He visited Europe and India, and was staying in Paris when he committed suicide.

A writer of sensitive imagination, Hidāyat's personality is vividly reflected in his serious themes, which almost invariably tend towards melancholy situations and characters with clearly marked physical and psychological traits. The tone ranges from solemnity to irony and is dominated by a sense of isolation and misery often culminating in the death motif. No one who reads Hidāyat for the first time can fail to be struck by his sympathy for individual suffering, mental and physical, his interest in the irony of human contradictions, and his concern for the frustrated and deformed. His language reveals a masterly use of colloquialism with all its expressive richness. The influence of Western literature is unmistakable, and Hidāyat in his best known work, *Būf-i kūr* (The blind owl), which is a mixture of fantasy and realism, evokes a certain affinity with writers such as Franz Kafka, Edgar Allan Poe and Gérard de Nerval.

Bausani, *Storia della letteratura persiana*, Milan 1960, 866-9; *La chouette aveugle* (French translation of *Būf-i kūr* by Roger Lescot), Paris 1953; *The blind owl* (English translation by D. P. Costello), London 1957.

(Munibur Rahman)

ḤIDHĀʾ [see libās].

HIDJĀʾ, Arabic term often translated by "satire", but more precisely denoting a curse, an invective diatribe or insult in verse, an insulting poem, then an epigram, and finally a satire in prose or verse. The etymological sense of the Arabic root *h.dj.w* may perhaps be deduced from the Hebrew root הגה the basic sense of which is "to utter a sound in a low voice, to murmur" and hence "to meditate" (so too in Syriac), but also "to pronounce incantations in a low voice" (see L. Koehler, *Lexicon in Vet. Test. libros*, 1949, 224; König, *Hebräisches Wörterbuch*, 75; Genesius, *Lexicon*, Leipzig 1833, 266; Jastrow, i, 331). It is by a curious approximation or a premature resemblance that Mattā b. Yūnus [*q.v.*] translated the Greek κωμῳδία by *hidjāʾ*, while he rendered τραγῳδία by *madīḥ*, in his Arabic version of the *Poetics* of Aristotle (the respective equivalents of these terms in modern Arabic are *malhāt* and *maʾsāt*; see ʿA. Badawī, *Arisṭūṭālīs, Fann al-shiʿr*, Cairo 1953, 85 and *passim*). In fact, *hidjāʾ* was the antonym of *madḥ/madīḥ* [*q.v.*] and the synonym of *dhamm*, provided that the insulting criticism was expressed in verse; in consequence, the poetic genre known as *hidjāʾ* was to stigmatize the failings that were the antithesis of the qualities glorified by *madḥ/madīḥ*. This genre has been widely cultivated by the Arabs ever since the pre-Islamic period, either in separate and generally very short pieces, or as the thematic element of a *ḳaṣīda* [*q.v.*] of traditional structure. It appears, however, to have taken as its successive forms the *sadjʿ*, the *radjaz* and finally the *ḳaṣīda*, according to I. Goldziher, who is the first orientalist to have undertaken any serious research into the significance and social value of the pre-Islamic *hidjāʾ*; in his *Abhandlungen zur arabischen Philologie* (i, Leiden 1896, *Ueber die Vorgeschichte der Hiǵâʾ-Poesie*, 1-105), he has formulated a theory which may be summarized as follows (i, 27): "The *hidjāʾ* is in origin an incantation, a curse ... The origins of the *hidjāʾ* are perhaps connected with the old conception according to which the utterance pronounced in solemn circumstances by those who have the mental aptitude and requisite qualities exercises an ineluctable influence upon the persons (and also things) to whom this utterance is addressed. In the primitive *hidjāʾ*, the poet thus appears with the magic force of his utterance inspired by the *djinn*"; I. Goldziher (i, 42) quotes the words which Balak caused Balaam to be ordered to pronounce (*Numbers*

XXII, 6) as the earliest instance of *hidjā'*. Following him, several orientalists have also regarded it as an incantation, a curse which the ancient Arabs hurled at the enemy (see, *e.g.*, Cl. Huart, *Histoire des Arabes*, Paris 1912, i, 99; I. Guidi, *L'Arabie antéislamique*, Paris 1921, 40-1; M. Gaudefroy-Demombynes, *Le monde musulman jusqu'aux Croisades*, Paris 1931, 62; idem, *Ibn Qotaïba, Introduction au Livre de la poésie et des poètes*, Paris 1947, XVIII). After recalling in this last work that *hidjā'* "takes its origin, as Goldziher has shown, from the curse that a man, with the aid of a potent phrase, hurls against some person or tribe", Gaudefroy-Demombynes adds, however, that the poetic *hidjā'* is not entirely identical with the imprecation that Muḥammad casts, together with a handful of sand, to align the cohort of angels against the enemy; "but, by uttering insults according to the inspired rhythmic formulae of his verse, [the poet] knows that they must produce formidable results. It is not only his own anger and personal rancour that he incorporates in his verse, but also those of his tribe whose honour (*ʿirḍ*) he has in his hands; ... he knows how to hurl an insult that is at once poetic, virulent and crude and that brands an individual or group of men for ever". Although Gaudefroy-Demombynes thus attenuates Goldziher's too rigid thesis, it is because B. Farès (*L'Honneur chez les Arabes avant l'Islam*, Paris 1932, 214-8 and *passim*) had in the meanwhile discussed the magic character attributed to *hidjā'*. Noting that the imprecations quoted by Goldziher in support of his theory are in rhyming prose (*sadjʿ* [*q.v.*]) and come from the mouth of the *kuhhān* [see KĀHIN], B. Farès shows that "the poet, on the battle-field, hurls no imprecations whatever", but rather invective against the adversary, and endeavours to secure his downfall by calling down on his head his "elements of dishonour", his *mathālib* [*q.v.*] and his reverses of fortune, while all the time threatening him with destruction, to which threats later critics were incidentally to give the name *tahdīd*, linking them with *fakhr* [see MUFĀKHARA]; it was because it humiliated that the *hidjā'* was regarded as an instrument of war; and thus the poet was called *midrah al-ḥarb al-ʿawān*. B. Farès adds: "it is by the very violence of the insult that the enemy is brought low and, in this combination of action and reaction, there is indeed some element of magic ... Thus, while differing in respect of character and form, the *hidjā'* and the *kāhin*'s formula for imprecation are in agreement from the functional point of view". It is indeed undeniable that, without resorting to magic to the same degree as the *sadjʿ* of the *kuhhān*, the *hidjā'* has a very pronounced impressive character and that it is readily associated with the supernatural practices and spells intended to weaken the adversary physically, if not to annihilate him. The Prophet himself was not insensitive to the attacks to which he was subjected and in which he saw evil omens; though valuing magnanimity and commending forbearance to his followers, he did not hesitate to curse some of those who had satirized him.

In any case, the *hidjā'*, taking the adversary's honour as its target, dishonoured and, what is more, humiliated him; it marked its victims for all time and, even when it was defamatory and calumnious, its effects were difficult to escape; numerous anecdotes are told regarding the lasting consequences of an original insult; how many bad reputations have been created thus, and how many nicknames, insulting but permanently adopted, have resulted from deliberate or jocular invective (see Barbier de Meynard, *Surnoms et sobriquets dans la littérature arabe*, in *JA*, 1907). The Shuʿūbīs [*q.v.*] had practically no difficulty in finding weighty arguments against the Arabs in the *mathālib* of the tribes, for the most part based on verses of *hidjā'*, and Abū ʿUbayda [*q.v.*] is reputed to have taken infinite pains to investigate and group together in monographs all the particulars that might serve to enrich the dossier of the Arabs' adversaries.

In all the circumstances of war and peace, reactions to *hidjā'* were generally violent; when occasion offered, the victims sometimes went so far as to cut out the tongue of the slanderer and to kill him; in other cases, the insults provoked armed conflicts, but when the man slandered was not compelled by his *ḥilm* [*q.v.*] to pardon, he generally limited himself to jousting (*tahādjī*), an echo of which is provided by the *Ayyām al-ʿArab* [*q.v.*]. In a later period, when manners had become milder, the rôle of insulter was not always without its dangers, to such an extent that some poets whose function it was hesitated to make use of it (see Gaudefroy-Demombynes, *Ibn Qotaïba, Introduction*, 57-8).

During the pre-Islamic period, whilst the poet who practised *madḥ* glorified the elements of the *ʿirḍ* of the tribe or person to whom the eulogy was addressed, the man who devoted himself to *hidjā'* did all he could to outrage the adversary's *ʿirḍ*, in a poetic form. A searching analysis would make it possible to draw a distinction between the individual *hidjā'* and the collective, *hidjā'* depending on whether it attacks the *ʿirḍ* of a group or that of an isolated individual; it is certain that originally it was collective, but the differences are made less evident by the fact that poets did not scruple to attribute to the whole tribe the culpable characteristics of a single member, in general one of its chiefs, or on the contrary to credit the latter with the faults traditionally attributed to the whole group.

Generally speaking, all the real or imaginary failings of the person under attack were stigmatized: avarice, refusal to provide hospitality for travellers, lack of intelligence, cowardice, timidity, failure to keep his word, lack of *ḥilm*, the obscurity of his forebears, mixed blood, etc. Collectively, they were charged with the smallness and weakness of the group, the mediocrity of its poets and orators, the defeats suffered, the undistinguished ancestors and the falsification of the chiefs' genealogies, the abandoned conduct of some women, various detestable habits, as when certain members of the clan were charged with having one day eaten the flesh of a dog or human flesh, etc. The grossness of the accusation was already a measure of its success, and in certain insulting formulae one could trace a recollection of unnatural practices long since vanished.

To examine the matter more closely, it seems much more difficult to compose a credible panegyric than an abusive poem, for it is not necessary to possess much critical sense to discern the extravagance of the eulogy, whereas the more excessive the attacks the more acceptable they appear, at least in the eyes of the poet's friends, and the *hidjā'* seems to some extent to be more appropriate to a milieu where hatred was deeper and more frequent than sincere and disinterested friendship. This perhaps is the explanation of the reflection of Ibn Sallām (*Ṭabaḳāt fuḥūl al-shuʿarā'*, ed. Shākir, 217) who directly relates the richness of the poetic output to the frequency of conflicts and maintains that, in the

pre-Islamic period, "poetry was abundant only in regard to wars between the clans ... If Ḳuraysh had little poetry, it was because they harboured no hatreds and were never at war".

It is in the struggles that took place between Muslims and polytheists that we see the important part played by *hidjāʾ*, and the verses of the Ḳurʾān (XXVI, 224-7) condemning poets, except for those who were believers, are a retaliation against the attacks to which the nascent Islam was subjected; the Prophet himself had to resign himself to using the services of several poets to combat his adversaries with the appropriate weapons to dishonour and vilify them, even going so far as to pledge his supporters the aid of Gabriel (see Ibn Sallām, *Ṭabaḳāt*, 181); the most celebrated and virulent of these champions of Islam is Ḥassān b. Thābit [*q.v.*], but we should also note at least Kaʿb b. Mālik [*q.v.*] and ʿAbd Allāh b. Rawāḥa [*q.v.*], who is less mordant but perhaps more effective in the mockery with which he overwhelmed the incredulity of the Meccans. If *hidjāʾ* had not been so influential in Arabia, the Prophet, who disavowed it, would certainly not have gone so far as to incite the poets against the infidels; incidentally he said that the shafts they shot were more potent than arrows.

Under the first caliphs, *hidjāʾ* was rejected as being contrary to the teachings of the new religion, but to a certain extent it continued to be practised, feared and encouraged, for religious, political and racial reasons. It was primarily cultivated in what C. A. Nallino (*Raccolta di scritti*, vi, Rome 1948, 110 ff.; French trans., *La littérature arabe*, 170 ff.) calls the poetry of the troops (delle milizie). Feeble when the enemy was non-Arab, it reached the vivacity and verve of the ancient *hidjāʾ* as soon as the adversaries present could understand (see, *e.g.*, the accounts of the Battle of the Camel [see DJAMAL]). Perhaps of greater interest are the poems inspired by the politico-religious hatreds born or inflamed during the early days of Islam, an especially eloquent echo of which can be found in the works of the Khāridjīs [*q.v.*] and in isolated poets like al-Aʿshā of the Banū Hamdān [*q.v.*] or Ibn Mufarrigh [*q.v.*].

Hidjāʾ was also practised in a quasi-official manner, in that sovereigns tended to surround themselves with poets able to defend their glory and attack their enemies; thus al-Akhṭal [*q.v.*] hurls invectives at all his master's foes, while at the same time insulting his own rivals, Djarīr and al-Farazdaḳ [*qq.v.*], who heaped abuse upon each other and set out to procure each other's destruction in *Naḳāʾiḍ* [*q.v.*] which remain a characteristic example of *hidjāʾ* of the Bedouin type—but of a *hidjāʾ* henceforward deprived of its social character and reduced to a punishment in the form of an insult delivered by opinion (represented in this case by the poet) upon anyone who failed to conform with the modes of existence, outlook and behaviour inspired by the sentiment of honour.

This character is even more markedly absent from another form of *hidjāʾ*, of the most sordid sort, which came into being at the very beginning of Islam: for the poet, it consists in earning himself a reputation for foulness of speech, with the aim of extorting nothing less than blackmail from potential patrons. Thus, for al-Ḥuṭayʾa [*q.v.*], that "eroder of honours" (*miḳrāḍ al-aʿrāḍ*), invective was a means of subsistence, for the terror inspired by his reputation won him a stream of gifts. This extortionate poet had a crowd of emulators in the 2nd/8th century, and a certain rhymester reached the point of simply writing on his stick the object of his desire, so great was the dread of his comments in verse [see AL-ḤAKAM B. ʿABDAL].

In the same period, *hidjāʾ* became epigrammatic in the hands of poets of greater or lesser renown who respected nothing and took malicious pleasure in denigrating their opponents, and sometimes even their friends, by addressing crude and obscene observations to them; the *Aghānī* teems with verse of this type, the writers being Bashshār, Ḥammād ʿAdjrad, Ibn Munādhir, Diʿbil [*qq.v.*] and many others; amongst which the *ḳiyān* [see ḲAYNA] were never behindhand, since the epigram had become a pastime of the upper classes.

The indecent *hidjāʾ* underwent a relative eclipse in the 3rd/9th century when neo-classical poetry flourished, although Ibn al-Rūmī [*q.v.*] became a past-master of the art of abuse, and a quantity of satirical verses is to be found in Abū Tammām, al-Buḥturī, and then in al-Mutannabī [*q.v.*]. They are, however, in no way comparable with the writings of the 2nd/8th century, nor with the works of later poets such as Ibn al-Ḥadjdjādj or Ibn al-Habbāriyya [*qq.v.*]; the propensity of these last poets for *sukhf* [*q.v.*] inspired them to write virulent, gross and obscene epigrams which they addressed to patrons whom they held to be too miserly; the principal themes were avarice, meanness of spirit, and lowly origin, but more and more insinuations crept in, not to say accusations, of homosexuality and other deviations.

The theorists had, however, endeavoured to restrict the subject-matter of *hidjāʾ* by restoring greater moderation; for them, it consisted essentially in refusing every praiseworthy quality to the person under attack and attributing to him defects of a purely moral order such as avarice, greed, lack of courage, etc. Physical defects should not be taken into consideration, nor, for some, even the smallness of the group (see al-ʿAskarī, *Ṣināʿatayn*, 105); Ḳudāma [*q.v.*] and other critics stood up against the grossness of the *hidjāʾ* and recalled the remark of Abū ʿAmr b. al-ʿAlāʾ [*q.v.*]: "the best *hidjāʾ* is that which can be recited by a girl without loss of modesty", but Ibn Rashīḳ [*q.v.*] admits that it should be adapted to the milieu for which it was intended, although he prefers the discreet and subtle allusion to over-emphatic assertion (see A. Trabulsi, *Critique poétique*, Damascus 1955, 228-30). In Muslim Spain, where the eastern tradition was faithfully followed, Ibn Bassām [*q.v.*] stated in his *Dhakhīra* (vol. iii, still unpublished) that he had not included any *hidjāʾ* in his anthology, in order not to spoil it; Ibn Bassām lived in an austere period, which explains his scruples, but his contemporary al-Fatḥ b. Khāḳān [*q.v.*] and others as well did not refrain from attacking their fellows, though without exceeding the limits permitted by decency, at least as understood by Arab authors.

In regard to style, the literary form of the *hidjāʾ*, which is very supple, allows the use of generally clear and simple language; only the subtlest epigrams appear obscure on account of the allusions that they contain.

This genre being exclusively poetic in origin, one would hardly expect to find any *hidjāʾ* in prose; and yet, from the 3rd/9th century, simple prose tends to replace certain functions of poetry, and al-Djāḥiẓ [*q.v.*] does not disdain to include in his *Kitāb al-Tarbīʿ wa 'l-tadwīr* some satirical pages in the best vein, and even to create satire with a portrait of

Muḥammad b. al-Djahm al-Barmakī ([*q.v.*]; ed. T. al-Ḥādjirī, in *al-Kātib al-Miṣrī*, February 1947, 55-62) and some *rasāʾil* in which he pokes fun at his closest friends, though without malice. In the following century his emulator, Abū Ḥayyān al-Tawḥīdī [*q.v.*] further developed the genre with the *Mathālib al-wazīrayn* (ed. I. Kaylānī, Damascus [1961]) and, in the 5th/11th century, the Andalusī writer and poet Ibn Shuhayd [*q.v.*] drew satirical portraits of great subtlety (see Ibn Bassām, *Dhakhīra*, i/1, *passim*); here we are concerned with an intellectual and literary *hidjāʾ* which has nothing in common with the writings in verse described above. Perhaps we should also mention the *Maḳāmāt* [*q.v.*], which again contain a large proportion of true satire; it is only here that the translation of κωμῳδία by *hidjāʾ* is strictly justifiable. Satire of manners, which has scarcely been cultivated in Arabic [see AL-DJĀḤIẒ, and ḤIKĀYA] has not resulted in comedy any more than *maḳāma*, but it will be noted that comedy made its entry into the Arab theatre before the other dramatic genres [see MASRAḤ].

Hidjāʾ in verse, of more or less the classical type, has not disappeared even at the present day; leaving aside its too unfamiliar survivals in dialectal Arabic, we find in many poems invectives which would not be disowned by the ancient poets, although the subject matter has for the most part changed; now the themes are mainly colonialism, imperialism, foreign (even Arab) governments, and hostile political parties, which are the target for attacks in verse by poets, and pamphlets too are renewing the ancient tradition; the great difference lies in the fact that gross insults are mostly banished from this verse, the best examples of which recall the wittiest and subtlest writings of certain poets of the 2nd/8th century.

Bibliography: in addition to the sources given in the article: Poems of *hidjāʾ* occur throughout the *dīwāns* of the ancient poets and the great collections such as the *Bayān* of Djāḥiẓ, the *K. al-Shiʿr wa 'l-shuʿarāʾ* of Ibn Ḳutayba, the *Aghānī*, etc.; certain anthologies devote to it a chapter entitled *bāb al-hidjāʾ*, in particular the *Ḥamāsa* of Abū Tammām, the *ʿIḳd* of Ibn ʿAbd Rabbih, the *Mustaṭraf* of Ibshīhī, etc.; in the same way, the critical works generally contain a *bāb al-hidjāʾ*, particularly the *Naḳd al-shiʿr* of Ḳudāma, the *ʿUmda* of Ibn Rashīḳ, etc.—The principal works of orientalists were named at the beginning of the article; to them should be added: W. Ahlwardt, *Ueber die Poesie und Poetik der Araber*, Gotha 1856, 51-2; Ṭ. Ḥusayn, *Fi 'l-adab al-djāhilī*, Cairo 1927, 122-40, 171-81; F. Gabrieli, *Estetica e poesia arabica*, in *RSO*, xii (1930), 293-300; ʿAbbās M. al-ʿAḳḳād, *Ibn al-Rūmī*, Cairo 1932, 217-43; M. Ḥusayn, *al-Hidjāʾ wa 'l- hadjdjāʾūn*, Cairo 1947; E. J. Webber, *Comedy and satire in Hispano-Arabic Spain*, in *Hispanic Review*, xxvi (1958), 1-11; R. Blachère, *HLA*, ii, 380-2, 417-25.

(CH. PELLAT)

ii.—PERSIA

Though *hidjā* is more specifically "satire", this section of the article will contain general considerations on Persian humour.

Persian humour finds its expression in various literary genres: *hadjw* (satire), *djawāb* (parody) etc. Amongst the rhetorical figures most widely used to obtain humourous effects are *taḍmīn* or "quotation", where a poem by another author is taken as the basis and inserted in one's own poem, macaronic verses (*mulammaʿāt*, a mixed composition of Arabic, Persian and sometimes Turkish elements), etc. Humorous or jocose poetry is moreover defined by classical Persian literary critics under various headings, with reference to its contents rather than to its form. So we have *ṭayyibāt* (jocose poems), *kufriyyāt* (blasphemous or heretical poems), *khamriyyāt* (wine-poems), *hazaliyyāt* (facetious poems) etc., and in prose the *laṭāʾif* (pl. of *laṭīfa*), *i.e.*, facetiae.

It would be impossible here to make even a sketchy history of Persian humour. Almost all the poets of the classical tradition wrote at least some verses in this style, which was already present in the Arabic literature of the early ʿAbbāsid period, from which Persian took so many forms and ideas. One of the oldest Persian specialists in humorous verses was Sūzanī of Nasaf (d. 569/1173-4 or 574/1179) who founded a sort of school of this kind of poetry in Transoxiana: Abū ʿAlī Shatrandj of Samarḳand, author of the "Stork Ḳaṣīda" or *ḳaṣīda-yi laklak*, Djannatī of Nakhshab, Lāmiʿī of Bukhārā. By far the greatest of Persian parodists and satirists is however the contemporary of Ḥāfiẓ, ʿUbayd-i Zākānī of Ḳazwīn (d. *ca.* 772/1371), whose masterpiece is the *Akhlāḳ al-ashrāf* ("Ethics of the Aristocracy"), in prose mixed with verses, composed in 740/1340; the authorship of his famous long *ḳaṣīda Mūsh u gurba* ("the Cat and the Mouse"), is now doubtful (Mīnovī). In the following century Abū Isḥāḳ or Būsḥāḳ of Shīrāz (active in the first decades of the 9th/15th century), called *Aṭ ima* (foods), specialized in writing jocose poems concerning food (*Kanz al-ishtihāʾ*, "Treasure of Appetite"; *Dīwān-i Aṭʿima*, etc.). It is significant that he, a carder of cotton, was connected with the mystical order of Shāh Niʿmat Allāh of Māhān (near Kirmān) and showed some *malāmatī* tendencies (parodies of his own master's mystical poems). A specialist in "cloths" was Niẓām al-Dīn Maḥmūd Ḳārī of Yazd (first half of 9th/15th century), author of the *Dīwān-i Albisa* ("Sartorial Poems"). For later times, we mention only Yaghmā (1782-1859), also coming from a poor family, a very popular poet of the Ḳādjār period. But, as has been said above, almost all the great classical poets (*e.g.* Saʿdī, and, later, Ḳāʾānī and others) indulged in writing *ṭayyibāt* or *hazaliyyāt*.

A special aspect of Persian humour is that represented by folk verses or folk tales, which are not generally included in the traditional histories of Persian literature. Their central character is that of the "fool of God" of the type of the Italian Bertoldo, with a different name in different places. In Iran we find Mullā Naṣr al-Dīn, Mullā Du-Piyāza, Shaykh Buhlūl, Mullā Mushfiḳī etc. He is rather a panislamic than a typically Iranian character (Sī Djuḥā in Arab countries, Nasrettin Hoca in Turkey, Bīrbal in Muslim India, Pak Pandir, Pak Kadok and others in Malaya and Indonesia etc.).

As regards classical Persian humour we must never forget that its stylistic background remains that (definable in general as decorative-symbolic) of all classical Persian literature. The abrupt insertion of ultra-realistic elements into this stylistic background produces by contrast a singular *vis comica*. One of the most comic passages of Zākānī is, for instance, a *naẓm* in Firdawsian style inserted in the chapter of the *Akhlāḳ al-ashrāf* devoted to chastity; in the static decorative style of the *Shāhnāma* when it describes battles and duels, accompanied by a couple of moralizing verses, Zākānī describes here, in the most direct and asymbolical way, the homosexual intercourse between two famous heroes of the

Shāhnāma, Rustam and Hūmān. The stylized majestic decorativeness of the verses of Firdawsī applied to such an incongruous object creates almost automatically a powerful *vis comica*. We should also keep in mind that the stylistic bases of our Western humour generally differ from those of the classical Persian literature; a verse of the famous *ḳaṣīda* in *-an* by Amīr Muʿizzī, where the poet in love is compared to a chicken roasting on a spit, invariably produces laughter in an unprepared Western reader, who interprets this purely static image in a dynamic way. One of the elements of classical Persian humour is however simply the exaggeration of the background style. For instance in Zākānī's works in prose mixed with verses the background style is that of Saʿdī's *Gulistān*: but the exaggeration in the use of this style is clearly visible, *e.g.* the continuous interruption of even short sentences through minute "commentaries" in verse form.

Another element often present in Persian comical works is the dynamic personification of inanimate objects which, for obvious reasons, plays only a secondary rôle in our modern Western humour. The complete lack of mythological trends in the Muslim world, the highly developed Neoplatonic static symbolism of its style may explain—by contrast—the comic force of such a stylistic device. The pots that become pregnant and give birth to infant pots in the famous *laṭīfa* of Mullā Naṣr al-Dīn, or the personified "beard" of Zākānī's *Rīshnāma* might produce only a smile in a Westerner, but in the stylistic world of classical Persian literature the abrupt appearance of a ribald old character called Rīsh al-Dīn Abu 'l-Maḥāsin ("Beard of the Religion", "Father of Virtues" [*maḥāsin*, also "beard" in Persian]) out of a hole in a wall is so uncommon "stylistically" that it creates laughter. And—here is another element of Persian classical humour—the *vis comica* is even augmented by the irreverent macaronic play on words implicit in the name of this character (*rīsh*, Persian for "beard" is macaronically combined with *dīn* through an Arabic *iḍāfa*). The use of courtly and religious Arabic words or elements together with the most common, and often vulgar, Persian names (*e.g.* the Arabic article *al-* in the humorous "Dictionary" by Zākānī, called *Taʿrīfāt*, one of his most remarkable productions) creates a humorous effect not easily understandable by people living in different stylistic milieus. This contrast is even emphasized when, as is often done, the satirical author applies solemn Ḳurʾānic passages, or *ḥadīth*s or classical Arabic verses, to quite common or vulgar actions, as a commentary on them. This is especially possible in such an excessively mixed language as that of classical Persian style, but it is not lacking even in folk tales of the Mullā Naṣr al-Dīn type.

The whole may give sometimes the impression of social criticism or realism, but we should always keep in mind the stylistic motives that lie at the basis of all this. Generally speaking, classical Persian humour seems to be the by-product of highly refined urban milieus that contrast with the ignorant *mullā*s on one side, but, on the other side, also with the equally ignorant peasants (so often criticized by Zākānī); we are in a palaeo-bourgeois and rather bookish world, creating a sort of "clerks' humour" equally anti-mystic and anti-popular.

This does not mean, of course, that social and sometimes even bitter social criticism is absent from Persian humour. Numerous elements of it are present, especially in Zākānī's *Akhlāḳ al-ashrāf* and even more in the works of recent satirists. Last but not least, Persian writers of this genre supply us with extremely important information—not yet sufficiently studied—concerning the common life of the people of their time, on food, clothes, customs, social institutions, etc., which is so difficult to obtain from other, more serious, contemporary sources.

iii.—Turkish Literature

The characteristic of *hidjā* (*hidjw*, mod. *hiciv*) in Turkish literature is that, with rare exception, it is blended with humour. It has been expressed both in verse and in prose and was not confined to any particular literary genres.

In Ottoman Turkish literature the earliest example of satire is the famous *Khar-nāme* (the Book of the Donkey) by the 9th/15th century poet Sheykhī [*q.v.*] of Germiyān (?-833/1430?). This is a poem of about 124 couplets (the number varies in the different manuscripts) in *mathnawī* form and in *khafīf* metre, which is included in most *dīwān*s (a good copy is in Istanbul Un. Lib., T.Y. 2408, fols. 60b-63b, which is better than that of the text in the *dīwān* published in facsimile by the Türk Dil Kurumu, Istanbul 1942, 63-70). A donkey, tired, broken down and emaciated by hard labour and ill-treatment, is one day allowed by his master to graze in the meadow. There he sees well-fed oxen enjoying life, and particularly envies their horns, which are like crowns on their heads. He goes to an old and experienced donkey and asks him the reason for this injustice. The old wise donkey explains to him that the reason why oxen are so privileged is that they work in the corn and barley fields whereas all that donkeys can do is to carry wood. Inspired by this explanation, the donkey rushes to a cornfield and begins to devour the green corn with delight. When he has eaten his fill he rolls on the ground and brays loudly. Thereupon the owner of the field appears, gives him a thorough beating and cuts off his tail and his ears.

This short poem contains in miniature all the elements of a classical *mathnawī*. The sources do not agree to whom the work was dedicated. Although some MSS mention Murād II in the introductory part, the evidence is stronger for Meḥemmed I, who was treated and cured in Ankara by Sheykhī, a physician by profession, during the sultan's Karaman campaign (818/1415). The Sultan rewarded the poet by giving him the fief of the village Ṭoḳuzlar or Ṭoḳuzlu. As Sheykhī was on his way to the village, the former

owners of the region held him up, beating him and wounding him badly, and took away everything he possessed. The *Khar-nāme* is an indirect complaint about these enemies, jealous of the imperial favours Sheykhī enjoyed. The tidy composition, the simple and straight-forward style without the usual Persian-type conceits and plays on words, the strong satire couched in subtle humour make this little poem a masterpiece almost without parallel in this genre until Ḍiyā (Ziya) Pasha's *Ẓafer-nāme* in the Tanẓīmāt period.

During the 9th/15th and 10th/16th centuries many *dīwān* poets wrote satirical *ḳiṭʿa*s against their rivals and enemies, but the famous name for *hidjā* in the classical period is Nefʿī [*q.v.*]. This outstanding *ḳaṣīda*-writer composed a special book of satires, *Sihām-i ḳaḍā* (Arrows of Fate), which contains violent satirical poems in the forms of *ḳaṣīda*s and *ḳiṭʿa*s against leading personalities of his time, viziers, scholars, poets, government officials and his own father. The majority of these satires contain gross invectives and obscenities and reflect the violent and arrogant temperament of the poet. Nefʿī thus takes vengeance on his victims by exposing their vices and enumerating the injustices they had made him suffer. Nefʿī was very popular at the courts of Aḥmed I and particularly of Murād IV, who enjoyed reading his vitriolic attacks on personalities also known to him. It is not surprising that this made Nefʿī many enemies. According to an anecdote reported in most contemporary sources, Murād IV, on a stormy day in 1039/1630, was reading the *Sihām-i Ḳaḍā* in the Beshiktash Palace when lightning struck nearby. Drawing an evil omen from this, the sultan tore up the book and forbade Nefʿī to write any more satires. But the poet could not resist the temptation very long. He wrote in 1044/1634 a violent *hidjwiye* against Bayram Pasha, who was then deputy Grand Vizier. According to one of the various versions of the story (reported by Shāriḥ al-manār-zāde, reproduced in Naʿīmā, iii, 235) the Sultan asked Nefʿī whether he had anything new, and the poet produced his satire. The sultan showed it to Bayram Pasha and the angry vizier obtained the poet's execution.

Nefʿī's contemporaries, mostly victims of his invectives, and many poets of the 12th/18th century, particularly Hashmet (d. 1182/1768), occasionally wrote satirical *ḳiṭʿa*s, but the next outstanding name in *hidjā* after Nefʿī is the Tanẓīmāt poet and writer Ḍiyā (Ziya) Pasha (1825-1880) whose *Ẓafer-nāme* (1868), a very subtle satire on his enemy ʿĀlī Pasha (1815-1871), the famous statesman, is a most original composition. It consists of three parts: (1) a *ḳaṣīda* in praise of the 'victorious' completion of ʿĀlī Pasha's mission in Crete (1867), supposedly written by Fāḍil Pasha, the *mutaṣarrif* of Izmit; (2) a *takhmīs* of this *ḳaṣīda* by a certain clerk Khayrī Efendi, a supporter of ʿĀlī Pasha; (3) a prose commentary on this *takhmīs* supposedly by Ḥüsnü Pasha, the head of the Police. In the whole work, written in a refined style with a careful choice of words and similes, ʿĀlī Pasha, most of his great and minor supporters, and the abuses of the time are made the subject of a very subtle irony. Although all the classical niceties of *dīwān* literature are used in this work, Ḍiyā Pasha succeeded in giving it a very personal and original touch.

Various Tanẓīmāt writers and their successors produced in poetry, plays, novels and newspaper articles many examples of social and at times political satire. Because of the strict censorship, some of this had to be published outside the country. Most of the political satire aimed at the person of Sultan ʿAbd al-Ḥamīd II [*q.v.*] and his autocratic rule, like Tewfīḳ Fikret's famous poems *Sis* (the Mist, 1901) describing Istanbul during this reign and *Bir laḥẓa-i teʾekhkhür* (One moment's delay, 1906) about the unsuccessful plot against the life of the Sultan, or his sarcastic poems *Doksan beshe doghru* (Towards Ninety-five, *i.e.*, A.D. 1878, when the parliamentary régime was brought to an end, 1912) and *Khʷān-i Yaghma* (The Table of loot, 1912), against the lawless rule and abuses of the Union and Progress governments, after the Constitution of 1908.

In the novel, social satire produced an interesting genre: several writers took 'the westernizing snob', the blind imitator of European manners and customs, as the central figure of their work and tried to kill by ridicule this new and, in their view dangerous, type of Turkish society. Aḥmed Midḥat's (1844-1912) *Felātūn Bey ile Rāḳim Efendi* (1875) and later *Vah* (1882) and *Ḳarnaval* (1881) began the series; they were followed by Redjāʾīzāde Ekrem's (1847-1914) *ʿAraba Sevdāsī* (1889, published 1896) and Ḥusayn Raḥmī's (1864-1944) *Shıḳ* (1897), *Shıpsevdi* (1900) and ʿÖmer Seyf al-Dīn's (1884-1920) *Efrūz Bey* (1919). At the turn of the century *hidjā* in Turkish poetry is brilliantly represented by Meḥmed Eshref (1847-1912) who, after a year's imprisonment for his political activities, went to Egypt (1903) and wrote there his famous satirical *ḳaṣīda*s and *ḳiṭʿa*s in which ʿAbd al-Ḥamīd II, his pashas, and his régime are mercilessly attacked in a very personal style where irony and sarcasm dominate.

A number of poets developed after the revolution of 1908 a new genre of satire in the form of pastiches or *naẓīre*s, with the same metre and rhyme as well-known *ḳaṣīda*s and *ghazal*s of the great classics, particularly of Fuḍūlī, Nefʿī and Nedīm. Two names stand out: Fāḍlī Aḥmed Aykaç (born 1884), the author of the *Dīwānče-i Fāḍil* (1913), and Khalīl Nihād Boztepe (1882-1949), the author of *Sihām-i ilhām* (1923). These two poets and a few other minor writers of this school wrote humorous satire mainly of a political nature, generally aimed at the individuals playing a prominent part in Turkey during the years 1908-1923.

Between 1908 and 1920 the essayist, short-story writer and humorist Refīḳ Khālid Karay [*q.v.*] (1888-1965) produced the best specimens of political satire in prose. In many essays he attacked and ridiculed the governments of the Committee of Union and Progress, their leading personalities, and Istanbul society during the First World War and immediately after. His mastery of the language and his colourful, vivid and flowing style, always scintillating with subtle irony, remained unrivalled in modern Turkish until a new prose style was developed by the generation of young writers following the language reform movement of the 1930's. Most of his satirical essays have been collected in the following works: (1) *Saḳın aldanma inanma kanma* (1915, in Roman script 1941); (2) *Kirpi'niñ dedikleri* (1916, 1940); (3) *Agho Pasha'nıñ khāṭırātı* (1918, 1939); (4) *Istanbul'uñ ičyüzü* (1920; in Roman script as *Istanbul'un bir yüzü*, 1939); (5) *Ghughuklu sāʿat* (1922, 1940); (6) *Tanıdıḳlarım* (1922, 1941).

In contemporary Turkish literature, several writers make use of humorous satire to combat extreme traditionalism, bigotry and political intolerance. The most popular and successful writer of this school is Aziz Nesin (b. 1915), the prolific short story writer, novelist, essayist and playwright (for a list

of his main works see Behcet Necatigil, *Türk edebiyatında isimler sözlüğü*, Istanbul 1964, 157), who is essentially known as a humorist but who actually aims at killing by ridicule social and political prejudices and the shortcomings of a society in transition.

In Turkish folk-literature social and political satire is one of the principal themes, and the tales of Naṣr al-Dīn Khodja and Bektashī anecdotes, folk tales, the stories told by *meddāḥ*s (public story-tellers) abound in satirical criticisms of public figures and social prejudices. Satirical interpolations in the improvised conversations on set themes in the Ortaoyunu and the Karagöz [*qq.v.*] are very frequent. These public performances have often been censored and at times temporarily suspended when the element of satire was thought to be dangerous.

In folk poetry a special satirical genre called *tashlama* has been developed. *Tashlama*s may have a great variety of subjects, but social injustices are one of their main targets (see İlhan Başgöz, *Türk halk edebiyatı antolojisi*, Istanbul 1963, 16 and 129).

In Eastern Turkish (Čaghatay) literature the great 9th/15th century poet and writer ʿAlī Shīr Nawāʾī is the most outstanding representative of satire. In many of the *ghazal*s and *rubāʿī*s in his four *dīwān*s there are powerful satirical passages against hypocrites and bigots. In a typical *ghazal* he addresses the *wāʿiẓ* (the preacher) in these terms: 'What lies, what ridiculous behaviour, O preacher! Are you not ashamed of the community? They asked you to moderate people's uncouthness by counsels; who told you to kick and break the pulpit?... The tears on my cheeks are because of my hidden suffering and not because of the effect of your sermon, O preacher! To drink wine at night, and by day to tell people not to drink it, these are really nice virtues, O preacher!' (*TDED*, xii (1962), 43-4). Examples of interesting social satire of minor literary value have been given by some late Eastern Turkish poets in Turkestan like Makhmūr (end of the 18th century), Muḳīmī (d. 1903) and Furḳat (d. 1909).

In Ādharbaydjānī Turkish two writers stand out in *hidjā* : Mīrzā Fetḥ ʿAlī Akhund-zāda (1812-1878), a leading modernist and the first Turkish playwright, who in his plays severely criticized, in humorous style, the feudal society of his day, superstitions, social and religious prejudices (see A. Caferoğlu, *Die aserbeidschanische Literatur*, in *Philologiae Turcicae Fundamenta*, ii, Wiesbaden 1964, 671-4). But the best representative of the satire proper is Mīrzā ʿAlī Ekber Ṣābir (1862-1911), who, together with some minor poets and writers of the humorous and satirical review *Molla Nasreddin* (founded in Tiflis in 1906), waged a relentless campaign against fanaticism and ignorance, and the conventional concepts of the old *dīwān* literature.

iv. — Urdu

Early Urdū poetry cultivated by the Ṣūfī poets of Gudjarāt and the court poets of Dakkan is free from satirical elements, which begin with Djaʿfar Zattalī, a late 11th/17th century poet who makes a speciality of obscene themes and phraseology. In his Persian satires also he uses Urdū colloquial and obscene vocabulary.

With Mīrzā Rafīʿ Sawdā (1713-1780) [*q.v.*], the greatest *hadjw* (*hidjā*) writer in Urdū poetry, satire suddenly reappears and attains a developed form. Sawdā's satires are social as well as personal. His social satires such as *Ḳaṣīda-i shahr āshūb* and *Mukhammas-i shahr āshūb* are 'complaints' of the life and times at a juncture when owing to the rapid decline of Mughal power the feudal order of Dihlī's society was disintegrating; and life in the city was precarious and undignified on account of the depredations of the Marāthas and the Djāts and the invasions of Nādir Shāh and Aḥmad Shāh Abdālī. Most illustrative of the decadence and decline of the feudal society in Dihlī are Sawdā's *Ḳaṣīda-i taḍhīk-i rūzgār*, a satire on a nobleman who had fallen on evil times, and *Mathnawī dar hadjw-i Siddī Fūlad Khān, kotwāl-i Shāhdjahānābād*, which is also full of some personal venom. Sawdā's personal satires such as those directed against a satirist of lower calibre, Mīr Ḍāhik, tend to be incisive, sardonic and vulgar. The most criticised of Sawdā's personal satires is *Ḳaṣīda dar hadjw-i shakhṣī ki mutaʿaṣṣib būd*, written from a Shīʿī polemical viewpoint against the theologian Walī Allāh Dihlawī [*q.v.*].

Sawdā's great contemporary Mīr Taḳī Mīr (1722-1810) [*q.v.*] had a lyrical genius suited to the writing of *ghazal*s, but the element of social satire is also present in his 'complaints' like the *Dar hadjw-i khāna-i khud*.

Hadjw developed in the Lucknow school of poetry, but its use was limited. Here, in comparatively secure social conditions, social satire is rarely found. Instead we have personal exchanges between poets like Inshā (1756-1817) and Muṣḥafī (1164-1824). Inshā, the better satirist of the two, had a frivolous virtuosity which his more dignified contemporaty lacked.

The satirical heritage of the Lucknow school produced a striking synthesis with counter-modernism under the impact of Western ideas and institutio s in the verse of Akbar Allāhābādī (1846-1921), the pre-eminent social and political satirist of modern times.

Thematically Akbar's satire is anti-West. It aims to ridicule, in isolated verses as well as in short poems like *Dihlī Darbār*, *Barḳ-i kilīsa* and *Curzon Nāma*, the glamour of British Indian life and institutions, and beyond it the very essence of Western civilization. He often directed his satire against Sayyid Aḥmad Khān [*q.v.*] and the modernism of the ʿAlīgarh movement. Akbar achieves his satirical effect by an intelligent cynicism, by reducing the sublime and the scientific to the ridiculous, by an amazing inventiveness in the interplay of rhymes, by coining and establishing a symbolical satirical vocabulary of his own, by an instinct for playing to the conservative gallery and by a passionate though pessimistic faith in the values of the Muslim past.

The tradition of political satire established by Akbar soon became a broad movement. The freedom movements organized by the Indian National Congress, the Khilāfat Conference and the Muslim

League produced a school of more sustained and topical satire. Its outstanding representative was Ẓafar ʿAlī Khān, a political leader of shifting loyalties and the editor of the *Zamīndār*. During and since the 1920's topical political satire became one of the regular and attractive features of Urdū journalism.

Prose satire in Urdū had its beginnings in the *dāstān* literature of the early nineteenth century, especially in the *Ṭilism-i hūshrubā*. From the prose *dāstān* the satirical elements travelled to the modern novel and are discernible in *Ibn al-Waḳt*, a novel in which Nadhīr Aḥmad (1836-1912) seems to ridicule Sayyid Aḥmad Khān's adoption of the Western style of living. Sarshār's (1845-1903) novels have also an element of social satire. Caricature, bordering on generalized satire, forms the subject matter and details of the novels of Sayyid Sadjdjād Ḥusayn, founder and editor of the humorous journal *Awadh Panč*.

Awadh Panč, modelled on *Punch*, was published in Lucknow in 1877 and continued until 1912. It was conservative in social outlook and opposed Sayyid Aḥmad Khān's loyalism and modernism. Much of its satirical content is directed against the ʿAlīgarh movement and Western institutions. *Awadh Panč* established the tradition of prose satire in Urdū journalism, which is traceable in a number of journals that have succeeded it as well as in the columns of caustic political comment which are a permanent feature of Urdū newspapers.

(Aziz Ahmad)

AL-**HIDJĀʾ, ḤURŪF** [see ḤURŪF AL-HIDJĀʾ].

ḤIDJĀB (A., from the verb *ḥadjaba* "to hide from view, conceal") is used of any veil placed in front of a person or an object in order to conceal it from view or to isolate it. In medicine, it is a membrane which separates certain parts of the organism: *al-ḥidjāb al-ḥādjiz* or *ḥidjāb al-djawf* "diaphragm", *al-ḥidjāb al-mustabṭin* "pleura" and *ḥidjāb al-bukūriyya* "hymen" (al-Tahānawī, *Kashshāf*; *LA*; Dozy, *Suppl.*).

Scarcely anything is known of the pre-Islamic use of this word; but the Ḳurʾān, though it is found there only seven times, provides as valuable information on the basic and metaphorical meaning of the term as it does, to a certain extent, on its evolution. In general *ḥidjāb* in the Ḳurʾān means a separation: it is the veil or the curtain behind which Mary isolated herself from her family (XIX, 17); it is also the separate establishment (later the gynaeceum) which was imposed at first only on the wives of the Prophet (XXXIII, 53; cf. XXXIII, 32), apparently on the advice of ʿUmar. On the Day of Judgement, the saved will be separated from the damned by a *ḥidjāb* (VII, 46), which is glossed as wall (*sūr*) by the commentators, who deduce this interpretation from Ḳurʾān LVI, 13. "It belongs not to any mortal that God should speak to him, except by revelation, or from behind a veil" (XLII, 51), a veil apparently intended to protect the elect from the brilliance of the Divine countenance. *Ḥidjāb* is finally a sort of veil which envelops, either actually (the sun which vanishes behind the veil of the night, Ḳurʾān, XXXVIII, 32) or in a mystic sense, people and things. This last meaning is particularly worthy of note. The unbelievers say to the Prophet "our hearts are veiled ... ; and in our ears is a heaviness; and between us and thee there is a veil (XLI, 5). "We place between thee, and those who do not believe in the world to come, a curtain obstructing (*ḥidjābᵃⁿ mastūrᵃⁿ*)" (XVII, 45). The commentators do not agree on the meaning of the expression. It is considered to be either an invisible curtain sent by Allāh to conceal the Prophet from the eyes of those who sought to kill him (*Djalālayn*) or a veil which dimmed the intelligence of renegades so that they were incapable of understanding the recitation of the Ḳurʾān (al-Bayḍāwī). The latter interpretation is to be compared with Ḳurʾān, LXXXIII, 14 f., where it is stated that profits "rust" the heart so that truth cannot penetrate it.

In a *ḥadīth* reported by Abū Dharr, *ḥidjāb* is used as a synonym for the veil of death. "Allāh", the Prophet is reported to have said, "will pardon His servant so long as the veil has not fallen"—"O Messenger of God, what does the *ḥidjāb* consist of?" —"It is", he said, "when the soul dies while it is *mushrika* (one who "associates" other gods with God)".

In classical and contemporary Islam, *ḥidjāb* seems to have developed, often starting from its Ḳurʾānic bases, in four different directions.

I. The separation, which was imposed at first only on the wives of the Prophet, was later extended to all free Muslim women. The wearing of the veil marks the transition from childhood to puberty, and from spinsterhood to marriage. It is true that the material used to cover the head and face is usually referred to by the words *lithām*, *ḳināʿ*, *burḳuʿ* (Dozy, *Dict. des vêtements*); but *ḥidjāb*, while meaning also the veil itself, refers particularly to an institution.

Pre-Islamic Arabic poetry proves that the custom had already been observed before the time of Muḥammad, the veil having been the prerogative of women of a certain rank, who used for this *naṣīf*, *sitr*, *sidjf*, etc. (ʿAlī al-Hāshimī, *al-Marʾa fi 'l-shiʿr al-djāhilī*, 79-80, 146). The verses of the Ḳurʾān in which the wives and daughters of the Prophet are commanded "to draw their veils close to them" (XXXIII, 59 — *djilbāb*, *djalābīb* —) and "to the believing women ... to cast their veils over their bosoms" (XXIV, 31) probably date from the year 5 (Ibn Saʿd, *Ṭabaḳāt*, viii, 173-4). Nevertheless ʿĀʾisha is said to have worn the veil from the time of her marriage with Muḥammad (*ibid.*, viii, 59), which took place in Shawwāl in the year 1 (al-Balādhurī, *Ansāb*, i, 403).

It is certain that this custom was very little observed in Medina. The Ḳurʾān justifies it in fact on the ground that thus "it is likelier [the believing women] will be known and not hurt" (XXXIII, 59). But with the expansion of Islam the custom spread rapidly in Arabia and elsewhere. It was adopted by almost all the women in towns, especially those belonging to the leisured classes; but neither the Bedouins nor the peasant women nor working women adopted it completely.

The wearing of the veil, being general in the towns,

where intellectual movements developed and spread, contributed to a large extent to the keeping of Muslim women in a sort of seclusion. At the end of the 19th century, however, under the influence of the reformist ideas of the Khedive Ismāʿīl, who founded in Cairo in about 1290/1873 the first school for girls, some Egyptian women abandoned the veil. But the real champion of feminism was Ḳāsim Amīn. In his work *Taḥrīr al-marʾa*, in which is apparent the influence of *Shaykh* Muḥammad ʿAbduh's liberal interpretation of the Ḳurʾān, he denounced the keeping of women in a state of subjection, stated their right to education and stressed the evils of the veil, which he considered to be "the vilest form of servitude". Nevertheless, he did not demand that it be totally abolished, but simply proposed that it should conform only with the strict demands of religion. As a jurist, he stated that there is in fact in Islamic law no text which justifies the use of the veil in the way which was then current. This opened the battle for the emancipation of women. Ḳāsim Amīn also returned to the charge in his other work, "The new woman". These works shocked Egypt and feelings ran high on the subject. Ṭalʿat Pasha Ḥarb, who led the opposition, wrote in reply two works in which, also in the name of religion, he defended the old system of education. The women were evidently on the side of Ḳāsim Amīn. Malak Ḥifnī Nāṣif, better known by her pseudonym Bāḥithat al-Bādiya, edited his *Nisāʾiyyāt*, and Mayy Ziyāda wrote a series of articles on the problem which she dedicated to her colleague. In 1925 the Egyptian feminist movement was born. Its president, Madame Hudā Shaʿrāwī Pasha, formally abandoned the veil in 1926, and her gesture has been imitated increasingly by other Muslim women.

II. *Ḥidjāb* signifies also the curtain behind which caliphs and rulers concealed themselves from the sight of their household. This custom, which appears to have been unknown to the early inhabitants of the Ḥidjāz, seems to have been introduced in Islam by the Umayyads, probably under the influence of the Sāsānid civilization. The partition is also known as *sitāra* and *sitr*, but the custom is the same, and it finally developed into an institution (to be distinguished from the *ḥidjāba*, sometimes also called *ḥidjāb*, which indicates the office of chamberlain [see ḤĀDJIB]).

According to the Ps.-Djāḥiẓ, Muʿāwiya and the majority of his successors were separated from their household by a curtain (*sitāra*) so that none of the latter could see the actions of the caliph when, under the influence of drink, he was no longer in control of himself (*Le livre de la couronne*, tr. Ch. Pellat, 59). The behaviour of the ʿAbbāsid rulers was sometimes less discreet: al-Amīn in particular preferred the company of his courtiers and familiars to being isolated behind a hanging (*ḥidjāb*) (*ibid.*, 70).

Introduced into Andalusia, North Africa and Egypt, this institution grew more complicated as court life developed, particularly among the Fāṭimids, where there gradually became established an elaborate ceremonial comparable with that of Byzantium (M. Canard, *Le cérémonial fatimite*). It should be mentioned that, although it was always the same institution, with the Fāṭimids, influenced as they were by Shīʿī ideas concerning the divine nature of the Fāṭimid imām (cf. al-Maḳrīzī, *Khiṭaṭ*, i, 456, where he is compared to the Deity), it seems to have been prompted by other considerations and to have responded to different needs. The caliph, considered as the hypostasis of the Active Intelligence of the world, was almost the object of worship. Because of this he was expected to hide himself as far as possible from the eyes of his faithful followers, who were thus protected from the radiance of his countenance.

In Cairo, the official in charge of the curtain was called *ṣāḥib al-madjlis* (al-Ḳalḳashandī *Ṣubḥ*, iii, 485; al-Maḳrīzī, *Khiṭaṭ*, i, 386), a different office from that of *ṣāḥib al-bāb*, or master of the door, who was the same as the Great Chamberlain. He was called also *mutawallī ʾl-sitr* (al-Maḳrīzī, *op. cit.*, i, 411) and *ṣāḥib al-sitr* (M. Canard, *op. cit.*, 374; *Alf layla wa-layla*, i, 147, ed. of Imprimerie catholique, Beirut 1956). He was the Chief Eunuch and sometimes combined with the office of Master of the Curtain that of Chamberlain (M. Canard, *op. cit.*, 374 n.). During receptions it was his particular duty to inform the vizier when the caliph was installed in his place and to give the order to his two assistants to raise the curtain in front of the ruler. The latter then appeared seated on his throne and facing the gathering. At the end of the audience the curtain was lowered and he then returned to his apartments (al-Ḳalḳashandī, *op. cit.*, iii, 499 f.). A *sitr* was also suspended in front of the door of the audience chamber when the ruler wished to ride in procession on the occasion of the New Year. The vizier and the important dignitaries waited outside, near to the sovereign's mount. At the proper moment the curtain was raised and the caliph came out, preceded by his eunuchs, and mounted his horse (al-Ḳalḳashandī, *op. cit.*, i, 506).

The use of the *ḥidjāb* was current in Fāṭimid receptions and solemnities, and its use during Ramaḍān should be particularly mentioned. On the second, third and fourth Fridays of this month, the caliph visited the mosque. On his arrival he ascended the *minbar* and sat under the cupola (*ḳubba*). At his invitation, the vizier also ascended, approached him, publicly kissed his hands and his feet, and closed the curtains. The ruler was thus hidden as though in a litter (*hawdadj*). He then pronounced a short sermon, after which the vizier opened the curtains (al-Ḳalḳashandī, *op. cit.*, iii, 511; al-Maḳrīzī, *op. cit.*, i, 451 ff.). On the day of *ʿīd al-fiṭr* [*q.v.*], after the solemn prayer, the *ḳāḍī*, from the *minbar*, named one by one the dignitaries who had been granted the honour of mounting the steps and of occupying the places on the left and the right of the sovereign. At a signal from the vizier, everyone veiled himself and then the caliph, also veiled, began to speak. At the end of the address they withdrew their veils (al-Ḳalḳashandī, *op. cit.*, iii, 514).

At the Shīʿī ceremony of mourning for the death of Ḥusayn, the caliph, his face veiled, on a seat without a cushion, received the dignitaries, who were also veiled (al-Maḳrīzī, *op. cit.*, i, 431).

Ibn Khaldūn distinguished several sorts of *ḥidjāb* which a state adapts to its needs as it develops. The first is adopted when nomadism is abandoned and the sovereign, giving up primitive customs, separates himself from the people and allows only his intimates to cross his threshold. With the development of the state and of the complexity of its workings, a second *ḥidjāb* is instituted: this allows only those who are initiated into the customs and etiquette of the court to have any communication with the sovereign. In their turn the ruler's familiars and intimates also place a *ḥidjāb* between themselves and the people. Finally, as the state declines, the dignitaries who have placed on the throne the heirs of the reigning dynasty sometimes seek to seize for

themselves the privileges of power. The dictator then sequesters the sovereign: he isolates him from his family and from his councillors by a *ḥidjāb*, making him believe that his dignity demands that he be separated from them (*Muḳaddima*, ii, 100-3, tr. Rosenthal, ii, 111-3).

III. In the eyes of the mystics, *ḥidjāb* represents everything that veils the true end (al-Djurdjānī, *Taʿrīfāt*, 86), all that makes man insensitive to the Divine Reality. "It is a curtain interposed between the novice and his desire, between the marksman and his target" (Massignon, *Ḥallâj*, 699). It is produced by the impression, on the heart, of the images of the tangible world, which hinder the manifestation of the truth. The man who is "veiled" (*maḥdjūb*) is he whose heart is closed to the Divine light, because his awareness is dominated by sensual or mental passion. "Your veil is your infatuation", said al-Ḥallādj (Massignon, *op. cit.*, 699). In fact there are many causes of this veiling. The more man's natural tendencies are fed with food, the stronger does his lower soul become, and passion spreads impetuously through his limbs; and in each vein a different sort of veil comes into being (al-Hudjwīrī, *Kashf*, 325). The realization of the mystical union is impeded equally by the internal feelings which are centred on the soul, the reason and the spirit. The veil of the *nafs* is the passions and the desires, that of the heart is all observation which has no foundation, and that of the reason is its dwelling on intelligible meanings (al-Tahānawī, *Kashshāf*, i, 276).

The opposite of the *ḥidjāb* which is characterized by the contraction (*ḳabḍ* [*q.v.*]) of the heart is the *kashf* (revelation), which means, by contrast, its expansion (*basṭ* [*q.v.*]), its spreading open. *Ḳabḍ* and *basṭ* are two involuntary states which no human effort can produce or destroy, for they proceed from God (al-Hudjwīrī, *op. cit.*, 374). However, when the lower soul is so weakened that it is incapable of overcoming obstacles, and when passion is annihilated, then all vain desires are effaced in the manifestation of the truth. The veil is rent and he who seeks God attains the fullness of his desire (al-Hudjwīrī, *op. cit.*, 325).

IV. Finally, *ḥidjāb* is a mystical separation, a supernatural isolation, a supra-terrestrial protection, in fact an amulet [see ṬILASM] which renders its wearer invulnerable and ensures success for his enterprises. A *shaykh* or a *faḳīr* writes cabbalistic signs and Ḳurʾānic verses on a sheet of paper which, for a small sum, he gives to petitioners. These writings are considered to be most efficacious and to have the power to attract a husband's love, to cure a sick person, to render a barren woman fertile and even to protect from bullets. They are worn round the neck and must never be taken off (Jaussen, *Moab*, 35 f. and 381; the same use of the word *ḥidjāb* is found in Syria and among the nomads of the Negev who have recently been the object of a study by J. Chelhod).

ḤIDJĀBA [see ḤĀDJIB].

AL-HIDJAR (sing. *hidjra*), settlements established by ʿAbd al-ʿAzīz b. ʿAbd al-Raḥmān Āl Suʿūd (d. 1373/1953), then Sultan of Nadjd, to promote the sedentarization of the Bedouins of Saudi Arabia during the first quarter of this century.

During the first decade of his career, ʿAbd al-ʿAzīz Āl Suʿūd attempted to revive the old religious enthusiasm among the virile, but often volatile, Bedouins as a basis for the recovery and the control of his realm. After the *muṭawwiʿūn* (preachers) had spread religious enlightenment and prepared for the idea of an agricultural, settled life, the first and most successful *hidjra*, or Bedouin settlement, was established in 1330/1912 at al-Arṭāwiyya, between al-Kuwayt and Nadjd, in the *dīra* (tribal territory) of Muṭayr. This settlement was soon followed by another at al-Ghaṭghaṭ in the *dīra* of ʿUtayba. In both settlements members of various tribes constituted the fraternity of Ikhwān [*q.v.*], though the mixing of tribes was not practised in most of the colonies.

The prospect of conflict with both Āl Rashīd of Ḥāʾil and the Sharīfs of Mecca gave impetus to the process of settlement, and eventually there were about 130 such colonies in al-Ḥidjāz and Nadjd. So successful was the movement in arousing the religious ardour of its members that some of the Ikhwān became more zealous than ʿAbd al-ʿAzīz himself and turned against him in rebellion. In the final crushing of the Ikhwān rebellion (1348/1930) some of their settlements were razed to the ground. The King then set out to create the nucleus of a modern, standing army which proved its worth in establishing peace throughout the length and breadth of his Kingdom.

(A. H. Kamal)

AL-ḤIDJĀZ, the birthplace and still the spiritual centre of Islam, is the north-western part of the Arabian Peninsula. As the site of the Kaʿba, as the home of the Prophet Muḥammad and the scene of Allāh's revelations to him (*manzil al-waḥy*), and as the capital district of the early Islamic state, al-Ḥidjāz is for Muslims as much the Holy Land (*al-bilād al-muḳaddasa*) as Palestine is for Jews and Christians. Muslims are, in fact, even more zealous in guarding the inviolate character of their chief shrines; the areas surrounding Mecca (Makka) and Medina (al-Madīna al-Munawwara) are sacred preserves (*ḥarams*) which only Muslims are allowed to enter, and restrictions have often been placed on the penetration of non-Muslims into other parts of al-Ḥidjāz.

While agreeing in general that al-Ḥidjāz means "the barrier", the Arabic sources differ in interpreting its application. The commonest view is that the barrier is the mountain chain of al-Sarāt [*q.v.*] separating the lowland of al-Ghawr or Tihāma [*qq.v.*] along the Red Sea from the interior uplands of Nadjd [*q.v.*]. Another view holds that the barrier stands between al-Shaʾm in the north and al-Yaman in the south, and modern geological research has shown that the mountains of these two regions lie beyond the Arabian Shield [see (djazīrat) AL-ʿARAB] to which al-Sarāt belongs.

The concept of al-Ḥidjāz as an obstacle also derives from the fact that much of its area is covered by lava tracts (*ḥarras* [*q.v.*]), which make it "a black barrier" (Yāḳūt, *s.v.*). Among the best known *ḥarras* in the early Islamic period were those bearing the names of Laylā, Wāḳim, al-Nār, and Banū Sulaym. Further research needs to be done on identifying these and on determining the correct forms of the modern names. On a visit to Tabūk, for example, the author learned that the *ḥarras* to the south are called al-R.hāt (vowelling uncertain) and ʿUwayriḍ, not al-Raḥā and al-ʿUwayriḍ as often given on maps.

No substantial agreement exists on defining the geographical limits of al-Ḥidjāz. Although Tihāma is, strictly speaking, not a part of al-Ḥidjāz, it is often included in the region. Mecca in the hills has been called Tihāmiyya, and Medina half Tihāmiyya and half Ḥidjāziyya. In the east al-Ḥidjāz is sometimes carried as far as Fayd near Adjaʾ [*q.v.*] and Salmā, but this is an extreme interpretation, as is the one that extends al-Ḥidjāz northwards into Palestine. The most circumscribed version of the northern extent excludes Madyan and its hinterland Ḥismā from al-Ḥidjāz. In the south al-Ḥidjāz once marched with al-Yaman, but in recent times ʿAsīr [*q.v.*] has been interposed between the two. As treated in this article, al-Ḥidjāz corresponds in general to the Western Province of the modern Kingdom of Saudi Arabia.

For descriptive purposes al-Ḥidjāz may be divided into three sections: northern, central, and southern. The central section, by far the most important for the history of Islam, is dealt with first.

The central section may be taken as bounded in the south by the lands in the vicinity of al-Ṭāʾif, Mecca, and Djudda [*qq.v.*], and in the north by the lands in the vicinity of Medina and Yanbuʿ [*qq.v.*]. From the verge of Medina a vast *ḥarra* runs along al-Sarāt for about 300 km. almost to Mecca.

The old road from al-Ṭāʾif went north to the valley of al-Nakhla al-Yamāniyya, down which it descended towards Mecca. In this valley was Ḳarn al-Manāzil, the early *mīḳāt* [see IḤRĀM] for pilgrims from southern Nadjd and Oman; the present *mīḳāt* is a place called al-Sayl al-Kabīr in the same valley. In al-Nakhla al-Shaʾmiyya was Dhāt ʿIrḳ, the *mīḳāt* for pilgrims from northern Nadjd and Iraq coming along Darb Zubayda, the route which the consort of Hārūn al-Rashīd provided with cisterns and other amenities. Dhāt ʿIrḳ is often mentioned as the limit of al-Ḥidjāz in this direction. A paved highway now winds down the mountains from al-Ṭāʾif directly to Mecca, so that the long loop to the north is avoided. The two Nakhlas, now called simply al-Yamāniyya and al-Shāmiyya, empty into Wādī Fāṭima (classical Marr al-Ẓahrān), the fertile bed of which is crossed by the road from Mecca to Djudda.

Throughout the history of Islam travellers between Mecca and Medina have had a choice between two ways, one following the coast (al-Ṭarīḳ or al-Darb al-Sulṭānī) and the other running east of the great *ḥarra* (al-Ṭarīḳ or al-Darb al-Sharḳī), with variations in the itinerary for each way. Before the introduction of motor vehicles those choosing al-Ṭarīḳ al-Sulṭānī usually by-passed Djudda in order to save time. Three hours out of Mecca were the domed tomb and mosque of the Prophet's last wife, Maymūna [*q.v.*], in Sarif, where she was married. North of Wādī Fāṭima the road went through ʿUsfān, the scene of the Prophet's raid on the tribesmen of Liḥyān [*q.v.*]. Next the road traversed the cultivated area of Khulayṣ set back some distance from the coast. Not far beyond al-Ḳaḍīma the Red Sea would be sighted. Rābigh, though a port, had no proper harbour; ships anchored well away from the shore and transferred their cargoes to local sailing craft. As the *mīḳāt* for pilgrims coming overland from Syria, Egypt, and al-Maghrib, Rābigh succeeded the now ruined village of al-Djuḥfa, which lies in a valley reaching the sea just south of Rābigh. Pilgrims coming down the Red Sea enter into *iḥrām* as their ship passes Rābigh. North of Rābigh is the reputed burial place of the Prophet's mother, Āmina, at al-Abwāʾ [*q.v.*], now called al-Khurayba.

From Rābigh secondary routes ran northwards through the mountains to Medina, providing a more direct but more difficult approach than al-Ṭarīḳ al-Sulṭānī, which continued to hug the coast. From the port of Mastūra an alternate route known as "the detour" (al-Malaff) turned inland, but the main road did not do so until it reached Badr Ḥunayn [*q.v.*], where the Prophet humbled Ḳuraysh on the battlefield. The road from Yanbuʿ, which has taken the place of al-Djār [*q.v.*] as the principal port for Medina, joins the road from the south at Badr, whence al-Ṭarīḳ al-Sulṭānī ascends Wādī al-Ṣafrāʾ towards Medina. In this valley ʿAbd Allāh b. Saʿūd of Nadjd won a signal victory over Aḥmad Ṭūsūn and his army from Egypt in 1226/1811.

Now that an asphalt highway joins Mecca and Medina via Djudda, Rābigh, and Badr, it is easier and faster not to take the short cuts through ʿUsfān and the mountain passes farther north.

The usual course for al-Ṭarīḳ al-Sharḳī runs northwards down ʿAḳīḳ Dhāt ʿIrḳ [see AL-ʿAḲĪḲ]. Sometimes it goes through the old oases of Ḥādha and Ṣufayna on the eastern edge of the *ḥarra*, and at other times it passes a little to the east of them. The oasis of al-Suwāriḳiyya (modern al-Suwayriḳiyya), also on the eastern edge of the *ḥarra*, is even farther off the road. North of the modern mine of Mahd al-

Dhahab, now abandoned, al-Ṭarīḳ al-Sharḳī proceeds for a space down another valley named al-ʿAḳīḳ south-east of Medina, which is different from the "blessed valley" of al-ʿAḳīḳ west of the city.

The main route from Medina to Nadjd forks just after the oasis of al-Ḥanākiyya, one branch continuing eastwards to al-Ḳaṣīm and the other heading northwards to Ḥāʾil. The main route east from Mecca (Darb al-Ḥidjāz) now runs from al-Sayl al-Kabīr via al-Ḳāʿiyya and al-Dawādimī to al-Riyāḍ, replacing the old pilgrim trail via al-Ḳunṣuliyya and al-Ḳuwayʿiyya.

The northern section of al-Ḥidjāz may be taken as extending to the boundary between Saudi Arabia and Jordan, which stretches from a point south of al-ʿAḳaba [*q.v.*] over to the range of al-Ṭubayḳ. The occupation by the state of Israel of a position on the Gulf of al-ʿAḳaba has made it impossible for pilgrims to follow the old overland route from Sinai via al-ʿAḳaba. Among the small ports are Haḳl and Maḳnā on the Gulf of al-ʿAḳaba, and al-Muwayliḥ, Ḍabā, al-Wadjh, and Amladj (orthography uncertain) on the Red Sea. From al-Wadjh tracks cut across the mountains to meet the interior highway at or near al-ʿUlā.

During the past century the heaviest traffic in the northern section of al-Ḥidjāz has been over the routes east of al-Sarāt, first the old Syrian pilgrim road through Tabūk and al-ʿUlā [*qq.v.*] and then the Ḥidjāz Railway [*q.v.*], which in most places followed the pilgrim road closely. The railway was damaged during the First World War, and reconstruction did not begin until 1383/1964. In the meantime a paved highway was being built north from Medina to Tabūk and the Jordan boundary. The highway runs through Khaybar and Taymāʾ [*qq.v.*], both of which lie a considerable distance east of the pilgrim road and the railway.

The southern section of al-Ḥidjāz has higher mountains, more rainfall, and much more cultivation than the other two sections. A road parallels the coast from Djudda through the ports of al-Lith, al-Ḳunfudha, and Ḥaly (Ḥaly Ibn Yaʿḳūb [*q.v.*], once regarded as the southern limit of al-Ḥidjāz) to al-Ḳaḥma, now reckoned as the beginning of Tihāmat ʿAsīr. The lower parts of the valleys that flow seawards furnish good areas for agriculture.

A highland road from al-Ṭāʾif leads to the oasis of al-Khurma (not Khurma, as shown on the map in *EI*², i, 708) on the far side of the range of Ḥaḍn (this range is often given as the limit of al-Ḥidjāz in these parts). Another highland road links al-Ṭāʾif with Turaba (or Taraba), also on the other side of Ḥaḍn, and a third takes a more direct course to Bisha [*q.v.*], beyond which lies Tathlīth at the southeastern end of al-Ḥidjāz. Eastward-bound travellers use tracks from the border areas to al-Riyāḍ, Wādī al-Dawāsir, and other places in Nadjd. Agriculture in the highlands is concentrated in the eastern oases and along the crest of al-Sarāt.

The map in *EI*², i, 891, shows the principal tribes in al-Ḥidjāz in the time of the Prophet, apart from Ḳuraysh of Mecca and al-Aws and al-Khazradj [*qq.v.*] of Medina. These three have long since disappeared from al-Ḥidjāz as important tribal aggregations, their members having been absorbed into the broader Islamic community. The populations of Mecca, Medina, and Djudda have become cosmopolitan; many non-Arabs are resident there, and the importance of tribal connexions is dwindling. Dispersed remnants of Ḳuraysh remain in al-Ḥidjāz, mainly as small tribes or clans claiming descent from the Prophet [see SHARĪF], some of whom have adopted the Bedouin way of life. Ḳuraysh has been the mother of sovereigns and dynasties, producing the Rāshidūn Caliphs, ʿAbd Allāh b. al-Zubayr, the Umayyads, the ʿAbbāsids, and a number of lesser ruling houses in al-Ḥidjāz itself, foremost among them being the Hāshimids [*q.v.*] of Mecca. Other noteworthy survivors of Ḳuraysh in al-Ḥidjāz are Banū Shayba [*q.v.*], the hereditary custodians of the Kaʿba.

The map also does not show the three Jewish tribes of the Medina area, Banū Ḳaynuḳāʿ, Banū Ḳurayẓa, and Banu 'l-Naḍīr [*qq.v.*], all of whom seem to have disappeared leaving no trace.

From the central section of al-Ḥidjāz the tribes of Sulaym and Hilāl [*q.v.*], a branch of Hawāzin, took part in the mass migration of Bedouins to Egypt and on to al-Maghrib in the 5th/11th century. Their place has been occupied by Ḥarb [*q.v.*] as the dominant tribe in the area between the two Holy Cities.

In the vicinity of Mecca and al-Ṭāʾif four ancient tribes still exist: Hudhayl [*q.v.*], from whose ranks sprang an array of poets; Thaḳīf [*q.v.*], the early masters of al-Ṭāʾif; Fahm, the tribe of the brigand bard Taʾabbaṭa Sharran [*q.v.*]; and Saʿd b. Bakr, the tribe that is reported to have introduced the young Muḥammad, the future Prophet, to Bedouin ways while he was in the care of the nurse Ḥalīma [*q.v.*] (the people of Saʿd are today all settled in villages). Among the more modern tribes are the Djaḥādila along the coast south of Djudda and ʿAdwān in the mountains south of al-Ṭāʾif, whose chief, ʿUthmān al-Muḍāʾifī, played a prominent role in the struggle involving the *sharīf* Ghālib of Mecca, the House of Suʿūd, and Muḥammad ʿAlī of Egypt during the early 13th/19th century.

In the northern section of al-Ḥidjāz the tribes of ʿUdhra and Djudhām [*qq.v.*] have vanished, their ranges now being occupied in a general way by al-Ḥuwayṭāt [*q.v.*] towards the coast and Banū ʿAṭiyya in the interior. Muzayna [*q.v.*], Fazāra, and Saʿd Hudhaym have dissolved, but Balī [see *EI*¹ and *EI*², s.v. AL-BALAWĪ] and Djuhayna [see *EI*², Suppl.] remain as flourishing entities based respectively on al-Wadjh and Yanbuʿ.

The tribes shown on the map for the southern section of al-Ḥidjāz have given way to the great confederations of Zahrān and Ghāmid [*qq.v.*] in the highlands and numerous other tribes in their neighbourhood and in Tihāma.

The borderlands between al-Ḥidjāz and Nadjd are occupied by elements of the modern tribes of Muṭayr, ʿUtayba, the Buḳūm, and Subayʿ [*qq.v.*], who have replaced such older tribal groups as Ghaṭafān and Hawāzin [*qq.v.*]. In the far south is the tribe which bears the hoary name of Ḳaḥṭān [*q.v.*].

As the history of al-Ḥidjāz is intimately bound up with the history of Mecca and Medina and the many other places and the various tribes referred to above, it will not be recounted here. Suffice it to say that since the beginning of time al-Ḥidjāz was the official name of an independent polity for less than ten years, under the reign of King al-Ḥusayn b. ʿAlī from 1334/1916 to 1343/1924. Since 1344/1925 the whole of al-Ḥidjāz has belonged to the domains of the House of Suʿūd.

Always a poor land inhabited by a people who chafed under the restraints of law and order, al-Ḥidjāz is now in many ways coming upon brighter times. The rapaciousness of the tribes, which for centuries made the overland pilgrimage a perilous undertaking, has been curbed and intertribal feuding

brought to an end. Impressive improvements in communications by land, sea, and air; closer ties with the outside world; and developments in education, public health, and other fields are bringing an easier life to many of the inhabitants. The revenue received by the Saudi Arabian government from the petroleum industry has freed al-Ḥidjāz from its former dependence on the bounty of Muslims abroad.

Bibliography: See the bibliographies for Djazīrat AL-ʿARAB, MAKKA, and AL-MADĪNA. The topography of al-Ḥidjāz is depicted with a relatively high degree of accuracy on detailed maps (1 : 500,000) published by the United States Geological Survey (1958-62). Toponyms are given in the Latin and Arabic scripts, but the standard of accuracy for these does not match that of the topography. The areas discussed in this article are covered by geographic maps I-200B, I-204B, I-205B, I-210B, I-211B, I-216B, and I-217B in the series entitled "Miscellaneous Geologic Investigations". Corresponding geologic maps are also available. The data on the 1 : 500,000 maps are summarized on a map of the Arabian Peninsula (1 : 2,000,000) issued in separate English and Arabic versions by the USGS (2nd ed., 1963).

(G. RENTZ)

ḤIDJĀZ RAILWAY, one of the two major railway projects (the other being the Baghdād Railway) of the reign of ʿAbd al-Ḥamīd II. Its ostensible purpose was to facilitate the *ḥadjdj* by means of a railway laid between Damascus and the Holy Cities, and its construction was used to further the Pan-Islamic policies and propaganda of the Sultan. It also served the more practical strategic and military purpose of transporting troops to the often turbulent Arabian provinces of the Empire and thus establishing effective control over them. It had been contemplated for a long time. In May 1900, the Sultan, by an Imperial *irāde*, created two Commissions, one supervisory at Istanbul under ʿIzzet Pasha, a Damascene who was a member of the palace staff, and the other executive at Damascus under the *wālī* of Syria. At the same time ʿAbd al-Ḥamīd, himself donating a gift of £ T. 50,000, appealed to Muslims all over the world for subscriptions. But not all contributions were voluntary: civil and military officials of the Empire were ordered to contribute a part of their salary and a special stamp duty was levied on all classes and creeds. The balance sheet generally showed a surplus, and the scheme never suffered from lack of finance. Included in the project was a branch line from Darʿa to Haifa, for which the concession had been granted to a British firm in 1890 but which the firm had failed to complete. The few miles of line actually laid by the firm and the building material were purchased by the Ḥidjāz Commission. Two other branch lines, one from Zarḳāʾ to the phosphate mines near al-Ṣalt and another from Maʿān to ʿAḳaba (later abandoned in 1905, in consequence of the frontier dispute between Egypt and Turkey), were also planned. In 1901, the Italian engineer, La Bella, originally entrusted with the construction work, was replaced by the German engineer, Meissner, under whose direction the construction was completed, though beyond al-ʿUlā only Muslim engineers were employed. The Damascus-Medina line was surveyed by Mukhtār Bey, a Turkish engineer; it generally followed the old pilgrim and caravan road, deviating only occasionally to avoid hills and unsuitable ground. Its construction through a country mostly waterless, vividly described in T. E. Lawrence's *Seven pillars of wisdom* as an area of 'thronging suns' and 'feverish winds' where attacks of dysentery were a frequent curse, was a remarkable feat. Water supply presented the greatest difficulty and was partly overcome either by constructing wells and working them by steam-pumps or windmills or by bringing water in railway-trucks. Considerable engineering difficulties were encountered near ʿAmmān with its steep gradients (where the train while ascending to Kesir had to be taken up in two sections), and near al-ʿAḳaba al-Ḥidjāziyya, where the line reached a height of over 3,700 ft. above sea level and immediately afterwards descended through sharp curves in the wild ravine known as Baṭn al-Ghūl. Construction was made possible through the employment of military labour—three regular *Niẓām* battalions and two specially enrolled battalions raised by conscription—totalling about 5,650 men, who received a special additional allowance for their work. Military labour was confined to simple navvying and the laying of the permanent way, while the more difficult work like constructing the bridges, station buildings, culverts and tunnels was given to Italians, Greeks and Montenegrins.

The railhead reached Zarḳāʾ (203 km. from Damascus) in 1902, Ḳaṭrāna (326 km.) in 1903, Maʿān (459 km.) in 1904, Dhāt al-Ḥadjdj (610 km.) in 1906, al-ʿUlā (993 km.) in 1907, and Medina (1320 km.) in 1908. The Darʿa Haifa section (160 km.) was completed in 1905. The railway cost about £ 4,000,000, including the purchase of rolling-stock and construction of necessary buildings (Consular Reports). Between 1904 and 1917 the Darʿa-Haifa section was extended to Boṣrā, and branch lines from ʿAkkā to Balad al-Shaykh (17 km.), ʿAfūla to Ludd (100 km.), Wādī al-Sūr to al-ʿAwdjāʾ (155 km.), al-Tīn to Bayt Hanum (39 km.) were added (Foreign Office Handbook, *Syria and Palestine*, London 1920, 69). The laying of the main tract (Damascus-Medina, Darʿa-Haifa), which averaged 182 km. a year—a rate of progress not achieved even by the Anatolian Railway—was the quickest in the history of the Ottoman Railways. With the exception of a few carriages which were made at the marine arsenal, the entire material was purchased from abroad; rails and sleepers were supplied by Belgian, German and American firms and the rolling-stock by Belgian and German firms only. The length of trains was usually determined by the weight the engine could haul up the steep gradients of the ʿAmmān and Yarmūk valleys. Originally hand-brakes were used but Hardy's system of automatic brakes was gradually introduced (Consular Reports). The gauge being 1.05 m., the carrying capacity of the railway was never great, and was considerably diminished by the necessity of taking large supplies of wood (originally coal was used) and water on each train. An additional problem was that boiler tubes were often damaged by the minerals in the desert water. In consequence, in 1914, only 15 engines were reported to have been fit for service (*Admiralty Handbook, Arabia*, London 1917, ii, 37-41). Only a small percentage of pilgrims, some 16,000 a year, used the railway (the great majority being Syrians and Kurds), for the bulk of the pilgrim-traffic passed through Djudda. The journey from Damascus to Medina took about 62 hours, at an average speed of 23 km. an hour. The single fare was £ 3.10 sterling for third class passengers (Consular Reports). The main stations were Damascus, Darʿa, Haifa, Ḳaṭrāna, Maʿān, Tabūk, Ḳalʿat al-Muʿaẓẓam, Madāʾin Ṣāliḥ, al-ʿUlā, Hadiyya and Medina. Generally the stations were about 20 kilometres apart and were used as 'garrison forts', for

protecting the line against the constant Bedouin attacks. During 1908, 128 attacks were reported; Bedouins cut telegraph wires, destroyed rails, damaged station buildings and robbed passengers. The railway, 'the unholy Frankish thing' as they called it, threatened their vested interests in the pilgrim traffic in which the Grand Sharif and the *wālī* of Ḥidjāz were also involved (Consular Reports). Their combined hostility, the Young Turk Revolution and the Turco-Italian war brought construction to a standstill and the original plan for railway extension to Mecca could not be carried out. The project for a line between Djudda and Mecca, for which a survey had been made in 1911, was shelved for the same reasons.

The Ḥidjāz railway 'belied the political hopes of its projectors'. Far from being the 'backbone of Ottoman territory in Arabia', it marked its uttermost eastern fringe. Expensive to build and difficult to maintain, it hardly contributed to the economic growth of the peninsula or to any appreciable increase in population along its course (Foreign Office Handbook, *Arabia*, London 1920, 26). However, it proved to be a great boon to the development of Haifa, which prior to the opening of the Darʿa-Haifa line was a small port outshone by its rival Jaffa. With the opening of the railway, Haifa developed steadily, diverting from Beirut the export of grain from the Ḥawrān and the import trade with Damascus and Arabia. In 1907, the total value of Haifa's exports was £ 270,000; in 1912 it increased to £ 340,000; in 1907 its total imports excluding railway material amounted to £ 240,000; in 1912 it grew to £ 375,100 (Admiralty Handbook, *Syria (including Palestine)*, London 1919, 304, 492). The entire railway was in operation until World War I, when Lawrence successfully damaged parts of the section between Maʿān and Medina which since then has remained out of operation. After the war, the ownership of the railway passed to the territories through which it ran, Syria owning Damascus-Darʿa, Darʿa-Samakh; Palestine owning Haifa-Samakh; Transjordan, Darʿa-Maʿān and Saudi Arabia, the Maʿān-Medina sections. (This was confirmed by the arbitral award of 18 April 1925, by the Swiss Professor M. Eugène Borel appointed by the League of Nations). Between 1923-39, Britain and France, the mandatory Powers, made efforts to restore the Maʿān-Medina section (others sections being already in operation) but failed because of Ibn Suʿūd's insistence on treating the railway as a *waḳf* and thereby demanding the proprietorship of the entire line on behalf of the Muslims. When, in January 1923, the problem was discussed at the Lausanne Conference, Britain and France, desiring to recognize the religious character of the railway, declared their readiness for the formation of a Muslim consultative body, representing the four States, to advise on the upkeep of the railway and the improvement of pilgrim conditions. On 6 August 1928, a conference was held at Haifa to tackle the problem of restoring the Maʿān-Medina section but failed because of Ibn Suʿūd's demand for the ownership of those parts of the line which were in mandated territories as a preliminary to the restoration of the railway. In November 1928, the Permanent Mandates Commission received petitions from certain Muslims of Syria and Transjordan to transfer the entire control and operation of the railway to a Muslim Commission (*League of Nations, Permanent Mandates Commission, Minutes of the Fifteenth Session*, 189-90, 262, 279-80). This being refused, the Muslim Congress held at Jerusalem in December 1931 discussed the issue and reiterated the demand made in the earlier petitions. Meanwhile, Ibn Suʿūd had modified his former attitude and was willing to discuss the technical problems of re-opening the railway without pressing his own claim to ownership forthwith, while reserving his rights. In 1938, the British Government, desirous of winning the good-will of Ibn Suʿūd in view of the situation in Palestine, was prepared partly to finance the repairs of the section lying in his territory and proposed the holding of a conference in the following year. The outbreak of the Second World War once again shelved the issue. The section between Maʿān and Medina is being rebuilt (1966) under a contract given to British firms.

AL-ḤIDJR, ancient ruin site in north-western Saudi Arabia (approx. 37° 50′ E. and 26° 45′ N.) near the small settlement of Madāʾin Ṣāliḥ, some 70 miles (110 km.) south-west of Taymā. It has been identified as the Ἔγρα of Strabo and the Hegra of Pliny. The name al-Ḥidjr has fallen into disuse and Madāʾin Ṣāliḥ has been substituted. As used by the Bedouins of the region, the name refers to a flat area, about 3 km. from North to South and 2 km. from East to West, its northernmost point being the land surrounding the Madāʾin Ṣāliḥ station of the Ḥidjāz railway. The plain, in which are located several Bedouin water wells, is surrounded by, and dotted with a number of sandstone cliffs and buttes. The tracks of the Ḥidjāz railway cross the plain from North to South. The quite extensive ruins of the ancient commercial town of al-Ḥidjr are approximately in the centre of the plain, where the railway tracks take a southwesterly direction. A large field of potsherds as well as remains of buildings and part of the town wall testify to the importance of al-Ḥidjr in antiquity. Much more impressive than the ruin field, however, is the large number of structures carved into the cliffs all around the plain, and in particular on the rock called Ḳaṣr al-Bint. Most of these structures are family tombs, with *loculi* generally sunk into the floor, but occasionally carved out of the sides of the main chamber. Many of the tombs have elaborately carved façades, with finely chiselled pillars, lintels and cornices, sometimes ornamented with urns or representations of birds, often topped by a double set of steps ascending from the centre, almost indistinguishable from some of the tombs found in Petra. In the complex of rocks called Djabal Ithlib, at the eastern edge of the plain, is another series of rock carvings consisting mostly of small niches with carved columns, urns, or bird figures, which probably had religious significance. At the entrance to a narrow canyon in Djabal Ithlib is also a very large hall, referred to as Dīwān or Madjlis al-Sulṭān, carved into the sandstone—about 10 metres wide, by 12 metres deep and 8 metres high —which also is considered to have been connected

with religious ceremonies. At the opposite end of the canyon, where the walls separate, there is a long channel carved in the north face of the cliff, which is believed to have been used to bring water into the site.

Vast numbers of inscriptions have been found in al-Ḥidjr: in Arabic, Aramaic, Thamudic, Nabatean, Minaean, Liḥyanite, and even in Hebrew, Greek, and Latin. No archaeological excavations have as yet (1966) been conducted in Madā'in Ṣāliḥ, but from what evidence is available it is held that al-Ḥidjr was second only to Petra in importance during the Nabatean period [see NABAṬ]. The Ḳur'ān relates (VII, 71 ff.) that this region was inhabited by a godless people, the Thamūd [*q.v.*], who carved their houses out of rock. God sent the prophet Ṣāliḥ to exhort them to mend their ways, but the people of Thamūd not only persisted in their idolatry, but also slew the camel which the prophet Ṣāliḥ had miraculously conjured out of a cleft in the rock to give evidence of his divine mission. God then sent an earthquake that destroyed the town and its people. This story was the origin of the name Madā'in Ṣāliḥ (Ṣāliḥ's towns) now given to the area Geologists see no evidence of an earthquake in Madā'in Ṣāliḥ; some believe that, because the Arabic term for earthquake can also be rendered as a "calamity from God", the town and its people may have been destroyed by another sort of disaster, such as a plague. There are other references to al-Ḥidjr, or Madā'in Ṣāliḥ, in Arab legends: one mentions that this is the place where God ordered the patriarch Abraham to abandon Hagar and her son Ishmael, who are both said to be buried here. Another legend relates that when the Prophet Muḥammad was going through the area with his army, on the occasion of the raid on Tābuḳ (9/631), he would not permit his soldiers to refresh themselves at the wells, because this was an accursed spot. After having flourished during the Nabatean period, the site of al-Ḥidjr seems to have declined rapidly. In the first half of the 4th/10th century al-Iṣṭakhrī mentions it as being only a village with few inhabitants.

The first European to visit al-Ḥidjr, and to bring back a well illustrated description of its monuments, was C. M. Doughty. Al-Ḥidjr was later also visited by J. Euting, C. Huber, and (more recently) by H. St. J. B. Philby. The most complete account of the monuments of Madā'in Ṣāliḥ is that of J. A. Jaussen and R. Savignac, who visited the region in 1907.

HIDJRA, latinized as Hegira, the emigration of Muḥammad from Mecca to Medina in September 622. The first stem of the verb, *hadjara*, means "to cut someone off from friendly association" (cf Ḳur'ān IV, 34/38) or "to avoid association with" (LXXIII, 10); there is often an explicit or implicit reference to a sexual relationship, as in the first Ḳur'ānic verse. The third stem *hādjara* refers to a mutual ending of friendly relationships. Thus *hidjra* properly does not mean "flight" as it has been traditionally translated but connotes primarily the breaking of the ties of kinship or association (cf. C. Snouck Hurgronje, *Twee populaire Dwalingen verbeterd*, in *Verspreide Geschriften*, Bonn 1923, i, 297-305, esp. 305; also *LA*, vii, 110-8).

The reason for Muḥammad's leaving Mecca is the loss of support from his clan on the death of Abū Ṭālib (about 619) and his replacement as chief of the clan by Abū Lahab, who had commercial relationships with some of Muḥammad's bitterest opponents. From the fact that after his visit to al-Ṭā'if (in 619 or 620) Muḥammad had to seek the protection (*djiwār*) of the clan of Nawfal before entering Mecca, it is to be inferred that Abū Lahab had refused protection (Ṭabarī, i, 1203 from Ibn Isḥāḳ; in Ibn Hishām, 251, but only as a note by Ibn Hishām himself). After various attempts, including the visit to al-Ṭā'if, to find a suitable sphere for continuing to propagate his religion, Muḥammad negotiated successfully with representatives of all the main Arab clans of Medina, finally concluding an agreement with them at al-ʿAḳaba [*q.v.*] during the pilgrimage of 622 (June-July). This agreement is known as "the pledge of war" (*bayʿat al-ḥarb*), since the men of Medina agreed to defend Muḥammad by force of arms, if necessary. Even before this agreement Muḥammad had begun to encourage his Meccan followers to go to Medina, and in all about seventy went in small parties, until of those willing to go only Abū Bakr, ʿAlī and Muḥammad with their womenfolk were left.

By this time Ḳuraysh are said to have become suspicious, and this was probably the case (though by no means all the stories which became attached to the Hidjra are to be believed). Ibn Isḥāḳ says that at a meeting of most of the clans it was agreed that chosen young men, one from each clan, should simultaneously attack Muḥammad with their swords and kill him; in this way, since so many clans were involved, Hāshim could not exact revenge but would have to be content with blood money. The young men assembled at Muḥammad's house, but he slipped away secretly, leaving ʿAlī in his bed to make them think he was still asleep. Whether this story is accepted or not, Muḥammad must have slipped out of Mecca secretly in the company of Abū Bakr, since a later passage of the Ḳur'ān reminds men of it (IX, 40): "If you do not give him support, still God already supported him when the unbelievers drove him out as the second of two; the two were in the cave, and he was saying to his companion, Do not grieve; God is with us ...". They spent three days in the cave, then accompanied by ʿĀmir b. Fuhayra, a freedman of Abū Bakr, and a nomad as guide, and mounted on two camels, made their way by an unusual route to Medina. Their arrival at Ḳubā' in the south of the oasis of Medina is dated Monday 12 Rabīʿ I by Ibn Isḥāḳ, which in the accepted calendar corresponds to 24 September 622, but is a Friday. The reason for their going into hiding and avoiding the main road is presumably that when Muḥammad left Mecca he would cease to be under the protection of Nawfal, but until he reached Medina he would not come under the protection of his followers there.

In the document sometimes called the Constitution of Medina (Ibn Hishām, 341-4) those who had thus made the *hidjra* with Muḥammad appear as the "emigrants (*muhādjirūn*) of Ḳuraysh", and have collectively a position comparable to that of one of the Arab clans of Medina. As time went on the status of *muhādjir* (fem. *muhādjira*) came to be greatly prized, perhaps sometimes placing people in a higher category in the *dīwān* or stipend-list; and the status

was granted to others than those who had actually journeyed from Mecca to Medina in 622. Members of nomadic tribes could pledge themselves to Muḥammad with the pledge of migration (*bayʿat hid̲j̲ra*) (Ibn Saʿd, iv/2, 66, line 3); they then settled in Medina, presumably as his clients (*mawālī*; cf. al-Buk̲h̲ārī, *Manāḳib*, 2), thus counting as belonging to the "clan" of *muhād̲j̲irūn*. Those who went to Abyssinia about 615 and remained there until fetched to Medina by Muḥammad in 7/628 were counted as having made a *hid̲j̲ra*, *viz*. to Abyssinia; perhaps this was part of the inducement to go to Medina. A consequence was that those who had gone to Abyssinia, returned to Mecca before 622 and then made the *hid̲j̲ra* with Muḥammad could claim two *hid̲j̲ras* (cf. Ibn Saʿd, iv/1, 79 line 8; viii, 205 foot). The tribe of Muzayna was given the status of *muhād̲j̲irūn* without actually settling in Medina (Ibn Saʿd, i/2, 38, 11-4); Aslam and K̲h̲uzāʿa were in a similar position. There is also evidence of other uses of the status of *muhād̲j̲ir* (al-Māwardī, *al-Aḥkām al-sulṭāniyya*, ed. Enger, 220; tr. Fagnan, 270).

Nāfiʿ b. al-Azraḳ, leader of the K̲h̲ārid̲j̲ī sect of the Azāriḳa, held that only those who actively supported him were genuinely Muslims, and spoke of them as *muhād̲j̲irūn*, who made the *hid̲j̲ra* to his camp, which was *dār al-hid̲j̲ra* (al-Ashʿarī, *Maḳālāt*, i, 86-9).

Muslim dates are normally given according to the era of the *hid̲j̲ra* (see TAʾRĪK̲H̲) which may be distinguished by the initials A.H. (= Anno Hegirae). This era does not begin on the date of Muḥammad's arrival at Medina, but on the first day of the lunar year in which that event took place, which is reckoned to coincide with 16 July 622. This result is based on the assumption that intercalary months did not occur after the Hid̲j̲ra, but this is by no means certain (see further TAʾRĪK̲H̲).

HID̲J̲RA [see HID̲J̲AR].

ḤIFẒ [see ḲIRĀʾA and ḲURʾĀN].

ḤIKĀYA (A.), verbal noun of *ḥakā*, originally meaning "to imitate", but which, in consequence of a readily explained semantic evolution, came to acquire the meaning of "to tell, to narrate"; similarly the noun *ḥikāya*, starting from the meaning of "imitation", has come to mean more specifically "mimicry", and finally "tale, narrative, story, legend". In classical Arabic the intensive form *ḥākiya* meant a "mimic" and modern Arabic has adopted the active participle *ḥākⁱⁿ* to translate "gramophone".

The radical *ḥ.k.y./w.* is not represented in the Ḳurʾān but it is found in *ḥadīt̲h̲* with the primary meaning of "to resemble" or "to imitate" (see *LA*, s.v.), a meaning expressed and retained up to the present in the 3rd form, *ḥākā*; this is the only meaning given to it in the classical dictionaries; the *Lisān*, which makes no mention of the meaning of "to relate" for the verb and "story" for the noun, states that both the first and the third forms have a slightly pejorative shade of meaning: "to try to imitate, to ape". The problem is therefore to discover by what process *ḥakā* and *ḥikāya* have acquired the meaning which they now usually have; then we shall try to draw up a classification of stories and to establish the place occupied by those which are now called *ḥikāya* in the Arabic narrative or recreational literature.

I. — Once again al-D̲j̲āḥiẓ provides a convenient starting point. In a well-known passage of the *Bayān* (ed. Hārūn, i, 69-70), he discloses that there existed imitators (*ḥākiya*) able, he says, not only to copy the mannerisms, gestures, the voice and the habits of speech of the different ethnic groups which formed the population of the empire, and more particularly of the capital, but also to reproduce with the most exact fidelity the demeanour and bearing of various types of people, the blind for example, and finally to imitate the calls of wild and domestic animals. Al-D̲j̲āḥiẓ adds that these imitators created real types whom they endowed with all the characteristic traits of the groups that they were mimicking. This gift of imitation, which demands no ordinary power of observation, had long been exploited in the East by professional and amateur entertainers (see J. Horovitz, *Spuren griechischer Mimen in Orient*, Berlin 1905), and we find for example in the "Book of the crown" of the Ps.-D̲j̲āḥiẓ (tr. Pellat, 149), an anecdote of a courtier who managed to restore himself to favour with a Persian king by means of a stratagem based on mimicry of the cries of various animals. A. Mez (*Abulḳâsim, ein bagdâder Sittenbild*, Heidelberg 1902, xv-xvi) has already remarked that the proliferation of mimics and the development of a form of entertainment much favoured by monarchs was certainly helped by the existence of Arabic dialects very different from one another and by the more or less successful attempts made by the non-Arab populations to speak the language of the conquerors. There were often mimics among the entertainers and the jesters who were regularly or occasionally admitted into the presence of the sovereigns, and al-Masʿūdī (*Murūd̲j̲*, viii, 161 ff.; cf. A. Mez, *Renaissance*, 386-7, Eng. tr., 408) confirms this in relating the success with al-Muʿtaḍid of one Ibn al-Mag̲h̲āzilī who mimicked (*yaḥkī, yuḥākī, ḥikāya*) all kinds of people, with an accompanying patter of humorous anecdotes (*nādira*). The *ḥikāya*, in fact, could not be a silent mimicry, and the performer was obliged to compose a little recitation or think up a story to add piquancy to his imitation. Thus one must be well experienced to avoid translating *ḥikāya* in such cases by "story", although one can understand that this term, originally applied solely to the imitation, later covered the gestures and the words, and finally the words alone, especially when authors began to commit to writing the words recited by the *ḥākiyas*. This evolution, further encouraged by the carelessness of writers over the exact use of words, hides to a large extent the fact that the mimics persisted, proof of which, however, is to be found throughout the Middle Ages; A. Mez (*Renaissance*, 399; Sp. tr. 505; the English translation, p. 423, misses the point) mentions one in 415/1024 and it is worthy of note that the performance in question entailed also shadow plays (*k̲h̲ayāl*). Although the modern theatre takes its origins from abroad, its historians have not failed to find antecedents for it precisely in the *ḥikāya* and the *k̲h̲ayāl* (cf. J. Landau, *Studies in Arab theater and cinema*, Philadelphia 1958, 1 ff.); they have also been induced to take into account the existence, in Turkey, of the *meddah* (*maddāḥ* [*q.v.*]) or *mukallit* (*muḳallid*, corresponding exactly to the *ḥākiya*) who related anecdotes while performing amusing imitations and expressive mimicries and even

dressed up in accessories symbolic of the characters that he wished to imitate. This profession seems to have declined in Turkey as in other Muslim countries, particularly in Egypt where, at the beginning of this century, a certain Aḥmad Fahīm al-Fār had formed a company which presented in Cairo plays which were very popular, thanks to his skill in imitating the cries of animals and in reproducing different scenes (see J. Landau, *op. cit.*, 3-4 and bibl. quoted). On the *məddaḥ* of North Africa see MADDĀḤ. We cannot omit to mention here that it is again a derivative from the root *ḥ.k.y./w.*, *ḥkāwāti*, which is used in the East for a teller of tales, whose mimicry is closely related to that of the early *ḥākiya*.

From the 4th/10th century onwards elements of mimicry (see J. Horovitz, *op. cit.*, 21-7) appear in the genre of the *maḳāma* [*q.v.*], which however the literary efforts of Badīʿ al-Zamān and his successors have separated from the *ḥikāya* proper. On the other hand it was at the same period or at the beginning of the 5th/11th century that there appeared a work, unique in Arabic literature, which calls to mind the *maḳāma* while differing from it quite clearly in its technique—the *Ḥikāyat Abi 'l-Ḳāsim al-Baghdādī* of Abu 'l-Muṭahhar al-Azdī (ed. A. Mez, *Abulḳâsim*). It marks a new though brief phase in the semantic evolution of the term *ḥikāya*. In his preface the author reproduces the very passage of al-Djāḥiẓ mentioned above, and this reference justifies in his opinion the creation of a new type of work which would put on the stage a single character, typifying the mentality of the inhabitants of the capital; in his introduction Abu 'l-Muṭahhar promises also a *ḥikāya badawiyya*, a picture of Bedouin manners, which has not survived. In the text which has come down to us, the scene is Baghdād, in a bourgeois milieu. The hero, Abu 'l-Ḳāsim, is a sort of vagrant who entertains this society and reels off jokes and sarcastic remarks in doubtful taste; after the evening meal the revellers sink into a drunken stupor, awaking only at the call of the muezzin; then Abu 'l-Ḳāsim harangues them and castigates their impiety, urging them to repent (cf. F. Gabrieli, in *RSO*, xx (1942), 33-45). The quotation from al-Djāḥiẓ enables us to see the meaning that the author wanted to give to this *Ḥikāya*, which is a realistic presentation of the manners of Baghdād, a picture borrowed from real life, and this is why A. Mez has translated the title of this play by *ein bagdâder Sittenbild*, it being quite impossible to translate *ḥikāya* by "story". In attempting to produce a "type", Abu 'l-Muṭahhar displays a certain advance on al-Djāḥiẓ, who in his studies of manners, notably in the "Misers", merely put together anecdotes without achieving a synthesis.

Nevertheless, this *Ḥikāya* of Abu 'l-Muṭahhar, who does not seem to have been imitated, raises several problems; on the one hand its links with the *maḳāma* are not clear, given that the author, details of whose life are not known, certainly seems to be later than Badīʿ al-Zamān; no doubt he wished to create a distinct genre. On the other hand, D. B. Macdonald (in *EI*[1], art. ḤIKĀYA) considers that the cause of the evolution which ended in the *Ḥikāya* must be sought in the influence of the Aristotelian doctrine of μίμησις in art (Poetics, i-iv); indeed Mattā b. Yūnus, in his translation of the *Poetics*, (ed. Badawī, in *Fann al-shiʿr*, Cairo 1953, 86 et passim) uses the word *ḥikāya* to translate μίμησις (where Badawī in his new translation uses the third form *muḥākāt*); it is certainly possible that the idea of literary art as an "imitation" of life might have produced the genre represented by Abu 'l-Muṭahhar, but the reference to al-Djāḥiẓ suffices to a large extent to explain this innovation which, by its scenic depicting of life, in any case marked a new stage in the development of the previous form of *ḥikāya*.

In the course of the following centuries we sometimes find the verb *ḥakā* with the meaning of "resemble", "imitate", but it is so archaic that the commentators have to explain it, particularly when it appears in the *Maḳāmāt* of al-Ḥarīrī (ed. de Sacy[2], ii, 420) who, moreover, uses it together with *ḥaddatha*, *akhbara*, *rawā*, with the meaning of "tell", "narrate", at the beginning of the *maḳāmāt*. The use of *ḥakā* with the preposition *ʿan* as a synonym for *rawā* "report something on the authority of somebody" had long been current (*e.g.*, al-Djāḥiẓ, *Tarbīʿ*, § 57) and the *Aghānī* (viii, 162) even provides one example of its use with the meaning of "to tell"; it can be deduced from this that the semantic evolution of the verb was more rapid than that of the noun *ḥikāya*, which is found however in al-Ḥuṣrī (*Djamʿ al-djawāhir*, 4) with the meaning of "a reported anecdote" and at least once in al-Ḥarīrī (ed. de Sacy[2], i, 13) to signify the fables (*amthāl*) of *Kalīla wa-Dimna*, while in the same passage the author remarks that his *maḳāmāt* are also *ḥikāyāt*, that is, a reproduction of contemporary life. Thus when *ḥikāya* later comes definitively to mean "tale, story, legend", the word forms a complete contrast with its primary meaning, since that applied exclusively to the present and could not indicate an imitation of the past; we must consequently suppose that before being used of all kinds of stories it went through a phase of meaning a story which was invented, but which was borrowed from real life, or was at least true to life; we have no proof of this, but the *Ḥikāya* of Abu 'l-Muṭahhar provides a sufficiently strong link in the chain, and we shall see that in Morocco *ḥkāya* has retained the meaning of a story which is more or less truthful so long as it is not unlikely.

It should not be forgotten that the term *ḥikāya* belongs also to the terminology of the sciences of tradition and that the expression *ḥakaytu ʿanhu 'l-ḥadītha ḥikāyatan* implies a literal quotation, a verbatim reproduction; in grammar *ḥikāya* means the use in a narrative of the verbal form which would have been used at the time when the event narrated took place; the expression *ḥikāyat ṣawt*, "onomatopoeia", preserves the primitive sense of the term; *ḥikāyat iʿrāb*, or simply *ḥikāya*, means the exact repetition of a word used by a speaker with a vowel of declension no longer appropriate to its function in the new context, *e.g.*, "*raʾaytu Zaydan*"—"*man Zaydan?*" (instead of *Zaydun*), but this *ḥikāya* is not permissible when the noun is followed by a qualifying element (see L. Machuel, *Voc. des principaux termes techniques de la grammaire arabe*, Tunis 1908, 27). The word appears again for example in the *Fihrist* (Cairo ed., 422, 429, 445, etc.) to indicate a textual copy as well as an account of the facts, equivalent here to *riwāya*. The same meanings are found in Ḥamza al-Iṣfahānī (ed. Gottwald, 17, 64, 65, 201) and in the *Aghānī* (notably i, 4), although in this last passage *ḥikāya* is used of the reproduction of words heard, without any claim to verbatim quotation. On the other hand, al-Zamakhsharī (*Asās al-balāgha*, s.v.) says that the Arabs use *ḥikāya* in the sense of "language", which they consider to be an imitation or a representation,

and this explains why in the Syrian and Lebanese dialects the verb *ḥakā* is normally used for "to speak". In Spain, Dozy (*Suppl.* s.v.) notes *ḥikāya* also in the sense of "model", but for him it is already primarily a "story".

Thus it seems that it was from the 8th/14th century onwards that *ḥikāya*, whose primary meaning is now considered archaic, acquired the general meaning of "tale, story, narrative, legend"; it is current in the *Thousand and one nights* and appears in the title of the *Kitāb al-Ḥikāyāt al-ʿadjība wa 'l-akhbār al-gharība* edited by H. Wehr, Damascus-Wiesbaden 1956, from a MS of the beginning of the 8th/14th century; in this last collection however each separate story is still called *ḥadīth*, which is one of those general terms whose technical meaning tends to obscure its other uses. Thus we have here significantly combined three words which are evidently interchangeable: *ḥikāya*, *khabar*, and also *ḥadīth*, which it might be profitable to restore to the group of words used in Arabic for "story".

The Ḳurʾān contains a certain number of narratives which are of a religious character and are to serve for the edification of the Believers; in the Holy Book "to narrate, tell" is expressed by *ḳaṣṣa*, *ḥaddatha*, and *nabbaʾa*, three terms which tend later to become specialized, forming with their derivatives and those of other roots a collection of lexicographic material which deserves examination. In fact the diversity of the words used in the first centuries of Islam would seem to indicate that tales, legends and stories of all kinds were in vogue and that they were distinguished from one another with great precision; on the other hand, each of them through the centuries has undergone an evolution distinctive enough to merit a special article, so that we need not attempt to discuss here the history of all narrative literature:

—*ḳiṣṣa* is used of every kind of story, but this word has been applied particularly, through the use of the verb *ḳaṣṣa* and the noun *ḳaṣaṣ* in the Kurʾān and of the professional *ḳuṣṣaṣ* [see ḲIṢṢA], to edifying tales and stories of the prophets. It is to be noted however that nowadays it has been adopted to mean a novel, its diminutive *uḳṣūṣa*, pl. *aḳāṣīṣ*, being in its turn used for a short story.

—[*usṭūra*] is Ḳurʾānic in the expression *asāṭīr al-awwalīn* "the fables of the Ancients" (vi, 25, viii, 31, xvi, 26/24, xxiii, 85/83, xxv, 6/5, xxvii, 70/68, xlvi, 16/17, lxxxiii, 13), which has a distinctly pejorative connotation when used by unbelievers inclined to compare the revelation with fables and old wives' tales to which no credence should be given. The difficulty which lexicographers have in finding the singular of *asāṭīr* proves that this term, probably deriving from the Greek ἱστορία or the Latin *historia*, had served to form a pejorative plural (cf. *abāṭīl*) and that the corresponding singular had been forgotten or had never existed. Nowadays the term has been reinstated in the singular form *usṭūra* with the particular meaning of legend or myth.

—*nabaʾ* has in the Ḳurʾān the meaning of "news", "announcement" which it has retained until the present day (vi, 66/67, xxvii, 22, xxxviii, 67, xlix, 6, etc.) but it is also found there with the meaning of an edifying tale, a story of a prophet (ix, 71/70, v, 30/27, vi, 34, etc.); in this sense it has been completely replaced by *ḳaṣaṣ* and *ḳiṣṣa*.

—*khabar* [*q.v.*] is also Ḳurʾānic, with a meaning similar to that of *nabaʾ*: "information, an account of someone or something". In later literature this word was to have a great vogue and to be applied to a narrative of historical or biographical character. Although a *khabar* need not necessarily be authentic in the eyes of the critics, in principle the term could not be used of a story presented as fictitious; it appears however parallel with *ḥikāyāt* in the title of the collection, edited by H. Wehr, cited above.

—*sīra* [*q.v.*] is found in the Ḳurʾān only with the meaning of "state" or "appearance", but in literature it has also that of "conduct", "way of life", "biography" (especially of the Prophet); it is the term used for the romantic biographies of famous characters of antiquity or of the Islamic era [see ʿANTAR, BAYBARS, etc.].

—*ḥadīth* [*q.v.*] as used in the Ḳurʾān can be translated by "discourse", but it means also an edifying story (*e.g.*, that of Moses, xx, 8/9, lxxix, 15); on the other hand, *aḥādīth* (plural of *uḥdūtha* rather than of *ḥadīth*) is used of legendary tales (xxiii, 46/44, xxxiv, 18) and, in a general way, of lying talk. Independently of its technical meaning in the science of Tradition, *ḥadīth* is in general use for a story, a tale, a narrative; it is found so used in the *Aghānī*, the *Fihrist*, the stories published by H. Wehr and elsewhere.

—*mathal* [*q.v.*] in the Ḳurʾān is not only an image or a likeness, but also an example (xviii, 52-54, xxv, 35/33, etc.), indeed even a parable (xii, 72, xviii, 43/45). In later usage it is a proverb as well as a story invented to illustrate a doctrine or explain a circumstance of life; it is used to describe the apologues of *Kalīla wa-Dimna* [*q.v.*] and, in general, fables of animals.

Outside the Ḳurʾān we find in literature the following:

—*riwāya* [*q.v.*], oral transmission of a *ḥadīth*, a poem or a story; this term, which retained this connotation in the technical language of tradition, grammar and criticism, was sometimes synonymous with *ḥikāya* in the sense of transmission and account of facts. In modern Arabic it has been adopted to mean a story, a novel, a play or a film.

—*nādira* [*q.v.*] has been used since the early Middle Ages for a witticism, an anecdote, especially a humorous one; the genre of the *nādira* contains enough typical characteristics to justify a separate article. In the article NĀDIRA will be found the rules which narrators were supposed to follow.

—*samar*, pl. *asmār*, is primarily a conversation, an evening gossip, for it comes from a root meaning "to chat in the evening" (cf. Ḳurʾān, xxiii, 69/67), but it is one of Ibn al-Nadīm's favourite words for stories told at an evening gathering and, in general, stories, for, contrary to what Mūsā Sulaymān maintains (*al-Adab al-ḳaṣaṣī*², Beirut 1956, 16-7), stories can in principle be related only at night (see *infra*). It seems that *samar* is used mainly of tales of the supernatural, but also of reports, since Ibn al-Nadīm sometimes refers to authentic *siyar* and *asmār* (*asmār ṣaḥīḥa*, Cairo ed., 424). After *ḥikāya* came to be used in a general sense, *samar* regained its earlier meaning of conversation at an evening gathering.

—*khurāfa*, finally, is said to be the name of an ʿUdhrī who was carried off by demons and who on returning related his adventures; nobody had believed him and the expression *ḥadīth Khurāfa* "story [worthy] of Khurāfa" had acquired the meaning of "entirely fictitious talk", "humbug"; however the Prophet himself vouches for the existence of the character and the authenticity of his statements (see al-Djāḥiẓ, *Ḥayawān*, i, 301, vi, 210; al-Maydānī, s.v. *ḥadīth Khurāfa*). With the dropping of the first element of the expression, and through contamination by the root *kh.r.f.*, "to talk nonsense", *khurāfa* became a common noun applied to a fabulous

story. It is the word used by al-Masʿūdī (*Murūdj*, iv, 89 f.), in a well-known passage on the nucleus of the *Thousand and one nights*, to translate the Persian *afsāna* and indicate stories in general. The *Fihrist*, which makes great use of it, seems to contrast it with *samar*, apparently attributing to it a more fictitious character. This term has remained current until the present with the meaning of "superstition", "fairy tale", "legend". It is interesting to note that in certain Moroccan dialects *ḥkāya* denotes a story more or less truthful, but in any case probable, *khurāfa* a story of marvels and *ḳəṣṣa* a historical account (see L. Brunot, *Textes arabes de Rabat*, ii, 163-4). In Tunisia (see W. Marçais, *Glossaire de Takroûna*, s.v.), we notice *khrāfä* with the meaning of "baseless talk" and *khrâyfi* "boaster, humbug", while *kharrāf* still denotes a story-teller; elsewhere (cf. G. Boris, *Lexique du parler arabe des Marazig*, Paris 1958, s.v.), *khoṛrāfa* is a story and *ḥkāyä* a short tale or anecdote.

II. — It would perhaps be rash to claim that the early Arabs, preoccupied solely with poetry and rhetoric, paid no attention to the tales of marvels and to the legends which are the common heritage of primitive man, but the brief semantic study given above certainly does not prove that they took a great interest in them, for, in fact, only the plural *asāṭīr*, and that a probable borrowing from a foreign language, is attested in the Ḳurʾān. Further, it was by Persian legends learned at al-Ḥīra that al-Naḍr b. al-Ḥārith [*q.v.*] replied to the stories in the Holy Book, treating them as *asāṭīr al-awwalīn* (see Ibn Hishām, *Sīra*, Cairo ed. 1375/1955, i, 300), which caused him, it is said, to be alluded to personally in some verses (notably lxviii, 15). In fact, these edifying stories introduced in the Ḳurʾān would seem to show that the early Arabs were familiar with stories and legends, but it is probable that the sanctification of Ḳurʾānic statements which were held to be historical truths, particularly on things concerning the annilated peoples of ʿĀd, Thamūd, etc., resulted in a certain mistrust of narrative literature or at least of that part of it which could not immediately be Islamicized to illustrate the Ḳurʾān and edify the faithful.

It is certain that, generally speaking, where the pre-Islamic period is concerned, the sphere of the legend is not distinguished from that of history and the historians of the first centuries did not hesitate to reproduce, quite uncritically, ideas originating in folklore which entered the stream of universal history [see TAʾRĪKH]; an examination of the Ḳurʾānic vocabulary, however, reveals a dividing line between that which is to be considered in any case as authentic and contributing to the edification of the Muslims: *ḥadīth*, *ḳaṣaṣ* (or *ḳiṣṣa*), *khabar*, *nabaʾ* and *mathal*, and that which is a fictitious story, useless, even dangerous and in any case unworthy of a Believer: *asāṭīr* and its synonyms: *asmār*, *khurāfāt*, which were later to be comprehended under the name *ḥikāyāt*.

A part of the materials constituting the narrative literature seems to have been reduced to writing as early as the 1st/7th century, and the names of ʿAbīd/ʿUbayd b. Sharya [*q.v.*], Wahb b. Munabbih [*q.v.*] and of the *Kitāb al-Tīdjān* immediately spring to mind; it is interesting that these were legends of southern Arabia that could be turned to account by Islam, in the same way as the stories of a Kaʿb al-Aḥbār [*q.v.*]. Other secular data received an Islamic flavour through being associated with famous people who were above suspicion, such as ʿAbd Allāh b. ʿAbbās to whom is attributed for example the legend about the *ʿanḳāʾ* [*q.v.*]. From the 2nd/8th century the situation changes in the sense that the searchers are led by their boundless zeal and curiosity to collect everything which they find, no longer distinguishing between ideas which have a religious or truly scientific value and what is merely secular literature. It seems to have been at this time that there were collected love stories, of which the *Fihrist* provides a very full list [see ʿISHḲ], tales intended to explain proverbs [see MATHAL], historical traditions [see AYYĀM AL-ʿARAB, TAʾRĪKH], stories of animals and aetiological legends [see ḤAYAWĀN], witty stories [see NĀDIRA] and probably also tales of the supernatural, since certain of these found in the later collections are of Arab origin. At the same time the centre of the Islamic world was inundated with translations from Persian which provided scholars with elements deriving from Persia and India [see especially BILAWHAR AND YŪDĀSAF], while translations from Greek also brought their share of mythological material. Thus, in the 3rd/9th century there was available to the public a very rich narrative literature which in later centuries was to be further enriched by various types of gestes which it would be an exaggeration to call epics [see ḤAMĀSA, SĪRA].

Mūsā Sulaymān, in his study of narrative literature (*al-Adab al-ḳaṣaṣī*) already cited and his anthology (*Yuḥkā ʿan al-ʿArab*², Beirut 1955-6, 2 vols.) which illustrates it, covering a wider field than that outlined above, draws up a classification which deserves mention. In his view this literature is divided into two broad categories: 1. the borrowed *ḳaṣaṣ*, represented chiefly by the *Thousand and one nights* and *Kalīla wa-Dimna*; 2. the genuinely Arab *ḳaṣaṣ* which can be subdivided into: historical (*akhbārī*: stories concerning musicians and singers, tales of love, traditions about *fakhr*, *hidjāʾ*, etc.); heroic (*buṭūlī*: ʿAntar, Bakr and Taghlib, al-Barrāḳ, etc.); religious (*dīnī*: *ḳiṣaṣ al-anbiyāʾ*, etc.); lexicographical (*lughawī*: the *maḳāmāt*); philosophical (*al-Tawābiʿ wa 'l-zawābiʿ* of Ibn Shuhayd, the *Risālat al-Ghufrān* of al-Maʿarrī, *Ḥayy b. Yaḳẓān* of Ibn al-Ṭufayl, *al-Ṣādiḥ wa 'l-bāghim* of Ibn al-Habbāriyya). From this classification it appears that for one thing the author does not take account of all the relevant literature, that for another some of his interpretations are mistaken (particularly about Ibn Shuhayd), and finally that he denies that the Arabs possessed any original stories of the supernatural. It is best therefore to refer to the essential source for information on this literature in the first centuries of Islam, the *Fihrist* of Ibn al-Nadīm, who gives to the first *fann* of his eighth *maḳāla* the title: *akhbār al-musāmirīn wa 'l-mukharrifīn wa-asmāʾ al-kutub al-muṣannafa fi 'l-asmār wa 'l-khurāfāt* (the copyist uses at this very point the expression *ḥikāyat khaṭṭ al-muṣannif* to indicate that he is copying verbatim); he first lists there the works concerning the *asmār* and the *khurāfāt*, treating separately the translations of texts of Persian, Indian and Greek origin; he includes in this *fann* traditions about Babylon and the Arsacids, then the love tales, the stories of the supernatural in which appear djinns [*q.v.*] who have amorous dealings with humans [see also GHŪL], and finally accounts of the wonders of the sea [see ʿADJĀʾIB]. Ibn al-Nadīm states that the first to compile collections of *khurāfāt* were the Persians of the first period, *i.e.*, the Kayānids, and adds that this material went on growing until the Sāsānids;

later these tales were translated into Arabic, and Arabs added stories of their own. It is at this point that Ibn al-Nadīm speaks of the *hazār afsān* which were to form the nucleus of the *Thousand and one nights* [see ALF LAYLA WA-LAYLA] and of the attempt of Djahshiyārī [*q.v.*] to collect a thousand tales (*samar*)—Arabic, Persian, Greek, etc.—by calling upon story-tellers (*musāmir*) and making use of written collections, but retaining only those which seemed to him the most interesting.

M. F. Ghazi (*La littérature d'imagination en arabe du II*ᵉ*/VIII*ᵉ *au V*ᵉ*/XI*ᵉ *siècle*, in *Arabica*, iv/2 (1957), 164-78) has tried to make use of these pages of the *Fihrist*, but his work is not free from errors and the result is rather disappointing, for the titles listed by Ibn al-Nadīm are not established with certainty and are liable to give rise to erroneous interpretations. It is evident that the great majority of the collections mentioned have not survived, having either been absorbed into the *Thousand and one nights* or relapsed into oral tradition where they have become more or less part of the folklore of the various Arabic-speaking countries. Here we have something rather strange. In the first half of the 4th/10th century, Ḥamza al-Iṣfahānī (ed. Gottwald, 41-2) declared that about 70 books of entertainment were very much read in his time; some decades later, Ibn al-Nadīm gives a still longer list of them, asserting that the *asmār* and the *khurāfāt* were very popular in the ʿAbbāsid period and especially under al-Muḳtadir, which encouraged the bookseller-copyists to reproduce them and perhaps themselves to collect new tales. A. Mez (*Renaissance*, 242-3; Eng. tr. 253; Sp. tr., 311-2) attributes this infatuation for narrative literature, and for stories which a critic as experienced and informed as Ibn al-Nadīm considers feeble and lacking in vigour, to the decline of pure Arab taste and the vogue for things foreign; as this decline increased we would expect to find a continuing success for this form of narrative literature; yet, although the works of *adab* [*q.v.*] continue to include short anecdotes and although collections for entertainment are still composed in great numbers by little-known *udabāʾ* [see NĀDIRA], complete disdain is evinced for the tales of the supernatural. We know what has happened to the *Thousand and one nights*, which Arab scholars have never been able to consider worthy of the slightest esteem, seeing in it merely a trivial diversion incompatible with the tastes which a true Believer should profess. In other words this masterpiece of world literature, which was revealed to the Arabs themselves by orientalists, has remained foreign to Arab literature even though, while of foreign origin, it contains authentic ʿIrāḳī and Egyptian elements (see N. Elisséeff, *Thèmes et motifs des Mille et une nuits*, Beirut 1949, 47 ff.). The disdain felt by the educated classes for stories amply explains why Arab folklore has developed in a completely different way from that of other parts of the world, and why the phase of its being handed on in written form, in the golden age of Arabic culture, was followed by a return to an exclusively oral tradition, even though chapbooks, hawked in the markets, continue to circulate at popular levels. It is also remarkable that myths and legends never inspired Arabic writers, while a Firdawsī, although he had no more direct access than they to the original tradition, succeeded in employing materials equally well-known to the Arabs to create so superb an epic as the *Shāhnāma*. We must on the other hand refer here to the influence exercised in the West by the so-called Arabic stories, and we shall merely recall that, in imitation of Galland, several orientalists collected in their turn stories generally drawn from literary works or from popular works which echoed them: Pétis de la Croix and his *Mille et un jours*, Paris 1830, Gaudefroy-Demombynes and *Les cent et une nuits*, Paris 1911, and above all R. Basset, the eminent folklorist who in his *Mille et un contes, récits et légendes arabes*, Paris 1924-6, has made such instructive comparisons.

III. — To be fair, it must be said that some modern Arabic authors are trying hesitantly to revive the ancient themes in order to make of them truly literary works, but it is quite certain that, on the whole, folklore hardly inspires contemporary writers, who are more interested in imitating the West, neglecting this traditional material. The choice would not in fact be an easy one, for the world of today is more attracted by the *ḥikāya* in the sense in which Abu 'l-Muṭahhar al-Azdī understood it than by the myths of antiquity, and one even has the impression that the ordinary people have less and less the time to listen to the stories and tales which delighted their ancestors—at least when they did not consider it beneath their dignity to be interested in them.

The observation of present or recent conditions in North Africa and elsewhere gives us an idea of what may have occurred formerly in Arab countries, and R. Blachère (in *Semitica*, vi (1956), 83-4) has put forward the hypothesis that the Ḳurʾānic term *asāṭīr* was applied to stories which were told by men, while *khurāfāt* indicated those reserved for women. This is quite possible, but the two spheres are not everywhere so neatly distinguished as the observations of H. Basset (*Essai sur la littérature des Berbères*, Algiers 1920, *passim*), which inspired R. Blachère's interesting hypothesis, would lead us to believe. Although, in general, adult men affect to disdain old wives' tales, they are often prepared to produce from the depths of their memory stories heard in their youth and ostensibly forgotten. There are some who do not refuse to yield to the insistence of the researchers and to relate, even in the day-time, fantastic or supernatural tales; thus the author has been able to collect, both in North Africa and in the Middle East, examples from friendly storytellers, whose memories, however, were sometimes at fault. But such a search does not reproduce normal conditions and it can be said that traditionally two fields are to be distinguished: the tales of the supernatural, the ancient *asmār* which correspond to the German *Hausmärchen*, are told by women, especially old women, while the heroic tales and historical legends are the province of men.

Women famous as story-tellers were booked long in advance and gathered round them each evening, after supper, in a village- or town-house, an audience consisting especially of women and children; the ceremony took place preferably in winter, but in certain hot regions gatherings of this sort were suited to the coolness of the long summer evenings. Tradition forbade story-telling during the day, perhaps because everyone had work to do, but primarily because to tell a story is an act which savours of magic; according to popular belief, any infringement of this prohibition was penalized by a supernatural punishment, the nature of which varied from place to place; in one place, the woman who told stories during the day would give birth to dwarfs or monsters, in another her offspring would be killed by wild beasts, or she would be threatened with having children with ringworm, unless by

chance one could, as was believed at Fās, count eleven beams in the ceiling. Several ways existed of escaping the punishment, but in most cases the prohibition was respected, for the story-teller felt that she was embarking on a dangerous action. It is true that every story had to begin with a sacred formula intended to create the right atmosphere and to attract the attention of the audience, but it seems that this formula was in essence propitiatory. The *kān mā kān* of the male and female story-tellers of the East is only a survival without any apparent meaning, but elsewhere we discover more explicit formulas, whether they have retained their pagan character or become islamicized; the following is one which is given by M. El-Fasi and E. Dermenghem, *Contes fasis*, 16: *kān ḥəttā kān, ḥəttā kān ḷḷāh f-kull mkān, mā ta<u>kh</u>wa mənno lā ʾarḍ wā-lā mkān, ḥəttā kān l-ḥbəḳ wə-s-sūsān f-əḥjer ən-nbi ʿalīh əṣ-ṣālvtū w-əs-sālām, ḥəttā kān* ... ('there was and there was Allāh in every place; no earth and no place is empty of Him; and there was basil and lily in the lap of the Prophet—upon him be prayer and greeting; and there was ...'). In the same way, when the story was finished, a formula at the end repelled evil influences, if need be, as in Kabylia, making them pass into the body of an animal. In general all these formulas tend to become reduced in length without in the least losing their prophylactic character; in Berber for example, the story-teller says at least "Our tale is finished, but the wheat and the barley are not finished". And even in such an abbreviated formula as this: *tūtā tūtā, <u>kh</u>əḷṣət 'l-ḥaddūtā*, "mulberry, mulberry, end of our story", heard in Syria, something of magic survives.

As for men, R. Le Tourneau (*Fès*, 555-6) has observed the story-tellers (*fdāwi*, pl. *fdāwiya* or *fdāwa*) of Fās who "intoned to the rhythm of a square tambourine the deeds of Arabs of former times; the majority of the listeners (about fifty in winter, up to two hundred in summer) knew the stories already and rebuked the narrator or prompted him if by chance his memory failed him, but they took great pleasure in hearing for the hundredth time the story of journeys, of single combats, of deeds of treachery and daring, and allowed themselves to be lulled or moved by the endless repetition of stereotyped formulas". The same writer relates that a shoemaker famed for his talent as a story-teller would take up his place on a chosen site between the *ʿaṣr* and *ma<u>gh</u>rib* prayers and "recited day after day a long story which he was able to make lively and sometimes poignant". His repertoire however consisted of only three stories: *ʿAntar*, which lasted a year, the story of the Ismāʿīlīs (*i.e.*, the Fāṭimids), which lasted six months, and the romance of Sayf <u>Dh</u>u 'l-Yasal (*sic* = Yazan), which lasted four months. At the end of the session, a member of the audience made a collection and handed it over to the story-teller.

It is not possible within the scope of this brief article to study the popular tales which are gathered together wholesale in the cycle of the *Thousand and one nights* on the one hand and the great romances of chivalry on the other, and it is desirable that those collected up to now and those still to be collected should be submitted to an investigation at least as far-reaching as that which H. Basset has devoted to the Berber field; such a study would certainly bring to light new sources and perhaps lead to a solution of the numerous problems which remain unanswered. Mention should be made of the recent work of Mia I. Gerhardt, *The art of story-telling, a literary study of the Thousand and One Nights*, Leiden 1963.

Fischer, *Die demonstrativen Bildungen neuarabischen Dialekte*, The Hague 1959, is almost exhaustive and consequently contains all the stories in Arabic dialects which have been published.—For the Berber field, see BERBERS, vi.

(CH. PELLAT)

ii. — PERSIAN LITERATURE

The term *ḥikāya* is regarded here as referring in classical Persian literature to the short prose story, which cannot be said to form a true literary genre in Persian tradition, since *ḥikāyāt* are inserted in many other types of literary composition (history, mystic writings, satire, etc.) in addition to the collections of *ḥikāyāt* properly so-called. Thus the *ḥikāya* is of different types according to the various works in which it is used: hence we have the imaginary fable, the allegorical moral tale, the semi-realistic anecdote, the mystic "*fioretto*", etc., and each of these sub-groups of *ḥikāyāt* may have a different origin and history.

One type of *ḥikāya* of particular importance is the fable of Indian origin. There is no doubt at all that this is the origin of the *Kalīla wa-Dimna* [*q.v.*] collection which, starting from the Arabic translation made by Ibn al-Muḳaffaʿ [*q.v.*] (d. *ca.* 142/759) from the Pahlavi version of an Indian original, appeared in many neo-Persian translations, both in verse and in prose. Already at an early date all these translations were superseded by that of Abu 'l-Maʿālī Naṣr Allāh b. ʿAbd al-Ḥamīd (538/1143-4), already in a rather flowery style, but considerably exceeded in ornamentation by the later recension by Ḥusayn Wāʿiẓ Kā<u>sh</u>ifī (d. 910/1504-5) under the title of *Anwār-i Suhaylī* (The Lights of Canopus). Yet another imitation of *Kalīla wa-Dimna* was the *Marzbān-nāma* of the prince Marzbān b. Rustam b. <u>Sh</u>ahriyār, originally written in the 5th/11th century in the dialect of Ṭabaristān and re-written in ornate neo-Persian in the *Marzbān-nāma* of Saʿd al-Dīn of

Varāmīn (622/1225) and in the *Rawḍat al-ʿuḳūl* of Muḥammad b. Ghāzī of Malatya (end of the 7th/13th century).

Other cycles of very popular fables also had remote Indian origins and underwent developments similar to those of *Kalīla wa-Dimna*. Notable among them were the *Sindbād-nāma* (Book of Sindbād, which should not be confused with Sindbād the Sailor of the Thousand and One Nights; this is the framework story of the Forty Viziers or of the Seven Viziers), the *Bakhtiyār-nāma*, similar to the preceding work (Book of the Ten Viziers), the *Ṭūṭī-nāma* (Book of the Parrot), all of them moralizing works, whereas the *Ḳiṣaṣ-i čahār darwīsh* (Stories of the Four Dervishes) are pure fiction. All of these texts were re-written several times by various authors in prose and in verse.

The ornamental style which, in these stories, varies with the contents, becomes purely an aesthetic sport in one literary genre which might be classed as *ḥikāya*, namely the *maḳāma* [*q.v.*]; the first *maḳāmāt* in Persian, those of Ḥamīd al-Dīn (d. 559/1164), are simply translations from the Arabic of Badīʿ al-Zamān al-Hamadhānī, who was however himself of Persian birth.

The task of collecting as many *ḥikāyāt* as possible and classifying them under various different rubrics was fulfilled in the enormous collection of Muḥammad ʿAwfī [see ʿAWFĪ], *Djawāmiʿ al-ḥikāyāt wa-lawāmiʿ al-riwāyāt*, which collects together more than 2,000 stories and anecdotes (first half of the 7th/13th century); it was inspired by such Arabic works as *al-Faradj baʿd al-shidda* of al-Tanūkhī (d. 384/994), which was re-written in Persian by ʿAwfī himself and others.

Anecdotes of the humorous type were collected also by ʿUbayd-i Zākānī (8th/14th century), whose *Risāla-yi Dilgushā* is merely a collection of *ḥikāyāt*, often obscene, in Arabic and in Persian.

The unequalled master of the *ḥikāya* is Saʿdī [*q.v.*] in his *Gulistān* (656/1258), which is basically only a collection of light moralizing *ḥikāyāt* in prose interspersed with verse, divided according to subject; it has been imitated more than once, among the best of the imitations being the *Bahāristān* of Djāmī (d. 898/1492) and the *Kitāb-i Parīshān* of Ḳāʾānī (d. 1270/1854).

This brief survey excludes the "novel", which, although it possesses some of its characteristics, cannot be classed as *ḥikāya*. The novel in its modern sense is practically non-existent in the classical literature, where its place is taken by long fabulous stories (*dāstān*) (generally not very highly thought of by the classical historians of literature), the earliest example of which is the *Samak ʿAyār* (585/1189) of Ṣadaḳa b. Abi 'l-Ḳāsim Shīrāzī, full of the imaginary adventures of cavaliers who aspire to the hand of the princess, daughter of the emperor of China. This romance was followed by many others, some of them midway between learned and popular literature, which relate the extraordinary adventures of various heroes (*e.g.*, of Amīr Ḥamza [see ḤAMZA], uncle of the Prophet) and which were particularly popular in India.

It is possible to consider as collections of *ḥikāyāt* also the *Tadhkirat al-awliyāʾ* or semi-legendary "biographies" of saints, the most famous of which, in Persia, is that of Farīd al-Dīn ʿAṭṭār (6th/12th century).

What all this heterogeneous material has in common is primarily a matter of style: the narrative style of the short tale, which in general appears in two main forms, the straightforward and the ornate. In the first case the narrative is advanced by extremely simple stylistic and syntactical means, with very rare use of subordinate clauses, or none at all, in a series of statements expressed in brief sentences which follow each other without any links. The attempts to make such a disjointed narrative more "complex" generally took the form of an elaboration in ornamentation. If the rhetorical ornaments are removed however, the basic style is found to be straightforward. The development is not necessarily from the plain to the ornate and the two styles may be found together in works of the same period and sometimes of the same author.

Thus, on the eve of the modern era, Persian narrative art found itself somewhat at a disadvantage when faced with the powerful influence of European novels and short stories, which in the West had a long history behind them: among the most difficult and fascinating tasks of modern Persian writers is to create a complex realism which surpasses the earlier realism attempted in the *ḥikāyāt* and a narrative style which, rejecting the use of complicated ornament, achieves a simplicity which is not merely straightforward narration; and they have sometimes produced some noteworthy results in this direction (*e.g.*, Djamālzāda, Ṣādiḳ Hidāyat, Ṣādiḳ Čūbak, etc.).

iii. — THE NARRATIVE GENRES OF TURKISH LITERATURE AND FOLKLORE.

The word *ḥikâye*, attested also in the form *ḥikâyet* (< Ar. *ḥikāya*) in Ottoman texts, means, when it is used with the auxiliary verb *et-*, "to relate", "to narrate". It means a story, when it is accompanied by simple or compound verbs such as *de-*, *söyle-*: "to say", *naḳlet-* : "to relate". As a generic term, the word has not had, in the Turkish of Turkey, any specific sense, but has indicated each and all of the narrative genres : tale (*masal* < Ar. *mathal*), legend (*menḳabe, efsâne*), anecdote (*laṭīfe, fıḳra*), story, novel, romance. It is only in recent scientific terminology that it has acquired the value of a precise technical term to indicate three clearly defined genres: in oral tradition, a lengthy story in prose alternating with verse passages (the *ḥikâye* of the *ʿâshıḳ*, see below), or a mimed story in prose performed by professional story-tellers (the *ḥikâye* of the *meddāḥs* [*q.v.*]; in modern written literature, a novel (see below).

In the modern Turkish of Turkey, the word *efsane* (< P. *afsāna*) is used as a technical term to mean a legend; but, in the current language, past as well as present, it can have, with the words *masal* (< Ar. *mathal*) and *hurafe* (< Ar. *khurāfa*), the pejorative sense of "a completely fantastic story, fabricated or superstitious".

There should also be mentioned the uses, which nowadays have completely disappeared, of certain other terms. First the words compounded with *nâme* (Pers. *nāma*) added to the name of the hero or to the word denoting the main theme, to indicate large scale narrative works, usually in verse but sometimes also in prose : *Iskender-nâme* (the "Romance of Alexander"), *Ḥamza-nâme* (the "Geste of Ḥamza"), *Ghazawât-nâme* ("Stories of holy wars"), *Fetḥ-nâme* ("Stories of conquest"), *Wilâyet-nâme* ("Hagiography"), *Oghuz-nâme* ("Stories about the Oghuz"),

etc. This latter term has, in the Book of Dede Ḳorḳut, which, in the recension which has survived, was probably compiled in the 9th/15th century (see P.N. Boratav, *Dede Korkut hikâyelerindeki tarihî olaylar ve kitabın te'lif tarihi*, in *TM*, xiii (1958), 31-62), the meaning of "epic episode composed and declaimed in honour of the main hero of the adventures related". In the same work are found also two terms, *boy* and *soy*, used together with the verbs which are derived from them : *boy boyla-*, *soy soyla-*; the former has the meaning of "to relate, in the epic style, a story which describes the memorable deeds of a hero", the second "to declaim (or sing or chant) the verse sections of an epic narrative". The term *boy* is, in addition, used in the titles of the twelve episodes found in one of the two manuscripts (that of Dresden, which is nearest to the lost original) of the Book of Dede Ḳorḳut; it accompanies the name of the hero and means simply "episode" : *Bamsı Beyrek boyı*, "Episode of Bamsı Beyrek"; *Basat Depegözi öldürdügi boy*, "Episode [in which is related how] Basat killed Depegöz", etc. *Boy* and *soy*, synonyms, mean strictly "tribe", "clan", "family"; they were probably originally used to denote the stories and songs recounting the memorable deeds of a clan (cf. the term *toy*, "feast", "banquet", "wedding ceremonies", used also for "wedding song"; see P. N. Boratav, *Halk hikâyeleri ve halk hikâyeciliği*, Ankara 1946, 52, 117, 120, 294-7). In the sense of "episode", the word *boy* has been replaced in the later epic narrative tradition of eastern Anatolia by the word *ḳol* ("arm", but also "branch", "detachment") ; it denotes an episode in the great narrative corpus of the adventures of the noble bandit Köroghlu : *Demirdjioghlu ḳolu*, *Ayvaz ḳolu*, etc. In the second, and more Ottomanized, manuscript (that of the Vatican) of the Book of Dede Ḳorḳut, the term *boy* is replaced in the titles by *hiḳâyet* : *Ḥikâyet-i Bamsı Baryik*, etc.; even the title of the book (*Kitâb-i Dedem Ḳorḳut* in the Dresden manuscript) is, in that of the Vatican: *Ḥikâyet-i Oghuznâme-i Kazan Beg ve ghayrih*.

The terms *ḳiṣṣa* (pl. *ḳıṣaṣ*) and *menâḳib* (sing. *menḳabe*) have been used in the same sense as the words formed with *-nâme*, but more often for prose works dealing with epico-religious themes; from the first is derived the word *ḳıṣṣakhʷân*, the equivalent of the Arabic *ḳaṣṣâṣ*, used of the teller (or "reader") of stories about the pre-Islamic prophets, the champions of Islam or the great mystic figures: *Ḳıṣaṣ-i enbiyâ*, *Menâḳib-i ghazawât-i Seyyid Baṭṭâl*, *Menâḳib-i Ḥâdji Bektash*, etc.; *siyer* (sing. *sîret*; Ar. *sîra*, pl. *siyar*) is the term reserved for stories of the life of the Prophet Muḥammad. As an example of technical terms used for specific genres of narrative literature there should also be mentioned *maḳtal* which means, in the tradition of Shīʿī circles, the account of the death of Ḥusayn at Karbalāʾ.

From about the beginning of the 10th/16th century, there spread through the territories of the Ottoman empire a tradition of popular poetry, that of the *ʿâshıḳs* [*q.v.*] (literally "lovers"). These poet-singers of the same type as the troubadours of the mediaeval West were the successors of the *ozan* ("bards") of Oghuz poetic tradition. They composed and disseminated lyric poetry but they also carried on the epic tradition. They transformed the heroic epic into a new genre called *ḥikâye*. This *ḥikâye* retained certained formal and thematic elements from the ancient tradition, but it was enriched either by borrowings from foreign literatures or by original contributions from the new social conditions. This narrative tradition has survived until the present day; it is still represented by story-teller singers in the provinces of Kars, Artvin and Erzurum in eastern Turkey. The *ḥikâyes* with heroic themes such as those of the Köroghlu cycle and the *ḥikâyes* like those of Kerem, of Gharīb, etc. which tell love stories have the same formal and stylistic patterns : the narrative and the ordinary dialogues are in prose; the "pathetic" monologues and dialogues, in verse, are intercalated in the narrative, sung to the accompaniment of the *saz* (an instrument of the lute type) by the *ʿâshıḳ*-storyteller himself. A number of these stories are romanticized biographies of *ʿâshıḳs* who have really existed, but even in this case a certain measure of the supernatural and the legendary is introduced. Nevertheless, in comparison with the tales of marvels, the romances of chivalry (such as the *Geste* of Baṭṭâl) and the hagiographies, the *ḥikâye* shows a clear tendency to realism. In the biographies of the *ʿâshıḳs*, the poems inserted are from the works of the poet in question, reproduced more or less faithfully. The *ḥikâyes* which do not belong to this category of "romantic biographies" are, in both the prose and the poetry section, the works of *ʿâshıḳ*-"writers" who, starting with themes drawn from oral or written sources, and sometimes even from some event in their immediate circle, develop them according to the rules and conventions of tradition, inserting poems of their own composition at the points of the narrative which seem most suitable. The various processes and the successive phases of such a production—in part improvised while it is being recited—have been observed among *ʿâshıḳ*-"writers" (= *muṣannif*) of the present day (see P. N. Boratav, *op. cit.*, 130-86, and more particularly 158-63).

A number of *ḥikâyes* in the Anatolian repertoire are common to other Turkish-speaking peoples; to mention only a few examples : the episode of Beyrek in the Book of Dede Ḳorḳut has spread beyond the Oghuz area among the Karakalpaks, the Özbeks, the Kazakhs, and the Altais; various episodes from the Köroghlu cycle exist in Ādharbaydjānī, Türkmen, Özbek and Tobol Tatar versions (and even non-Turkish versions : Armenian, Georgian, Kurdish, Tādjik) ; the romantic biographies of the *ʿâshıḳs* such as Kerem and Gharīb are known in Ādharbaydjān and Turkmenistan, and the romance of the loves of Ṭāhir and Zühre in these two countries and in Özbekistan (see P. N. Boratav, *L'épopée et la "ḥikâye"*, in *Philologiae Turcicae Fundamenta*, ii, Wiesbaden 1964, 11-44).

The *ḥikâyes* vary in length. Those of Köroghlu form a vast cycle in which each episode (*ḳol*) is related independently and is in general of the same length as a full-scale *ḥikâye*. When recited by a skilled story-teller a lengthy *ḥikâye* may entertain his audience for several sessions (evenings), each lasting 3 or 4 hours. If in addition he is encouraged by an enthusiastic audience of connoisseurs, a good story-teller can always find a pretext to prolong his recital as much as he wishes, filling it out artificially with non-narrative additions: musical sections (instrumental and vocal) added at the beginning and in the middle of the story (when "pauses" are reached), anecdotes and short tales (= *ḳaravelli*) introduced at random, etc.; the sessions may also be prolonged by interventions sung by talented members of the audience. The shorter *ḥikâyes* (lasting one or two hours) are known as *serküshte* (< *sergüzesht*) or *ḳaṣîde*.

There are some written recensions of the *ḥikâyes* of the *ʿâshıḳs*. Some 19th century manuscripts exist (see P. N. Boratav, *op. cit.*, 206-10); also in the 19th

century, some lithographed editions were produced, very probably baseed on manuscripts; however, editions based on oral versions are also possible, without the intervention of copies circulating in manuscript : some quite recent editions (in Latin characters, hence printed since 1928) produced by this process are known (see P. N. Boratav, *op. cit.*, 212-3).

There should also be mentioned the classical themes such as Leylā and Medjnūn, Ferhād and Shīrīn, etc., which, without being completely assimilated to the *ḥikāyes*, particularly in their verse sections, have nevertheless become part of the repertoire of popular *ḥikāyes* which are distributed in the form of books sold in the streets by pedlars, first in lithographed then in printed form.

The classics of Arabo-Persian narrative prose such as *Kalīla wa Dimna*, *Ṭūṭīnāme*, and the Thousand and One Nights have, since the beginnings of the Islamic Turkish literatures, existed in written recensions recorded in the various Turkish-speaking areas. The culmination of this literature, in the Ottoman area, at the end of the 18th century, is the famous collection *Mukhāyyelāt-ı ledünn-i ilāhī* of ʿAzīz Efendi (see A. Tietze, in *Oriens*, i (1948), 248 f.). But very few examples are known of the true popular story which has passed into a written version: there may be mentioned a *Dāstān-ı Aḥmed Ḥarāmī* (written version in verse, of the folk-tale type no. 153 in the Turkish catalogue, no. 956B of the international catalogue of Aarne-Thompson), an anonymous work, probably 8th/14th century; a short verse tale by ʿĀshıḳ Pasha (7th/13th century), which corresponds to the folk-tale type no. 1626 of the international catalogue. The collection *Billūr Köshk*, containing 13 stories drawn from oral tradition, is a fairly recent compilation, probably of the 19th century. On the other hand, the comic narrative literature, which seems to have drawn a large part of its subject matter from oral tradition, has appeared much more frequently in written versions. The collections of amusing anecdotes of Naṣr al-Dīn Khodja [*q.v.*] begin from the 10th/16th century to supplant the others because of their popularity. More recent anecdotes such as those of Bekrī Muṣṭafā or Indjili Čavush, both of them actual persons of the 11th/17th century, which at first were transmitted orally, were also to appear in modern editions in books peddled in the streets. The anecdotes concerning the adherents of heterodox sects (*e.g.*, the Takhtadjī and the Ḳızılbash), and also the "discriminatory" stories which different racial, regional or religious communities tell against one another, remained until fairly recently exclusively oral. Nevertheless there are to be found in some 11th/17th and 12th/18th century manuscripts jokes about the Rāfiḍīs which appear again later, attributed to the Bektashīs.

In Turkey, the modern novel and short story began as a kind of negation of the ancient narrative traditions, both classical and popular. It is nevertheless true that the first modern novels and stories were deeply influenced by works of these two ancient traditions. Although they succeeded in eliminating all irrational and supernatural elements, yet so far as style, forms of expressions and construction are concerned, the old narrative techniques of the storytellers of scholarly literature and of the *meddāḥ*s were to survive for a long time, right up to the period of the realist-naturalist novel of the beginning of the 20th century, for example in the works of the great novelist Ḥusayn Raḥmī [Gürpınar] [*q.v.*] (1864-1944), who here follows his master Aḥmed Midḥat (1844-1913), the father of the modern novel in Turkey. The very titles of the early novels which appeared at the same time as the first works of Aḥmed Midḥat are significant in this respect : *Müsāmeretnāme* (1872-5) by Emīn Nihād, *Siyer-i Sırvināz* (1873-4) by T. ʿAbdī. At this time works of this genre were called "*roman*", but also *ḥikāye*, as is illustrated by the title of an anonymous novel *Ḥikāye-i Ferdāne Khanım* (1872-3); thus the word *ḥikāye* acquired a new meaning and it was thereafter to be reserved for the "story" in written educated literature. The composite term *küçük hikâye* (short story) refers only to the length of the story.

Bibliography: In addition to the works cited in the article, see Köprülüzāde Meḥmed Fuʾād, *Türklerde khalḳ ḥikāyedjiliğine ʿāʾid baʿdī mäddeler*, in *TM*, i (1925), 1 ff.; O. Spies, *Türkische Volksbücher*, Leipzig 1929; Mustafa Nihat Özön, *Türkçede roman*, Istanbul 1935; Ilhan Başgöz, *Turkish folk stories about the lives of minstrels*, in *Journal of American Folklore*, lxv (1952), 331-9; W. Eberhard, *Minstrel tales from southeastern Turkey*, Berkeley-Los Angeles 1955. Bibliographies in the above works and in *Philologiae Turcicae Fundamenta*, ii, Wiesbaden 1965; the latter work gives, in the relevant chapters, accounts of the narrative genre in the literatures of all the Turkish-speaking countries, followed by extensive bibliographies. For Turkish tales see the catalogue by W. Eberhard and P. N. Boratav, *Typen türkischer Volksmärchen*, Wiesbaden 1953. (PERTEV NAİLİ BORATAV)

iv. — URDU

Urdū prose developed much later than Urdū verse. The prose *ḥikāya* is therefore shortlived in Urdū and gave place to the Westernized forms of the novel in the later nineteenth and of the short story in the early twentieth century [see URDŪ]. Most of the *ḥikāya* literature in Urdū consists of translations from Persian; but these translations have often a literary, and certainly a historical value, which their originals lack.

The *ḥikāya* made its first appearance in the *mathnawīs* [*q.v.*] written in the courts of Bidjāpūr and Golkunda in the Dakkan, and were later rewritten in prose when it developed in the north in the early nineteenth century. The outstanding prose work of this genre written in the Dakkan is Mullā Wadjhī's *Sabras* (ed. ʿAbd al-Ḥaḳḳ, Awrangabad 1932). It is a prose allegory adapted from Muḥammad ibn Sībak Fattāḥī Nīshāpūrī's (d. 852/1448) *Dastūr-i ʿushshāḳ* (ed. R. S. Greenshields, Berlin 1926). Its theme is the quest of the elixir of life, and it has certain unexplained thematic similarities with the *Roman de la Rose*. The quest motif is interwoven in a pattern of allegorization of the conventions of love familiar in Islamic poetry, in the story of the love of Prince *Dil* (heart) for the Princess *Ḥusn* (beauty) with the personification as characters of all the symptoms of desire in the lover and of 'rigueur' and resistance in the beloved. The allegorical story has certain magical elements linking it with the prose *dāstān* literature rendered into Urdū in the early nineteenth century. It is written in rhyming prose, blending literary idiom with Dakkanī colloquialism.

In Islamic India the *dāstān* was a form written in prose as well as orally recited. *Dāstān*s were narrated by professional story-tellers in the houses of noblemen or in special gatherings at Delhi, Lucknow, Benares and Ḥaydarābād. The art of *dāstāngūʾī* in speech and writing survived well into the 1930's with Mīrzā Bāḳir ʿAlī.

The basic material of the *dāstān*-literature was the cycle of Amīr Ḥamza, written and recited in most Muslim countries from Turkey to Indonesia. *Dāstān* characters fell broadly into three categories: the hero, the heroine and their chivalrous friends; 'tricheurs' (*ʿayyār*) who supported them and supplied some comic relief in the narrative; and the sorcerers or magicians (*dj̲ādūgar*) who were their adversaries. The *dāstān* has a repetitive pattern of almost identical stock situations in which heroes aided by *ʿayyār*s challenge sorcerers in a magical landscape with a labyrinthine monotony which drags on to enormous lengths.

The authorship of *Dāstān-i Amīr Ḥamza* is attributed apocryphally to Akbar's [*q.v.*] poet-laureate Fayḍī: It was rendered into Urdū from Persian by As̲h̲k under the auspices of the Fort William College in 1215/1801. The entire *dāstān* runs into seventeen volumes divided into a number of series. The first of these series is *Naws̲h̲īrwān Nāma*. The most popular series is the seven-volume *Ṭilism-i Hūs̲h̲rubā*, the first four volumes of which were translated from a Persian original by Mīr Muḥammad Ḥusayn Dj̲āh, and the remaining three by Aḥmad Ḥusayn Ḳamar.

An imitation of the Ḥamza cycle is the *Bustān-i k̲h̲iyāl*, a *dāstān* of 4,000 pages composed in Persian by Mīr Taḳī K̲h̲ān under the patronage of the decadent Mug̲h̲al emperor Muḥammad S̲h̲āh (1131/1719-1161/1748). It was translated into Urdū by K̲h̲ʷādja Amān Dihlawī and Mīrzā Muḥammad ʿAskarī among others. In stylistic quality the *Bustān-i k̲h̲iyāl* is inferior to the Ḥamza group, though both rely on linguistic cadence, rhymed sentences and ornate phraseology.

Fasāna-i ʿadj̲āʾib (1824), Mīrzā Radj̲ab ʿAlī Bēg Sarūr's (1787-1867) short volume of inter-related stories, is thematically descended from the *dāstān*s and has the same involved magical elements, but it is distinguished from them by its brevity, its occasional reflection of the actual life of the period and its primary pre-occupation with the concentrated decorativeness of style. These new characteristics, especially the last, were inherited by Pandit Ratan Nāth Sars̲h̲ār (1846-1902) in his novels, which also reflect the influence of *dāstān*s in love scenes and certain conventional situations.

Čahār darwīs̲h̲, originally a collection of inter-related stories in Persian, has wrongly been attributed to Amīr K̲h̲usraw [*q.v.*]. It was composed probably during the 11th/17th century. It has been rendered into Urdū in two literary versions of considerable importance. One of these was Muḥammad Ḥusayn ʿAṭā K̲h̲ān's *Naw ṭarz-i muraṣṣaʿ* compiled in 1798 in a highly Persianized style. It was rendered into simpler and idiomatic Urdū prose by Mīr Amman Dihlawī at the Fort William College in 1801, under the title *Bāg̲h̲-u bahār*. Both these works constitute landmarks in the development of Urdū prose. Another *Naw ṭarz-i muraṣṣaʿ* of inferior literary quality was compiled at the Fort William College by Zarrīn in 1801.

Sayf al-mulk wa Badīʿ al-dj̲amāl, a story from the *Arabian Nights*, was first rendered as a *mat̲h̲nawī* by the Dakkanī poet G̲h̲awwāṣī in 1035/1625. It was written as a prose romance by Manṣūr ʿAlī in the early nineteenth century.

Other remarkable specimens of the *ḥikāya* literature of the early nineteenth century include *Ḥayāt al-ḳulūb*, Walī Muḥammad b. Ḥāfiẓ Mīrān's rendering of Bāḳir Madj̲lisī's work on the stories of the prophets; S̲h̲aykh Ṣāliḥ Muḥammad ʿUt̲h̲mānī's *Sayr-i ʿIs̲h̲rat, dj̲āmiʿ al-ḥikāyāt* (1825), an imitation of Saʿdī's *Gulistān*; the *Haft guls̲h̲an*, a collection of Nāṣir ʿAlī K̲h̲ān Wāsiṭī's translated from Persian into Urdū by Mīrzā Luṭf ʿAlī Wilā; Benī Narāyan's *Čar guls̲h̲an*, translated from Persian in 1811; and two collections of prose tales *Mor pank̲h̲ī* and *Ras̲h̲k-i parī* composed by Aḥmad ʿAlī about 1241/1825. As̲h̲k, the translator of *Dāstān-i Amīr Ḥamza*, also wrote a prose romance, *Gulzār-i Čīn*, in 1219/1804. Ḥaydar Bak̲h̲s̲h̲ Ḥaydarī's (d. 1833) *Arāʾis̲h̲-i maḥfil* belongs, like several other tales written in the early nineteenth century, to the Ḥātim Ṭāʾī cycle. Ḥaydarī is also the author of *Laylā Madj̲nūn* and *Gulzār-i dānis̲h̲*, which is a translation of S̲h̲aykh ʿInāyat Allāh's *Bahār-i dānis̲h̲* containing stories of feminine wiles and infidelity.

Ḥaydarī's most famous work *Totā kahānī*, compiled in 1215/1801 at the Fort William College, belongs to another group in the *ḥikāya* literature, that of stories of Indian origin. Ḍiyā al-Dīn Nak̲h̲s̲h̲abī's *Ṭūṭī Nāma* (731/1330) is the Persian version of a Sanskrit collection of seventy stories, *Šuka saptati*. The central plot around which the stories are clustered evolves around a faithful parrot who keeps an unfaithful wife, whose husband is away on a distant journey, from adultery by relating to her a series of stories to keep her absorbed and out of mischief. A simpler abridged version reducing the number of stories to thirty-five was compiled in Persian in 1049/1639 by Muḥammad Ḳādirī. G̲h̲awwāṣī's Urdū *mat̲h̲nawī Ṭūṭī Nāma* (1049/1639) is based on Nak̲h̲s̲h̲abī's version, while Ḥaydarī's prose *Totā kahānī* is based on Ḳādirī's abridgement.

Other stories of Indian origin compiled at the Fort William College include *Singhāsan Battīsī* by Kāẓim ʿAlī Dj̲awān and Lallū Lāl; and *Baytāl Pačīsī* translated into Urdū by Luṭf ʿAlī Wilā with the help of Lallū Lāl. Wilā also translated a Hindi romance, *Mādho Mal*.

Ins̲h̲ā's (1756-1817) *Kahānī Rānī Kētakī awr Kanwar Udaybhān kī* (1803) is a story of Indian origin in which not a single word of Arabic or Persian origin has been used.

A famous Indian cycle is of the quest of a rare flower *Bakāwalī*, which is also the name of a woman. The story was rendered into Persian in 1124/1712 by ʿIzzat Allāh Bangālī, and from this version it was translated into Urdū by Nihāl Čand Lāhorī (eds. Calcutta 1815, 1827; Garcin de Tassy's French summary in *JA*, 1836). Earlier versions of this romance were written in Dakkanī verse in 1035/1625 and 1151/1738. The most famous Urdū version of the Bakāwalī romance is Dayā S̲h̲ankar Nasīm's *mat̲h̲nawī Gulzār-i Nasīm* composed in 1254/1838.

(Aziz Ahmad)

v. — Malaya

Hikayat in Malay as in Arabic means 'story, tale, narrative, historical account'. It occurs in the titles of two Sumatran works of the early 9th/15th century, the history of the rulers of Pasai (*Ht. Raja Raja Pasai*) and *Ht. Iskandar Dhu 'l-Ḳarnayn*, the story of Alexander the Great as a missionary of Islam derived from a Perso-Arabic source. Probably a little later and done in the Javanese quarter of 15th century Malacca are a *Ht. Pĕrang Pandawa Jaya* (or *Bharatayuddha*), a *Ht. Sang Boma* (or *Bhaumakawya*) and a number of *hikayat* based on the Javanese shadow-play cycle (ca. 750/1350) of Panji tales. To the same period belongs a *Ht. Sĕri Rama* or Malay version of the Ramayana. But the "Malay Annals" (15th-16th cent. A.D.) say that when d'Albuquerque conquered Malacca in 1511 A.D., the Malays had a *Ht. Amīr Ḥamza* and a *Ht. Hanafiah* (*Ḥanafiyya*)—both from the Persian. Another early Malay *hikayat* is a *Ht. Yūsuf.*

Tales of the Prophet, which also date from the early Indo-Persian phase of the Malays' Islamic culture, all bear the name *hikayat*, *e.g.*, the stories of the mystic light (*nūr*) of Muḥammad, of the moon splitting at his command, of his shaving and of his death.

The name is applied to versions of famous cycles of tales from Muslim sources. The Persian *Ṭūṭī-nāme* was translated under the names *Ht. Bayan Budiman* (Tale of the wise parrot) or *Ht. Khoja Maymūn* (Tale of the lucky merchant):a lady in 15th century Malacca was named Sabariah (Ṣabariyya, Patience) after one of its characters. Two versions of the History of the Seven Viziers (*Ht. Bakhtiyār*), the *Ht. Ghulām* (or *Ht. Raja Aybakh*) from the Arabic, and a complete version of the *Ht. Kalīla wa-Dimna* all date from the 11th/17th century. The most recent version of the last was translated *ca.* 1825 from the Tamil by Raffles' clerk, Munshi ʿAbd Allāh, and called *Ht. Pancha Tanderam.* The same translator termed his own autobiography the *Ht. ʿAbd Allāh.*

Down to the first half of the 19th century the Muslim Malay continued to enjoy many *hikayats* translated from Indian sources, where princes and princesses of divine origin triumph over every wile of demon, giant and man and where invulnerable heroes defeat monsters with the bow of Arjuna or the sword of Japhet and solve riddles with the help of spirits, genii, and sages both Hindu and Muslim. The advent of Islam saw the Hinduized legends of Muslim India turned into *hikayat* embellished with reminiscences from Persian tales, allusions to heroes of the *Shāhnāma* like Ḳobād, Djamshid and Bahrām, episodes from the Alexander legend, references to Baghdād, Medina, Egypt and Byzantium and (as in the *Ht. Shāh-i Mardan*) expositions of Ṣūfī mysticism. One of the last was a *Ht. Bustamman.*

Malay history began with imitations of the Javanese historico-romance and though a Malay scholar ascribes the differentiation of history from fiction to the publication by the British education department of a *Kitab Tawarikh Melayu* (2nd ed., 1921), Malay historians have often preferred to *hikayat* words like *sejarah* (annals), *salsilah* (genealogies) or names like *Bustān al-Salāṭīn* (Garden of Kings) or *Tuḥfat al-nafīs* (Precious gift) as titles for their works.

Catalogues list more than a hundred and fifty works in classical Malay that are termed *hikayat.*

ḤIKMA, wisdom, but also science and philosophy. The ancient usage of the word lent itself to this evolution, which was favoured by the meaning of the Greek σοφία. On the purely Arabic side al-Djurdjānī, who gives the word *ḥukm* the primary meaning of "to set the thing in its place" (*Taʿrīfāt*), seems thereby to suggest the sense of equilibrium and stability that Léon Gauthier found and that is well fitted to express the force and maturity of wisdom. The Ḳur'ān calls it *al-ḥikma al-bāligha* (LIV, 5), wisdom which has attained its maturity. It uses *ḥikma* many times in the current sense of "wisdom", a wisdom, however, which implies knowledge of high spiritual truths. "The Book and wisdom" together often constitute a single gift (II, 123/129, 231, III, 75/81, IV, 57/54, 113, XXXIII, 34). Wisdom was granted to David, to Jesus, to Muḥammad, even to Luḳmān (II, 252/251, XXXVIII, 19/20; V, 110, XLIII, 63; II, 146/151; XXXI, 11/12). It is a great asset (II, 272/269); it is linked with the idea of purity (II, 123/129). The *Taʿrīfāt* understand it not only of every word that accords with the truth, which implies knowledge, but also of science and action, of the science of the licit and the illicit, of the sciences of the religious law, and also of the secrets that elude common knowledge, that is to say the secrets of the Divine Essence. It is then *al-ḥikma al-maskūt ʿanhā*, "the science about which one remains silent".

On the Greek side, "wisdom" from the beginning extended to the sense of "science", since the seven Sages included several scholars, Thales certainly being among them. The astronomer Cleostratos was a philosopher, as was Anaximander, said to be the author of the first book about nature. The Sages were called φυσιολόγοι Science and philosophy were founded at the same time, in a study of nature which at the start made no distinction between them. It extended to things in themselves and to actions which it was desired to render perfect. A reflection of this original unity appears in Ibn Sīnā's fine definition: "Wisdom (*ḥikma*) is the passage of the soul of man to the perfection possible for him within the two bounds of science and action". It includes, on the one hand, justice and on the other the perfecting of the reasoning soul, inasmuch as it comprises the theoretical and practical intelligibles (*Burhān*, 260).

Distinctions became established in proportion as increasing knowledge called for specialization, but they were recognized as forming part of a whole. Thus the beginning of the *Manṭiḳ al-mashriḳiyyīn* presents *ḥikma* as the main stock from which spring directly the *uṣūl* or *al-ʿulūm al-aṣliyya*, the fundamental sciences, such as the study of the world and logic, while medicine, agriculture and the other individual sciences are derived sciences, branches, *furūʿ*. The lost work, of which the *Manṭiḳ* is a fragment, was entitled *al-Ḥikma al-mashriḳiyya*, but we do not know what sciences it covered. Djurdjānī tells us only that the *ḥukamā' ishrāḳiyyūn* were under the leadership of *Aflāṭūn* (*Taʿrīfāt*), Plato? Plotinus? Naṣīr al-Dīn al-Ṭūsī follows Ibn Sīnā and leaves the individual sciences, medicine, agriculture and the others, in their subordinate place.

The tradition of the inclusion of the sciences in wisdom seems indeed to have remained unbroken

from the Greeks to the Arabs. A short manual of medical ethics which forms part of the *Corpus Hippocraticum* affirms that "the physician who is at the same time a philosopher is the equal of the gods". Similarly, ʿAlī al-Ṭabarī, a Persian physician of the 3rd/9th century, wrote in Arabic a compendium of medicine which is one of the oldest in that language, entitled *Firdaws al-ḥikma*, "Paradise of wisdom". Its arrangement is inspired by Oribasius and Paul of Aegina, not by al-Rāzī or Ibn Sīnā; the sources quoted are: Hippocrates, Galen, Aristotle and Ḥunayn b. Isḥāḳ [*q.v.*], a contemporary of the author. This little book also deals with the natural sciences, and concludes with a sketch of medicine in India; it was quoted by E. G. Browne, *Arabian medicine*, Cambridge 1922, and analysed by Meyerhof. Djābir b. Ḥayyān said on the subject of the [supposed] founder of alchemy: "Know that successive philosophers have made science benefit from a long evolution and have given it an extraordinary power, thus attaining their objective" (cf. the translation of Kraus, 54-5), This alchemist was known as the Wise. Ḳusṭā b. Lūḳā, a Christian of Greek origin, was a physician and philosopher, and at the same time a mathematician and astronomer. Ibn al-Ḳifṭī applies the term *ḥukamāʾ* to all the celebrated men whose biographies he gives in his *Taʾrīkh al-ḥukamāʾ*, among them Ptolemy, Hippocrates, etc.; he even describes Galen as *al-ḥakīm al-faylasūf*. For Ibn Sīnā, the opinion of the *ḥukamāʾ*, as being wise and learned, does not derive from the same origin as that of ordinary men. The former are concerned with truth and seek for it, the latter with the everyday outlook.

Ibn Sīnā's treatise on the classification of the sciences appears in the same line, *ḥikma* taking the place of the root and trunk, its ramifications covering the whole field of the sciences then explored. The work begins with a description of wisdom-science: "it is the art of observing, by means of which man acquires the realisation (actuation, *taḥṣīl*) within himself [through the knowledge] of everything that has being and of what he must necessarily practise in order to elevate and perfect himself and become an intelligible world, similar to the existing world" (104-5). *Ḥikma*, he continues, is divided into a theoretical part, seeking for certain knowledge of the beings whose existence is not dependent on man, truth thus being its objective, and a practical part, which aims at the good which can be procured by man's actions. In the first part, forming the various branches of wisdom, are found the natural sciences, mathematics and the "divine science" relating to *tawḥīd*, divine unity; in the second, ethics, domestic economy, politics, social relations in the city,—all this in the framework of Aristotle's work. Each of the fundamental sciences named is in its turn sub-divided, sometimes remaining in the Aristotelian line, from metaphysics to mineralogy, and sometimes going beyond it, particularly in the spheres of derived wisdom-science, *al-ḥikma al-farʿiyya*: here, in the ramifications of the natural sciences, are to be found medicine, astronomy, magic, the last-named having as "its aim the mingling of [incorporeal] forces with the substances of the terrestrial world", chemistry with its use of the properties of mineral substances, etc. Algebra is a science (*ʿilm*) derived from mathematics, as is hydraulics, etc. Finally, wisdom includes the nine sections of *Manṭiḳ*, that is to say the sciences of expression in speech, firstly logic, then rhetoric and poetry.

In this classification, *ḥikma* embraces that which belongs to science (*ʿilm*) following the terminology of the *Manṭiḳ al-mashriḳiyyīn*, the classification used by the Ikhwān al-Ṣafāʾ, al-Fārābī, al-Khawārizmī, al-Ghazālī and Ibn Khaldūn (tables and references collected by Gardet and Anawati, *Introduction à la théologie musulmane*, 108-23). In another short work, *ʿUyūn al-ḥikma*, "the Sources of wisdom", Ibn Sīnā expresses himself in a manner very closely allied to that of *Aḳsām al-ʿulūm*, to such a degree that the only part published deals with purely scientific subjects under the name *al-ḥikma al-ṭabīʿiyya*, natural sciences, physics, with motion, time, the proof of the incorporeal Prime Mover, the soul, the source of voluntary motion. Ibn Sīnā uses *ḥikma* as the synonym of *ʿilm*, but seems to prefer the richer meaning of *ḥikma*. This last is not restricted to the sense of "philosophy", or even of "philosophy considered as wisdom" (in the words of Gardet, *La pensée religieuse d'Avicenne*, 18, 30). In the same perspective, medicine appears as a *ḥikma* applied to the behaviour of the human body and, through it, of the soul.

Ḥikma appears as a lofty spiritual conception of the world, penetrating all knowledge within the grasp of man, and even attaining to faith in God in revelation. It goes beyond *falsafa*, which denotes only Hellenistic philosophy; it transcends science, *ʿilm*: "Science consists in grasping those things which it appertains to human intelligence to grasp in such a manner that no error enters into it [...] and if this is done by means of certain proof and actual demonstrations, this is called *ḥikma*" (*ʿAhd*, 143). By bringing absolute rectitude, both in his search and in the application, "The truly Wise Man is he who, having formed an opinion on a question, speaks to himself as to others, which signifies that he has spoken the truth faithfully" (*Safsaṭa*, 6).

Averroes seems to take *ḥikma* rather in the limited sense of "philosophy", as against "religion" (*Faṣl al-maḳāl*); nevertheless he calls it "the supreme art", *ṣināʿat al-ṣanāʾiʿ*; *ibid*, 5, line 7).

ḤĪLA [see ḤIYAL].

HILĀL, the new moon, the crescent.

i. — In Religious Law

The new moon is important in Islamic religious law because, in the Islamic lunar calendar [see ta'rīkh], it determines, among other things, the date of the pilgrimage [see ḥadjdj], and the beginning and the end of Ramaḍān [*q.v.*], the month of fasting [see ṣawm].

The Ḳur'ān refers to the new moon in *sūra* II, 189 (a verse of indeterminate date; *Gesch. des Qor.*, i, 181): "They ask thee about the new moons; say : 'They are fixed times (*mawāḳīt*) for the people and for the pilgrimage.' " Another relevant passage is *sūra* II, 183 f. (to be dated shortly before the Ramaḍān of the year 2; *Gesch. des Qor.*, i, 178): "O ye who believe, fasting is prescribed for you as it was prescribed for those before you—maybe ye will show piety—during a certain number of days (*ayyām*^an^ *ma'dūdāt*)." As the observation of the new moon even in a clear sky is subject to chance, as described, for instance, by Ibn Djubayr (162), whereas the terms *mawāḳīt* and *ma'dūdāt* in the Ḳur'ān seem to refer to an exactly determined date or period, it seemed indicated that the beginning of the month should be determined by calculation, and several systems of calculation came into being. An argument in favour of calculation (*ḥisāb*) was also drawn from *sūra* X, 5 (belonging to the third Meccan period; *Gesch. des Qor.*, i, 158) which reads: "He it is who has made the sun a glow and the moon a light, and has given it determined stations (*wa-ḳaddarahū manāzil*), that ye may know the number of the years and the reckoning (*ḥisāb*) [of time]." Calculation was, however, rejected by the Sunnīs, the Ibāḍīs, the Zaydīs, and the "Twelver" Shī'īs, whereas the Ismā'īlīs adopted it, and whilst traces of it are found in the literature of the other schools, it has become a distinguishing feature of these last (and of the present-day Bohras). It is, of course, generally agreed that the actual observation of the new moon at the beginning and at the end of Ramaḍān is decisive, and the difference comes down to this, that if the new moon has not been observed on the evening of the twenty-ninth day the majority consider the thirtieth day as still belonging to the month in question, so that both Sha'bān and Ramaḍān may have thirty days, which can never happen under the rule followed by the Ismā'īlīs.

There is an arbitrary interpretation of the words *ayyām*^an^ *ma'dūdāt* as referring to a fast of three days in each month which had allegedly preceded as a religious duty the fast during Ramaḍān; the interpretation aims at eliminating the seeming implication of the words in favour of calculation; the traditions in which it is expressed (Ṭabarī, *Tafsīr*, Būlāḳ 1323, ii, 76) can be dated between 'Aṭā' (d. 114 or 115/732-33) and Ibn Abī Laylā (d. 148/765). The commentators Ṭabarī, Djaṣṣāṣ, Ibn al-'Arabī, and Fakhr al-Dīn al-Rāzī (*Mafātīḥ al-ghayb*, Istanbul 1307, ii, 170 ff.) reject this interpretation, and Ḳurṭubī (*al-Djāmi' li-aḥkām al-Ḳur'ān*, Cairo 1353/1934, ii, 256,) does not even mention it.

The opinion of the majority is expressed in a tradition from the Prophet which occurs in the six classical collections and in many other works of *ḥadīth* (for detailed references, see Wensinck, *Handbook*, s.vv. Fast(ing) and Ramaḍān; further, *Kanz al-'ummāl*, iv, nos. 6060 ff.); its main *isnād* goes through Mālik—Nāfi'—Ibn 'Umar, and it can therefore be dated in the first half of the second century of the *hidjra* (cf. my *Origins*, 176 ff.). A typical version of it (in Mālik's *Muwaṭṭa'*, *Kitāb al-Ṣiyām*) runs: "The Prophet spoke of Ramaḍān and said: 'Do not fast until you see the new moon, and do not break the fast until you see it; but when it is hidden from you [by cloud or mist], give it its full measure (*fa-ḳdurū lahū*).' " Because the expression *fa-ḳdurū lahū* could be taken to mean not only the computation of thirty days from the last new moon but also the calculation of the mansions of the moon, it was replaced in other versions by *fa-'akmilu 'l-'idda*, "complete the reckoning" (an expression taken from *sūra* II, 185), or by "count thirty".

According to another tradition, going back (through Nāfi') to Ibn 'Umar only, which occurs in the *Sunan* of Abū Dāwūd as a corollary to his version of the tradition from the Prophet, Ibn 'Umar on the twenty-ninth of Sha'bān used to have the new moon looked for, and if it was seen that was that; if it was not seen in a clear sky, he continued to eat on the following day, and if there were clouds or dust in the sky he started fasting; but he finished his fast [at the end of Ramaḍān] together with the rest of the people and did not follow that method of counting. This reflects two early, not necessarily conflicting, attitudes, the meticulousness typical of the pious and the desire to follow the community, *i.e.*, the orders of the *imām*, and both have left other traces in traditions. It was as a counter-move against this tradition that the (later) tradition from the Prophet was provided with the *isnād* Mālik—Nāfi'—Ibn 'Umar. The Ḥanbalī school has essentially adopted the doctrine attributed to Ibn 'Umar, whereas the other orthodox schools of law follow the implications of the tradition from the Prophet. (That one ought to start fasting after the 29th day of Sha'bān, if the view of the new moon was obscured by clouds, is also the doctrine of the "Twelver" Shī'īs, expressed, *e.g.*, in a tradition from Dja'far al-Ṣādiḳ in Ṭūsī's *Tahdhīb*.)

Questions of detail concerning the observation of the new moon began to be discussed at an early date, *e.g.*, what to do when it is seen in the forenoon or in the afternoon at the end of Ramaḍān; see Abū Yūsuf, *Āthār*, no. 819, for a normative statement of Ibrāhīm Nakha'ī (presumably authentic); *Muwaṭṭa'*, *Kitāb al-Ṣiyām*, *bāb* 1, tradition 4, for the doctrine of Mālik; *Kanz al-'ummāl*, iv, nos. 6614 ff.; Shams al-Dīn Ibn Ḳudāma, in *al-Mughnī wa 'l-Sharḥ al-kabīr*, iii, 6.

There were, however, in the words of Ibn al-'Arabī, "some ancient authorities" (*ba'ḍ al-mutaḳaddimīn*) of the Sunnīs who "erred by resorting to calculation, *i.e.*, determining through study of the mansions of the moon that it would be visible if the sky were clear" (*Aḥkām al-Ḳur'ān*, Cairo 1331, i, 35). A detailed discussion of this opinion which, according to Ibn 'Abd al-Barr, was held by members of the highest group of Tābi'īs, is found in the commentary of 'Aynī on Bukhārī, on the tradition from the Prophet mentioned before (ed. Istanbul 1308 ff., v, 182). Among the somewhat later upholders of it are mentioned Muṭarrif b. 'Abd Allāh b. Yasār (d. 220), a companion of Mālik (Ibn Sa'd, v, 325; Ibn Farḥūn, *al-Dībādj al-mudhahhab*, s.v.), Ibn Ḳutayba (d. 276), and Ibn Suraydj (*sic*, not Ibn Shurayḥ; d. 306), a famous Shāfi'ī scholar (Tādj al-Dīn al-Subkī, *Ṭabaḳāt al-Shāfi'iyya*, ii, 87-96; Ibn Hubayra, *K. al-Ifṣāḥ 'an ma'āni 'l-Ṣiḥāḥ*, Aleppo 1347/1928, 111); this last is said to have attributed a similar opinion to Shāfi'ī. But it was felt that astrologers should be given no part in determining the incidence of a religious duty, and an author as early as Ṭaḥāwī (d. 321), in his *Sharḥ Ma'āni 'l-Āthār*, where we should expect him to discuss it, does not mention this point at all.

For the final doctrines of the orthodox schools, see their authoritative handbooks and : Ibn Rushd al-Ḥafīd, *Bidāyat al-mudjtahid*, Istanbul 1333, i, 196 f.; *Kitāb al-Fiḳh ʿala 'l-madhāhib al-arbaʿa*, Ḳism al-ʿIbādāt, 2nd ed., Cairo 1349/1931, 514 ff.; also: *Sommario del diritto malechita*, transl. I. Guidi and D. Santillana, i, Milan 1919, 207 ff.; Juynboll, *Handleiding*[4], 100 ff.; H. Laoust, *Le Précis de droit d'Ibn Qudāma*, Beirut 1950, 65 f.; idem, *Essai sur les doctrines sociales et politiques de ... B. Taimiya*, Cairo 1939, 336 f.—For the Ibāḍīs: Muḥammad b. Yūsuf Aṭfiyāsh, *Sharḥ Kitāb al-Nil*, ii, Cairo n.d., 179 ff. — For the Zaydīs: al-Ḥusayn b. Aḥmad al-Siyāghī, *al-Rawḍ al-naḍīr, Sharḥ Madjmūʿ al-Fiḳh al-Kabīr*, Cairo 1350, ii, 503 ff.

The "Twelver" Shīʿīs insist on the principle of observation of the new moon even more strongly, and reject calculation even more forcefully than the Sunnīs. Their main authoritative traditions, found in their four classical collections, are: "The people of the *ḳibla* are only bound by observation (*ru'ya*), the Muslims are only bound by observation" (from Djaʿfar al Ṣādiḳ), and: "When you see the new moon fast, and when you see it break the fast; it is not done by assumption and surmise (*wa-laysa bi-'l-ra'y wa-la 'l-taẓanni*)" (from Muḥammad al-Bāḳir). The same doctrine is formulated in their authoritative works of *fiḳh*, from the spurious *Fiḳh al-Riḍā* (Teheran 1274; the *imām* al-Riḍā d. 202), through the *Muḳniʿ* and the *Hidāya* of Ibn Bābūya al-Ṣadūḳ (d. 381; in *al-Djawāmiʿ al-Fiḳhiyya*, Teheran 1276), the *Muḳniʿa* of al-Mufīd (d. 413; Teheran 1274), and the *Mabsūṭ* and the *Nihāya* of Shaykh al-Ṭā'ifa al-Ṭūsī (d. 459; the first Teheran 1271, the second in *al-Djawāmiʿ al-Fiḳhiyya*), to the *Sharā'iʿ al-Islām* of al-Muḥaḳḳiḳ al-Ḥillī (d. 676) and later works.

At the same time, the older sources admitted various methods of calculation as alternatives if the new moon could not be observed on the evening of the 29th Shaʿbān on account of cloudiness. One method consists of counting from the day of the week on which fasting has started in the preceding year, and starting to fast on the fifth (or in a bissextile year, the sixth) day of the count; this method, which takes the length of the lunar year of 354 days into account, is said to have been checked over fifty years and found correct, but is available only to him who knows chronology and the incidence of bissextile years. Another method consists of counting 59 days from the new moon of the month of Radjab if it has been visually observed, and starting to fast on the sixtieth day. Traditions authorizing these methods by the authority of the *imām*s of the "Twelver" Shīʿīs are found in the *Kāfī* of Kulīnī (d. 328; Teheran 1315) and in the *Kitāb man lā yaḥḍurhu Faḳīh* of Ibn Bābūya (Lucknow 1307) as well as in the *Fiḳh al-Riḍā* and in Ibn Bābūya's *Muḳniʿ* and *Hidāya*. A third method consists of estimating the age of the new moon when it becomes visible for the first time, and determining the beginning of the month retrospectively; a rule concerning this is related, on the authority of *imām* Djaʿfar al-Ṣādiḳ, in Kulīnī's *Kāfī*, the *Fiḳh al-Riḍā*, and other works. To the same context belongs the doctrine that Ramaḍān has always 30 (and Shaʿbān always 29) days; this is expressed in traditions from Djaʿfar al-Ṣādiḳ in Kulīnī and elsewhere (but not accepted by Ibn Bābūya in the *Muḳniʿ*), and it has its parallel in a Sunnī tradition from the Prophet to the effect that Ramadān and Dhu 'l-Ḥidjdja are never short (*lā yanḳuṣān*; see Wensinck, *Handbook*, s.v. Ramaḍān), which was made innocuous by interpretation.

By the middle of the 5th/11th cent., however, the doctrine of the "Twelver" Shīʿīs had become definitely hostile to all traces of the method of calculation, and Ṭūsī, the Shaykh al-Ṭā'ifa (d. 459), in the *Tahdhīb* (Teheran 1307) and in the *Istibṣār* (Lucknow 1307), engages in sharp polemics against it, referring to those who use calculation (*aṣḥāb al-ʿadad* or *ʿadadiyyūn*) as deviationists (*shudhdhādh al-Muslimīn*), explaining away or rejecting outright as unreliable the traditions in its favour, and adducing counter-traditions, *e.g.*, traditions from Muḥammad al-Bāḳir and particularly from Djaʿfar al-Ṣādiḳ to the effect that Ramaḍān may have 29 days only, a tradition which makes ʿAlī reject the procedure of *ḥisāb*, and a tradition from the Prophet, transmitted by Muḥammad al-Bāḳir from ʿAlī, which expresses a doctrine identical with that common to the orthodox schools. In the *Mabsūṭ*, Ṭūsī mentions the "reports" (*riwāyāt*) concerning the methods of counting five or sixty days objectively, but adds that a person using them must formulate the intention of a voluntary fast, as if the day in question still belonged to the month of Shaʿbān; the only concession he is prepared to make is that if no new moon has been observed during the whole year, the method of counting five days may be used. Muḥaḳḳiḳ al-Ḥillī, too, in the *Sharā'iʿ al-Islām* (transl. A. Querry, *Droit musulman*, i, Paris 1871, 195), explicitly rejects all kinds of calculation, and the modern commentator Muḥammad Ḥasan b. Bāḳir (d. 1268/1851; *Djawāhir al-Kalām*, ii, Tabrīz 1324, 212 ff.) argues at length against it and tries to eradicate all its traces; he engages in pointed polemics against opponents in the present time (whom he does not name but who are obviously the Bohras) whose Ramaḍān is one or two days short (p. 214). Both the forceful rejection of calculation from the early sources onwards and the recrudescence of polemics against it at a later period would seem to derive from the need the "Twelver" Shīʿīs felt to differentiate themselves from the Ismāʿīlīs.

The method of calculation became a distinguishing feature of the Ismāʿīlī movement at an early date. The Zaydī *imām* al-Ḳāsim b. Ibrāhīm (d. 246/860) says of them that they start fasting and break the fast two days early, and count the month from one disappearance of one moon to the next—an erroneous rationalizing (*K. al-Radd ʿala-'l-Rawāfiḍ*, MS Berlin 4876 (Glaser 101), 105 r, quoted by W. Madelung, *Isl.*, xxxvii (1961), 47). Ṭabarī (d. 310/923), under the year 278, in speaking of the Ḳarmaṭians, describes the doctrine of what is obviously an heretical group of Ismāʿīlīs, and quotes a *sūra* which they recite at the opening of their ritual prayers; it contains the passage, a variation on the Ḳur'ān, *sūra*s III, 189 and X, 5: "Say: 'The new moons are fixed times for the people, their outward aspect (*ẓāhiruhā*) (serves) to make known the number of years, calculation (*ḥisāb*), months and days, and their esoteric meaning (*bāṭinuhā*) is My intimates who make known My way to My servants'" (*Annales*, iii, 2129; cf. Madelung, *Isl.*, xxxiv (1959), 41). The method of calculation was introduced by the Fāṭimids in Ifrīḳiya in 331, and in Cairo, after the conquest of Egypt, in 359 (*REI*, 1935, 178, with reference to Abū Bakr al-Mālikī, *Riyāḍ al-nufūs*; Maḳrīzī, *Ittiʿāẓ;* and Ibn Ḥadjar al-ʿAsḳalānī, *Rafʿ al-iṣr*). There is no statement of principle on calculation in the *Daʿā'im al-Islām* of the Ismāʿīlī *ḳāḍī* Nuʿmān b. Muḥammad (d. 363/925), though he regards the actual observation of the new moon as decisive on the basis of traditions from ʿAlī which are common to him and

to the "Twelver" Shīʿīs; but he emphasizes the rule which alone was of practical importance to him, that if the *imām* is present or can be reached, he is the one who decides when to start and when to break the fast (ed. A. A. A. Fyzee, i, Cairo 1370/1951, 323); there may be some desire not to alienate the non-Ismāʿīlī masses here. The author of the *Madjālis al-Mustanṣiriyya* (ca. 450/1058) argues at length in favour of the principle of calculation (*madjlis* 19, 30, and 31; ed. Muḥammad Kāmil Ḥusayn, Cairo n.d., 128 and note 64, 131, 133 f.); he says that *ruʾya* implies *ḥisāb*, just as the *ẓāhir* points to the *bāṭin*; only the *imām* combines them both, and it is a miracle that the *ḥisāb* has worked perfectly in the 150 years since the Mahdī introduced it (as the Mahdī ʿUbayd Allāh died in 322, this cannot be taken literally if the date 331 given for that event (see above) is correct); for the author, calculation comes down to the regular alternation of months of 30 and of 29 days, Ramaḍān having always thirty. This is also the practice of the contemporary Bohras (Mustaʿlian Ismāʿīlīs), and it results in their celebrating the Muslim festivals one day, or sometimes two days, earlier than the others (cf. Sh. T. Lokhandwalla, in *Stud. Isl.*, iii, 1955, 132). The question does not arise for the Khodjas (Nizārian Ismāʿīlīs), whose fast is essentially different from that of the other Muslims (cf. Syed Mujtaba Ali, *The origin of the Khojāhs and their religious life today*, (thesis Bonn) Würzburg 1936, 68 f.; J. N. Hollister, *The Shīʿa of India*, 389 f.).

Bibliography: in the article.

(J. Schacht)

ii. — In Islamic art.

The crescent appears first as an emblem in the Islamic period in combination with a five- or six-pointed star on the obverses and reverses of Arab-Sāsānian coins, such as the anonymous coins, including one probably struck for ʿAbd al-Malik in Damascus in 75/695 (G. C. Miles, *Miḥrāb and ʿAnazah*, in *Archaeologica Orientalia in Memoriam Ernst Herzfeld*, Locust Valley 1952, 156-71, pl. 28, No. 3; Fig. 1), the more numerous ones struck for the Umayyad governors of the East, till ca. 84/698, and for the ʿAbbāsid governors in Ṭabaristān, till ca. 197/812 (J. Walker, *A catalogue of Arab-Sassanian coins*, London (British Museum) 1941, 130-60; G. C. Miles, *Rare Islamic coins*, New York 1950, 1-15; idem, *The iconography of Umayyad coinage*, in *Ars Orientalis*, iii (1959), 208-10, pl. 1, nos. 1-6; idem, *Some new light on the history of Kirman in the first century of the Hijrah*, in *The world of Islam. Studies in honour of Philip K. Hitti*, London-New York 1959, 98). This usage is due to the adaptations of pre-Islamic coin types, mostly those of Khusraw II, but also of Yazdigird III and Hormuzd IV, where this marginal element had been customary. A crescent alone occurs also occasionally on the reverse of Arab-Byzantine coins (J. Walker, *A Catalogue of the Arab-Byzantine and post-reform Umaiyad coins*, London (British Museum) 1956, Nos. 78-9, 81; Miles, *Iconography of Umayyad coinage*, pl. 1, Nos. 7-9, 12-4; Fig. 2). While this was the first official use of the *hilāl*, it had no historical consequences.

Another early use of the *hilāl* is to be found in the mosaics of the Ḳubbat al-Ṣakhra in Jerusalem of 72/691. It occurs there as the customary finial of Sāsānian-type crowns and, more frequently, as an element suspended from Byzantine-type crowns where it is combined with a large pearl usually placed just beyond the horns (K. A. C. Creswell, *Early Muslim architecture*, Oxford 1932, i, pls. 11, 16-8; Fig. 8). Since this building seems to have been originally a victory monument (O. Grabar, *The Umayyad Dome of the Rock in Jerusalem*, in *Ars Orientalis*, iii (1959), 33-62), these crowns, as symbols of the defeated enemies of Islam, reflect a pre-Islamic usage now introduced into a Muslim context. However, the preserved crowns, which had been placed in churches as *ex-votos*, show as the main suspended element a cross (H. Schlunk, *Arte Visigodo* ..., in *Ars Hispaniae*, ii (Madrid 1947), 312-6, figs. 328-30); as this could not be represented in a Muslim shrine, it had to be exchanged for another, more innocuous motif which had also a royal association (*Sakrale Gewänder des Mittelalters. Ausstellung im Bayerischen Nationalmuseum*, Munich 1955, 17, No. 17, colour pl.). It is significant that the crescent has here a non-Muslim connotation.

The use of a *hilāl* as a decorative emblem on royal horses is also a continuation of a Sāsānian custom (*A survey of Persian art*, ed. A. U. Pope, London-New York 1938-39, iv, pls. 176C, 202B, 229B; F. Sarre, *Die Kunst des alten Persien*, Berlin 1925, pl. 99). In these instances the emblem is made of valuable material or at least executed in fine workmanship. Possibly the earliest preserved example is one made of rock crystal, with the name of the Fāṭimid Caliph al-Ẓāhir li-iʿzāz Dīn Allāh, 411-27/1021-36, which was later incorporated into a Gothic monstrance of about 1350, Germanisches Nationalmuseum, Nuremberg (cf. C. J. Lamm, *Mittelalterliche Gläser und Steinschnittarbeiten aus dem Nahen Osten*, Berlin 1929, i, 213, No. 21, ii, pl. 75; Fig. 7). The usage continues into the Seldjūḳ period (6th-7th/12th-13th centuries) when bronze crescents are decorated with other designs (Fig. 10). The *hilāl* as equine decoration survived till the Ottoman period, as an example composed of two boar tusks mounted in gold was captured in the Battle of Slankamen in 1691 (E. Petrasch, *Die Türkenbeute* ... *Trophäensammlung des Markgrafen Ludwig Wilhelm von Baden*, Karlsruhe, Badisches Landesmuseum, 1956, pl. 15).

The emblem also had early decorative uses in a human context. Its heavy-set shape with the points nearly touching each other is to be found as gold and gilt silver jewelry (earrings or pendants), decorated with filigree and cloisonné enamel, the latter showing bird designs. This type of trinket was made in the 5th/11th or 6th/12th century, both in Egypt (where such work was found in al-Fusṭāṭ) and Spain (Marvin C. Ross, *An Egypto-Arabic cloisonné enamel*, in *Ars Islamica*, vii (1940), 165-67; Mohamed Mostafa, *The Museum of Islamic Art, a short guide*, Cairo 1955, 36, 112, fig. 28; *Katalog, Sammlung E. und M. Kofler-Truninger, Luzern*, Kunsthaus Zürich 1964, pl. 131; Fig. 9). The same shape is to be found among the tooled decorations on Mamlūk bookbindings (8th/14th century; Fig. 6). The *hilāl* occurs also together with a seven-pointed star, as inlaid stone work, on the walls of Saint Sophia of Trebizond (Fig. 5), built by the Emperor Manuel I (1238-66). This Byzantine Church shows strong Seldjūḳ influence in its wall decorations; so far no crescents of such an elaborate nature have, however, been found on contemporary Muslim buildings or objects of Anatolia, although a crescent-shaped element occurs in the pseudo-Kūfic border of a Seldjūḳ "Konya-carpet" (Istanbul, Türk ve Islam Eserleri Müzesi, Nos. 692/3, see Oktay Aslanapa, *Turkish arts* ..., Istanbul 1961, pl. VII) and there are a few crude masons' marks of that shape on the stones of caravansarays (K. Erdmann, *Das anatolische Karavansaray des 13. Jahrhunderts*, Berlin 1961, i, 82, 134,

177). The occurrence in Trebizond in a near-Muslim context is significant, as it is the earliest so-far-known use of the crescent and star in what is now Turkish territory since the Islamic conquest of Asia Minor (T. T. Rice, *Decorations in the Seljukid style in the Church of Saint Sophia of Trebizond*, in *Beiträge zur Kunstgeschichte Asiens. In Memoriam Ernst Diez*, ed. O. Aslanapa, Istanbul 1963, 112 and pl. 8; examples from Anatolia of the pre-Islamic period are given in Fevzi Kurtoğlu, *Türk bayrağı ve Ay Yıldız*, Ankara 1938, chapter III, figs 15-6, 19, 21-8). A function with a possibly royal connotation is implied by the use of a brilliant golden "moon" above a jade lion on the top of a black umbrella held over the head of the ʿAbbāsid caliph. This is reported by the mid-7th/13th century Chinese author, Chau Ju-kua, in his account of Baghdād. The translators and commentators of the text have cogently argued that this moon must have been a crescent, since a circular emblem would have been taken for a sun (*Chau Ju-kua; on the Chinese and Arab trade in the twelfth and thirteenth centuries*, tr. by F. Hirth and W. W. Rockhill, St. Petersburg 1911, 135 and 137, n. 3).

Another use of the crescent started in the 6th/12th century when symbolical personifications of the planets, including that of the moon (*ḳamar*), were widely applied to metal objects. The earliest dated example so far found is on a magic mirror, dated 548/1153, in the Museum of Islamic Art, Cairo (D. S. Rice, *A Seljuq mirror*, in *Communications ... First International Congress of Turkish Art, Ankara, 1959*, Ankara 1961, 288-9, pl. 224). Here the emblem consists of a human figure seated cross-legged and holding a crescent whose two points meet before the face. Such representations of the crescent-shaped moon appear on many brass or bronze objects, where six planets are usually grouped around the central sun; they are inlaid in silver, usually placed on the bottoms of large trays, basins, on the covers of large vessels or pen-boxes and even on the back of astrolabes of the 7th/13th and 8th/14th centuries, made in Iran, the D̲j̲azīra (Mosul), Syria, and Egypt (F. Sarre-Max van Berchem, *Das Metalbecken des Atabeks Lulu von Mosul in der Kgl. Bibliothek zu München*, in *Münchener Jahrbuch der bildenden Kunst*, i (1907), 22, 27, figs. 1 and 13; G. Wiet, *Objets en cuivre*, Cairo 1932, pl. XLVII; M. S. Dimand, *Unpublished metalwork of the Rasulid Sultans of Yemen*, in *Metropolitan Museum Studies*, iii (1931), fig. 2, etc.). The crescent appears also at least as early as the second half of the 6th/12th century in connexion with the pertinent figures of the Zodiac, namely, in combination with Cancer as its domicilium, or with Taurus as the exaltation of the Moon and with Scorpio as its dejection. In the case of the planets' exaltations and dejections, the dragon symbolism of D̲j̲awzahr, the pseudo-planetary node of the moon's orbit, is also introduced (Fig. 13); (W. Hartner, *The pseudoplanetary nodes of the moon's orbit in Hindu and Islamic iconography*, in *Ars Islamica*, v (1938), 113-54, figs. 1, 2, 12-20; idem, *Zur astrologischen Symbolik des 'Wade Cup'*, in *Aus der Welt der islamischen Kunst, Festschrift für Ernst Kühnel*, Berlin 1959, 239, figs. 4 and 14; D. S. Rice, *The Wade Cup in the Cleveland Museum of Art*, Paris 1955, 17-20, figs. 14b/5, pl. VIIb). From the 7th/13th century on, illustrations of the seven planets appear in cosmographical works, such as al-Ḳazwīnī's *ʿAd̲j̲āʾib al-makh̲lūḳāt*, Munich, Bayerische Staatsbibliothek, C. arab. 464, fol. 10 r., dated 678/1260 or the late 8th/14th-century "Sarre Manuscript", Washington, Freer Gallery of Art, No. 54. 33r. (Fig. 11); F. Saxl, *Beiträge zu einer Geschichte der Planetendarstellung in Orient und Occident*, in *Isl.*, iii (1912), 152-5, figs. 4 and 8). Here the figure appears seated, with or without a crown, with or without a long sword on its lap, but always holding up a crescent moon which frames its face. The representations here and on the metal objects are analogous to the personifications of the sun, which has a radiating hollow disc before or in place of its face. The iconography reflects the explanation in the text which compares the sun to a king and the moon to the vizier or heir apparent.

Isolated figural representations of the *hilāl* appear in various media. Possibly the earliest example is on a piece of lustre pottery of the Fāṭimid period, 11th-12th century, from Syria or Egypt, now in the Musée du Louvre; here (Fig. 12) two female busts are framed by the horns of a crescent moon (R. Koechlin-G. Migeon, *Islamische Kunstwerke*, Berlin 1928, pl. 8), representing an iconography rather like the Roman one as found for instance on the cult image of Aphrodite in Aphrodisias (*Illustrated London News*, 5 Jan. 1963, 21, fig. 5). The motif appears also on coins of Saladin (Mayyāfāriḳīn, 587/1191) and of the atabegs of Mosul, al-D̲j̲azīra, and Sind̲j̲ār, between 585 and 657/1189 and 1258 (Figs. 3, 4), where they form parallels to other astronomical coins of the period showing the figural symbols of the Sun, Mars, and Sagittarius (S. Lane-Poole, *Catalogue of oriental coins in the British Museum*, London 1877, iii, Nos. 529-33, 567-9, 589-92, 645-51, pl. X, 568, XI, 646 and Behzad Butak, *Resimli Türk paraları*, Istanbul 1947, Nos. 75, 81, 94, and 114). A whole series of the isolated, personified *hilāl* appears also quite frequently on silver-inlaid brass and bronze vessels of the 7th/13th century, in which cases they form parallels to the sun symbol on other pieces, while an abbreviated form of the crescent moon figure presents only a crowned head within the crescent as the centre of an animated arabesque decoration (Fig. 14). Formerly it was thought that the inclusion of the full crescent moon figure on inlaid metal pieces represented a tell-tale hallmark of the famous Mosul production of inlaid metalwork, being either the coat of arms of Badr al-Dīn Luʾluʾ or the emblem of the city. D. S. Rice marshalled all the pertinent reasons why this cannot be so, and he also pointed to the fact that the motif is not restricted to Mosul but appears in Egypt and Syria as well (*Inlaid brasses from the workshop of Aḥmad al-D̲h̲akī al-Mawṣilī*, in *Ars Orientalis*, ii (1957), 321). The specific reason why the isolated symbol was so popular has not been established, although it seems very likely that it had an astrological or magical basis.

A crescent-shaped figure constitutes also a blazon in the Mamlūk period of the late 7th/13th and first half of the 8th/14th centuries. Although the emblem occurs fairly frequently on pottery vessels and sherds (L. A. Mayer, *Saracenic heraldry*, Oxford 1933, 25, pls. XI-XIIa; J. Sauvaget, *Poteries syro-mésopotamiens du XIVe siècle*, Paris 1932, pl. 31, 36, No. 121), it appears rarely in connection with specific persons. It is found as a simple charge on undated coins of al-Manṣūr Ṣalāḥ al-Dīn Muḥammad (on top of a bird), or (alone) on those of al-As̲h̲raf Nāṣir al-Dīn S̲h̲aʿbān II and al-Manṣūr ʿAlāʾ al-Dīn ʿAlī, or as part of a composite blazon on those of al-Ẓāhir Sayf al-Dīn Barḳūḳ and of al-Nāṣir Nāṣir al-Dīn Abu 'l-Saʿādāt Farad̲j̲ (P. Balog, *The coinage of the Mamlūk sultans of Egypt and Syria*, New York 1964, Nos. 395, 471, 506, 507, 598, and 659). It can be specifically associated with only four persons below the rank of sultan, *i.e.*, (1) and (2) Sunḳur al-Aʿsar, and, after his death in 1309, his daughter Fāṭima (D. S. Rice, *Studies in*

Islamic metalwork, I, in *BSOAS*, xvi (1952), 564-78); (3) ʿAlī b. Hilāl al-Dawla (died 739/1338); in this case Mayer thought of the possibility of a canting coat in view of his father's name (Mayer, *Heraldry*, 25, 54, pl. XLII, 15); (4) Ṣārim al-Dīn Ibrāhīm b. ʿAḳīl al-Shihābī (Mayer, *op. cit.*, 25, 122, pl. XLII, 3 and XLVII, 2); here Mayer considered the possibility that the emblem did not represent actually a crescent, but an oriental horseshoe, which looks like a circle enclosing a tangental oval or circular area. He refers to Abu 'l-Fidāʾ who states that the emblem of the Master of the Stable (*amīr akhūr*) is the horseshoe (ed. J. J. Reiske, iv, 380). Since a blazon corresponded to the symbol of the office a Mamlūk received when he was dubbed *amīr* and was then kept for life, and there is evidence that the crescent was given to persons who occupied an office other than that of the *amīr akhūr*, this interpretation seems unlikely. Furthermore, Abu 'l-Fidāʾ speaks of conditions under the Khwārizmshāh Muḥammad b. Takash and not of those of Mamlūks, closely related as they may have been. The context of the same horseshoe-like design used by the Ottoman Turks also makes it clear that in the 10th/16th century it was understood as the crescent moon.

The *hilāl* occurs also in the coinage of the Rasūlid al-Ashraf Ismāʿīl (about 781-83/1379-81); here the sultan's name is placed on the large crescents whose circular sections between the horns are filled with a seated figure, three swords, a chalice, or a lion with a raised tail (H. Nützel, *Münzen der Rasuliden* ..., in *Zeitschrift für Numismatik*, xviii (1892), 129-38, Nos. 35, 38, 52, 54). Balog is probably correct when he says that in this and other instances the Rasūlids imitated the Mamlūk heraldic tradition (*Coinage of the Mamlūk sultans*, 19), especially since their decorative art, too, was strongly influenced by Egypt.

The *hilāl* was also used in religious settings. W. Barthold states after N. Marr that when in the 5th/11th century the Cathedral of Ani was converted into a mosque the cross on its dome was replaced by a silver crescent, which could imply a symbolical value or at least a cultural identification for this emblem (W. Barthold, *Contribution au problème du croissant comme symbole de l'Islam*, in *Bull. de l'Académie des Sciences de Russie*, 1918, No. 6, 476, quoted in A. Sakisian, *Le croissant comme emblème national et religieux en Turquie*, in *Syria*, xxii (1941), 66). Later evidence of the custom is provided by the *ḥadjdj* certificate for a lady pilgrim, dated 836/1432(Fig. 15), where all domed and gabled structures in a schematic miniature showing the Kaʿba and the surrounding buildings have a *hilāl* finial (British Museum, Add. 27,566; R. Ettinghausen, *Die bildliche Darstellung der Kaʿba* ..., in *ZDMG*, xii (1934), 115, fig. 2). This usage is corroborated by a painting, apparently based on careful observation by Gentile Bellini (or a member of his school), which shows that the dome and minarets of the Mosque of the Umayyads in Damascus were decorated with *hilāl* finials (J. Sauvaget, *Une ancienne représentation de Damas au Musée du Louvre*, in *BÉt. Or.*, xi (1945-46), 5-12, pl. 1). The same conclusion can be drawn from a miniature showing the Süleymāniye Mosque in Istanbul in a manuscript dealing with the history of the reign of Süleymān, written in 987/1579 (V. Minorsky and J. V. S. Wilkinson, *A catalogue of the Turkish manuscripts and miniatures. The Chester Beatty Library*, Dublin 1958, No. 413, pl. 12) or from a representation of the Kaʿba of 1151/1738 (*ibid.*, pp. 78-80, pl. 36). Such an architectural finial (*ʿalam*) of gilded metal with the name of the Mamlūk Sultan al-Muʾayyad Abū Naṣr Shaykh (815-24/1412-21) has been preserved in the Armour Collection of the Topkapı Sarayı Müzesi. Unlike these examples, which have at least a *terminus ante quem*, the large collection of such emblems on domes and minarets compiled by Riza Nour is to a large extent of doubtful value, as we do not know when most of these finials were made and applied (*L'histoire du croissant*, in *Revue de Turcologie*, i, book 3 (1933), 232-74, pls. 1-17; Tahsin Öz, *Istanbul camileri*, Ankara 1962, 13-5, figs. 13 and 18). A sacred context of the *hilāl* in Ottoman Turkey is also provided by its use on the domed cover of the reliquary containing the Cloak of the Prophet [see KHIRḲA-I SHERĪF] made by order of Murād III and now in the Treasury of Topkapı Sarayı Müzesi or by the decorative rendering of a prayer in a manuscript attributed to the 10th/16th century (Minorsky and Wilkinson, *Turkish manuscripts ... Chester Beatty Library*, 52, pl. 27). On the other hand there cannot have been a strong religious association with the *hilāl* in the Muslim world, as the emblem occurs also on secular buildings, *e.g.*, in the representation of garden pavilions on a brass bowl of probable Mamlūk workmanship of the 9th/15th century (D. S. Rice, *Studies in Islamic metalwork, IV*, in *BSOAS*, xvi (1953), 502-3 pl. X), and on military flags and textiles as well (see below). There are also many renditions of mosques and other buildings dating from the 10th/16th century to the 12th/18th century which lack the crescent finial, and the motif plays no rôle on prayer rugs or on tiles applied to the walls of mosques (K. Erdmann, *Kaʿba-Fliesen*, in *Ars Orientalis*, iii (1959), 192-7, where only two of eight illustrated examples show the *hilāl*: figs. 3 and 4). This indicates that in Muslim eyes, and in particular during the Ottoman period, the *hilāl* was not of great importance. It certainly does not seem to have had a major religious significance and was apparently applied mostly for decorative purposes.

The *hilāl* occurs on the flags of Selīm I (Fig. 18), of Khayr al-Dīn Barbarossa, the latter being later used as his tomb cover (both in the Topkapı Sarayı Müzesi), and on those captured during the battle of Lepanto in 979/1571 (Fig. 17). It had then no standardized form, for it appears both as a thin sickle, the ends of which are still a slight distance from each other, and as a heavy, circular form with the ends touching each other and covered with religious formulas; both shapes enclose either a star or the names of the Prophet or of the first four caliphs. It is significant that the crescent occurs on each flag several times, and even then it is only one of several motifs used, which include other celestial bodies (the sun and stars); weapons (the legendary sword of ʿAlī, the double-pointed *Dhu 'l-Faḳār* [*q.v.*], which in turn can have a crescent-and-star pommel, swords with blades showing wavy edges, daggers); and religious slogans such as the *shahāda* and *Sūra* LXI, 12 (many examples in Fevzi Kurtoğlu, *Türk bayrağı ve Ay Yıldız*, figs. 47-52, 54-5, 64-5, 69; Sakisian, in *Syria*, xxii (1941), fig. 1, flag in the Palazzo Ducale, Venice; *Du*, May 1962, flag in the Chiesa San Stefano dei Cavalieri, Pisa; Fig. 17). Such a combination of victory-proclaiming symbols, including a series of *hilāls*, occurs also on the flags captured at the siege of Vienna in 1683 (Sakisian, fig. 2, flag in St. John Lateran, Rome; Kurtoğlu, fig. 60, in the Municipal Museum, Vienna) or in the battle of Slankamen of 1691 (Fig. 19; Petrasch, *Türkenbeute*, fig. 1, a combination of *hilāl*, star, *Dhu 'l-Faḳār* and hand). The flag on a state barge in Wehbī's *Sūrnāme*, written ca. 1720-25 for Aḥmed III, shows a row of three large

suns, each separated from the other by two small crescent moons (Topkapı Sarayı Müzesi, MS Ahmed III 3593). Other Turkish flags, too, present the *hilāl* only occasionally in small size and places of lesser importance or no *hilāl* at all (Riza Nour, pl. XXIII, Kurtoğlu, figs. 53A-B, 56-60, 80, 88). However, a number of flags from the 10th/16th to the end of the 12th/18th centuries display three, four, or even six *hilāls* on a red or green ground, and in each case without a star or any other emblems (Riza Nour, pls. XVIII-IX, XXIV, and XXX; Kurtoğlu, figs. 71, 73-6, 78, 86-7). On the other hand a flag as late as that made in 1793 for Selīm III, in the Deniz Müzesi, shows only the imperial *tughra* and the Dhu 'l-Faḳār (Kurtoğlu, fig. 58; Sakisian, in *Syria*, xx (1941), 73).

A number of Turkish pole arms, horsetail standards (*tugh*) and ship lanterns of the 10th/16th century in the Palazzo Ducale in Venice have crescent-shaped finials, although contemporary Ottoman miniatures seem to indicate that these military and naval objects often lacked this emblem.

The earliest datable textile with a *hilāl* is a pair of silk trousers made for Sultan Süleymān (Fig. 16), a context which precludes any religious significance of the emblem at that time; here, the heavy, fully circular crescent encloses a sun (or a large star) and the whole is surrounded by other stars (Tahsin Öz, *Türk kumaş ve kadifeleri*, Istanbul 1946-51, i, pl. XXVI). The motif continues to be used by subsequent sultans in varied forms, *e.g.* the crescent in combination with flowers; a triangular arrangement of three heavy crescents, each filled with one or two smaller identical shapes; or a sickle-shaped form covered with floral patterns enclosing several stars (Öz, i, pls. XXIX, XXX, XXXII-III; ii, pls. XLIII, L, LXV, LXXIV, LXXX, LXXXV-VI).

The *hilāl* was also occasionally used to decorate a *fermān*; for instance, one of Meḥemmed IV, which has a crescent filled with flowers on the onion-shaped top of the *tughra* (Türk ve Islam Eserleri Müzesi, T. 2242).

It has been claimed, for instance by B. V. Head, in his *Historia numorum. A manual of Greek numismatics*, Oxford 1911, 269-70, that the frequent use of the crescent and star among the Ottoman Turks was the result of Byzantine inheritance. Bronze coins of Byzantium, especially of Imperial times, are said to have applied this emblem on the reverse as a symbol of Artemis-Hekate, because this moon goddess let her light shine unusually bright during a critical siege. There the crescent and star, however, is only one of many emblems found on the coins of the city under Roman domination from the 1st century B.C. to the early 3rd century A.D. (R. Stuart Poole, *Catalogue of Greek coins. The Tauric Chersonese, Sarmatia, Dacia, Moesia, Thrace, etc.*, London (British Museum) 1877, 105, No. 99); it occurs also on the coins from Pontus of Mithradates II (240-190? B.C.) and Mithradates Eupator (121-63 B.C.) and on those from Carrhae (Ḥarrān), a place famous for its cult of the moon god Sīn, from Marcus Aurelius (161-180) to Gordian III and Tranquillina (240-244). In view of the enormous time gap between the early numismatic and later Ottoman examples, it seems unlikely that the pre-Islamic usage could have exerted an influence, particularly as the *hilāl* is also to be found in the Islamic world before its use by the Ottomans. Byzantine influence is more likely in the case of the *hilāl*-shaped Fāṭimid earrings, especially if the generally held assumption that the very similar Byzantine examples date from the 6th to the 10th century should prove to be correct (cf. *Early Christian and Byzantine art, an exhibition held at the Baltimore Museum of Art, 1947*, pl. LXII, Nos. 445, 488, LXIV, No. 488a, and *Byzantine art. Ninth exhibition of the Council of Europe, Athens, 1964*, Nos. 417-8, 420, 434, 437, 440, 442-3, with *Sammlung E. and M. Kofler-Truninger, Luzern*, Kunsthaus Zürich 1964, pl. 131).

While the *hilāl* remained one of many Turkish motifs and was till the end of the 12th/18th century never a formalized, official symbol, its rôle in the Western world was quite different. From the middle of the 15th century on, views of Oriental cities like Jerusalem, Istanbul and Algiers show the major buildings capped by a crescent (typical examples in many paintings of Carpaccio). Even more frequent was its use on Turkish flags and boats in pictures of military engagements (examples given by Sakisian, *Syria*, xxii (1941), 66-7; *Du*, May 1962). It was also given as a finial on the sceptres held by various Turkish sultans (Sakisian, fig. 5). Another use was as watermarks in European paper manufactured for the Levant in the 17th and 18th centuries, for instance, the combination of three crescents known in Venice as *trelune* (C. M. Briquet, *Les filigranes*, Paris, ii, 314-5, Nos. 5374-5; see also W. Nikolaev, *Watermarks of the medieval Ottoman documents in Bulgarian libraries*, Sofia 1954), which has actually been found in a Maghribī Ḳur'ān discovered in Nigeria (N. Abbott, *Maghribī Koran manuscripts of the 17th and 18th centuries*, in *American Journal of Semitic Languages and Literature*, lv (1938), 62). The crescent appeared even in fireworks, as in that arranged by Louis XV in 1132/1720 for the Turkish Ambassador Yirmi Sekiz Meḥmed Efendi [*q.v.*], who to his surprise was told that since each country was symbolized by a special emblem, a crescent—in this instance placed on a fiery tripod and surmounted by a crown—represented his *pādishāh* and Turkey (*Sefāretnāme-i Fransa*, Istanbul 1283, 76; *Paris sefāretnāmesi*, Istanbul 1306, 138).

It was only in the early 19th century, when Selīm III created a military organization [see NIẒĀM-I DJEDĪD] in imitation of European troops, that an imperial flag consisting of a crescent and star on a red ground was officially adopted for the Turkish army and navy, analogous to the official flags of Europe. When this sultan was dethroned in 1807, his new army was abolished and its flag given up (but not by the navy). After the massacre of the Janissaries in 1826, the modern-type army was re-established by Maḥmūd II and in 1827 the flag instituted by Selīm III was once more given to the army (Yacoub Artin Pacha, *Contribution à l'étude du blason en Orient*, London 1902, 158-9). An ornamental rendition of this sultan's *tughra* shows therefore a crescent and six-pointed star next to the name, but, characteristically, even here the design of a sun occurs elsewhere in the panel (Ankara, Etnoğrafya Müzesi, No. 7603; Fig. 20). The flag of the Ottoman Empire was retained when Turkey became a republic in 1923.

The next country to adopt the *hilāl* for its flag was Tunisia. Under Ḥusayn I (1824-35) a red flag was adopted, bearing in its centre on a white circle or oval a red crescent turned away from the hoist and containing a six-pointed star. From the end of the reign of Aḥmad I (1253-71/1837-55) on, a five-pointed star was substituted. Egypt used the white crescent on a red ground while the country was under Ottoman rule, but in 1923 the royal government selected a green ground and had the upright white crescent filled with three white stars between its horns. This

design, with a horizontal crescent containing the three stars in a green circular field, was also placed in the centre of the national coat of arms consisting of a displayed eagle, which was adopted when the country became a republic in 1953. The national flag with the crescent and stars was used until the founding of the United Arab Republic in 1958. Pakistan took the so-called Muslim League flag in 1947 which was formed by a white crescent on the slant, turned away from the hoist, and a white five-pointed star on a green field; to this a broad white stripe along the hoist was then added. In 1951 Libya chose the flag of Cyrenaica (used there since 1947) which consisted of a white upright crescent facing away from the hoist and a five-pointed white star on the broad central stripe of a tricolor—red, black, and green. Malaya adopted in 1950 a flag for the new federation, which displays a golden upright crescent facing away from the hoist together with a golden eleven-pointed star on the dark blue field of the canton, while the main part of the flag consists of eleven white and red horizontal stripes. Some of its constituent states, such as Selangor, Johore, Kelantan, and Trengganu also had the crescent and star in characteristic colours, compositions, shapes and positions. With the founding of Malaysia in 1963, the scheme of 1950 was enlarged to a crescent with a star of 14 points and 14 red and white bars. The next Muslim country to follow the pattern was Mauritania, which, since its independence in 1960, has used a horizontally placed golden crescent and a five-pointed star on a green ground. The latest major Muslim country to adopt the *hilāl* was Algeria, which places a red crescent on the inner green area of its flag so that only its horns project into the outer white field, which also carries a red five-pointed star. This flag was officially adopted in 1962 but had already been in use during the War of Liberation. Even this list does not exhaust the countries which have adopted the *hilāl* for their flag. For instance the national flag of the Maldive Islands carries a white crescent turned away from the staff and placed on a green rectangle which is framed by a red stripe and edged by a narrow black and white stripe along the hoist. The sultan's flag has the crescent combined with a white star. In Muslim countries (with the exception of Iran) a red *hilāl* on a white ground was also adopted for the equivalent of the Red Cross symbol, being placed near the staff and turned away from it; and there are many other major or minor Muslim organizations which also make use of the symbol, *e.g.*, the Mahdī flag of the Sudan, in which a crossed spear and *hilāl* are superimposed on three horizontal stripes of green, orange and black. All this indicates that since the beginning of the 19th century the *hilāl*, usually combined with a star, has become the Muslim emblem *par excellence*.

Owing to the new symbolical importance of the *hilāl*, the emblem was also used on postage stamps of most Muslim countries. It was first introduced in Turkey in its first stamps, issued in January 1863.

In view of the present-day identification of Islam with the *hilāl* and star, the Department of the Army of the United States Government has designated this emblem as the appropriate symbol for the top of headstones which are furnished for Muslim veterans buried in national cemeteries, analogous to the Christian Cross, the Jewish Shield of David, and the Buddhist Wheel of Righteousness. For the same reason, a white five-pointed star and crescent turned away from the hoist on a red rectangular central field, surrounded by a wide white frame, with the words "Islam, Equality, Justice, Freedom" set on a slant in the corners, has been taken by the "Black Muslims" of America as their symbol.

Outside this official context the *hilāl* continues to be used for decorative purposes in more recent times. It is occasionally found on carpets (Amos B. Thayer, *Turcoman rugs*, New York 1940, pl. 21) and in Maghribī jewelry (Paul Eudel, *Dictionnaire des bijoux de l'Afrique du Nord*, Paris 1906, 34-5, 52, 57, 91, 141, 181, 199, and 239). Rather crude versions are also at times used as camel brands, marks of ownership, or tribal marks (*wasm*), see Artin Pacha, *Contribution à l'étude du blason en Orient*, 202-20, 242-4; Henry Field, *Camel brands and graffiti from Iraq, Syria, Jordan, Iran, and Arabia*, Suppl. to *JAOS*, xv (Oct.-Dec. 1952), with extensive bibliography.

Bibliography: So far there has been no general treatment of all the aspects of the subject. Publications on specific themes are given in the article.

(R. Ettinghausen)

HILĀL, eponymous ancestor of the tribe of the Banū Hilāl whom the Arab genealogists trace back to Muḍar according to the following lineage: Muḍar → ʿAylān → Ḳays → Khaṣafa → ʿIkrima → Manṣūr → Hawāzin → Bakr → Muʿāwiya → Ṣaʿṣaʿa → ʿĀmir → Hilāl. Its three main divisions were the Athbadj, the Riyāḥ and the Zughba. This tribe naturally played its part along with the other groups of the ʿĀmir b. Ṣaʿṣaʿa in the pre-Islamic tribal struggles or *Ayyām al-ʿArab* [*q.v.*] and in the affairs connected with the beginning of Islam such as that of Biʾr Maʿūna [*q.v.*]. It is likely that it did not support Islam until after Muḥammad's victory over the Hawāzin at Ḥunayn (8/630), but, like the other ʿĀmir b. Ṣaʿṣaʿa, it did not participate in the *ridda*. It remained in the Nadjd, its initial habitat, longer than the other tribes of the same group who also inhabited it as their primitive domain. Although renowned for its courage, it did not win any particular fame during the conquests. During the first half of the 2nd/8th century, some of the Banū Hilāl (and Banū Sulaym) were invited to emigrate to Egypt where they soon became numerous. This exodus did not, however, diminish their turbulence, which increased considerably under the ʿAbbāsids, especially when, in the 4th/10th century, these brigands joined with the Ḳarmaṭīs to bring about a state of anarchy. After defeating and driving back the Ḳarmaṭīs (368/978), the Fāṭimid al-ʿAzīz b. al-Muʿizz, seeking no doubt to deprive his defeated enemy of their best allies, had a large number of the families of the Banū Hilāl and Banū Sulaym deported into Upper Egypt. Moreover this move was in accord with Egypt's rôle as a centre of attraction for the nomads of Arabia and Syria. Continuing to pillage and to fight amongst themselves, the new emigrants had to be confined to the Ṣaʿīd and forbidden to cross the Nile. But when the Zīrid al-Muʿizz b. Bādīs had broken with his suzerain al-Mustanṣir (439/1047) and recognized the ʿAbbāsid Caliph, al-Yāzūrī, the Fāṭimid minister, advised his master to take revenge on the Ṣanhādja by handing over Ifrīkiya to the horde of the Banū Hilāl, of whom, at the same time, he would rid himself. The chief organizer of the invasion of the Banū Hilāl, of which he also assumed command —and the man who reconciled the Riyāḥ and the Zughba—was probably the *amīr* Amīn al-Dawla wa-Makīnuhā Ḥasan b. ʿAlī b. Mulhim.

Better than the saga of the Banū Hilāl, upon which however he also draws, Ibn Khaldūn gives the fullest information on the composition and the principal leaders of the invaders. The most important

tribe, that of the Athbadj, comprised the Durayd and the Karfa. The Banū Mirdās formed the main division of the Riyāḥ. To the Zughba, whose divisions are unknown, must be added the ʿAdī, also (according to Ibn Khaldūn and Ibn Bassām) descendants of ʿĀmir b. Ṣaʿṣaʿa. Towns and provinces are said to have been allotted in advance by al-Mustanṣir to the various tribes and their leaders, but it was really only a matter of legitimizing *a posteriori* subsequent appropriations, in the form of an anticipatory grant of a domain yet to be conquered. The Banū Hilāl, setting out in 442/1050-51, at first ravaged the province of Barḳa, which they left to the Banū Sulaym who had followed them, and they did not approach Ifrīḳiya until the beginning of the 7th/13th century. Ibn Khaldūn compares the wave of half-starved nomads to a cloud of locusts. Al-Muʿizz b. Bādīs did not immediately recognize the extent of this unforeseeable scourge; lacking an effective army, he even tried to enlist the invader into his service by marrying one of his daughters to the chief of the Riyāḥ. But the ever-increasing pillaging destroyed this hope, and military action became necessary. The Zīrid army tried to stop the nomads at Ḥaydarān [*q.v.*] in the region of Gabès (443/1051-52) but, in spite of its numerical superiority, it was utterly routed. The countryside, the important villages and soon the towns fell into the hands of the nomad chiefs. Anarchy and insecurity spread further and further. While the pressure of the Banū Hilāl round Ḳayrawān was increasing (446/1054-55), the capture of Béja by Muʾnis b. Yaḥyā al-Ṣinnabarī al-Mirdāsī consolidated the seizure of the valley of the Médjerda. Tripoli and its province had fallen to the Zughba. Al-Muʿizz married three of his daughters to Arab *amīr*s but this did nothing to check the continual devastation and was no more effective than was a return to Fāṭimid obedience in 446/1054-55. Finally, on 27 Shaʿbān 449/29 October 1057, the Zīrid took refuge at al-Mahdiyya with his son Tamīm. On 1 Ramaḍān 449/1 November 1057, Ḳayrawān was sacked by the Banū Hilāl, a disaster from which it never recovered. The presence of the Athbadj and the ʿAdī is attested shortly afterwards in the central Maghrib where, allied to the Ḥammādid, they fought against the Zanāta. Gradually the Athbadj established themselves as auxiliaries of the Ḥammādids, and the Riyāḥ, of the Zīrids. In 457/1065, the Ḥammādid al-Nāṣir, at the head of a large coalition of Berbers and Banū Hilāl (Ṣanhādja, Zanāta, Athbadj and ʿAdī) formed against the other Arab groups (Riyāḥ, Zughba and Sulaym), suffered a defeat at Sabība which was as serious for his dynasty as that of Ḥaydarān had been for the Zīrids. The consequences, however, were less abrupt and less immediate owing to the relief of the Central Maghrib, which was much less favourable for the expansion of the nomadic Banū Hilāl than the plains of Ifrīḳiya. But, by 461/1068-69, the grip of the Banū Hilāl was such that he had to abandon his capital, the Ḳalʿa, for Bougie (Bidjāya) which he had just founded. In about 466/1073-75 the Zughba, driven from Ifrīḳiya by the Riyāḥ, went to put themselves at the service of the Ḥammādids; before this they had proceeded to the "sale of Ḳayrawān", a phrase which symbolizes well the discomfiture of the Ṣanhādja. The Banū Hilāl were too closely involved in the history of the last Zīrids and Ḥammādids to be spoken of separately. In the general anarchy, certain of the chiefs of the Banū Hilāl set themselves up as independent rulers, from simple condottieri like Muḥriz b. Ziyād, who made himself a lair in the ruins of Carthage at La Malga (al-Muʿallaḳa), to dynasties such as those of the Banu 'l-Ward at Bizerta and the Banū Djāmiʿ at Gabès. After recovering the latter town in 489/1095-96, the Zīrid Tamīm was forced to yield it to the Zughba—whose expulsion had not been complete—and they later lost it to the Riyāḥ. Maggan b. Kāmil b. Djāmiʿ, *amīr* of the Munāḳasha, a division of the Dahmān who, together with the Fādigh/Fādiʿ formed the Riyāḥid tribe of the Banū ʿAlī, established himself there as master. In 491/1097-98, it was the turn of the ʿAdī to be driven from Ifrīḳiya by the Riyāḥ, apparently towards the west. The conquest of the littoral of Ifrīḳiya by the Normans (543/1148) had scarcely any influence on the position of the Banū Hilāl, whose grip on the country was on the contrary greatly strengthened until the arrival of the Almohads. ʿAbd al-Muʾmin seized the Ḥammādid states without difficulty and in a single expedition (547/1152), but, before he could return to Morocco, he had to put down a serious uprising of the Arabs of the Central Maghrib who had been driven back towards the Sahara or nominally subjected. Aware of the deep-seated incompatibility between the peace imposed by the Almohads and their own mode of existence, they united en masse, determined to put all to the stake. The Arab wave (Athbadj, Riyāḥ, Zughba, ʿAdī, Ḳurra), after massing in the region of Béja, spread out in the Constantinois, but was routed on the plain of Sétif (1 Ṣafar 548/28 April 1153). Some of the conquered chiefs were taken to Marrākush and released, others were able to go there later to look for their families, who had been transported there and well treated. This behaviour was the first sign of a policy of enrolling contingents of the Banū Hilāl. The presence of Arabs, probably members of the Banū Hilāl, is attested in the army with which Abū Muḥammad ʿAbd Allāh, the son of the Caliph ʿAbd al-Muʾmin, tried in 552/1157 to take Tunis from the Khurāsānid; he was prevented by the Riyāḥ of the lord of La Malga, Muḥriz b. Ziyād. Since the disaster of Sétif, the Arab *amīr*s had often gone to the court of the Almohad, who loaded them with gifts. According to official Almohad letters of 551/1156, it is they who requested the Caliph to nominate his eldest son Abū ʿAbd Allāh Muḥammad as governor of Ifrīḳiya and heir presumptive. Before he left Ifrīḳiya, which he had just conquered in a single campaign (555/1160), ʿAbd al-Muʾmin wanted to transfer the Banū Hilāl to Spain, to wage the Holy War there. He informed the *amīr*s of the Banū Riyāḥ of his intention, demanding of them 10,000 men, and the agreement was concluded. But the Caliph had scarcely begun the return journey when the Arabs defected. The Almohad forces routed them in Rabīʿ II 555/end of April 1160, at Djabal al-Ḳarn, south of Ḳayrawān. The conquered *amīr*s were permitted to go to Morocco to recover their captured wives, who were returned to them. In eastern Barbary the Banū Hilāl always rallied round the banner of rebels against Almohad rule, such as Ḳarāḳūsh and the Banū Ghāniya and played an important and active role in Ḥafṣid history, the vicissitudes of which are too long to recount even briefly. The Marīnids also had to cross swords with the Banū Hilāl who had been settled on the Atlantic plains by the Almohads. From the 7th/13th century it becomes more and more difficult to distinguish the Hilāl from the Sulaym and other nomadic Arab tribes who followed them and pursued their work of devastation.

The invading Banū Hilāl, probably, like most Arab nomads, little concerned with religion, made less contribution to the islamization of Barbary—

in fact they themselves were rather re-converted to Islam by the strength of religious influences in the Maghrib—than they did to strengthening its Arab character. Indeed, whereas the Arabs of the conquest had been absorbed in the Berber population, especially in the towns—Islam is essentially urban—those of the 5th/11th century led, in all fields, to a promotion of nomadism which was absorbed so little that almost all the Arabic-speaking Bedouins of the present-day Maghrib are their descendants. Also, many large villages and towns have come under their influence in consequence of the necessary *modus vivendi* which was soon established between the sedentary population and the nomads. In the East as in the West, neither ethnography nor dialectology have yet made it possible to discern a type specifically belonging to the Banū Hilāl, and it is perhaps too late to do this.

The Saga of the Banū Hilāl

The movement of the Banū Hilāl into Africa and the battles they had to fight in order to conquer the country form the historical basis for a collection of tales of heroism and love, the romance, or rather the saga, of the Banū Hilāl (*Sīrat Banī Hilāl*), which has come down to us in two versions (*al-Sīra al-Shāmiyya* and *al-Sīra al-Ḥidjāziyya*) and in three cycles.

The first cycle tells the story (more properly the *Sīra*) of the Banū Hilāl in the Bilād al-Sarw wa-ʿUbāda: Hadhbāʾ and ʿAdhbāʾ, the two wives of Hilāl's son al-Mundhir, give birth in the same night to two sons, Djābir and Djubayr. The latter goes away with his mother and later becomes sultan of the Nadjd. In the Bilād al-Sarw reign the *amīrs* Ḥāzim and Rizḳ of the line of Djābir. Rizḳ marries al-Khaḍrāʾ, the daughter of the *sharīf* of Mecca, whom he assists against the king of Rūm. He has a son by her, the swarthy Barakāt, later named Abū Zayd (Zēd). Ḥāzim's successor is his son Sirḥān (Sarḥān), who is succeeded by his son Ḥasan, who marries Kharmā, queen of the Yemen, after conquering the fire-worshippers of the land of Bardhakhā, against whom Kharmā had invoked his aid. With the aid of Abū Zayd, India is then conquered, after which Ḥasan passes with Kharmā into the Bilād al-Sarw wa-ʿUbāda.

The second cycle deals with the migration (*riḥla*) of the Banū Hilāl into the country of Nadjd; because of a famine, the Hilāl go from the Bilād al-Sarw into the Nadjd, where they are warmly welcomed by the prince Ghānim and his son Dhiʾāb (Diyāb, of the line of Djubayr) and by their tribe the Banū Zughba. The Hilāl triumph over the prince al-Haydabī, who is the foremost of the seven rulers of the Nadjd; Ḥasan, who marries al-Nāfila, the sister of Dhiʾāb, then reigns over the Nadjd with several viceroys. A struggle occurs between Dhiʾāb, who kills two of Ḥasan's brothers, and Abū Zayd; Dhiʾāb yields and peace is restored.

The subject of the third cycle is the migration of the Ḥilāl towards the West (*taghrība*) and their wars with the Zanātī ruler of Tunis; in the year 460/1068 Abū Zayd marches with his followers towards Tunis, in order to find a better place of abode than the Nadjd, where famine is widespread. Saʿdā, the daughter of the Zanātī ruler, who is particularly attracted to Mirʿī (Marʿī), one of the companions of Abū Zayd, works on their behalf. Abū Zayd then returns to the Nadjd and the Banū Hilāl start to move westwards. After several adventures (the journey through the land of the Persians with the seven sultans and their battles in this country, the capture of al-Māriya, the daughter of the *ḳāḍī* Budayr, battles with al-Ghaḍbān, king of the Kurds and the Turkomans, with al-Bardawīl b. Rāshid (i.e. Baldwin I, 1110-1118), al-Sarkasī Ibn Nāzib, al-Firmend, ruler of Egypt, al-Māḍī, king of Bilād al-Ṣaʿīd, etc.), they enter the territory of the Zanātī caliph. The latter marches against the Hilāl and kills two brothers of Dhiʾāb. After al-Zanātī has been killed with the aid of Dhiʾāb, the struggle begins for possession of the seven thrones and the fourteen strong castles of the land of the west. Ḥasan and Abū Zayd are then treacherously killed by Dhiʾāb. Their orphans try to avenge these assassinations. Under the leadership of Buraykiʿ, son of Ḥasan and nephew of Dhiʾāb, and of al-Djāziya, sister of Ḥasan, they march against Dhiʾāb and kill him, after he has stunned al-Djāziya with a kick. Buraykiʿ, who then seizes power, governs tyrannously and provokes a general uprising of the Banū Zughba, in which he is killed by Naṣr al-Dīn, a son of Dhiʾāb.

Of the two principal heroes of the legend, Abū Zayd and Dhiʾāb, the latter had an historical existence; but he played only an insignificant role, thus resembling Roland, the main hero of the poem of the Carolingian cycle.

This short résumé records only the characteristic features of this tale, which is of the highest importance for the history of language and civilization, and which contains a great number of separate narratives.

HILĀL b. al-Muḥassin b. Ibrāhīm al-ṢĀBIʾ, secretary and writer of the Buwayhid period, belonging to a family of Sabean scholars and secretaries which had come from its native Ḥarrān to settle in Baghdād and which included among its members the historian Thābit b. Sinān.Hilāl's grandfather, Abu Isḥāḳ Ibrāhīm [see al-ṣābiʾ], was director of the Chancery at Baghdād and it was in his service that Hilāl (b. at Baghdād in 359/969) began his

career in the time of the *amīr* Ṣamṣām al-Dawla (*K. al-Wuzarāʾ*, 151). Little is known however of the details of his career, except that he became in his turn the Director of Chancery under the vizier Fakhr al-Mulk during the reign of the *amīr* Bahāʾ al-Dawla; it was at this time, in 403/1012, that he embraced Islam, being the first member of his family to do so. When his master fell into disgrace (407/1016-7) Hilāl is said to have received from him 30,000 *dīnārs* which he was allowed to keep under Muʾayyid al-Dawla, and it was on this capital that he lived until his death in 448/1056.

His administrative duties and his rank at the court of the Buwayhid *amīrs* allowed Hilāl al-Ṣābiʾ to write works which, while often adhering faithfully to the genre of *adab*, constitute, because of the documents of which their author has made use and the evidence reproduced in them, valuable sources of information. Hilāl is known particularly for his *Kitāb al-Wuzarāʾ* which he wrote in the time of the vizier Ibu Māfinā, *i.e.*, during the latter part of his life, and of which there is preserved only the beginning, which concerns the viziers of the caliph al-Muḳtadir. But the *Rusūm dār al-khilāfa*, published in 1964, which deals with questions of protocol at the court and in official correspondence, also provides extremely important documentation. Of his *History*, which was a continuation of that of Thābit b. Sinān and covered the period up to 447/1055, there survives only a short fragment covering the years 389-93/999-1003. Finally the *Ghurar al-balāgha* is a collection, still unpublished, of models of private and official letters and containing also some texts of brevets of appointment. There are attributed to Hilāl various works which have not survived, notably a *Kitāb Akhbār Baghdād*, cited by Yāḳūt, and a collection of anecdotes entitled *al-Amāthil wa 'l-aʿyān* which seems to have been different from the *K. al-Wuzarāʾ* though part of its content was similar.

Bibliography: Brockelmann, I, 239-5, S I, 556; D. Chwolson, *Die Ssabier und der Ssabismus*, Saint-Petersburg 1856, i, 606-10; Yāḳūt, *Udabāʾ*, vii, 255-7; Ibn al-Djawzī, *Muntaẓam*, viii, 176-9. The *K. al-Wuzarāʾ*, edited by Amedroz in 1904, was re-edited in Cairo in 1958; some fragments of the lost section, reproduced by later writers, have been collected by M. ʿAwwād, *Aḳsām ḍāʾiʿa min K. al-Wuzarāʾ*, Baghdād 1367/1948; H. Busse, *Das Hofbudget des Chalifen al-Muʿtadid billah (279/892-289/902)*, in *Isl.*, xliii (1967), 11-36 (contains German tr. of *K. al-Wuzarāʾ*, Cairo ed., 15-27, = ed. Amedroz, 14 ff.); see also D. Sourdel, *L'originalité du Kitāb al-Wuzarāʾ de Hilāl al-Ṣābiʾ*, in *Arabica*, v (1958), 272-92. The edition of *Rusūm dār al-khilāfa* by M. ʿAwwād (Baghdād 1964) includes an introduction which contains all the necessary references for the biography of Hilāl.

(D. SOURDEL)

HILĀLĪ, BADR AL-DĪN, Persian poet of the late 9th/15th—early 10th/16th centuries, of Turkish origin, born in Astarābād. While a young man he went to Herāt and enjoyed the patronage of ʿAlī Shīr Nawāʾī. Sām Mīrzā, who gives the fullest account of Hilālī, states that although he was known as a Sunnī, he was executed as a Shīʿī heretic by ʿUbayd Allāh Khān in 936/1529-30. Apart from his *dīwān*, consisting mainly of *ghazals*, he composed three *mathnawīs*. These are, in chronological order: (a) *Shāh u Darwīsh*, the content of which Bābur criticized on moral grounds (*The Bábar-náma*, GMS, i, 181b), but which Ethé, who translated it into German verse, regarded as a mystical poem (*Gr.I.Ph.*, ii, 302): (b) *Ṣifāt al-ʿāshiḳīn*, an ethical poem; (c) *Laylā u Madjnūn*, which Hilālī considered superior to his earlier *mathnawīs* and which is distinguished from the versions of his predecessors by having a happy ending. A recently published *baḥr-i ṭawīl* in Turkish (E. R. Rustamov, *Uzbekskaya poeziya v pervoy polovine XV veka*, Moscow 1963, 20 ff.) displays also Hilālī's ability in his mother tongue.

ḤILF, etymologically "covenant", "compact", "friendship" and, by extension, "oath", the *ḥilf* being generally confirmed by an oath (*ḳasam, yamīn*). The term is used of three different varieties of institution, all of which originate in the customs of pre-Islamic Arabia.

In a primary sense, *ḥilf* merges with the institution of *walāʾ*, which consists of the admission of an individual to a clan, by an agreement with one of the members of this clan or by collective assent. This individual, known as *mawlā*, is generally accorded the same social and juridical position, from the standpoint both of rights and of obligations, as the original members of the tribe. There is even established a right of succession between him and the member of the tribe with whom the agreement is made [see MAWLĀ].

The second type of *ḥilf* consists of the agreement between the clans within one tribe through which they settle on a common line of conduct in the general interest. Such was probably the case with the *Ḥilf al-fuḍūl* [*q.v.*].

A *ḥilf* may also be arranged between opposing clans within one group, or between different groups, for the accomplishment of a particular object such as a war or the pursuit of a *thaʾr*,—and which is dissolved when the object is accomplished. In this instance it is of an accidental and temporary nature. Hence the term *ḥilf* came to mean an alliance in the modern sense of the term. Of this type were the two *ḥilfs* arranged on the occasion of the disagreement which arose between the clans of Ḳuraysh on the subject of the allocation of the ritual offices of the Kaʿba and of the Pilgrimage: *ḥilf al muṭayyabīn* for the former, *ḥilf laʿaḳat al-dam* for the latter.

Ḥilf properly so-called however is the compact which, entered into between quite separate tribes, is, in principle, very general in scope and conduces to the amalgamation of these tribes.

It was concluded with solemn formalities, as indeed were the other types of *ḥilf*. The parties gathered around a great fire, "the fire of the *ḥilf*", where they exchanged their reciprocal undertakings, calling down anathemas on the party which broke them. Other rituals were still in use. The *Aghānī* mentions the custom by which those assembled plunged their hands into a leather bottle filled with perfumes, blood or ashes. There are mentioned other rituals, of a religious character, which took place during the conclusion of *ḥilfs* between the clans of a single tribe. The pre-Islamic sources do not appear to mention on these occasions the formal taking of an oath, but there was implicit throughout the ritual the sense of such an oath in the minds of those taking part.

In principle, the *ḥilf* did not diminish the autonomy of the tribes or the degree of equality between them; and they retained their respective dwelling places and their grazing-grounds. Its object was, as well as establishing a permanent state of peace between the tribes, also to unite them for purposes of common defence, for enterprises of *g͟hazw* [*q.v.*], for vengeance (*t͟ha*ʾ*r*), for mutual aid in the payment of settlements to third parties and for the common use of pasturage.

The agreement was sometimes accentuated by the fact that the two tribes adopted a common dwelling place or, more often, that one of the groups came and settled on the other's territory. The effects of this latter practice, reinforced by the continuation of the compact and by community of interests, usually led to the amalgamation of the groups. This was later sealed by the adoption of a common eponym, either real or invented. According to the author of the *ʿIḳd*, the Arab tribes which had not originally been made up of disparate elements united by a *ḥilf* were very rare.

The *ḥilf* in this sense was to be condemned in Islam, as a result of the pronouncement attributed to Muḥammad: "There is no *ḥilf* in Islam". It was indeed contrary to his principle, which was that all the ancient tribal distinctions should be fused into a single community and that this community must inevitably oppose all others, in order to absorb them or at least to subjugate them (the obligation of the *d̲jihād*). It is true that another saying is reported which announces the survival of the *ḥilf*, but it must refer only to the *ḥilf-walā*ʾ, which is in any case no longer permitted except between Muslims, or perhaps to the maintenance of those *ḥilf*s which had been concluded earlier.

It is not clear to what extent the new principle is adhered to in the specifically Arab milieus which continue to live according to the ancient traditions of tribal organization. There may however be mentioned the use among the Arabs of Transjordania of forms of agreement known as *ben-ʿamma*, the object of which is to establish a state of peace between tribes. One of these forms implies the recognition by the contracting parties of a common ancestral origin such as may lead, as in the ancient *ḥilf*, to their being united.

ḤILF AL-FUḌŪL, a famous pact concluded between several Ḳuras͟hī clans a few years before the Prophet's mission, more precisely, according to certain authorities, in D̲hu 'l-Ḳaʿda on the return from the war of Fid̲jār [*q.v.*]. The traditions concerning the events which brought it about are divergent, but can be reduced to the following outline: a merchant of Zabīd (or elsewhere, or even the poet al-Ṭamaḥān al-Ḳaysī) sells merchandise to a leading man of the clan of the Banū Sahm who proves to be a bad payer and wants to harm the merchant. The latter climbs up the D̲jabal Abī Ḳubays and, complaining loudly of the treatment he has received, appeals to the Ḳuray̲shīs to see justice done to him. This appeal, together with the fears of extermination which they felt as a result of the supernatural punishments which had smitten the Banū Sahm, brought about the conclusion of the *ḥilf al-fuḍūl*. The circumstances of it are differently reported, but it seems likely that al-Zubayr b. ʿAbd al-Muṭṭalib and ʿAbd Allāh b. D̲judʿān [*q.v.*] played the principal roles; in the latter's dwelling the representatives of the following clans are said to have gathered: Banū Hās͟him, Banu 'l-Muṭṭalib, Banū Zuhra, Banū Taym al-Lāt and Banū Asad b. ʿAbd al-ʿUzzā (this last clan is replaced in al-Masʿūdī by the Banu 'l-Ḥārith b. Fihr), to conclude the pact; after washing the Black Stone and drinking the rinsings, the participants, standing with one hand held above the head, vowed to be all "like a single hand with the oppressed and against the oppressor", to have justice done to all victims whatever their origin and their situation and to afford mutual aid and assistance.

The name of this pact has given rise to widely differing interpretations: for some, a similar agreement had been concluded by several D̲jurhumīs [*q.v.*] of the name of al-Faḍl (or bearing names derived from this root); for others, it originates from the undertaking of the participants not to leave the outstanding debt (*faḍl*) to the recalcitrant debtor; and for others, some clans which did not participate in the pact saw in it something superfluous (*fuḍūl*); according to al-D̲jāḥiẓ, it owes its name to the outstanding virtues and advantages it presents, so that the tribes who took part in it were called al-Fuḍūl.

The multiplicity of explanations put forward proves that the reason for this name was forgotten very early, even though Islam did not repudiate the agreement. The Prophet is said moreover to have been present when it was concluded and to have said later: "I was present in the abode of ʿAbd Allāh b. D̲judʿān at such a pact that I would not wish [to exchange] for the "red cattle" (*ḥumr al-naʿam*=the best camels), and if I were invited to [agree to it], now that we are in Islam, I would accept willingly". The pact ended with the death of the last of the participants, but it was sometimes effectively recalled down to the Umayyad era and on certain occasions threats were made to bring it into operation. In the 3rd/9th century, al-D̲jāḥiẓ drew arguments from it to prove the superiority of the Hās͟himīs over the ʿAbd S͟hams (=Umayyads), who had not participated, and he considers it to be the noblest pact ever concluded by the Ḳuray̲shīs. Recently M. Hamidullah (who had at his disposal a manuscript of the *Munammaḳ* of Ibn Ḥabīb) has taken into account the tradition that there existed among the D̲jurhumīs a *ḥilf al-fuḍūl*, which lasted for several centuries and, regarding it as an "order of chivalry", has attributed its restoration to the remorse felt by al-Zubayr after the war of the Fid̲jār.

AL-ḤILLA, a town situated on the Euphrates midway between al-Kūfa and Bag͟hdād near the ruins of ancient Bābil. Not to be confused with several like-sounding places, it is sometimes called Ḥillat Banī Mazyad or Ḥillat al-Mazyadiyya after Sayf al-Dawla, Ṣadaḳa b. Manṣūr b. Dubays b. ʿAlī b. Mazyad al-Asadī, who founded the town in 495/1102 (Ḳazwīnī gives the date 436/1044, but this is an error) on the west bank of Nahr Sūrā, the main

subsidiary of the Euphrates. In later times (6th/12th century) this waterway came to be known by the name of the parent stream, the former name gradually going out of use. An earlier settlement called al-Djāmiʿān existed on the intensively cultivated east bank, but the major built-up area was the new town across the river. At a spot which Yāḳūt describes as having hitherto been a gathering place for lions, Dubays settled with his troops, building magnificent dwellings and palaces. The town also contained a wide variety of markets and gave every indication of being prosperous. This prosperity continued well after the death of the founder, for after the decline of Ḳaṣr b. Hubayra, in the 6th/12th century, it became the half-way town along the pilgrim route linking al-Kūfa and Baghdād. A large bridge of boats was constructed in order to facilitate movement across the river, presumably to take the place of the great Sūrā Bridge which was located at the above-mentioned site. Ibn Djubayr describes this bridge as having been moored by iron chains tied to wooden posts on each bank of the river. He found the town to be large and prosperous, of oblong shape, and protected only by mud walls. Ibn Baṭṭūṭa, writing two centuries later, was also struck by this magnificent bridge, and by the prosperity of the town in general. His contemporary Ḳazwīnī adds that the population was made up of Twelver Shīʿīs and that a religious shrine was situated there. The town continues to exist in modern times.

Bibliography: Ibn Djubayr, 214; Yāḳūt, *Muʿdjam*, ii, 322 ff.; iii, 861; Ibn Baṭṭūṭa, ii, 97, tr. Gibb, ii, 324 f.; Ḳazwīnī, 138; Le Strange, 71.

(J. Lassner)

AL-ḤILLĪ, (1) Djamāl al-Dīn Ḥasan b. Yūsuf b. ʿAlī b. Muṭahhar, called ʿAllāma-i Ḥillī (the sage of Ḥilla) after his native city Ḥilla [*q.v.*], which was for a long time the recognized centre of the Shīʿīs when Sunnī rulers were in authority in Baghdād. He was born on 19 Ramaḍān 648/15 December 1250, eight years before the capture of Baghdād by the Mongols, and died 11 Muharram 726/18 December 1325. He came of a great family of Shīʿī theologians, which produced in a comparatively short period ten *mudjtahids*. He studied religious subjects with his father and uncle, and philosophical subjects with the great philosopher, astrologer and theologian Naṣīr al-Dīn Ṭūsī [*q.v.*].

ʿAllāma-i Ḥillī is said to have written as many as five hundred books and treatises on every branch of Islamic learning, seventy-five of them specifically named in the *Ḳiṣaṣ al-ʿulamāʾ* and the *Amal al-Āmil*. The modern Shīʿī writers ʿĀmilī and Agha Buzurg (see bibliography) name many private libraries in Iraq and Persia where original manuscripts are to be found. Only eight of al-Ḥillī's works are published, however, and are regarded by the Imāmī Shīʿa as the most authentic expositions of their dogma and practice. Two of them, *al-Bāb al-ḥādī ʿashar*, together with its commentary by Miḳdād-i Fāḍil (English tr. by W. M. Miller, Oriental Tr. Fund, N.S. xxix), a recognized creed of the Ithnāʿasharīs, which has superseded every other in modern times, and *Sharḥ Tadjrīd al-iʿtiḳād*, on scholastic theology, have become classics of the Imāmī faith, and are universally taught in all the Shīʿī *madrasas* as fundamental texts.

ʿAllāma-i Ḥillī moved to Persia, in about 705/1305, and is said to have successfully conducted many debates with the leading Sunnī theologians of his time in the court of Öldjeytü [*q.v.*], the eighth Īl-Khānid ruler of Persia, who, after renouncing Christianity, became a Sunnī Muslim, but was ultimately converted by ʿAllāma-i Ḥillī into a staunch Imāmī Shīʿī. It was perhaps at his suggestion that Öldjeytü ordered the names of the Twelve Imāms and especially the formula, *ʿAlī walī Allāh*, to be engraved on the coins (see S. Lane-Poole, *Catalogue of Oriental coins in the British Museum*, London 1881, vi, 44 ff.); hence it may be said that through ʿAllāma-i Ḥillī's efforts Imāmī Shīʿism was for the first time declared the state religion of Persia (see H. Howorth, *History of the Mongols*, London 1888, iii, 559). His services were so much appreciated by the Shīʿīs that soon after his death his grave in Mashhad became one of the centres of veneration for those who go on pilgrimage to the tomb of Imām ʿAlī al-Riḍā.

(2) Another eminent jurist-theologian of Ḥilla, often described as Muḥaḳḳiḳ-i Ḥillī and also known as Muḥaḳḳik-i awwal, is Nadjm al-Dīn Djaʿfar b. Ḥasan b. Yaḥyā, born 638/1240-1, died 726/1326. He distinguished himself as the author of *Sharāʾiʿ al-Islām*, which came to be recognized as the authoritative work on Shīʿī law (Fr. tr. by A. Querry, Russian tr. by Kasembeg).

Bibliography: in addition to the works mentioned in the text: (1) Muḥammad b. Ḥasan al-Ḥurr al-ʿĀmilī, *Amal al-Āmil*, lith. Tehrān 1320 h., 40; Muḥammad b. Sulaymān Tunakābunī, *Ḳiṣaṣ al-ʿulamāʾ*, Tehrān (latest edition 1954), 355 ff.; Muḥammad Bāḳir al-Khwānsārī, *Rawḍāt al-djannāt*, Tehrān 1888, 171 ff., 235; Muḥsin al-ʿĀmilī, *Aʿyān al-shīʿa*, Damascus 1946, xxiv, 277-334; Ḥasan al-Ṣadr, *Taʾsīs al-Shīʿa li-ʿulūm al-Islām*, Baghdād 1951, 270, 313 and 397 ff.; Agha Buzurg al-Tihrānī, *al-Dharīʿa ilā taṣānīf al-shīʿa*, Nadjaf 1959, xiii, 117 and 133, and other volumes, as he describes books in alphabetical order; Shaykh Yūsuf Karakūsh, *Taʾrīkh al-Ḥilla*, Nadjaf 1965, i, 87-8, ii, 32-4; Brockelmann, II, 164; Browne, iv, 406; W. (S. H. M. Jafri)

ḤILM (A.), a complex and delicate notion which includes a certain number of qualities of character or moral attitudes, ranging from serene justice and moderation to forbearance and leniency, with self-mastery and dignity of bearing standing between these extremes. The term, which is sometimes linked with *ʿilm*, more however from stylistic considerations and a taste for paronomasia than from any conceptual association, is basically contrasted with *djahl* [see djāhiliyya] and *safah* or *safāha*; a derivative from the latter root appears in the expression *saffaha 'l-aḥlām*, which can be translated "to put the most imperturbable out of countenance, to make them lose their temper". The Arabic dictionaries give only fragmentary definitions of *ḥilm*; in the *LA*, it is "levelheadedness and reason", whilst *ḥalīm* is glossed by "patient"; for the *TA*, *ḥilm* consists of controlling oneself and not allowing any violent emotion or anger to burst out; for the *Muḥīṭ*, it is "the state of the soul which preserves its calm and does not easily allow itself to be carried away by anger" (see also Ibn Abi 'l-Ḥadīd, *Sharḥ Nahdj al-balāgha*, iv, 290, 335

and *passim*). From these definitions it emerges that the lexicographers consider the basic element of *ḥilm* to be self-mastery, dignity, detachment (though without the last of these going as far as the *ataraxia* of the Greeks, as T. Izutsu suggests in *The structure of the ethical terms of the Koran*, Tokyo 1959, 26; revised version under the title: *Ethico-religious concepts in the Qur'ān*, Montreal 1966, 31, 69); but they make no reference to the pardoning of offences, whilst in the modern period (as probably for many centuries) the word *ḥilm* generally connotes the qualities associated with patience, leniency, understanding (cf. H. Wehr, *Wörterbuch*, s.v.), or even gentleness (*ibid.*; Beaussier, s.v.). In a recent work, S. H. al-Shamma (*The ethical system underlying the Qur'ān*, Tübingen 1959, 7) gives it simply the meaning of "good conduct".

The problems posed by this word are however not so simple. I. Goldziher (*Muh. Stud.*, i, 319 ff.; analysis by G.-H. Bousquet, in *Arabica*, vii/3, 246-9), in studying the concept of *d̲j̲āhiliyya*, very justly contrasts *d̲j̲ahl* with *ḥilm*, which implies "an idea of physical solidity, and then of moral integrity and solidity, of calm dispassionate reflexion and gentleness in social intercourse. The *ḥalīm* is the civilized man", as opposed to the *d̲j̲āhil*, the "barbarian". Goldziher adds that *muruwwa* [*q.v.*] allowed it to be known in what cases it was permissible however to resort to *d̲j̲ahl*, that is to say to allow oneself to be carried away by a somewhat crude spontaneity, for *ḥilm* could be a mark of weakness (cf. al-Maydānī, i, 220; *al-ḥalīm maṭiyyat al-d̲j̲ahūl*).

Now B. Farès (*L'honneur chez les Arabes avant l'Islam*, Paris 1932, XXI), who had used only the second volume of *Muh. Stud.*, makes *ḥilm* one of the four elements of honour, along with generosity, intelligence and courage (*op. cit.*, 56). While noting (*ibid.*, 55) that *ḥilm* "consisted in not giving way to one's anger", this writer recognizes that it sometimes went beyond simple moderation to "become identical with forbearance; in that case, the chief willingly suffered insults and refrained from avenging them, regardless, strange as it may seem, of his own honour". For this attitude, so much at variance with the toughness of the ancient Arabs, B. Farès finds an explanation in the fact that dishonour provoked by the practice of *ḥilm* enhanced the group's prestige, while the tyranny of the chief was averted. In reality this form of *ḥilm*, the scorning of insults, cloaks a considerable moral force, since indifference can, if he possesses a certain nobility of character, administer a more profitable lesson than a physical penalty to the guilty man, but it can only be an aristocratic virtue. Tradition indeed relates numerous anecdotes in which important personages can be seen turning a blind eye to faults of greater or lesser gravity, while in similar circumstances, according to the writers, men of the common sort would be carried away and take to fighting. Abu 'l-ʿAtāhiya (*Dīwān*, 286-7, verses 3 ff.) relates *ḥilm* to silence (*ṣamt*), "in which the *ḥalīm* finds a protection against all that might injure his honour (*ʿirḍ*)". Before Islam, therefore, *ḥilm* seems to have been compounded of a mixture of characteristics which conferred upon those who possessed them, and who were *sayyid*s, an incontestable moral authority.

With Islam, if one is to judge by the interpretations of it that have been given, *ḥilm* was to change its character entirely, at least in principle. The word itself is absent from the Ḳur'ān, and the adjective *ḥalīm*, qualifying Allāh (*passim*), Abraham (IX, 115/114, XI, 77/75), Isaac (XXXVII, 99/101) and S̲h̲uʿayb (XI, 89/87), is generally rendered by "long-suffering", "patient", "gifted with tolerance", "slow to punish"; it is also the 33rd of the *asmā' ḥusnā* [*q.v.*]. Thus the Ḳur'ān does not appear to impose the virtue of *ḥilm* on the Muslims; but in strict logic, granted that Islam is opposed to *D̲j̲āhiliyya* and that *d̲j̲ahl* is the fundamental characteristic of that period, it follows that *ḥilm* must be the essential feature of Islam. This is the reasoning that is followed by Goldziher (*op. cit.*), for whom the new religion "desired the triumph of a *ḥilm* superior to that known by Arab paganism". This original opinion has recently been revived and developed by T. Izutsu (*op. cit.*, 25), who thinks that "Muhammad's whole work on its ethical side may very well be represented as a daring attempt to fight to the last extremity with the spirit of *jāhiliyyah*, to abolish it completely, and to replace it once for all by the spirit of *ḥilm*". Indeed, the notion of *ḥilm* is simply implicit in Islamic ethics and can be deduced *a contrario* from the use of the word *d̲j̲ahl* and its derivatives in the Ḳur'ān; but it also emerges from certain verses, the most characteristic of which is certainly the following (XXV, 64/63): "The [true] servants of the Beneficent are those who walk the earth modestly and who, when addressed by the *d̲j̲āhil*, answer 'peace!' ". In fact, to eradicate the tendencies of the Arab people, it was fitting to substitute a "civilization" for the "barbarism" of the *d̲j̲āhiliyya*, to make the Arabs civilized men, capable of holding their instincts in check and of pardoning insults, in short of spreading abroad the virtue of *ḥilm* hitherto restricted to an élite; this reform of manners was to be favoured by the belief in the Last Judgement, which imposes a rule of life on earth, and in Allāh, Who combines in Himself all the elements of *ḥilm* and of responsibility for avenging men by chastising the guilty.

This analysis of Muslim ethics, suggested by Goldziher and restated more systematically by Izutsu, does not provoke any major objection, except that the Muslims do not appear to have consciously made *ḥilm* a directing principle of their conduct, even though their behaviour in fact corresponded with the definition of this multiple virtue and, in practical life, a true Muslim is necessarily *ḥalīm*.

The proof of the survival of the pre-Islamic notion of *ḥilm* without any Muslim admixture is to be found in the first place in the facts put forward to explain the origin of the saying (al-Maydānī, i, 229): *aḥlam min al-Aḥnaf*. This noble Tamīmī (d. 67/686-7 [see AL-AḤNAF]) still represents the typical pre-Islamic *sayyid*, and the *ḥilm* which has made him proverbial contains the following elements: self-mastery, leniency in respect of his enemies, repression of anger, inclination towards the serious, discretion, and hostility to denunciation. After him, the man who seems to have been regarded as most *ḥalīm* is Muʿāwiya; but, on the one hand, this caliph belonged to a dynasty which had not yet shed all its bedouin character and, on the other hand, an analysis of his *ḥilm* shows that he had made of it a political principle: he succeeded through his leniency in disarming certain of his enemies, and through his liberality in securing the submission of others, saying that war is more costly than generosity; such a *ḥilm* can in no way be regarded as a Muslim virtue (cf. H. Lammens, *Études sur le règne du calife omaiyade Moʿāwia I*). Al-D̲j̲āḥiẓ, who of all the ancient authors took the greatest pains to analyse sentiments and traits of

character, has no difficulty (*Faḍl Hāshim ʿalā ʿAbd Shams*, in *Rasāʾil*, ed. Sandūbī, 104) in destroying the legend of the *ḥilm* of al-Aḥnaf and Muʿāwiya by observing that neither of them fulfilled the conditions of a true *ḥalīm*, who must in fact possess a combination of qualities which he enumerates, notably in a fine passage in the *Kitmān al-sirr* (ed. Kraus-Ḥādjirī, 40), and which incidentally have nothing specifically Muslim about them. The *adab* writers subsequently name various other great men renowned for their *ḥilm*, in particular al-Maʾmūn (see al-Ibshīhī, *Mustaṭraf*, Cairo n.d., i, 262), but in general they base themselves primarily on tradition, either pre-Islamic or dating from the very first centuries of Islam (see particularly Ibn Ḳutayba, *ʿUyūn, passim*; Ibn ʿAbd Rabbih, *ʿIḳd*, Cairo 1346/1928, ii, 75). Even in al-Djāḥiẓ, in the passage just referred to, there appears a new element, but one to be expected from a Muʿtazilī: it is reason which must curb the passions. In his *Tahdhīb al-akhlāḳ* (25), Miskawayh lists *ḥilm* among other qualities and defines it (232) as "the consultation of reason" (*istishārat al-ʿaḳl*); al-Ghazālī, in his *Iḥyāʾ* (book xxv) brings together anger, hatred and jealousy, but links *ḥilm* with anger and defines it as the plenitude of reason, the mastery of self, the subjection of the passions to reason. Ibn Sīnā introduces it into the system of Greek philosophy [see FALĀSIFA, at p. 766b]. Al-Harawī (*K. al-Tadhkira al-harawiyya fi 'l-ḥiyal al-ḥarbiyya*, ed.-tr. J. Sourdel-Thomine, in *BÉt.Or.*, xvii (1961-2), 236, 246) regards *ḥilm baʿd al-ḳudra* as one of the qualities of the ruler. The author of a popular encyclopaedia such as al-Ibshīhī in the 36th chapter of his *Mustaṭraf* (i, 252-65) groups together pardon, *ḥilm*, good-nature and the repression of anger, and quotes a certain number of memorable sayings which all go back to the first centuries of Islam, with the conclusion that each must try to acquire these qualities and to imitate the Prophet who was the most *ḥalīm* of men.

Thus it appears that *ḥilm* is naturally regarded as a praiseworthy quality but not as a cardinal virtue in Islamic morality; in popular estimation generally restricted to self-control and the forgiving of insults, it is a quality whose effects are turned outwards; however, the thinkers and moralists tend to make it a sort of internal restraint, of mastery over the passions, thanks to the intervention of reason, which must decide the conduct to be followed in any particular circumstance.

(CH. PELLAT)

HILMAND (HELMAND), name of a river (the Etymandrus of Arrian, the Erymanthus of Polybius, the Haētūmat of the Avesta, the Hīdhmand of the *Ḥudūd al-ʿālam*) which, with its five great tributaries (Khūd Rūd, Tirīn, Arghandāb, Tarnak, Arghasān) drains all south-west Afghānistān (see map at i, 222 above). Rising in a valley at the convergence of the Kūh-i Bābā and Sangakh ranges, the river flows in a southwesterly direction through Hazāradjāt and Dihrāwat to Khʷādja ʿAlī, where it turns westward, and finally north, to lose itself in the lakes of Sīstān. It is navigable downstream from the important crossing on the Ḳandahār-Harāt road at Girishk. The waters of the lower Hilmand have been used for irrigation since antiquity; after the Second World War an ambitious project was undertaken to use the waters of the Hilmand and its tributaries for irrigation west of Ḳandahār, but it has encountered many difficulties.

(M. E. YAPP)

AḤMED **ḤILMĪ** EFENDI, 19th century Turkish translator. Born in Üsküdar, he was trained in the language chamber [see TERDJÜME ODASI] of the Ministry of Foreign Affairs, and subsequently held a number of official appointments. He is mentioned as having been Ottoman Consul in Tabriz and a member of the Embassy in Tehrān, and in 1876 was elected a deputy in the first Ottoman parliament. He died in 1878 of typhus, contracted while caring for refugees from the Russo-Turkish war, and was buried at the Karacaahmet cemetery in Üsküdar.

Aḥmed Ḥilmī played a pioneer role as a translator of books on history and economics. His major historical enterprise was a Turkish translation and adaptation of an English book (*Chambers's Historical questions with answers. Embracing ancient and modern history*, London and Edinburgh 1865). Entitled *Taʾrīkh-i ʿumūmī*, this work appeared in 2 vols. in Istanbul in 1285/1868-9; a second, expanded edition was published in 6 volumes in 1293-4/1876-7. The second edition contained more extensive treatment of Islamic history, drawn from the *Ṣaḥāʾif al-akhbār* of Müneddjimbashī [*q.v.*]. Though not the first Turkish translation of a European historical work [see TARDJAMA], the *Taʾrīkh-i ʿumūmī* was the first modern work on world history published in Turkey; its appearance, which was followed by the publication of numerous other translations and adaptations of works on European and world history, introduces a new phase in the Turks' awareness of history and their own place in it. It was published under the auspices of the official Translation Committee appointed in 1865, of which Aḥmed Ḥilmī was a member (on this committee see Mahmud Kemal Inal, *Osmanlı devrinde son sadrıazamlar*, 1308; Ş. Mardin, *The genesis of Young Ottoman thought*, Princeton 1962, 239). In addition, Aḥmed Ḥilmī is said to have published a book entitled *Taʾrīkh-i Hind*, and consisting, according to *ʿOthmānlı müʾellifleri*, of a translation of a history 'written in the ancient language of India'.

Besides history, Aḥmed Ḥilmī was also interested in economics, and in 1286/1869-70, according to *ʿOthmānlı müʾellifleri*, published *ʿIlm-i tedbīr-i therwet*, an economic treatise translated from the German.

(B. LEWIS)

AḤMED **ḤILMĪ**, known as Shehbenderzāde, a Turkish journalist who first achieved prominence after the revolution of 1908, when he returned to

Istanbul from exile in Fezzan, and started a periodical called *Ittiḥād-i Islām*. He also contributed to *Iḳdām*, *Taṣwīr-i Efkār*, and, later, the weekly *Ḥikmet* [see DJARĪDA, iii], and wrote a considerable number of books, some of which were published. These include a history of Islam and books on the Sanūsī order and on Ibrāhīm Gülshanī [*qq.v.*]. He died in 1913.

Bibliography: Babinger, 397; *ʿOthmānlı müʾellifleri*, ii, 156-7. (ED.)

TUNALÎ ḤILMÎ, Turkish writer and politician. Born in Eskidjuma in 1863, he became involved in illegal political activities while still a medical student. After serving a brief term of imprisonment, he fled to Europe in 1895, and joined the Young Turk group in Geneva, where in 1896 he founded, with others, the Ottoman Revolutionary Party (*ʿOthmānlı Ikhtilāl Fırḳası*); he was particularly effective as a writer and propagandist with a simple and direct popular appeal. In 1900, together with ʿAbd Allāh Djewdet and Isḥāḳ Sükūti [*qq.v.*], he made his peace with the Sultan and was appointed Secretary at the Ottoman Embassy in Madrid, but later reverted to opposition. Returning to Turkey in 1908, he held various official positions and became a member of parliament. Later he joined the Kemalists and was a member of the first Grand National Assembly in Ankara. He died in 1928.

Bibliography: Ibrahim Alâettin Gövsa, *Türk meşhurları ansiklopedisi*, Istanbul n.d., 175; Ş. A. Mardin, *Jön Türklerin siyasî fikirleri 1895-1908*, Ankara 1964, 96-7 and *passim*, with a bibliography of his writings on pp. 238-9; Ahmed Bedevî Kuran, *Inkılâb tarihimiz ve Ittihad ve Terakki*, Istanbul 1948, 89 ff.; cf. idem, *Osmanlı imparatorluğunda ve Türkiye Cümhuriyetinde inkılâb hareketleri*, Istanbul 1959, 216; E. E. Ramsaur, *The Young Turks*, Princeton 1957, 37, 53-4; Y. H. Bayur, *Türk inkılâbı tarihi*, ii/4, Ankara 1952, 68-70. (B. LEWIS)

ḤILMĪ PASHA [see ḤUSAYN ḤILMĪ PASHA; IBRĀHĪM ḤILMĪ PASHA].

ḤIMĀ (A., literally "protected, forbidden place"), an expanse of ground, with some vegetation, access to and use of which are declared forbidden by the man or men who have arrogated possession of it to themselves. The institution, which dates back to pre-Islamic Arabia, seems to have a secular origin. To protect their flocks from the ill-effects of drought, the powerful nomadic lords used to reserve to themselves the grazing and watering rights in certain rich pasturages. The story is well-known of the famous Kulayb b. Rabīʿa who, having appropriated certain meadows, fixed as the limits of his *ḥimā* the points within earshot of his dog's bark. A strange she-camel having strayed into the middle of his herd, he shot an arrow which wounded it mortally. In reprisal, Djassās killed Kulayb. Such is said to have been the origin of the celebrated war of Basūs.

The *ḥimā* was often placed under the protection of the tribal deity. It was then assimilated with the *ḥaram* in whose privileges it participated. Its fauna and flora were protected, and it enjoyed the right of asylum. The inviolability of the *ḥimā*s of the idols Fals and Djalsad is well-known. The animals consecrated to them grazed there safely, and no-one dared to kill or steal them. The straying animal that crossed over the boundary was lost to its owner, for it then came under the god's tutelage.

The Ḳurʾān, which recognizes only the *ḥaram* (XXVIII, 57, XXIX, 67), does however make a discreet allusion to the institution of *ḥimā* when it evokes the history of the prophet Ṣāliḥ: "O my people, this is the camel of Allāh, which is for you a sign. Leave it to graze on the land of Allāh" (XI, 64, VII, 73). This apparently refers to a consecrated animal which had to live in freedom on the territory of the god. Nevertheless Islam, which turned against *wasm* and the consecration of animals to divinities (V, 103, VI, 138 f.), intended to put an end to these pagan practices. Henceforward, the sole territory to be strictly sacred was Mecca, its inviolability having been decreed by Allāh Himself (Ḳurʾān XVII, 91; al-ʿAynī, *ʿUmda*, v, 89 and 92). By extension, under the terms of a special measure made on its behalf by the Prophet, Medina enjoyed the same religious prerogatives as the Meccan *ḥaram*. But the institution of *ḥimā* was not suppressed as such: Islam simply reduced it to its secular applications. It was, accordingly, to this practice that Muḥammad and the first caliphs resorted in reserving for the mounts of the Muslim armies, both for the camels acquired by the Treasury and for the smaller herds belonging to the poorer Muslims, the use and possession of certain pasturages (in the places called Naḳīʿ, Rabadha, Sharaf).

The Muslim jurists dispute the validity of the measures taken by Muḥammad's successors for, according to a celebrated *ḥadīth*, "there is no *ḥimā* save for Allāh and His messenger".

Bibliography: Ibn al-Kalbī, *Kitāb al-Aṣnām*; Maydānī, *Madjmaʿ al-amthāl*, Būlāḳ 1284, i, 427; Yāḳūt, Beirut 1956, ii, 307, iii, 24, 330, 336, 457, iv, 282, v, 301; ʿAynī, *ʿUmdat al-ḳāriʾ*, *ad locc.*; Alūsī, *Bulūgh al-arab fī maʿrifat ʿaḥwāl al-ʿArab*, iii, 31 ff.; Māwardī, *al-Aḥkām al-sulṭāniyya*, 178 ff. (ch. XVI), Cairo n.d.; Lammens, *Le berceau de l'Islam*, 60-70. (J. CHELHOD)

ḤIMĀR (A.), donkey (fem. *atān* and *ḥimāra*). The Arabs make a distinction between the domestic donkey (*ahlī*) and the wild donkey (*waḥshī*, *faraʾ*, *ʿayr al-ʿāna*). Domestic donkeys are used to turn mills, as beasts of burden and as mounts, but although the Prophet is said to have owned one, named Yaʿfūr, and although the animal has been esteemed by famous persons, it is not ridden by Arabs of high rank, who even employ a formula of apology (*ḥashā-kum*, *aʿazza-kum Allāh*, etc.) when they utter its name. The zoological works provide details of its characteristics: it is able to find its way even if it has travelled a road only once before; it is sharp of hearing; its braying, provoked by the sight of a demon (whereas when a cock crows it is said to have seen an angel), carries a great distance, and is so disagreeable that a dog howls with pain on hearing it; in order to prevent it braying a stone should be attached to its tail; if it sees a lion it either stops or runs towards it, and this saves it; it is not very prone to illness but is very sensitive to cold; if someone who has been stung by a scorpion sits back to front on its back the pain felt is transmitted to the donkey. The uses made of the different parts of its body are innumerable. From the juridical point of view it is not generally permitted to eat its flesh [see ḤAYAWĀN, iv] and it is forbidden in principle to mate a mare with a domestic ass [see BAGHL].

Wild asses are all so similar to one another that there is nothing to distinguish among them. The stallion is so jealous that it tears off with its teeth the testicles of young asses; for this reason the she-asses do not rejoin the herd until their young are strong enough to run away. As the herd usually does not separate, it is very easy to hunt the wild ass: the hunter hides in a ravine and kills the first one

to pass; the others, instead of turning back, stay together and are easily killed; but this detail does not correspond with the data of poetry collected by G. Jacob (*Studien in arab. Dichtern*, iii, 115). It is permitted to eat the flesh of the wild ass, except for the Ḥanafīs.

Wild asses are considered to live much longer than domestic ones (up to 200 and even 800 years!), and the breed which enjoys the greatest longevity is that known as *akhdariyya*; it owes its name to *al-Akhdar*, the stallion of Ardashīr which, having reverted to a wild state, is said to have been the founder of this breed which is considered to be the most beautiful.

(J. Ruska*)

ḤIMĀYA, term used of practices and institutions of "protection" which are almost unrecognized by *fiḳh* but which were in fact important in classical Islamic society.

In one sense, where the synonym *khafāra* [*q.v.*] is usually employed, *ḥimāya* has meant, from the pre-Islamic period, the protection given, in return for financial compensation, by a nomadic tribe or group to the settled inhabitants or more particularly to travellers who are in the territory controlled by them; this *khafāra* may be conceded in a regular manner by a head of state or may be seized by the group concerned.

In a second sense, which concerns more broadly the whole social structure of the mediaeval East, *ḥimāya* is related to certain practices or institutions of Byzantium or of the late Roman Empire. There existed in the Muslim world, as in these empires, relations between patron and client; but we are not here concerned with the personal forms of this relationship (which in the early centuries of Islam were usually called the *walā'* of the *mawlā* [*qq.v.*]) but rather with certain practical forms of "protection" of the property of men whose personal status was unaffected. In this case *ḥimāya* is the aspect of protection by a superior which corresponds to the practice which from the point of view of the inferior is called *taldji'a* or *ildjā'*. *Fiḳh* recognizes *taldji'a* in a limited sense, which for it consists of "a fictitious sale resorted to by a person who wishes to protect his possessions from possible confiscation" (cf. Y. Linant de Bellefonds, in *Revue Internationale de Droit Comparé*, x (1958), 513). More generally, in the practice of the first three or four centuries of Islam, *taldji'a*, literally "putting under protection", consisted of the "commending" by an inferior (who might be either a humble person or a person of some importance) to a superior of a possession of which the former remains the legal owner but for which, by virtue of a tacit agreement, the latter is to be responsible vis-à-vis the administrative authority and more particularly the tax authorities. It is true that the inferior rewarded by a fee the service rendered by the superior, but it must be admitted that, in accordance with the conditions under which the payment of the tax was made, he might often still find this advantageous. The right to receive this fee was itself the property of the superior and a *ḥimāya* might be inherited like anything else which counted as property. It can thus be seen how in fact this could result in a sort of sharing of property between the two parties to the contract, and even, when the inferior party was a person of humble rank, in actual dispossession: the contract being merely a tacit agreement, it was impossible for the victim to prove his ownership against the assertion of a superior who appealed to the tax registers. And it can readily be understood how *ḥimāya*, in this instance imposed by force or as a way of repaying debts, was one of the methods used by those in power to build up for themselves vast domains, in which the former owners of the separate estates were now merely sharecroppers. Although from the 4th/10th century onwards there is no further mention of *taldji'a* or of *ḥimāya* in this sense, this is not because small estates were better protected, but on the contrary because on the one hand fewer of them remained and on the other the concession in new forms to the officers of the new military aristocracy of *iḳṭā'*s [*q.v.*] granting them all the administrative and fiscal rights over a district rendered useless to both sides the intermediate practice which until then had been current.

There existed at the same time as this *ḥimāya* of land another which resembled, in greater or less degree according to circumstances, both *taldji'a* and *khafāra*. Important persons received or assumed the "protection" of a territory, essentially of the crops and the roads, against bandits; for this they needed a police force, and they received a fee which was commonly called simply *ḥimāya*. In this case too they might be acting by virtue of an official concession or have arrogated to themselves a responsibility which might or might not be recognized. The members of the newly arisen military aristocracy in the 4th/10th century developed this type of *ḥimāyāt* to their own profit, though the Būyid dynasty, which grew from the military aristocracy, tried to regulate and discipline the practice. In the following century these *ḥimāyāt* also disappeared as the result of the strengthening of the great governmental *iḳṭā'*s which conferred on the military chiefs more complete powers over their territories.

The name *ḥimāya* was, however, to remain in use for several centuries longer as the designation of another, narrower, institution. Sometimes in towns undisciplined groups such as those of *futuwwa* [*q.v.*] imposed on the merchants, for example, their "protection". But, in general, the term *ḥāmī*, plur. *ḥumāt*, was used for the chief of police of a quarter in a large town like Baghdād or Cairo, or of a small town; this official naturally levied for his services a *ḥimāya* tax, the legitimacy of which was contested by the early jurists (on the grounds that the ordinary taxes were intended among other things precisely to meet the expenses of ensuring public order), but which had now become a tolerated custom. In the same way little local potentates continued to "protect" bridges, passes etc.

Post-Classical

i. — The Middle East

The term *ḥimāya*, as meaning "protection", has been used in various contexts. In a popular sense, in the field of power politics, France for instance considered herself the "protecting" European power

of all Catholics in the Levant, while Russia claimed a similar role over all Eastern Orthodox subjects of the Ottoman Sultan [see KÜČÜK KAYNARDJA, Treaty of]. The term referred also to the status of those members of the non-Muslim communities (Christian and Jewish) in the Ottoman Empire, especially in its Levant provinces, who in the nineteenth century enjoyed the consular "protection" afforded by a number of European powers, *e.g.*, Austria, Great Britain, France, Italy, Russia [see BERĀTLÎ, IMTIYĀZĀT].

More specifically, *ḥimāya* refers to various bilateral treaty arrangements, particularly those contracted between Great Britain and the shaykhly rulers of states on the western seaboard of the Persian Gulf, from Muscat (Masḳaṭ) and Oman (ʿUmān) to Kuwayt (the so-called "Trucial" Coast), in a system built up in the course of the nineteenth century on the basis of the general Treaty of Peace of 1235/1820. In return for British protection, rulers were bound by treaty to desist from acts of piracy or of war with one another. In concluding these bilateral arrangements, which gave Great Britain some jurisdiction over defence and the conduct of the external affairs of these states and principalities, the British government was motivated by the desire to protect and secure its maritime interests in the Gulf. Only since the end of the nineteenth century did other factors play a part, such as a strategic threat from the hinterland of Arabia or from other European powers (*e.g.*, France). See the articles on the individual states: AL-BAḤRAYN, DUBAYY, AL-ḲAṬAR, KUWAYT, MASḲAṬ, SHARDJA, ʿUMĀN, etc.

Similar bilateral agreements exist between Great Britain and the rulers of states in South Arabia—what are referred to today as the Western and Eastern Aden Protectorates. Here too Britain's treaty obligation is to protect the independence of the various rulers who have such a relationship with her; the rulers on their part undertake not to cede any portion of their territories to another state or power, or to enter into agreements with them without consultation with Great Britain [see ʿADAN—iii, and cross-references there].

The protection exercised by Great Britain over Egypt was based not on a bilateral agreement but on a unilateral British act following the outbreak of the First World War: the Declaration of 18 December 1914 formally terminated Ottoman suzerainty over Egypt (until then an autonomous province of the Ottoman Empire, ruled by the dynasty of Muḥammad ʿAlī but recognizing the Ottoman Sultan as its suzerain) and legalized the status of the British occupation begun in 1882. The new status was subsequently recognized by article 147 of the Treaty of Versailles. The Protectorate was ended, as it had begun, by a unilateral Declaration of the British Government (22 February 1922). See MIṢR.

ii. — NORTH AFRICA

(I) In North Africa, in the modern period, this term has been used officially of the protection exercised by a foreign Christian power over certain individuals, then over states.

(a) In Tunisia, the principle of the protection of individuals arose from the earlier system of the Capitulations (*imtiyāzāt*) granted to various European powers throughout the Ottoman Empire.

In Morocco, so far as France was concerned, this right of protection goes back to the treaty concluded in 1767 between Louis XV and the ʿAlawid sultan Muḥammad b. ʿAbd Allāh. The protected persons were those natives (Muslims and Jews) who were in the service of the French consuls (secretaries, interpreters, guards) and of the French merchants (brokers, rural agents). This protection conferred absolute freedom of movement, exemption from dues and taxes and a guarantee against any arbitrary action by the local authorities.

During the 19th century, several agreements of the same type were concluded with other European powers, beginning with England and Spain. In 1880, Morocco was forced to accept the Convention of Madrid which laid down definitively the conditions of the protection. This applied to diplomatic personnel and to the employees of European merchants: brokers (*simsār*) and agricultural agents (*mukhāliṭ*). One so protected was described as *ḥimāya*, whereas a Moroccan was only *raʿiyya*, "subject to the common law".

Those possessing this privileged status were able to escape from the normal taxes and from the judicial system, and were protected from arbitrary action and the extortion of money; thus they formed a sort of state within the state. For their part, the foreign powers desired only that the protection should be used to increase their political following. Thus we see the protection extended to wealthy individuals, high officials and even to ministers. In 1883, the powerful *sharīf* of Wazzān [*q.v.*], al-Ḥādjdj ʿAbd al-Salām, leader of the great religious brotherhood of the Tuhāmiyya-Ṭayyibiyya (*dār al-ḍamāna*), requested and obtained the status of French-protected persons for himself and for his family. When he introduced protection in 1767, the only aim of the great statesman, the sultan Muḥammad b. ʿAbd Allāh, was to protect trade in his kingdom with foreign nations and thus to increase the revenue from customs. As he saw it, the benefit of protection was to be restricted to a small number of people living in the few ports which were open to trade with the Christian countries. But the gradual increase in the number of protected persons, in the country as well as in the towns, and their evasion of their responsibilities to the state, was an important factor in the decay of the Moroccan state which reached its final stage at the beginning of the 20th century. Thus the protection of individuals prepared the way for the establishment of a protectorate over the state itself.

(b) The French protectorate in Tunisia lasted from 1881 to 1956 and that in Morocco (apart from a zone conceded to Spain in the north) from 1912 to 1956. During these periods the other foreign powers gradually renounced their rights of protection over individuals.

(II) Among the Berbers and Arabs (especially nomads) of North Africa there existed numerous forms of protection, occasional or permanent, exercised over individuals or groups, the latter more especially in the regions (*blād əs-sība*) where the government was unable to ensure security.

(a) Protection of individuals. (1) Here, as

everywhere, a guest was accorded protection for three days [see IDJĀRA]. (2) If a stranger, generally a merchant, wished to cross safely a tribe's territory, he addressed himself to a dignitary, often a descendant of the Prophet (*shrīf*) or of a saint (*mrābəṭ*), who would give him one of his servants as an escort, in return for a fee, or gave him to carry an object well known in the region as belonging to him: an iron-tipped staff, a burnous, a rosary, etc., which served as a kind of passport for the traveller. The same form of paid protection was also applied to the periodical trading caravans which plied, for example, between Tāfīlālt and Fez and Marrākush. This protection was agreed, by contract, by the whole of a tribe which supplied an armed escort.

The name of the iron-tipped staff, *məzrāg* (= classical *mizrāḳ*) was ultimately used of all forms of protection, and it was said: *X fī-məzrāg-Y*, "X is under the protection of Y". The Berbers of Morocco used in the same circumstances the word *āmūr*, "hunting spear".

If a burnous was given, the Moroccans called the protector *kāsī*, literally "one who has clothed" or *zəṭṭāṭ*; *zṭāṭa* referred both to the protection and to the fee. These last two terms derive from the Berber *āzəṭṭa/tāzəṭṭa*, "cloth".

In mediaeval Arabia there existed a similar method of protection in which the protector gave to the person protected a turban or a cap (cf. Ibn Baṭṭūṭa, i, 354; Eng. tr. Gibb, i, 220).

In Morocco the protector was also, though less commonly, known as *rəffād*, "he who supports", or *duwwāz*, "ferry-man" (root *dj-w-z*). Another general term for protection was *ʿnāya* (= classical *ʿināya*, "care"), and it was said *X fī-ʿnāyət-Y*, "X is under the protection of Y". In all cases a protector who proved false was publicly exposed to ignominy.

(3) Another type of protection was when a person under a threat begged a dignitary to grant him shelter and assistance. One case would be that of a man who, as the result of a crime, had been forced to flee from his tribe in order to escape the vengeance of the family of his victim. He would present himself before the man whose protection he desired in the ritual attitude of the supplicant: prostrating himself on the ground, with bare feet, a knife between his teeth and his arms crossed behind his back like a bound prisoner. He was thus in a state of *zwāg* and said to the dignitary: *āna mzāwəg fīk* "I implore your help". These terms come from the Berber where the verb *zūg* has the double sense of "banish" and "implore assistance".

Another procedure was that of the *ʿār*. A person who was the victim of an arbitrary action (*maẓlūm*) requested a protector to intervene to put an end to his miserable state. During a ceremony consisting of various rites, the supplicant said: *ʿārī ʿlīk*, "let my disgrace be yours [if you do not see that I obtain justice]", or: *āna fī ʿārək*, "my disgrace is yours". This procedure of a formal summons to act, under threat of the transfer of the *ʿār*, often came to resemble a sort of blackmail in which the person entreated could not, without incurring dishonour, refuse to intervene. The same method of intimidation was also employed when begging the protection of saints.

In serious cases such as that of the defeated imploring the mercy of their conquerors, the ritual of supplication was often accompanied by the sacrifice of a valuable animal: a bull, a camel or a horse; its throat was cut (*dhbīḥa*), or it was hamstrung (*tʿargība*, from the classical form *ʿurḳūb*).

Finally, surrounding the *zāwiyas* [*q.v.*] covering the tomb of an important saint, there existed an area of sanctuary (*ḥorm*, *ḥmā*, see ḤIMĀ), where persons who were being pursued could find a sure refuge.

(b) Protection of groups. From the time of the second Arab invasion in the middle of the 5th/11th century, the group of the Maʿḳil [*q.v.*] gradually occupied the pre-Saharan zone up to the Atlantic coast. They imposed their protection on the settled Zanāta in the oases and the *ḳṣūr*, extorting a tribute (*itāwa*) known as *khafāra*, "protection due" or *ʿināya*. Until the 20th century their example was followed by powerful nomadic Berber tribes in southern Morocco: Ayt-Khabbāsh, Ayt-ʿAṭṭa. From the first quarter of the 7th/13th century, during the period of anarchy which preceded the disappearance of the Almohads, a Zanāta nomad tribe, the Banū Marīn, had overrun northern Morocco and imposed on the settled population a *khafāra* in return for ensuring their protection and the safety of the roads.

(c) There existed also institutions of mutual protection. In the majority of the regions in which the authority of a central power was not effective, the tribes were divided into two opposing groups, historically stable, known as *ṣəffs* or *ləffs*. When a tribe belonging to a specific *ləff* was attacked by a tribe of the opposing *ləff*, it automatically received help from the other tribes of its *ləff*.

There existed also pacts (*ʿahd*) of mutual protection between two groups which were usually already ethnically linked. These were solemnized by a ritual fraternization marked either by a solemn exchange of items of clothing (burnous or sandals), or by a co-lactation (usually symbolic only) making each member of one group the foster-brother of those in the other. The latter procedure was known as *ṭāḍa/ṭāṭa*, from the Berber verb *ṭṭəḍ* "to suck".

It should be noted that the majority of these forms of protection were found in early Arabia and that many of them were condemned by Islam. It would, however, be rash to conclude from this that these practices were all imported into North Africa by the Arab conquerors. Any coincidence is due to independent, but parallel, efforts made by separate peoples to impose a minimum of order and justice in anarchical societies.

(G. S. Colin)

ḤIMṢ (Latin Emesa, French and English Homs, Turkish Humus), town in Syria (36° E. and 34° 20′ N.) 500 m above sea level on the eastern bank of the Orontes (Nahr al-ʿĀṣī), in the centre of a vast cultivated plain which is bounded in the east by the desert and in the west by volcanic mountains. Situated at the entrance to a depression between the mountains of Lebanon and the Djabal Anṣāriyya, Ḥimṣ benefits from the climatic influences of the sea which come through this opening and enjoys a less continental climate than the rest of Syria; it has an average annual temperature of 16° C. It has also the heaviest rainfall, which averages annually 600 mm, while nearby Ḥamāt [*q.v.*] has only 350 mm.

The varied soil, made up of alluvium and disintegrated basaltic coulées, favours agricultural and pastoral activity thanks to the richness of its water resources. Already in the 2nd millennium B.C. the Egyptians had dammed the Orontes and were perhaps the first to organize the irrigation system which has been perfected in the course of time. In the Middle Ages a canal led the water of Salamiyya to irrigate the cultivated land on the east of the town. A modern irrigation system was constructed in 1938 below the lake. A canal leads off from the dam and branches out into several secondary canals which permit irrigation between the Orontes and Ḥimṣ.

Ḥimṣ is on an important crossing of routes. It is situated on a shelf, the Ḥimṣ gap, which is the easiest passage from the Persian Gulf to the Mediterranean via Palmyra and which since remotest antiquity has been the channel for the produce of Mesopotamia and nowadays enables the pipelines from Kirkūk to run petroleum to Tripoli and Bāniyās; it is situated also midway along the route joining Aleppo and Damascus. Before the construction of the railway the journey to Damascus took five days on horseback. The single-track D.H.P. railway, built in 1902, ensures connexions with Bayrūt [*q.v.*] through Rayak. Under the Ottoman Empire this railway had a strategic rôle, as was shown before 1914 by a very important military platform at Ḥimṣ.

History

Human settlement on this site has been conditioned for five thousand years by irrigation, the origin of which goes back to the most distant times. In the 2nd millennium B.C. Ḥimṣ still had only an obscure rôle, the principal towns of the region being Kadesh, which the Hittites occupied in the time of Rameses II, and Ḳatna, the present Mishrifé. Yāḳūt says that the name of the town is attributed to an eponym: Ḥimṣ b. al-Mahr b. Hāf b. Muknīf al-ʿAmālīḳī, and that the town was founded by the ancient Greeks who planted there the Palestine olive. Ḥimṣ must be among the towns founded by Seleucus Nicator or among those to which he gave a Greek name, but up to the present it has not been identified. In 64 B.C., when Pompey made Syria a Roman province, Ḥimṣ fell within the orbit of the Empire. There is no doubt that Roman town-planning left its mark on Ḥimṣ, for one can still trace a town built on a square plan with a citadel in the south-west corner, but in the present-day network of streets the *decumanus* and the *cardo* are scarcely discernible. Well before Islam, numerous Arabs settled in the area and, from 81 B.C. until 96 A.D., a local Arab dynasty reigned at Ḥimṣ. The most illustrious of these princes was Sampsigeramus, who preferred to dwell at Rastān (Arethusa) where he controlled one of the routes over the Orontes. The pyramidal mausoleum which this prince built at Ḥimṣ in 78 A.D. was destroyed in 1911. With its temple of the Sun, worshipped in the form of a block of black basalt, Ḥimṣ rivalled Baʿlabakk [*q.v.*] in ancient times.

The crossroad of empires, Ḥimṣ emerged from obscurity when, in the time of Domitian, it received the name of Emesa. Under Antoninus Pius, in the 2nd century A.D., Ḥimṣ began to strike coins, but the town did not occupy a leading position among the towns of the Roman Orient until the young high-priest of the Sun Heliogabalus was made Emperor by his troops (217 A.D.). Ruling under the name of Marcus Aurelius Antoninus, he had as successor another citizen of Ḥimṣ, his cousin Alexander Severus who fought the Sāsānians. In 272 Ḥimṣ saw the defeat of Zenobia, queen of Palmyra, conquered by the Roman legions.

The paucity of Christian inscriptions at Ḥimṣ attests to the existence of a pagan majority, elements of which were to persist down to the Middle Ages. Nevertheless, since the beginning of the 5th century, Christianity had been firmly implanted at Emesa, which was a bishop's see in the ecclesiastical province of Lebanese Phoenicia, dependent on Damascus. Later, with the discovery of the head of St. John the Baptist near the town (452), Emesa became an ecclesiastical metropolis. Among the Arab tribes which were then settled in the area were the Banū Tanūkh.

At the time of the Arab conquest numerous semi-nomadic Arab tribes came from the south to settle in the area. Ḥimṣ then became an important Yamanī centre and was included in the area of the Banū Kalb, who were great horse-breeders. After the battle of the Yarmūk, the Emperor Heraclius abandoned Ḥimṣ. When the Muslim army, under the command of Abū ʿUbayda b. al-Djarrāḥ [*q.v.*] accompanied by Khālid b. al-Walīd [*q.v.*], appeared before the walls of the town, the population asked for *amān* and agreed to pay a ransom of 71,000 *dīnār*s. The Muslims entered Ḥimṣ without bloodshed in 16/637 and turned the church of St. John, which was then one of the largest in Syria, into a mosque. It is related that almost five hundred Companions of the Prophet came to live in the newly-occupied town. Under the Caliph ʿUmar the governor was Saʿīd b. ʿĀmir. In 26/647, Muʿāwiya took Ḥimṣ and Ḳinnasrīn and included them among the provinces of Syria; then, when the latter was divided into five military districts, Ḥimṣ became the capital of one of these *djund*s [*q.v.*]. During this Muslim period, this *djund* comprised all the region north of Ḥimṣ where Ḳinnasrīn [*q.v.*] and the *ʿAwāṣim* were situated. The *kharādj* of the *djund* brought 800,000 *dīnār*s into the Treasury. The caliph appointed as governor the *amīr* Shuraḥbīl, who proceeded to share out the houses, the Muslims occupying the districts and houses abandoned by the Christians. At the battle of Ṣiffīn [*q.v.*] in 37/657, the inhabitants of Ḥimṣ took the side of ʿAlī and for a long time Shīʿism held a preponderant position in this area.

In 41/661, under Yazīd b. Muʿāwiya [*q.v.*], the *djund* was deprived of its northern region which went to form a new *djund* with Ḳinnasrīn, Aleppo and Manbidj as its main centres. The boundary between the two seems to have been a line passing through Bāniyās, Ṭarṭūs, Djisr al-Shughur, Maʿarrat al-Nuʿmān, Apamea, Shayzar, Ḥamāt, Rastān, Salamiyya, Ḳaryatayn and Tadmur.

On the death of Yazīd the governorship of Ḥimṣ

is said to have been conferred on al-Nuʿmān b. Bas̲h̲īr (d. 65/684), but many authors maintain that it went to his son K̲h̲ālid b. Yazīd who had built a palace at Ḥimṣ. In 126/744, on the death of Yazīd III, Marwān II [*q.v.*] intervened in Syria with the support of the Ḳaysīs. He attacked Sulaymān b. His̲h̲ām, who was assisted by the Kalbīs. In 127/754, Sulaymān, defeated, fled to Ḥimṣ and from there to Kūfa. Ḥimṣ held out for a time against Marwān II but he finally took the town. In order to prevent the town, whose *d̲j̲und* then numbered 20,000 Yamanīs, from being used as a base of operations for the Kalbīs, he razed the walls. In 128/746 order was restored.

In 132/750 there appeared in Syria ʿAbd Allāh b. ʿAlī al-ʿAbbāsī [*q.v.*], who was to overthrow the last Umayyad, Marwān II. From that date Syria fell under the control of ʿIrāḳ. In 137/754, the ʿAbbāsid caliph gave Aleppo, Ḳinnasrīn and Ḥimṣ to Ṣāliḥ b. ʿAlī b. ʿAbd Allāh b. al-ʿAbbās. The ʿAbbāsid period was a dark one in the history of the town; the population, mostly of Yamanī origin, rose up against the Ḳaysīs and provoked numerous punitive expeditions from the time of Hārūn al-Ras̲h̲īd (170/786-193/809) onwards. Ḥimṣ was prosperous at that period, for its revenues, according to al-D̲j̲ahs̲h̲iyārī, amounted to 320,000 *dīnār*s and 1000 camel-loads of grapes. The last punitive expedition took place under al-Mustaʿīn who, in 250/864, put Aleppo, Ḳinnasrīn and Ḥimṣ under the same governor.

When the ʿAbbāsid caliphate weakened, Aḥmad b. Ṭūlūn [*q.v.*], the governor of Egypt, extended his authority over Syria in 264/878. The Ṭūlūnid power was to maintain itself until 282/896. In 269/883 Aḥmad b. Ṭūlūn named as his representative the *amīr* Luʾluʾ who imposed the authority of the sovereign upon Ḥimṣ, Aleppo, Ḳinnasrīn and the Diyār Muḍar. The Ḳarmaṭīs [*q.v.*] appeared at this period and sowed trouble throughout the region. In 290/903 their leader Ḥusayn, known as Ṣāḥib al-S̲h̲āma, came to Ḥimṣ from Damascus. In order to avoid extortions the townspeople agreed to the reading of the *k̲h̲uṭba* in the name of the new master. The latter seized Ḥamāt, Salamiyya and Maʿarrat al-Nuʿmān before reaching Aleppo, where the Ḥamdānids took up arms against him.

In the middle of the 4th/10th century Ḥimṣ sought the support of the Ḥamdānids of Aleppo to avoid falling into the power of the Ik̲h̲s̲h̲īdid governors of Damascus. In 333/944 the Ḥamdānids were victorious at the battle of Rastān on the Orontes and Sayf al-Dawla [*q.v.*] seized Ḥimṣ, which was to remain in the hands of his dynasty until 406/1016. In 356/967, on the death of Sayf al-Dawla, Ḥimṣ had been governed for a year by Abū Firās [*q.v.*]. The illustrious poet attempted a rebellion against Saʿd al-Dawla but was defeated, taken prisoner, and executed on 2 D̲j̲umādā I 357/4 April 968.

In the following year Nicephorus Phocas occupied Ḥimṣ during his victorious campaign in Syria, transformed the great mosque into a church, had divine service celebrated there, and then set fire to it. In 362/973 Nicephorus Phocas departed and the Ḥamdānids governed the town again. In Rad̲j̲ab 364/March-April 975, the Byzantine general John Tzimisces succeeded in occupying a large part of Syria and levied tribute from Ḥimṣ, Damascus, Bayrūt and Baʿlabakk. At this time there appeared a Turkish *amīr*, Alptakīn Bakd̲j̲ur, who revolted at Ḥimṣ against the Ḥamdānids of Aleppo; having failed to receive the Byzantine reinforcements on which he was counting, he was forced to withdraw. Three years later Saʿd al-Dawla granted him Ḥimṣ as a fief. The memory of this *amīr* has been preserved by a Kūfic inscription, the sole remaining trace of a minaret which was demolished in 1912. Ḥimṣ remained one of the stakes in the Arabo-Byzantine rivalry and was set on fire by the Greeks in Rabīʿ II 373/September 983.

In 385/995 the Emperor Basil II established his authority over Aleppo, S̲h̲ayzar and Ḥimṣ. This town was taken only after a lively resistance; it was devastated and then placed under the authority of the Byzantine duke of Antioch. In 389/999, on the orders of the *basileus*, the town was burnt.

In 406/1016 Ḥamdānid power came to an end and Aleppo fell to the Mirdāsids [*q.v.*]. Ten years later Ṣāliḥ b. Mirdās [*q.v.*], *amīr* of the Banū Kilāb, was in control of Ḥimṣ, then, in 420/1029, S̲h̲ibl al-Dawla Naṣr b. Mirdās governed the town.

From the middle of the 5th/11th century the Fāṭimids extended their power into Syria, and Ḥimṣ did not escape them. A pro-Fāṭimid *amīr*, K̲h̲alaf b. Mulāʿib [*q.v.*], was in command at Ḥimṣ in 475/1082 and caused much trouble by his brigandage and depredations. In 483/1090, in response to a complaint about him from the Seld̲j̲ūḳ princes and commanders in Syria, the sultan Malik S̲h̲āh wrote instructing them to attack and remove him. Ḥimṣ was taken after a siege. K̲h̲alaf was captured and sent to Iṣfahān. The town was given to Tād̲j̲ al-Dawla Tutus̲h̲. Then in 487/1094 it passed to his son Riḍwān, ruler of Aleppo. Riḍwān's *atabeg*, the *amīr* D̲j̲anāḥ al-Dawla Ḥusayn, after quarrelling with his ward, took refuge at Ḥimṣ and made himself independent there in 490/1097. Later, when the Franks arrived, he was to join forces with Duḳāḳ against them.

After the capture of Anṭākiya (491/1098) the Crusaders made a first attack southwards; they sacked Maʿarrat al-Nuʿmān but besieged Ḥimṣ in vain. The town was then under the *amīr* Ḳarad̲j̲a, a former *mamlūk* of Malik S̲h̲āh, representing D̲j̲anāḥ al-Dawla. Contrary to a legend accepted by d'Herbelot and later by Pococke and Le Strange, the Franks did not succeed in capturing the town, which they named "La Chamelle". They merely cut off the port of Ṭarṭūs [*q.v.*]. In the middle of 496/May 1103, D̲j̲anāḥ al-Dawla was assassinated by three Ismāʿīlīs inside the great mosque of Ḥimṣ. Prompt action by Duḳāḳ, the ruler of Damascus, forestalled a Frankish attempt to take advantage of the situation by attacking Ḥimṣ, and brought the city under Damascene control. Ibn al-At̲h̲īr's story, which puts the murder of D̲j̲anāḥ al-Dawla a year earlier than all the other sources, and thus places it at the moment when D̲j̲anāḥ al-Dawla was preparing to attack Raymond of Saint Gilles, together with his account of Raymond's immediate attack on Ḥimṣ, may be dismissed. The following year Duḳāḳ died and Ẓahīr al-Dīn Tug̲h̲takīn succeeded him, leaving Ḳarad̲j̲a as governor of Ḥimṣ. From this period Ḥimṣ became a huge military camp against the Franks, an assembly-point for troops, an arsenal, a depot for heavy siege equipment and in addition it supplied large contingents for the war.

In 506/1112, K̲h̲ayrk̲h̲ān (Ḳarak̲h̲ān) succeeded his father as master of Ḥimṣ. Two years later Nad̲j̲m al-Dīn Īl G̲h̲āzī appeared outside Ḥimṣ but K̲h̲ayrk̲h̲ān overcame his opponent in S̲h̲aʿbān 508/January 1115.

In 512/1118 Ẓahīr al-Dīn Tug̲h̲takīn b. Būrī [*q.v.*] took Ḥimṣ and imposed his suzerainty upon K̲h̲ayrk̲h̲ān. Five years later the *atabeg* of Damascus

attacked Ḥimṣ once again but had to retreat before Khayrkhān, who had received reinforcements.

In Rabīʿ II 520/May 1126 the Franks invaded the territory of Ḥimṣ and laid it waste, but ʿIzz al-Dīn Masʿūd b. Aḳ Sunḳūr came from Aleppo and relieved the town. In 524/1129, Zangī [*q.v.*] had in the ranks of his army the *amīr* Khayrkhān, but he dismissed him, made him a prisoner and laid siege to Ḥimṣ, demanding that the population should surrender the town. In order to encourage the besieged townspeople to surrender, he inflicted the most excruciating tortures on their *amīr* Khayrkhān before their eyes, but the town did not yield. A few years later, when the *amīr* Khumartash was governing Ḥimṣ in the name of the sons of Khayrkhān, Zangī came once more to besiege the town, which was one of the best fortified and had an impregnable citadel. Khumartash called in the aid of the *amīr* of Damascus Shihāb al-Dīn Maḥmūd. The sons of Khayrkhān negotiated the cession of Ḥimṣ to the prince of Damascus in Rabīʿ I 530/December 1135, the latter giving the governorship of the town to the chamberlain Yūsuf b. Fīrūz.

In Ramaḍān 531/May 1137 Zangī again drew up his forces outside Ḥimṣ, where Anar offered a vigorous resistance. A few months later, during another siege which was to last three months, correspondence was exchanged between Zangī and Shihāb al-Dīn Maḥmūd which resulted in a matrimonial alliance, the prince of Damascus marrying a daughter of Zangī, while the latter took as wife Ṣafwat al-Mulk, queen-mother of the prince, who brought him Ḥimṣ as her dowry. The governor of the town, Muʿīn al-Dīn Anar, received Bārīn, Lakma and Ḥiṣn al-Sharḳī by way of compensation. Two years later, on the death of Zangī, Anar lost no time in re-establishing his suzerainty over the governor of Ḥimṣ. Al-Raḥba, on the Euphrates, and Tadmur depended upon this place. An important point in the struggle against the Franks, a rallying-point for Muslim troops, sheltered from surprise attacks on the right bank of the Orontes, Ḥimṣ was one of the operational bases in the centre of a line running from north to south, from Aleppo through Shayzar and Ḥamāt towards Damascus, Boṣrā and Salkhad. Nūr al-Dīn installed himself there in 544/1149. At the time of the siege of Damascus by the Franks of the Second Crusade, Ḥimṣ served as a rallying-point for the troops of Nūr al-Dīn and for those of Sayf al-Dīn Ghāzī.

The contemporary geographer al-Idrīsī describes Ḥimṣ as a town with active markets and paved streets, notes that it possesses one of the largest great mosques in Syria and mentions particularly the numerous canals which irrigated orchards and gardens. In 548/1153 Nūr al-Dīn encamped at Ḥimṣ and prevented supplies from being taken into Damascus, hoping to bring about the surrender of that town. When, a few months later, Nūr al-Dīn succeeded in taking Damascus on 10 Ṣafar 549/25 April 1154, he gave Ḥimṣ in compensation to Mudjīr al-Dīn Abak, the defeated *amīr* who, however, was able to remain there for only a short time.

The successive earthquakes of the year 552/1157 sorely tried Ḥimṣ and the other towns of northern Syria, and, with the earth tremor of 565/1170, the already weakened defence works suffered heavy damage.

After the first expedition of Syrian troops into Egypt (559/1164), the *amīr iṣfahṣalār* Asad al-Dīn Shīrkūh received Ḥimṣ as an *iḳṭāʿ* from Nūr al-Dīn, together with al-Raḥba and Tadmur. This was the origin of the Asadī dynasty of Ḥimṣ. In 564/1169 Shīrkūh died and Nūr al-Dīn reclaimed the town from his son, Nāṣir al-Dīn Muḥammad, to award it to another *amīr*.

In the middle of 570/beginning of 1175, Saladin took Ḥimṣ and Ḥamāt. Four years later, when he reorganized northern Syria, he gave back the town to his cousin Nāṣir al-Dīn Muḥammad b. Shīrkūh. Re-installed in Ḥimṣ, the Asadī dynasty's task was to keep in check the Franks of Tripoli, who were increasing the frequency of their raids into the rich agricultural region around Ḥimṣ where they also made off with horses. Ibn Djubayr, who passed through Ḥimṣ in 580/1185, notes the good condition of the walls round the town.

In 581/1186, al-Malik al-Mudjāhid Asad al-Dīn Shīrkūh II succeeded his father at Ḥimṣ. In 602/1205 he fought the Hospitallers of Ḥiṣn al-Akrād [*q.v.*]. In 604/1207, he had to appeal to the Ayyūbid prince of Aleppo, al-Malik al-Ẓāhir Ghāzī for aid. The following year al-Malik al-Manṣūr Ibrāhīm took command at Ḥimṣ; several times he had to push back the Provençaux of Tripoli and the Hospitallers of Ḥiṣn al-Akrād, and to assure a better defence he supervised the maintenance of the town walls and restored the Bāb al-Masdūd.

In 623/1226 Ḥimṣ took part in the quarrel of the Ayyūbid princes, Ibrāhīm being the ally of al-Malik al-Ashraf of Aleppo. The town was attacked by al-Muʿaẓẓam ʿĪsā, prince of Damascus.

In 640/1242 Ibrāhīm with troops from Ḥimṣ overcame the Khʷārazmians who had come from the East. He died in Damascus in 644 and his remains were transferred to Ḥimṣ where his son al-Ashraf Mūsā succeeded him. In 646/1248 the Ayyūbid of Aleppo, al-Malik al-Nāṣir, took Ḥimṣ and temporarily interrupted the control of the Asadī dynasty over the town. In Ṣafar 658/February 1260 the town was taken by the Mongols, Mūsā recovered his possessions and fought alongside Hūlāgū's troops at ʿAyn Djālūt [*q.v.*]. After the defeat, on 25 Ramaḍān 658/3 September 1260, he obtained the *amān* of Ḳuṭuz and resumed his post at Ḥimṣ. A short while afterwards a Mongol army was routed near Ḥimṣ by the prince of that town in co-operation with the prince of Ḥamāt. Baybars [*q.v.*] came to power in Cairo in 659/1261 and repaired the citadel at Ḥimṣ, supplying it with provisions so that it might resist any eventual return by the Mongols. Al-Ashraf Mūsā died in 661/1262, and with him the Asadī dynasty, which had ruled at Ḥimṣ for almost a century, was extinguished. The town lost its independence; from this time forth it was commanded by a deputy governor and was sometimes dependent on the *amīr* of Ḥamāt and sometimes on the ruler of Damascus.

In 680/1281 Ḥimṣ witnessed the victory of Ḳalāwūn [*q.v.*] over a coalition of Armenians and Mongols. From the reign of Muḥammad b. Ḳalāwūn onwards Ḥimṣ played no further political rôle; it was governed by an *amīr* of a thousand troops and, later on, the command was given to an *amīr* of *ṭablkhāna*. None of these governors left any lasting impression on the history of the town. In the citadel, the *nāʾib* was a *mamlūk* of the Cairo sultan. At this time an official pigeon-house was installed at Ḥimṣ to ensure postal contact with Ḳarā in the south and Ḥamāt in the north. In Rabīʿ I 699/December 1299 Ghāzān crushed the Mamlūks at Ḥimṣ but did not remain in the district. According to the geographer al-Dimashḳī, Ḥimṣ was at that time the smallest governorship in Syria and comprised Shamsīn,

Shumaymis and Salamiyya; the *niyāba* of Ḥimṣ was included in that of Damascus. The anarchy prevailing in Syria in the 9th/15th century does not seem to have arrested the economic life of Ḥimṣ, if the Mamlūk decrees of 817/1414 and 844/1440 are to be believed, for these indicate the important position held by the weavers in this town where wool and especially silk had been worked for centuries, rivalling Alexandria in the quality and beauty of its products. Tīmūr Lang [*q.v.*], after taking Aleppo in 803/1400, seized Ḥamāt and Ḥimṣ before occupying Damascus. During the following century no event of importance occurred at Ḥimṣ, the territory of which was exposed to the depredations of Bedouins. In 916/1510 the town was menaced by the powerful tribe of the Āl Faḍl b. Nuʿayr; it was relieved with the assistance of Sībāy, the governor of Damascus, who on this occasion seized an abundant booty consisting particularly of camels and sheep. When, in 922/1516, the Ottoman sultan Selīm had subjected Syria, Ḥimṣ became one of the five *liwās* attached to Ṭarābulus. On the death of the Sultan in 926/1520, the governor of Damascus, Djanbirdī al-Ghazālī [*q.v.*], proclaimed himself independent and seized Ṭarābulus, Ḥimṣ and Ḥamāt. The post of governor of Ḥimṣ was given to the *muḳaddam* Ibn al-Ḥarfūsh. We have a picture of Ḥimṣ in the 10th/16th century by Pierre Belon, who describes it as a town with good walls of hewn stone and with a citadel built, he says, by the Romans. Although the surrounding walls were almost intact, the town within the walls was quite ruined. Within the walls, says the French traveller, "there is nothing beautiful to be seen except the bazaar and the bazestan in the Turkish style". Under Süleymān I and Selīm II several surveys of lands, of the adult male population, and of the tax-returns were made for the towns and provinces of Syria (for Ḥimṣ, see B. Lewis, *The Ottoman archives as a source for the history of the Arab lands*, in *JRAS*, 1951, 152-3). Through the Ottoman fiscal regulations we have information on the economic activity of Ḥimṣ at this period. The yoghourt brought to the town by the Turkomans was exported as far as Damascus; the watermills for corn and sesame were numerous, and the oil-presses were very busy. Grapes remained one of the country's main resources. There were good harvests of rice which had just been added to the products of the cultivated marshland for feeding the town. The main industry was weaving. Ḥimṣ was one of the largest centres for silk, the neighbouring mulberry trees feeding the silkworms, and here were made mottled fabrics, run through with gold thread, which were exported as far as Istanbul. At Ḥimṣ, camels and cattle in transit from Damascus towards Aleppo met the flocks of sheep and goats coming down from Aleppo and Ḥamāt for Damascus.

In the course of the centuries, the Ottomans destroyed the gates in the town walls one after the other and in 1785 Volney could describe Ḥimṣ as "a town, formerly strong and well populated, now no more than a fairly large ruined village, where there are no more than 2,000 inhabitants, partly Greeks and partly Muslims. There resides an *agha* who holds on sub-lease from the pasha of Damascus all the countryside as far as Palmyra. The farming lease was given to the pasha for 400 purses or 500,000 livres, but it brings in four times as much" (cf. *Voyages*, 1823 ed., iii, 18-9). The *agha* was of a local family.

In 1246/1831 Ḥimṣ was seized by adventurers and then fell into the power of Ibrāhīm Pasha who, until 1256/1840, was to represent the authority of Muḥammad ʿAlī in Syria. At this time a particularly serious revolt flared up in the town, and the Egyptian troops had difficulty in repressing it; one of its consequences was the almost total demolition of the Citadel. After 1840 the town was again under Ottoman rule.

At the present time Ḥimṣ is an important agricultural centre and an active industrial city; the Military School is there. The chief town of a *muḥāfaẓa*, it had a population of 50,000 inhabitants in 1920 and more than 130,000 in 1962, one-fifth of whom are Christians, mostly Greek Orthodox. The plain of Ḥimṣ produces cereals, notably barley and corn, with extensive cultivated areas in the east. All around Ḥimṣ numerous ruins of *ḳanayāt* bear witness to the efforts made by man for centuries to exploit the earth; with state encouragement many new villages are being built upon the ruins of old settlements, and one of the original features of the region is peasant ownership, the cultivator being the owner of the ground he is working. Moreover, the technique of the rural economy is attaining there a very high degree of perfection. Besides barley and corn are to be found maize (declining since 1940), lentils, and cotton (encouraged since 1940), as well as sugar-beet, which has been cultivated since 1949. Trees grown include poplar, lime, cypress, and fruit trees such as the apricot, pomegranate, pear, apple and plum. The vine, grown east of Ḥimṣ beyond the marshland and in the basaltic area of Waʾar on the left bank of the Orontes, has been one of the principal resources of the country since antiquity. Its wine was praised by the poet al-Akhṭal in the days of the Umayyads. It is a most economical crop; the vines are neither treated with copper sulphate nor stummed; they are not staked up and the branches grow along the ground. The grapes are sold fresh or dry or turned into *dibs* (molasses).

Around Ḥimṣ the cultivated marshlands and the market-gardens covering nearly 1,200 hectares form the greatest patch of green in the Orontes valley. It is the most intensively cultivated part of the valley's irrigated zone. Nowadays these gardens are made up of small properties (*ṣayfiyya*) of an average area of 30 *dunums*, mostly owned by one family, and represent the fruit of man's diligent and meticulous labour over centuries. As the meeting-point for the agricultural area, Ḥimṣ is an important market. The townsmen have few relations with the western plateaux but prefer to trade with the Bedouin tribes, since no obstacle separates them from the desert. In summer the Bedouin comes up to the Orontes to buy in the markets while the townsman takes the dairy produce and entrusts to the nomad the flocks he owns. An important centre of consumption, Ḥimṣ takes the agricultural products and in return supplies the country with clothes and manufactured goods. For centuries there has been developing in the town a processing industry; corn and barley are treated for the starch necessary for finishing in the textile industry. There is a considerable manufacture of *dibs* (molasses) and at a recent date 16 presses were still in existence. In 1949 there were two factories treating sesame to make *sirādj* or *ṭaḥīna* (an emulsion of oil mixed with seed-pulp). The most important industry and trade is still weaving; since the early Middle Ages the fabrics and silks of Ḥimṣ were renowned in the markets of the world. Before 1914, 4,000 looms employed 30,000 workers; in 1933 there were more than 4,300 looms; nowadays silk and cotton goods are exported to Egypt and ʿIrāḳ. Modern factories have been built at Ḥimṣ and in the area; there are two flour-mills (1938), a distillery,

a starch-works, a glucose factory, a sugar factory (1949) and a vegetable-oil factory which treats cotton and sunflower-seed (1951). Finally, from the far distance can be seen the petroleum storage-tanks shining in the sun, while tall chimneys indicate the presence of an important oil refinery. The oil is transported by pipe-line from Kirkūk to Ṭarābulus or Bāniyās but, to meet the needs of the country, some of it is refined at Ḥimṣ.

Situated at the crossing of important routes, an agricultural and industrial centre, Ḥimṣ plays a leading rôle in the Syrian economy.

Archaeology

The rectangular enceinte of antiquity had almost entirely disappeared in 1895 when M. van Berchem passed through Ḥimṣ. Of the gates only the names remain, a few stones still indicating the position of some of them. Starting from the north-east there are around the town the following gates: Bāb Tadmur, where a ramp incorporating Hellenistic remains emerged from the town. Southwards a deep wide ditch followed the defensive wall which was reinforced by round and square towers, the remains of which can still be seen. Bāb al-Durayd survives only in the name of the district situated in the south-east corner of the town. In the south large blocks of stone indicate the site of the Bāb al-Sibāʿ; not far away was the Bāb al-Turkmān. The Bāb al-Masdūd, on the western side, restored several times during the Middle Ages, still bears the appearance of a well-maintained fortified work with the remains of the bases of columns; a square tower stood on each side of the gate. The road which leads back in a northerly direction is called S̲h̲āriʿ al-K̲h̲andaḳ, thus preserving the memory of the vanished moat. Another gate, the Bāb Hūd, opened into the wall before one arrived at the north-west corner, which was marked by three round towers that are still standing. Finally, in the north face near the great mosque there opened the Bāb al-Sūḳ which no longer exists.

The Citadel: In the south-east corner of the town, dominating the town with its silhouette, the citadel rose up on a mound 275 m in diameter. The origin of this *tell*, which seems to be artificial, is thought to be Hittite or Aramaean. Numerous travellers described it, up to the beginning of the 19th century. During the Egyptian occupation (1831-40), Ibrāhīm Pas̲h̲a destroyed it and left inside only the D̲j̲āmiʿ al-Sulṭān which has now disappeared. On the north front a particularly important tower, repaired in 1952, exists in part and bears two inscriptions of 594/1198 and of 599/1202 in the name of the Asadī al-Malik al-Mud̲j̲āhid S̲h̲īrkūh. There remain of the Ayyūbid and Mamlūk citadel only a few stones of the glacis, a huge cistern, stretches of the walls and the half-ruined square towers overlooking the moat.

The mosques: Most of the ancient mosques in Ḥimṣ and particularly the Great Mosque and the mosques of Abū Lubāda, al-Faḍāʾil, al-ʿUmarī and al-Sirād̲j̲ share three characteristics: the minaret, the prayer-hall and the *maṣṭaba*. The minaret is square and about twenty metres high; at the base there are foundations consisting of huge stones together with re-used column bases and stones, some carrying fragments of Greek inscriptions. Higher up the basalt foundations become less massive. At the top, on each face, there opens a high double-bay surmounted by an octagonal drum, which itself bears a whitewashed cupola. The prayer-hall, roofed with a series of ribbed vaults and having within it facilities for the minor ablutions, opens through large doors into the courtyard. At the north of the courtyard a raised area, the *maṣṭaba*, partly shaded by a vine, is used for prayer in the open air.

The Great Mosque of Nūr al-Dīn is situated in the north of the town amidst the *sūḳ*s. The "continuity of site" of sanctuaries leads us to suppose that this mosque is built on the site of the Temple of the Sun and of the cathedral of St. John, the forecourt of which was once occupied, it is said, by the original mosque. The mosque is a huge rectangular edifice with the main axis running east-west. It has two entrances: the western entrance leads from the road into the courtyard; the southern entrance opens into the Bāb al-Sūḳ quarter and leads by a long vaulted corridor to the prayer-hall. This latter is 99 m long by 17 m wide and has two long bays, each covered by 13 ribbed vaults. Each of three *miḥrāb*s in the south wall is framed by two columns of white marble. The central *miḥrāb* still bears in its conch a gilded mosaic which could be earlier than the 5th/11th century. To the left of this *miḥrāb* a door opens into a square room lit by a lantern and reserved for the Naḳs̲h̲bandiyya [*q.v.*]. The prayer-hall opens out into the courtyard through eleven wide doors. This oblong courtyard has a dais (*maṣṭaba*) paved with black and white marble, with a small basin for ablutions; an ogival stone sharply incurved, in which a hole has been made, serves as a *miḥrāb*; to the north, beneath a pillared portico, open seven rooms, while the western part of this *riwāḳ*, having taps, is used for ablutions.

Near the Great Mosque, in the market to the west, there was formerly a cupola surmounted by a weather-vane in the form of a copper statuette standing on a fish. This cupola was regarded as a talisman against scorpions.

There are at the present time about fifteen *ḥammām*s which are still in use, the most frequented being the Ḥammām Ṣafāʾ, the Ḥammām ʿUt̲h̲mānī, the Ḥammām al-Sirād̲j̲ and the Ḥammām Ṣag̲h̲īr. The latter, situated in the *Sūḳ* of the goldsmiths, is a *waḳf* of the Great Mosque. From its lay-out it seems to be the oldest bath in Ḥimṣ.

From the age of caravans Ḥimṣ still preserves about twenty *k̲h̲ān*s, some of which have been made into bus garages. Although the K̲h̲ān al-Sabīl, where the traveller Ibn D̲j̲ubayr stayed, seems to have disappeared, there remains a K̲h̲ān Asad Pas̲h̲a and a K̲h̲ān al-Ḥarīr, which is in fact a *ḳaysāriyya* where silk has been sold for centuries.

The *Sūḳ*s, paved in the Middle Ages, are now tiled, and not only the cloth bazaar but also those of the goldsmiths and of their neighbours the chest-makers are very busy. The *sūḳ* of the pastry shops is in the centre, while the vegetable and dairy-produce markets are on the edge of the commercial area, together with the basket-makers, the saddlers, the metal-workers and the blacksmiths.

Places of pilgrimage are numerous outside the old town (see al-Harawī, *Ziyārāt*, 8-9); the most frequented is the D̲j̲āmiʿ K̲h̲ālid b. al-Walīd situated in the northern suburb. The fame of this sanctuary goes back at least to the Ayyūbid era and retained its attraction under the Mamlūks. K̲h̲ālid b. al-Walīd, who died at Medina, and his wife Faḍḍā are said to be buried there; Yāḳūt wonders whether this is not rather the tomb of K̲h̲ālid b. Yazīd b. Muʿāwiya who built a palace nearby or even that of K̲h̲ālid b. ʿIyāḍ b. G̲h̲anm, the Ḳuravs̲h̲ī who

conquered the Djazīra [*q.v.*]. The original mausoleum was situated by the side of a mosque; it was altered by Saladin, then by sultan Baybars in 664/1265; al-Malik al-Ashraf Khālid b. Sayf al-Dīn Ḳalāwūn had works carried out there in 691/1292. In 1326/1908 it was all demolished and rebuilt in the Ottoman style on the model of the mosques of Istanbul by Nāẓim Pasha, the governor of Syria. The sultan ʿAbd al-Ḥamīd devoted 6,000 *dīnārs* to works which were completed in 1331/1913. The prayer-hall is almost square (32 m × 30 m) covered by nine cupolas, of which the central cupola, which is 12 m in diameter, rises to 30 m and rests on four strong pillars. A public park has recently been made of the vast cemetery which surrounded the monument. Some of the burials date back to Roman times, as is testified by the sarcophagi found there.

Among the *mazārs* may be mentioned, outside the Bāb al-Durayd, the *maḳām* of Kaʿb al-Aḥbār, which is a mosque on the upper floor; in the neighbouring cemetery there is a fairly large square building with a cupola: it is the Maḳām Djaʿfar; further on, amidst whitewashed basalt tombs, a sizeable arch indicates the Maḳām ʿAbd al-ʿAzīz.

At Ḥimṣ there are also the tombs of two Ayyūbid princes, the Masdjid al-Khiḍr to the south of the town, where al-Malik al-Manṣūr Ibrāhīm is buried (d. 644/1246 at Damascus) and, within the walls, the *turba* of al-Malik al-Mudjāhid Asad al-Dīn Shīrkūh II, a very dilapidated cubic edifice dating from 637/1239, surmounted by an octagonal drum with a brick cupola.

The exigencies of modern town planning have led to the disappearance, in 1960, of a convent of *Mawlawiyya* derwishes, formerly situated west of the town near the present Government House and dating from 840/1437. Finally, the existence of two large ruined dwellings may be indicated: the Bayt al-Zahrāwī and the Bayt Mallāḥ, vestiges of former prosperity.

Of the ten churches at present in Ḥimṣ, none presents any great archeological interest, neither the Greek Orthodox church of Mār Elyān nor the former seat of the Syrian Catholic Patriarch Umm al-Zannār, since the buildings are modern.

Outside the walls many water-mills grind grain on the Orontes; the most ancient are the Ṭāḥūn al-Sabʿa, dated by an inscription of 824/1421, the Ṭāḥūn al-Khuṣūba, dated to 975/1567 by a Turkish inscription, and the mill of al-Mīmās which lacks an inscription.

ḤIMṢ (The battle of). The first great trial of strength between the Mamlūks and the Mongols took place more than twenty years after the battle of ʿAyn Djālūt [*q.v.*] at Ḥimṣ in 680/1281. Though this battle was won by Ḳalāwūn, the real architect of the victory was undoubtedly Sultan Baybars [*q.v.*], who, in the seventeen years of his rule (658/1260-676/1277), built a war-machine which, in spite of the decline it underwent during the four years following his death, proved to be strong enough to break one of the mightiest armies which the Mongol Īlkhāns ever put into the field.

In the battle of ʿAyn Djālūt the Mamlūks were a new and unknown enemy to the Mongols, who were, therefore, taken by surprise. By the time of the battle of Ḥimṣ, however, the Mongols had become well acquainted with this army by a long series of encounters, so that they came to Ḥimṣ very well prepared. As Baybars al-Manṣūrī justly remarks, never before had the Mongols marched on Syria with such huge armies; hence the victory of Ḥimṣ was far more remarkable than the preceding ones (fol. $117a_{12-17}$).

The battle was fought out at the depression (*waṭāʾ*) of Ḥimṣ near the tomb (*mashhad*) of Khālid b. al-Walīd. The Mongol army numbered 80,000, of whom 50,000 (according to one version) or 44,000 (according to another) were Mongols. The rest were Georgians, "Rūmīs", Armenians, Franks and Muslim apostates (*murtadda*). As they advanced, the flank of their *maymana* reached as far as Ḥamāt and that of their *maysara* as far as Salamiyya. Their *ḳalb* of 44,000 soldiers was composed solely of Mongols. They intended to launch a heavy attack on the *ḳalb* of the Mamlūk army. The *maymana* of the Mongols was also extremely strong. (On the eve of the battle a Mongol deserter gave the Mamlūks valuable information about the strength of the Mongol army; earlier a Mamlūk deserter had given the Mongols similar information about the Mamlūk army). The numerical strength of the Mamlūk army is not mentioned in the sources. It was divided into *maymana, maysara, ḳalb, djanāḥān* and *djālīsh*. The *maymana* consisted of the Ayyūbid prince of Ḥamāt

and of a number of Mamlūk *amīrs* with their private armies. At its head were placed the bedouins of Syria under the command of ʿĪsā b. Muhannā. The *maysara*, strengthened as a result of the warning of the Mongol deserter, consisted of the Ẓāhiriyya of Baybars under the command of Sunḳur al-Ashḳar, and of a number of Mamlūk *amīrs* with their private armies. At its head were placed the Turcomans and the troops of Ḥiṣn al-Akrād. The *djālish*, which served as the vanguard of the *ḳalb*, consisted of the viceroy (*nāʾib al-salṭana*) and other *amīrs* with their private armies, as well as an unspecified number of Ḳalāwūn's *mamlūks*. Sultan Ḳalāwūn was in the *ḳalb*, under the Royal banners, having with him 4,000 picked soldiers of the *ḥalḳa*, 800 Royal Mamlūks and an unspecified number of his own *mamlūks*. The composition of the *djanāḥān* is not mentioned in the sources. Shortly before the battle the Sultan chose 200 of his own *mamlūks* and, leaving his banner, went with them to the top of a hill overlooking the battlefield. Any *ṭulb* [*q.v.*] which had been shaken received by his orders a reinforcement.

The *maysara* of the Tatars dealt at first a heavy blow to the Muslim *maymana*, but could not shake it. The Egyptian *maymana* counter-attacked quickly, and routed the Tatar *maysara*. On the other side of the battlefield the *maymana* of the Tatars succeeded in inflicting a heavy defeat on the Egyptian *maysara*, and with it was routed the left part of the centre (*djanāḥ al-ḳalb al-aysar*). Both the defeated Mamlūk wing and the victorious Tatar wing had no idea of what was going on at the other end of the field, and they went on with their flight and pursuit. Part of the routed Mamlūk *maysara* reached Ṣafad another part reached Damascus, and a third part arrived as far as Gaza. The pursuing Tatars halted after a while, dismounted and waited for the rest of the Mongol army to join them, but as their fellows did not appear, they decided to go back to the battlefield. (The features common to all battles between the Mamlūks and the Mongols are discussed above, s.v. ḤARB, pp. 187-8). There the Muslims went on winning, but their strength was already failing. Fortune was, however, on the side of the Muslims, for the Mongol commander, Mankutimur, wrongly concluded that the army confronting him was still very strong. In fact, however, Ḳalāwūn was left with only 300 horsemen (according to one version) or 1,000 (according to another). With this small force Ḳalāwūn attacked the Tatars and defeated them. Meanwhile the victorious *maysara* of the Tatars returned to the battlefield. In order to conceal the whereabouts of his army from the returning Tatars, Ḳalāwūn ordered his drums to be silenced and the Royal banners folded. His ruse succeeded, for the Tatars passed by him without noticing anything. As soon as they had their backs to him he attacked them from the rear, and inflicted upon them a heavy defeat. The number of the Tatars killed during their retreat far exceeded the number of those who died in the field of battle.

ḤIMYAR [see YAMAN].

AL-ḤIMYARĪ [see IBN ʿABD AL-MUNʿIM; AL-SAYYID AL-ḤIMYARĪ].

HINĀ, BANŪ (HINĀWĪ), a settled tribe of inner ʿUmān, southeastern Arabia, in earlier times of considerable political and military importance and, since Shaʿbān 1373/May 1954, again prominent by one of its members, Ghālib b. ʿAlī b. Hilāl, becoming an Ibāḍī Imām of ʿUmān. Banū Hinā (mostly Ibāḍīs) were one of the two leading factions in the civil warfare of the early 12th/18th century in ʿUmān. Led by Khalaf b. Mubārak (known as al-Ḳuṣayyir, "the Short") they and their allies were opposed by a group led by the Banū Ghāfir (mostly Sunnīs). Since that time all the tribes of ʿUmān have aligned themselves with these factions as Hināwīs, usually groups of traditionally southern descent, or as Ghāfirīs, generally tribes of northern ancestry.

The chief settlements of Banū Hinā are al-Ghāfāt, residence of the shaykhly section known as Awlād Zakrī, and Balad Sayt. A section known as al-Makhārīm inhabit the Djabal al-Kawr area, while other members of the tribe share the village of Sayfan with the Banū Shukayl. The paramount *shaykh*, ʿAlī b. Zāhir b. Ghuṣn, is established at Muḍaybī, the chief village of al-Ḥubūs tribe [*q.v.*], where in 1384/1965 he was acting as *wālī* of the Sultan of Muscat and Oman. Many of the group of Banū Hinā who occupied the lower section (al-Sufāla) of Nazwa moved to al-Ghāfāt after the events of 1377/1957 (see ʿUMĀN).

Nearly all the members of the Banū Hinā make their living on small agricultural holdings in inner ʿUmān. Lucerne and wheat are the principal crops grown in addition to the date palm.

(J. MANDAVILLE)

ḤINĀṬA (A.), embalming. The root is common to the Semitic languages and meant at first "to change colour", especially in ripening fruit (hence *ḥinṭa*, "wheat") and then the stain left by fragrant oils etc. Both senses are preserved in Arabic and Hebrew. *Ḥannāṭ* (Ar.) is explained as one who follows the trade of *ḥināṭa*; Samʿānī explains both *ḥannāṭ* and *ḥannāṭī* as corn-chandler. Aramaic alone seems to have *ḥannāṭā* meaning embalmer. *Ḥanūṭ* is perfume or scented unguent, but always in connexion with death; "when Arabs prepared to fight, they put *ḥanūṭ* on themselves and made themselves strong for death" (ʿAbīd b. al-Abras, (1913), 17). Thābit b. Ḳays, who carried the flag of the Anṣār, anointed himself, put on grave clothes, dug a hole in which he sank to his shins and fought from it till he was killed. This custom is thrown back to Thamūd; when they knew that destruction was certain, they anointed themselves and put on skins as grave clothes. The practice was not confined to fighters, for a poet says "every one alive will be anointed (for death)"; it was not entirely utilitarian, for when a man is at the point of death there should be some

perfume "to honour the angels". Martyrs, including a pilgrim killed by a fall from his camel, were not anointed. The Gospel story provides parallels, "she has anointed my body for the burial" and the spices carried to the tomb.

Ḥanūṭ was of different kinds; "the best *ḥanūṭ* is camphor" is contradicted by "camphor and *ḥanūṭ*" and "put *ḥanūṭ* on my head and beard and camphor on the places of prostration", which are the parts of the body that touch the ground during prayer, the forehead (forehead and nose), palms of the hands, knees and toes. *Ḥanūṭ* consisted of *dh̲arīra*, which is either sweet rush or some mixture, musk, *ʿanbar* (probably saffron), camphor, Indian reed and powdered sandal wood. Some insisted on dry camphor and others forbade saffron for males. As a scent with the dead, musk is more pleasant than camphor but the latter is better for drying the body, keeping it cold, hardening it and keeping away insects. Camphor should not be put in the water with which the body was washed but on the body after it had been dried. Some said that *ḥanūṭ* must be put on the body; some that it might be between the grave clothes but not on them; others allowed it on the clothes and on the bier. How was *ḥanūṭ* to be used? All the terms employed are ambiguous but there are so many that there is no doubt as to what is meant. It was put on the eyes, nose and ears, on the belly and under the chin and armpits, on the navel, between the thighs, behind the knees and on the soles of the feet.

Some would close the orifices of the body with cotton wool, some put it in the anus and one writer adds that the object is to keep out worms. A theorist forbade the extravagant use of cotton wool, for the corpse should look like one and not like a bundle. But cotton wool should not be put in the nose, throat or anus. There was a custom of putting a knife or weight on the belly lest the heart should swell or the belly burst before interment.

These practices do not amount to what is now called embalming. A man was killed in Baṣra during the revolt of the Zandj̲ in 257/871 but his body was not found till two years later; it was not changed (had not putrefied) but the skin had stuck to the bones and the belly had no slit in it. A possible explanation of the last phrase is that the Arabs were familiar with the evisceration of the dead. Some ruled that exhumation was not lawful, in the Yemen for example, but reburial was so common as to call for no remark. "His bones were dug up and reburied" is probably to be taken literally. Later *ṣabara*, from *ṣabir*, meaning aloes or some other bitter vegetable substance, was used as equivalent to *ḥanaṭa*. Aloes seems to be mentioned by Arabic writers only in the story of T̲h̲amūd; otherwise it is found only in a Syriac lexicon. Many stories presuppose embalming. In 559/1164 a man died in Mosul and the body was taken by Bag̲h̲dād, Ḥilla, Kūfa with excursions to Karbalāʾ and Nadj̲af, to Mecca and ʿArafāt, where it was treated as a pilgrim, and at last to Medina to be buried in the *ribāṭ* which the man had founded. In 615/1218 the lord of Damascus died; his death was kept secret, the body embalmed, placed in a litter with a slave to fan it, and taken to Damascus. In 665/1257 a man died in Bag̲h̲dād and his body travelled with the pilgrims, but they had to return home so the body was left with some bedouin till the following year. These examples suggest that embalming was effective and prevented decay. On the other hand Ibn Baṭṭūṭa (ii, 313; tr. Gibb, ii, 447) says that a son of Ṣārūk̲h̲ān was embalmed, put in a coffin and placed in a chapel without a roof so that the stench might escape; this was apparently in 731/1331.

When Sayf al-Dawla died (356/967) the body was washed several times with water and various essences, and anointed with myrrh and camphor; 100 *mithk̲āl* of *g̲h̲āliya* was put on the cheeks and neck, 30 *mithk̲āl* of camphor in the ears, eyes, nose and on the back of the neck. The grave clothes were worth 1000 *dīnārs*; then the body was put in a coffin and camphor strewn over it. When Ibn Killis died (380/990) the caliph gave the grave clothes, 50 pieces of *dabīḳī* linen, each weighing 30 *mithk̲āl* because of the gold thread, and *ḥanūṭ*, a box of camphor, two flasks of musk and 50 *man* of rosewater, the whole worth 10,000 *dīnārs* (Maḳrīzī, *Khiṭaṭ* (1270), ii, 7; *ḥanūṭ* seems here to be a collective name for the perfumes).

Bodies brought to Karbalāʾ and Nadj̲af for burial may be in rough coffins or wrapped in matting, and any embalming is rudimentary for the stench is horrible. Modern dictionaries give the meaning 'embalm' but *LA* says that *aḥnaṭa'l-rimth̲* means 'turned white'. Now in Tunisia *ḥanūṭ* may be pistachio-resin, cloves and *boutons de rose*.

(A. S. Tritton)

HINĀWĪ [see HINĀ; ʿUMĀN].

HIND, the name currently employed in Arabic for the Indian sub-continent. The current names in Persian were Hindūstān, Hindistān, "land of the Hindūs" [*q.v.*], whence Ottoman Turkish Hindistān. The present article comprises the following sections:

i. the geography of the sub-continent as described by the mediaeval Muslim geographers;
ii. the ethnography of the sub-continent at the present day;
iii. its languages;
iv. a survey of its history, with cross-references to the individual rulers, dynasties, etc., treated separately;
v. the spread of Islam, the distribution of Islamic sects, the activities of Muslim scholars;
vi. Islamic culture;
vii. Indo-Muslim architecture;
viii. music.

For Anglo-Muhammedan law, see SH̲ARĪʿA; for political parties, see ḤIZB; for the development of the apparatus of modern government, see ḤUKŪMA; for the events leading to partition and for the history of Pakistan since independence, see PĀKISTĀN.

(Ed.)

i. — The Geography of India according to the mediaeval Muslim geographers.

(a) The term "*Hind*": The Muslim geographers of the mediaeval period generally used the term "Hind" to denote regions east of the Indus. It was also applied to practically all the countries of South-East Asia, when used imprecisely in such phrases as 'the Kings of Hind', or 'the lands of Hind', which included not only India but also Indonesia, Malaya, etc. The term 'Sind' as used by them referred to Sind, Makran, Baluchistan, portions of the Panjab and the North-West Frontier Province. Thus no single term covered the whole of India. Only 'Hind' and 'Sind' used together denoted the whole of mediaeval India. The geographical accounts of India in Arabic and

Persian literature are therefore covered under two separate headings, namely, 'Sind' and 'Hind'.

(b) Geographical position, boundaries and area: Muslim geographers, following Claudius Ptolemy, divided the inhabited quarter of the earth (*al-rubʿ al-maskūn*) into seven climes, each running parallel to the equator from east to west, and covering the area north of the equator up to the Island of Thule as described by Ptolemy. India was usually placed between the first and the third climes. In the Iranian system of climes, which divided the 'inhabited world' into *kishwars* by drawing seven circles of equal size and placing six of these around the fourth in such a way that they touched each other, India was placed in the second *kishwar* (al-Masʿūdī, *Murūdj*, i, 181). Although the Muslim geographers were acquainted with the Greek division of the land-mass into three continents: Asia (*Āsiyā*), Europe (*Urūfa*) and Africa (*Lūbiyā*), they did not use it much. Al-Bīrūnī, however, describes India as part of "the northern continent" (meaning thereby Asia) and bordering on the 'Great Ocean' (*al-Baḥr al-Aʿẓam*, the Indian Ocean) (*A.I.* [for this abbreviation and others employed in this article, see *Bibl.*], i, 197; *Ṣifa*, 5). His image of India was of a plain surrounded on three sides (north, west and east) by lofty mountains forming a part of the long range of mountains that extended from China in the east and crossed the whole of Asia and Europe latitudinally, reaching as far as the lands of the Franks and the Galicians. India was placed to the south of this long range and the waters (rivers) of this range flowed down through the Indian plains (*A.I.*, i, 198). Al-Bīrūnī was the only Muslim geographer who conceived of India as having been a sea in the geological period and perhaps the first scientist to present this concept. He arrived at this conclusion by observing the different types of stones, round and big, near the mountains (of the north) and both above and under the surface of the earth, but becoming smaller further away and finally getting pulverized into sand near the mouths of the large rivers and near the sea. He says, "... if you consider all this, you could scarcely help thinking that India has once been a sea which by degrees has been filled up by the alluvium of the streams" (*op. cit.*, i, 198).

Again, according to the Muslim geographers and navigators India lay on the great mediaeval sea-route between the Persian Gulf and China. The Arab navigators of the early Middle Ages divided, for navigational convenience, the seas lying along this route into 'the seven seas'. These were: (1) Baḥr Fārs (the Persian Gulf); (2) Baḥr al-Lārwī (after the ancient name of Gujarat, *Lār* [*Larike* of Ptolemy], from Sanskrit *Lāṭa*, see Sauvaget, *Akhbār*, 35, note 4.3); this was the portion of the Arabian Sea stretching between Oman and the Laccadives; (3) Baḥr Harkand (Bay of Bengal, from Sanskrit *Harketiya* representing Eastern Bengal; *kand* may be due to the influence of the Iranian *kand* meaning 'town'; in M. Filliozat's view it may have some relation with the Tamil word *arikandam*, one of the nine divisions of the world as regarded by the Indians, see Sauvaget, *Akhbār*, 35, note 4.2); (4) Baḥr Kalah (the Strait of Malacca; *Salahat*, from Malay *selat*, *salat*, meaning 'strait', see *Akhbār*, 4); (5) Baḥr Kardandj (Panduranga?); (6) Baḥr Ṣanf (the Sea of Champa; the Kingdom of Champa lay between the sea and the mountain all along the eastern coast of Indo-China, see *Akhbār*, 44-5); (7) Baḥr al-Ṣīn (the Sea of China).

(c) Maps of India: Muslim geographer-cartographers like al-Khuwārizmī [*q.v.*] and al-Idrīsī [*q.v.*], who followed Ptolemy in their world cartography, committed grave mistakes in incorporating their contemporary data in the framework of maps that were conceived and drawn by Marinos and Ptolemy a thousand years earlier. Ptolemy's maps of India erred in depicting wrong courses of the rivers, *e.g.*, the Ganges flowed south instead of east and discharged itself into the Arabian Sea at the south-western coast; peninsular India was shown much smaller than its actual size, and Ceylon was highly exaggerated. These and other defects of the Ptolemaic charts were handed down to the Muslim cartographers, who did not try to improve upon them. Thus, the configuration of India is confused on the maps of al-Khuwārizmī (his sectional maps of the world have recently been reconstructed by S. Razia Jafri, of Aligarh Muslim University, on the basis of the latitudes and longitudes given by him in his work *Kitāb Ṣūrat al-arḍ*) as well as on those of al-Idrīsī. The geographer-cartographers of the Balkhī School of geography, like al-Iṣṭakhrī and Ibn Ḥawḳal [*qq.v.*], who probably followed some ancient Iranian traditions of cartography, likewise do not show peninsular India on their world maps. Their regional maps of Sind are useful, but one does not get any idea of the shape of the country from these maps. Al-Bīrūnī's description of south India, when represented on paper, does result in the shape of a peninsula but not quite as large as it actually is. His 'map of the seas' also shows the peninsula in a limited way.

(d) Boundaries and area: For the Merchant Sulaymān, India was more extensive than China, in fact twice its size (*Akhbār*, 26; cf. Ibn al-Faḳīh, 14), and according to al-Yaʿḳūbī, India extended from the region of China in the east up to Daybul in Sind, and from ʿIrāḳ up to the Arabian Sea and Ḥidjāz (i, 93). Al-Masʿūdī [*q.v.*] describes India as a vast country comprising land, water and mountainous regions. The limits of India, according to him, extended up to 'the kingdom of the Maharādj' (Sumatra) in one direction and adjoined Khurāsān, Sind and Tibet in the other. Sind was the borderland between 'the kingdom of Islam and Hind' (*Murūdj*, i, 162-3, 349); its boundaries are described as follows: the Ocean in the east, the Arabian Sea (in the west), Daybul (to the south) and the regions adjacent to China in the north (*Tanbīh*, 32). Al-Iṣṭakhrī gives the measurement of India's length from Makrān, across Kannawdj up to Tibet as being about four months' journey, and its width, from the Sea of Fārs across Kannawdj, as being about three months' journey (cf. Ibn Ḥawḳal, *Ṣūra*, 16). As for its boundaries, to the east lay the Sea of Fārs, to its west and south 'the Kingdom of Islām' and to its north, China. Tibet, according to this author, lay between China and India, (the land of) the Kharlukhs and the Toghuzghuzz and the Sea of Fārs. Part of it was in India and part in China (al-Iṣṭakhrī, 16, 19). Sind, according to al-Iṣṭakhrī, included Makrān, Ṭūrān and al-Budha. To the whole of its east lay the Sea of Fārs and to its west Kirmān, the desert of Sidjistān and its districts. To its north lay the country of al-Hind and to its south a desert stretching between Makrān and al-Ḳufṣ, on the rear side of which lay the Sea of Fārs. The Sea of Fārs encircled these lands on the eastern side and to the south of this desert, because the sea stretched from Ṣaymūr (Chaul, in the Kolaba district of Bombay) towards the east roughly up to Tīz of Makrān; then it turned round this desert until it formed an area around Kirmān and Fārs (Jafri, 7). Exactly the same boundaries of

Sind are given by Ibn Ḥawḳal (Jafri, 11), who included in India, Sind, Ḳas͟hmīr and a portion of Tibet (*Ṣūra*, 9). Describing India's boundaries, he says that to its east lay the Sea of Fārs, to its west and south K͟hurāsān and to its north China (*Ṣūra*, 11). According to him parts of Tibet lay in India and parts in China (*Ṣūra*, 15).

An exaggerated account of India's limits and boundaries is, however, found in Marvazī who says: "Their lands are numerous, with extensive areas, and the outlying parts of them are far-flung, stretching as they do down to the limit of habitation where cultivation and procreation cease and the existence of animals comes to an end" (*Marvazī*, 39). The anonymous author of *Ḥudūd al-ʿālam* gives the following boundaries of Hindustan: east of it lay the countries of China and Tibet; south of it, the Great Sea, west of it the river Mihrān (Indus); north of it, the country of S͟haknān and some parts of Tibet (*Ḥudūd al-ʿālam*, 86); and the boundaries of Sind given by him are: east of it is the river Mihrān; south of it, the Great Sea; west of it, the province of Kirmān; north of it a desert adjacent to the Marches of K͟hurāsān (*Ḥudūd al-ʿālam*, 122).

The apparent disparity between al-Iṣṭak͟hrī and Ibn Ḥawḳal on the one hand and the author of *Ḥudūd al-ʿālam* on the other as noticed in the above accounts with regard to the boundaries of India, is not actual but due only to a difference in the way of looking at the maps used or drawn by them. Generally speaking, if the maps and the descriptions are read correctly, the Sea of Fārs or the Great Sea (Indian Ocean) lies to the south of India; China and Tibet to the north and east; Kirmān, Sid̲j̲istān, K͟hurāsān, etc. to the west; and the relative positions of Sind and Hind are correct. Again, according to the reckoning of al-Iṣṭak͟hrī and Ibn Ḥawḳal, the length of India from the borders of Makrān up to Tibet would be about 3600 Arabian miles or 3840 geographical miles (counting 1 day's journey to be an average of 30 Arabian miles). Similarly, the width of India from the Indian Ocean (Sea of Fārs) across Kannawd̲j̲ would be about 2700 Arabian miles or 2880 geographical miles.

(e) Regions: The western, north-western, southern and eastern regions of India were thoroughly surveyed by the early Muslim geographers and travellers both for political and for commercial reasons. Among the early writers Ibn K͟hurradād̲h̲bih, the Merchant Sulaymān, al-Balād̲h̲urī, al-Masʿūdī, al-Yaʿḳūbī, Ḳudāma b. D̲j̲aʿfar, Ibn Rusta, Ibn al-Faḳīh, al-Iṣṭak͟hrī, Ibn Ḥawkal, al-Muḳaddasī, al-K͟huwārizmī and al-Idrīsī give topographical accounts of western and southern India. Of these, those of al-Balād̲h̲urī, al-Iṣṭak͟hrī, Ibn Ḥawḳal and al-Muḳaddasī are of special importance with regard to Sind and the Panjab. They not only furnish us with information on important cities and towns of these regions, but give distances and describe roads; their maps of these regions are of great value. The majority of the later Muslim writers seemed to have borrowed from them. The itineraries given by al-Bīrūnī cover a wider region of India and some new areas not mentioned by the Muslim writers up to his time. Al-Bīrūnī was critical of the Indian method of measuring distances; so he uses the *farsak͟h* for his measurements. The Arab geographers also used the (Arabian) mile in their topographical accounts. Al-Bīrūnī gives the distances between important towns and ports of India and gives an approximate idea of the coastal regions by naming the important ports. From his topography one can get a sufficiently clear idea of the road-systems of India of this period. His information covers practically the whole of northern and central India as well as the western and eastern regions and parts of southern India. Moreover, his account is original and covers for the first time a detailed account of Kashmir. From the accounts of the Muslim geographers some idea about the regions of the country may be formed. Roughly speaking the following regions are described by them: (1) Sind, covering the region between Daybul, al-Manṣūra and Mūltān, including the lower course of the Indus; (2) Ṭūrān (covering parts of Baluchistan); (3) Makrān (along the coast of Sind and Baluchistan; (4) al-Ḳas͟hmīr al-suflā or al-Ḳas͟hmīr al-k͟hārid̲j̲a (the Panjab and the Himachal Pradesh); (5) D̲j̲azīrat al-Mayd̲h̲ and *Kač* or *Kīs͟h* (Kachh and Kathiawar); (6) 'the land of al-D̲j̲urz or D̲j̲azarāt or Lāra-deśa' (Gujarat and parts of Rajasthan); (7) Mālwā (central India); (8) al-Kumkam (Konkan, Maharashtra); (9) Malībār or Manībār (Kerala); (10) Kanara (Kanada); (11) al-Ag͟hbāb or al-Ak͟hwār (the region facing Ceylon on the Indian coast); (12) al-Maʿbar (the Coromandal Coast, Madras); (13) Ūrīsīn or Uwarihār (Orissa); (14) Bankala (Bengal); Kāmrū or Ḳāmarūb (Kamarupa, Assam); (15) Gangāsāyara (mouth of the Ganges); (16) Assam; (17) Naypāl (Nepal); (18) 'the mountains of sulphur' or *Himāmanta* (the Himalayan ranges); (19) Ḳas͟hmīr al-dāk͟hila or al-Ḳas͟hmīr al-ʿulyā (Kashmir Valley); and (20) 'the country of Kanōd̲j̲' or 'al-Ḳinnawd̲j̲', or 'Madhyadeśa'. It was so called because it was the centre of India from the geographical point of view in that it lay halfway between the sea (Indian Ocean) and the mountains (the Himalayas), and was in the middle of the hot and the cold provinces and also between the eastern and the western frontiers of India (*A.I.*, i, 198).

(f) Ports and towns: Some of the important ports on the western coast of India with which the Arab navigators were acquainted and which are described by Arab geographers and travellers in their accounts are: Daybul (mediaeval main port of Sind, near modern Karachi), Barūd̲j̲ or Barūṣ (Broach), Sindān (Sand̲j̲ān, 50 miles north of Thana, Bombay), Sūbāra (Sopara, near Bassein, in the Thana district of Bombay), Tāna (Thana), Ṣaymūr (modern Chaul, in the Kolaba district of Bombay), Sindābūr (the Island and the bay of Goa, cf. Gibb, *Ibn Battúta*, 363-4; but Nainar identifies it with Shadāshivagad (Nainar, 74)), Hannaur (Honavar), Mand̲j̲arōr (Mangalore), Hīlī (the name of the mediaeval kingdom, Ili or Eli, has left a trace in Mount Delly. The mediaeval port is probably now represented by the village of Nileshwar, a few miles north of the promontory, cf. Gibb, *Ibn Battúta*, 364), Fandarayna (identified with Panderani by Gibb, *Ibn Battúta*, 234; with Pantalayini, Pantalayini Kollam, north of Quilandi, by Nainar, 35), Kūlam Malay (Quilon, Malabar).

The main sea-ports of the east coast of India described by the Muslim geographers are: Ballīn (probably Negapatam; it was from here that the Arab sea-route to the east bifurcated. Arab boats lay at anchor here for some months; then, those bound for China sailed straight to the Nicobar Islands, and others, going to Bengal and Assam, sailed north), Kand̲j̲a (Conjeevaram) and Samundar/Sumundar (an important mediaeval Indian port visited by the Arabs. V. Minorsky places it south of Baruva and north of Ganjam, see *Ḥudūd al-ʿālam*, 241. However, the more probable identification is with the Sunur

Kāwān (Sonargaon) of Ibn Baṭṭūṭa, see Gibb, *Ibn Battúta*, 271).

The Coromandal Coast was called *al-Maʿbar* ('the place of crossing') because it was from here that the boats of the Arabs sailed or crossed over from India to China, probably at the port of 'Ballin'.

The number of inland cities and towns described by Arab writers is too large to be mentioned here fully. We may, however, enumerate some of the more important towns: Manṣūra/Manṣūriyya (the Arab capital of Sind; ruins of the town 47 miles to the north-east of Ḥaydarābād, Sind), Nīrūn (at the site of the present Ḥaydarābād, Sind), Multān, Ḳannawdj, Nahrwāra/Anhalwāra (Patan, Gujarat), Asāwal (Āśāpalli, near Ahmedabad, Gujarat), Kanbāya (Cambay) and Mālwā (Mandu or Udjdjain); then, Tanjore, Rāmēshar (Rameshwaram), Mandarībīn (Mandūrpattan, Mandapam), Somnāt (Somnath), Dhār, Uzayn (Udjdjayn), Mēghār (Mewar), Mahūra (Mathura), Kālandjar, Kwālīr (Gwalior), Kadjūrāha (Khadjūrāho), Adjūdha (Adjudhya), Bānārasī (Varanasī), Bātlīputra (Patna), Munkērī (Monghyr), Ḳuzdār (Khozdar), Arūr (Rohri), Parāswar (Peshawar), Djēylam (Jehlum), Sālkūt (Sialkot), Radjkīrī (Radjgiri), Sunnām, Mīrat (Merut), Tānēshar (Thanesar) and Adhistān (Srinagar); then Uwarīhār (Uriyadēśa), Prayāk (Allahabad), and Vayhind (Ohind, which lay between the Indus and the Kabul river, just above their confluence, *Ḥudūd al-ʿālam*, 253-4); then, Dillī (Delhi), Dawlatābād the proposed capital of Muḥammad b. Tughluḳ (Gibb, *Ibn Battúta*, 204), Hansī, Sūdkāwān (Satgaon), Sunurkāwān (Sonargaon), Koel (old Aligarh) and Maitra (Madura).

(g) Islands: The word *djazīra* was used by the Muslim geographers both for an 'island' and a 'peninsula'. Thus, al-Maydh (Kathiawar), Kūlam Malay (Quilon), etc. are described by some as 'islands'. Among the islands of India, the Maldives (*al-Dībadjāt*) (meaning 'the Islands' from Sanskrit *Diva* with the Perso-Arabic plural termination *-adjāt*), the Andaman and the Nicobar (*Lankabālūs*) islands are described in great detail. The Maldives were famous for boat-building activities and for the craftsmanship of their artisans. These islands were ruled by a queen who along with her husband lived on the Island called *Anb.riya* (probably Ptolemy's *Eiréné*, see al-Idrīsī, *India*, 24 and [comm.] 114).

Arab merchant boats on the way to China also called at the Andaman and Nicobar Islands. The inhabitants of the former are described by Sulaymān as cannibals, having curly hair, ugly faces and long legs and those of the latter as being white in colour and having scanty beards (*Akhbār*, 5, 8).

(h) Climate, Soil and Crops: On the basis of the information provided by the Muslim geographers one can form a rough idea of the climatic conditions, the soil and other topics relating to physical geography. The climate of India is generally described as hot and some geographers compare it to that of Ethiopia and describe the common features between them. Al-Bīrūnī describes the Hindu division of the year (*A.I.*, i, 357-8): the people of Kathiawar divided the year into three parts; 1. *Varshakāla*, beginning with the month of *Āshāḍha*; 2. Śitakāla (*i.e.*, the winter); and 3. *Ushnakāla* (*i.e.*, the summer). But his actual description of the climatic conditions seems to pertain mainly to northern India. He says, 'the rains are the more copious and last the longer the more northward the situation of a province of India is, and the less it is intersected by ranges of mountains". Multān had no rains but in Bhātal and Indravēdi (Antarvedi, the old name of the lower Doab, extending from about Etawah to Allahabad, *op. cit.*, annotation, 321) it rained for four months heavily and incessantly, beginning from Āshāḍha, as though buckets full of water were being poured out. Around the mountains of Kashmir up to the peak of Djūdarī it rained heavily for two and a half months, beginning with Śravaṇa; on the other side of this peak, there were no rains. Hence, Kashmir had no *varshakāla* but continuous snowfall during two and a half months, beginning with Māgha, and shortly after the middle Chaitra continuous rains set in for a few days, melting the snow and cleaning the earth. This rule, he says, has an exception; however, a certain amount of extraordinary meteorological occurrance was peculiar to every province of India (*op. cit.*, i, 211-2). The rainy season was considered to be the most important season of India by almost all Muslim geographers. Sulaymān describes the rains as being very heavy (*Akhbār*, 26).

The soil of India is usually spoken of very highly by the Muslim geographers. Passages relating to cultivated lands and agriculture are also found in their writings, as are those pertaining to waste-lands, mountainous regions and deserts.

Seasonal crops are also described by Muslim geographers. Ibn Baṭṭūṭa, describing those of northern India, mentions the following as the grains of the *kharīf* crop: *al-kudhrū* (a kind of millet) in abundance; *al-shāmākh*, *Panicum frumentaceum*, (called to-day *sāṅwā* or *sāṅwāṅ* in the eastern districts of Uttar Pradesh, and *sāṅwak* in its western districts and in Panjab); it was cooked with buffalo milk and formed the food of 'the good and poor people'; *al-māsh* (Indian peas); *al-mūṅdj* (moong); *lūbyā* (haricots); *al-mūt* (mooth); and barley. The grains of the *rabīʿ* crop were: wheat, chick-peas and lentils. Rice had three crops in the year and India produced a type with large grains. Sesame and sugar-cane were cultivated in the *kharīf* season. Referring to the food of the people of Nahrwāra (Patan, Gujarat) al-Idrīsī says that it consisted of rice, chick-peas, beans, haricots, lentils, Indian peas, fish and animals that died a natural death (al-Idrīsī, *India*, 60-1).

(i) Mountain ranges: Not all the Muslim geographers had an overall view of the mountain ranges of India, though many of them describe ranges that they knew either through first-hand knowledge (which was very rare) or through earlier original sources. The Himalayas, the mountains of Kashmir, the Kamarupa Mountains (*Ḳāmarūn*), the ranges of the Western Ghats, the hills of Kathiawar (Girnar Hills, *Marvazī*, 43), the mountains of Thana (*Tāna*) and a few other mountain ranges of India were known to many, but few go into the details of these ranges or describe their exact locations or directions. A very early attempt, though based on Ptolemy's account, was made by al-Khuwārizmī, who gives the geographical positions of many of the Indian ranges (see *Ṣūrat al-arḍ*). Following the same Ptolemaic system and sources, al-Idrīsī also gives the Ptolemaic names of some of the Indian mountains (*e.g.*, Ūndiran, Gr. *Ouindion* = Vindhya Mountains) and adds some additional ones known to the Arabs.

A clear picture of India's mountain ranges is, however, presented by al-Bīrūnī and by the *Ḥudūd al-ʿālam*. Al-Bīrūnī describes mainly the mountains of the north, north-west and the north-east. Describing the Himāvanta (Himalaya) he says that the mountains formed the boundaries (north, north-west and east) of India. In the middle of the snowy

Himāvanta lay Kashmir, and they were connected with the country of the Turks. "The mountain region becomes colder and colder till the end of the inhabitable world and Mount Meru" (*A.I.*, i, 258). Al-Bīrūnī conceived of the Himalayas as extending longitudinally; the rivers that arose on their northern side flowed into the Caspian Sea, the Aral Sea, the Black Sea or the Baltic, whereas those that arose on the southern slopes passed through India and some flowed into 'the great ocean' (Indian Ocean), either singly or jointly (*op. cit.*, i, 258). The mountains of Kāmrū (Kamarup, Assam), according to him, stretched as far as the sea (i, 281). He also describes some Tībetan ranges, on the authority of a certain traveller. From *Bhōteshar* (*bhauṭṭa-īśvara*, lord of the *bhauṭṭas*, or Tibetans, *A.I.*, annotations, i, 318) to "the top of the highest peak is 20 *farsakh*. From the height of this mountain, India appears as a black expanse below the mist, the mountains lying below this peak like small hills, and Tibet and China appear as red. The descent towards Tibet and China is less than one *farsakh*" (*op. cit.*, i, 201-2). He describes Kashmir as being surrounded by "high and inaccessible mountains" (i, 206). Kulārdjak mountain is described as a cupola, and here the snow never melted (i, 207-8). The Djūdarī peak was situated between Dunpūr and Barshāwar (i, 211). The author of *Ḥudūd al-ʿālam* conceived of the Central Indian ranges as "starting from the western coast of India, stretching eastwards and then splitting into two so that its outer ramification . . . comprises the Himalaya, Karakorum, Pamir and the ranges north of the Oxus, while the inner ramification . . . comprises the part of the Himalaya immediately north of Kashmir which is then connected with the Hindu Kush &c." (*Ḥudūd al-ʿālam*, commentary, 196).

(j) Rivers: Of the rivers of India, the best known to the Muslim geographers were those of the north and north-west. References are, however, found to the rivers of the eastern and the south-eastern regions. Al-Bīrūnī conceived of the rivers of India as rising either from "the cold mountains in the north or from the eastern mountains, both of which in reality form one and the same chain, extending towards the east until they reach the great ocean, where parts of it penetrate into the sea at the place called the *Dike of Râma*" (*A.I.*, i, 258).

The Indus and its tributaries and the rivers of the Panjab are the best described, and many details pertaining to their sources and courses can be found in the works of the Muslim geographers. According to al-Bīrūnī the river Ghorvand fell into the river Sindh (Indus) near Gandhāra (Ohind); the rivers Biyatta, known as Djaylam (Jhelam), the Candarâha, the Biyâh (Beas), the Irâva, and the Shatladar (Satlej) all united below Multan at a place called Pañcanada and formed an enormous watercourse. After it passed Aror as a united stream, the Muslims called it Mihrân (Indus); see *A.I.*, i, 259-60 and cf. al-Masʿūdī, *Murūdj*, i, 278, who says that it was called Mihrān after it passed (to the south) the town of Shākira. The earliest reference to the Mihrān is found in Ibn Khurradādhbih (62, 173-4) and al-Khuwārizmī (*Ṣūrat al-arḍ*, 131) who describes 'the Lesser Mihrān' (*Mihrān al-Ṣaghīr*) and 'the Greater Mihrān' (*Mihrān al-Kabīr*), of which the former seems to stand for the Narmada and the latter for the Indus (see also *Ḥudūd al-ʿālam*, 72, 196, 198, 210, 236). The mouth of the river, according to the Muslim geographers, was divided between two points, one near Lohrânî (near Karachi) and the other in Kachh (*A.I.*, i, 260). The river has since changed its course. Again, al-Manṣūra (the Arab capital of Sind) was encircled by a branch of the Mihrān, forming an island. But this branch of the Indus no longer exists today. A branch of the Ravi, according to these writers, flowed past Multan.

The Ganges (variously described as *Djandjis*, or *Kank*) was the second best known river to these writers. It was well-known as the sacred river of the Hindus, where they practised self-immolation and other religious rites. According to al-Bīrūnī it arose in a place called Gaṅgâdvâra and flowed into the sea at a place called Gaṅgâsâyara (Gaṅga-sagar) (*A.I.*, i, 199-201). Those Arab geographers who followed the Ptolemaic description of the Ganges, like al-Khuwārizmī and al-Idrīsī, depict this river on their maps as flowing south (!) instead of following its true eastern course. Again, some Muslim geographers do not distinguish between the Yamuna and the Ganges, thus causing great confusion and misplacement of the towns along its banks. But al-Bīrūnī calls the Yamuna "Djawn" (*A.I.*, i, 261).

Besides these two main river-systems, among the other large rivers of India described by the Muslim geographers are: the Narmada, Sarsutī (*A.I.*, ii, 105); the Godavari (*Kūdāfarīd*); the lower course of the Brahmaputra; the Meghna, called "the Blue river" by Ibn Baṭṭūṭa (Gibb, *Ibn Battúta*, 271); a Nahr al-Ṭīb is also mentioned by some (al-Idrīsī, *India*, 111-2, tentatively identified by me with the Godavari or the Kistna). There are many other smaller rivers and rivulets described by them, the details of which it is not possible to give here.

(k) Flora: Among fruits, the citron is specially described (al-Masʿūdī, *Murūdj*, ii, 438). According to Ibn Baṭṭūṭa sweet oranges were found in abundance in India, but the sour variety was rare. There was a third variety with a taste between sweet and sour and about the size of a citron (*al-līm*) (Ibn Baṭṭūṭa, iii, 128). Jack-fruit (Ar.: *al-shakī wa 'l-barkī*, Malayalam: *chakka*; Hindi: *kaṭhal*) is mentioned (al-Idrīsī, *India*, 34; Ibn Baṭṭūṭa, iii, 127). Mango (Ar.: *al-ʿanbā*, Hindi: *ām*; Marathi: *amba*) and the condiments prepared from it are described in detail (al-Idrīsī, *India*, 34, 35; Ibn Baṭṭūṭa, iii, 125-6; Iṣṭakhrī, 173; Ibn Ḥawḳal, 320; al-Muḳaddasī, 482). It is compared with peach in taste. *Mahuwā* (*Bassia latifolia* or *longifolia*) was, according to Ibn Baṭṭūṭa (iii, 129), found in abundance in Delhi and some other parts of India. *Jāman* (Ar.: *al-yamūna*, *Eugenia jambolana*) is described by many Arab geographers (Iṣṭakhrī, 173; Ibn Ḥawḳal, 320; al-Muḳaddasī, 482; al-Idrīsī, *India*, 42; Ibn Baṭṭūṭa, iii, 128). Figs and grapes were rare in India according to the Arab writers. Among some fruits mentioned by Ibn Baṭṭūṭa (iii, 125-9) are *tēndū* (*tenda* is *Diospyros ebenum* or *glutinosa*); *kasīrā* (*kaseru* is a fibrous root eaten as a fruit, *Scirpus-kysoor*, see Fr. tr. at iii, 129). Al-Ḳalḳashandī (Spies, 49) describes several fruits: sugar-cane, bananas, date-palms, peaches, mulberries, jujube, quince, pears, apples, and green and yellow melons. Sugar-cane (*ḳaṣb al-sukkar*) is usually described by the writers on Sind and Makrān, where sugar-candy (Ar.: *al-fānīdh*, Sanskrit: *phāṇita*) was manufactured from it in abundance.

Of the plants and woods, bamboo (*al-ḳaṣb* or *khayzurān*) is described as growing in abundance in the mountains of Thana (Maharashtra), see al-Idrīsī, *India*, 62-3; the plant whose bark was used by the ancient Indians as paper is called by al-Masʿūdī *kādhī* (*Murūdj*, ii, 202), but al-Bīrūnī gives the correct spelling, *tārī* (*tāṛ*, *Borassus flabelliformis*),

A.I., i, 171. This was not the same as *bhojpattar-bark* which came from a tree said to be a kind of birch (*Betula bhojpatra*) used in making *ḥuḳḳa*-snakes (Shakespeare, s.v.).

The betel leaf (Ar.: *tanbūl*, Hindi: *pān*; leaf of *Piper bettle*) was according to al-Masʿūdī (*Murūdj*, ii, 84) very popular with the Arabs of Yemen and Ḥidjāz, and especially in Mecca. The coconut tree and the pepperplant (*al-filfil*) are described by many. *Al-baḳḳam* (Brazil-wood, *Caesalpinia sappan*) was found in abundance in south India (al-Idrīsī, *India*, 63-4). Indian cotton is described as being superior to that grown in Baghdad (al-Ḳalḳashandī, Spies, 93). Aloes-wood (*al-ʿūd*) grew in abundance in the mountains of Kamarup (Assam) (al-Idrīsī, *India*, 64) and the Indian variety is described as the best in the world. It was called *Bankālī* (of Bengal) and *Samandarūk* (of Samundar, see above), see al-Bīrūnī, *Ṣifa*, 128. The banyan tree is mentioned by many writers (see al-Masʿūdī, *Murūdj*, ii, 81-3).

A variety of vegetables and aromatic plants are mentioned, *e.g.*, cucumber, pumpkin, egg-plant, turnip, carrot, asparagus, ginger, onion, garlic, fennel, thyme, cardamom, tamarind (Ar.: *thamar hindī*, 'the Indian fruit', Hindi: *ʾimlī*), etc. (see al-Ḳalḳashandī, Spies, 49-50).

Of the flowers, rose, nenuphar, violet, narcissus, jasmine and the blossom of henna, etc., are mentioned (al-Ḳalḳashandī, Spies, 50).

(l) Fauna: A variety of Indian wild and domestic animals are mentioned, but the elephant occupies the most important place in the geographical accounts for its various qualities and its great size (Ibn Khurradādhbih, 67; al-Idrīsī, *India*, 36; Ibn Rusta, 134; *Marvazī*, 46-7; Buzurg b. Shahriyār, *ʿAdjāʾib*, 163-5; al-Masʿūdī, *Murūdj*, iii, 11-26). The Indian rhinoceros (*al-karkaddan*) is also described for its commercial value. Its horn was a very precious commodity used for making ornaments, etc. Strange stories connected with it are also mentioned (see Ibn Khurradādhbih, 67-8; al-Masʿūdī, *Murūdj*, i, 385-7; al-Idrīsī, *India*, 30-1). Among other animals, the two-humped camel of Sind (Iṣṭakhrī, 176; Ibn Ḥawḳal, 323) and *sharava* (probably a wild boar) found in Konkan, Maharashtra (*A.I.*, i, 203) are mentioned. Among the domestic animals, water-buffaloes, cows, goats and sheep, two types of horses (the Arabian and the pack-horse), mules and donkeys are mentioned (al-Ḳalḳashandī, Spies, 47-8). Some fishes and water-animals are also mentioned, *e.g.*, *al-mīzara* (probably the eels belonging to the *moray* family of the order of Apodes, al-Idrīsī, *India*, 72, 132), crocodiles, *grahu* (an Indian alligator or a shark?) and a fish called *burlū* (al-Bīrūnī thought it was the dolphin, *A.I.*, i, 204); another dangerous water animal, *graha jalatantu* or *tanduwā*, is described by al-Bīrūnī (*A.I.*, i, 204); this may be the octopus.

Of the Indian birds, peacocks, pigeons, the domestic fowl, cranes, *bulbul* (probably the shrike, *Lanius boulboul*, see Shakespeare, *s.v.*) are mentioned.

(m) Commercial products: Of the commercial commodities of India, the Muslim geographers mention especially the cotton cloth of Bengal as early as the 3rd/9th century (Ibn Khurradādhbih, 67; *Akhbār*, 13; *Marvazī*, 48). Shoes manufactured in Cambay, Indian swords, aloes-wood from Assam, diamonds from Kashmir, gold from Kamarup (Ibn Khurradādhbih, 67; *Marvazī*, 48), pearls from Thana (Bombay) (al-Idrīsī, *India*, 55), sugar-candy from Sind, are mentioned as commercial commodities.

ii.—Ethnography

The Indian sub-continent has been divided since 1947 into the two nations of India and Pākistān, with populations of 439,234,771 and 93,720,613 respectively (all statistics refer to 1961). The 82,556,634 Muslims of Pākistān comprise 89% of the total population (97% in West Pākistān and 80% in East Pākistān), the only sizeable minority being the 4,386,623 caste Hindūs and 4,993,046 scheduled castes in the latter Province. India's population contains 46,939,357 (10.69%) Muslims. The proportion of Muslims is greatest in the areas of earliest Muslim penetration, viz., the northern States (Assam 23.29%, West Bengal 20.0%, Bihār 12.24% and Uttar Pradesh 14.63%, only the Pandjāb showing a small proportion (1.94%) owing to the emigration of Muslims at the time of Partition), and Kerala (17.91%). The remaining States have proportions of between 4% and 9%, except for Orissa's 1.23%. Djammū and Kashmir contains 2,432,067 (68.3%) Muslims.

The population of the sub-continent increased over the decade 1951-61 by 22% in India and 23% in Pākistān, that is, by an average of some 9½ million annually. Densities vary widely with ecological conditions. East Pākistān, with an average density of 922 per sq. mile, has a pattern similar to that of those valley and coastal areas of India where live the majority of Indian Muslims. West Pākistān, with an average density of only 138 per sq. mile, contains both highly populated irrigated areas (*e.g.*, Sargodha and Mardan districts) as well as the arid zones of

Balūčistān and Sind, where the density is often less than 10 per sq. mile, matched in India only in western Rādjāsthān. The net increase in population, and the consequent high densities in certain regions, pose the most severe problems of land shortage and create a need for urgent economic development.

Several physical types can be distinguished in the sub-continent. There are few Muslims amongst the Mongoloid peoples in the Himālayan region or amongst the Veddoid tribal peoples in the hills of central and eastern India; most are either of the short-statured, brachycephalic type associated with the pre-Āryan population, or of the taller, fairer and dolichocephalic Mediterranean type. These latter types are mixed in the various regions, though the former predominates in the south and the latter in the north-west, and it would be erroneous to give the terms Dravidian and Āryan to them, these being best used for the two main families of languages spoken in the sub-continent.

Muslims in each language area speak the regional tongue, but many also have a knowledge of Urdū, particularly in West Pākistān, the Gangetic plain, and those parts of India where Muslim princes ruled before 1947. Diacritical features, such as dress, headgear and type of beard may distinguish Muslims from others; so may diet, styles of poetry and music and other secular cultural traits. On the other hand, some social features are common to all inhabitants of both nations.

The overwhelming majority of the population of the sub-continent is rural (82% in India and 87% in Pākistān). Pastoralists are found in the more arid zones; estates growing rubber, tea and coffee exist in both countries and have an economic importance as gainers of foreign exchange which far outweighs the area they cover and the numbers they employ; there is some shifting cultivation and settlement amongst tribal people; but, for the most part, settlement is in villages of between 200 and 5,000 people, depending on ecological and historical factors. In Kerala, the Himālayan foothills and the Bengal delta, however, settlement is of scattered homesteads; and in those more arid areas of India and West Pākistān without canal irrigation homesteads are encountered wherever there is a well. Upon the size of the settlement depends the number of non-agricultural specialists, larger villages having a full complement of agricultural, household and religious services available, and smaller villages or isolated homesteads calling on specialists from outside.

The major food crops grown include rice, mainly in the coastal areas of south India and in Bengal and Sind, and wheat, sorghum, maize and other grains elsewhere. Each crop requires a different amount of labour, this being supplied by the farmer and his family, by labourers and, at times of peak activity, by neighbours on a co-operative basis. Women of poorer families work in the fields except where the rules of purdah prevent them. Labourers may be paid with daily wages; or they may, like the specialists, be under annual contracts and be paid in kind at each harvest. The trend in recent years has been to make payments in cash, and this is part of a move from a largely subsistence economy towards a greater dependence on cash crops such as sugar cane, jute, cotton and groundnuts. This has resulted in stronger links with urban markets and with wider price and demand fluctuations; and this, together with the increase in the demand for manufactured articles, has been a factor breaking down the social as well as the economic isolation of villages.

The structure of rural political power rests on the interconnected bases of control of land and political statuses. In many areas, land is held by individual farmers (*raʿiyyat*; see RAʿIYYA) on direct engagement with the State; in some regions, especially in former princely states and in parts of Bengal, Uttar Pradesh, Pandjāb and Sind, there are large landlords (*zamīndār*, *djāgīrdār*, *taʿallukdār*) whose holdings are now diminished to varying extents under legislative restrictions in both countries; and in a few areas, notably western Pandjāb, land is held by a coparcenary lineage, with shares distributed amongst members (*paṭṭedār*). Economic power in *zamīndārī* and *paṭṭedārī* villages is focussed on the landlords, and in *raʿiyyatwārī* villages members of several families and castes may hold land, though there is usually a dominant group here too. Economically subordinate are the occupancy tenants, tenants-at-will, labourers and artisans [see TENURE OF LAND].

The system of village government is similar in most parts of the sub-continent, standardized as it has been by the Mughal and British administrations. There is a headman, responsible for the collection of land revenue and the maintenance of law and order, a village accountant responsible for the land records, and village watchmen under the headman. The headman's office may be divided between its revenue and police functions. It is usually a hereditary post, and may be divided among land holding lineages, or held by an absentee landlord's bailiff. In the tribal areas, especially among the Paṭhāns of north-west Pākistān, there has always been a large degree of autonomy, and here political control operates mainly through the balanced oppositions within the segmentary lineage systems around which the tribes are organized. Since 1947, programmes of community development and of decentralization of administration (known as Pančāyatī Rādj in India and Basic Democracies in Pākistān) have led to the emergence of locally elected committees from the village to the district level. These have taken over many of the headman's duties, especially in India, and the office of headman has correspondingly declined in importance.

Muslims participate in the above political and economic activities. In India, their importance varies partly with the statuses of the Hindū castes from which many were converted, and partly with the degree to which they have been able to maintain and wherever necessary adapt economic and political positions acquired before and during the period of British rule to conditions in independent India. In Pākistān, of course, Muslims fill virtually all economic and political rôles.

The urban population lives both in small towns which function as markets and administrative centres, and in the larger cities. Pākistān has three of these, viz., Karachi (1,916,000) [see KARĀČĪ], Lahore (1,297,477) [see LĀHAWR] and Dacca (556,712) [see ḌHĀKA]. India has 12 cities with over half a million inhabitants of which the largest are Bombay (4,152,056) and Calcutta (2,927,289). The process of industrialization has produced a growing managerial and professional middle class and a skilled labour force drawn from different strata of the rural population. This is larger in India than in Pākistān, where industrialization started to a large extent only after 1947, and it supplements the traditional urban classes of traders and entrepreneurs, among Muslims notably those of the Memon, Bohorā and Khōdja communities, whose members play an important

part in the economy of western India and Pākistān.

The most important social distinction among Muslims is between the Ashrāf, Muslims of foreign ancestry, and those descended from local converts. The division among Ashrāf between Sayyid, Shaykh, Mughal and Paṭhān is recognized throughout the sub-continent. Sayyids are those reckoning descent from the Prophet through his daughter Fāṭima; Shaykhs are said to be descended from the early Muslims of Mecca and Medina; the Mughals entered the sub-continent in the armies of the dynasty of that name; and the Paṭhāns are members of Pashtō-speaking tribes in north-west Pākistān and Afghānistān. Members of these divisions are found all over both countries. Other groups of foreign descent, such as the Sīdīs [see ḤABSHĪ], Persians and Ḥaḍramawtīs are highly localized and are negligible in numbers and influence.

The non-Ashrāf population is not usually designated by a single name, although Aṭrāf or Adjlāf and Arzal are terms sometimes used for its higher and lower strata. It consists for the most part of converts from Hinduism, and embraces people of many statuses and occupations. People belong to named populations (*ḳawm*) of traditionally landholding groups (*e.g.* Bhaṭṭī, Djandjūā), farmers (*e.g.* Arāīn), artisans (*e.g.* Tarkhān or carpenter and Pindjārā or cotton carder) and service groups (Muṣallī or sweeper). It is debatable whether these *ḳawm* should be called 'castes' or not. Here a distinction can be drawn between the nature of the *ḳawm* in India and in Pākistān. Non-Ashrāf groups in Indian villages appear to be sociologically similar to the Hindū castes which encapsulate them. They have ascribed occupations associated with status (whether they practise them or not); they are endogamous; they observe rules of restricted interdining with other Muslim and Hindū groups which they consider lower than they are; and their decisions are enforced by councils of prominent men. It is therefore possible to argue that they are strata in the caste system. The Ashrāf divisions are less clear-cut. Whilst retaining hierarchical notions, there is some inter-marriage between divisions, much of it hypergamous. Moreover, there is an upward movement from non-Ashrāf into Ashrāf groups, especially into the Shaykh division. It would thus be better to see Ashrāf divisions more as status categories than as castes.

Social distinctions in Pākistān, as well as being between Ashrāf and non-Ashrāf are also between groups of different socio-economic status, especially between landowners and artisans. The Sayyid is given the highest social status and the Muṣallī the lowest according to values attached to their occupation and descent; but there are no ritually-based restrictions on social intercourse of the kind existing in the society which surrounds Muslims in India. Hence, stratification in Pākistān is based more clearly than it is in India on statuses in which economic and political factors are dominant.

Some features of Muslim social organization cut across orthodox Islamic behaviour. An important example is the prohibition in northern India of cross- or parallel-cousin marriage amongst many non-Ashrāf groups. Consequently, kin ties are widespread and this, combined with territorial exogamy, makes for an extended kin-group of the type characteristic of north Indian Hindū organisation. In Pākistān, by contrast, the Islamic practice of both types of cousin marriage, subject to equal or hypergamous status (*kafā'a*), exists everywhere except, for the moment, amongst some refugee groups. Consequently, local lineages themselves become intra-marrying (though not formally endogamous) units, resulting in a pattern of small local kin-groups. Another variation is met with among the Māppillas [*q.v.*] of Kerala, who stem from intermarriages of Arab traders with local women as well as from conversion; for Māppillas in north Malabar are organized in matrilineally-defined groups, in which marriage is matrilocal.

Again, the pattern of inheritance has not always been fully Islamic. Instead of property being divided amongst both sons and daughters, customary procedure has normally excluded daughters in favour of male collaterals, except when the former have themselves married agnates. Pākistān law has now started to replace such customary law by Islamic personal law in this and other domestic contexts. For example, new provisions safeguarding divorce and polygamous marriages support, by a liberal interpretation of Ḳur'ānic injunctions, a general policy in favour of increased women's rights.

The vast majority of Muslims are members of the Sunnī sect, and of these some two-thirds of the Muslim population of both countries adheres to the Ḥanafī legal school, those belonging to the Shāfiʿī being found mainly among Māppillas; Sunnīs with Wahhābī tendencies exist in Uttar Pradesh, East Pākistān, and in the northwestern areas of West Pākistān. There are, in addition, smaller groups of Sunnīs, of which the most important are the Memons, to be found in the major cities on the west coast, the Mahdawīs of Gudjarāt and the Dhikrīs of Balūčistān. Lastly, mention must be made of the Aḥmadiyya sect whose two branches, the Lāhawrī and the Ḳadiyānī (the latter now settled in Rabwah, West Pākistān) are proselytizers overseas and active in the educational and social fields at home. Of the Shīʿīs, the bulk of the Ithnā-ʿashariyya division is found in Uttar Pradesh and thereabouts, with Lucknow (Lakhna'ū) as the main centre. Of the Ismāʿīlīs, Bohorās and Khōdjas (including the Agha Khānī sect) are found in most major cities, especially in western India and in West Pākistān.

At a different level from these divisions lies the network of allegiances held by a very large number of Muslims to *pīrs*. Some of these *pīrs* are members of *bā-sharʿ* Ṣūfī orders, of which the most important are the Čishtiyya, the Suhrawardiyya, the Ḳādiriyya and the Naḳshbandiyya [*qq.v.*]; others are members of *bī-sharʿ* orders [see IBĀḤATIYYA]; and yet others are not formally adherents of any order, but are simply ascetics with personal followings. The orders are centred at major shrines, such as those of Khwādja Muʿīn al-Dīn at Adjmēr and Shaykh Farīd al-Dīn Shakargandj at Pāk Paṭṭan for the Čishtī order; but besides these there are many minor shrines whose guardians (sometimes the descendants of the person buried there) have taken on the duties of a *pīr*. These include the instruction and spiritual guidance of disciples (*murīd*) who may enter the order or may remain as lay disciples, and the provision of aid for secular problems such as illness and family difficulties to both disciples and other followers. The rôles of spiritual guide (*murshid*) and of general helper are combined in the *pīr*, but a person can have only one *pīr* as his *murshid*, whereas he can go to various *pīrs* for aid of some kind. As a result of this twofold rôle, *pīrs* have considerable spiritual and secular influence, particularly in West Pākistān where many

of the main shrines are situated, and where Ṣūfism first entered the sub-continent.

Distinct from these activities is the worship at the mosque. Most villages in Pākistān have a *mullā* and there are often several mosques, one of which is used for the Friday prayers. In many cases, however, the *mullā* has less influence than has the *pīr*. Formerly, there was considerable syncretism of Hinduism and Islam, particularly in the Pandjāb and its environs and among the less educated; there are references to the mixed composition of devotees at shrines and to the way in which saints were given both Hindū and Muslim aspects. Since 1947, however, this pattern has greatly diminished, though examples of it are still to be found in rural India.

Detailed ethnographies of the Muslims of the subcontinent are rare, and a great deal of research needs to be carried out before an authoritative account can be given of the social organization and culture of Muslims there and of their relations to fellow citizens of other religions.

(A. C. MAYER)

iii. — LANGUAGES.

The presence of four great language families in the sub-continent is due to several waves of invasion by different ethnic groups in prehistoric and early historic times. The oldest such family appears to be the Muṇḍā (which, with Khasī spoken in the Assam hills and classified with the Mon-Khmer family, is sometimes regarded as "Austro-Asiatic"; but not enough is known about the affiliations of Muṇḍā for this interpretation to be acceptable to all scholars), spoken by over 6 million speakers, of whom the Santalī, with over 3 m. speakers, are the most numerous. Small though the numbers are, the Muṇḍā languages are important in Indian linguistic history, partly as providing the linguistic substratum for some languages now classified in other families, and partly as a source of borrowed words and constructions in other, more important, languages. These languages have had no connexion with Islam.

The Dravidian (Sanskrit *Drāviḍa-*) family extends mainly over southern India, and its original connexions with language families outside India have not been determined. It is generally assumed that the Dravidian speakers occupied a much more extensive area of India, including the north and north-west, before the Aryan invasions; both the presence of a pocket of Dravidian speakers, the Brāhūī, in Balōčistān, and the linguistic evidence of early Dravidian influences on Sanskrit, are consistent with this assumption. (The problem of the language of the inscriptions of the seals found in the Indus Valley civilizations of Harappā and Mohendjoḍāro is not at present soluble; internal philological evidence from the Rigveda suggests that these cities were those overrun by the early Aryans *ca.* 1500 B.C., but this neither proves nor disproves that their civilization was Dravidian.) There are now some 108 m. speakers of Dravidian languages: 30 m. Tāmil, in Madrās; 17 m. Malayālam, in Kerala; Kannaḍa (Kanarese) 17 m., in Mysore; 38 m. Telugu, in Āndhra; rather under 1 million speaking Tuḷu, and another 3 m. speaking the "tribal" Dravidian languages in north Madrās, Uṛisā, and districts of central India, of which Gondī, with 1½ m. speakers, is the most important; recent figures for Brāhūī are not available, but there are probably less than 50,000 speakers. Of these languages Tāmil, Telugu, Kannaḍa and Malayāḷam alone have any written literature, but in these four the literature is rich and, at least in the case of Tāmil, goes back to the early centuries of the Christian era. Brāhūī is the only Dravidian language to be spoken exclusively by Muslims; some others are spoken by small Muslim minorities, *e.g.*, Malayāḷam by the Māppilla [*q.v.*] community in Kerala; Tāmil by some Muslims in Madrās state and in Ceylon, having a small Islamic literature [see TĀMIL]; Kannaḍa and Telugu to a lesser extent in Mysore and in the former Hyderabad state [see ḤAYDARĀBĀD], where the preferred language of Muslims is Urdū or Dakhnī (see further below).

The Indo-Aryan languages [*q.v.*], the Indian branch of Aryan or Indo-Iranian, the most easterly representative of the Indo-European language family, were introduced into India during the Aryan conquest of the second millennium B.C. The earliest literary remains show little difference between the Indian side, as represented by the hymns of the Rigveda, and the Iranian side, as represented by the Gāthās of the Avesta. The Rigveda represents a north-west Indian linguistic development; a more central variety of the Indo-Aryan speech became elaborated and "purified" (*sam-s-kṛta*) into (classical) Sanskrit, the language of the sacred texts of Hinduism. The position of Sanskrit in India has been comparable to that of Latin in Europe: a language cultivated for religious and literary purposes, and consequently enjoying a high prestige; its artificial form has been preserved to the present day, and its influence has been considerable and constant on all the other languages of India, Dravidian as well as Indo-Aryan. Sanskrit has had a little importance for Islam in India: several rulers have patronized Sanskrit poets and Sanskrit learning; translations have been made at their orders from literary and religious works [see, for example, DĀRĀ SHUKŌH]; and a few Sanskrit inscriptions refer to the works of Muslim rulers and others. From colloquial dialects originally contemporary with Sanskrit arose the Prākṛt ("natural") speeches (including the language of the Aśokan inscriptions; Pālī, one of the sacred languages of Buddhism; Śaurasenī and Arddhamāgadhī, the languages of Jainism), which by about the end of the first millennium A.D. had become the early stages of those different modern Indo-Aryan languages which are now spoken all over north India and Pākistān.

There are some 320 million speakers of Indo-Aryan languages in India. The following figures, reduced to round millions, are based on the 1961

census returns: Marāṭhī, with Konkaṇī, 35 m.; Uṛiyā, 16 m., the three main Bihārī speeches 17 m., Assamese 7 m., Bengali 34 m.; Hindī 134 m., Urdū 23 m.; Pandjābī 11 m.; Gudjarātī 20 m., Bhīlī 2½ m., Rādjāsthānī dialects 15 m.; Pahāṛī speeches 4½ m.; Sindhī 1½ m. These figures do not, of course, include speakers of Urdū, Bengali, Pandjābī and Sindhī in Pākistān. For most of the languages the areas in which they are spoken is obvious, as since 1956 India has been organized on a system of "linguistic states": thus, Gudjarātī is the language of Gudjarāt, etc. Hindī [*q.v.*] above includes both Western Hindī and Eastern Hindī, which properly belong to different groups of the central speech; Urdū [*q.v.*] is linguistically a form of Western Hindī, separated by higher vocabulary and by script (see further below); Western Hindī, written in the form of script called Nāgarī or Devanāgarī, is now the official language of the Indian Union, and it may be suspected that the figure given above has been somewhat inflated by Indians anxious to show the national language as their mother-tongue, as the 1961 census seems to have been carried out without any discrimination on the part of the recorders. Hindī and Urdū [see also the art. HINDUSTĀNĪ] have as their homeland the western U.P. (United Provinces [scil. of Āgrā and Awadh] = Uttar Pradesh), especially the upper Ganges *dō'āb* around Mīraṭh ("Meerut"); but they, or their lowest common denominator Hindustānī, are spoken over the whole of northern and western India and western Pākistān as a *lingua franca*, and Urdū (or, in the south, its archaic sister Dakhnī) is the common language of Indian Muslims. All these Indo-Aryan languages, Urdū not excepted, are influenced to a greater or less degree by borrowings from Sanskrit. The most important of these languages, in an Islamic sense, are firstly Urdū and Bengali, national and official languages of West and East Pākistān, both with a considerable amount of Muslim literature of all genres; Sindhī is most usually written in a modified variety of the Persian script by Sindhī Hindūs as well as by the Muslims of Sind, but has little literary cultivation; Hindī, on the other hand, although thought of usually as a "Hindu" form of language, has a considerable Muslim element in its extensive literature, both mediaeval under Ṣūfī inspiration and modern under 19th and 20th century Muslim writers, and indeed some modern writers have published virtually the same works in Hindī and Urdū forms; Pandjābī is used beside Urdū as the speech of Muslims in the Pandjāb, although the bulk of Pandjābī writing is Sikh inspired and in the Gurmukhī script; Gudjarātī is the common speech of Muslims in Gudjarāt as well as an impure Urdū with many Gudjarātī loans, but except for a little religious and sectarian literature is not much cultivated by local Muslims for literary purposes; Gudjarātī is also the Indian language adopted by the Pārsī community.

The Iranian branch of Indo-Iranian is represented in Pākistān by Balōčī [see BALŪČISTĀN] with perhaps ½ m. speakers, an archaic variety of Persian; and by Pashtō [*q.v.*], with about 2 m. speakers in Pākistān and many more in Afghānistān, with a considerable literature of its own in a script modified from that of Persian, and in some use also as a *lingua franca* in the north-west; it has borrowed much from Indian sources. There are also a few minor Iranian tongues, known collectively as Ghalča, in the Pāmir region. By far the most significant of the Iranian languages in India, however, is Persian itself. Nowhere now a mother-tongue of any community in the sub-continent, it was for long the medium of communication of the Muslim élite and the major literary vehicle of Islam in India, the official language of the Mughal court as long as it lasted and of some independent states (*e.g.*, Ḥaydarābād) until the present century, and in the late 18th century even the proceedings of the English courts of the East India Company were recorded in Persian; it was a necessary subject of study for the educated Hindū as well as for the Muslim until English became the ascendant language in India, and it was probably through the Hindū scribes—mostly of the Kāyasth class—employed in the Mughal administration that large numbers of Persian words and expressions became current in north Indian languages; the Indian contribution to Persian literature is considerable [see ĪRĀN, Literature], the various histories compiled under the Muslim rulers being the prime source of Indian history for the mediaeval period. Persian is also the usual language of Muslim inscriptions in India, except for the pre-Mughal period in Bengal [see KITĀBĀT]. Besides its importance in its own right, Persian has exercised a deep influence on the vocabulary of all Indo-Aryan languages (and indeed to a lesser extent Dravidian languages also), most especially Hindī and Urdū; but whereas Hindī, especially the mixed variety which emanates from Indian official sources, draws its culture-words and expressions of modern abstract concepts from Sanskrit, Urdū continues to draw on Persian for such expressions, including a vast corpus of words borrowed or derived from Arabic. The effect of these progressive changes has been to make modern Hindī and Urdū almost mutually unintelligible, although they are essentially the same language; Hindī has probably advanced further than Urdū in the direction of unintelligibility to the uneducated peasant. Urdū, and to some extent Bengali, Pandjābī, and Gudjarātī, have also borrowed from Persian certain of its literary genres; the *ghazal*, for example, is not known in Hindī or Marāṭhī literature.

Of other Indo-Iranian languages, lying between the Iranian and the Indo-Aryan branches, are the Dardic and Kāfir languages [*q.v.*], although the former are probably to be looked at as a group of Indo-Aryan languages which, isolated from the innovations of IA in the plains, have developed on their own. They are confined to the mountainous regions in the north-west of Pākistān and Kashmir, are numerically insignificant, and have no literature, except for Kashmīrī [*q.v.*] itself, which has 2 m. speakers in India and perhaps ¾ m. more in Pākistān.

The fourth language family represented in the sub-continent is the Tibeto-Burman, introduced particularly in north-eastern India by migration rather than by invasion. It includes Tibetan itself and some closely related Himālayan languages, a group of eastern 'pronominalized' Himālayan languages with a Mundā substratum, the Boro and Nāgā groups in Assam. These are all minor tribal languages of no numerical significance and of no importance for Islam, except only for Bāltī spoken by Muslims in the north of Kashmir and written in a form of Persian script.

One language spoken in the extreme north of Pākistān has not yet been related to any other language family; this is Burushaskī [*q.v.* in Supplement].

Of the non-Indian languages spoken in the sub-continent by far the most extensive is English, which, introduced by the East India Company, quickly became the important language of commerce and later of general communication for the educated

Indian. It is still an official language of government in both Pākistān and India, is the general vehicle of higher education and hence the vehicle for the diffusion of European culture and ideas in both dominions, and is indeed the only pan-Indian language (the known English has more appeal than the unknown Hindī for the south Indian). There is extensive publication in English in both India and Pākistān, including a vigorous daily press; there are many specialist and popular Islamic publications, and probably English is of more account than are Persian and Arabic in maintaining touch with the doings of the rest of the Islamic world. In the 18th century Portuguese was an important language of trade, which lingered on in Bengal, in the face of heavy English competition, until the 1820s (T. W. Clark, *The languages of Calcutta, 1760-1840*, in *BSOAS*, xviii (1956), 453-74); it was in use also in the ports on the west coast of India, and was in official use beside Konkaṇī in Goa until the departure of the Portuguese; there is a considerable Portuguese loan-word element in most Indian languages. French was used as a language of administration in the former French possessions, but had very little effect on Indian languages beyond providing for some a window on European culture; this aspect has in fact been extended in independent India through the French cultural centre in Pondicherry.

The Arabic element has been referred to above in connexion with Persian, which is linguistically the source of most of Arabic borrowing; but Arabic is of considerable importance in its own right as the language *par excellence* of Islam. It has been studied in the *madrasa*s as the essential linguistic tool of Islamic studies since the first establishment of Islamic power in India, and has been the vehicle of much writing in India on Ḳurʾānic exegesis, *ḥadīth*, *fiḳh*, *taṣawwuf*, and grammar. The earliest inscriptions of the Dihlī sultanate are in Arabic, and Arabic was used in preference to Persian in the inscriptions of pre-Mug͟hal Bengal; but it never seems to have been used as the language of an élite as was Persian, and as a spoken language seldom went beyond the purpose of theological discussion. The exception was among the bands of Arab mercenaries who were maintained at some courts. Some Semitic or Hamitic language was presumably once spoken by the Ḥabs͟hī [*q.v.*] community, but no study of the modern Ḥabs͟hī communities, even at D͟jand͟jīra, has been made by a competent scholar to determine the affinities of their present language.

Indian languages are little spoken outside the subcontinent (Ceylon, of course, is taken as belonging to the Indian linguistic area; the main language is Sinhalese, an Indo-Aryan language, and the Dravidian Tāmil is spoken by Indian immigrants in the north) except by emigré communities: Gud͟jarātī and some Hindī/Urdū by Indian communities in East Africa, a dialect of Eastern Hindī by Indians in Fiji, Pand͟jābī by Sikhs in various parts of the world but especially in south-east Asia and eastern Īrān, Tāmil by some labouring communities in Malaya, while Sanskrit and Pālī are studied, if not spoken, in east and south-east Asia and the East Indies as the sacred languages of Buddhism. The only Indian language to have reached Europe is the Gipsy or Romani, with European, Armenian and Syrian branches; whether recent Indian and Pākistānī immigrants to Europe and America will retain anything of their own cultures after another two generations is doubtful.

Scripts.—The native Indian scripts are all arranged on the same principle: they are syllabaries, not alphabets, in that each unit of writing is either a vowel or a consonant (or consonant-cluster) followed by a vowel; all vowels other than *a* are expressed by signs above, below, before or after the consonant-characters; where consonant-characters are written without vowel-sign the vowel *a* is considered to be inherent in the character. There are thus three categories of symbol: vowel-character, vowel-sign, and consonant-character; there are also modifiers by which nasality as a feature of the vowel may be indicated, or which replace a nasal before a consonant of the same class, or which indicate that a consonant is to be pronounced without the inherent vowel. Since consonant-articulations may be clustered and consonant-characters cannot be written in series without implication of a separating vowel, it follows that consonantal ligatures are a feature of the writing system: thus the Sanskrit *kārtsnya-* 'totality' is written with two characters, *kā* and *rtsnya*. The Indian syllabaries have been arranged since antiquity in an order based on strict phonetic principles (see W. S. Allen, *Phonetics in ancient India*, Oxford 1953).

All these Indian alphabets are written from left to right. Two main graphic varieties of the script, Nāgarī and Śārdā, have been responsible for the main forms of the characters in the modern scripts, with much mutual influence, and regional development has altered the form of the characters, and introduced a few new principles, so that now many scripts in use for contiguous languages are mutually unintelligible. The simplest form, Nāgarī or Devanāgarī, is in use for Hindī, Marāṭhī, Nepālī and generally for Sanskrit; Gud͟jarātī is a modified cursive form of this; Bengali and Assamese differ somewhat in appearance from Nāgarī, many characters having a Śārdā origin; and Pand͟jābī in the Gurmukhī script has even more of the Śārdā element. All these have the appearance of being written below a straight line which forms the head-stroke of the characters. Other scripts, as a result of having been early written on palmyra leaves, have developed a cursive form to avoid splitting the writing material with straight lines: such are Uṛiyā and the southern scripts, all different, used for Tāmil, Telugu, Kannaḍa and Malayālam; the Sinhalese script is a near relation of these, and the scripts in use for most south-east Asian languages (Burmese, Mon, Siamese, Cambodian, Javanese, Cham), and for Tibetan, are all Indian in origin. Specimens of most of these scripts are illustrated by Grierson, and their palaeographic relations described by Bühler (see Bibliography).

The Perso-Arabic script entered India with the conquest and has been, of course, studied by Muslims in all ages for its value in the literature of Islam; at first, however, it was used only sporadically for writing in the languages of India (*e.g.*, the Hindī poems of Amīr K͟husraw [*q.v.*]). Necessarily modified to embrace the peculiarities of the Indian consonantal system [see, for example, DĀL, D͟JĪM, HĀʾ, WĀW, YĀʾ] it later became used for some Indian languages in common use by Muslims, especially Urdū, Pand͟jābī, Kas͟hmīrī, Pas͟htō, Sindhī; a very small amount of writing in this script in Bengali is known, Bengali Muslims normally using the same script as the Bengali Hindūs; and it has hardly ever been applied to Gud͟jarātī. There are some works in Hindī in this script—their language and subject-matter having prevented them from being regarded as works of

Urdū literature. In addition to the articles on the individual languages, see further KHAṬṬ.

Bibliography: Indian languages have been widely studied in the last two centuries, and there is an enormous literature. References to the languages most germane to Islam will be found in the individual articles on these in this Encyclopaedia, especially BENGALI, GUDJARĀTĪ, HINDĪ, HINDUSTĀNĪ, KASHMĪRĪ, PASHTŌ, SINDHĪ, TĀMIL, URDŪ. For the linguistic affiliations of these see DARDIC AND KĀFIR LANGUAGES, INDO-ARYAN LANGUAGES, ĪRĀN — Languages.

General accounts of the languages of India: G. A. Grierson, *Language*, in *Census of India, 1901*, i/1, 247-348; idem, *Linguistic survey of India*, 20 vols., Calcutta 1904-27; S. K. Chatterji, *Languages and the linguistic problem*, Oxford Pamphlets on Indian Affairs, OUP Indian Branch 1943; A. L. Basham, *The wonder that was India*, London 1954, Chap. ix 'Language and literature'. On the Indo-Aryan languages: J. Bloch, *L'indo-aryen du Veda aux temps modernes*, Paris 1934; S. K. Chatterji, *Indo-Aryan and Hindi*, Ahmadabad 1942; T. Burrow, *The Sanskrit language*, London 1955, especially for the position of Indo-Aryan and Indo-Iranian in the Indo-European framework, and for Chap. VIII, 'Non-Aryan influence on Sanskrit'; on this topic also S. Lévi, J. Przyluski and J. Bloch, *Pre-Aryan and Pre-Dravidian*, Calcutta 1929. iv. — HISTORY

This article aims at being no more than a guide to the numerous articles on individual topics of the Muslim history of India and Pakistan to be found elsewhere in the *Encyclopaedia*, and to relate these to a chronological framework

The pre-Muslim history of India is mostly outside the scope of this *Encyclopaedia*; aspects of the culture of this period, however, are relevant in the development of Muslim scientific knowledge and in the peculiarly Indian developments in Islam and Islamic institutions. For the scientific aspect an account of the relevant culture of pre-Muslim India will be found in DJUGHRĀFIYĀ, iii; for its religions, Hinduism and Jainism, see HINDŪ and DJAYN, and for the Indian aspects of mysticism which are relevant to Islam see TAṢAWWUF. References to the state of the land at the time of the various occasions of Islamic conquest will of course be found in the articles on the major Muslim powers and regions of India, especially DIHLĪ SULTANATE, BANGĀLA [in Supplement], GUDJARĀT, SINDH, DAKHAN.

Muslim history in the sub-continent begins with the Arab invasion and capture of Sind in 92-3/711-2, which thereby came under first the Umayyad and later the ʿAbbāsid caliphates; this period is, however, no more than a curtain-raiser, since caliphal authority was almost extinct by 257/871, although two Arab principalities in Sind endured for a little longer. For this period see SINDH; MUḤAMMAD B. ḲĀSIM; and references under AL-ḤADJDJĀDJ and UMAYYADS. For the Arab principalities see MANṢŪRA and MŪLTĀN, and also under DAYBUL.

Hindū rulers in the west and north-west of India were not slow to see the dangers to themselves in the establishment of an active Muslim state at Ghazna in the 4th/10th century; the first conflict between Hindū and Muslim powers came when a ruler of the Pandjāb invaded the territory of the Ghaznawid Sebüktigin, but the balance of power was soon reversed and Sebüktigin became the aggressor, compelling the cession of Kābul. Sebüktigin's empire was consolidated and extended by his successor Maḥmūd, who between 389/999 and 417/1027 entered India fifteen times on marauding raids, the chief towns plundered being Wahind, Mūltān, Nardīn (Tarā'ōrī), Thānesar, Baran, Mathurā, Kannawdj, Gwāliyar, Kālindjar and Sōmnāth, although permanent occupation of the captured territories never seems to have entered his mind, and in consequence Islam was not established there; except in the Pandjāb which became the Ghaznawids' frontier province and in which, in Lāhawr (Lahore), they established their capital after losing Ghazna to the Ghūrids. For the history of these years see especially the articles GHAZNAWIDS, SEBÜKTIGĪN, MAḤMŪD B. SEBÜKTIGĪN, GUDJARĀT, and PANDJĀB.

The Ghaznawids' successors, the Ghūrids, were the next pre-eminent Muslim power to harass India from the north-west, although at first the ruler of their eastern province, Shihāb al-Dīn (later Muʿizz al-Dīn) Muḥammad b. Sām, merely continued the *ghāzī* tradition of Maḥmūd of Ghazna by making rapid local incursions: thus in 571/1175-6 he supplanted the Ismāʿīlī rulers of Mūltān by an orthodox governor, and later took the fortress of Uččh [*q.v.*]; in 574/1178-9 he marched through Mūltān and Uččh to Pāṭan in Gudjarāt, where his exhausted army was defeated. Sind and Daybul were acquired the next year, and in 582/1186-7 Lāhawr was finally added to the Ghūrids' territories, this last conquest ending Ghaznawid rule in India and placing the Ghūrids in a favourable strategic position for an assault on upper India. A Ghūrid army was defeated in 587/1191 at Tarā'ōrī [*q.v.*] by a Čawhān force under Prithvīrādja, but a further Ghūrid army was successful at the same place in the following year and Hānsī and Dihlī (Delhi) [*qq.v.*] were occupied. Mīraṭh and Koyl (the modern ʿAlīgaṛh) [*qq.v.*] and the territory south-west as far as Adjmēr [*q.v.*] soon capitulated to the invaders under their local commander Ḳuṭb al-Dīn Aybak, and Muʿizz al-Dīn returned in 592/1195-6 to take Bayānā. Thereafter affairs were left in Ḳuṭb al-Dīn Aybak's hands, and he, after defeating attacks by local Hindū rulers, occupied Badā'ūn in 594/1197-8, Kannawdj the following year, Gwāliyār in 597/1200-1 and Kālindjar in 599/1202-3; he was appointed *walī ʿahd-i Hindūstān* by Muʿizz al-Dīn shortly before the latter's death in 602/1206. The political rôle of the Ghūrids in India was still limited, and Aybak was more concerned after Muʿizz al-Dīn's death with maintaining his position *vis-à-vis* Tādj al-Dīn Yïldïz, the Ghūrid governor in Ghazna, than with extending, or even consolidating, the Ghūrid possessions in India; indeed, at this time certain local Hindū rulers were accepted as tributaries. But the Ghūrids nominally controlled wider possessions in India than those administered by Ḳuṭb al-Dīn Aybak, for two other local governors, who like Aybak

were Turkish slaves, were established in remoter provinces: Nāṣir al-Dīn Ḳabāča in Mūltān and Sind and Muḥammad b. Bakhtiyār Khaldjī in Lakhnawtī in Bengal. At Ḳuṭb al-Dīn Aybak's death in 607/1210 he was succeeded by his son Ārām Shāh, but Aybak's son-in-law Iletmish was set up at Dihlī by a group of army officers; after he had overcome initial opposition he was able to consolidate his Indian position to the extent of severing the political connexion with Afghānistān, where the Khwārazm-Shāhs had supplanted the Ghūrids and in turn were being harassed by the Mongols under Čingiz Khān, and by securing the main strategic points of north India. Under him Islamic government received a settled form in north India, and he may be regarded as the founder of the Dihlī sultanate. For events in this period see especially GHŪRIDS, MUḤAMMAD B. SĀM; UČČH, LĀHAWR, HĀNSĪ, ḲUṬB AL-DĪN AYBAK, DIHLĪ and DIHLĪ SULTANATE. For events in Bengal see BANGĀLA [in Supplement], LAKHNAWTĪ, MUḤAMMAD B. BAKHTIYĀR, and KHALDJĪ. For events in Mūltān and Sind see SINDH. For the establishment of the Dihlī sultanate see DIHLĪ SULTANATE and ILETMISH.

For the rule of Iletmish at Dihlī see DIHLĪ SULTANATE. For his early struggles for possession see also NĀṢIR AL-DĪN ḲABĀČA and TĀDJ AL-DĪN YÎLDÎZ; by his victory over Ḳabāča, Iletmish established his authority over Sind in 623/1226; he also recovered Bengal, where the successors of Muḥammad b. Bakhtiyār had for some time enjoyed virtual independence. He was succeeded in 634/1236 by his daughter, the only female ruler in Muslim India [see RAḌIYYA], and later by his third son Nāṣir al-Dīn Maḥmūd [*q.v.*] (644-64/1246-66), although in this reign *de facto* power was exercised by Ghiyāth al-Dīn Balban as *nā'ib*. The latter, who later succeeded as sultan, was engaged in ceaseless military activity to consolidate Dihlī as the principal power in north India against the local Hindū dynasties, especially those of Mēwāt; he suppressed an attempt at independence by the Bengal governor Tughril in *ca.* 680/1281-2; and had to maintain constant strong garrisons on his north-western frontiers, where skirmishes with the Mongols, although not a serious threat to India, were frequent. Sind, however, seems to have remained virtually independent under its local rulers, the Sūmrā dynasty, who gradually became converts to Islam. The so-called 'House of Balban' was never a real dynastic power in the Dihlī sultanate, although Balban was succeeded for a time by his grandson Muʿizz al-Dīn Kayḳubād (and theoretically by his great-grandson Kayūmarth), and his second son Nāṣir al-Dīn Maḥmūd Bughra Khān, followed in turn by his son Rukn al-Dīn Kaykā'ūs, assumed the title of sultan in Bengal. For this period of the history of India see DIHLĪ SULTANATE; BANGĀLA [in Supplement]; MĒWĀT. For the rise of the local Sind dynasty see SINDH and SŪMRĀS.

A coup by Khaldjī Turk officers led to the establishment of the next dynasty of the Dihlī sultanate. Djalāl al-Dīn assumed the royal title in 689/1290, succeeded after six years by his nephew ʿAlā' al-Dīn, under whom the sultanate assumed an imperial character. Attacks by the Čaghatay Mongols were repulsed; Gudjarāt was conquered in 697/1298, several victories in Rādjāsthān subdued most of that area in the early 8th/14th century, the Yādava kingdom of Devagiri was taken in 707/1307, the Kākatīya kingdom of Tilingānā was laid under tribute two years later, and even the southern Pāndya kingdom was invaded and plundered. ʿAlā' al-Dīn entered into matrimonial alliances with defeated Hindū rulers' families, and was a shrewd administrator whose principal concern in this field was the regulation of prices. The Khaldjī dynasty lasted only four years after his death; the last sultan, Ḳuṭb al-Dīn Mubārak, was assassinated by his favourite slave, a Hindū convert, who usurped the throne as Nāṣir al-Dīn Khusraw; a brother of the first sultan was, however, an ancestor of the Khaldjīs of Mālwā (see below). For the events of this period see KHALDJĪ; ʿALĀ' AL-DĪN MUḤAMMAD KHALDJĪ; MALIK KĀFŪR; NĀṢIR AL-DĪN KHUSRAW; AMĪR KHUSRAW; also references under DAWLATĀBĀD, GUDJARĀT, RĀDJĀSTHĀN, TILINGĀNĀ. For Bengal, where from about 696/1297 the province had been divided into an eastern and western part with capitals at Sonārgāwn and Lakhnawtī respectively and where Dihlī had not reasserted its suzerainty, see BANGĀLA [in Supplement], LAKHNAWTĪ, SONĀRGĀWN.

With Islam threatened by the excesses of Nāṣir al-Dīn Khusraw, a *djihād* was declared against him by Ghāzī Malik, the governor of Dīpalpur, who succeeded to the sultanate as Ghiyāth al-Dīn Tughluḳ in 720/1320. An account of the events leading to the Tughluḳ succession is given in GHIYĀTH AL-DĪN TUGHLUḲ I; see also NĀṢIR AL-DĪN KHUSRAW. Further military activity consolidated and expanded the territory of the sultanate: the Pāndya kingdom of Madurā (Maʿbar) was annexed, Djādjnagar in Orissa (Uṛīsā) invaded, and Bengal, then suffering from civil war, partly re-annexed; for this expansion see MADURĀ, TILINGĀNĀ, UṚĪSĀ, WARANGAL. Tughluḳ's son Djawna Khān, entitled Ulugh Khān, who succeeded his father in 725/1325 as Muḥammad b. Tughluḳ, was the general who brought about this consolidation; yet after his accession his oppressive rule led to many rebellions, some of which resulted in a permanent loss of hegemony: Maʿbar (735/1334-5), Gulbargā (740/1339), Warangal (746/1345-6), and Dawlatābād, which he had earlier attempted to make a second capital, in 748/1347. This last loss led to the proclamation of an independent sultanate under ʿAlā' al-Dīn Bahman Shāh in the Deccan. By the close of his reign (752/1351) Bengal was again independent [see FAKHR AL-DĪN MUBĀRAK SHĀH], and the Sūmrā dynasty in Sind had been succeeded by the Sammās [*q.v.*]. For the events of these reigns see, in addition to the articles already cited, MUḤAMMAD B. TUGHLUḲ; TUGHLUḲIDS; DĀR AL-ḌARB, iii (for Muḥammad b. Tughluḳ's token currency); DAWLATĀBĀD; for Madurā see also DJALĀL AL-DĪN AḤSAN SHĀH; for events in the Deccan see DAKHAN and BAHMANIDS, and references under VIDJAYANAGARA. For Kashmīr, where Islam had been introduced *ca.* 715/1315 by Shāh Mīr or Mīrzā, who later became the first Muslim ruler of the country, see KASHMĪR and SHĀH MĪRZĀ.

Muḥammad b. Tughluḳ's nephew Fīrūz Shāh (usually conveniently but inaccurately differentiated as Fīrūz Shāh Tughluḳ) succeeded in 752/1351 to a reduced domain. He early led expeditions to restore the Dihlī hegemony over Bengal, in 754/1353-4 and 760/1359; but that province, reunited since 753/1352, retained its independence under Ilyās Shāh [*q.v.*], whose successors remained in power for another half-century. His prolonged expedition to Sind against the Sammās of Thaṭṭhā restored Dihlī's suzerainty over Sind for a short time only, although in expeditions against Kāngṛā and Iṭāwā [*qq.v.*] he was more successful. His reign was generally peaceful and prosperous—particularly in the hindsight of historians writing after the Tīmūrid invasions of the end of the 8th/14th century—and he is remembered

as an innovator in agriculture and especially irrigation, a remitter of the harsher taxes (but as an upholder of the necessity of levying *djizya* from Brāhmaṇs: see ḌARĪBA, 6 a.), and as a constant public builder; but he was mild to the extent of culpable leniency, and his delegation of authority to his subordinates eventually weakened the royal power. For his reign see FĪRŪZ SHĀH TUGHLUḲ, DIHLĪ SULTANATE, and TUGHLUḲIDS; for the events in Sind see SINDH and ṬHAṬṬHĀ; for events in Gudjarāt see GUDJARĀT (*b*); for the position in Bengal see specially ILYĀS SHĀH and SIKANDAR B. ILYĀS; for his agricultural policies and irrigation works see FILĀḤA, V; NAHR; and references under DJAMNĀ; for his buildings and other public works see DIHLĪ, DIHLĪ SULTANATE (ART), DJAWNPUR, ḤIṢĀR FĪRŪZA, SARHIND.

Some half-dozen kings of the Tughluḳ line followed Fīrūz after his death in 790/1388, none (except the last: see below) for more than a year or two. The Dihlī sultanate was in a state of political disintegration, and many provincial *muḳṭā*ʿs achieved virtual independence at this time. Even before Fīrūz's death the *muḳṭā*ʿ Malik Rādjā of Karwand near Thālnēr had been able to act independently of Dihlī after about 784/1382 [see FĀRŪḲIDS, KHĀNDESH]. The Bahmanīs of the Deccan strengthened their independence and enlarged their dominions, the second sultan, who succeeded in 759/1358, bringing in careful and extensive administrative reforms; for these see MUḤAMMAD SHĀH I BAHMANĪ. The constant skirmishing with the neighbouring Hindū kingdom of Vidjayanagara flared up in 766/1365 in the first major battle between Hindūs and Deccani Muslims; accounts vary, but it seems that the boundaries drawn between the rival powers were more in Vidjayanagara's favour and that consequently the Bahmanīs cannot have had the better of the argument. For this campaign and the conflicting evidence see VIDJAYANAGARA. Some five years later the Vidjayanagara ruler extinguished the Muslim dynasty of the small southern sultanate of Madurā [*q.v.*]. In Mālwā [*q.v.*] the governor, Dilāwar Khān, had failed to remit to Dihlī the revenue collections of the district since 795/1392, although he did not declare himself independent until 804/1401 [see DILĀWAR KHĀN]. In the eastern provinces of the sultanate, disaffected Hindūs were rejecting all obedience to Dihlī when the (Ḥabshī?) eunuch Malik Sarwar, Khʷādja Djahān, was sent there in 796/1394 to control them; having done this he occupied Djawnpur as *sulṭān al-sharḳ* and there made himself independent of Dihlī [see DJAWNPUR, SHARḲIDS; also ITĀWĀ, KOYL]. Disorder had similarly arisen in Gudjarāt, where Ẓafar Khān had been sent by Dihlī in 793/1391 to establish the Tughluḳ authority; he pacified the province, but remained there as a virtually independent ruler during the confused Tughluḳ rivalries in the north; yet he did not assume the royal prerogatives until 810/1407 (although his son Tātār Khān had had himself proclaimed king five years previously); for these events see GUDJARĀT and MUẒAFFAR SHĀH GUDJARĀTĪ I.

In 800/1398 Pīr Muḥammad, governor of Kābul and grandson of Tīmūr, attacked India, capturing Uččh and Mūltān [*qq.v.*]; the chiefs and nobles of Dīpālpur had also submitted to him, but later revolted and killed his governor. This seems to have been made a *casus belli* by Tīmūr in 801/1398-9: Dīpālpur and Bhaṭner, where the rebels had taken refuge, were sacked, and Tīmūr proceeded through Pānīpat to Dihlī, chastising the Djāṭs [*q.v.*] on the way: the sultan (Maḥmūd Tughluḳ) fled, Dihlī was occupied, and was given up to pillage, plunder and wholesale massacre. On his withdrawal in the spring of that year, the Dihlī sultanate was left in virtual anarchy and moral, political and financial bankruptcy, although Maḥmūd Tughluḳ had returned to his 'capital city without an empire' after the Tīmūrid armies had withdrawn; *de facto* authority seems, however, to have been exercised by Maḥmūd's minister Mallū Iḳbāl Khān [*q.v.*]. The Sayyid Khiḍr Khān held Mūltān, Lāhawr, Dīpālpur and other localities as governor owing allegiance to Tīmūr or to his son Shāh Rukh. In addition to the now fully independent Muslim states mentioned in the last paragraph, many minor Muslim governors had become more or less independent, and the local Hindū chieftains, particularly those of the Dōʾāb, had thrown off all pretence of recognizing the suzerainty of Dihlī. Maḥmūd Tughluḳ's military governor of the Dōʾāb, Dawlat Khān Lōdī—who after the death of Mallū came to occupy the same position in the state as Mallū had—gained some small success in re-asserting the authority of Dihlī over the neighbouring states; he and Khiḍr Khān were the chief contenders for power in the north, and after the death of Maḥmūd Tughluḳ in 815/1412 or 1413 (the evidence on this point is conflicting) Dawlat Khān was raised by the nobles to the Dihlī throne. In about 806/1404 Islam had suffered a setback in Bengal with the defeat of Ghiyāth al-Dīn Aʿẓam Shāh by Rādjā Gaṇesh of Dinādjpur; and this Hindū minister continued to wield power (and, according to some Muslim historians, persecuted Muslims; but their accounts are not well authenticated and may be tendentious) until his death in 818/1415. Apparently he never assumed the royal title; but a succession of minor Muslim kings were puppets in his hands. He was succeeded by his son, who had been converted to Islam as Djalāl al-Dīn Muḥammad. For the events of these years in north India see TĪMŪR; MAḤMŪD TUGHLUḲ; KHIḌR KHĀN; DAWLAT KHĀN LŌDĪ [in Supplement]; for encroachments by the Djawnpur sultan Ibrāhīm see IBRĀHĪM SHĀH SHARḲĪ and SHARḲIDS; for Rādjā Gaṇesh see BANGĀLA [in Supplement].

In the Bahmanī kingdom the fifth ruler, Muḥammad Shāh II [*q.v.*], a liberal and enlightened sultan, enjoyed a long reign (780-99/1378-97) undisturbed by foreign campaigns, and showed his administrative ability in his famine relief measures during 789-97/1387-95. On his death, one Tughalčin, chief of the Turkish slaves, seized power and installed a puppet ruler; but Fīrūz and Aḥmad, two grandsons of the first sultan, resenting the degradation to which the royal family was being subjected and being assured of support, rose to power; Fīrūz succeeded as the next sultan in 800/1397, his brother Aḥmad becoming Amīr al-Umarāʾ and Khān-khānān. Fīrūz reorganized the administration, in which Brāhmaṇs came to be extensively employed—probably to balance the high proportion of influential 'foreigners' (Īrānīs and ʿIrāḳīs) whom previous sultans had favoured. He was three times involved against Vidjayanagara (800/1398, 809/1407, 820-2/1418-20), possession of the Rāyčūr [*q.v.*] *dōʾāb* being the main point of contention; in 802/1399, after the foundation of the new city of Fīrūzābād on the river Bhīma, he was engaged against the Gond rādjā of Kherlā [*q.v.*], and shortly afterwards against Tilingānā. About 803/1401 he is said to have sent an embassy to Tīmūr and to have obtained from him a brevet of sovereignty over the Deccan; this is not recorded by historians of

Tīmūr's reign, but its truth seems confirmed by the actions of other southern rulers: an understanding of mutual assistance between the rulers of Gudjarāt, Mālwā, Khāndesh and Vidjayanagara against the Bahmanī kingdom, and a demand from these rulers to Fīrūz to keep the peace. Fīrūz was able to maintain excellent relations with the Hindūs of the Deccan, taking wives from several prominent Hindū houses, not excluding Vidjayanagara (being persuaded, although a Sunnī, to contract *mutʿa* alliances in this respect: Shīʿī doctrines were at this time penetrating the Deccan). Opposition to Fīrūz towards the end of his reign centred around the Čishtī saint Gīsū Darāz [*q.v.*], who favoured his brother Aḥmad; and to the latter Fīrūz assigned the throne in 825/1422. For this period in the Deccan see, in addition to the references above, BAHMANIDS, VIDJAYANAGARA, ILIČPUR.

In Dihlī the sultanate had fallen to Khiḍr Khān in 817/1414, who, however, never assumed the royal title. He and his house, the so-called Sayyid dynasty, ruled Dihlī until 855/1451; their rule was never strong, and military force was always necessary for the mere collection of the revenues; their military expeditions were undertaken in attempts to maintain the small prestige remaining to the sultanate: *e.g.* 817/1414 Katahr [*q.v.*]; 818/1415-6 Nāgawr [*q.v.*], which was being approached by Aḥmad Shāh of Gudjarāt; 821/1418 Badāʾūn; 823/1420 Mēwāt, Gwāliyar and Iṭāwā [*qq.v.*]; 826-32/1423-8 constant trouble with Bayānā; and unhappy relations with most of the neighbouring states. The sultanate was menaced by uprisings of disaffected Turkish nobles (the 'Turkbaččas'), the Khōkars of the Pandjāb, and, in the 830s/1430s in the reign of Mubārak Shāh, Mughals from Kābul; and the rulers of the new Muslim sultanates of western India and the Deccan had become strong enough to attack some of the possessions of the Dihlī sultanate, such as Gwāliyar by Hūshang of Mālwā in 826/1423, Kalpī in 834/1431 by Mālwā and Ibrāhīm Sharḳī of Djawnpur simultaneously. During the reign of the third Sayyid, Muḥammad Shāh (838-49/1434-45), the governor of Sirhind, Malik Bahlūl Lōdī, gradually came to control the whole of the Pandjāb; Bahlūl defended the Sayyid kingdom in 844/1440-1 against the invasion of Maḥmūd Khaldjī of Mālwā, probably to keep Dihlī secure for himself; and the last Sayyid king, ʿĀlam Shāh, who had moved his court to Badāʾūn, voluntarily resigned the throne to Bahlūl in 855/1451. For this period of the Dihlī sultanate see KHIḌR KHĀN, MUBĀRAK SHĀH, MUḤAMMAD SHĀH B. FARĪD, BAHLŪL LŌDĪ; KHŌKAR; MUGHAL; KALPĪ; and references under MĀLWĀ and SHARḲIDS.

In Mālwā, Dilāwar Khān had been succeeded by his son Hūshang Shāh [*q.v.*] in 808/1405, who was accused of parricide and attacked and carried off by Muẓaffar Shāh of Gudjarāt [see DHĀR]; he was reinstated in 811/1408, and thenceforth transferred his capital from Dhār to Māndū [*q.v.*]. He invaded Gudjarāt several times in the early part of his reign, although when in 824/1421 Hūshang in search of elephants invaded Uṛīsā his dominions were in turn invaded by Gudjarāt armies; in 831/1428 he supported the rādjā of Kherlā [*q.v.*] against the Bahmanīs but was badly beaten by a Bahmanī army; in 834/1431 he attacked Kalpī [*q.v.*] at the same time as Ibrāhīm Sharḳī of Djawnpur and, gaining possession of it, left a governor there, who, being at some distance from Mālwā, was soon able to assert a considerable degree of independence. On Hūshang's death in 838/1435 [?] the barbaric rule of his eldest son Muḥammad Shāh caused Maḥmūd Khān, a former general and counsellor of Hūshang and son of his minister Malik Mughīth [*q.v.*], to remove Muḥammad and, Mughīth having declined it, assume the throne as Maḥmūd Shāh Khaldjī in 840/1436. In spite of an attempt by Aḥmad Shāh I of Gudjarāt to secure the throne for Masʿūd, a son of Muḥammad Ghūrī, Maḥmūd consolidated his position and during his long reign (33 years) the Mālwā sultanate reached its greatest extent. He several times attacked Čitawr in Mēwār [*q.v.*], eventually compelling its ruler, Rāṇā Kumbha, to acknowledge his suzerainty (858/1454); he exacted tribute from the rulers of minor Hindū states to the north of his dominions (Bundī, Koṭā, Kumbhalgaṛh, etc.) and, while engaged in the conquest of Mandasor, 'recovered from the idolaters' the city of Adjmēr [*q.v.*] (861/1457); disputes over Kalpī led to occasional war with the sultanate of Djawnpur; he caused the *khuṭba* to be read in his name in Bayānā; several times he invaded the Deccan to attack the domains of the Bahmanī minor Niẓām Shāh, once (865/1461) being utterly defeated, but able later to despoil Barār and to defend his outpost at Kherlā [*q.v.*]; and even Dihlī, as noticed above, was not safe from his ambition (844/1440-1). But he was a good Muslim and a great builder and patron of the arts, and in his time Mālwā acquired renown as a centre of learning. For the details of his reign see, in addition to the references above, MAḤMŪD SHĀH I KHALDJĪ, MĀLWĀ, MĀNDŪ; ČANDĒRĪ; also references under GUDJARĀT.

The Gudjarāt sultanate had, at much the same time, similarly profited by a long reign. Aḥmad I had succeeded his grandfather Muẓaffar I in 813/1410 and spent much of his reign in hostilities with neighbouring Rādjpūt princes, especially Īḍar [*q.v.*], Čāmpānēr [*q.v.*] and Djūnāgaṛh [*q.v.*], and with his Muslim neighbours; his interest in Mālwā has been described above, but he was also involved against Khāndēsh and the Bahmanīs. He founded the new capital of Aḥmadābād [*q.v.*] in 813/1411, Aḥmadnagar *ca.* 830/1427, and consolidated Islam throughout Soraṭh [see DJŪNĀGAṚH; although this town itself did not become a centre of Islamic propaganda until *ca.* 874/1470 in the reign of Maḥmūd], where Islam was already well established in the coastal towns [see for example MANGRŌL]. He extended the Gudjarāt dominions southwards into the northern Konkan coast from 834/1431 by the capture of Thānā [*q.v.*] from the Bahmanīs [see also MAHĪM]. His strict but impartial justice, and through him the example of the religious teachers of Baṭwā and Sarkhedj near Aḥmadābād, did much to establish the firm rule of Islam throughout Gudjarāt in the early 9th/15th century. The policy of constant pressure on Gudjarāt's Hindū neighbours was maintained under Muḥammad I (846-55/1442-51) and Ḳuṭb al-Dīn Aḥmad Shāh (855-62/1451-8), the latter having once entered into a Muslim alliance with Maḥmūd of Mālwā against Čitawr. With the accession of Maḥmūd I in 862/1458 Gudjarāt entered the period of its greatest prosperity; for the attempt at usurpation by Shams Khān Nāgawrī before Maḥmūd's accession see NĀGAWR. For the general history of Gudjarāt in this period see, in addition to the references above, GUDJARĀT.

The small state of Khāndēsh, where Malik Rādjā (= Rādjā Aḥmad) had been appointed to an *iḳṭāʿ* by Fīrūz Shāh and where he had established himself sufficiently to act independently of Dihlī since *ca.* 784/1382, early sought alliance with Mālwā through a royal marriage; but on the temporary division of the state between Malik Rādjā's two sons on his

death in 801/1399 the elder brother, Naṣīr, dissatisfied with lack of support from Mālwā against Aḥmad I of Gudjarāt who had intervened on behalf of the younger brother Ḥasan, had to recognize the overlordship of Gudjarāt, 820/1417. A Khāndēsh attack on Nandurbār in 833/1429 provoked Gudjarāt reprisals, and an alliance with the Bahmanīs was sought by marriage: but when his daughter complained that her husband was neglecting her, Naṣīr Khān invaded the Bahmanīs' northern territories; however, his army was defeated and only the threatened assistance of Gudjarāt led to a Bahmanī withdrawal. ʿĀdil Khān (d. 844/1441) and Mubārak Khān (d. 861/1457) accepted Gudjarāt suzerainty, but in 904/1498 ʿĀdil Khān II failed to pay tribute and was chastised by Maḥmūd Bēgfā. After the death of ʿĀdil Khān II in 907/1501 a disputed succession caused the intervention in Khāndēsh of the stronger neighbouring powers. None of the Fārūḳī rulers was recognized as equal by the sultans of Gudjarāt, Mālwā, Aḥmadnagar or the Deccan, and were known as Khān rather than Shāh. For Khāndēsh in this period see FĀRŪḲIDS and KHĀNDESH, and references under GUDJARĀT and MĀLWĀ.

Bengal, where rival sultanates had been established in the late 7th/13th century at Lakhnawtī (capital later transferred to Pānduā) and Sonārgāwn, had been reunited about 753/1352 under Ilyās Shāh, and after Fīrūz Shāh Tughluḳ's vain attempts to recover the province (see above) was never again molested by Dihlī. The Ilyās Shāhī succession had degenerated into a number of puppet kings under the influence of the Hindū minister Rādjā Gaṇesh of Dinādjpur, and was terminated by the accession of Gaṇesh's son the Muslim convert Djalāl al-Dīn Muḥammad in 818/1415; his reign seems to have been a time of peace and prosperity for Bengal, to judge by the magnificence of the monuments and the evidence for the growth of sea-borne trade with China; and he has the rare distinction of receiving praise for his justice and equity from both Muslim and contemporary Hindū sources. There was, however, a continual threat to the western regions from the Djawnpur sultans, and the existence of coins dated Śaka 1339-40 (= 819-20/1416-18) of Danudjamardana-deva and Mahendra-deva perhaps shows the temporary rise of local Hindū chiefs to power in regions away from the capital. He was succeeded by his son Shams al-Dīn Aḥmad Shāh in 836/1432, in whose reign Bengal was invaded by Ibrāhīm Sharḳī of Djawnpur, against whom Aḥmad Shāh sought help from Tīmūr's son Shāh Rukh. On his assassination a year later the Ilyās Shāhī dynasty was restored, and with the Djawnpur rulers continually engaged with the Dihlī sultans the removal of the western threat brought some peace; although Arakanese disturbances on the east led to the loss of Čāṭgām [see CHITTAGONG]. However, the sultanate was extended south to Bāgerhāṭ and westward to Bhagalpur (now in Bihār). One of the many changes in the course of the river Ganges [see GANGĀ] caused the transfer of the capital from Pānduā back to Gawṛ-Lakhnawtī. In the reign of the second sultan of the restored dynasty, Rukn al-Dīn Bārbak (864-79/1459-74), the Ḥabshī [*q.v.*] slaves are first known to have become prominent, and it was they who finally superseded the Ilyās Shāhīs in 892/1486. For this period in the history of Bengal see specially BANGĀLA (in Supplement), ILYĀS SHĀHIDS, NĀṢIR AL-DĪN MAḤMŪD I, RUKN AL-DĪN BĀRBAK; and references under SHARḲIDS and ḤABSHĪ.

Some of the incidents between the sultanate of Djawnpur and its neighbours have been mentioned above. Its first ruler, Malik Sarwar, left at his death in 802/1399 a kingdom extending from Koyl (ʿAligaṛh) in the west to Tirhut and Bihār in the east. It early received tribute from the sultans of Bengal, for whom it obviously represented a buffer state between the Dihlī sultanate and themselves; but later, as its strength grew, it was all too often the aggressor against Bengal. The reign of Malik Sarwar's adopted son and successor, Mubārak (802-4/1399-1402), was distinguished only by the last Tughluḳ attempt to regain Djawnpur; but the long reign of Ibrāhīm (804-44/1402-40) established the Sharḳī sultanate as one of the major powers of northern India. His campaigns against his neighbours have been mentioned above; but his reign was distinguished by his patronage of art, letters, and religion, and by the great building activity in the capital. Ibrāhīm's son Maḥmūd (844-61/1440-57) continued the indecisive hostilities with Mālwā and unsuccessfully besieged Dihlī in an attempt, inspired by malcontents in that city, to oust Bahlūl Lōdī in 856/1452; an uneasy peace resulted, for Bahlūl saw that Djawnpur constituted a greater threat to the Dihlī sultanate than the petty campaigns in which he was involved in the Pandjāb. Maḥmūd seems to have had greater success against Čunār, south of Banāras, shortly after this, and Muslim historians credit him also with a successful incursion into Uṛīsā. In 861/1457 he died and was succeeded by Muḥammad Shāh, whose initial successes against Bahlūl were wasted by disturbances in Djawnpur provoked by his cruelties; he was killed in the following year and succeeded by his brother Ḥusayn. Ḥusayn overran Tirhut and successfully raided Uṛīsā with the not uncommon aim of capturing elephants; his army was at that time possibly the strongest in India, and he made several attempts to take Dihlī, instigated by his wife, the daughter of ʿĀlam Shāh the last Sayyid king of Dihlī. He was finally decisively defeated by Bahlūl in early 884/spring 1479, and Dihlī annexed the Djawnpur territories; Ḥusayn retired to Bihār, and in spite of fomenting dissensions between the Lōdī princes after the death of Bahlūl he never recovered his kingdom. For the history of this region see SHARḲIDS, DJAWNPUR; BIHĀR, IṬĀWĀ, KALPĪ; IBRĀHĪM SHARḲĪ, MAḤMŪD SHARḲĪ, ḤUSAYN SHARḲĪ; and references under DIHLĪ SULTANATE, MĀLWĀ and UṚĪSĀ.

Mūltān recognized the suzerainty of Dihlī until 847/1443-4; the first Sayyid king of Dihlī, Khiḍr Khān, had in fact been appointed governor of Mūltān by Tīmūr, but under the weaker later Sayyids Mūltān was left without a governor. Shaykh Yūsuf Zakariyyāʾ Ḳurayshī was elected governor, but was soon dispossessed by a Langāh chief of the district of Sibi who proclaimed himself as Ḳuṭb al-Dīn Muḥammad. Yūsuf took refuge in Dihlī and persuaded Bahlūl Lōdī to send an army to recover Mūltān, but the province remained in Langāh hands under its first two able rulers Ḳuṭb al-Dīn (d. 864/1460) and Ḥusayn (d. 908/1502); under the next ruler, Maḥmūd, the affairs of the province became troubled, rule eventually passing to Shāh Ḥusayn of the Arghūn dynasty of Sind, with Mughal support, in 932/1525. For this region see MŪLTĀN, LANGĀHS, and references under SINDH.

In Sind itself at this time the Sammā dynasty was still ruling, isolated, independent, and little troubled by or for their neighbours; Sind history for long is purely local with no great concern either for the rest of India or for Islam, and until the late 9th/15th

century few details of it are known beyond the list of its kings—and even here the chronology is uncertain. The later Sammās were, however, connected by marriage with the sultanate of Gudjarāt. Mughals of the Arghūn clan began to exert some influence in lower Sind in the last quarter of the 9th/15th century, in the long reign of Nandā, Djām Niẓām al-Dīn (*ca.* 866-914/1461-1508); and in *ca.* 876/1472, on a report that 40,000 rebels had risen against the Djām, Maḥmūd I of Gudjarāt marched against them. On a previous report of persecution of Muslims by Hindūs in Sind, Maḥmūd had intervened there, to be informed that the Sind Muslims knew little of Islam and married freely with Hindūs. In 898/1493 Shāh Beg Arghūn of Ḳandahār occupied some forts in northern Sind, and eventually, after the death of the last of the Sammā Djāms in 933/1527, the Arghūns became rulers of Sind. For details of this period see SINDH, SAMMĀS, ṮHAṮṮHĀ.

Kashmīr, like Sind, had at first little connexion with other Islamic powers in India, although the reign of Shihāb al-Dīn (755-74/1354-73?—here again the chronology is uncertain) saw the arms of Islam victorious over most of Kashmīr's immediate Hindū neighbours and the rise of Kashmīr to the status of a great power, although the rule within its borders was characterized by religious toleration. Under Sikandar (*ca.* 791-815/1389-1413), however, a fierce policy of persecution of Hindūs, banishment of Brāhmaṇs, iconoclasm, and immigration of Muslims from other regions made the country a predominantly Muslim state, earning for Sikandar the title of Butshikan ("Breaker of Idols"). That policy was strikingly reversed under the greatest of the Kashmīr sultans, Zayn al-ʿĀbidīn (823-75/1420-70), who recalled the exiled Brāhmaṇs and permitted the observance of Hindū practices by that community provided the ordinances of their sacred books were observed; he abolished the *djizya* and also illegal taxes and cesses, and was active in building public works, including bridges and canals; he was a patron of the arts, especially literature and music. Kashmīr was still little involved with other kingdoms of India, although the sultan maintained friendly relations with Indian and other rulers, Hindū and Muslim alike. After his death the power of the royal line declined and the nobles manipulated the throne with a succession of puppet kings; several tribes obtained great power at this time, one of whom, the Čakk, later usurped the throne. For the region at this time see, besides KASHMĪR, the articles SHIHĀB AL-DĪN, SIKANDAR BUTSHIKAN, ZAYN AL-ʿĀBIDĪN; also SRĪNAGAR and, for the wooden bridges of Kashmīr, references under ḲANṬARA.

To revert to Dihlī: Bahlūl Lōdī, who had peacefully acquired the Dihlī throne in 855/1451, at first gained by this more in prestige than in territory, for he was already master of the Pandjāb and Sirhind and the area of the sultanate under the Sayyids had been of little extent. On his early expedition to repossess Mūltān from the Langāhs, some of the old nobles of the last Sayyid king invited Maḥmūd of Djawnpur to attack Dihlī; the attack was repulsed on Bahlūl's prompt return, but Djawnpur remained the most powerful threat to Dihlī over the next quarter-century, with major conflicts in 856/1452, 861/1457, 878/1473-4, 881/1476, and 884/1479. On the last occasion Bahlūl's victory was decisive; he recovered all the Djawnpur territories for Dihlī, and established his son Bārbak Shāh on the Djawnpur throne. Many of Bahlūl's tribe of Afghāns came to India during his reign, and, by dividing his territories before his death among his relations and most influential nobles, he wrought the Dihlī sultanate into an Afghān confederacy. Sikandar Lōdī, who succeeded his father in 894/1489, was soon compelled to intervene in Djawnpur, where his ineffective elder brother was incapable of dealing with large-scale rebellion by the Hindū *zamīndārs* fomented by Ḥusayn Sharḳī from his exile in Bihār; Bārbak was replaced, and Sikandar forced Ḥusayn to flee to Bengal; he had brought Bihār again within the sphere of influence of Dihlī by 899/1494. After occupying Sambhal [*q.v.*] and holding court there for four years he turned his attention to the subjugation of the smaller Rādjpūt states near Dihlī, especially the territories of Gwāliyar, founding a new capital at Āgrā [*q.v.*] the better to conduct his campaigns: thus Dholpur fell in 907/1502, Mandrāyl in 910/1505, Utgīr in 911/1505, Narwar in 914/1508; Čandērī [*q.v.*] was virtually governed as a dependency of Dihlī (although nominally on behalf of the pretender to the throne of Mālwā, Ṣāḥib Khān "Muḥammad Shāh") from late 919/1513 after Sikandar's intervention in the Mālwā domestic struggles, although it later passed into Rādjpūt hands. Sikandar Lōdī, perhaps the greatest king of the dynasty although his fierce intolerance of Hindūs and destruction of their temples was hardly the way to command popular support, died in Āgrā (922/1517) and was succeeded by his eldest son Ibrāhīm; but at the suggestion of a prominent faction of the nobility the small kingdom was partitioned and Ibrāhīm's younger brother (?) Djalāl Khān was established on the revived throne of Djawnpur. The moderates, however, condemned this policy, and Djalāl Khān became the figurehead of a rebellion against Dihlī fomented by members of the Lōḥānī and Farmūlī clans in Bihār and Djawnpur. Djalāl Khān, before his surrender and death, had fled for refuge to Gwāliyar, giving Ibrāhīm the pretext for annexing it in 923/1518; but the rebellion had caused Ibrāhīm to suspect even the loyal nobles, whom he dismissed and degraded indiscriminately. Disaffection spread; and when the son of Dawlat Khān Lōdī, the powerful governor of Lāhawr, reported to his father the iniquities of Ibrāhīm's rule Dawlat Khān applied to the Mughal Bābur for help. A similar request had come from Ibrāhīm's uncle, ʿĀlam Khān Lōdī, who had hopes of gaining the Dihlī throne. It soon became plain that Bābur's intervention in Indian affairs was prompted more by his own interest than that of the Lōdīs; ʿĀlam Khān failed to take Dihlī on his own, Dawlat Khān died in flight having been dispossessed of Lāhawr by Bābur, and Bābur's army moved on through the Pandjāb to encounter and defeat the Dihlī Afghāns at the battle of Pānīpat in 932/1526. Within the next four years the whole of north India had become subject to the Mughal power. For this period see DIHLĪ SULTANATE; LŌDĪS, BAHLŪL LŌDĪ, SIKANDAR LŌDĪ, IBRĀHĪM LŌDĪ; MUGHALS; BĀBUR; LĀHAWR, PĀNĪPAT, PANDJĀB, SIRHIND.

In the Deccan the last of the Bahmanī kings had fled from Bīdar a year after the victory of the Mughals in the north, although the old Bahmanī sultanate had been partitioned nearly forty years previously. Its history from the reign of Aḥmad Shāh Walī is largely one of faction between local and foreign Muslims. Aḥmad soon (826/1423) devastated Vidjayanagara, and then annexed Warangal, whose rādjā had assisted Vidjayanagara against the Bahmanīs; but probably the threat of the proximity of Vidjayanagara to Gulbargā caused Aḥmad to move his capital to Bīdar [*q.v.*] shortly thereafter. Three

northern campaigns between 829/1426 and 831/1428 brought Māhūr [*q.v.*] under subjection and secured also Gāwilgaṛh [*q.v.*]; and the fort of Narnālā [*q.v.*] was rebuilt, thus strengthening the Bahmanīs' northern frontiers for an assault on Mālwā in pursuance of the empty claim on that kingdom and on Khāndēsh and Gudjarāt on the ground of Tīmūr's "grant" of them to Fīrūz: Mālwā had in fact provided the Bahmanīs with a *casus belli* by demanding allegiance from the rādjā of Kherlā [*q.v.*], a Bahmanī tributary. A Mālwā army was defeated in 832/1429, and an alliance with Khāndēsh was effected by a marriage between the two houses; but a rash attack on Gudjarāt the next year led to a Bahmanī defeat and the loss of Thānā [*q.v.*]. Aḥmad died in 839/1436; towards the end of his life he had shown great partiality for foreigners, especially Persians, and he seems to have accepted Shīʿī beliefs under the tutelage of Khalīl Allāh "Butshikan" [*q.v.*]. He was succeeded by his eldest son ʿAlāʾ al-Dīn Aḥmad, under whom the foreigners rose to greater power after their victory over an invasion from Khāndēsh. In 847/1443 the Vidjayanagara forces—in which large numbers of Muslim mercenaries had recently been recruited—invaded the Deccan but were eventually overcome. Three years later the foreigners were inveigled into a disastrous campaign in the Konkan and, through Dakhnī treachery at court, many of them (including 1200 *sayyids*) were butchered in the massacre of Čākan. Before the king's death in 862/1458 the Deccan had been twice more invaded by Mālwā, and an attempted rebellion in Tilingānā crushed by a recently arrived foreigner, Maḥmūd Gāwān [*q.v.*]. The next king, Humāyūn, in a reign of three and a half years, endeavoured to strike a balance between Dakhnīs and foreigners and to consolidate the kingdom; his ruthless persecution of adherents of his rebel brother earned him the title of Ẓālim, "the Tyrant", apparently unjustly. A regency followed until *ca.* 870/1466 with Maḥmūd Gāwān as *wazīr*, not without further trouble from Mālwā when the infant king's dominions were defended with the help of Maḥmūd Begṛā of Gudjarāt. Maḥmūd Gāwān was sent on an extensive campaign in the Konkaṇ coast between 874/1469 and 876/1472, where local Hindū chiefs were causing heavy loss to Muslim merchantmen and pilgrim-vessels by piracy—probably with encouragement from Vidjayanagara; the country was laid under tribute, and as a sort of bonus to the campaigns the Vidjayanagara port of Goa [see ṢINDĀBŪR] was taken by the Bahmanīs in 876/1472. Tribute was also exacted from Uṛīsā in 882/1478; a mutiny in the eastern provinces with Vidjayanagara support was quashed, and the Vidjayanagara lands were invaded, in 885-6/1480-1. A conspiracy between some Dakhnīs and Ḥabshīs led to Maḥmūd Gāwān's murder in the latter year and consequent political chaos. Muḥammad III died in 887/1482, and his successor Maḥmūd's reign of 25 years saw the gradual decline of the state. The ruler became completely subservient to Ḳāsim Barīd in the capital, and the provincial governors became increasingly autonomous: thus Malik Aḥmad Niẓām al-Mulk in his new city of Aḥmadnagar, Fatḥ Allāh ʿImād al-Mulk in Barār, and Yūsuf ʿĀdil Khān in the western province (Gulbargā and Bīdjāpur) all broke away from the Barīdī ascendancy at Bīdar in about 895/1490, still, however, acknowledging Bahmanī suzerainty; since all were succeeded in their territories by their sons they may be considered as the founders of new dynasties. Sulṭān Ḳulī Hamadānī, governor of Tilingānā, was appointed to Golkondā in 903/1498 with the title of Ḳuṭb al-Mulk; after about 924/1518 he ceased to send tribute to Bīdar and became virtually independent. When Ḳāsim Barīd died in 910/1505 he was succeeded as chief minister by his son Amīr Barīd; Bahmanī sultans occupied the throne until 934/1528, but as no more than puppets of the Barīds; and the Barīd family succeeded to the Bīdar throne when the last Bahmanī ruler fled. Perhaps the last concerted action of the Bahmanī state was the expedition in 898/1493 to punish Bahādur Gīlānī, the refractory governor of Goa who, having turned pirate, was plundering ships of the Gudjarāt fleet: it was in the interest of all the provincial governors to avoid giving Maḥmūd Begṛā of Gudjarāt an excuse for an invasion of the Deccan, and their combined force defeated the rebel. For the Deccan during this period see DAKHAN; BAHMANĪS, GULBARGĀ, BĪDAR, GĪSŪ DARĀZ, MAḤMŪD GĀWĀN, HUMĀYŪN SHĀH BAHMANĪ; references under MĀLWĀ, VIDJAYANAGARA, GUDJARĀT, FĀRŪḲĪDS, KONKAṆ, ṢINDĀBŪR; for the political factions see also ḤABSHĪ, and for Shīʿī-Sunnī tensions see SHĪʿA. For the establishment of the five successor sultanates see ʿĀDIL SHĀHĪ and BĪDJĀPUR, BARĪD SHĀHĪS, ʿIMĀD SHĀHĪS, ḲUṬB SHĀHĪS, NIẒĀM SHĀHĪS.

In Mālwā Maḥmūd Khaldjī had been succeeded in 873/1469 by his eldest son Ghiyāth al-Dīn, a religious, simple and peaceable man, whose reign was devoid of external incident. His eldest son Nāṣir al-Dīn succeeded to the throne on his father's abdication in 906/1500, and in his earlier years continued an old struggle with the Hindū rāṇā of Mēwāṛ. His tyranny caused his elder son to revolt in 916/1510; on his death in the following year his third son was enthroned as Maḥmūd II, the succession being disputed by the second son Ṣāḥib Khān, who was proclaimed as Muḥammad II by a rival faction. Maḥmūd eventually became established through his Hindu ministers, especially Mēdinī Rāī [*q.v.*], in spite of interventions against him by Sikandar Lōdī of Dihlī and Muẓaffar II of Gudjarāt; but Mēdinī Rāī's growing power caused Maḥmūd to flee to Gudjarāt later for protection. Muẓaffar took Māndū in 924/1518, massacred the Rādjpūt garrison, and restored Maḥmūd. Mēdinī Rāī and the Rāṇā of Mēwāṛ later invaded Mālwā, defeated the army and captured the king, who was generously restored to Māndū; but the northern part of Mālwā was annexed by Mēwāṛ. Maḥmūd offended Bahādur, the new sultan of Gudjarāt, by sheltering a rival; Bahādur captured Māndū in 937/1531, and annexed Mālwā to Gudjarāt. In 941/1535 Māndū was taken by Humāyūn in his war with Bahādur, but the following year a former officer of the Khaldjīs, Mallū Khān, assumed the royal title as Ḳādir Shāh. The latter was dispossessed by Shēr Shāh Sūr, who left Shudjāʿat Khān as governor of Mālwā in 952/1545; his son Bāyazīd, known in popular legend as Bāz Bahādur, succeeded him in 962/1555 and, refusing to acknowledge the restored Humāyūn, assumed the royal title; he surrended Mālwā in 968/1561 to an army sent by Akbar. For this period see MĀLWĀ, MĀNḌŪ, and references under GUDJARĀT, BAHĀDUR SHĀH GUDJARĀTĪ, MĒWĀṚ, HUMĀYŪN, SHĒR SHĀH SŪR.

In Gudjarāt the 54 years reign of Maḥmūd I, 862/1458-917/1511, brought the sultanate its greatest prosperity and extended Islam into southern Rādjpūtānā, Sōraṭh and the northern Konkaṇ: in 865/1461 he secured ʿUthmān Khān in Djālor [*q.v.*], in 871-4/1467-70 overcame Djunāgaṛh [*q.v.*], extended Islam into Sindh and Kaččh in 875/1472 and next put down piracy in Dwārkā [*q.v.*]; in 887/

1482 the campaign was opened against Pāwāgaṛh and Čāmpānēr [*q.v.*]. In 913/1508 he was allied with the Mamlūks of Egypt in a naval campaign against the Portuguese, who had arrived in the Indian Ocean in 1498. Muẓaffar II, who succeeded in 917/1511, was soon involved in a clash with Mālwā (capturing Māndū in 924/1518 from a Rādjpūt faction and restoring Maḥmūd II there) and with Rāṇā Sangrām of Čitawr in Mēwāṛ [see IDAR]; there was some diplomatic intercourse with the Portuguese, now established at Goa, who first sought permission to build a fort at Dīw (Diu) and later twice tried to take Dīw by force. Bahādur Shāh, 932-43/1526-37, attacked the Niẓām Shāhīs of Aḥmadnagar in 935/1528 to settle a territorial dispute with Khāndēsh, conquered Mālwā in 937/1531, lost Bassein to the Portuguese in 941/1534 and the following year gave them permission to build a fort at Goa; from 941/1534 he was engaged in a long war with Humāyūn until the latter returned to face the Sūr threat. After Bahādur's murder by the Portuguese in 943/1537 the history of the sultanate is largely one of puppet monarchies and rival factions of nobles. In 944/1538 an Ottoman fleet attacked the Portuguese at Dīw, but received only lukewarm support from Gudjarāt; the Portuguese power increased, and the Muslims of Dīw and Bharoč [*q.v.*] were massacred in 953-4/1546-7. After this time the Ḥabshī [*q.v.*] community rose to some power, as did the Mīrzās [*q.v.*], who had taken control of Sūrat, Baṛodā, Bharoč and Čāmpānēr; they were defeated in Akbar's conquest of Gudjarāt in 980-1/1572-3. For this period see, in addition to the references given above, GUDJARĀT, BAHĀDUR SHĀH GUDJARĀTĪ, MĀLWĀ, HUMĀYŪN; for the Portuguese in the Indian Ocean see ṢINDĀBŪR, also KHĀDIM SÜLEYMĀN PASHA.

In the neighbouring state of Khāndēsh a disputed succession eventually led to ʿĀdil Khān III being installed as ruler in 914/1509 by Maḥmūd Bēgṛā, who had overcome the opposition by the Niẓām Shāhī forces supporting a rival claimant. ʿĀdil Khān married the daughter of the next Gudjarāt sultan, Muẓaffar II, and their son Muḥammad I (926-43/1520-37) co-operated in many campaigns with his uncle Bahādur Shāh of Gudjarāt, received from him the title of Shāh, and was designated his heir-apparent; he died, however, before he could reach Gudjarāt and claim his second throne. The reign of his successor Mubārak II saw in 969/1562 a defeat of a Mughal army and in 972/1564 the compulsion to accept Mughal overlordship: chaos in Gudjarāt, the annexation of Mālwā by the Mughals, and the growing concern of Aḥmadnagar with her southern neighbours, had so altered the balance of power between the great sultanates that the position of Khāndēsh as a buffer state was no longer tenable. Khāndēsh at first connived at the Mughal manipulation of the Aḥmadnagar throne, and joined the Mughals in the siege of Aḥmadnagar in 1004/1596, but later the Mughals, having been opposed by the last Khāndēsh ruler Bahādur Shāh, besieged him in Asīrgaṛh and Khāndēsh became a Mughal province in 1009/1601. For this period see FĀRŪḲIDS, KHĀNDĒSH, BAHĀDUR SHĀH GUDJARĀTĪ, ASĪR, BURHĀNPUR, THĀLNĒR, and references under AKBAR.

In Bengal a succession of Ḥabshī rulers had succeeded the Ilyās Shāhīs in 892/1486, of whom the second, Sayf al-Dīn Fīrūz (d. 895/1489), re-established order; but later Ḥabshī rule became intolerable, and a Tirmidhī *sayyid*, ʿAlāʾ al-Dīn Ḥusayn, was brought to the throne in 899/1493. He disbanded the Hindū infantry, expelled the Ḥabshīs, and transferred the capital from Gawṛ to Ikdālā; he recovered the provinces lost in the six preceding reigns, and in 904/1498 was able to annex part of Assam: his army had been reinforced by the influx of the disbanded Djawnpur forces after Sikandar Lōdī had driven Ḥusayn Sharḳī from Bihār to the protection of Bengal. In the years 918-22/1512-6 there were extensive military campaigns in the Tripura and Arakan regions as well. Ḥusayn Shāh's reign saw also a great development of Bengali literature, a liberal attitude towards the Hindūs and the growth of the syncretistic Satyapīr [*q.v.*] sect. In the reign of his son and successor Nuṣrat Shāh (925-38/1519-31) many Afghāns arrived in Bengal from Dihlī after Bābur's defeat of Ibrāhīm Lōdī. After 934/1528 there were clashes with the Portuguese on their first appearance in Bengal [see CHITTAGONG]. His brother Ghiyāth al-Dīn Maḥmūd, who had usurped the throne from his nephew in 939/1533, was early faced with a rebellion by a brother-in-law who leagued himself with the Afghān Shēr Khān [see SHĒR SHĀH SŪR] and defeated the governor of Monghyr (Mungēr [*q.v.*]). Shēr Khān later invaded Bengal, whose army pressed Portuguese captives into service; but on the fall of Gawṛ in 945/1538 Shēr Khān assumed the royal title in Bengal—only to lose it later that year to Humāyūn. For details of Bengal in this period see BANGĀLA (in Supplement), DIHLĪ SULTANATE, ḤABSHĪ, ḤUSAYN SHĀH, LAKHNAWTĪ, LŌDĪS, SHARḲIDS.

In north India after Pānīpat Bābur's first task was consolidation and extension of his authority, for many who had supported him as an ally against Lōdī oppression turned against him when it became obvious that he intended to remain. Thus he first occupied Dihlī and Āgrā in 932/1526, moved his forces eastwards down the Ganges to Djawnpur and, by his defeat of Rānā Sanga of Čitawr, secured his western territories against Rādjāsthān the next year; by the defeat of an eastern Afghān force in 935/1529 he extended his paramountcy up to Bengal. For the events of his reign, his character and his Indian policies, see BĀBUR. After his death in the following year he was succeeded by his son Humāyūn, whose first act on his accession was to assign Kābul, Ḳandahār and the west Pandjāb to his brother Kāmrān [*q.v.*], and to make smaller assignments to his younger brothers. A force of Afghān supporters of Maḥmūd Lōdī, brother of the last Lōdī king, which had taken Djawnpur in 937/1531, was defeated, although the ablest soldier among them, Shēr Khān the future Sūrī emperor, was enabled to continue his preparations against the Mughal power through Humāyūn's preoccupation with again securing his western front against the ambitious Kāmrān. A brother-in-law, Muḥammad Zamān Mīrzā, gave Humāyūn further trouble in offering his services to Bahādur Shāh of Gudjarāt, and the latter's refusal to surrender the rebel led to war between the Mughals and Gudjarāt, and to their first conquest and occupation of that province in 942/1535-6. For details see BAHĀDUR SHĀH GUDJARĀTĪ; GUDJARĀT; HUMĀYŪN; MĀNḌŪ; MUGHALS. A rebellion to put a younger brother on the Mughal throne caused Humāyūn's return to the centre, whereupon Mallū Khān profited by his withdrawal to proclaim himself ruler of Mālwā as Ḳādir Shāh [see MĀLWĀ]. Humāyun continued to be troubled by rebellious or independent-minded relations after his return to the centre [for these see MĪRZĀS], and Shēr Khān was able to consolidate his position and occupy all the south of Bihār [*q.v.*]; he was soon able to besiege Gawṛ, the Bengal capital,

but by the time Humāyūn had at last made up his mind to crush Shēr Khān the latter had occupied Rōhtāsgaṙh [q.v.]. Humāyūn marched to Gawṙ and occupied a deserted city, and then found that Shēr Khān had cut his line of communication to Dihlī; on his retreat he was defeated first at Čawsā in 946/1539, later near Kannawdj the following year, and fled towards Sind since he found no welcome in his brother Kāmrān's territories. Expelled from Sind by the Arghūn ruler, Shāh Ḥusayn, he eventually arrived at the court of Shāh Ṭahmāsp [q.v.] of Īrān for the start of his fifteen years' exile. For details of all these events see AFGHĀNISTĀN, V, 2; HUMĀYŪN; MĪRZĀS; MUGHALS; SHĒR SHĀH SŪR.

Meanwhile, Shēr Shāh had assumed sovereignty over Humāyūn's former possessions, and had regained the Pandjāb by driving Kāmrān back to Kābul, establishing a fortress at the northern Rōhtās [q.v.]. In 948-9/1542 he conquered Mālwā from Ḳādir Shāh, who fled to Gudjarāt, and in the next year laid waste Rāysen in revenge for its rādjā's massacre of Muslims at Čandērī [q.v.] and established his authority in Rādjāsthān, being killed in an explosion there at Kālindjar in 951/1545. During his periods at the capital he set about reorganizing the revenue system of the country. His reforms are described s.v. ḌARĪBA, 6 b. He was succeeded by his younger son Islām Shāh, who took stern measures to suppress the adherents of his elder brother. This revived tribal strife among the Indian Afghāns. The Niyāzī tribe, in particular, rebelled in the Pandjāb and at first allied themselves with the malcontent Gakkhaṙ [q.v.] community, but later intervened in Kashmīrī affairs and were killed by the Čakk tribe there, Islām Shāh having regained the Pandjāb. A revolt of a different kind was suppressed by the execution of one Shaykh ʿAlāʾī, a follower of the teachings of Sayyid Muḥammad of Djawnpur [see AL-DJAWNPŪRĪ], which put an end to the Mahdawī [q.v.] movement in India. On Islām Shāh's death in 961/1554 he was succeeded by an infant son who was within days murdered by his mother's brother Mubāriz Khān. The latter ascended the throne as Muḥammad ʿĀdil Shāh, and retained it only by the generalship of a Hindū administrator named Hēmū; two other Sūrī nobles, cousins of Shēr Shāh, contested the throne by rising in rebellion in their own provinces, and all three were calling themselves Sultan—ʿĀdil Shāh in Mālwā and the tract from Āgrā to Djawnpur, Sikandar from Dihlī to Rōhtās in the Pandjāb, and Ibrāhīm in a Pandjāb region further north still—when Humāyūn, who had regained Kābul, took advantage of the tribal squabbles among the Sūrs to reconquer his former empire. The army of Sikandar was defeated at Sirhind in 962/1555, and Humāyūn went on to reoccupy Dihlī without opposition. Within six months he had died after a fall from a height, and his elder son Akbar, then not fourteen years of age, succeeded to the Mughal throne. For details of this complicated period see DIHLĪ SULTANATE; HUMĀYŪN; ISLĀM SHĀH SŪR; SHĒR SHĀH SŪR; SIKANDAR SHĀH SŪR; SŪRS; and, for domestic affairs under the Sūrī dynasty, also DIHLĪ; NĀRNAWL; RŌHTĀS; RŌHTĀSGAṘH; SAHSARĀM.

On Akbar's accession the three Sūrī ex-monarchs were still active, although Muḥammad ʿĀdil was shortly afterwards killed in a clash with Bahādur Shāh of Bengal; Sikandar was the most dangerous, although Muḥammad ʿĀdil's old minister, Hēmū, was also campaigning against the Mughals, ostensibly on behalf of his former master but privately on his own account. Hēmū soon occupied Dihlī, but was killed in the battle between his followers and Akbar's smaller force at the familiar plain of Pānīpat in 964/1556. Sikandar Sūr resisted until mid-964/1557 before surrendering. The Mughal generals quickly recaptured Adjmēr, Gwāliyar and Djawnpur [qq.v.], the young emperor remaining under the influence of the "ḥaram party", his former nurses and foster-mother and their husbands and children, at Āgrā. Since Akbar's tutor, the general Bayram Khān [q.v.], was a Shīʿī he was unpopular at the court, and in 967/1560 Akbar, doubtless under the persuasion of the "ḥaram party", announced that he was assuming charge of the government; within two years he was able to free himself from the ḥaram influence as well. Mālwā had been occupied in 968/1561, rebelled the following year, and was finally subdued by Akbar in person in 971/1564; his generals in that year crushed an attempt at Afghān resurgence in Bihār. In the next few years Akbar had to contend with rebellions on the part of an Uzbek faction at court, and of his distant relations, princes of the house of Tīmūr, the Mīrzās [q.v.] of Katahr (later Rohilkhanḍ), who had received small assignments after the Mughal restoration; the latter invaded Mālwā and made their way to Gudjarāt, where in the local disorder they possessed themselves of much land, especially in its southern provinces. Meanwhile the Rādjpūts were defeated in Čitawr (975/1568) and, in the two following years, Ranthambor and Kālindjar. The heir, Salīm (later Djahāngīr), was born in 977/1569 at Sīkrī, where in 979/1571 Akbar founded his new capital, later known as Fatḥpur Sīkrī [q.v.]. Next Gudjarāt was conquered—one party in the civil strife had invited his assistance, and the sultanate was showing itself incapable of dealing with the Portuguese threat on its coast and its interference with the Mecca pilgrim traffic—in 980/1572-3. Good relations were established with the Portuguese to protect the pilgrim traffic; but about this time Akbar began to have his doubts about the sufficiency of Islam.

Soon after this, Dāʾūd Khān Kararānī [q.v.], who had succeeded to the Bengal throne, refused to acknowledge Akbar's supremacy, and invaded Bihār. Akbar marched against him, drove his Afghān army out of Bihār, and invaded Bengal; Dāʾūd surrendered, but later rebelled and was finally defeated and killed in 984/1576. For the affairs of Bengal and Bihār at this time see BANGĀLA (in Supplement), and references under DĀʾŪD KHĀN KARARĀNĪ. Khāndesh, the buffer state between the Mughal empire and the Deccan, was occupied in 985/1577. In 988/1580 the first Jesuit mission reached Āgrā; religious toleration was preached in the court, largely as a result of the influence of Abu 'l-Faḍl ʿAllāmī and his brother Fayḍī [qq.v.], but that toleration now appeared to exclude Islam. Many Muslims, believing their faith in danger, supported the idea of replacing Akbar by an orthodox sovereign; first Bihār and later Bengal, where a faction of Ḳāḳshāl Turks had become prominent, rebelled and the Ḳāḳshāls proclaimed Akbar's younger brother Muḥammad Ḥakīm, the ruler of Kābul, as their sovereign. The latter indeed marched on Hindustān, but was repulsed by Akbar and made his submission, and the rebels in the east were put down gradually by Akbar's generals. In 990/1582 he promulgated his syncretistic faith, the Dīn-i Ilāhī [q.v.], and two years later introduced an Ilāhī [q.v.] era. The year 994/1586 saw the annexation of Kashmīr, and a first abortive attempt on Aḥmadnagar. By 1001/1593 Sind, Uṙīsā and Kāṫhiāwāḍ had made their submission, and within

another three years Barār, the first of the Deccan provinces which were the object of Mughal ambition, had been ceded to Akbar; the fortresses of Gawilgaṙh and Narnāla followed, in 1009/1600 Aḥmadnagar was taken by storm, and the following year Asīrgaṙh [*q.v.*] fell. Akbar died in 1014/1605, his last few years having been clouded by disagreement with Salīm, the heir-apparent. For India in Akbar's time see AKBAR, MUGHALS, MUḤAMMAD ḤAKĪM, and references under the various cities and provinces mentioned above. For his revenue system see ḌARĪBA, 6 b, and ṬOḌAR MALL. For religious tolerance in his reign see DJAYN and PĀRSĪ, as well as ABU 'L-FAḌL ʿALLĀMĪ, FAYḌĪ and DĪN-I ILĀHĪ. For the art and literature fostered in his court see HIND, Architecture; HINDĪ; ʿABD AL-RAḤĪM, KHĀN-I KHĀNĀN; TAṢWĪR, India.

Salīm succeeded, as Djahāngīr, to a powerful empire, and was soon challenged by his own son, Khusraw [*q.v.*]; his rebellion was promptly put down and the rebels severely punished—including the Sikh [*q.v.*] leader Guru Ardjun Singh, whose execution provoked the constant hostility of the Sikhs to the Mughal power. In the north Shāh ʿAbbās [*q.v.*] of Persia laid claim to Ḳandahār, and Djahāngīr moved to Kābul to be near the potential trouble, at the same time sending armies against the Rānā of Mēwāṙ; operations were also commenced against the Deccan from Burhānpur, but the former Ḥabshī slave Malik ʿAnbar [*q.v.*] developed guerilla tactics for use against the Mughals by trained bands of Marāthā soldiers, and by 1019/1610 had recovered Aḥmadnagar and expelled the imperial forces. Further attacks on the Deccan proved useless and the Mughals in fact lost more territory, which was not regained until 1030/1621 when prince Khurram, the future Shāhdjahān, who had been placed in command of the Deccan force, met with some success at last. The following year Ḳandahār fell to Shāh ʿAbbās, and Khurram, ordered to retake it, went into open rebellion against his father; he moved quickly through Central India and Uṙīsā to Bihār, and Malik ʿAnbar profited from the disorganization by taking Bīdar. Khurram's activities in the distant provinces of the empire led him at one point to join forces with Malik ʿAnbar against the imperial forces, but he was eventually reconciled to his father. Djahāngīr died in 1037/1627 and was buried in Lāhawr, which he had raised to the status of a capital city. For details of his reign see DJAHĀNGĪR, MUGHALS, and NŪR DJAHĀN, and also ĀGRĀ and LĀHAWR, and references under MALIK ʿANBAR; for his great artistic interests see HIND, Architecture; BŪSTĀN, KASHMĪR, SHRĪNAGAR; for his elaborate coinage see SIKKA, and for paintings in his reign, TAṢWĪR, also MANŌHAR, MANṢŪR.

Shāhdjahān's reign too started with a war of succession, and after that a rebellion on the part of Khān Djahān Lōdī [*q.v.*], who defected to Aḥmadnagar; this led to a renewed conflict with the Deccan kingdoms, Aḥmadnagar being invaded in 1039/1630 and finally surrendering to the Mughals with the capture of Dawlatābād [*q.v.*] three years later. The Mughals now had to take account of the Marāṙhās [*q.v.*], some of whom had now joined the Mughal forces but who were always a potential source of danger. Attempts to take Bīdjāpur were at first unsuccessful, but a peace was concluded with that kingdom, in exchange for the promise of tribute, in 1045/1636. Shortly afterwards Prince Awrangzīb was appointed viceroy of the Deccan, and Shāhdjahān returned north, where he began building his new Dihlī. In 1047/1638 Ḳandahār was ceded to the Mughals by its governor ʿAlī Mardān Khān and held for eleven years, after which it was retaken by the Persians; three attempts to recover it failed between 1059/1649 and 1063/1653. Before these an attempt to subdue Balkh had been a failure. After these northern campaigns the Mughals again directed their efforts to the conquest of the Deccan until the sickness of Shāhdjahān in 1067/1657 led his four sons to quarrel among themselves for the throne. The third son, Awrangzīb, was victorious over his brothers Dārā Shukōh, Shāh Shudjāʿ and Murād Bakhsh [*qq.v.*], and assumed the imperial title, with the regnal name of ʿĀlamgīr, placing his father in confinement in the court of Āgrā where he died in 1076/1666. For Shāhdjahān's reign see SHĀHDJAHĀN, MUGHALS, and references under MARĀṚHĀS; for events in the north see also ḲANDAHĀR; for the Deccan see DAKHAN, also BĪDJĀPUR, NIẒĀM SHĀHĪS, and references under ḤAYDARĀBĀD; for Awrangzīb's early career as governor of the Deccan see AWRANGZĪB. For Shāhdjahān's buildings see, in addition to HIND, Architecture, ĀGRĀ, DIHLĪ, LĀHAWR, TĀDJ MAḤALL.

Before Awrangzīb had assumed the throne, the western Deccan had already been troubled by Shivādjī [*q.v.*] the Marāṙhā adventurer, who had encroached more than once on the imperial dominions, and had met with success against the ʿĀdil Shāhī armies as well. He was attacked by the Mughal armies, to whom he surrendered in 1076/1666, concluding a treaty which gave him the right to collect one-fourth (*čawth*) of the revenues in Bīdjāpur; this was no doubt agreed by Awrangzīb with a view to weakening the Bīdjāpur resources, but its effects were far-reaching as the right to *čawth* was arrogated by Shivādjī's Marāṙhā followers wherever they later conquered; for details see MARĀṚHĀS, also references under ḤAYDARĀBĀD, ii. When various Afghān tribes (Yūsufzays, Afrīdīs) rebelled beyond the Indus in and after 1082/1671, Awrangzīb went to Ḥasan Abdāl [*q.v.*] for two years, which gave Shivādjī even more scope to continue his depredations in the Deccan. He assumed the insignia of royalty, and abandoning an alliance with the ʿĀdil Shāhīs, he joined forces with the Ḳuṭb Shāhīs to invade the Madrās coastal tracts (the "Carnatic" of British historians; see KARNĀṬAKA) and Mahisur ("Mysore") in 1085/1647, taking from the ʿĀdil Shāhīs a number of their southern districts. When he died, six years later, he had created a nation out of the Marāṙhās who had been the former subjects of the Aḥmadnagar and Bīdjāpur sultanates, and who were to be Awrangzīb's strongest and most persistent rivals for the rest of his life—indeed, of the Mughal empire as long as it lasted as a power, and of the British in India as well. Awrangzīb moved to the Deccan in 1093/1682, and remained there in constant warfare until his death 25 years later. After exacting a peace treaty with Golkonḍā he captured Bīdjāpur in 1097/1686; Golkonḍā fell next after a siege of nearly a year; and within the next few years all the former forts of the ʿĀdil Shāhī and Ḳuṭb Shāhī sultanates had been taken, and many forts recovered from the Marāṙhās, to enlarge the Mughal empire to its greatest extent. The years 1101-9/1690-8 were spent trying to wear down the fortress of Djindjī ("Gingee"), where Rādjā Rām, son and successor of Shivādjī, had set up new headquarters; years of petty sieges against minor Hindū kings followed, but the army was becoming exhausted and a retreat was at last made to Aḥmadnagar, where Awrangzīb died in 1118/1707. For his reign see AWRANGZĪB, MARĀṚHĀS, MUGHALS,

SHIVĀDJĪ; references to his bigotry under DJIZYA, iii; for the important digest of Muslim law made at his orders see AL-FATĀWĀ AL-ʿĀLAMGĪRIYYA. For his buildings see HIND, Architecture, DIHLĪ and LĀHAWR.

The Deccan sultanates, the last two of which were extinguished by Awrangzīb, grew out of the chaotic Bahmanī empire, its provincial governors having gradually asserted their autonomy since about 895/1490. Their history is a record of continuous strife among them, with occasional uneasy alliances but rarely the community of interest to combine against their common foes. The immediate successors of the Bahmanīs in Bīdar were the Barīd Shāhīs, whose domination over the later Bahmanīs has been noticed above. Their sultanate was gradually whittled away in the north and west by Bīdjāpur, against whom they were allied on several occasions with the neighbouring sultanates. The Rāyčūr [*q.v.*] *dōʾāb* was a continuous bone of contention between Bīdjāpur and Vidjayanagara [*q.v.*], and the only occasion on which the four southern sultans seem to have been united in a common cause is in 972/1564-5 when their confederacy finally crushed the power of Vidjayanagara at the battle of Tālīkoṭa [*q.v.*]. Bīdar was finally annexed by Bīdjāpur in 1028/1619. For details of this sultanate see BARĪD SHĀHĪS, also BAHMANĪS and BĪDAR.

The ʿImād Shāhī sultanate of Barār was remote enough to stand aside from part of the Deccan conflicts, although there were occasional border clashes with the Niẓām Shahīs of Aḥmadnagar. In 933/1527 Barār was invaded by the Niẓām Shāhīs and the Barīd Shāhīs; the ruler, ʿAlāʾ al-Dīn ʿImād Shāh, fled to Khāndēsh from where he invited the help of Bahādur Shāh of Gudjarāt, who promptly invaded the Deccan [see BAHĀDUR SHĀH GUDJARĀTĪ]. The ruler was restored, and Barār was for some time left unmolested while the larger sultanates were quarrelling among themselves. In 969/1561-2 Daryā ʿImād Shāh, the son of ʿAlāʾ al-Dīn, had been succeeded by his infant son Burhān, and the minister Tufāl Khān took *de facto* control over the sultanate. The latter stood aloof from the confederacy which defeated the Vidjayanagara kingdom, and plundered the Niẓām Shāhī dominions while their ruler was at Tālīkoṭa; the ʿĀdil Shāh and Niẓām Shāh sultans invaded Barār in 973/1566 to punish Tufāl, but strife between them saved the ʿImād Shāhī state from destruction at that time. Eventually the Niẓām Shāhīs, intent on strengthening their position to match that of the ʿĀdil Shāhīs who had annexed many former Vidjayanagara possessions in the south, again invaded Barār in 981-2/1574-5, capturing Tufāl Khān in Narnāla and forcing the surrender of Gawīlgaṛh; with the imprisonment of Tufāl Khan and Burhān ʿImād Shāh, the Barār sultanate was extinguished and absorbed in the Niẓām Shāhī dominions. For the detailed history of this sultanate see ʿIMĀD SHĀHĪS, GAWĪLGAṚH, ILIČPUR, NARNĀLA, as well as references under NIẒĀM SHĀHĪS.

The Niẓām Shāhīs, like the Barīd Shāhīs and ʿImād Shāhīs, were Sunnīs, although after about 944/1537 Burhān I adopted Shīʿism. The ancestral home of the Niẓām Shāhī kings was at Pathrī in Barār, the claim to which led to several Niẓām Shāhī raids on ʿImād Shāhī territory. For the most part, however, the Niẓām Shāhīs were in a constant state of dispute with their larger neighbours, the ʿĀdil Shāhīs and the Ḳuṭb Shāhīs, in turn, one sultanate always eventually being compelled to intervene in a war between any two others lest the balance of power be upset to the disadvantage of the non-belligerent party. In this strange way the rival sultanates were in fact able to keep going where the Bahmanīs had failed, and to destroy the powerful Vidjayanagara kingdom to their south. To give an account of these three sultanates *seriatim* would involve unnecessary repetition and, since the political history of each is so closely bound to that of its neighbours, would fail to show clearly the events in the Deccan in relation to a chronological framework; the purely domestic affairs of each sultanate are less relevant to the history of Islam in India, for each "produced more history than it could consume locally."

Yūsuf, the founder of the ʿĀdil Shāhī dynasty, had been a Shīʿī and established that form of Islam in his dominions. On his death in 915/1510 his son Ismāʿīl was a minor, and a regent reintroduced the Sunnī faith; this was politically to the disadvantage of the "foreigners", who were as powerful a faction in Bīdjāpur as they had been in the Bahmanī sultanate, and were on this occasion successful in returning to power and reintroducing Shīʿism. But the state was torn by political rivalry, and was not powerful enough to prevent the Portuguese from capturing Goa [see ṢINDĀBUR] later that year. Their troubles with Vidjayanagara immediately followed when that state, in 916/1510, annexed the Rāyčūr [*q.v.*] *dōʾāb*. Four years later Bīdjāpur was strong enough to defeat Amīr ʿAlī Barīd, who had established a provincial governor at Gulbargā—now virtually part of the Bīdjāpur state—on behalf of the puppet Bahmanī king. Shortly after this the ʿĀdil Shāhī sultan, in reward for extricating a Persian ambassador from detention at Bīdar, had received recognition of his royal title from Shāh Ismāʿīl, the Ṣafawī sultan. By 927/1521 Bīdjāpur was in a position to try to recapture the Rāyčūr *dōʾāb*, although the attack failed; the Hindū king had been incited to take the *dōʾāb* by Amīr ʿAlī Barīd, against whom Bīdjāpur sought an alliance with Aḥmadnagar, marrying the sister of the Bīdjāpur king to the Niẓām Shāhī sultan. But the princess's dowry, the fort of Shōlāpur [*q.v.*], was never ceded to Aḥmadnagar, and so in 931/1525 the Niẓām Shāhīs, in alliance with Barār and Bīdar, invaded Bīdjāpur but were defeated and driven out. The invasion of Barār by Bīdar and Aḥmadnagar, which resulted in the Gudjarāt sultan Bahādur Shāh's attack on the Deccan, has already been mentioned; Aḥmadnagar and Bīdjāpur were on this occasion united against the invader, but even on this occasion Amīr ʿAlī Barīd had tried to interfere between them and Ismāʿīl ʿĀdil Shāh marched to Bīdar to punish him. Bīdar fell, but was restored to the Barīd Shāhīs on condition that Kalyānī and Ḳandhar [*qq.v.*] were ceded to Bīdjāpur, and that assistance should be given to recapture the *dōʾāb*. Rāyčūr and Muḍgal were regained shortly, but the Barīd Shāhīs did not in fact cede the two northern forts. In 937/1531 Bahādur Shāh of Gudjarāt had annexed Mālwā and Burhān Niẓām Shāh, alarmed by his growth of power, offered allegiance to him and obtained from him recognition of his royal title; Bahādur's aim was to enlist Burhān's support against the Mughals, but secretly Burhān suggested to Humāyūn an attack on Gudjarāt. Later that year Burhān's insolence to Ismāʿīl ʿĀdil Shāh, who was attempting to force the promised cession of Kalyānī and Ḳandhār, led to further Aḥmadnagar-Bīdjāpur war, in which the Niẓām Shāhīs were defeated; but next year, 938/1532, an agreement was reached between these two powers permitting Aḥmadnagar to annex Barār and Bīdjāpur to annex

Golkonḍā. The campaigns started, but were cut short by the death of Ismāʿīl ʿĀdil Shāh, in 941/1534, upon which first Mallū Khān and shortly afterwards Ibrāhīm succeeded to the Bīdjāpur throne. Ibrāhīm reintroduced the Sunnī faith, dismissed the "foreigners", and introduced Kannaḍa and Marāṭhī as court languages in place of Persian—thus allowing the employment of many Hindūs in the administration. A few years afterwards Burhān Niẓām Shāh was converted to Shīʿism, and consequently relations worsened between him and Ibrāhīm; in 947/1540 Burhān marched again on the ʿĀdil Shāhī kingdom and annexed Shōlāpur, then drove Ibrāhīm out of Bīdjāpur, occupied the town, and set off in pursuit of Ibrāhīm; the latter received reinforcements and drove the invaders to Dawlatābād, where Burhān bought peace by relinquishing his claim to Shōlāpur. Smarting under his defeat he persuaded Djamshīd Ḳuṭb Shāh and the rādjā of Vidjayanagara to join a confederacy against Bīdjāpur in 950/1543. These three powers, together with ʿAlī Barīd, invaded Bīdjāpur that year and the next without success; on a third attempt ʿAlī Barīd decided to support the Sunnī Ibrāhīm rather than the Shīʿī Burhān, causing the latter to invade Bīdar and taking three strongholds on the Bīdar-Bīdjāpur border. In the consequent troubles in Bīdjāpur a disaffected minister and the king's younger brother, ʿAbd Allāh, sought the aid of the Portuguese at Goa, who were claiming the Konkan coast. A rebellion in the Konkan was crushed by Ibrāhīm. Further attacks on ʿĀdil Shāhī territory were made by Burhān, with Vidjayanagara support, in 954/1547 and 959/1552, the Rāyčūr *dōʾāb* again being annexed to Vidjayanagara on the latter occasion. In 961/1553 Burhān died and eventually his son Ḥusayn gained the Aḥmadnagar throne after a war of succession. Djamshīd Ḳuṭb Shāh had similarly been succeeded by his youngest brother Ibrāhīm. At this time the ʿĀdil Shāhīs actually turned to Vidjayanagara for assistance in 962/1555, against a rebel noble Sayf ʿAyn al-Mulk, and alone waged war against the Portuguese in the northern Konkan. Ibrāhīm ʿĀdil Shāh died in 965/1558 and was succeeded by his son ʿAlī, who re-established the Shīʿī faith and readmitted the "foreigners". On ʿAlī's enlisting Vidjayanagara aid again, this time for the recovery of Shōlāpur, his kingdom was again attacked by the Niẓām Shāhī and Ḳuṭb Shāhī forces; but the Ḳuṭb Shāhī opposition was suddenly withdrawn: the Ḳuṭb Shāhīs could not risk supporting a Sunnī state against a Shīʿī one. ʿAlī's demands for the return of Shōlāpur and Kalyānī became more insistent, and in 967/1559 it was Aḥmadnagar which was invaded, by the ʿĀdil Shāhīs, Ḳuṭb Shāhīs, and a large Vidjayanagara contingent; a Barār army soon joined in, invading Aḥmadnagar from the east. The Ḳuṭb Shāhī ruler later withdrew and the ʿImād Shāhī contingent changed sides, but still Ḥusayn Niẓām Shāh had to sue for peace from the Vidjayanagara commander who had now become the dominant party in the confederacy. Bīdjāpur and Vidjayanagara continued the campaigns for the next few years; but the Hindū army of Vidjayanagara offended allies and enemies alike by their excesses on their campaigns, including desecrating mosques and violating and enslaving Muslim women; their arrogant rādjā now demanded large tracts of land from both Golkonḍā and Bīdjāpur. On this the Muslim rulers sank their differences, and in 972/1564-5 marched on Vidjayanagara and defeated an enormous army at the battle of Tālikoṭa [*q.v.*]. The Vidjayanagara empire was destroyed and its lands divided among the victors. The Muslim alliance did not last long: the Niẓām Shāhīs, where Ḥusayn had been succeeded by Murtaḍā, and the ʿĀdil Shāhīs were soon at war again, although in 977/1569-70 they again united against a common enemy, the Portuguese. The ʿĀdil Shāhīs attacked Goa, the Niẓām Shāhīs Čewal ("Chaul"); but the Portuguese were so adroit at manipulating dissensions in their opponents' forces, and in playing off one enemy against the other, that both towns held fast against overwhelming odds and the attackers were forced to conclude peace treaties. ʿAlī ʿĀdil Shāh turned to the former Vidjayanagara territories for easier conquests, and it was this aggrandisement of the Bīdjāpur lands which caused similar ambitions on the part of Aḥmadnagar, whose ruler annexed Barār in 981-2/1574-5, as mentioned above. A general state of warfare persisted between Aḥmadnagar and Bīdjāpur for some years to come, not without internal troubles such as the rebellion of a Niẓām Shāhī prince in 987/1579 who fled to Akbar; later wars of succession in Aḥmadnagar between 996/1588 and 999/1591 ended in the accession of that prince as Burhān II. In Bīdjāpur the minor Ibrāhīm II had succeeded ʿAlī I, and the Ḥabshī Dilāwar Khān rose to supreme power, re-establishing the Sunnī faith (for the Ḥabshī factions in both sultanates see ḤABSHĪ); during the Bīdjāpur internal struggles, the Aḥmadnagar forces contested Naldrug [*q.v.*], a border fort between the two states. Before the accession of Burhān II in Aḥmadnagar the effective control of the state had been in the hands of one Djamāl Khān, a Mahdawī, who persecuted Sunnī and Shīʿī alike, which led to the intervention of Bīdjāpur and the defeat of Djamāl Khān a few months before the millennium. At least four contending factions in Aḥmadnagar after the death of Burhān II in 1003/1595 led the minister to appeal for help from Murād [*q.v.*], Akbar's second son, governor of Gudjarāt; Burhān II, though once in Akbar's service, had refused to swear fealty to the Mughals, and in fact the Mughal armies in Gudjarāt and Mālwā were already preparing for an attack on Aḥmadnagar when the appeal arrived. The city of Aḥmadnagar was soon under siege, and in 1004/1596 Čānd Bībī, sister of Burhān II and widowed queen of ʿAlī ʿĀdil Shāh I, purchased its liberty by the cession of Barār. The fortresses of Gawīlgaṛh and Narnālā held out, only to fall to the Mughals two years later, and after another two years Aḥmadnagar itself was finally taken by storm. For the Mughals in the province after that date see above. Malik ʿAnbar [*q.v.*] held the state together for another twenty-five years, ousting the Mughals and restoring a nominal Niẓām Shāhī dynasty; but Aḥmadnagar was disintegrating under Mughal pressure, and Bīdjāpur was able to acquire more of Aḥmadnagar territory. In 1046/1636 the Mughals at last invaded Bīdjāpur and forced a peace by which Mughal suzerainty was acknowledged, and the region was comparatively peaceful for the next twenty years; Shāhdjahān objected to the succession of ʿAlī ʿĀdil Shāh II in 1068/1656 and ordered the invasion of the kingdom, but his illness stopped operations. Bīdjāpur now faced danger from another quarter, the Marāṭhā armies who had risen under Shivādjī; and Marāṭhā depredations slowly nibbled away the kingdom on the north and west until its remains fell to Awrangzīb in 1097/1686. The Ḳuṭb Shāhī kingdom of Golkonḍā was less troubled than its neighbours after the battle of Tālikoṭa, and knew a long period of peace and prosperity under Muḥammad Ḳulī

Ḳuṭb S̲h̲āh during which the city of Ḥaydarābād [*q.v.*] was built and adorned; for six years (1101-7/1603-9) a Persian embassy from S̲h̲āh ʿAbbās resided in Ḥaydarābād. That peace was preserved under Muḥammad Ḳuṭb S̲h̲āh, 1020-35/1611-26, although in 1024/1615 the Dutch established themselves at Masulipaṭam, on the Madrās coast, and the English there seven years later. The next ruler, ʿAbd Allāh Ḳuṭb S̲h̲āh, was able to extend his dominions to the south, with the help of his minister Mīr D̲j̲umla [see MUḤAMMAD SAʿĪD]; but the Mug̲h̲als were already active to the north, and in 1045/1635-6 S̲h̲āhd̲j̲ahān forced the payment of tribute from Golkonḍā. Mīr D̲j̲umla became increasingly powerful in the eastern provinces, and in a quarrel between himself and the king appealed for aid from prince Awrangzīb; this led to the first Mug̲h̲al siege of Golkonḍā in 1066/1656, which was bought off. In 1078/1667 the Marāṭhā S̲h̲ivād̲j̲ī exacted tribute, and was indeed provided with money and troops to recover some of the Ḳuṭb S̲h̲āhī forts which had been annexed by Bīd̲j̲āpur. The accession of the last king, Abu 'l-Ḥasan Ḳuṭb S̲h̲āh, in 1083/1672, was followed by the rise to power of two Brāhman ministers; their position in a Muslim kingdom, the assistance given by Golkonḍā to Bīd̲j̲āpur against the Mug̲h̲als, and the fact that it was in any case a S̲h̲īʿī kingdom, were all sufficient cause for Awrangzīb to renew the attack in 1096/1685; the capital, and the kingdom, fell to the Mug̲h̲als two years later. Awrangzīb had conquered the Deccan, but destroyed the balance of power; for Bīd̲j̲āpur and Golkonḍā no longer stood between the Mug̲h̲als and the Marāṭhās, and the southern states became an easy prey for disaffected adventurers from the north. This enormously complicated phase of Indian history is partly covered by the articles ʿĀDIL S̲H̲ĀHS, BARĪD S̲H̲ĀHĪS, BĪDAR, BĪD̲J̲ĀPUR, DAKHAN, DAWLATĀBĀD, GAWĪLGAṚH, GOLKONḌĀ, ḤABS̲H̲Ī, ḤAYDARĀBĀD, ILIČPUR, ʿIMĀD S̲H̲ĀHĪS, KALYĀNĪ, ḲANDHĀR, ḲUṬB S̲H̲ĀHĪS, MARĀṬHĀS, MUḌGAL, MUG̲H̲ALS, MUḤAMMAD SAʿĪD Mīr D̲j̲umla, NALDRUG, NARNĀLĀ, NIẒĀM S̲H̲ĀHĪS, RĀYČŪR, S̲H̲ŌLĀPUR, ṢINDĀBŪR, TĀLĪKOṬA, VID̲J̲AYANAGARA; some references under S̲H̲ĪʿA; and articles on the major dynasts of the five Deccan sultanates.

The Mug̲h̲al empire lasted barely five years as an empire after Awrangzīb's death. There was again a war of succession, culminating in the accession of Bahādur S̲h̲āh I, whose five years' reign was a constant struggle to retain the Mug̲h̲al authority in his dominions: Kām Bak̲h̲s̲h̲, a younger brother, usurped Ḥaydarābād; the Rād̲j̲pūts, especially in Mārwāṛ [see D̲J̲ŌD̲H̲PŪR], were in rebellion against Mug̲h̲al authority; a rebellion of Sikhs [*q.v.*] broke out in the Pand̲j̲āb; and he provoked resentment in Dihlī and Lāhawr by commanding the introduction of S̲h̲īʿī forms in worship. The emperor D̲j̲ahāndār S̲h̲āh [*q.v.*] succeeded in 1124/1712, soon to be supplanted by Farruk̲h̲siyar [*q.v.*] supported by the Sayyid brothers of Bārhā [*q.v.* in Supplement], the effective kingmakers of the Mug̲h̲al empire for some years to come. Attempts to quell the rebellions of the Rād̲j̲pūts and Sikhs were partly successful; the D̲j̲āṭs [*q.v.*], near Dihlī and Āgrā, and the Marāṭhās, too strong to be attacked, received revenue concessions. Farruk̲h̲siyar attempted to remove the Sayyids, and was consequently deposed by them in 1131/1719. Neither Rafīʿ al-Darad̲j̲āt nor Rafīʿ al-Dawla retained the throne for more than a few months before the Sayyids produced Muḥammad S̲h̲āh [*q.v.*]; but there was so little faith in the monarchy, and less in the Sayyids, that provincial governors and nobles were able to assume independence of Dihlī more or less as they desired. Ḳamar al-Dīn Čīn Ḳilič K̲h̲ān, entitled Niẓām al-Mulk [*q.v.*], opposed to the Sayyids, abandoned his province of Mālwā and established himself first at Asīrgaṛh; for a time he returned to Dihlī as minister, but retired again to the Deccan ostensibly on hearing of Marāṭhā depredations there. His deputy in the Deccan had been ordered by Dihlī to oppose him; he defeated this deputy at the battle of S̲h̲akarkheldā [*q.v.*] in 1137/1724, and made himself independent in the Deccan with Ḥaydarābād as his capital. Dihlī could only conciliate him in his position of great strength with the title of Āṣaf D̲j̲āh, since then borne as a hereditary title by his descendants, the Niẓāms of Ḥaydarābād. The Marāṭhās—who were supported in their activities against Dihlī by the Niẓām—appeared now in Mālwā, Gud̲j̲arāt, and Bundelkhanḍ. The D̲j̲āṭs grew in power, and an imperial officer, ʿAlī Muḥammad K̲h̲ān, had become practically independent in Katahr (later Rohilkhanḍ [*q.v.*]) to the east of Dihlī. Bād̲j̲ī Rāo, the Pes̲h̲wā [*q.v*] of the new Marāṭhā empire, was recognized as governor of Mālwā in 1148/1735, and constantly demanded from the Mug̲h̲als fresh territory and tribute. Shortly after this Nādir S̲h̲āh [*q.v.*], who had become ruler of Persia, raided Afg̲h̲ānistān and occupied Kābul, and large numbers of Afg̲h̲ān refugees took refuge with the pro-Afg̲h̲ān ʿAlī Muḥammad K̲h̲ān in Rohilkhanḍ. Nādir S̲h̲āh's advance on India continued, and in 1131/1739 Dihlī was sacked by his army and a general massacre of the inhabitants began; after collecting what treasure he could—enough to keep Persia free of taxes for three years!—he restored Muḥammad S̲h̲āh to his throne and left, annexing Kābul and the trans-Indus provinces on the way. Dihlī was left stupefied and desolate.

The province of Bengal was less disturbed than the centre. Its government after the time of Awrangzīb, together with the provinces of Bihār, Uṛīsā and Allāhābād, was held first by D̲j̲aʿfar K̲h̲ān, known better as Murs̲h̲id Ḳulī K̲h̲ān [*q.v.*]; his son-in-law S̲h̲ud̲j̲āʿ al-Dawla [*q.v.*] after him had handled the province well; but the successor of S̲h̲ud̲j̲āʿ, Sarfarāz K̲h̲ān, a weakling, was supplanted in early 1153/1740 by ʿAlīwirdī K̲h̲ān [*q.v.*], who was twice successful in repelling attempted Marāṭhā invasions of Bengal. The Marāṭhās were, however, successful in Uṛīsā, which was surrendered to them in 1164/1751. ʿAlīwirdī K̲h̲ān was succeeded in 1171/1756 by Sirād̲j̲ al-Dawla, who was defeated the following year by Clive at Plassey.

Nādir S̲h̲āh was murdered in 1160/1747, and an opportunist commander of his, Aḥmad K̲h̲ān, took over the royal possessions and the royal title as Aḥmad S̲h̲āh Durrānī [*q.v.*], and advanced with an army through the Pand̲j̲āb to Dihlī; defeated by an imperial army, the Afg̲h̲āns retreated. They returned two years later to besiege Lāhawr, and the revenue of part of the Pand̲j̲āb was ceded to them. A third invasion, in 1165/1751, brought them Multān and the remainder of the Pand̲j̲āb; in 1170/1757 a fourth invasion took Dihlī and ransacked it; two years later a Durrānī army came to expel the Marāṭhās from the Pand̲j̲āb, and by 1174/1761 the Marāṭhā power in the north was broken at the third battle of Pānipat in which the Durrānīs were joined by Mug̲h̲al, Awadh and Rohilla troops. These Rohillas, the Afg̲h̲āns of Rohilkhanḍ, had more than once risen against Dihlī and the virtually independent province of Awadh, and had been on a previous occasion subdued by Marāṭhā troops invited by Dihlī.

The Durrānīs on their numerous visits had acted as the rulers of the Mug͟hal empire; when they were absent the real power was manipulated by the governor of Awadh, Ṣafdar D̲j̲ang [*q.v.*], the nephew and successor of Saʿādat K̲h̲ān [*q,v.*], a Persian S̲h̲īʿī. The titular monarch at the time of Pānīpat was S̲h̲āh ʿĀlam II, who had tried to gain control of Bihār and Bengal without success. He came under British protection from 1765 to 1771 when he was recalled to Dihlī after the Marāṭhās had again risen to power; but Awadh, under S̲h̲ud̲j̲āʿ al-Dawla, the D̲j̲āṭs of Bharatpur, and the Rohilla leader Nad̲j̲īb K̲h̲ān held the balance of power, rather than any remnant of Mug͟hal authority. On an occasion when the Marāṭhās were engaged elsewhere the Rohilla G̲h̲ulām K̲h̲ān, in 1788, attacked Dihlī and seized and blinded S̲h̲āh ʿĀlam II, and the Marāṭhā leader Sindhia continued his virtual domination of Dihlī. In 1803 the Marāṭhā army was thoroughly defeated by the British general Lord Lake, and under British protection S̲h̲āh ʿĀlam II was restored to his barren title and hollow empire: although titular monarchs remained until the deposition of Bahādur S̲h̲āh II in 1857 after the Mutiny, the Mug͟hal empire had ceased to exist. For the period of the later Mug͟hals see MUG͟HALS, BAHĀDUR S̲H̲ĀH I, D̲J̲AHĀNDĀR S̲H̲ĀH, FARRUK̲H̲SIYAR, MUḤAMMAD S̲H̲ĀH, S̲H̲ĀH ʿĀLAM II, BAHĀDUR S̲H̲ĀH II; D̲J̲ĀṬS, MARĀṬHĀS, RĀD̲J̲PŪTS, SIKHS; NIẒĀM AL-MULK; NĀDIR S̲H̲ĀH; AḤMAD S̲H̲ĀH DURRĀNĪ; ROHILLAS; PĀNĪPAT. For Awadh see AWADH, SAʿĀDAT K̲H̲ĀN, ṢAFDAR D̲J̲ANG, LAKHNAʾŪ. For the events in the Deccan after 1137/1724 see NIẒĀM AL-MULK and ḤAYDARĀBĀD. For Bengal see BANGĀLĀ (in Supplement), MURS̲H̲ID ḲULĪ K̲H̲ĀN, ʿALĪWIRDĪ K̲H̲ĀN, SIRĀD̲J̲ AL-DAWLA, MĪR D̲J̲AʿFAR, also CALCUTTA, ḌHĀKĀ, MURS̲H̲IDĀBĀD.

To the south-west of the Niẓām of Ḥaydarābād's dominions, in Mahisur ("Mysore"), a ruler who established himself about 1750 was Ḥaydar ʿAlī [*q.v.*], who fought against the local Marāṭhās, against the Niẓām, with the Niẓām, or with the French, against the British, and carved out for himself a large kingdom. He died in 1782 and was succeeded by his son Tipū [*q.v.*], who was killed in a British attack in 1799. For this region and its events see ḤAYDAR ʿALĪ, TIPŪ SULṬĀN, MAHISUR, S̲H̲RĪRANGAPAṬṬANAM.

After 1857 there was in effect no Muslim rule in India. For the history of the Muslim community thereafter see MUSLIMS. The community was educationally backward and thus at a disadvantage in matters of government in comparison with the Hindūs. For aspects of the betterment of the community see especially AḤMAD K̲H̲ĀN, ʿALĪGARH, DEOBAND, D̲J̲AMʿIYYA, D̲J̲ĀMIʿA, TADRĪS; also D̲J̲ARĪDA, India (in Supplement). For Muslim involvement in politics see ḤIZB, India; INDIAN NATIONAL CONGRESS; MUSLIM LEAGUE. For events leading up to the division of what has hitherto been called India in this article into the two dominions (later republics) of India (Bhārat) and Pākistān, see PĀKISTĀN, also D̲J̲INĀḤ, MUḤAMMAD ʿALĪ; LIYĀḲAT ʿALĪ K̲H̲ĀN; MUḤAMMAD IḲBĀL; for the constitution and government of Pākistān see DUSTŪR xiv and ḤUKŪMA V.

It is perhaps not quite correct to say that there was no Muslim rule in the sub-continent before 1947, since the British government did recognize independent "Native States", some of which were under autonomous Muslim rulers, where the British retained the right to intervene if requirements of public safety demanded it and were represented by Residents officially appointed. Ḥaydarābād was the largest of the Muslim states, but there were many smaller ones. See, for example, BAHĀWALPŪR, BHOPĀL, D̲J̲UNĀGAṚH, KAS̲H̲MĪR (under a Hindū Mahārād̲j̲ā but with a predominantly Muslim population), K̲H̲AYRPŪR, RĀMPUR. See also BALŪČISTĀN.

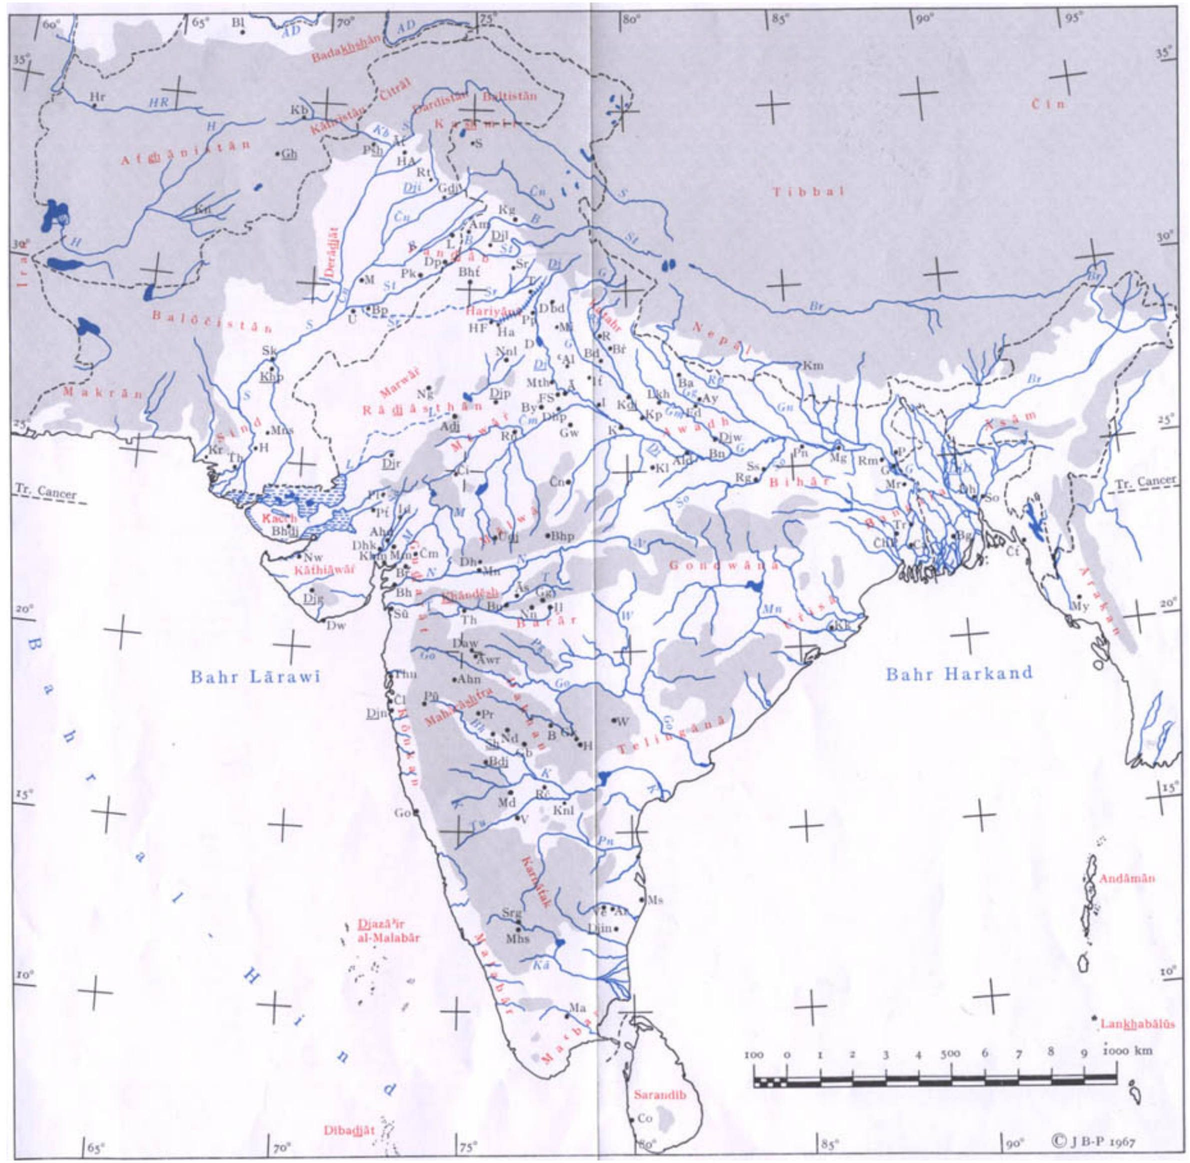
Bibliography: A separate bibliography to cover the various aspects of the Muslim history of the sub-continent would be enormous and would duplicate the detailed bibliographies of the many entries referred to above; reference should therefore be made to the special bibliographies given under each article. (J. BURTON-PAGE)

V. — ISLAM

(a) *Growth of Muslim society*

The growth of Muslim society in India took place through four processes—conquest, conversion, colonization and migration. It is difficult to say what proselytizing agencies worked in Sind, but we are told that on the instructions of the Umayyad Caliph ʿUmar b. ʿAbd al-ʿAzīz an announcement was made that whoever embraced Islam in Sind would be accorded all the rights enjoyed by the Arab rulers themselves. Some tribes of Sind consequently embraced Islam, Dāhir's son, D̲j̲ay Singh, being one of them. But when the Umayyad political control weakened in Sind, they went back to their original faiths. Muḳaddasī found that the impact of Islam was confined to only a few towns. In Makrān, he writes, the people were Muslims only in name.

The rise of G̲h̲azna under Sultan Maḥmūd (388-421/998-1030) marked the beginning of a new era in the history of Indian Islam, yet Maḥmūd's invasions created a gulf between Islam and Hinduism. Notwithstanding the fact that the ruler of Baran, Rai Hardat, had embraced Islam with 10,000 of his followers at the hands of Maḥmūd (ʿUtbī, 305; ʿUnṣurī, 141), the general effect of his invasions was not favourable (al-Bīrūnī, *Kitāb al-Hind*, tr. Sachau, 22).



The establishment of the G̲h̲aznavid hold on the Pand̲j̲āb linked India with the cultural centres of mediaeval ʿAd̲j̲am. However, the real growth of Indo-Muslim society took place after the G̲h̲ūrid conquest of northern India. References to conversions at the hands of S̲h̲ihāb al-Dīn Muḥammad G̲h̲ūrī (d. 602/1206) or of his slave-officers are few and far between (Minhād̲j̲, 152; Firis̲h̲ta, i, 59). The Sultans of Delhi did not devise any agency for conversion, and minor acts of royal favour, as recorded by Ibn Baṭṭūṭa (iii, 179; tr. von Mžik, 82), could hardly act as incentives to change one's faith. When Muḥammad b. Tug͟hluḳ (725-52/1325-51) embarked upon his Deccan experiment, one of his objects was to prepare the ground for the spread of Islam in that region (Niẓāmī, *Salāṭīn-i Dihlī kāy mad̲h̲habī rud̲j̲ḥānāt*, 338-45). He exhorted the saints and the *ʿulamāʾ* to go to different parts of the country to propagate Islam. But if Muḥammad b. Tug͟hluḳ helped in the expansion of Islam in the south or in the growth of Muslim society in that region it was done indirectly. Muslim society grew in India through conversions which took place voluntarily at tribal levels, and often through the peaceful persuasion of Muslim mystics.

The social set-up of India in the 5th/11th and the 6th/12th centuries was based on the principle of caste. According to al-Bīrūnī the caste Hindus lived within the city walls and enjoyed all the privileges of city life, the non-caste people were compelled to live outside the city walls and were denied all civic amenities, as the idea of physical pollution was one of the basic principles of the Hindu social system.

Land over 500 m.

When the Muslims conquered these caste-cities they threw open their gates to everybody, with the result that the egalitarian principles of Islam attracted large number of non-caste Hindus and professional groups to the fold of Islam. It was this conversion of the lower caste population to Islam which swelled Muslim society in this country. The Muslim saints handled the problem of conversion with great sympathy, understanding and love. The Čis̲h̲tī saints, for instance, attracted the Hindus to the Muslim way of life, without demanding formal conversion (*Fawāʾid al-fuʾād*, 182-3, 153), taught the *d̲h̲ikr* to them without demanding initiation into the mystic fold (*Maktūbāt-i Kalīmī*, 74, 25), and when any Hindu desired that his conversion be not disclosed to his family or tribe, they readily agreed. This sympathetic and comprehending attitude enhanced the effect of their persuasion. According to Abu 'l-Faḍl and Dārā S̲h̲ukōh, S̲h̲ayk̲h̲ Muʿīn al-Dīn Čis̲h̲tī converted large numbers of non-Muslims to Islam (*Āʾīn-i Akbarī*, ed. Sir Sayyid, 207; *Safīnat al-awliyāʾ*, 93). Farīd al-Dīn Gand̲j̲-i S̲h̲akar converted to Islam numerous tribes living in and around Pāk-patan. Even as late as the 10th/16th century, ʿAbd al-Ḳādir Badāʾūnī saw S̲h̲ayk̲h̲ Dāʾūd of Lahore converting 50 to 100 Hindus and their families to Islam every day (*Muntak̲h̲ab al-tawārīk̲h̲*, iii, 34-5). This process continued throughout the mediaeval period. Arnold (*The preaching of Islām*, 255-93) has thrown revealing light on the rôle of mystics in the expansion of Muslim society in India.

In addition to this, population pressure and disturbed conditions in Central Asia and Persia drove large numbers of Muslim families to India during the 6th/12th and the 7th/13th centuries. Later the Afg̲h̲ān rulers invited many Afg̲h̲ān families to come and settle in India. Many S̲h̲īʿa families migrated from Persia and settled in the south. The process of Muslim settlement under the Hindu *rād̲j̲ās*, which had begun with the Arabs, continued also later. There are references to the presence of Muslims at Kannawd̲j̲, Bahrāič, Badāʾūn, Benares and Ad̲j̲mīr and some other towns of Uttar Pradesh and Bihar before the establishment of Muslim political power in these areas (Niẓāmī, *Religion and politics in India during the 13th century*, 76-8). With the establishment of Turkish rule, these early Muslim settlements turned into great religious and cultural centres.

The *masd̲j̲id*, the *madrasa* and the *k̲h̲ānḳāh* sustained the community life of the Indian Muslims and contributed to its expansion. The *masd̲j̲id*s sustained the external structure of the faith; the *madrasa*s supplied the intellectual nourishment, while the *k̲h̲ānḳāh*s ensured that the fervour of spiritual life did not freeze in the day to day life of the community.

(b) *Growth of Muslim religious thought*

Muslim religious thought during the 6th/12th and the 7th/13th centuries was exercised within the framework of classics produced outside India on the different branches of religious sciences. In *tafsīr*, the *Kas̲h̲s̲h̲āf* of Zamak̲h̲s̲h̲arī and the *Tafsīr* of Imām Nāṣirī, in *ḥadīt̲h̲* the *Mas̲h̲āriḳ al-anwār*, in *fiḳh* the *Hidāya* and the manual of al-Ḳudūrī, and in *taṣawwuf*, the *Rūḥ al-arwāḥ*, the *Kīmiyā-i saʿādat* and the *ʿAwārif al-maʿārif* dominated the scene and the general trend—produced by the spectacle of the dissolution of the Muslim social and political structure of mediaeval ʿAd̲j̲am at the hands of the Mongols—was to preserve existing knowledge rather than to explore new avenues of thought and enquiry. A subtle conflict between the As̲h̲ʿarī and the Muʿtazilī attitudes is, however, discernible in the religious thought of the period.

With the introduction of Ibn al-ʿArabī's works (*Fuṣūṣ al-ḥikam* and *al-Futūḥāt al-Makkiyya*) in India during the 7th/13th century there was a stir in Muslim religious thought. Since the pantheistic ideas of the Great S̲h̲ayk̲h̲ were in consonance with the spirit of the *Upanishads*, they became identified with the movement of rapprochement between the Hindu and the Muslim religious attitudes. The rise of mystic poetry in G̲h̲azna at this time and the composition of the *mat̲h̲nawī* of D̲j̲alāl al-Dīn Rūmī [*q.v.*]—which was first quoted in the mystic gatherings of S̲h̲ayk̲h̲ Naṣīr al-Dīn Čirāg̲h̲ (675-757/1276-1356)—further strengthened the influence of Ibn al-ʿArabī's thought. Eminent scholars, like Sayyid ʿAlī Hamadānī (d. 786/1384), S̲h̲araf al-Dīn Dihlawī (d. 795/1392), and S̲h̲ayk̲h̲ ʿAlī Mahāʾimī (d. 835/1431), wrote commentaries on the *Fuṣūṣ al-ḥikam*, and S̲h̲ayk̲h̲ ʿAlī Mahāʾimī even attempted a commentary on the Ḳurʾān (*Tabṣīr al-Raḥmān wa taysīr al-Mannān*) in the light of Ibn al-ʿArabī's ideas. It became the theme of Masʿūd Bak's (d. 800/1397) poetic compositions and inspired also his prose-work, *Mirʾāt al-ʿārifīn*. Ibn al-ʿArabī's ideas had become fairly popular in Muslim religious circles when Ibn Taymiyya's teachings reached India through one of his pupils, Imām ʿAbd al-ʿAzīz Ardabilī (Ibn Baṭṭūṭa, iii, 252; tr. von Mžik, 128), and Muḥammad b. Tug̲h̲luḳ came under its influence. It found its reflection in the Tug̲h̲luḳ sultan's attitude towards different problems of religion and politics, particularly his relations with the mystics. As was inevitable, there ensued a conflict between the ideas of Ibn al-ʿArabī and those of Ibn Taymiyya. The orthodox section of Muslim society had so far tolerated the acceptance of pantheistic ideas by the mystics as a basis for their spiritual experience, but now that it became the basis for the organization of small social groups—as one finds in the *Futūḥāt-i Fīrūz S̲h̲āhī* (Aligarh ed., 8-10)—they viewed it as a serious threat to the very structure of the *s̲h̲arīʿa* and its function as the regulator of the Muslim conscience. The *ʿulamāʾ* and the Tug̲h̲luḳid sultans began to combat the tendencies released by the pantheists. The production of an enormous literature on *fiḳh* during the 8th/14th century—more than in any other period of Indian history—was inspired by a desire to provide a defensive ideological apparatus against the upsurge of pantheistic ideas which seemed to weaken the external structure of faith.

While accepting *waḥdat al-wud̲j̲ūd* as the basis of all spiritual experience, S̲h̲ayk̲h̲ Naṣīr al-Dīn Čirāg̲h̲ emphasized close adherence to the Ḳurʾān and the *sunna* and discontinued many mystic practices (*e.g.*, prostration before the *s̲h̲ayk̲h̲*), which did not conform to the externals of the *s̲h̲arīʿa*. He did not agree with many of the ideas of Ibn Taymiyya (*K̲h̲ayr al-mad̲j̲ālis*, intr. 29-31), but he met the challenge of the time by making a serious effort to bridge the gulf between the formalist scholars and the mystics. That a mystic of his eminence should be styled "the second Abū Ḥanīfa" shows the extent to which in his own person he had succeeded in bridging the gulf. His disciple Sayyid Muḥammad Gīsū Darāz criticized the thought of Ibn al-ʿArabī, and even planned to write a book in refutation of his ideas (*Maktūbāt-i S̲h̲āh Muḥibb Allāh*, Aligarh University MS, 90).

For some time the balance seems to have been in favour of Ibn Taymiyya's school of thought, but the

views of Ibn al-ʿArabī, which provided the necessary ideological meeting-ground for Islam and Hinduism, made a deeper impact and the stream of religious thought began to flow in that direction. The 9th/15th and the 10th/16th centuries saw a mushroom growth of new sects, ideologies, philosophies and attitudes in India, most of them based on a pantheistic approach to religion. The Bhakti movement, the Shaṭṭārī order, and the Rawshaniyya sect were the expressions of the same attitude, which laid greater emphasis on the spirit than on the form of religion. Shaykh Muḥammad Ghawth of Gwāliyār translated *Amrit Kund* into Persian, and thereby introduced Hindu mystical ideas and Yogic practices into the Ṣūfī discipline. Bāyazīd Anṣārī, the founder of the Rawshaniyya movement, laid greater emphasis on the interiorization of religious rites and practices than on outward conforming to the externals of religion. When Akbar appeared on the Indian scene, the ideas of Ibn al-ʿArabī held sway. In his eagerness to evolve a common religious outlook, Akbar made certain experiments with the ideological support of pantheistic philosophy, which hurt the religious susceptibilities of the orthodox section and produced fears that in the process of evolving an amalgam of different religions the individuality of Islam might be jeopardized. Had Akbar not intervened, Indo-Muslim religious thought would probably have proceeded on entirely different lines, but Akbar's attempt to assume the leadership of these syncretic forces provoked a severe reaction, which expressed itself on one side in the production of *ḥadīth* and juristic literature by scholars like Shaykh ʿAbd al-Ḥaḳḳ Muḥaddith and on the other side gave birth to the powerful movement of the Naḳshbandī Shaykh Aḥmad Sirhindī [*q.v.*], popularly known as Mudjaddid-i Alf-i Thānī.

Under the influence of his teacher Shaykh ʿAbd al-Wahhāb Muttaḳī, Shaykh ʿAbd al-Ḥaḳḳ had followed a very cautious and non-committal policy towards the ideas of Ibn al-ʿArabī (*Akhbār al-akhyār*, 263), but Shaykh Aḥmad Sirhindī published abroad his tirade against Ibn al-ʿArabī's pantheistic approach to religion and mysticism. He considered it an expression of an immature spiritual experience, fraught with great dangers to Muslim society and religion, as it facilitated the absorption of ideas and practices by Muslims which ran counter to the monotheistic ideals of Islam. He condemned on that account the religious experiments of Akbar. Drawing his inspiration from the Ḳurʾānic verse, "For you yours, and for me my religion" (CIX, 6), he declared against an admixture of Muslim and non-Muslim—Hindu, Buddhist, Djayn and other—ideas by Akbar. He succeeded in winning over large numbers of Mughal nobles to his side, and through them he sought to bring about a change in the atmosphere of the court. Djahāngīr had to give up Akbar's policy of meddling in religion and making religious experiments, while Shāhdjahān and Awrangzīb came definitely under the impact of Shaykh Aḥmad Sirhindī's ideas. Shāh Kalīm Allāh of Delhi (1060-1142/1650-1729) wrote to a disciple, who was trying in vain to influence the thought of Awrangzīb, that the Emperor was completely under Naḳshbandī influence and could not be converted to any other point of view. However, in the 11th/17th century two definite ideological schools—one in favour of and the other against the doctrine of pantheism—were in the field. Dārā Shukōh, Miyān Mīr, Mullā Shāh, Sarmad, Shāh Muḥibb Allāh of Allāhābād stood for pantheistic ideas; Awrangzīb, Khʷādja Maʿṣūm (son of Shaykh Aḥmad), and others stood for the religious and spiritual concepts adumbrated by Shaykh Aḥmad Sirhindī. The conflict assumed such proportions that even a foreign traveller, like Bernier, noticed this conflict (ed. Constable, 345-7). So much so, that when the war of succession broke out between the sons of Shāhdjahān it was not merely a conflict between the two sons of an Emperor, but a clash of ideals between the spirit of Mudjaddid's *Tawḥīd-i shuhūdī* and the spirit of Akbar's *Dīn-i ilāhī*. Dārā Shukōh had written the *Madjmaʿ al-baḥrayn* and had translated the *Upanishads*, Awrangzīb concentrated his energies upon the compilation of *Fatāwā-i ʿĀlamgīrī* (for the personal supervision of the work by the Emperor, see Shāh Walī Allāh, *Anfās al-ʿārifīn*, Delhi 1917, 24). Notwithstanding the great impact of Shaykh Aḥmad Sirhindī's thought on the contemporary religious attitude, the dynamic element of Muslim religious thought in India found some of his views spiritually untenable and socially inconsistent with Indian conditions—particularly when the atmosphere created by Akbar's religious experiments no longer existed—and two eminent saints associated with his own school—Shāh Walī Allāh Dihlawī and Mīrzā Maẓhar Djān-i Djānān—took up an attitude which completely altered the Naḳshbandī position with reference to pantheism (*Fayṣala*, cited below) and Hinduism (*Kalimāt-i ṭayyibāt*, 37-40). During the 12th/18th century, Muslim scholars were concerned with effecting a compromise between the conflicting ideas and concepts of the preceding era. Shāh Walī Allāh wrote a small treatise, *Fayṣalat waḥdat al-wudjūd wa 'l-shuhūd* (Delhi 1324), and contended that there was no substantial difference between the ideas of Ibn al-ʿArabī and Shaykh Aḥmad Sirhindī: both meant really the same thing, and their difference was nothing more than that between two metaphors. He also said that it was his mission to reconcile the two concepts whose underlying reality was one and the same. Though some other followers of the Mudjaddid, like Khʷādja Mīr Nāṣir ʿAndalīb (*Nālā-i ʿAndalīb*, Bhopal 1310), Khʷādja Mīr Dard (*ʿIlm al-kitāb*, Delhi 1308), and Ghulām Yaḥyā (*Kalimāt al-Ḥaḳḳ*, MS, Aligarh), did not agree with his point of view, Shāh Walī Allāh, so far as he was concerned, closed the controversy which had been raging in Indian Muslim thought for several centuries. Shāh Walī Allāh's son Shāh Rafīʿ al-Dīn rebutted the arguments of Ghulām Yaḥyā in his *Damgh al-bāṭil* (MS no. 1699 Bankipore), and paved the way for the return of pantheistic ideas as the basis of spiritual experience.

Shāh Walī Allāh of Delhi (d. 1763) was a seminal personality in the intellectual life of the Indian Muslims. He exercised a profound influence on the religious thought of his contemporaries, and many of the religious movements of the period, though differing in their approach, drew inspiration from his outlook and insight. On one side the orthodox school of Deoband, which aimed at resuscitating the traditional and classical values of early Islam, clung to his ideology, on the other hand Sir Sayyid Aḥmad Khān, who stood for a complete reorientation of religious thought in the light of Western rationalistic tendencies, looked to him for support and guidance.

Shāh Walī Allāh was the last great thinker of the Middle Ages who realised the need of re-interpreting Islamic thought in the light of reason and pointed out that the codification of *sharīʿa* laws should be related to the specific requirements of a particular

region and should take into consideration the social, religious and legal practices of the society concerned. This dynamic religious approach opened fresh avenues for the re-interpretation of the basic religious values. On being asked which of the four schools of Sunnī *fiḳh* he belonged to, he said: "I try my best to combine all the points of agreement in all the schools, and in matters of variance I adhere to what is proved by the genuine *ḥadīth*—which, thank God, I can do. If anybody asks me for a *fatwā*, I give it according to whatever school he wishes". This liberal method of recourse to any school of Sunnī law which suited the circumstances was of great significance to the succeeding generations. It may be pointed out that in its attempt to bring its laws into consonance with the spirit of the modern world, Egypt was guided by this very principle.

The new spirit of *idjtihād* which Shāh Walī Allah wanted to awaken could be possible only if religious thought was extricated from narrow and sectarian controversies. With this aim in view he translated the Ḳur'ān into Persian and his two illustrious sons—Shāh ʿAbd al-Ḳādir and Shāh Rafīʿ al-Dīn—translated it into Urdu, so placing the main source of Muslim religion within the reach of all Indians. Besides, he and his sons popularized the study of *ḥadīth* and prepared many thought-provoking commentaries on them. He was thus responsible for the revival of religious learning in India which had an impact on the entire Muslim world.

The impact of Wahhābī ideology was felt in India in the beginning of the 19th century when Sayyid Aḥmad Brēlwī (1201-46/1786-1831) returned from the Ḥidjāz, influenced by the thought of Muḥammad b. ʿAbd al-Wahhāb of Nadjd. He trenchantly criticized the adoption of non-Islamic ideas by the Muslims and advocated purification of Muslim religious ideas in the light of the Ḳur'ān and the *sunna*. The literature produced by his followers, particularly Mawlānā Muḥammad Ismāʿīl Shahīd (d. 1831), breathes the spirit of Wahhābī ideology.

The infiltration of western influences into Muslim society created a stir in the Muslim mind in the 19th century. The superiority of the West in technique, science, and industry was an established fact, but the British Government was considered to be the supplanter of the Mughal rule in India and could not, therefore, be accepted. This created a conflict in the Muslim mind which is revealed in the strange but significant position taken up by Shāh ʿAbd al-ʿAzīz, the eldest son of Shāh Walī Allah. On the one hand he praised English efficiency in art and industry (*Malfūẓāt*, 51) and permitted the study of the English language (*Fatāwā-i ʿAzīzī*, 195) and on the other side he issued a *fatwā* declaring all land under British occupation as *dār al-ḥarb* (*Fatāwā-i ʿAzīzī*, 17). This position was not, however, maintained by the succeeding generations. Those who studied the English language and sciences willingly accepted British rule, and those who refused to accept British rule totally refused to learn the English language and literature. As was inevitable, two diametrically opposite tendencies developed in Muslim religious and social attitudes, one represented by the ʿAlīgarh movement under Sayyid Aḥmad Khān (1817-98) and the other by the Deobandī school of thought under Mawlānā Muḥammad Ḳāsim (1832-1880). It is, however, significant that both Sayyid Aḥmad Khān and Mawlānā Muḥammad Ḳāsim were pupils of Mawlānā Mamlūk al-ʿAlī (d. 1850), a pupil of Shāh ʿAbd al-ʿAzīz's pupil Mawlānā Rashīd al-Dīn Khān.

The Christian missionary activity which started in the wake of the establishment of British rule in India found a reaction in contemporary Muslim thought. Many eminent scholars like Mawlānā Raḥmat Allāh Kayrānawī, Mawlānā Āl-i Ḥasan, Dr. Wazīr Khān and Mawlānā Muḥammad Ḳāsim turned to the production of *munāẓara* literature (religious disputations) in order to combat the Christian missionary propaganda. The atmosphere of casuistry thus created continued to absorb the attention of religious-minded Muslims, and in Amritsar a great centre of theological discussions and *munāẓara* rose up under Mawlānā Thanā' Allāh. In the second half of the 19th century theological controversies within the fold of Islam itself made their appearance. The *ahl-i ḥadīth* advocated recourse to *ḥadīth* as the chief source of guidance and discouraged adherence to juristic schools; the *ahl-i Ḳur'ān* laid greater emphasis on direct recourse to the Ḳur'ān in all matters, instead of seeking guidance from the Traditions of the Prophet or the formulations of the jurists; and the Brēlwī school, under Mawlānā Aḥmad Riḍā Khān, trenchantly criticised and condemned the Wahhābī approach towards religion.

The greatest challenge to Muslim religious thought, still in the meshes of mediaevalism, was posed by Western thought and civilization. Sayyid Aḥmad Khān was the first to react to this new situation. "Today we are, as before, in need of a modern *ʿIlm-i Kalām* (new scholasticism)", he declared in 1884, and in fact he himself laid the foundations of modern scholastic thought in Islam. He fought mediaeval obscurantism through his journal *Tahdhīb al-Akhlāḳ* and advocated a rational approach to religion. He rejected *taḳlīd*, blind adherence to religious law, and asked for a re-interpretation of the Ḳur'ān in the light of reason, to suit the new trends of the time. Furthermore, he took the first momentous step towards a comparative study of Islam and Christianity by writing a commentary on the Bible (*Tabyīn al-Kalām*, Aligarh 1862). In his *Khuṭabāt-i Aḥmadiyya* (Aligarh 1900) he rebutted the teachings propounded by the Christian missionaries. Amongst those who followed Sayyid Aḥmad Khān's example of reconstructing religious thought in Islam, the names of Mawlawī Čirāgh ʿAlī (d. 1895), author of *The proposed political, legal and social reforms*, and Sayyid Amīr ʿAlī (1849-1928), author of *The spirit of Islam*, stand out pre-eminent in the history of Muslim religious thought of the period.

Amongst those who sought a reorientation of Muslim religious thought in a way different from that of Sayyid Aḥmad Khān, the names of Mawlānā Abu 'l-Kalām Āzād (1888-1958) and Dr. Muḥammad Iḳbāl (1876-1938) are particularly noteworthy. Mawlānā Abu 'l-Kalām Āzād was deeply influenced by Djamāl al-Dīn Afghānī (d. 1897), Muḥammad ʿAbduh (d. 1905) and Rashīd Riḍā (d. 1935), and he enthusiastically broadcast through his journals *al-Hilāl* and *al-Balāgh* the same spirit of religious enquiry and dynamism which Afghānī and his school of thought had tried to infuse into the Middle East. But the greatest contribution of the Mawlānā is his incomplete commentary on the *Ḳur'ān* (*Tardjumān al-Ḳur'ān*, 2 vols.), which marks the beginning of a new era in the history of Muslim exegesis. The Mawlānā discarded the apparatus of philosophic disquisition of the Muʿtazilites and the spirit of ratiocination developed by Sayyid Aḥmad Khān and others of his school of thought. He commended a natural, direct and unsophisticated

approach to the study of the Ḳur'ān and declared all attempts at resolving the conflict between religion and science as irrelevant, since scientific problems, according to him, were not the domain of religion. But it was difficult for the Mawlānā to escape the spirit of the age in which he lived. His humanistic approach and theosophic attitude give an idea of the mental climate of the period.

Dr. Muḥammad Iḳbāl, who had made an intensive study of western and eastern religions and philosophies, emphasized the reconstruction of Muslim religious thought in the light of the problems posed by the modern world. He looked upon religion as a powerful factor in the evolution of a man's personality and the betterment of human society. "His Islam", writes Smith, "repudiated the conception of a fixed universe dominated by a dictator God and to be accepted by servile men. In its place he would put a view of an unfinished growing universe ever being advanced by man and by God through man". He criticized those ecstatic elements of religious thought which made man parasitical and indolent. He preached a life of self-assertion and self-realization. "The moral and religious ideal of man is not self-negation but self-affirmation", he declared. Iḳbāl's thought had a very deep impact on the contemporary Muslim religious attitude.

Another great conflict in Indo-Muslim religious thought took place in 1938 when Mawlānā Ḥusayn Aḥmad Madanī (1879-1957), who taught *ḥadīth* at Deoband for several decades, attempted a reconciliation of religious thought with the national trends in the country and declared that religion did not constitute any basis for separate national individuality and that the Hindus and the Muslims of India were one nation. Dr. Muḥammad Iḳbāl opposed this view and the controversy (*Maʿraka-i dīn wa waṭan*, ed. ʿAbd al-Waḥīd Khān, Lucknow n.d.) continued for years and found reflexion in political life also.

(c) *Muslim religious movements*

A number of Muslim religious movements have appeared in India during the last 700 years. Abu'l-Faḍl refers to 14 mystic orders, and the author of *Dabistān al-madhāhib* to a number of religious groups, sects and movements which have flourished there. Significantly enough, most of these movements were inspired by mystic ideas and even where orthodoxy initiated them, it was often through the medium of mysticism that they reached the people. Considered as a whole and from the broad point of view of their impact on Indian life, these movements reflect four distinct attitudes and tendencies: from the 6th/12th to the 10th/16th century they aimed at the "expansion" of Muslim religion and society in India; during the 11th/17th century they were concerned mainly with the "reform" of Muslim religion and society; in the 12th/18th century "regeneration" was attempted, while movements that sprang up in the 19th century mainly strove for "reorientation", either in the light of classical traditions of Islam or in the light of Western thought.

Movements for Expansion: Five important mystic orders—the *Čishtiyya*, the *Suhrawardiyya*, the *Firdawsiyya*, the *Ḳādiriyya* and the *Shaṭṭāriyya* —worked during this period. Though these mystic orders differed from one another in certain points of detail—*e.g.*, their attitude towards the state, to *samāʿ* (audition parties), the relative value of the life of *sukr* (intoxication) and *ṣaḥw* (sobriety), and the degree of emphasis on the *sharīʿa* laws etc.—they all agreed that the leitmotif of the mystical spirit was to strive for the moral and spiritual uplift of man through the expansion of Islamic ideas. They tried to adjust and adapt themselves to the mental and emotional climate of the regions in which they worked and adopted many Hindu and Buddhist rites, like the practices of bowing before the *shaykh*, presenting water to visitors, circulating *zanbīl*, shaving the head of new entrants to the mystic circle, audition parties (*samāʿ*) and the *Čilla-i-maʿkūs* (the inverted *čilla*). This identification with the surrounding conditions helped them in attracting non-Muslims to their fold. Besides, almost all the principal saints of these *silsila*s were believers in the pantheistic thought which also provided common ground for intellectual contact with the Hindus.

Movements for Reform: In the 11th/17th century the general drift and direction of the Muslim mind was towards the reform of Muslim society from within. The Naḳshbandī *silsila*, which was introduced in India by Khʷādja Bāḳī bi'llāh (971-1012/1563-1603) during the closing years of Akbar's reign, reached its high-water mark under his principal disciple, Shaykh Aḥmad Sirhindī, whose disciples, according to Djahāngīr, operated in every important town and city of India. The efforts of Shaykh Aḥmad Sirhindī were directed towards the reform of Muslim society. He was not concerned, as were the mystics of the preceding era, to expand the faith amongst non-Muslims. He aimed at consolidating it by reforming it and removing its un-Islamic trappings. An uncompromising monotheist, he did not agree with those religious experiments of Akbar which he had made with the ideological support of the pantheistic thinkers and which had elements which ran counter to the very basis of the orthodox Islamic concept of *tawḥīd*. He condemned the prevalence of *bidʿa*s (innovations), which meant to him dissuasion from looking to the Prophet as the source of all religious guidance and inspiration. He permitted the exercise of *ḳiyās* and *idjtihād*, provided it was within the framework of the Ḳur'ān and the *sunna*. He condemned those *ʿulamā'* and *ṣūfī*s of his day who encouraged deviations from the *sunna* under the garb of *idjtihād*. He approached the rulers, the *ṣūfī*s and the *ʿulamā'* in order to bring about a change in their outlook on life. It was due to his efforts that Djahāngīr abandoned Akbar's policy of making religious experiments, the *ṣūfī*s came closer to the *sharīʿa* and rejected the doctrine of *waḥdat al-wudjūd*, and the *ʿulamā'* turned to the revival of religious learning.

Era of Regeneration: The 12th/18th century was an era of regeneration in Indian Islam. Shāh Walī Allāh (1114-76/1703-63) and Shāh Kalīm Allāh (1060-1142/1650-1729) were the two outstanding figures who attempted to revive the original teachings of Islam—one at the intellectual, and the other at the spiritual level. Shāh Walī Allāh gave a new impetus to the revival of the religious sciences. He laid the foundation of a new school of scholastic theology; bridged the gulf between the jurists and the mystics; softened the controversy between the exponents and the critics of the doctrine of *waḥdat al-wudjūd* and awakened a new spirit of religious enquiry. He addressed all sections of Muslim society —rulers, nobles, *ʿulamā'*, mystics, soldiers, traders, etc.—and tried to infuse a new spirit of dedication in them. His seminary, Madrasa-i Raḥīmiyya, became the nucleus of a revolutionary movement for the reconstruction of religious thought in Islam and scholars flocked to it from every corner of the

country. His concentration on *fiḳh* and *taṣawwuf* and his attempt to make them complementary was determined by his conviction that through a dynamic use of these two active principles both the structural and the spiritual aspects of Muslim religious life could be resuscitated and a healthy balance (*tawāzun*) between the form and the spirit—which had been shattered during the preceding years—could be maintained. His work was continued by his sons and successors. The extent to which he and his family contributed to the revival of Muslim religious sciences may be judged from the fact that the majority of Muslim institutions all over India from the 12th/18th century onwards owe their existence to their efforts. S̲h̲āh Kalīm Allāh's work was in a different direction. He revived and revitalized the Čis̲h̲tī [*q.v.*] order on the lines of the saints of its first cycle, checked the growth of esoteric tendencies, and sent his disciples near and far to propagate the Čis̲h̲tī mystic ideals. The rise of a number of Čis̲h̲tī *k̲h̲ānḳāh*s in the Pand̲j̲āb, the Deccan, the North West Frontier, and Uttar Pradesh was due to the efforts of his spiritual descendants (Niẓāmī, *Ta'rīk̲h̲-i mas̲h̲ā'ik̲h̲-i Čis̲h̲t*, Delhi 1953).

Era of Reorientation: The 19th century saw the reorientation of Muslim religious thought as demanded by the new problems arising out of the impact with Western thought and culture. Three different reactions to this situation are discernible in the religious movements of this period—(i) to reorientate religious thought on traditional lines, or (ii) to evolve a new *ʿIlm-i Kalām* to meet the situation and to accept whatever the West could give; or (iii) to attempt to steer a middle course. The Wahhābī and the Farā'iḍī movements were inspired by a desire to resuscitate classical Islam through the reform of Muslim society and the restoration of its political power. The movement initiated by the *ʿulamā'* of Deoband aimed at revitalizing Muslim society through the revival of religious learning, and looked with a feeling of distrust towards western thought and learning. The ʿAlīgarh movement, organized by Sayyid Aḥmad K̲h̲ān, tried to meet the challenge of the time by accepting Western education and giving a new orientation to Muslim social, educational and religious ideals. There was considerable opposition to Sayyid Aḥmad K̲h̲ān and his social and educational ideals and religious views, but ultimately the movement succeeded, and it was through ʿAlīgarh that Indian Islam became acquainted with the West and its achievements in the realm of thought. The establishment of the *Nadwat al-ʿulamā'*, which stood for effecting a compromise between the excessive "this-worldliness" of ʿAlīgarh and the excessive "other-worldliness" of Deoband, was in fact an off-shoot of ʿAlīgarh, and Mawlānā S̲h̲iblī (1857-1914), who played a prominent part in its establishment, was one of those who were closely associated with the ʿAlīgarh movement. S̲h̲iblī's idea of writing a series entitled "Heroes of Islam"—which included G̲h̲azzālī, the caliph Ma'mūn and Abū Ḥanīfa, and which was responsible for reviving interest in the history of Islam—was inspired by Sayyid Aḥmad K̲h̲ān, who also asked Ḥālī, another friend of his, to write a *musaddas*, in order to awaken the Indian Muslims from their stupor by presenting a vivid story of their rise and fall. The Dār al-Muṣannifīn of Aʿẓamgarh, which has published a number of outstanding religious works, is an offshoot of the *Nadwa* and is run mainly by its alumni.

The *D̲j̲amāʿat-i Islāmī*, an organization of considerable religio-political significance, established by Mawlānā Abu 'l-Aʿlā Mawdūdī in 1941 with a view to providing guidance to both the modernists and the classicists (Mawdūdī, *Tafhīmāt*, Lahore 1947), has checked the permeation of Communist ideas in Muslim youth, but its attitude towards the jurists and the *ṣūfī*s of Islam has been resented in Muslim religious circles.

Towards the end of the 19th century a new religious movement was initiated by Mīrzā G̲h̲ulām Aḥmad (1839-1908) from Ḳādiyān, known as the Aḥmadiyya, and it soon assumed the shape of a new sect of Islam. The Mīrzā claimed to be an *avatar* of Kris̲h̲na as well as Jesus returned to earth and the *Mahdī*; also the *burūz* (reappearance of Muḥammad). The movement has spread to various parts of the world, with a small band of converts in Britain, on the continent of Europe and in the United States.

The purely religious and spiritual movements of the Indian Muslims during this period centre round three great figures, S̲h̲āh G̲h̲ulām ʿAlī of Delhi (1156-1240/1743-1824), Mawlānā As̲h̲raf ʿAlī of Thāna Bhawan (d. 1943), and Mawlānā Muḥammad Ilyās of Delhi (d. 1944). The influence of S̲h̲āh G̲h̲ulām ʿAlī reached distant parts of the Muslim world (*Āt̲h̲ār al-ṣanādīd*, chapter iv, 18), through his disciples, such as S̲h̲ayk̲h̲ K̲h̲ālid al-Kurdī. Mawlānā As̲h̲raf ʿAlī has many works to his credit, big and small, dealing with various aspects of Muslim life (ʿAbd al-Bārī Nadawī, *D̲j̲āmiʿ al-Mud̲j̲addidīn*). He also strove to popularize and strengthen the Čis̲h̲tī order. Mawlānā Muḥammad Ilyās set up a centre for moral and spiritual instruction at Delhi, and started a brisk religious activity. His movement (Abu 'l-Ḥasan ʿAlī Nadawī, *Ḥaḍrat Mawlānā Muḥammad Ilyās aur un kī dīnī daʿwat*, Lucknow 1947) has spread to different Arab countries, and his followers, who go about far and near in small groups known as *d̲j̲amāʿat*s, concern themselves only with the purification of religious life. The Mawlānā first applied his methods of religious persuasion to the Maywātīs (*Gazetteer of Ulwurr*, London 1878), an illiterate and half-converted tribe living in the eastern regions of Delhi. This is, in fact, the only significant Muslim religious movement in India at present.

(d) *The S̲h̲īʿīs: It̲h̲nā-ʿas̲h̲arīs and Ismāʿīlīs*

Long before the influence of the It̲h̲nā-ʿas̲h̲ariyya [*q.v.*] spread in India, the Ismāʿīliyya [*q.v.*] entered the country and started brisk religious propaganda. In the last quarter of the 4th/10th century, Fāṭimid political power was established in Multan, and was overthrown by Sultan Maḥmūd of G̲h̲azna in 396/1006. Undeterred, the Ismāʿīlī missionaries spread out into Sind, the Pund̲j̲āb and Gud̲j̲arāt, and by their strenuous efforts retrieved much of their lost political prestige. When S̲h̲ihāb al-Dīn Muḥammad of G̲h̲ūr appeared on the Indian scene, he found the Ismāʿīlīs quite powerful. In 571/1175 he dislodged them from Multan and many of them "went underground living in the guise of Hindus" (Ivanow, *Brief survey of the evolution of Ismailism*, 20). Embittered and annoyed, the Ismāʿīlīs entered into an alliance with the Khokars and assassinated S̲h̲ihāb al-Dīn (602/1206) at Damyak on the Indus. The Sultanate of Delhi found itself committed to an anti-Ismāʿīlī policy, and when Iletmis̲h̲ secured a *mans̲h̲ūr* from the ʿAbbāsid Caliph the secret Ismāʿīlī opposition became open and aggressive. During the reign of Raḍiyya (634-7/1236-40), a Ḳarmaṭī preacher—Mawlānā Nūr Turk—gathered together his supporters from Gud̲j̲arāt, Sind and the Doab and organized a *coup d'état* to establish Ismāʿīlī power

at Delhi (*Ṭabaḳāt-i Nāṣirī*, 189-90). The Sultans of Delhi adopted stern measures against all forms of Ismāʿīlism. The Ibāḥatīs (Amīr Khusraw, *Khazāʾin al-futūḥ*, ed. M. Waḥīd Mīrzā, Calcutta, 20; *Futūḥāt-i Fīrūz Shāhī*, Aligarh, 7-8), whom some consider Ismāʿīlīs (M. Ḥabīb, *The Campaigns of ʿAlāuddin Khaljī*, 12; Hodivala, *Studies in Indo-Muslim history*, 282-3; I. H. Qureshi holds a different view, see art. IBĀḤATIYYA and references there given), were severely dealt with by ʿAlāʾ al-Dīn Khaldjī (695-715/1296-1316) and Fīrūz Shāh Tughluḳ (752-90/1351-88). According to ʿIṣāmī, ʿAlāʾ al-Dīn Khaldjī had punished the Bohorās also (*Futūḥ al-salāṭīn*, 301). Fīrūz Shāh Tughluḳ refers to some extreme Shīʿī groups of Delhi as *Rawāfiḍ* and says that they reviled the first three Caliphs and Ḥaḍrat ʿĀʾisha, the wife of the Prophet, and considered the Ḳurʾān as *mulḥaḳāt-i ʿUthmānī* (*Futūḥāt-i Fīrūz Shāhī*, 7). Sayyid Djalāl al-Dīn Bukhārī, popularly known as Makhdūm-i Djahāniyān (d. 785/1384), has given an account of some Shīʿa sects in his conversations embodied in *Sirādj al-Hidāya* (MS India Office D.P. 1038). Though some Shīʿa families trace their pedigree to him, he himself, like Sayyid Muḥammad Gīsū Darāz of Gulbarga (*Djawāmiʿ al-kalim*, 10, 20, etc.), seems to have been opposed to Shīʿa doctrines. The *Sīrat-i Fīrūz Shāhī* (MS Bankipore vii, 547) also deals with some Shīʿa sects known in India during the 8th/14th century.

In the 9th/15th century appeared the Shīʿa states of the Deccan—the ʿĀdil Shāhīs of Bīdjāpūr (895-1083/1489-1686), the Niẓām Shāhīs of Aḥmadnagar (896-1043/1490-1633), and the Ḳuṭb Shāhīs of Golkonda (917-1083/1512-1687)—and their rulers propagated Shīʿa teachings and practices in the south. Muḥammad Ḳulī Ḳuṭb Shāh was the first *marthiya-gū* (reciter of elegies) in Urdu. Shīʿa influence increased in northern India when the Ṣafawid power was established in Iran (907/1502) and particularly after the return of Humāyūn (962/1555) from that country. The emigration of Shīʿīs from Persia to India continued during the reign of Akbar and reached a significant stage when Djahāngīr came to the throne. The great Shīʿī scholar and divine Ḳāḍī Nūr Allāh Shūshtarī was flogged to death by the order of Djahāngīr for writing his *Iḥḳāḳ al-Ḥaḳḳ*. The propagation of some of the Shīʿī views created resentment in the mind of the Sunnī scholars and there appeared a large number of works—such as *Risāla Radd-i Rawāfiḍ* by Shaykh Aḥmad Sirhindī, the *Izālat al-khafāʾ*, by Shāh Walī Allāh, the *Radd al-Shīʿa* by Mulla Muḥammad Muḥsin of Kashmīr (d. 1191/1777), the *Radd-i Rawāfiḍ* by Shāh Kalīm Allāh and *Tuḥfa Ithnā-ʿashariyya* by Shāh ʿAbd al-ʿAzīz—in which some of the basic concepts of the Shīʿī were subjected to criticism.

During the 12th/18th century Shīʿa states were established at Murshidābād (in Bengal), Awadh and Rāmpūr (in Uttar Pradesh) and Khayrpur (in Sind) and these states played a very important rôle in the spread of Shīʿism in India and the popularization of its various religious practices. Separate Shīʿa congregational prayers and their distinct corporate religious life began with the efforts of Sayyid Dildār ʿAlī of Naṣīrābād (d. 1235/1819). The Shīʿas of India commemorate the martyrdom of the Imām Ḥusayn by exposing *taʿziyas* (miniatures of the tomb of Imām Ḥusayn), holding *madjlises* in *imāmbārās*, and reciting elegies during the first ten days of the month of Muḥarram. The *imāmbārās* have a very important place in the cultural and religious life of the Indian Shīʿas. (For accounts of Shīʿas in India, see Muḥammad al-Ḥusayn al-Muẓaffarī, *Taʾrīkh al-Shīʿa*, Nadjaf 1352 A.H., 232-60; J. N. Hollister, *The Shiʿa of India*, London 1953).

Of the Shīʿī religious literature produced in India, the *Iḥḳāḳ al-ḥaḳḳ wa ibṭāl al-bāṭil* and the *Madjālis al-muʾminīn* of Nūr Allāh Shūshtarī, and the *ʿImād al-islām* and *al-Shihāb al-thāḳib* of Sayyid Dildār ʿAlī deserve particular mention (for a comprehensive list, see ʿAbd al-Ḥayy, *al-Thaḳāfa al-islāmiyya fi ʾl-Hind*, Damascus 1958, 217-22).

The Khōdjās and the Bohorās [*qq.v.*] represent the best-organized Shīʿa communities in India (see also S. C. Misra, *Muslim communities in Gujarat*, Asia Publishers, 1964). They emphasize esoteric (*bāṭinī*) discipline and believe in an hierarchical system which controls and regulates the entire life of the community. The Khōdjās, according to their own tradition, originally belonged to the Lohana caste of Hindus. A Persian Ismāʿīlī missionary, Pīr Ṣadr al-Dīn, converted them to Ismāʿīlism. Among his successors, who organized the Ismāʿīlī communities in the Pundjāb, Sind and Kashmīr, were Seth Sham Das, Trikam and Seth Tulsi Das respectively, all bearing Hindu names and enjoying the title of *mukhī* (chief). Ṣadr al-Dīn called the Prophet of Islam the *avatar* or incarnation of Brahma, Adam the *avatar* of Shiva and ʿAlī the *avatar* of Vishnū (S. Nanjiani, *Khoja Vrttant*, Aḥmadābād 1892, 208; Bartle Frere, *The Khojas, the disciples of the Old Man of the Mountain*, in *Macmillan's Magazine*, xxxiv (London 1876), 431-4). The majority of the Khōdjās —who are Nizārī Ismāʿīlis—are followers of the Āghā Khān.

The principal source of Ismāʿīlī *fiḳh* is Ḳāḍī Nuʿmān's *Daʿāʾim al-Islām* (ed. A. A. Fyzee, 2 vols., Cairo 1951-60). Contrary to the Ithnā-ʿashariyya, the Ismāʿīlī law rejects *mutʿa* marriage as invalid. On the question of bequests to heirs (A. A. A. Fyzee, in *Bombay Law Reporter, Journal*, 1929, 84; *JRAS*, 1930, 141; *The Ismaili law of wills*, London 1933 and) *mutʿa* (*Bombay Law Reporter, Journal*, 1931, 30; *JBBRAS*, 1932, 85), the Ismāʿīlī law agrees with the Ḥanafī school.

(e) *Growth of Muslim religious sciences and literature*

The Muslim religious literature produced in India does not merely furnish the indispensable background to the active religious life of Muslim India, but it also supplies the key to an assessment of the influence of Indo-Muslim religious thought on the Muslim world.

Ḳurʾānic studies, particularly *ḳirāʾāt* and *tadjwīd*, have been very popular in India even so early as the 6th/12th century, when in small places like Aror (near Multan) one could receive instruction in reciting the Ḳurʾān according to its seven recognized methods of recitation (*Siyar al-ʿārifīn*, 103). Referring to three experts in *ḳirāʾāt* during the reign of ʿAlāʾ al-Dīn Khaldjī (695-715/1296-1315) Ḍiyā al-Dīn Baranī says that "their equals were not to be found in Khurāsān or ʿIrāḳ". This Indian tradition of specialization in *ḳirāʾāt* continued throughout the ages. Dārā Shukōh (1024-69/1615-59) found more than five thousand *ḥāfiẓ* living in a single quarter of Lahore (*Malfūẓāt-i Shāh ʿAbd al-ʿAzīz*). But *tafsīr* literature made little progress in India during the early period, as the works produced at the time catered for limited tastes; some were written for the *ʿulamāʾ*, others for the *ṣūfīs*; thus the *Tafsīr al-Raḥmān wa taysīr al-Mannān* of Shaykh ʿAlī al-Mahāʾimī was inspired by a desire to find Ḳurʾānic support for the pantheistic ideas of Ibn al-ʿArabī, and the *Baḥr-i mawwādj* of Shihāb al-Dīn Dawla-

tābādī [*q.v.*] was an essay in rhetoric, beyond the comprehension of the ordinary man. A disciple of Shaykh Niẓām al-Dīn Awliyā, Khwādja Ḳāsim, is reported to have written the (lost) *Laṭā'if al-tafsīr* with the specific purpose of making the thought-content of the Ḳur'ān popularly intelligible (*Siyar al-awliyā'*, 207). It was Shāh Walī Allāh, through his Persian rendering of the Ḳur'ān, and his sons, Shāh Rafī' al-Dīn and Shāh 'Abd al-Ḳādir, through their Urdu translations, who popularized Ḳur'ānic learning and made its thought-content available to the people. His *al-Fawz al-kabīr*, on the principles of *tafsīr*, was the first work of its nature written in India. In this he protested against subjective commentaries on the Ḳur'ān and laid down the principles which should guide one who undertakes this task. Shāh Walī Allāh having prepared their ground, many commentaries on the Ḳur'ān appeared in India during the succeeding centuries. A comparative study of his works—*Fatḥ al-Raḥmān*, *al-Fawz al-kabīr* and *Ḥudjdjat Allāh al-bāligha*—with the literature on exegesis produced in India, and even elsewhere, during the last two centuries, would reveal the extent of Shāh Walī Allāh's influence on Muslim religious thought.

It was in the sphere of *ḥadīth* literature that Indian Islam made a remarkable contribution. According to Rashīd Riḍā, India revived and resuscitated the science of *ḥadīth* in the 10th/16th century when it was dying out in the Arab world. The earliest contribution of India to *ḥadīth* literature is the *Mashāriḳ al-anwār* of Raḍī al-Dīn Ḥasan al-Ṣāghānī; then comes the *Kanz al-'ummāl* of Shaykh 'Alī Muttaḳī (d. 975/1567) in which Suyūṭī's *Djāmi' al-Djawāmi'* has been more scientifically rearranged. According to Abu 'l-Ḥasan al-Bakrī: "The whole world of learning is indebted to 'Allāma Suyūṭī, but Suyūṭī himself is under obligation to Shaykh 'Alī Muttaḳī". The systematic study of *ḥadīth* literature in India was initiated by Shaykh 'Abd al-Ḥaḳḳ Muḥaddith of Delhi and was developed by Shāh Walī Allāh. Shāh Walī Allāh's main emphasis was on the *Muwaṭṭa'* of Imām Mālik because it fitted in with his juridico-theological thought and was of great value in deciding matters relating to the *fiḳh*. Consequently he rearranged the *Muwaṭṭa'* according to the order of chapters given in the books of *fiḳh*.

Apart from *ḥadīth*, Indian Islam produced two very important works on the life of the Prophet—the *Madāridj al-nubuwwa* (Persian, 2 vols., Delhi 1269) of Shaykh 'Abd al-Ḥaḳḳ Muḥaddith and the *Sīrat al-Nabī* (Urdu, 6 vols., A'ẓamgarh 1918-39), by Shiblī and Sulaymān Nadawī.

Besides a large number of commentaries on different classics on *fiḳh*, like the *Hidāya*, *Talwīḥ*, *Ḥusāmī*, *Manār*, etc., Indian scholars produced independent works on *fiḳh*, like *Fatāwā-i Tātār Khāniyya* (MSS, Zubayd Aḥmad 269) by Mawlānā 'Alim b. 'Alā' al-Dīn during the reign of Fīrūz Shāh Tughluḳ (752-90/1351-88) and the *Fatāwā-i 'Ālamgīrī* [*q.v.*], by a board of scholars under the personal supervision of the Emperor Awrangzīb (1027-1118/1618-1707). If the *fatāwā* collections made in India throughout the centuries were properly edited and their contents analysed, the religious aspirations of the Indian Muslims throughout the ages could be more specifically studied. While the law books seem to ignore completely the specific problems of Muslims in the Indian environment, the *fatāwā* collections throw considerable light on this aspect. On *uṣūl al-fiḳh*, the *Musallam al-thubūt* of Muḥibb Allāh Bihārī (d. 1119/1707) is a work of great merit.

Probably on no other aspect of Muslim religious life was more literature produced in India than on mysticism. The *malfūẓ* literature (collections of conversations of mystic teachers)—*e.g.*, *Fawā'id al-fu'ād*, *Khayr al-madjālis*, *Ma'ādin al-ma'ānī*, *Sirādj al-hidāya*, *Laṭā'if-i Ḳuddūsī*, *Durr al-ma'ārif*, *Anwār al-Raḥmān*—is a mine of information on the religious life and attitudes of the Muslim community as shaped in the Indian milieu. The earliest Persian work on Islamic mysticism, *Kashf al-mahdjūb* of Shaykh 'Alī Hudjwīrī, was produced in India, and the place it enjoyed in religious thought may be judged from the remark of Shaykh Niẓām al-Dīn Awliyā' that for one who had no *pīr*, the *Kashf al-mahdjūb* was sufficient guidance. The letters of Shaykh Aḥmad Sirhindī, known as *Maktūbāt-i Imām Rabbānī*, have a place of their own in the Muslim mystic literature of the world. The Shaykh gave a new depth and a new content to mystic terms, which he explained and elucidated in the light of his own spiritual experience. The fact that these letters were translated into Turkish and Arabic shows the reception they had in the Muslim world. On the theoretical aspects of mysticism, works like the *Ṭawāli' al-shumūs* of Ḳāḍī Ḥamīd Nāgawrī, the *Asmā' al-asrār* of Gīsū Darāz, the *Ma'rifat al-nafs* of 'Abd al-Awwal and the *'Ilm al-Kitāb* of Mīr Dard, have a value of their own.

In the sphere of scholastic theology the *Ḥudjdjat Allāh al-bāligha* of Shāh Walī Allāh of Delhi may be considered one of the most original contributions of Indian Islam to Muslim religious thought. Its impact may be traced in the works of Djamāl al-Dīn Afghānī, Muḥammad 'Abduh and Rashīd Riḍā. In this work he made a serious attempt to rethink the whole system of Islam without completely breaking with the past. "Perhaps the first Muslim", remarks Dr. Iḳbāl, "who felt the urge of a new spirit in him was Shāh Walī Allāh of Delhi" (*Reconstruction of religious thought in Islam*, 97). His other work, *Izālat al-khafā'*, is another outstanding contribution to a clear understanding of the significance, historical rôle and religious meaning of the institution of *khilāfa*. He looked upon the patriarchal caliphate as normative and wanted to see its spirit working as an operative principle in the social and political life of the Muslims.

(f) *Influence of Islam on India and vice versa*

Islam made a deep impact on the religious thought and social behaviour of Indians. The development of monotheistic ideas and the consequent re-orientation of Hindū religious thought—as evinced in the Bhaktī, the Sikh and the Arya Samādj movements—was greatly inspired by Islam. It is true that monotheistic ideas were present in some Hindū scriptures also, but they were covered by a polytheistic veneer. Islam made possible the transition of Hindū thought from polytheism to monotheism. Another significant change in the religious behaviour of the Hindus brought about by contact with Islam was the belief that every individual could approach God without the help of intermediaries. The saints of the Bhaktī—Kabīr, Nānak, Dādū, Čataniya, Pīpā, Sena etc.—who claimed direct contact with the Ultimate Reality received encouragement from Muslim religious thought and behaviour. The sacred book of the Sikhs, *Gurū Granth*, contains numerous references to Muslim mystics, particularly Shaykh Farīd Gandj-i Shakar, which indicates also the source for the infiltration of monotheistic ideas into the Sikh scriptures. Besides, the idea that religious knowledge

and learning should be available to all without any discrimination is the result of Islamic influence. The Hindū social system had refused to the common man any access to religious texts. Islam encouraged the universalization of religious knowledge amongst the Hindus. The emphasis on congregational prayer amongst the Muslims had its effect on the Hindus also. The Hindu temples constructed before the advent of Islam provided space for individual prostration before the deity; while the temples constructed subsequently contain more space and seem to have been influenced by the Muslim idea of congregational prayer. Hinduism, as we know from the account of al-Bīrūnī, was not a proselytizing creed. In fact, it was more inclined to excluding people than to admitting them into its religious fold. From the 8th/14th century onwards we find that Hinduism also adopted proselytizing methods.

Islam was also, in its turn, deeply influenced by Indian surroundings and Indian religious attitudes. Many of the mystic practices—meditation, concentration, control of breath, *taṣawwur-i shaykh* etc. —were borrowed from the Hindū Yogis and the Buddhists. Through his *Baḥr al-ḥayāt* and the *Djawāhir-i khamsa*, Sayyid Muḥammad Ghawth of Gwāliyār popularized Yogic practices amongst the Muslim mystics. Some of these adjustments to Indian conditions were necessitated by the circumstances in which the saints had to inculcate their mystic doctrines among the masses. For instance, it is stated that Shaykh Farīd permitted some of his disciples to practice *dhikr* in the Pandjābī language (*Kashkūl-i Kalīmī*, Delhi 1308, 25); Shāh Fakhr al-Dīn of Delhi (1126-99/1717-84) said that in India the *khuṭba* before the Friday congregation should be read in "Hindawī" (*Fakhr al-ṭālibīn*, Delhi 1315, 23), and Sayyid Muḥammad Gīsū Darāz considered Hindī poetry emotionally more effective in his audition parties than Persian poetry (*Djawāmiʿ al-kalim*, 173). At another popular level we find excessive faith in magic, sorcery, miracles, grave-worship, and the superstitious belief that epidemics could be averted through the performance of certain practices inconsistent with Islamic teachings. Since there was always a danger of idolatrous habits entering the religious life of the Muslims, Muslim religious leaders—both the *ʿulamā᾽* and the *ṣūfīs*—frequently warned the people against adopting such practices. Sayyid Muḥammad Gīsū Darāz objected to the adoption of Yogic practices and Shaykh Aḥmad Sirhindī directed his powerful and incisive criticism against all kinds of innovations. The fear underlying this attitude was that the idolatrous background of many Hindu institutions would affect the monotheistic character of Islam. When a Hindu wrote to Shaykh Aḥmad Sirhindī that *Rāmā* and *Raḥīm* were the same, he objected to it and said that *Rāmā* was a human being and could not therefore be considered identical with the Allāh of Islam. Shāh Walī Allāh and Shāh Ismāʿīl Shahīd fought against the adoption of all those Hindu practices with which idolatrous leanings and ideas were associated. An attempt at synthesis at a higher level of Hindu and Muslim religious thought was made by Dārā Shukōh. As an individual scholar of comparative religion, Dārā Shukōh occupies an unrivalled place in Indian history, but his thought did not make any great impact on the contemporary Muslim religious attitude.

It was in the sphere of social life and customs that the influence of Hinduism on the Indian Muslims was the most far-reaching. Since most of the people were converts from Hinduism, it was not possible for them to break away completely from their social background. In varying degrees and at different levels the Hindu traditions and customs were consequently continued among the Muslims. In certain rural areas, where conversion was not complete, many of the social customs, even some religious practices of Hinduism which had become a part of their social life, were accepted. In ceremonies connected with birth, marriage, mourning etc. the impact of Hindu traditions was quite remarkable. In certain Muslim families of Awadh and the Pandjāb, the Muslim law of inheritance was ignored in preference to the customary law. Though Islam had softened the caste ideas of Hindus, considerations of family and *kafā᾽a* in matrimonial matters found ready acceptance in Muslim society also. If a survey is made of the forces and factors which have brought Indian Islam closer to Hindu society, it will be found that the pantheistic thought of the Muslim mystics, which found its affinity in the religious thought of the *Upanishads*, has invariably brought Islam and Hinduism closer, while the idolatrous connotations and concepts associated with many Hindu institutions pulled them apart. This was to some extent implicit in the situation. "The *Upanishads*", writes S. Radhakrishnan, "no doubt, shattered the authority of these gods in the world of thought, but did not disturb their sway in the world of practice" (*Indian philosophy*, i, 453). Similar has been the case with reference to Hindu festivals and many of the heroes of ancient India. In the case of many of the festivals, —though based on Indian climatic changes—the Indianising process has forced their acceptance by the Muslims, but their polytheistic religious associations have made them subject to the criticism of the orthodox.

Bibliography: Only a select bibliography of works which throw light on the various aspects of Indian Islam is given below. ʿAbd al-Ḥayy's *al-Thaḳāfa al-Islamiyya fi 'l-Hind* (Damascus 1958, 102-250) contains the most comprehensive bibliography of Muslim religious literature produced in India.

(a) Arab geographers, travellers, etc.: see section i of this article. Relevant extracts from the works of all important Arab geographers and travellers along with Urdu translations are given in *Hindustan ʿArbon kī naẓar mayn*, 2 vols., Dār al-Muṣannifīn, Aʿẓamgarh, 1960-2.

(b) Ḳur᾽ānic Literature: ʿAlā᾽ al-Dīn b. Aḥmad Mahā᾽imī, *Tabṣīr al-Raḥmān wa taysīr al-mannān*, Delhi 1286; Shihāb al-Dīn Dawlatābādī, *Baḥr -i mawwādj*, Lucknow 1297 (*Sūras* I-VI); for MSS see Storey, 10, 1193; Fayḍī, *Sawāṭiʿ al-ilhām*, Nawal Kishore 1306; Shāh Muḥibb Allāh Ilāhābādī, *Tardjamat al-Kitāb*, MSS, Zubaid Ahmad, 239; Muṣṭafā b. Muḥammad Saʿīd, *Nudjūm al-furḳān*, Madras 1292; Shāh Walī Allāh Dihlawī, *Fatḥ al-Raḥmān*, Hāshmī Press 1296; idem, *al-Fawz al-kabīr*, Delhi 1898; Shāh Kalīm Allāh Djahānābādī, *Ḳirān al-Ḳur᾽ān*, Meerut 1290; Shāh ʿAbd al-ʿAzīz Dihlawī, *Fatḥ al-ʿAzīz*, Lahore 1278; Shāh ʿAbd al-Ḳādir Dihlawī, *Mūḍiḥ-i Ḳur᾽ān*, Houghly 1245; Ḳāḍī Thanā᾽ Allāh Pānīpatī, *Tafsīr-i Maẓharī*, Meerut 1301; Muḥammad Ḥasan Amrohwi, *Tafsīr-i burhān fi-ta᾽wīl al-Ḳur᾽ān*, Amroha 1322; Sayyid Aḥmad Khān, *Tafsīr al-Ḳur᾽ān*, Aligarh 1880-95; idem, *al-Taḥrīr fī uṣūl al-tafsīr*, Aligarh; Ṣiddīḳ Ḥasan Khān, *Fatḥ al-bayān fī maḳāṣid al-Ḳur᾽ān*, Bhopal 1290; idem, *Iksīr fī uṣūl al-tafsīr*, Kanpur 1290; Ashraf ʿAlī Thanwī,

vi. — Islamic Culture.

The transplantation of Islamic culture on the Indian sub-continent began with the incorporation of Sind into the Umayyad Caliphate after 95/713, and came to be represented by such scholars of *ḥadīth* as Abū Maʿshar and Abū Turāb (c. 171/788), and by the poet Abu 'l-ʿAṭāʾ.

Sind became the main channel of Indian studies in the early ʿAbbāsid times, especially through the active interest of Yaḥyā al-Barmakī. The fragmentary renderings of Hindu scientific works touched, however, merely the periphery of the external Arab equipment of learning; their influence on the Arab *lexique technique* was slight; and the movement of translations from Sanskrit, which in any case had completely ignored the total corpus of Hindū scriptural and speculative literature, came to an end as the political grip of the ʿAbbāsids over Sind loosened. The transmission of Hindū mystical ideas into Ṣūfism has been argued for and against, through the controversial Abū ʿAlī al-Sindī [*q.v.*] and al-Ḥallādj [*q.v.*] who travelled through Sind. Not much evidence of a recognizable form of the culture of Sind under the Ismāʿīlī influence (c. 366/977) has survived.

Parallel to the conquest and occupation of Sind were the peaceful commercial and missionary activities of Arab traders on southern Indian coasts; and theories have been hazarded of the possible inspiration of the Muslim presence on the great Hindū movements led by Shankarāčārya (788-850) and Rāmānudja (d. 1137). These may be discounted in the absence of any direct evidence, and because every element of the teachings of these Hindū thinkers can be traced to purely Hindū sources.

With the occupation of the Pandjāb by the Ghaznawids [*q.v.*] (c. 381-582/1001-1186) Lahore as a centre gave Muslim Indian culture the Persian contours it has largely preserved throughout the centuries, continually accepting and modifying certain additional Indian features. The pattern of Ghaznawid culture as it developed on the Ghazna-Lahore axis shows a transition from an Arabic intellectual base (al-Bīrūnī [*q.v.*], al-ʿUtbī [*q.v.*]) to Persian (Bayhaḳī, Gardīzī and al-Hudjwīrī) and a shift of emphasis to ṣūfistic and theological studies (Ismāʿīl al-Bukhārī, d. 450/1058). The Ghaznawid tradition of Persian poetry was cultivated in Lahore by Masʿūd Saʿd Salmān [*q.v.*] (437-515/1046-1121) and Abu 'l-Faradj Rūnī (d. 484/1091). This period also marks the phase of incubation, if not of actual early growth, of Urdū [*q.v.*].

After the Ghūrid conquest of Lahore the cultural scene shifted to Iletmish's Dihlī and Ḳubāča's Mūltān. In these courts literary history established itself with ʿAwfī [*q.v.*] (c. 617/1220), political thought with Fakhr-i Mudabbir, and historiography with al-Djūzdjānī (c. 658/1260) and Ḥasan Niẓāmī (c. 614/1217) who, with their successors, form the chief link in Persian between the early Ghaznawid and the Il-Khānid historians. About this time two major Ṣūfī orders established themselves in India, the Suhra-

wardiyya in Mūltān and the Čis͟htiyya [*q.v.*] in Dihlī/Ad͟jmēr. A balance was maintained by Iletmis͟h between the s͟harīʿa and the *ṭarīḳa*, inaugurating a tradition of the tolerant co-existence of the two religious disciplines which Islamic culture in India subsequently tried quite successfully to preserve. Refugees fleeing before the Mongol onslaught brought to India fresh waves of Islamic traditions from Central Asia and northern Persia, emphasizing conservative trends in an atmosphere of external (Mongol) threat and internal (Hindū) challenge. The institution of the *madrasa* [*q.v.*] was introduced under the 'Slave' sultans, and works of al-G͟hazālī [*q.v.*] and al-Rāzī [*q.v.*] were translated into Persian.

The *élite* of the court, at first purely Turkish, opened its ranks under various pressures to Afg͟hān and later to indigenous converted elements. Under ʿAlāʾ al-Dīn K͟haldjī (695-715/1295-1315) external religious conformity was enforced on the Muslim population, whereas the writings of Amīr K͟husraw [*q.v.*] reflect the borrowings into Islamic culture from Hindū ways of living, popular vocabulary and music. Muḥammad b. Tug͟hluḳ's (725-52/1325-51) policies of re-establishing political and intellectual links with the Dār al-Islām, his patronage and employment of a foreign Muslim *élite* and his early proclivities towards rationalism and eclecticism paved the way in the growing Indo-Muslim culture for certain intellectual trends such as Ibn Taymiyya's [*q.v.*] fundamentalism imported during this period by ʿAbd al-ʿAzīz Ardabīlī, pre-Taftāzānī rationalism, and an intellectual curiosity relating to certain elements of the Hindū complex of religions such as Djaynism and *yōga*, emphasizing in general a movement towards exoteric and political rather than esoteric and mystical Islam. Enigmatic intellectualism, imported from Central Asia by Badr Čāč, became the fashion in Persian poetry. In the reign of Fīrūz Tug͟hluḳ (752-90/1351-88) [*q.v.*] the state became a traditionalist theocracy, providing certain social welfare elements for the Muslims, and abolition of torture and cruel punishments for all elements of the population. His reign saw the establishment of the disciplines of *fiḳh* and lexicography in India, but painting and even poetry were discouraged.

The complete Persianization of the administration by Sikandar Lōdī (849-923/1488-1517) introduced the Hindū official into the intellectual sphere of Islam, and this in due course of time led to the specific cultural development of certain communities like the Kāyasthas, the Khatrīs, the Kās͟hmīrī Brāhmans and the ʿĀmils of Sind, who retained their Hindū religion but identified themselves culturally with the Muslims.

The successor states of the Dihlī Sultanate [*q.v.*] mark a regionalization of Muslim culture in India. In Bengal a number of Hindū social and religious institutions were integrated into the Muslim way of life, and the Bengali language and literature show a simultaneous series of borrowings from Sanskrit and Persian sources. In the Dakhan (Deccan) a regional form of Urdū was developed into a rich literary language. The maritime states of Gud͟jarāt and the Dakhan balanced Hindū cultural borrowings with fresh re-orientations from the external Dār al-Islām.

During the 8th/14th and 9th/15th centuries Ṣūfī proselytization achieved mass appeal, and Hindū resistance to it developed in the form of various *bhakti* movements, borrowing from Islam its emphasis on the Unity of God and its egalitarianism, but fortifying, against its spiritual, economic and social pull, a reformed and latitudinarian Hindūism among the lower castes. The *bhakti* movements in their attitudes, receptive and resistant, towards Islam ranged from the syncretism of Kabīr and Dādū Dayāl to the counter-conversionist trends of Čaytanya.

Tīmūrid cultural elements from Samarḳand and Harāt were introduced into India after Bābur's [*q.v.*] conquest (932/1526). For a short while the Turkish language assumed at court the position of literary supremacy, only to be finally displaced by Persian during the Sūrī interregnum (946-62/1539-55) and after Humāyūn's [*q.v.*] return from Persia which also marks in India the establishment of the Mug͟hal school of painting [see TAṢWĪR].

Akbar's [*q.v.*] (963-1014/1556-1605) policies of integrating the Hindūs into the political and social life of Muslim India influenced the attitude of the Muslims in the direction of eclecticism. These policies also evoked an orthodox reaction represented by theologians like ʿAbd al-Ḥaḳḳ Dihlawī, who re-introduced in India an emphasis on the study of *ḥadīt͟h*, and Naḳs͟hbandiyya Ṣūfīs like S͟hayk͟h Aḥmad Sirhindī [*q.v.*] who brought Indian Ṣūfism very close to orthodoxy. The programme initiated by Akbar, and earlier by Sultan Zayn al-ʿĀbidīn of Kas͟hmīr (822-75/1420-76) of translations of Hindū religious and literary classics marked the beginning of a more liberal understanding of Hindūism. Co-existent with these internal eclectic features was the constantly flowing cultural stream from Persia and Transoxiana bringing an administrative *élite* which developed into the Īrānī and Tūrānī factions in the Mug͟hal court, rationalist trends, artists and architects, and chiefly poets. During the 10th/16th and 11th/17th centuries India rather than Persia was the focus of Persian poetry, and the 'Indian Style' (*sabk-i Hindī* [*q.v.*]) assumed its highly intellectualized and curiously stylized features in the tradition of Fig͟hānī S͟hīrāzī.

Akbar's eclectic tradition remained the cultural denominator of the reigns of his successors Djahāngīr [*q.v.*] and S͟hāhdjahān [*q.v.*] with a slight focal adjustment in favour of orthodoxy. The 11th/17th century marks the culmination of the growth of syncretic sects, some of them rooted in Hindūism but borrowing liberally from Islam such as the Kabīr Panthīs, Vayrāgīs, Lingāyats, Ḥusaynī Brāhmans, etc., others rooted in Islam with converse borrowings such as Madārīs, Pāgalnāthīs and others, others again developing into independent religions like Sikhism which has a strong anti-Muslim bias. The conflict of the eclectic and orthodox trends of Mug͟hal culture is to some extent reflected in the essentially personal trial of strength between Dārā S͟hukōh [*q.v.*] and Awrangzīb [*q.v.*] resulting in the latter's victory (1069/1695) and the establishment of a theocratic régime, discriminatory against the non-Muslim elements, and in the compilation of the encyclopaedic juridical work *Fatāwā-i ʿĀlamgīrī*.

In the political and economic anarchy that followed the rapid decline of the Mug͟hal empire in the early 12th/18th century mass syncretization followed, borrowing extensively from Hindū institutions. The leadership of the Muslim community for the first time passed on to the *ʿulamāʾ*, especially S͟hāh Walī-Allāh [see AL-DIHLAWĪ, S͟hāh Walī Allāh], his successors, and his militant followers of the early nineteenth century, the *Mud͟jāhidīn*. Parallel movements in Bengal, aimed at clearing Indian Islam from borrowed accretions, show Wahhābī influences. The Muslim *élite* of Dihlī and Lakhnaʾū

(Lucknow), decadent and economically bankrupt, developed a new creative impetus by using Urdū instead of Persian as the language of poetry. Like the Persian poetry written in India, Urdū poetry, except in *mathnawīs*, tended to ignore the Indian life and background totally in theme and image alike.

The aftermath of the Mutiny of 1857 marks the sharp turning point of Indo-Muslim culture towards modernism represented mainly by Sayyid Aḥmad Khān and the ʿAlīgarh movement. Cultural trends inclined towards separatism and were dominated by a fear of cultural and possibly religious submergence of Indian Islam into the religion and culture of the Hindū majority. This fear of submergence is reflected in the Urdū-Hindī controversy (c. 1870 onwards), revivalism, pan-Islamism and finally in the movement for the achievement of a separate state, Pākistān [*q.v.*]. The official cultural orientation in Pākistān has been to play down the glories of Muslim architecture and literature in the areas outside the present frontiers of Pākistān, and to substitute instead a new concept of cultural heritage derived from regional literatures and local monuments situated within the geographical limits of Pākistān.

vii.—ARCHITECTURE

At the time of the Muslim conquest, India was a land with a rich artistic tradition: temples and monasteries abounded, Hindū shrines of all descriptions and sizes were found by almost every hillside and spring, cities were rich and well-planned, Hindū rulers had built for themselves forts and palaces, and the remains of earlier phases of Indian civilization —such as the Hindū, Buddhist and Djayn cave-temples, and the Buddhist *stūpa*s and monasteries— were numerous. Architecture was characteristically of stone, its construction derived from timber prototypes: beams and lintels were supported on columns or brackets, and roofs tended to a stepped pyramidal shape, through having been built in diminishing horizontal courses. Domical shapes were known, often carried on octagonal bases, but were often solid and in any case had little structural affinity with the true voussoir-built dome. The northern temples usually had curvilinear towers, again often solid; these, and some of the domical forms, had a characteristic crowning feature which later became part of the Indian Islamic dome decoration, a ribbed ring known as *āmalaka* (from the fruit it resembles, the Emblic Myrobalan, *Phyllanthus emblica*) surmounted by a pot-shaped moulding, the *kalaśa* (lit. 'water-jar'); to these a base of stone foliations in the form of lotus-petals might be added. The entire ornamental feature was on occasions supported by ribs on the curvilinear towers, and it has been suggested that at least part of the origin of ribbed domes in India is to be found in this device. The arch is not known at all as a structure, and only rarely as a decorative form; but recesses used freely on both internal and external walls lead to a proliferation of vertical lines and to unnecessary horizontal plinths and mouldings. Window-openings were rare: the interior of the Hindū temple was poorly lighted, its kernel being the secret shrine of an idol god whose mysteries were known only to a few initiated priests and were not for public display. The exterior, however, was as luxuriant and prolix as the interior was esoteric and recondite, for all its surfaces were covered with a profusion of exuberant sculpture of iconographic significance, in which the human form preponderated. Free-standing statuary was also known, with the human form again dominant; but frequent also were the vehicles and attendants of the Hindū gods, especially Shiva's bull, and also the *linga*, the representation of the phallus as the generative principle of the world. The Indian painting tradition must also be mentioned as part of the artistic heritage; but there is as yet insufficient evidence for an unbroken tradition of Indian painting from the

Adjanṭā frescoes to the period of the pre-Mughal hill schools. Of the other arts, metalwork, especially cast bronze, had reached a high degree of refinement at the time of the conquest; coins were heavy and fairly crude, but certainly some of the northern coin-designs were appropriated by the early Muslim rulers [see further SIKKA]; and there were fully developed indigenous arts of music (see viii, below) and dance (implicit in much of the sculptural evidence), which do not concern us here.

There is as yet insufficient archaeological evidence of the first Islamic buildings on Indian soil which must have been produced by the conquest of Sind in the 2nd/8th century, although excavation at present being undertaken at Bhambōr and elsewhere may eventually reveal the site of Daybul [*q.v.*]; for a further account of these see SINDH, and see also MANṢŪRA. The buildings after the 6th/12th century conquest of the north, however, show the Muslims' reaction to indigenous building very plainly; for the traditions of the idol-temples, with their plethora of florid figure representation, their gloom and secrecy, and above all the nature of the worship they implied, were not only anathema to Islam but were its direct antithesis. The earliest phase of Muslim building is in Delhi [see DIHLĪ], and is here represented by the re-use of pillaged material from Hindū and Djayn temples; destruction of the religious buildings of the enemy is known, of course, in many religions other than Islam, and indeed in India there is more than one record of a Hindū king doing just this to his neighbour's lands. Reutilization of the pillaged material is a feature of the initial phase of Muslim occupation in many regions of India, for example, at Adjmēr and Djālor [*qq.v.*] in Rādjāsthān; Bharōč, Khambāyat and Pāṭan [*qq.v.*] in Gudjarāt; Djawnpur [*q.v.*]; Bīdjāpur, Dawlatābād and Warangal [*qq.v.*] in the Deccan; Lakhnawtī, Pānduā and Tribēnī [*qq.v.*] in Bengal; Dhār and Māndū [*qq.v.*] in Mālwā; and many other sites. The first example, the Masdjid Ḳuwwat al-Islām at Dihlī ([*q.v.*] for description and plan), is in fact built on a temple plinth, and some twenty-seven temples were pillaged to provide columns, walls, roofing materials, and paving; sculptured figures were mutilated or were so set in walls that the unworked sides of the stones were all that could be seen. This mosque was at first a plain enclosure, but in 595/1199, eight years after its foundation, a large *maḳṣūra* screen was erected between the western *liwān* and the courtyard, and the arch appears for the first time: but these arches are corbelled out, not voussoired, and it appears that the work was done by Hindū artisans working under general Muslim direction and as yet having no mastery over the alien architectonic forms; moreover, the courtyard side of the *maḳṣūra* is covered with carving, mostly typical Hindū floral motifs and ornaments, but also some bandeaux of *naskh* calligraphy, in such a way as to suggest that local workmanship was being employed. In the south-east corner of the mosque buildings the minaret known as the Ḳuṭb Mīnār presents a stylistic contrast, as its tapering fluted storeys develop the polygonal outline of the *mīnār*s at Ghazna which must be its immediate prototype, and features of typically Hindū derivation are almost entirely absent.

The extension of the Ḳuwwat al-Islām mosque and the first completion of the *mīnār* were carried out by Iletmish in the early 7th/13th century, and to his reign belong the Aṛhāʾī din kā djhōmpṛā mosque at Adjmēr [*q.v.*], his own tomb of *ca.* 632/1235, and his son's tomb of 629/1231, the earliest monumental tomb in India (there are earlier dated tombstones: see HĀNSĪ); also minor buildings at Dihlī and Badāʾūn ([*q.v.*]; the Djāmiʿ Masdjid has been so much repaired and rebuilt that scarcely any of Iletmish's fabric is visible), at Bayānā, and at Nāgawr [*q.v.*]. In none of these buildings is there a true arch or dome, although all the masonry has well-dressed surfaces, often elaborately carved. The tomb of Iletmish's son, Nāṣir al-Dīn Maḥmūd, stands within an octagonal cell which seems to be the earliest use of the octagon in Muslim India; it appears next as the phase of transition in Iletmish's own square tomb, to support, presumably, a dome of which there is now no trace (and which, one must imagine, was also corbelled and not voussoired). In the latter tomb the octagon is formed by simple corbelled squinch arches across each corner. These early buildings are of so heterogeneous and, often, of so makeshift a nature that there is little of a coherent style about them. The buildings of the emperor Balban, similarly, are few and largely uninteresting, except for the significant appearance of the true voussoired arch in his tomb, now a mere unprepossessing lump of decaying masonry.

With the Khaldjī dynasty, however, a distinct if short-lived style appears, the keynote of which is provided by ʿAlāʾ al-Dīn's southern doorway into the Masdjid Ḳuwwat al-Islām complex and known as the ʿAlāʾī Darwāza. This, like other examples of the style, is built with specially quarried stone and not improvised from Hindū materials; its chief characteristic is the shape of the arch, which is voussoired and of the pointed horseshoe shape and, in the case of external arches, has on the intrados a fringe of conventionalized stone spear-heads. The masonry is well finished and jointed, decoration in the form of bandeaux of calligraphy and a running merlon-like ornament being now more prominent than the diaper and rosette patterns in basso-relievo with which the earlier builders were wont to cover entire walls. At the ʿAlāʾī Darwāza, but not in the other examples of Khaldjī work, the entire surfaces are so treated, and in addition show the use of white marble bandeaux of inscriptions, pilasters and architraves. Works of similar style exist at Dihlī (the so-called Djamāʿat-khāna mosque at the shrine of Niẓām al-Dīn Awliyāʾ) and Bayānā, near Agra; but other buildings of the Khaldjī period are found as far afield as Djālōr [*q.v.*] in Rādjāsthān, at Bharoč, Khambāyat, Pāṭan and Siddhpur [*qq.v.*] in Gudjarāt, at Bhīlsā in Mālwā, in Dawlatābād in the northern Deccan, and elsewhere, many of these incorporating much pillaged temple material but showing also many of the characteristics mentioned above, and most significant in pointing out the expansion of this early Sultanate style.

Under the Tughluḳ dynasty the Dihlī empire was greatly extended, and with the expansion came the spread of the Dihlī style to all parts of that empire. Of the works of the first ruler, Ghiyāth al-Dīn Tughluḳ, there are insufficient remains to show how early the Tughluḳian traits developed: besides the ruins of his capital city, Tughluḳābād, only his own tomb. But a major work for which he was responsible before his accession to the Dihlī throne is the mausoleum of the saint Rukn-i ʿĀlam at Mūltān [*q.v.*], originally intended as his own tomb. Some features of this, especially the batter of the walls and the sloping corner turrets, are reflected in the walls of Tughluḳābād and in the strong batter of Tughluḳ's tomb; and perhaps the profile of the dome also is closer

to the pointed Mūltān model than to the shallow domes of the ʿAlāʾī Darwāza and the Djamāʿat Khāna of the preceding dynasty. The characteristic Mūltānī features of raised tile-work and wooden structural courses, described below when the Pandjāb style is considered, are however absent in the extant Dihlī examples; nor is the octagonal shape retained. Tughluḳ's son Muḥammad b. Tughluḳ [*q.v.*] shortly after his accession conceived the grandiose idea of forming a second capital at Dawlatābād [*q.v.*] and transporting there the élite population of Dihlī, and the necessary services. The old Hindū fort, the former Dewgiri, at the new capital was much extended, and it seems likely that the Khaldjī mosque there was modified at this time since its rear wall has tapering angle turrets, although its interior arrangements seem undisturbed. Muḥammad's occupation of Dawlatābād was only for about five years, after which he returned to Dihlī, where most of his building projects were carried out. His administration seems to have impoverished the royal treasury, and the fine stone-work of earlier reigns almost disappears and is replaced by cheaper material, plaster over a rubble core; but, from the sudden appearance in the 8th/14th century of buildings in the Deccan which are obviously close to the earlier Dihlī styles, it is to be supposed that many of the artisans taken to Dawlatābād drifted away from that centre and formed other allegiances: certainly the earliest Bahmanī tombs at Gulbargā (see further below) would support this view. Muḥammad b. Tughluḳ's royal palaces at Dihlī, the Bidjay Manḍal and the Hazār Sutūn, are now in too ruined a state to permit of certain conclusions as to architectural style; the majority of the remains of his period in Dihlī are in fact more commonplace works: the fort walls of ʿĀdilābād and Djahānpanāh, and the interesting sluice or water-regulator called Sāt pulā. The only significant innovation is to be found in the Bidjay Manḍal remains: the earliest Indian example of intersecting vaulting. Some ceramic fragments are known from the ʿĀdilābād excavations.

Under Muḥammad's nephew Fīrūz Shāh Tughluḳ the building art received an enthusiastic patron. Not only did he build extensively on his own account, but he arranged for the renovation or restoration of many of the monuments of his predecessors. But a strict economy had now to be practised, and plans and costings for each projected undertaking came first under the scrutiny of the *Dīwān-i wizāra*. Red sandstone and marble were no longer used, and in Dihlī the favourite materials were the local quartzite for columns, jambs, arches and reveals, with the other elements built of compact plaster, usually whitewashed, over a random rubble core. Ornament is generally reduced to a minimum, and where it exists it is more usually of moulded plaster than of carved stone. The sombre and ascetic effect of this architecture produced under conditions of financial stringency is in marked contrast to the exuberance of plastic ornament of the preceding régimes, and was certainly foreign to the instincts of the traditional Indian craftsman. But aspects of the Hindū tradition are certainly found in buildings of this phase, exemplified in the use of beam-and-bracket construction for many of the openings—a main doorway tends to show a large arched opening in which a smaller opening of lintel-and-bracket construction is recessed; but this device is met with earlier in Ghiyāth al-Dīn Tughluḳ's tomb—and in the use of sloping eaves (*čhadjdjā*) supported on corbels, which now appears for the first time. An innovation which seems to be of extra-Indian provenance, however, is the machicolation which now appears in fortified works [see BURDJ, iii]. There seems also to have been some experiment in the planning of mosques: the courtyards of the Sandjar mosque at Nizamuddin and the mosque at Khiṙkī village are both partially covered. Several mosques are now built on a high plinth over a *tahkhāna* storey and are approached by flights of steps, and a frequent device is the flanking of a gateway or a *miḥrāb* buttress by a pair of tapering pillars; roofs now begin to show a multiplication of domes, and domed corner turrets appear in many works (those in Sulṭān Ghārī, the tomb of Iletmish's son, are most probably to be attributed to Fīrūz Tughluḳ's renovations). One innovation, in the mosque of Begampur, is a feature of many later styles and was probably introduced from the region of Djawnpur after Fīrūz's conquest of that region: the central bay of the façade of the western *līwān* is occupied by a tall arched pylon which completely conceals the large central dome from the courtyard. Most of the tombs of the period are of the square type, including Fīrūz's own, but of great architectural significance is that of his *wazīr* Khān-i Djahān Tilingānī, d. 770/1368-9, which is octagonal; the tomb-chamber is surrounded by a veranda with a shallow dome-like cupola and three arched openings on each of the eight sides, continuous eaves, and a single central dome crowned by the *āmalaka* motif. The tomb is surrounded with a fortified enclosure. Other buildings of Fīrūz Tughluḳ are known from Djawnpur [*q.v.*], Fatḥābād, where a pillar in the fort records Fīrūz's lineage [see KHAṬṬ, KITĀBĀT], and Ḥiṣār Fīrūza [*q.v.*]; many of these, reflecting a stage of new conquest or refoundation, are improvisations from Hindū material, but show in addition some regional trends not apparent in the buildings of the capital: thus the now destroyed Čihil Sutūn at Djawnpur ([*q.v.*] for illustration) was entirely trabeate, was roofed on its upper storey with a curvilinear ribbed pyramid, and was decorated with stone stringcourses, parapets and plinth. Two buildings of the end of the Tughluḳ period show perhaps a reaction to the Fīrūzian austerity: the tomb of Kabīr al-Dīn Awliyāʾ at Dihlī, a poor and half-scale copy of the tomb of Ghiyāth al-Dīn Tughluḳ, showing a revival of polychromatic work in red sandstone and white marble, and the Djāmiʿ Masdjid at Irič [*q.v.*], entirely arcuate with some good stonework, and exhibiting in its façade arches and squinches a recession of planes, a familiar device under succeeding dynasties.

The sack of Dihlī by Tīmūr in 801/1398-9 left the sultanate with little resources and less prestige, and for many years the building art in the region of the capital is represented almost entirely by tombs. The tombs of the so-called "Sayyid" rulers are octagonal, continuing the tradition of the Tilingānī tomb with structural improvements, especially in raising the springing of the dome by a tall drum; and the shallow domes over the octagonal arcade have been replaced by small pillared kiosks (*čhatrīs*, lit. 'umbrellas')—the beginnings of a feature which later is to characterize the architecture of many schools, including the Mughal; and the batter of the outer walls is retained. The Lodī monuments show the gradual rehabilitation of the building art, although indeed most of these also are tombs. There is a series of monumental tombs, mostly anonymous, in the plain to the south of Dihlī, all of a square type not previously known in the north, since all their upright lines are truly vertical and there is no

batter. The area of their ground-plans is less than that of the octagonal tombs, but their height is greater; and their side walls are often broken up to the eye by dividing each façade with deep string-courses with sunk blind arches above and below to give the impression of two or three storeys, although the interior is a single square cell; frequently a central bay of each side is extended upwards to enclose a main arch of nearly the whole height of the wall, the actual doorway being set in this arch with a lintel-and-bracket; and the west wall is usually closed to accommodate a *miḥrāb*. But Lōdī tombs also exist in the octagonal style, including—apart from numerous octagonal pillared pavilions—the fine tomb of ʿAlāʾ al-Dīn ʿĀlam, the largest of the series, at Ti̲d̲j̲ārā, and the tomb of Sikandar, *ca.* 924/1518, at the Dihlī suburb of K̲h̲ayrpur. The latter perhaps represents the link between the former habit of placing tombs in a fortified enclosure, of which the Tilingānī tomb is the last extant example, and the Mug̲h̲al practice of surrounding the mausoleum by a garden; for this tomb stands in a large walled enclosure with decorative corner turrets and an ornamental doorway. Part of the west wall is built upwards and buttressed to form an additional external *miḥrāb*, and is presumably a *ḳānātī* mosque; the feature is known in other tombs of this period. Here, as in some of the square tombs, part of the external surface is embellished with glazed tiles, mostly blues and greens; and the dome, as in the earlier tomb of S̲h̲ihāb al-Dīn Tād̲j̲ K̲h̲ān, *ca.* 906/1501, has an inner and outer shell. Two mosques of the period are particularly significant in the development of a style which persists until well into the Mug̲h̲al period; the mosque of Abū Amd̲j̲ad at K̲h̲ayrpur, of 899/1494, has massive tapering pillars at each rear angle, and also flanking the buttress of the *miḥrāb*, each with a band of vertical fluting alternately angled and rounded as in the lowest storey of the Ḳuṭb Mīnār, the central bay of the façade projected outwards and upwards, a succession of receding architraves and soffits in each arched opening, and incidentally the finest cut-plaster decoration in Dihlī (Goetz, *op. cit.* below, considers it second only to that of the Alhambra palace at Granada). The other mosque approaches more nearly the type of the early Mug̲h̲al and Sūrī periods; this is the Mōṭh kī masd̲j̲id of *ca.* 911/1505, where the tapering buttresses are confined to a position flanking the *miḥrāb* projection on the west wall, and the rear angles are furnished with two-storeyed open octagonal towers. The pylon-like frame of the central arch, and the recession of planes in the arch outlines, are similar to those of the K̲h̲ayrpur mosque; but as well as fine cut-plaster the decoration includes coloured tilework and the contrasting use of red sandstone and white marble. The interior is also remarkable for the stalactite pendentives which support the side domes (the main dome is carried on squinch arches). This mosque design is continued in the D̲j̲amālī mosque of 943/1536—thus in the reign of Humāyūn; but this is the date of completion—where the stonework is of very high quality; the central archway of the façade of the west *līwān* is very much taller, so that its arch reaches above the parapet level of the side aisles, and the fluted buttresses appear flanking this pylon on the courtyard side; and the intrados of that arch is decorated with the spearhead fringe. Beside the mosque is the tomb of D̲j̲amālī [*q.v.*], externally unpretentious but still containing the finest coloured decoration in the whole of Dihlī. The D̲j̲amālī mosque is the immediate model for the mosque built by S̲h̲ēr S̲h̲āh Sūrī in the citadel of his new city of Dihlī, where every feature is elaborated and refined, and polychromatic faience takes its place in the external ornament. Outside Dihlī there is a small amount of Lōdī work, much of it still inadequately studied, especially of the time of Sikandar Lōdī, who made Āgrā [*q.v.*] his capital; especially noteworthy is the large mausoleum called Čawrāsī Gumbad at Kalpī [*q.v.*]. One mausoleum at Dihlī, that of ʿĪsā K̲h̲ān Niyāzī, shows the persistence of the octagonal variety of tomb well into the Sūrī period (954/1547-8), its construction being almost identical to that of Muḥammad S̲h̲āh erected over a hundred years before; but here there are more traces of encaustic tile decoration, and a large separate mosque stands on the western wall of the outer enclosure, its central dome flanked by two *čhatrīs* over the side bays. This octagonal style goes further: in Dihlī it peters out in the tomb of Adham K̲h̲ān, but receives its supreme developments in the Sūrī monuments at Sahsārām in Bihār [see further below].

The regional styles of Indian Muslim building.

At least a dozen major regional styles may be distinguished before the expansion of the Mug̲h̲al empire brings about a certain degree of unification throughout the sub-continent; and many of these styles must be further sub-divided. A variety of factors is responsible for this diversity: for example, brickwork predominates in the Pand̲j̲āb and Bengal styles, where there is little building stone obtainable locally; in Gud̲j̲arāt, where the local stonemasons had shortly before the Muslim conquest been producing exquisitely carved temples for the D̲j̲ayns, Muslim art retains the tradition of elaborate stonework; in Bīdar and Dawlatābād the presence of foreign craftsmen has produced a few buildings in a pure Persian tradition; and so on. These new styles for the most part develop after independence from a central authority has been achieved by the regions to which they belong, although in some cases, as at Gulbargā, the Dihlī traditions have persisted for some time.

i. — The Pand̲j̲āb. — Lahore was a dependency of the G̲h̲aznawids and the G̲h̲ūrids long before the conquest of Dihlī. No monuments of this early period have survived, although some pieces of woodcarving from doorways in the city, now in the Lahore museum, retain features derived, through the G̲h̲azna tradition, from Sald̲j̲ūḳ ornament. The earliest extant monuments are in Mūltān and Uččh [*qq.v.*], a series of tombs of local saints. The earliest, that of S̲h̲āh Yūsuf Gardīzī, of 547/1152, is a solid oblong building covered with blue-and-white tiles to form a plane external surface; but the later buildings are all tall domed buildings, from the tomb of Bahāʾ al-Ḥaḳḳ, d. 660/1262, a square battered base surmounted by an octagonal drum and the earliest true dome in the sub-continent, to the magnificent mausoleum of Rukn-i ʿĀlam, which Marshall (*op. cit.*, below) describes as "one of the most splendid memorials ever erected in honour of the dead"; this resembles the previous examples in being built of baked brick but with some structural bonding courses of wood in addition, with a lofty second storey which forms an octagonal drum, with a hemispherical dome, and with pinnacles at each external angle, but differs from them in its lowest storey which is also an octagon, with battering faces and engaged tapering buttresses terminating in pinnacles at each outer angle. The external decoration

is worked out in stringcourses of tile-faced brick and bands of raised diaper pattern, bands of calligraphy in carved brick, and the typical Mūltān tilework (known also at Uččh but nowhere else) wherein the main geometrical patterns are raised as much as 2 cm. above the tile background; this adds greatly to the richness of the tilework by adding depth and a constant effect of light and shade where the sheen of a plane surface would have become dulled by the dust which pervades Mūltān in the summer. The interior decoration includes fine wood-carving in *s̲h̲īs̲h̲am* wood, with the six-pointed star (a common G̲h̲aznawid motif, but otherwise rare in India until early Mug̲h̲al times) in the spandrels of the wooden *miḥrāb* and scrolls of arabesque ornament similar to that of the *maḳṣūra* of the Ḳuwwat al-Islām mosque at Dihlī.

ii. — Bengal. — Stone in the Bengal provinces is almost confined to the black basalt of the Rād̲j̲maḥall [*q.v.*] hills in the Māldā district; but the fine alluvial clay is freely available, the material for the characteristic Bengali bricks and terracottas. The earliest buildings, at Tribeni [*q.v.*] and Čhōṭā Pāndụā [see PANḌUĀ, Čhoṭa] are mostly adaptations of pillaged Hindū temple material, using pillars built of large stones without mortar, and shallow corbelled domes; the tomb of Ẓafar K̲h̲ān G̲h̲āzī, of 698/1298, shows an early use of the arch, and *miḥrāb*s in finely moulded terracotta. The greatest of the early buildings, after the independence of Bengal, is the large Ādīna mosque at Ḥaḍrat Pānḍuā [see PANḌUĀ], of 776/1375, in which again use was made of Hindū materials, although it appears that some of the stonework was original work executed by Hindū craftsmen in Muslim employment; it is enclosed by a multiple arcade which carried nearly 400 small domes, and has a large central *aywān*-like hall in the western *līwān*, with an elaborate stone *miḥrāb* and *minbar*, of which the roof has fallen; the stonework is mostly a thin ashlar veneer over a brick core. In a somewhat later phase, represented by the Ēklākhī mausoleum at Pānḍuā, the other characteristics of the Bengal style make their first appearance, notably a curve on each cornice of the square tomb-chamber which derives from a local method of constructing huts with bamboo rafters, octagonal corner buttresses, and ornament in terracotta and glazed tile; here the interior of the enormously thick chamber is an octagonal room which directly supports the single hemispherical dome. Some similar buildings were erected at Gawṛ [see LAKHNAWTĪ] after the 9th/15th century under the later Ilyās S̲h̲āhī and the Ḥusayn S̲h̲āhī rulers; the decorations became especially lavish, some domes being gilded; besides the square buildings with a curved cornice on each side appears the oblong pitched-roof building with the curved cornice on the long sides and gables at the short sides—a type later taken to northern India at the time of S̲h̲āhd̲j̲ahān. Some buildings of the mid 9th/15th century at Bāgerhāṭ, built by one K̲h̲ān D̲j̲ahān, a renegade from the Dihlī court, show corner turrets and lintel-and-bracket doors set within pointed arches very similar to those of Fīrūz S̲h̲āh Tug̲h̲lūḳ's buildings in Dihlī of a century earlier (see above), although retaining the local curved cornice. Many of these local features persist in the Bengali architecture of the Mug̲h̲al period.

iii. — D̲j̲awnpur sultanate. — The early buildings of D̲j̲awnpur and its suburb Ẓafarābād are adaptations of the time of Fīrūz S̲h̲āh Tug̲h̲luḳ, who laid the foundations of a large mosque on the site of a temple to Aṭalā Devi. This was completed, however, under the S̲h̲arḳī kings, with four other mosques of similar style—all the other buildings of this once magnificent city were destroyed by Sikandar Lōdī. Again, Hindū remains were freely utilized in the construction; but the building is in coursed stone, with no plaster facing as in Dihlī, and there is an abundance of stone carving of high skill. The special characteristic of the D̲j̲awnpur mosques is the immense pylon which fills the central bay of the western *līwān*, completely concealing the large dome behind it (see illustration s.v. D̲J̲AWNPUR), in some cases three times as high as the other bays of the *līwān*. The trabeate construction is used freely within the prayer-halls and in the side arcades, although the *līwān* façades are arcuate, and are freely ornamented with recessed arches which are either blind or carry thick window grilles; and the intrados of the arch is usually decorated with the spearhead fringe. All these mosques are well finished externally, especially the *miḥrāb* walls, and the tapered buttress, so familiar in the Dihlī sultanate buildings, is used freely at the external angles. Similar mosque styles are to be found at Banāras, Iṭāwā, and Kannawd̲j̲ [*qq.v.*].

iv. — Gud̲j̲arāt. — The very rich stone-building tradition of the Hindū and D̲j̲ayn craftsmen was appropriated by the Gud̲j̲arāt Muslims, and made Gud̲j̲arāt at once the richest and the most distinctive of the regions in architecture. The artisans appear to have been less bound here than were their fellows in other regions to the whims of individual rulers or to rigid prescriptions by punctilious *ʿulamāʾ*, and indeed it often appears that the requirements of Islamic building rather emancipated them from the dogma of the schools of temple architecture, for of all the styles of Indian Islamic building that of Gud̲j̲arāt is the most Indian, and its purely local characteristics are obvious, even in the earliest stages where pillaged temple material was being used under the orders of governors of the Dihlī K̲h̲ald̲j̲īs. The earliest surviving Muslim building, the tomb of S̲h̲ayk̲h̲ Farīd at Pāṭan [*q.v.*] of *ca.* 700/1300, is merely a converted temple, and very little more organization appears in the Ādīna mosque there, of the same time, where over a thousand rich temple pillars are assembled to a mosque plan (the building has now fallen almost entirely). In Bharōč [*q.v.*] only a little later the D̲j̲āmiʿ Masd̲j̲id is a planned construction and not a mere improvisation, for the outer walls are obviously constructed of stone cut for the purpose; but the western *līwān* is of three bays which appear to be three temple *manḍapa*s used unaltered except for the obliteration of figure iconography in the ornament. The arch is not used, so that the *līwān* has an open pillared façade with no *maḳṣūra*-screen—a mosque-type more frequent in Gud̲j̲arāt than in other regions. The D̲j̲āmiʿ Masd̲j̲id at Khambāyat (Cambay), however, of 725/1325, does have an arched wall closing the *līwān*. The walls of this mosque, of alternate deep and shallow courses, are uncharacteristic of Gud̲j̲arāt and recall the K̲h̲ald̲j̲ī workmanship of Dihlī. A feature appearing here for the first time which later becomes a favourite device in Gud̲j̲arāt is a semicircular engrailed arch, of no structural significance, carried between two pillars inside the central arch of the façade; this directly copies the *toraṇa* doorways of the local Hindū and D̲j̲ayn temples. This Khambāyat mosque has an entrance porch which is almost an exact copy of that of a temple at Modhērā built three centuries before, as is that of Hilāl K̲h̲ān Ḳāḍī's mosque at Dhōlkā

(733/1333); but here there is another significant innovation: the façade is ornamented with two tall turrets flanking the central arch. These are in fact solid, but are the obvious types from which the Gudjarāt minarets are derived (isolated *mīnārs*, for example the Kutb Mīnār at Dihlī, are not unknown elsewhere in India, but the Gudjarāt mosques present their first systematic use). Other buildings of this first phase of Gudjarāt building are to be found at Mangrol [*q.v.*] and Petlad. A second phase is represented by the buildings of Aḥmad Shāh I in his new capital at Aḥmadābād, although even there the earliest buildings, Aḥmad Shāh's first mosque and the mosque of Haybat Khān, follow the pattern of the Djāmiʿ Masdjid at Khambāyat; but soon after them the mosque of Sayyid ʿĀlam, of 814/1412, shows several elements which are developed and perfected in the later Aḥmadābād buildings, including heavy projecting cornices, well-built and projecting bases for the minarets with internal stairs (the tops of the minarets above the parapet level of the roof have fallen), and an elevated portion of the roof forming a clerestory to admit more light to the central chamber. Aḥmad's *chef d'œuvre* is his Djāmiʿ Masdjid of ten years later. The western *līwān* has its central chamber flanked by a bay on each side raised above the level of the more distant bays of the western façade by a clerestory roof supported on an open colonnade, the central chamber itself having a second such clerestory carrying the main dome; the light thereby admitted to the central chamber has first to pass through carved stone screens, which are another typical feature of the Gudjarāt architecture. The side *riwāḳs* are all of the simple pillared construction without arches. This mosque, with Aḥmad Shāh's own tomb and a screened enclosure containing the tombs of the queens, form part of Aḥmad Shāh's careful town planning, all lying on a central royal way to his palace, on which stands a triple-arched triumphal gateway. All these buildings are in the same harmonious style, which was continued in Aḥmadābād under his immediate successors, Muḥammad and Kutb al-Dīn Aḥmad. Muḥammad's reign saw the beginning of building at Sarkhēdj [*q.v.*] with the mosque and tomb of Shaykh Aḥmad Khattū, the former a vast hypostyle hall with an enormous courtyard, the latter a large square building with arches on all sides filled with stone screens, the central tomb-chamber itself being further surrounded by pierced brass screens. This Gudjarāt practice of using perforated screens round a tomb-chamber is imitated in later periods in remoter parts of India. Two buildings of Kutb al-Dīn Aḥmad's time are in sharp contrast to other local architecture, the tomb of Daryā Khān in Aḥmadābād and Alif Khān's mosque at Dhōlkā; both are in brick, with arches throughout on heavy piers, with none of the usual Gudjarāt ornament, and seem to have been built by foreign workmen. They are isolated specimens and had no influence on the local style.

A third stage in Gudjarāt architecture appears in and after the time of Maḥmūd I Begŕā [*q.v.*], from the middle of the 9th/15th century. The mausoleum of Sayyid ʿUthmān in a village across the river from Aḥmadābād shows in the tomb a greater competence in handling the dome, which is carried by pillars in the form of a dodecagon, than previous examples; and the attached mosque, which is entirely of the open-faced trabeate variety, shows minarets for the first time in this type of mosque, placed at the two ends of the prayer-hall. The arcuate mosques of this time, those of Miyān Khān Čishtī of 860/1456 and Bībī Ačut Kūkī of 876/1472, show the minarets still centrally placed, flanking the middle bay of the prayer-hall—but by now rather over-elaborate and dominating the structure. An innovation is a type of oriel window, carried on brackets and fitted with a perforated stone screen, set in the *līwān* façade. The Shāh ʿĀlam mausoleum, of 880/1475, shows an increased use of the arch in tomb-buildings, again with outer and inner perforated screens. Some five years later the tomb of Kutb al-ʿĀlam, at Baŕwā, 10 km. to the south of Aḥmadābād, is not only arcuate throughout but of two storeys; but there are irregularities in the construction, as though the builders were still experimenting with the arch as a structural device. The defects have been remedied in the tomb of Sayyid Mubārak (889/1485) at Maḥmūdābād, where perhaps an architect from outside Gudjarāt was concerned, for the parapet and the clerestory roof bear *čhatrīs* similar to those of the Lōdī buildings in Dihlī; but the Gudjarātī feature of the pierced screens round the tomb-chamber continues. *Čhatrīs* also appear over the entrance porch of the Djāmiʿ Masdjid in Maḥmūd's new city at Čāmpānēr [*q.v.*]. This mosque is very similar in plan to the Djāmiʿ Masdjid built at Aḥmadābād a hundred years earlier, and has a similar double clerestory; but the decoration is richer, particularly externally: the rear wall of the *līwān* shows seven *miḥrāb* buttresses of design similar to the bases of the *mīnārs*, and the four corners bear straight octagonal towers resembling small *mīnārs* without balconies; the oriel windows carried on rich corbels add to the exterior richness, as do the smaller pierced screens in every opening. Other mosques in Čāmpānēr are of similar design but smaller and with only a small central clerestory; in particular the Nagīna Masdjid, which has panels of carved tracery at the bases of the *mīnārs* in the form of intertwining plants. Other works of the time of Maḥmūd include his palaces at Sarkhedj and his own tomb there by a lake—which has, in addition to various pavilions, a set of sluices carved with the same attention to detail as the *mīnārs* of Gudjarāt mosques—and other buildings at Aḥmadābād, of which the mosque of Muḥāfiẓ Khān, *fawdjdār* of the city, is the finest; this is an example of the arcuate style of mosque with the *mīnārs* at the ends of the *līwān*. Towards the end of Maḥmūd's long reign the tomb and mosque of Rānī Sabarī shows the usual decorative, almost jewel-like, ornament and tracery to its best advantage by being built on a smaller scale than most of the buildings so far considered; but here the mosque minarets have ceased to be functional, becoming merely slim tapering pinnacles. Other outstanding works, of a different class, are two step-wells (Gudj. *vāv*), described s.v. BĀʾOLĪ.

The common Aḥmadābād mosque style, with arcuate *līwān* and central *mīnārs*, is continued by buildings towards the close of the Gudjarāt sultanate, for example Rānī Rūpāwatī's mosque of *ca.* 921/1515. One late example, from 980/1572-3, the year before Akbar's conquest of Gudjarāt, is an exquisite mosque built by Shaykh Saʿīd al-Ḥabshī [see ḤABSHĪ], the tympana of the arches on the western side filled with stone traceries of filigree-like delicacy, representing palm-trees and creepers, the finest in the Muslim world, of which perhaps the blind traceries of the Nagīna Masdjid at Čāmpānēr are the immediate ancestor.

After the Mughal conquest it would appear that many of the skilled craftsmen were taken by Akbar

to north India; certainly there are many features of Gudjarātī workmanship in Akbar's Fatḥpur Sīkrī (see below).

v. — Mālwā. — In contrast to Gudjarāt, the contiguous province of Mālwā was comparatively uninfluenced by a prior Hindū artistic tradition. There were certainly temples, for the earliest buildings, at the end of the 8th/14th and beginning of the 9th/15th centuries, are built of temple spoil. These are three mosques at Dhār [*q.v.*], all of trabeate construction; but the portico of the Djāmiʿ Masdjid shows an interesting attempt to interpose pointed arches between the columns, without any structural significance. The two earliest mosques at Māndū [*q.v.*], Dilāwar Khān's of 808/1405-6 and Malik Mughīth's of 835/1432, have similar *līwān*s, but the latter is raised on a high basement in which there is a range of arched cells; here the pillars of the *līwān* have some pointed arches interposed, as at Dhār, but also with the resulting spandrels filled in with plate tracery. The *līwān* is domed, but the phase of transition is crudely effected by lintels and their octagon bases are irregular. There are two domed turrets at the angles of the east (entrance) walls; these, and the shape of the *līwān* domes, recall those of Fīrūz Tughluḳ's time in Dihlī. This second mosque is of the time of Hūshang Shāh [*q.v.*], whose own complex of buildings dominates the centre of Māndū: the Djāmiʿ Masdjid, the *madrasa* (later nicknamed Ashrafī Maḥall), and his own tomb. The mosque is built on a tall (4.5 m.) plinth, with arched cells on either side of the entrance porch; these and a few open arches, at courtyard level, perhaps originally filled with screens, and two restrained stringcourses, are the only external decoration, except for a band of merlon-like decoration, of a type already noticed at Dihlī, above the *čhadjdjā*. The *līwān* and side aisles are built entirely of true arches on plain slender columns. The *miḥrāb* arches show the spearhead fringe, recalling the Dihlī Khaldjī style, and the *minbar* is covered by a large stone canopy of obvious Hindū temple design. Hūshang's tomb, a little earlier (the mosque was completed by Maḥmūd I in 858/1454), is a square domed structure of white marble throughout (the earliest building to be so treated) except for sparing ornament of deep blue glazed tiles, standing in a large enclosure. At each corner of the dome is an engaged domed turret, a common feature in the Māndū tombs and already present over the entrance to the Djāmiʿ Masdjid. The domes are characteristic of Mālwā—a tall cylindrical drum carries the haunch without any intervening structure or decoration, while above the haunch the dome may be developed as a hemisphere or smaller spherical section or as a shallow cone. Later buildings at the capital (described s.v. MĀNḌŪ) become elegant, and in the final stages even meretricious: palaces, pavilions, fountains and water-channels, kiosks and balconies. The open *čhatrī* appears, and some of the domes are ribbed. In one building, known now as Gadā Shāh's house, there are the remains of some wall-paintings.

A northern manifestation of the Mālwā style is found at Čanderī [*q.v.*], where the Djāmiʿ Masdjid shows the characteristic stilted domes; the convoluted brackets supporting the *čhadjdjā* are a somewhat exaggerated form of a type seen in Māndū as early as Hūshang's tomb, a form which becomes exaggerated and elaborated further in Fatḥpur Sīkrī (see below).

The general characteristics of the Mālwā style are, in addition to the stilted dome, the fine masonry of walls and doors, very restrained ornament, and the frequent use of engaged domical turrets round a central dome. The *mīnār*, so prominent in the neighbouring provinces of Gudjarāt and Khāndēsh, is not used.

vi. — Khāndēsh. — This small province had a building art with a character of its own, although the mixed origins of that art are to be found in the neighbouring provinces of Gudjarāt, Mālwā, and the Deccan. The Fārūḳī [*q.v.*] khāns ruled first from Thālnēr [*q.v.*] and later from Burhānpur [*q.v.*], and their buildings are mostly at these two places and at Asīrgaṙh and Čikaldā. The Thālnēr tombs are not dissimilar to the typical square Māndū mausolea in general plan, but the dome is usually carried on a separate octagonal drum, and over the wide *čhadjdjā* there is a high decorated parapet; the door and window openings are better spaced than in the Māndū examples, and there is more external decoration. An octagonal tomb is covered with fine basso-relievo carving in geometric patterns, and its arches bear on the intrados the spearhead fringe. All these tombs date from the first half of the 9th/15th century. Little remains of the palace at Thālnēr and the Bādshāhī Ḳilʿa at Burhānpur, and the next significant buildings are two late 10th/16th century mosques at Burhānpur. The Djāmiʿ mosque has an arcaded façade with *mīnār*s at the ends, while the Bībī kī masdjid has two heavy *mīnār*s flanking the central arch as in the Čāmpānēr mosque in Gudjarāt; the design of these *mīnār*s, however, is original: from octagonal bases they pass to a hexadecagon, above which is a circular storey with oriel windows facing each cardinal point, with a hemispherical dome forming a fourth stage; balconies on heavy brackets separate these four stages. The Djāmiʿ Masdjid at Asīrgaṙh, although built after the Mughal conquest, perpetuates the Gudjarātī tradition. At Čikaldā an enormous gateway (Baṙā Darwāza) has an arch of the wide Gulbargā style (see below) but is decorated with the lion-and-elephant motif of the Gond kings (cf. similar devices at Gāwilgaṙh [*q.v.*]).

vii. — The Bahmanī sultanate. — The principal phases of Bahmanī architecture are to be found at Gulbargā and Bīdar [*qq.v.*], although the kingdom was early provided with a powerful system of fortifications and many of the Bahmanī strongholds contain important buildings; for these see especially DAWLATĀBĀD, GĀWILGAṘH, ILIČPUR, MĀHŪR, MUḌGAL, NALDRUG, NARNĀLĀ, PARENDĀ, RĀYČŪR, and WARANGAL.

The Djāmiʿ Masdjid in the old citadel of Gulbargā, although of a type not reproduced later, since its *ṣaḥn* is completely roofed over, shows nevertheless some features that were to characterize Bahmanī architecture and to spread some of the styles of the successor sultanates. The arches of the outer arcade are specially noteworthy: of obtuse angle at the apex, of wide span, and springing from very low imposts. An earlier mosque in the city is a mere compilation of temple spoil, as are the two early mosques at Bīdjāpur [*q.v.*] built by the Bahmanī governors. The earliest group of tombs at Gulbargā, all of the second half of the 8th/14th century, are similar to contemporary examples at Dihlī with weak semi-circular domes and battering walls. A later group of tombs, the Haft Gunbad, shows similar sloping walls and domes, but with a refinement of decoration. The outer faces are divided into two apparent storeys with blind arches in each, these arches being of the type which comes to typify the

Bahmanī style, stilted above the haunch with straight tangential projections to the apex. Some of these tombs are double— *i.e.*, there are two tomb-chambers with continuous walls but separate domes, standing on a common plinth—and show a few features of Hindū decoration. The tomb of Gīsū Darāz [*q.v.*], built after the transfer of the court to Bīdar, is a single square building with upright sides but otherwise similar to the other Gulbargā tombs. At Bīdar the early Tug͟hluḳ influence has been added to by features of Persian inspiration: thus the early royal palace, the Tak͟ht Maḥall, while retaining the Bahmanī arch, was profusely decorated with encaustic tiles, including a tiger-and-rising-sun device. The foreign element is most pronounced in the *madrasa* of Maḥmūd Gāwān [*q.v.*] of 877/1472, which has a prototype in the *madrasa* of K͟hargird in K͟hurāsān; its internal façades surrounding a central courtyard show a single arch of the height of the building on each of the three-storeyed sides, the Persian *aywān* pattern. The circular *mīnār* is also of a Persian pattern, as is a detached *mīnār* built *ca.* 840/1437 at Dawlatābād. The entire surface of the *madrasa* is covered with multicoloured tiles. The royal tombs at Bīdar, ranging over a period of some 80 years from the first example of 839/1436, show the progress of the Bahmanī style. The stilted arches are in general retained, although one tomb unusually shows arches struck from four centres rather like the Mug͟hal arch of north India or the English Tudor arch. Some of the tile-work of these tombs is superb, and includes some historically and hagiographically important inscriptions. The domes progress from a hemispherical type stilted over an octagonal drum to a type which, being greater than a hemisphere, shows a tendency towards the bulbous pattern which develops in some of the successor sultanates, and the parapets progress from a line of shield-shaped merlons to a line of stone trefoils. All these tombs have a single entrance doorway, the other sides being either solid or closed by screens, with *miḥrāb*s in the western walls; none of them has turrets or *čhatrī*s in addition to the central dome.

viii. — Barīd S͟hāhī, ʿImād S͟hāhī, Niẓām S͟hāhī. — The Niẓām S͟hāhīs [*q.v.*] of Aḥmadnagar, although independent there from the beginning of the 9th/15th century until the Mug͟hal conquest, evolved no distinctive architectural style of their own but perpetuated something like the middle Bahmanī style with decorative borrowings from Hindū art (and later from the style of Bīd͟jāpur); such of these buildings as are worthy of note are discussed s.v. NIẒĀM S͟HĀHĪS. Nor was the ʿImād S͟hāhī style of Barār significantly different from its Bahmanī parent except for the use in the mosque façades of a pylon at each end of the *līwān* bearing a square *čhatrī* with deep eaves, heavy brackets, and stone screens in each side; see further GĀWILGAṚH, also ILIČPUR, NARNĀLĀ. The buildings of the Barīd S͟hāhīs, however, the successors of the Bahmanīs in Bīdar, do show some notable independent characteristics. The typical Bahmanī stilted arch continues, but the dome becomes even more bulbous, usually three-quarters of a sphere. A frequent tomb-pattern is a square domed cell with an open arch on all four faces; thus, since there is no integral *miḥrāb*, a small mosque is built beside the tomb. The trefoil parapet is commonly used. A common feature of the decoration is a chain-and-pendant motif in plaster, but good tile-work is still a frequent ornament. The latest buildings tend to become over-ornate, and the influence of the Hindū mason becomes more apparent.

ix. — ʿĀdil S͟hāhī. — The style of the ʿĀdil S͟hāhī buildings at Bīd͟jāpur [*q.v.*] is the most developed and the most original of the Deccan sultanates. The earliest dated ʿĀdil S͟hāhī building, a mosque of 918/1512-3, already shows features which characterize this style throughout: the base of the dome surrounded by a ring of vertical foliations, so that the dome resembles a bud surrounded by petals; and a three-arched façade in which the central arch is much wider than the flanking arches. Another early mosque reveals another Bīd͟jāpur speciality in its arch spandrels, a medallion supported by a bracket-shaped device, moulded in plaster. The works executed before the death of ʿAlī I in 987/1579 are mostly in rubble covered with dense and durable plaster, and include the city walls and gates (most of these with the typical wide centre arch flanked by two narrow ones), many palaces and audience halls, and some notable mosques. One of these, in memory of the *sayyid* ʿAlī S͟hahīd Pīr, which unusually has a transverse wagon-vaulted roof, shows the (equal) façade arches surrounded by an outer band of cusping, remarkably similar to that of the recently-discovered D͟jurd͟jīr mosque in Iṣfahān [*q.v.*]. This device recurs in the other buildings, for example the D͟jāmiʿ Masd͟jid of 985/1576, where it decorates only the central arch of seven, which also bears the medallion-and-bracket device; the great dome of this mosque is supported by an original system of vaulting by which two intersecting squares, both oblique to the square chamber underneath, form an octagon; this system is later used to great effect in the colossal mausoleum of Muḥammad ʿĀdil S͟hāh. This mosque also shows a feature made much of by later Bīd͟jāpur builders, an elegant exterior. The domes in this early phase are hemispherical; *mīnār*s are not used, although bases for them exist in the D͟jāmiʿ Masd͟jid; small ornamental pinnacles (*guldasta*), however, are freely used at angles of the parapets and over *miḥrāb* buttresses, of a type found on some of the Bahmanī tombs at Bīdar.

After 987/1579, under Ibrāhīm II and later sultans, fine sculptured stonework replaces the earlier rubble-and-plaster. The dome becomes a three-quarter sphere; the cornices and eaves are supported by intricate carved brackets, often with the added decoration of hanging stone chains and locket-like pendants (is there a connexion between these and the chain-and-pendant plaster device of the Barīd S͟hāhīs?), and the parapets become delicate lace-like borders. But many of the earlier features persist: the band of foliations at the base of the dome, the occasional cusping of a central arch, the medallion-and-bracket motif, now often carved in stone, the characteristic wide central and narrow flanking arches, and the love of vertical projections above the sky-line; but these have often become pseudo-*mīnār*s, in that they appear over solid bases and rise at the sides of mosque façades where in other styles true *mīnār*s are found, although they are slender and solid and hence can only be decorative; they frequently carry miniature domes, and fascicular clusters of minuscule minarets along their shafts, in each case with the petal-like foliation. The enormous mausoleum of Muḥammad (d. 1067/1656), known as the Gol Gunbad͟h, reverts to the hemispherical dome, and has a large staged octagonal turret of the height of the building at each corner; but the prototype of these is the small octagonal pinnacles found in the earliest buildings. In tombs of the closing years of the dynasty, there is a tendency to exaggerate an intermediate stage, a square storey between the

parapet of the tomb-chamber and the drum of the dome, so that in extreme cases the globular dome appears almost separated from the ground floor. The best of the vast number of buildings at the capital are described s.v. BIDJĀPUR; but some Bidjāpur characteristics are encountered far afield, for example in two mosques standing outside Naldrug [*q.v.*] fort, and at the great entrance arch to the *dargāh* of Gīsū Darāz at Gulbargā.

x. — Ḳuṭb Shāhī. — The style of the Ḳuṭb Shāhī buildings, first in Golkonḍā and later in the city of Ḥaydarābād [*qq.v.*], is distinctive more on account of its luxuriant ornament than any originality in structure. The principal building material is stone, usually grey granite or trapstone, but rather than being carved this is ornamented with stucco and encaustic tiles. The tombs of the dynasty at Golkonḍā, and the mosques and gateways there and at Ḥaydarābād, show the comparative fixedness of the style over a century and a half from the time of Sulṭān Ḳulī's independence in 924/1518. The tombs are almost all square in shape and constructionally resemble the Bahmanī tombs in Bīdar; the earlier ones are single-storeyed, and only once is the outer face divided into two apparent floors by an upper row of blind arches; some of the later tombs have two storeys, the lower one forming a projecting arcade around the building. The domes are all bulbous, usually a three-quarter sphere, and are foliated at their bases in a similar way to the Bidjāpur domes; but the later buildings develop this into a double or triple band of foliation. The Ḳuṭb Shāhī buildings emphasize especially the upper parts of walls between the eaves and the parapet, and the rich ornament here is sometimes projected out from the façade to form a balcony carried on brackets. The parapets are crenellated with trefoil-shaped merlons, as in the later Bahmanī and Barīd Shāhī styles, and are frequently interrupted by small *guldastas*; at the corners these may be replaced by small *mīnārs*. The Ḳuṭb Shāhī *mīnār*, whether decorative or functional, has its shaft encircled one or more times with an arcaded gallery, and bears a miniature dome with the characteristic foliations. Designs of Hindū provenance are not infrequent in the ornament, especially in the later periods; but these were accepted in the earliest period, as they occurred freely in the Kākatīya work taken over in the old Bahmanī province of Warangal—for example, in the Bālā Ḥiṣār *darwāza* at Golkonḍā.

xi. — Kashmīr. — The architecture of this region is remarkably different from that of all other countries of Islam, as it is essentially in wood: great logs of *dewdār* (*Cedrus deodara*) laid horizontally and joined by crude carpentry, and used also as piers to support any superstructure; the interstices between courses may be filled with brickwork or plaster covered with glazed tile. There is of course a constant fire risk, and many buildings have undergone repeated rebuilding, usually, however, reproducing the form of the original structure. The typical Kashmīrī Muslim building is the tomb-shrine (*ziyārat*) of a local saint: a cubical ground floor (sometimes set on a stone or brick plinth), covered by a pyramidal roof which may be in several tiers, topped by a long and slender wooden *flèche*. The same type with flanking courtyards may be used for mosque buildings, with the addition of a square open pavilion between roof and *flèche* to form a platform for the *mu'adhdhin* (the minaret is not used). Such a pattern is used in the mosque of Shāh Hamadān in Shrīnagar, a two-storeyed building on the plinth of a Hindū temple, with projecting wooden balconies and the eaves supported on a log cornice; the pyramidal tiered roof is covered with an impervious layer of birch-bark and then with turves planted liberally with irises and tulips, above which rise the *ma'dhīna* platform and the *flèche*. The Djāmiʿ Masdjid in Shrīnagar, dating from the end of the 8th/14th century, but three times rebuilt, is the most ambitious example of pre-Mughal Kashmīrī architecture: a vast square courtyard is surrounded on each side by a wide arched wing which carries a central *ziyārat*-like structure, that on the west having a tall central brick arch. Much of the lower walling is in brick, but the surrounding colonnades are composed entirely of *dewdār* trunks on stone plinths. Some fine stone tombs of the 9th/15th century exist, constructed from temple spoil, but domed and covered with glazed tiles. For these, and for later Mughal work in Kashmīr, see KASHMĪR and SHRĪNAGAR.

xii. — Sind. — The building style of Sind, while not so egregious as that of Kashmīr, stands apart from other provincial Indo-Muslim styles since it has many affinities with the building art of eastern Persia, and where Indian motifs appear they often seem to be used with neither organization nor fluency in their use. They are represented especially by the remaining tombs at Thaṭṭhā [*q.v.*], where some building stone was available, although the characteristic medium of the country was brick. The stonework of one of the earliest remaining tombs, that of Djām Niẓām al-Dīn (d. 915/1509), is in stone which seems to have been carved by Hindū workmen who were not good enough to find work in Gudjarāt; perhaps they came across the Rādjāstān desert with only the memory of the designs, or were the local employees of the Sammās, recent converts to Islam but with rather faded memories of a dilute Hinduism. The carved Arabic inscriptions are in excellent *thulth*, incongruously set next to bandeaux carved with the geese of Hindū mythology. Other stone tombs are ornamented with shallow and often curiously discontinuous geometrical carving. The brick tombs certainly show a great familiarity with the material; solid dense bricks, after all, were known in Sind at the time of the prehistoric Mohendjodāro. They are built on stone foundations, to counteract the destroying effects of the high salinity of the Thaṭṭhā soil, and their surfaces are covered with the tilework for which Sind is renowned. Common tilework patterns include dark blue rectangles outlined with white, to give the effect of an imitation mortar-joint; the tiles themselves are of hand-baked terracotta, very heavy, and the glazes are generally white, light-blue, turquoise, and dark blue, very occasionally also yellow. Generally the design is continuously worked in multicoloured tiles, but occasionally very small tiles, like tesserae, each of one colour, are built up to form a mosaic. The design of the tombs, especially their domes, and the few remaining mosques, is essentially Persian rather than Indian, although this may be due to early Mughal influence. Certainly some of the Thaṭṭhā buildings of later times revert to a trabeate style in sandstone, such as the mausoleum of ʿĪsā Djān Tarkhān the younger, d. 1054/1644, which recalls the buildings of Fatḥpur Sīkrī (see below) and also is the only building in which the intrados of the arch is embellished with a spearhead fringe.

The Mughal schools.

Shortly after Bābur's arrival in India in 932/1526 he ordered buildings to be erected; he was unimpressed with Indian edifices, and disgusted with the

lack of the formal gardens to which he was accustomed. Most of his works were, therefore, secular, consisting of terraced gardens with pavilions and summer houses, hardly anything of which has survived. Two of his mosques exist, one in Pānīpat and one in Sambhal: works large but utterly undistinguished. Little more can be said about the buildings of Humāyūn's reign (except those works of a previous period now completed, described above); but Humāyūn's importance is in the craft traditions imported with him after his exile rather than the ideas of his own.

In point of time, the Sūr sultan Shēr Shāh [*q.v.*] followed Humāyūn although his buildings are a continuation of pre-Mughal styles. There is, indeed, little characteristic architecture remaining of the first part of Humāyūn's reign from which a comparison might be made, since Shēr Shāh systematically destroyed Humāyūn's city of Dihlī called Dīnpanāh. In his tombs at Sahsarām [*q.v.*] in Bihār, Shēr Shāh perfected the octagonal pattern, and may indeed have planned these buildings in the decade before he came to power. The earliest (*ca.* 941/1535) of these, the tomb of his father Ḥasan Khān, is experimental: there is no plinth, and the drum is a bare wall without fenestration or *čhatrī*s. Unlike the Lōdī examples, the Sahsarām tombs have vertical, not battered, walls. The next tomb, that of Shēr Shāh himself, is amplified not only from this but also from the Dihlī models; it is in five stages, rising to 50 m., and set in the middle of an artificial lake connected to the shore by a causeway to which access is given by a domed guardroom; the lowest stage is a square plinth rising out of the water, the next a vast square platform with a *čhatrī* at each corner, on which stands the octagonal tomb chamber in three further stages, the two lower with *čhatrī*s at the corners. The roof is crowned with a massive lotus finial. The tomb of his successor Islām Shāh also stands within a lake, but smaller; the better preservation of its causeway shows this to have been constructed on a cantilever principle, each pier with projecting balconies and carrying a *čhatrī*. In Nārnawl Shēr Shāh built the tomb of his grandfather Ibrāhīm Khān, a square building not unlike the square Lōdī tombs, but finished in better stone and with a shallower dome.

After Shēr Shāh's accession in 947/1540 he started building at Dihlī, fortifying first the Purānā Ḳilʿa and adding an exquisite mosque, with the corner turrets already noticed in the Mōṭh kī Masdjid and the Djamālī mosque, and with a refined form of the recessed arch: a lower arch set back from a taller one. The arches are struck from four centres, and the spearhead fringe is again in evidence. The stonework is very finely jointed, enriched with fillets of white marble, with fine coloured inlay patterns of a type similar to that later found in Akbar's mosque at Fatḥpur Sīkrī. The interior decoration is similar to that of the Mōṭh kī Masdjid, but with every part refined. Other important building products of Shēr Shār were at Rōhtāsgaṛh [*q.v.*] in Bihār [*q.v.*] and his new fortress of Rōhtās [*q.v.*] in the Pandjāb, as well as many single buildings at other towns.

The first major building to be erected during Mughal rule is Humāyūn's mausoleum, not begun until 976/1568-9, and erected, not in his lifetime after the usual practice, but by his widow. The cenotaph-chamber, which stands on a vast high plinth, is essentially square in plan, with each corner of the square chamfered off and with a recessed central bay in each side. Each of these bays contains a deep arch, as high as the walls on either side of the bay, constructed as a half-dome, and smaller arches of varied height and levels fill the remaining façades of each wall. The central chamber is surmounted by a tall drum, which carries a high double dome, with a *čhatrī* of Lōdī type, open and on slender pillars, at each corner, and two smaller square *čhatrī*s over each central arch. The dome is slightly curved at its base, but its general shape echoes that of the arches below; the arches introduce a new shape to north India, as their curves are struck from four centres. The building is in red sandstone with white and grey marble inlay (sparing use of other colours as well), executed in star-shaped designs at the drum below the dome, well inlaid but not polished *in situ*: this inlay work is to be classified as *opus sectile* rather than as the finely polished marquetry-like *pietra dura* of later Mughal periods. A smaller tomb of not dissimilar design is that of Akbar's foster-father, Atga Khān, at Nizamuddin; but Humāyūn's tomb gains enormously in effect not only by the vast plinth (which contains the true tomb immediately below the cenotaph) but by the vaster garden in which it is set—a great square, subdivided into squares and squares again by paths, flower-beds, and parterres. It marks immediately the advent of a new style in India, and is of great importance as the immediate Indian prototype for other monumental mausolea. A fuller description, with plan, is given s.v. DIHLĪ. See also BŪSTĀN.

Akbar's building projects, many and varied, reflect something of the man. They start at Āgrā [*q.v.*] fort, on the trace of the previous Lōdī fort, with the gateways: a half-octagon flanking tower on each side of the four-centred arch of the gate, the towers decorated with blind arches below and open arches on the upper storey, with *čhatrī*s over towers and gateway; internally, the arch carried a spearhead fringe of a more elaborate and conventionalized form than that of previous reigns; the whole is decorated in *opus sectile*. Palaces inside the fort are in much the same style, and include projecting balconies supported on richly carved corbels, with much beam-and-bracket workmanship; some of the brackets, in sandstone, seem to have been borrowed directly from wood-building techniques. Similar buildings were commenced, in very similar styles, at Lāhawr and, on a smaller scale, at Allāhābād. The new capital, at Fatḥpur Sīkrī [*q.v.*], is a sandstone city. The palaces are for the most part built in the trabeate style, with shallow domes and heavy eaves recalling Lōdī work, occasional arches with the spearhead fringe, carved brackets resembling those of Rādjāsthān temples, and superb carving. There is some inlaid *opus sectile* work in white marble, especially on the mosque; the inside of the mosque, however, is of finely polished marble mosaic inlay, the first attempt towards the technique of *pietra dura*. Some buildings in the city, such as the Dīwān-i khāṣṣ, with an extraordinary bracketed central column supporting a platform in the middle of the single room, and the Pānč maḥall, a five-storeyed pyramidal open pavilion, are unique structures, part of Akbar's personal whimsy, with no significance in the development of the Mughal style; but one of interest and archaeological significance is the tomb of Salīm Čishtī, after 979/1571, a square chamber with an outer verandah which is screened with marble lattices on the outside: a feature characteristic not of north India at all, but familiar in the tombs of Gudjarāt (see above). The eaves are supported on convoluted brackets which have a prototype in

Čanderī [*q.v.*]. Another Gudjarāt feature, apparently, is the reservoir which lies beneath the *ṣaḥn* of the great mosque (on these features see J. Burton-Page, ***Fatehpur Sikri***, in R. E. Mortimer Wheeler (ed.), ***Splendours of the East***, London 1965, 143-53).

Of Akbar's reign in Dihlī is the last of the octagonal tombs, that of Adham Khān, of 969/1562; it is without the wide *čhadjdjā* which characterizes the earlier octagonal tombs, and, being also without *čhatrīs*, looks curiously insipid. Of about the same time is the Masdjid Khayr al-Manāzil, with a four-centred arched façade, an imposing gateway with ***opus sectile*** decoration, and corner turrets at the rear of the *līwān* similar to those on the Lōdī Moth kī Masdjid and the Sūrī mosque in the Purānā ḳilʿa. At Djawnpur [*q.v.*] is a fine bridge, with screened pavilions over each pier, across the river Gomtī, and at Gwāliyar is the tomb of Muḥammad Ghawth, which has the typical Gudjarātī screened arcades. For provincial Mughal architecture in Bengal and Gudjarāt, see MUGHALS.

Djahāngīr's interest was more in miniature painting [see TAṢWĪR] than in architecture, and there are few examples of the buildings of his reign; although it is known that he extended Akbar's buildings at Āgrā and Lāhawr forts, beginning at the latter a "picture wall" in mosaic tiles showing hunting, polo and court scenes, and completed the building of Akbar's tomb: a four-storeyed pyramidal building, over-ornamented with *čhatrīs*, with a large half-dome archway in each face, ***opus sectile*** ornament, and an open square with a cenotaph, all in marble, at the top, standing in a vast *čār-bāgh* garden. The entrance gateway is imposing, with a tall white marble *mīnār* at each corner—the first appearance of this feature in the north. The two most important buildings of Djahāngīr's reign are the tomb at Āgrā, begun 1031/1622, of his father-in-law Mirzā Ghiyāth Beg entitled Iʿtimād al-Dawla, in marble inlaid in Persian motifs (cypresses, vines, flowers, vases, wine-cups) in true *pietra dura*, with four short corner towers, and fine marble tracery screens; and the tomb of ʿAbd al-Raḥīm Khān-i Khānān [*q.v.*], similar to that of Humāyūn's tomb but without the corner chambers. The former tomb heralds the decorative techniques of the Tādj Maḥall; the latter is the immediate prototype of its design. For other buildings of Djahāngīr see PALAMAʾŪ.

Shāhdjahān's buildings show the Mughal style at its height, although the earliest, the completion by Nūrdjahān of Djahāngīr's tomb at Shāhdara, near Lāhawr, continues the ***opus sectile*** tradition; it is of only a single storey, with a lofty *mīnār* at each corner, again in an immense garden; it is more important for its decoration than for its structure, not only on the surface of the building, but in the *pietra dura* of the cenotaph, in white marble, calligraphy (the ninety-nine names of God) appearing in delicate *pietra dura* here for the first time. Shāhdjahān himself replanned the buildings at Āgrā and Lāhawr forts, replacing some of the earlier sandstone structures with marble ones; these are characterized by engrailed arches, tapering supporting columns and *pietra dura* ornament, especially on walls and at the feet of columns and their plinths; and the marble was delicately channelled and carved. There appear at Āgrā, for the first time in north India, two oblong pavilions with a Bengali-style curved cornice to the roof; and at Lāhawr fort also is a pavilion in the style of a Bengali *čawčalā* hut. These works were perhaps a preliminary essay for Shāhdjahān's own grandiose fort, the Lāl ḳilʿa (from its red sandstone enclosure walls; see BURDJ, iii) in his new city at Dihlī [*q.v.*] called Shāhdjahānābād. The palace buildings are distinguished for their symmetrical planning along an ornamental marble canal, with chutes and cascades; in structure they are similar to those at Āgrā, except that the columns tend to be thicker, and the *pietra dura* work and the marble carving are of the highest quality. Before the fort was begun, however, the construction of the mausoleum of his queen, Mumtāz-i Maḥall, had been started. This building, known to everyone by its corrupted title of Tādj Maḥall [*q.v.*], is in the village now called Tādjgandj outside Āgrā, on the opposite bank to the fort: a complex of buildings with a square mausoleum with a tall *mīnār* at each corner of its plinth, and a red sandstone mosque and an identical *djawāb*, used as a *mihmān-khāna*, flanking it on a platform at the river end of the great oblong garden; the garden divided by paths and parterres, with central crossing water-channels, and an imposing gateway. The entire mausoleum, plinth, and the four *mīnārs* are worked in white marble with *pietra dura* in semi-precious stones, and there is a tall white marble dome, surrounded by four marble *čhatrīs*; the dome is slightly bulbous. This is the perfect culmination of the tomb-type starting with Humāyūn's tomb of a century earlier, through ʿAbd al-Raḥīm Khān-i Khānān's tomb, with decoration of the type started in the tomb of Iʿtimād al-Dawla and perfected at the forts of Āgrā, Lāhawr and Shāhdjahānābād. In Dihlī the plans for the city were completed with the Djāmiʿ Masdjid, 1057-9/1648-50; the *līwān*, in red sandstone with white marbles, has a large central half-dome arch, with five smaller flanking arches on each side, all engrailed; two *mīnārs* at the courtyard ends of the *līwān*; and three bulbous marble domes. A similar mosque, much smaller, was built in Āgrā at about the same time for his daughter Djahān Ārā [*q.v.*]; here the arches revert to the plain (not engrailed) four-centred type. Another important building of Shāhdjahān's reign, of a different type, is the mosque of Wazīr Khān in Lāhawr, of about 1044/1634; here the ornament is more akin to the arts developed in Persia, consisting of true mosaic tile decoration on the external surfaces, floral, calligraphic, geometrical, especially with the cypress (*sarw*) and the plane (*činār*) (for the nature and technique of this art see KHAZAF); the internal surfaces are painted in tempera and cut-plaster [see DJIṢṢ]. Other buildings of Shāhdjahān are at Adjmēr (two marble lakeside pavilions) and Kashmīr (terraces in the Shālimār gardens, laid out by Djahāngīr).

In the reign of Awrangzīb the building art began to lose its vitality, although the Mōtī (pearl) Masdjid he added to the fort of Shāhdjahānābād, *ca.* 1070/1660, retains the delicacy of earlier craftsmanship (the too-large bulbous domes are a later addition). The effeteness is starting to be apparent in the great Bādshāhī Masdjid of *ca.* 1085/1674 added to the west of Lāhawr fort, with four tall *mīnārs* at the corners of the courtyard, four short ones at the corners of the *līwān*; the three domes are a little over-bulbous, and the *līwān* façade presents too many blank spaces. A few years later the tomb of Awrangzīb's wife, Rābiʿa Dawrānī, was built at Awrangābād; it stands in a walled garden, which is its best feature; for it is a half-scale copy of the Tādj Māḥall, with a thin engrailed central arch, bulbous dome, disproportionately heavy *mīnārs*, a cramped skyline with insufficient room for the corner *čhatrīs*, attenuated *guldastas*, which combine to give it an air

of assiduous mediocrity. Awrangzīb's mosques at Banāras and Mathurā, on the other hand, are orthodox and well-proportioned, so it must be assumed that he played no personal part in their construction. A far better tomb building is the last of the great square mausolea, the tomb of the *wazīr* Ṣafdar Djang [*q.v.*] at Dihlī (d. 1166/1753), of good proportions, even if the dome is a little too bulbous, in finely worked fawn sandstone, and in the last great *čārbāgh* garden.

The Nawwābs of Awadh, in their capital of Lucknow, became the artistic successors to the Mughals. Their earlier buildings are similar to the Awrangzībī buildings, large and impressive, but over-decorated; their later ones, produced in a sort of bastard château style under the influence of a French adventurer with magnificent vision and no taste, mix up Corinthian capitals, fluted domes, compositions of round romanesque arches, ogee arcades, and odd ideas gathered from the Mughals, Ancient Greeks, and the European "Palladian" school. The Sikh style of the Pandjāb is at least of consistent late-Mughal extraction, but tends to over-proliferate *čhatrīs* and the fluted dome, and to be too partial to the Bengali cornice. Some of the Rādjpūt palaces have preserved better elements of late Mughal style, especially at Amber and Djaypur, and have combined it with an excellent masonry technique.

In the south a strange hybrid Islamo-Vidjayanagara style was evolved at Hampī [*q.v.*], and later scions of the Vidjayanagara house, after the dissolution of their empire, remembered some elements in their palace of Čandragiri. The few buildings of the Mahisur sultanate of Ḥaydar ʿAlī and his son Tipū are less bizarre, particularly the tomb of the dynasty at Shrirangapaṭṭanam [*q.v.*]. Other local Muslim styles are more aberrant: for example, the 19th century tombs at Djūnāgaṛh, which appear to translate the fancy knobs of a Victorian bedstead into stone, not without skill.

Bibliography: There is as yet no single comprehensive work of professional standard on Islamic building in India, nor can there be until the historical development of certain aspects of structure and decoration is fully worked out. Information is still most inadequate on foundations, coursework and bonding in masonry and brickwork, and the methods of setting out; on plasterwork, incised, moulded, fresco-painted and polished; on ceramic decoration and its relation with some types of plasterwork; on fenestration; on woodwork, carved or inlaid; on decorative techniques involving polished stone: *opus sectile* and *pietra dura*; and on the development of such features as kiosks (*čhatrīs*), merlons and parapets, *zanāna*-galleries, even on major structural works such as bridges, riparian buildings such as landing-stages and *ghāṭs*, and domestic architecture. A "grammar of ornament" is also an urgent necessity. There are, it is true, many brilliant works in which most of these points are dealt with over a short period or in a limited region; but they are outnumbered by the lacunae. Of general works the most comprehensive is Percy Brown, *Indian architecture* (*Islamic period*), Bombay n.d. (1943?); good shorter accounts are H. Goetz, *Arte dell' India musulmana e correnti moderne*, in *Le civiltà dell' Oriente*, Rome 1962, iv, 780-882; Y. D. Sharma, *Islamic monuments*, in A. Ghosh (ed.), *Archaeological remains*: *monuments and museums*, XXVI International Congress of Orientalists, Delhi 1964, ii, 241-328; M. S. Briggs, *Muslim architecture in India*, in G. T. Garratt (ed.), *The legacy of India*, Oxford 1937, 223-55; J. H. Marshall, *The monuments of Muslim India*, in *Cambridge history of India*, Cambridge 1937, iii, 568-640; Percy Brown, *Monuments of the Mughal period*, *ibid.*, iv, 523-76; for a general account with particular reference to Pakistan: R. E. Mortimer Wheeler, *Five thousand years of Pakistan*, London 1950, specially 61-128; idem, *Splendours of the east*, London 1965, 68-71. A tendentious account, written in support of the untenable thesis that all Indian art springs directly from Indian roots, by E. B. Havell, *Indian architecture*; *its psychology, structure and history from the first Muhammadan invasion* ..., London 1913. Older works: J. Ferguson, *History of Indian and eastern architecture*, London 1876; revised ed. by J. Burgess and R. P. Spiers, 2 vols., London 1910 (esp. ii, 186-335); V. A. Smith, *History of fine art in India and Ceylon* ..., Oxford 1911, 391-420. There is much material available on local aspects of Muslim building, especially in A. Cunningham, *Archaeological survey of India*, xxiii vols., Simla and Calcutta 1873-87; various authors, especially J. Burgess, in *Archaeological Survey of western India*, Old series, ii, iii, iv, 1875; vi, 1877; viii, 1879; xi 1885; xi a, 1890; *Archaeological survey of India, New Imperial series* (combining New Series of some provincial surveys, from 1876); also Progress reports of circles of the Survey, from 1890; after 1902-3 superseded by *Archaeological Survey of India Annual Reports*, supplemented by monographs entitled *Memoirs of the archaeological survey of India*. Detailed lists of contents of all volumes relevant to Islam in K. A. C. Creswell, *Bibliography of the architecture, arts and crafts of Islam*, Cairo 1961, *passim*; individual articles after 1905 listed also in Pearson. Since Indian independence many articles in *Ancient India*, from 1946. Some articles of archaeological importance in *EIM*. Critical bibliography, before 1948 only, in *Annual bibliography of Indian archaeology*, i-xv, of the Kern Institute, Leiden.

(J. BURTON-PAGE)

viii. — MUSIC

The first detailed account of secular Indian music occurs in the *Nāṭyashāstra* by Bharata, which has been dated variously from the 3rd century B.C. to the 5th century A.D. Although this work is primarily devoted to drama and stagecraft, music is an important topic in it. Musical theory had, by this time, already reached a high state of development and is described in considerable detail. The melodic system is based on modes (*djāti*) which are constructed on heptatonic series of notes (*mūrččhanā*) beginning on the successive degrees of two parent scales, *Shaḍdjagrāma* and *Madhyamagrāma*. These scales were composed of 3 different sized intervals, comparable to the major wholetone, minor wholetone and semitone of "just intonation". These were expressed (approximately) in terms of their highest common factor, about a quartertone, called *shruti*. Thus the intervals are described as containing 4, 3 and 2 *shrutis* respectively. An interval of 1 *shruti* was not considered musical.

Cultural exchanges between India and the outside world included music and musical instruments before the advent of Islam. Greco-Roman influence is clearly evident in the Gandhārā sculptures and the musical instruments depicted corroborate this. Furthermore, Roman singing boys are said to have been imported into India in about the 2nd century A.D. (*Periplus of the Erithraean Sea*) and 12,000 Indian musicians are said to have been sent to Bahrām Gūr in Sāsānid Persia (Thaʿālibī, *Histoire des rois des Perses*, tr. Zotenberg, 1900, 566-7).

During the next few centuries it appears that Indian music underwent considerable change. In Mataṅga's *Bṛhaddeshī*, of about the 3rd/9th century, a new technical term, *rāg* (= Skt. *rāga*), was introduced. The essence of the concept of *rāg* was the recognition that certain combinations of notes were endowed with particular sentiments, *ras* (= Skt. *rasa*). These *rāgs*, which had crystallized from the ancient modes (*djāti*), formed a melodic basis for the composition of songs (*gītī*). Gradually, as the *rāgs* completely displaced the *djātis*, the two original parent scales lost their significance. In the *Saṅgīta Ratnākara* (607/1210-645/1247) it is stated that 264 *rāgs* were currently in use. This important Sanskrit treatise, composed by Shārṅgadeva at the court of the Yādava dynasty in the Deccan before the Muslim conquest of this area, discusses *saṅgīta* in its three aspects, vocal music, instrumental music and dance. Although Shārṅgadeva attempted to follow the earlier theorists, he was obliged to admit that much of the ancient music was extinct.

Indian music was known and held in high regard in the Islamic world in the 3rd/9th century, when it was praised by al-Djāḥiẓ (*Sūdān*, ed. van Vloten, 84; ed. Hārūn, *Rasāʾil*, i, 223; cf. M. Z. Siddiqi,

Studies in Arabic and Persian medical literature, Calcutta 1959, 32), and in the 4th/10th century, al-Masʿūdī, evidently referring to the emotional impact of *rāgs*, reports that Indians "frequently hear songs and musical performances, and they have various sorts of musical instruments which produce on man all shades of impressions between laughing and crying ..." (*Murūdj*, i, 169 = tr. Pellat, § 177). Indian musical theory, too, was not entirely unknown, for the Caliphs of Baghdād are said to have ordered the translation of a number of Indian treatises, among which was one on Indian music entitled *Biyāphar* (*Taʾrīkh al-ḥukamāʾ*, *ca.* 595/1198) which has been interpreted as *Vidyāphala* "fruit of science", but has not yet been traced (H. T. Colebrooke, *Miscellaneous essays*, London 1873, ii, 460).

In several respects Indian music was probably similar to Persian and Arabic music, especially as all three were modal systems based on melody rather than harmony. Each of them was concerned with the cosmic implications of music as well as its power to influence the individual. In India, the modes are ascribed to specific periods of the day, and are further associated with seasons, colours and, of course, the Hindu deities. Similar associations, at first attached to the strings of the lute (al-Kindī) and later extended to include the modes, are also found in Arabic musical treatises.

Thus the conquering Muslims encountered in India a musical system which was not entirely alien, and their reaction to it appears to have been favourable. The poet Amīr Khusraw, who was expert in both Indian and Persian music at the court of ʿAlāʾ al-Dīn Khaldjī (695/1296-715/1316), states, without equivocation, that "Indian music, the fire that burns heart and soul, is superior to the music of any other country. Foreigners, even after a stay of 30 or 40 years in India, cannot play a single Indian tune correctly" (M. W. Mirza, *Life and works of Amir Khusrau*, Calcutta 1935, 184). Amīr Khusraw is credited with the introduction into Indian music of a number of Persian and Arabic elements which include new vocal forms, as well as new *rāgs*, *tāls* (= Skt. *tāla*, time measure) and musical instruments. Of the vocal forms, two are of particular importance; *ḳawl*, which is said to be the origin of *ḳawwālī*, at present a form of religious song, and *tarāna*, a song composed of meaningless syllables, both of which are prominent today.

From this time until well into the Mughal period, foreign music, particularly from Īrān, was frequently heard in the Indian courts along with Indian music. Under these circumstances, it is not surprising that there were numerous attempts to introduce new elements into Indian music. Many of these were subtle rather than drastic innovations, but they nevertheless brought about modifications in the character of Indian music without actually changing its basic form.

Music flourished in Islamic India in spite of the puritan faction which believed that music was unlawful in Islam. The impetus was supplied by the rulers, some of whom were not only patrons but excellent musicians in their own right. Sultan Muḥammad b. Tughluḳ (726/1325-752/1351), although a ruler of strong religious convictions, yet kept 1,200 musicians in his service and had, in addition, 1,000 slave musicians (Mahdi Hussain, *Rehla of Ibn Batuta*, Baroda 1953, 50-1). Sultan Zayn al-ʿĀbidīn of Kashmīr (819/1416-872/1467) encouraged literature, painting and music and ordered the writing of a treatise on music which is, unfortunately, not extant (Abdul Halim, *History of Indo-Pak music*, Dacca 1962, 79). Ḥusayn Shāh Sharḳī (863/1458-935/1528) [see SHARḲĪS], initially of Djawnpur, was an incomparable performer and an innovator second only to Amīr Khusraw. His most important contribution was the introduction of a new form of song, *khayāl*, which gave much greater scope for technical virtuosity than did the traditional and austere *dhrupad*. The rivalry between the advocates of these two forms of song and their respective styles of singing has continued until recent times, when the *khayāl* finally gained supremacy.

This was a period of great musical activity. Sultan Sikandar Lōdī [*q.v.*] (895/1489-923/1517) took a keen interest in music in spite of his religious orthodoxy. Under his patronage, probably the first treatise on Indian music in Persian, the *Lahdjat-i Sikandar Shāhī*, was composed. This was a traditional work based on Sanskrit treatises. In Gwalior, however, Rādjā Mān Singh Tońwar (891/1486-922/1516) was responsible for the formulation of a more progressive treatise in Hindi entitled *Mān Kawtūhal*. This work was compiled by the leading musicians of his court and incorporated many of the innovations that had been introduced into Indian music since Amīr Khusraw's time. In spite of this endeavour, traditional Indian musical theory continued to be expressed, for the most part, in Sanskrit treatises which bore less and less resemblance to court music as time went on. To some extent, the traditional Indian music has been preserved in South India, but here too the music has evolved, albeit in its own direction.

Patronage of music reached its peak under the Mughal Emperors, Akbar, Djahāngīr and Shāh Djahān. The lists of the leading musicians, both Hindu and Muslim, who were attached to their courts is impressive, and included such famous musicians as Tānsen, his son Bilās Khān, and Bāz Bahādur. Bāz Bahādur was the last Muslim ruler of Mālwā, whose tragic affair with Rūpmatī, a singer and dancing girl, has become legendary. In the later part of his life, after he had lost his empire, he became one of the leading musicians in Akbar's retinue. It is interesting to note that nearly all the vocalists attached to these courts were Indian, while many of the instrumentalists were foreigners, some of whom came from Mashhad, Tabrīz and Harāt (Abu 'l-Faḍl, *Āʾīn-i Akbarī*, tr. H. Blochmann, Calcutta 1873, i, 611-3). In addition to this court music, large orchestras (*nawbat*), consisting of wind and percussion instruments, were maintained. These usually played at regular periods in the *naḳḳār-khāna* or *nawbat-khāna*, which were located in the gateways of palaces and shrines (*ibid.*, i, 50-1). A similar tradition, *nawba*, had been known in Arabia several centuries earlier (H. G. Farmer, *A history of Arabian music*, London 1929, 153-4).

In the beginning of the 11th/17th century, music flourished in the Deccan under the patronage of Ibrāhīm ʿĀdil Shāh II, a renowned poet. The *Kitāb-i Nawras* contains a collection of his poems intended to be sung in different *rāgs*. These are, however, referred to as *maḳāms* and give an indication of the similarity between the Indian and Arabic musical systems.

Under the Emperor Awrangzīb (1068/1658-1118/1707) music suffered a temporary set-back, for, although he was fond of music and was skilled in its theory, he relinquished all pleasure and chose a life of asceticism early in his reign. The cause of Indian music was, however, revived under the later Mughals, Bahādur Shāh (1118/1707-1124/1712) and Muḥammad

Shāh (1132/1719-1161/1748). The latter was a famous singer who composed many *khayāls*, some of which can still be heard. In 1137/1724, an important Sanskrit musical text, *Saṅgīta Pāridjāta*, was translated into Persian and the manuscript bears the seal of Muḥammad Shāh's state librarian (O. C. Gangoly, *Rāgas and Rāginīs*, Bombay 1948, 63). The original work was written by Paṇḍita Ahobala in 1076/1665 and contains the first Indian attempt at measuring intervals in terms of string lengths.

With the decline of the Mughal Empire, music was maintained in the provincial courts, but not on such a lavish scale An important Hindi treatise, entitled *Saṅgīt Sār*, was compiled by the musicians of Mahārādjā Pratāp Siṃha of Djaypur at the beginning of the 19th century, while in 1813, Muḥammad Riḍā ("Rezzā"), a nobleman of Paṭnā, composed a treatise entitled *Naghmāt-i Āṣafī*, a work which is considered to be the beginning of modern musical theory in North India. Whereas in the mediaeval period many new *rāgs* had been introduced and the prevailing system of classification in terms of *rāgas* (masculine modes) and their *rāginīs* (female consorts) had been extended to include *putras* (sons) and *bhāryās* (wives of sons), a system which does not appear to have had any musical basis, in the *Naghmāt-i Āṣafī* a new system based on classification in terms of scale (*thāt*) was advocated. This basis for the classification of *rāgs* is generally accepted in the present period.

The process of integrating musical theory and musical practice still continues. At the beginning of this century great strides were made in this direction by the efforts of V. N. Bhatkhaṇḍe, who was both a musician and a Sanskrit scholar. His theories are based on songs which he collected from a number of eminent musicians, many of whom were Muslim and could trace their ancestry to the Mughal court musicians. Bhatkhaṇḍe's system can be briefly outlined as follows:

The octave is composed of twelve approximately equal semitones, but the intonation of these, with the exception of the perfect 4th and 5th of the standard tonic or drone note, *sā*, may vary from *rāg* to *rāg* and from musician to musician. More than 200 *rāgs* are extant, most of which are classified in 10 groups on the basis of scale (*thāt*). These are:

Kalyān	C	D	E	F♯	G	A	B	C
Bilāval	C	D	E	F	G	A	B	C
Khamādj	C	D	E	F	G	A	B♭	C
Bhayrav	C	D♭	E	F	G	A♭	B	C
Pūrvī	C	D♭	E	F♯	G	A♭	B	C
Mārvā	C	D♭	E	F♯	G	A	B	C
Kāfī	C	D	E♭	F	G	A	B♭	C
Āsāvarī	C	D	E♭	F	G	A♭	B♭	C
Bhayravī	C	D♭	E♭	F	G	A♭	B♭	C
Toṛī	C	D♭	E♭	F♯	G	A♭	B	C

A performance of classical or art music generally consists of two parts; *ālāp*, introductory improvisation establishing the melodic features of the *rāg*; and *bandish*, the composition, which in vocal music may be *khayāl*, *dhrupad*, *tarāna* or one of several more modern forms, and in instrumental music as played on the stringed instruments, *sitār* and *sarod*, is generally *gat*. This composition is set in a particular *tāl*, a cyclic time-measure punctuated by a stress pattern which is marked on a pair of drums, *ṭablā*. The composition is generally short and is used as a springboard for improvised variations dependant on the creative ability and the virtuosity of the performer. While the variations maintain the interest of the audience, a deeper emotional impact is achieved through the gradually increasing tempo and the progressive complexity of the music which finally culminates in a powerful climax.

Bibliography: The secular music of pre-Islamic India in Sanskrit treatises, notably: Bharata, *Nāṭyashāstra*, especially chapters XXVIII-XXXIII, text and translation Man Mohan Ghosh, Calcutta 1961; Mataṅga, *Bṛhaddeshī*, Trivandrum 1928; Shārṅgadeva, *Saṅgīta Ratnākara*, Madras 1945, Eng. trans., i, ch. 1, C. HIND BINT AL-KHUSS, or simply BINT AL-KHUSS, name by which is known a woman of the pre-Islamic era, whose eloquence, quickness of repartee and perspicacity became legendary. According to al-Shiblī (*Ākām al-murdjān*, Cairo 1326, 71), the word *khuss* denotes the son of a man and of a *djinniyya* (while *ʿamlūḳ* is applied to the offspring of a *djinn* and a woman), and thus we perceive the origin of the legend which arose probably from the belief of the intervention of *djinns* in the generation of human beings endowed with exceptional gifts. In spite of affirmations such as that of *LA* (s.v.) in respect of al-Khuss: "well-known member of the Iyād", the historicity of this man and his daughter is open to serious doubt; nevertheless it is significant that some authors call the daughter Hind bint al-Khuss b. Ḥābis b. Ḳurayṭ al-Iyādī (al-Iyādiyya), while they give to another woman, presented as her sister, the name of Djum(a)ʿa bint Ḥābis b. Mulayl. Furthermore, they give her also the nickname al-

Zarḳāʾ and it is possible that in the welter of legends collected in the first centuries of Islam this Hind was more or less confused with Zarḳaʾ al-Yamāma. It is thus for instance that Karam al-Bustānī, in his edition of the *Dīwān* of al-Nābigha al-Dhubyānī (Beirut 1953, 45), calls "Zarḳāʾ al-Yamāma bint al-Khuss" the one who solved the problem posed by the poet in a poem in *-di*, where the question is raised of finding the number 66; here the commentators are divided, some according the merit of the solution to Zarḳāʾ al-Tamāma, others to Bint al-Khuss. Finally al-Djāḥiẓ (*Bayān*, i, 312-3) and others after him mention the hesitation of Ibn al-Aʿrābī (al-Khuss, al-Khuṣṣ, al-Khusf) and the decision of Yūnus b. Ḥabīb (al-Akhass). Only the author of the *Bayān* seems to put in doubt (*Tarbīʿ wa-tadwīr*, § 63) the existence of this woman, of whom it is said that she used to go to ʿUkāẓ, serve as arbiter and give her opinion about camels, horses, marriage, men, women, and express in refined words opinions of great simplicity. Some of her answers, in rhyming prose, became proverbs, probably at an early date, because the first evidence for her name is in a verse of al-Farazdaḳ which does not seem to figure in the printed *Dīwān*; her "sayings" have been collected by philologists and cited as *shawāhid* and as examples of very trenchant statements.

Although she is said to have refused to marry, her conduct was not blameless, and it is to her that people attribute the proverb *ḳurb al-wisād wa-ṭūl al-siwād* "nearness of the pillow and length of confidences" (= opportunity makes the thief).

It is interesting to note that the legend of Bint al-Khuss, probably brought by the Banū Hilāl, remains very much alive in Algeria, where some "sayings", very similar to those found in the classic works, are attributed to her, and where she passes as the leader of a tribe or the daughter of an Arab king.

Bibliography: sayings in rhyming prose, proverbs and repartees of Bint al-Khuss are found scattered in Djāḥiẓ, *Bayān* and *Ḥayawān*, index; Ibn Ḳutayba, *ʿUyūn*, ii, 214; Ḳālī, *Amālī*, i, 199, ii, 218, 235, 256, 257, iii, 107, 119; Ibn al-Sikkīt, *Tahdhīb al-alfāẓ*, Beirut 1896, 353; Ibn Abī Ṭāhir Tayfūr, *Balāghat al-nisāʾ*, 58; Ibn Sīduh, *Mukhaṣṣaṣ*, ii, 31; Djawharī, *Ṣaḥāḥ*, s.v.; ʿAskarī, *Ṣināʿatayn*, Cairo 1320, 320; Maydānī, *Amthāl*, ii, 40 and *passim*; Ibn Nubāta, *Sarḥ al-ʿUyūn*, 222-3 (in the margin of Ṣafadī, *Sharḥ Lāmiyyat al-ʿAdjam*, ii, 179-80); they are assembled in larger quantity in Suyūṭī, *Muzhir*, ii, 333-6 (bad translation in Perron, *Femmes arabes avant l'Islamisme*, Paris-Algiers 1858, 43-6).—The only study is that of R. Basset, *La légende de Bent El-Khass*, in *R Afr.*, 1905, 18-34 (with numerous references).

(CH. PELLAT)

HIND BINT ʿUTBA B. RABĪʿA, mother of Muʿāwiya; this Meccan woman, who belonged to the clan of the ʿAbd Shams (see the list of her maternal ancestors in Muḥ. b. Ḥabīb, *Muḥabbar*, 19), had married as her third husband Abū Sufyān b. Ḥarb, to whom she bore other children besides the future caliph. Traditions hostile to the Umayyads draw an extremely repellant portrait, apparently something of a caricature, of this short, stout woman who quite certainly had a highly passionate temperament and who on different occasions made violent utterances that have remained famous. Her hatred of Muḥammad was increased still more by the fact that Ḥamza [*q.v.*] killed her father in the battle of Badr. With other women, she accompanied the Meccans on their expedition against Medina in 3/625, and was one of the most ardent in urging on the men to the fight; when Ḥamza perished in the battle of Uḥud, she is said to have mutilated his corpse and bitten his liver. According to some authors, she was condemned to death by the Prophet at the time of the capture of Mecca (8/630; see al-Djāḥiẓ, *Tarbīʿ*, index s.v. Fartanā), but it is more probable that she was present—however unwillingly—to see the homage paid to the victor (see *Muḥabbar*, 408). Later, she had every reason to be satisfied with events when her son became governor of Syria and, according to one account, she took part in the battle of Yarmūk with undiminished ardour, exhorting the Muslims to circumcise their uncircumcised adversaries with their swords. In the end, Abū Sufyān divorced her, for which action she is said to have avenged herself by different intrigues. Some traditions place her death in the reign of ʿUmar, others under ʿUthmān, so that she did not live to see her son's exalted destiny.

(FR. BUHL*)

MĪRZĀ **HINDĀL**, ABŪ NĀṢIR MUḤAMMAD, surnamed Hindāl, the name by which he is known to history, since he was born during his father's campaign to India, the youngest surviving son of the emperor Bābur [*q.v.*], by his wife Dildār Bēgam, the mother of Gulbadan Bēgam [*q.v.*]. He was born in Kābul in 925/1519 and educated there under the care of his foster-mother Māham, the first wife of Bābur and the mother of Humāyūn [*q.v.*]. At the time of Bābur's death in 937/1530 he was in Badakhshān fighting against the Özbeks, deputizing for Humāyūn who was away in Kābul. On the accession of Humāyūn he returned to India and received Alwār [*q.v.*] in *djāgīr* as well as 2,000 rupees in cash from the family treasury.

In 940/1533, when he was only 14 years old, he was sent against Tātār Khān, a powerful noble, who had rebelled against Humāyūn and joined hands with Bahādur Shāh of Gudjarāt (933-944/1526-1537).

During the battle of Čawsa (Chausa) in 946/1539, in which Humāyūn suffered a crushing defeat at the hands of Shēr Shāh Sūr [*q.v.*], he, in league with Kāmrān [*q.v.*], the rebel brother of Humāyūn, played an ignoble rôle and deserted Humāyūn at a very critical juncture. Similarly during Humāyūn's campaign in Bengal (945/1538-39) he acted rather treacherously and, taking advantage of his royal brother's absence in Gawr, unfurled the banner of revolt at Āgra [*q.v.*]; he occupied the Imperial palace and, assuming kingship, began to issue firmans. Shaykh Buhlūl, the elder brother of the celebrated saint Muḥammad Ghawth of Gwalior, who was sent by Humāyūn to make Hindāl see reason and dissuade him from pursuing his rebellious activities, was executed by the orders of Hindāl on the charge of treason (cf. Gulbadan Bēgam, *Humāyūn-nāma*, 134-5; al-Badāʾūnī, i, 459; *Akbar-nāma*, i, 338). Humāyūn felt grieved at the Shaykh's death but did not consider it prudent to punish his rebel brother. It was in Hindāl's camp at Rōhrī, near Bhakkar [*q.v.*], that Humāyūn first saw Ḥamīda Bānū Bēgam in 948/1541 and decided to marry her.

This match was resented by Hindāl, in whose entourage Ḥamīda happened to be. On Humāyūn's refusal to give up, Hindāl felt offended and without the royal permission left for Ḳandahār which he seized from Kāmrān's men. Even this act of open revolt was condoned by Humāyūn, who allowed him to retain his newly gained possession. The territory of Badakhshān was conferred on him for gallantry during the battle of Ḳunduz in 953/1546. He was killed on 21 Dhu'l-Ḥidjdja 952/21 November 1551 in a surprise attack by Kāmrān's men while engaged in reconnoitring operations at night in the vicinity of Djū-yi Shāhī in eastern Afghānistān, where he was temporarily buried. His coffin was later removed to Kābul and interred near the grave of his father, the emperor Bābur. He was more faithful to Humāyūn than his other ambitious brothers, Kāmrān and ʿAskarī. He was married to Sulṭānim Bēgam, a sister of Sayyid Mahdī Khʷādja, husband of Bābur's sister, Khānzāda Bēgam. His daughter Ruḳayya Bēgam was Akbar's first wife but bore him no children. She died at the advanced age of 84 on 7 Djumādā I 1035/19 January 1626 at Āgra (cf. Gulbadan Bēgam, 274).

HINDĪ, the national language of the Republic of India, is now generally regarded as that form of the central north Indian speech which draws its erudite vocabulary from Sanskrit and its culture from Hinduism, and for literary purposes as including not only the standard dialect (Khaṛī bolī) but also the eastern Awadhī, the central Bradj, and the bardic poetry of Rādjāsthān [see also hind, Languages]. Formerly, and as late as the 19th century, it was also used to describe the speech of north Indian Muslims, those of *Hind* as opposed to *Dakhan*, the speech of the Hindūs being distinguished as *Hindawī*. The term has now been replaced entirely in its Muslim sense by *Urdū* [*q.v.*]; in the remainder of this article the term *Hindī* is used in its Hindū sense.

The relevance of Hindī to Islam is threefold: there is a small but important corpus of Hindī works by Muslim writers; Muslim rulers and nobles have been active patrons of Hindī poetry; and there has been a considerable Muslim influence on Hindī vocabulary, with a more limited influence on grammar (including phonology, morphology and syntax) and on style.

The Muslim poets' interest in Hindī began early, long before the emergence of anything resembling Urdū as an Indian Muslim language; thus under Ghaznawid rule in Lahore in the 6th/12th century Masʿūd b. Saʿūd Salmān is credited with a Hindī *dīwān* as well as *dīwāns* in Arabic and Persian (ʿAwfī, *Lubāb*, ii, 246). The first Muslim poet of Hindī whose works have come down to us is, however, Amīr Khusraw Dihlawī [*q.v.*], who wrote at the Khaldjī and Tughluḳ courts in the late 7th/13th and early 8th/14th centuries; his Hindī output is small beside his prolific Persian works: a few riddles and macaronic Hindī/Persian verses, and the short rhyming Persian-Hindī dictionary, the *Khāliḳ-bārī*, an important early vehicle for the diffusion of common Persian words in north India.

The north Indian *bhakti* movement—sometimes seen incorrectly as a Hindū reaction seeking to strengthen Hinduism against the advancing pressure of conversions to Islam; in fact its origins date from long before the conquest and its early growth was in regions of slight Muslim influence—saw little Islamic theological and philosophical influence, although the number of Arabic and Persian loanwords used in the Hindī of its exponents is noteworthy. The poet Kabīr [*q.v.*], of a Muslim weaver (*djulāhā*) family from Banāras (Benares), is unquestionably most strongly influenced by the Hindū *bhakti* tradition, even though his theology is a deistic monotheism with Vedāntic affinities; but his preaching appears to be directed as much to Muslims as to Hindūs, and his followers, the Kabīrpanthīs, have both Hindū and Muslim branches. His exact chronology is most uncertain, but he does seem to have been a contemporary of Sikandar Lōdī; Kabīr criticism is bedevilled by the fact that his followers composed verses in his name, and the true Kabīr and the pseudo-Kabīr sometimes overlap disconcertingly. Some of the authentic Kabīr poetry is collected in the *Ādi Granth*, the Sikh scriptures put together in 1012/1603, which shows clearly the formative effect of Kabīr on Nānak [*q.v.*], his younger contemporary. Nānak's writings in the *Granth* show him to have been somewhat closer to Hinduism than was Kabīr; perhaps both show, especially in their emphasis of the worship of the Name of God and in the importance they attach to the teacher, the influence of the Pandjābī Ṣūfī teachers of the previous centuries starting with Farīd al-Dīn Masʿūd [*q.v.*], two of whose verses in a sort of "Pandjābized" Hindī (perhaps modernized by later redactors) occur in the *Granth*.

An important school of writing in Awadhī (Eastern Hindī) known as *prem-gāthā* (lit. 'love song'), of Ṣūfī inspiration, depends entirely on Muslim authors. The works are all narrative love stories, some of them owing much to the poetic conventions of the Sanskrit romances; but the love stories of two humans are to be taken as allegories of the soul's love for God and its ultimate union with Him. The earliest such work is the *Čandāyan* of Mawlānā Dāʾūd, of about 771/1370, on a popular romantic tale which appears to have been known as far east as Bengal (cf. Rai Krishnadas, *An illustrated Avadhi MS of Laurchanda in the Bharat Kala Bhavan, Banaras*, in *Lalit Kalā*, 1955-6, 65-71). Some of the *Čandāyan*'s successors of the 9th/15th and 10th/16th centuries are now known only by their names, although the stories on which they are based are still current in folk-literature (cited by Djāyasī in *Padmāwat*, xxiii, stanza 17; see further Gaṇesh Prasād Dwiwedī, *Hindī mẽ prem-gāthā awr Malik Muhammad Djāyasī*, in *Nāgarī Pračāriṇī Patrikā*, xvii/1, 61 ff. (in Hindī)); but in the extant *Mṛgāwatī* of Shaykh Ḳuṭb ʿAlī of

Djawnpur, known as Ḳuṭban, the allegorical element seems slight in spite of Ḳuṭb ʿAlī's having been a *murīd* of Shaykh Burhān al-Dīn of Kalpī (composed 909/1503-4). Slightly later (*ca.* 936/1530) is the *Madhu-mālatī* of Mīr Sayyid Mānḍjhan, who was later a luminary of the Sūrī courts; although incomplete, the work is one of the finest Hindī romances of pre-Mughal times, with a well-constructed allegory and a striking description of the beauties of nature. By far the most prominent writer of this school is Malik Muḥammad Djāyasī [*q.v.*], b. 900/1494, whose *Ākhirī kalām* (930/1523) is a short poem on the Day of Judgment, and whose *Akharāwat*, of about the same period, is an acrostic on the characters of the Devanāgarī script of Sanskrit and Hindī to which mystic significance is attached; his *magnum opus* is the *Padmāwat* of 947/1540, a *prem-gāthā* partially based on the siege of Čitawr in 689/1290 by ʿAlāʾ al-Dīn Khaldjī, in which the poet sees the hero Ratansen as man's soul, the elder queen Nāgmatī as worldly care, the young queen Padmāwatī as wisdom, Čitawr as the body, the parrot who brings the message of Padmāwatī's beauty to Ratansen as the true teacher, Rāghaw Četan the Brāhmaṇ, who betrays Padmāwatī to ʿAlāʾ al-Dīn, as Satan, and the sultan ʿAlāʾ al-Dīn himself as illusion, this *taʾwīl* being explicitly stated in the closing verses. The *Padmāwat* has formed a model for later Awadhī Ṣūfī poets (and, further afield, for the Bengali [*q.v.*] poet Ālāwal), the most notable of whom is Sayyid ʿUthmān of Djawnpur, a Niẓāmiyya Čishtī of a *silsila* very similar to that of Muḥyī al-Dīn, Djāyasī's teacher; his *Čitrāwalī* of *ca.* 1022/1613 shows a Nepalese prince marrying first the princess Kamalāwatī and then renouncing her to conquer princess Čitrāwalī: the allegory is the necessity for the renunciation of ignorance in order to attain true knowledge. Similar are the *Gyān-dīp* of Shaykh Nabī of *ca.* 1028/1619, the *Hans-djawāhir* of Ḳāsim Shāh of Daryābād of 1143/1731, Nūr Muḥammad's *Indrāwatī* of 1157/1744, and a *Yūsuf-Zulaykhā* by Shaykh Niṣār of Shekhūpur of 1200/1786. All these works have in common, besides the allegorical treatment of a love-story, a poetic form closely resembling the traditional *mathnawī* but couched in purely Indian metrical forms; and all, though the language is Awadhī, use the Persian script (although Devanāgarī recensions are also known).

With the coming of the Mughal courts, the Indian vernaculars flourished under royal patronage. Even Bābur is known to have composed a verse in Hindī (cf. T. Grahame Bailey, *Early Urdū conversation*, in *BSOS*, vi/1 (1930), 205-8; although Urdū *stricto sensu* had not at that time come into being), and certainly had admitted a large number of Hindī words to the Turkī of his autobiography (list in M. A. Ghani, *History of Persian language and literature at the Mughal court*, Allahabad 1929, i, 59). His grandson Akbar, who was thoroughly Indianized, is known as the author of several Hindī couplets, in which he signs himself *Akabbar sāhi* (= Shāh), but most of all for the patronage he extended to Hindī poets, Muslim and Hindū alike. And the liberality of his age created conditions for the writing of the finest Hindī devotional poetry by Sūr Dās and Tulsī Dās, who were in no way dependent on court patronage; they were poets of Hindū *bhakti*, devotion to a personal god who for the love of his worshippers was incarnated in human form: Krishṇa in the case of Sūr and his followers, Rām in the case of Tulsī. Naturally there are no Muslim poets of this school, for the implicit theology is the antithesis of Islam; the one Muslim name among its writers, Sayyid Ibrāhīm called Ras Khān (b. 980/1573), is an apostate. The Krishṇa-cult, however, had in some writers an aspect capable of secular interpretation in the stories of the boy-god's dalliance with the cowherd girls of Brindāban, especially with the principal Rādhā; and while with devotees the Rādhā-Krishṇa stories were no more than symbolic of the longing of the human soul for union with the divine, in the hands of others they could provide a convenient peg on which to hang erotic verses. Eroticism in Indian poetry had a long and refined tradition and was closely linked with Indian theories of poetics, and it was this deliberately cultivated display of the poetic art which came into great favour at the Mughal courts as the indigenous counterpart to Persian court poetry. At Akbar's court Hindī verses were written by rādjā Ṭoḍar Mall [*q.v.*], by Bīrbal of Djaypur, to whom many witty and humorous apophthegms are ascribed (the modern *Bīrbal-nāmas* preserve perhaps the spirit but certainly not the words of the genuine Bīrbal), the brothers Abu 'l-Faḍl and Fayḍī [*qq.v.*], and above all by ʿAbd al-Raḥīm Khān [*q.v.*], entitled Khān-i Khānān, who wrote under the *takhalluṣ* Raḥīm. His *Satsaī* is a collection of seven hundred couplets (*dohās*) on a variety of themes, each a neatly polished pen-picture, in which the essential philosophy and experience of this cultivated soldier is everywhere apparent; in his *Nayikā-bhed*, a conventional *genre* of Indian poetry which depicts the various types of heroine, he has used the *barwayya* metre which he did much to popularize; some of his *barwayyas* are written in Persian or in Persian and Hindī mixed, some verses in other metres are Sanskrit/Hindī macaronics, and a treatise on astrology is in Persianized Sanskrit; he is also remembered as the translator into Persian of Bābur's Turkī memoirs, and as the patron of the Hindī poet Gang Kavi. On Raḥīm see specially V. Vidyalankar, *ʿAbdur Raḥīm Khānkhānān and his Hindi poetry*, in *IC*, xxiv/2 (1950), 123-33.

The same traditions continued under Djahāngīr and Shāhdjahān, both emperors taking an active interest in Hindī poetry, rewarding poets, and causing Hindī works to be transcribed into Persian characters; and Mīrzā Muḥammad b. Fakhr al-Dīn Muḥammad's *Tuḥfat al-Hind*, written for Awrangzīb, shows his interest in the vernacular: an introduction dealing with the Devanāgarī script and the grammar of Bradj-bhāshā is followed by chapters on prosody, rhyme, rhetoric, *ars amoris*, and music (Syed Masud Hasan Rizavi, *The Tuhfatu'l-Hind...*, in *Jhā commemoration volume*, Poona 1937, 309-14). The Mughal courts set the fashion for the provincial courts of Hindū kings, and in particular Orčhā, Djaypur, Gwāliyār, Nāgpur, Bundī and Satārā patronized Hindī poetry; in the Mughal court Awrangzīb's third son Aʿẓam Shāh is particularly known as an enthusiastic patron, and a special recension of Bihārī Lāl's *Satsaī* (composed 1073/1662, the highest point of Hindī court poetry, a natural descendant of Raḥīm's) was made in his honour. Other poets who should be mentioned here are Ghanānand, a Kāyasth, for some time an amanuensis of Muḥammad Shāh, one of the most personal and idyllic of love-poets, killed in Nādir Shāh's sack of Dihlī; and Sayyid Ghulām Nabī Bilgrāmī, known as Raslīn, who in the 1150s/1740s produced a learned work on rhetoric and a most felicitous treatment on the beauty of heroines; and the Brāhmaṇ convert ʿĀlam, in the service of prince Muʿaẓẓam (later the emperor Bahādur Shāh), who with his wife—now known by no other name than

Shaykh—jointly composed hundreds of light epicurean verses.

Prose literature in the modern Indian languages is little known before the 19th century. With the founding of Fort William College in Calcutta in 1800, for the purpose of instructing the servants of the East India Company in Indian languages, an impetus was given to the development of prose, especially in Hindī and Urdū, by the commissioning of translators; although one work of Hindī prose, *Rānī Ketkī kī kahānī*, had already been completed in 1800 by Inshā' Allāh Khān [*q.v.*], who was in the service first of Shāh ʿĀlam II in Delhi and later of Saʿādat ʿAlī Khān in Lucknow and was an accomplished Urdū poet. The Hindī produced under these auspices was in fact the Khaṛī bolī dialect, that is to say virtually the same dialectal standard of the northern speech as in the case of Urdū, the literary form of which was by now well established; and herein lies the innovation of the Fort William school of Hindī writing, for previously only Awadhī and Bradj had attained literary status, although Khaṛī bolī had for centuries been the *spoken* norm in the Delhi region; and in practice this new literary language was little more than the language of Urdū-speaking Hindūs, in which words of Arabic and Persian origin had been replaced by words either Sanskrit or of Sanskrit origin. Although its chief exponent, Lallūdjī Lāl [*q.v.*], was also an Urdū writer, he went to the extreme of using Sanskrit words of learned rather than popular currency, and the new Hindī was accepted in consequence by a militant orthodox Hindū element rather than by the Hindū element as a whole. The Christian missionaries in Madras and Bengal had, in their Hindī translations of the Christian scriptures, naturally preferred to use religious terms already familiar to the Hindū mind, and thus increased the Sanskritic element. Macaulay's appointment in 1834 as President of the Committee of Public Instruction nearly visited this Hindī with its death-blow, by his insistence on the value of Western education for Indians and his vigorous but uninformed and injudicious denials that classical Indian learning had anything to offer; Persian continued as the language of the courts until 1837, when Urdū replaced it; and, when the question of the medium of instruction in the schools arose after the report of the Parliamentary Committee of 1854, the adoption of Hindī was vehemently opposed by Sayyid Aḥmad Khān [*q.v.*] on the grounds that it was a rustic tongue and the language of idolators (in this view he was supported by the French Professor Garcin de Tassy). But at this time Rādjā Shiw Prasād (not a rādjā in the traditional sense; the title of rādjā was a British conferment) became an inspector of schools in the Department of Public Instruction and produced some sixteen text-books for school use in a language not far removed from Urdū, but in Devanāgarī script, which allowed the use of Hindī in the schools' curricula; in a preface to one of these he condemns those "who always urge the exclusion of Persian words, even those which have become our household words . . . and use in their stead Sanskrit words quite out of place and fashion, or those coarse expressions which can be tolerated only among a rustic population"; and he endeavoured to bring this Hindī to a wider public through his newspaper *Banāras Akhbār*. But the form of the language he used was felt to offer too many concessions to Muslim usage, and the more militant orthodox Hindū politicians, especially Rādjā Lakshmaṇ Singh, gradually brought about the rejection of Shiw Prasād's Persianized diction in favour of a more highly Sanskritized style. Hindū-Muslim tension was thus reflected on a linguistic plane.

The subsequent growth of Hindī into a literature rather than merely a written language, first by the efforts of Bhāratendu Harishčandra and later by Mahāwīr Prasād Dwiwedī, does not concern us here, as the linguistic and stylistic differences between Hindī and Urdū became greater and Muslims found in Hindī an expression to which they could not give their allegiance. Authors who used both Hindī and Urdū as literary vehicles are very rare —Premčand [*q.v.*] is a notable exception. Community feeling and nationalism have preserved the Hindū-Muslim linguistic dichotomy in both Hindī and Urdū (in a way which has not affected Bengali), the short-lived Hindūstānī Movement [see HINDŪSTĀNĪ] having commanded little popularity; but the protagonists of the Sanskritized Hindī, which now has the blessing of the Government of India, have not had things all their own way: shortly after partition, village communities near Delhi and in the Indian Pandjāb preferred to listen to the news broadcasts of Pakistan Radio from Lahore, finding their Urdū more comprehensible than the Hindī broadcasts of the All-India Radio. Recently there have been signs of an increased acceptance of Hindī by some north Indian Muslims.

The above account has excluded Dakhnī, which will be treated under URDŪ. It must be mentioned, however, that many old Dakhnī texts are now being published in Devanāgarī transcription in India, often under the name of "Dakhnī Hindī", and it is probable that before long Dakhnī will be studied in India as part of Hindī literature (cf. Bābūrām Saksenā, *Dakkhinī Hindī*, Allāhābād 1952).

SABK-I **HINDĪ** [see SABK-I HINDĪ].

HINDŪ, the name given to the largest religious community of India, conquered by the Muslims in the 6th/12th century. Early Muslim knowledge about the religious belief of India was very small: and no wonder, for Hinduism is utterly different from Islam in most of its ways. It is essentially polytheistic, has no official scripture (although many sacred books), no canon, many different schools of belief and of philosophy and yet really no orthodoxy, and above all no prophecy; it tolerates the worship of idols, which are nevertheless not a necessity; it knows no organized worship, although it has temples—but devotion in these is optional and individual; its

religion is inseparable from its concepts of society and of state; and its goal is not the release of the soul to a paradise and to a physical resurrection, but the release of the soul from a particular body for the purposes of rebirth until eventually the soul is freed from the necessity of transmigration. What, perhaps, impresses the oldest Muslim writers, the Arab geographers, most about Hinduism is its utter difference from Islam, and its social strictures and exclusiveness —the way, for example, certain people were excluded from eating with, or taking food from the hands of others. Its beliefs were not investigated for Islam before al-Bīrūnī [*q.v.*] compiled his *K. Ta'rīkh al-Hind* in Ghazna in the 5th/11th century; this deals, however, mostly with the beliefs of the Brāhman community, the highest grade in the Hindū social order [see BARĀHIMA], a rigid system (although divided into six more orthodox schools, and a number of less orthodox ones) communicated by oral tradition from father to son or from hereditary teacher to selected and initiated pupil, based on the Vedas (the hymns to the gods composed by the Āryan people in their migrations to India in the 2nd millennium B.C.) and their later mythological accretions and their philosophical interpretations. Al-Bīrūnī, though he mentions many popular practices, does not seem to have gone so far as collecting material on "popular" Hinduism, the beliefs of the non-Brāhman population: a plethora of superstitions, taboos, local godlings including snakes, propitiation of ancestors, magical spells, sacred objects and places, and a system of ritual exclusiveness and restrictive practices far in excess of the system of the Brāhmans. For the Brāhmans, the priests of the community, are the descendants of the upper grade in the original Āryan hierarchy who have kept their old beliefs most pure; the lower grades intermarried more freely with the Dravidian and aboriginal inhabitants of the country they conquered, and absorbed more of the indigenous beliefs. To the Muslim conquerors all these shades of Hindū belief were anathema; their practitioners were not *Ahl al-Kitāb*, and therefore in theory they could not be beneficiaries of the *dhimma* [see DHIMMĪ], and be given the choice of paying the *djizya* [*q.v.*]; the alternatives were Islam or death. This, however, is not easy for a minority to impose on a majority, and there is early evidence (from the *Čač-nāma*, a Persian work of *ca.* 613/1216 said to be a translation of an Arabic account of the conquest of Sind) of the Sindhīs being allowed the status of *dhimmī*. There are references to *djizya* early in the chronicles of the Dihlī sultanate, but these may relate to the payment of tribute by Hindū chieftains.

The rulers of India seem to have taken little interest in the belief of their subjects before the reign of Akbar. That ruler introduced many forms drawn from Hindū worship (as from that of the Djayns and Pārsīs [*qq.v.*] and from Christianity) into his personal devotions, and later into his own syncretistic faith the Dīn-i Ilāhī [*q.v.*]; how much these meant to the orthodox Muslim of the time is illustrated by Badā'ūnī's scathing comments in the *Muntakhab al-tawārīkh*. Akbar's religious curiosity was followed by that of his great-grandson, Dārā Shukōh [*q.v.*], in whom it was perhaps more dangerous to Islam in India as he saw the mixing of the two seas (*madjma' al-baḥrāyn*; cf. Ḳur'ān, XVIII, 59-60) of Muslim and Hindū pantheistic mysticism as a scholastic counter to orthodoxy, and sought in this the common factors of Hinduism and Islam. He was correct in identifying these common factors, for the mysticism of the pantheism which developed from polytheism in the Hindū philosophers, particularly those of the Vedāntic schools, is little different theologically from the pantheistic mysticism of, say, Ibn al-'Arabī; however, the consensus of the Muslim community on Dārā's beliefs was certainly that he was guilty of heresy.

Although the apparent rapprochement of Islam to Hinduism in the writings of the Indian *ṣūfī*s suggests that Islam in India may have come under Hindū influence, this does not in fact appear to have been the case; although some trends in Hindū mysticism may have stimulated the *ṣūfī* mystics. This mysticism was in Ṣūfism long before its arrival in India, and indeed al-Ḥallādj [*q.v.*] is not far from the thought of the Upanishads. The real union of Islamic and Hindū notions comes rather from the Hindū side, in the syncretistic movements of north India in the 9th/15th and 10th/16th centuries: Kabīr [*q.v.*], in spite of his name, is more in the Hindū tradition than the Muslim, and indeed his Islam appears to have been learnt at second-hand; what singles him out from other Hindū preachers is his uncompromising monotheism, expressed pantheistically, rather than the usual mediaeval Hindū monotheistic expression which is a henotheism and susceptible of compromise. The later Islamic influence in some of the syncretistic cults, such as the Prān-nāthīs, the Kabīr-panthīs, the Dādū-panthīs, and not excluding the Sikhs [*q.v.*], stems directly through Kabīr's monotheism.

Hindū influences on some of the Muslim writers of Hindī [*q.v.*] are rather literary than religious. When Indian literature began to be studied as an art-form in the Mughal courts and under Mughal patronage a whole additional repertory of image and metaphor, already couched in Hindū terms, became available to the Muslim poet; indeed, we know that much of this repertoire was already familiar to the *ṣūfī* poets of Awadhī [see MALIK MUḤAMMAD DJĀYASĪ]. But its acceptance by Muslim poets such as Raḥīm [see 'ABD AL-RAḤĪM KHĀN-I KHĀNĀN] certainly does not involve the acceptance of the theology; indeed, it does not seem to involve it on the part of many Hindū writers.

There do, however, seem to have been some Hindū influences on Muslims in social rather than in religious practices. The Hindū conception of caste (*djāt*, *djāti*), a pre-Āryan social division of society which, by being grafted on to the Āryan concept of social order (*varṇa*), has acquired Brāhmanical sanction and consequent sanctification, has certainly spread to Muslim minority communities in some of the remoter districts of India. Caste is, for example, usually endogamous, and some Muslim communities have adopted similar restrictive endogamic patterns to those of their Hindū neighbours; in some cases even community of worship has ceased to be observed, and commensality has been replaced by mutually restricted eating groups. This is particularly noticeable among recent converts from Hinduism, especially from the lower caste Hindūs or from the so-called "untouchables"; it applies also to converts to Christianity in districts where a competent ministry is only rarely available. (J. BURTON-PAGE)

HINDŪ KUSH, extensive range of mountains in northern Afghānistān, which forms the watershed between the river systems of the Amū Daryā and the Indus [*qq.v.*]. The range extends in a westerly direction from the junction of the Mustagh and

Sariḳol ranges in the region of the Pāmirs to where it is extinguished among the low hills of the Paropamisus range. The Kūh-i Bābā mountains are not so much an extension of the Hindū Kush as an overlapping range, separated from the Hindū Kush itself by the Bāmiyān valley. The origin of the name Hindū Kush is obscure. Popular etymology derives it from the Persian *kushtan*, "to kill", and according to Ibn Baṭṭūṭa (iii, 84) it refers to the death of slaves being carried from India to Turkestan.

The range may be divided into two sections. The westerly section, to which the name Hindū Kush is locally confined, stretches from near Bāmiyān to the Khawāk pass. This part contains a large number of passes, some of which have formed the traditional routes of merchants, pilgrims and conquerors between Turkestan and India. The eastern section from the Khawāk pass to near the Kilik pass, which links Hunza with Yārkand, separates Badakhshān and Wakhān on the north from Nūristān (Kāfiristān), Hunza and Čitrāl on the south. Because of the greater difficulty of the country to the south, the passes in this area, among which are the Dora, linking Čitrāl with Badakhshān, and the Baroghil, have never been used to the same extent as those in the western section. Until the later part of the nineteenth century they were little known to Europeans, but in the course of the last quarter of that century a great deal of exploration was done on behalf of the Government of India, especially in connexion with the Afghan Boundary Commission in 1885.

Although the range presents substantial difficulties to north-south communications, they have never been found insuperable. The main routes are all open for six months of the year. Historically the most used routes between Kābul and the north were that via the Pandjshīr valley and the Khawāk pass (11,650 feet), which was used by Alexander the Great and by Tīmūr, and the route up the Bāmiyān valley over the Aḳ Ribāṭ Pass (12,500 feet), which was used by the early Buddhist pilgrims and by Čingiz Khān. The first motor road, completed in 1933 with the aid of German engineers, followed neither of these routes, however, but turned north down the Bāmiyān valley from Shikārī. Like its predecessors it involved an extensive detour. In the reign of Amān Allāh Russian engineers had suggested a more direct route across the difficult Sālang pass (11,700 feet). In 1956 this project was again taken up and by 1964 a new road had been completed involving the construction of a tunnel, one and a half miles long, beneath the Sālang Pass. This new road shortened the journey between Kābul and the north by 125 miles, a fact of great economic and political importance.

HINDŪ-SHĀHĪS, a native dynasty of northern India who were the first great opponents of Ghaznawid and Islamic expansion into the Pandjāb. Bīrūnī in his *Taḥḳīḳ mā li 'l-Hind* describes them as originally Turks from Tibet who ruled in the Kābul river valley; it is possible that these "Turks" were Hinduized epigoni of the Kushans and Kidarites pushed eastwards by the Hephthalites [see HAYĀṬILA]. During the 4th/10th century these first Hindū-Shāhīs were replaced by a Brāhmanic line. In the time of the first Ghaznawids Sebüktigin and Maḥmūd [*qq.v.*], the Hindū-Shāhīs constituted a powerful kingdom stretching from Lāmghān to Mūltān and the southern foothills of Kashmīr and based on Udabhāṇḍapur or Wayhind (modern Und near Attock).

In the course of his campaigns down the Kābul valley, Sebüktigin attacked and twice defeated the Hindū-Shāhī Rādjā Djaypāl. Maḥmūd intensified the struggle; Djaypāl was captured and sold as a slave in Khurāsān, and by 399/1008-9 his successor Ānandpāl had been driven out of Peshāwar and Wayhind. Despite the efforts of Ānandpāl's son Triločanpāl to rally the support of other threatened princes, the "Turuṣkas", as the Ghaznawids' Turks appear in Indian sources, drove him into the eastern Pandjāb. With his death in 412/1021-2, the dynasty ceased to exist as a major impediment to Ghaznawid penetration towards the Ganges-Djumna basin, although some Hindū-Shāhī princes took refuge in Kashmīr and others founded minor independent principalities in the mountains of Čitrāl and Gilgit.

HINDŪSTĀN [see HIND].

HINDUSTĀNĪ, also HINDŪSTĀNĪ, HINDOSTĀNI, is or has been used in India, confusingly, to mean at least three different forms of language, the first two of which are common.

i.—As a synonym for Urdū [*q.v.*] as spoken in North India; *i.e.*, the Muslim speech of Hindustān as opposed to the Deccan; antonym Dakhnī.

ii.—As a name for that speech which is the common denominator of Urdū and Hindī [*q.v.*], coloured neither by recondite loanwords from Persian nor by loanwords from Sanskrit: the sort of language in which a Muslim villager might converse with a Hindū villager, and *vice versa*; in this sense, also the customary simplification of speech made by an educated Muslim or Hindū to an uneducated person of his own community. In this form common Persian loanwords are used freely by both Hindūs and Muslims. In this sense may be included also a common bazaar speech of north India which may extend west to Bombay and east to Calcutta, a sort of Hindī/Urdū without genders and *sine flexione*.

The spoken norm of the district round about Mīraṫh ('Meerut') is described by Grierson in the *Linguistic survey of India* as 'Vernacular Hindustani';

but this term is now not in use by linguists, and has never been an Indian usage.

iii.—A conscious attempt, made for political purposes, at a language acceptable to both Muslims and Hindūs in speech and in writing, especially the written language of the "Hindustānī movement" of the 1930s and early 1940s; one may see in this movement, which arose within the Indian National Congress [*q.v.*], a political attempt to placate both the Muslims within the Congress party and also the Muslim League. This was virtually Urdū, shorn perhaps of its more recondite Persian loanwords, written in the Devanāgarī script used for Hindī, indicating the Urdū letters *ḳ, kh, gh, z* (including *ḍ, dh, ẓ* and possibly *zh*) and *f* by modifications of the Devanāgarī characters *ka, kha, ga, ja,* and *pha.* By some Hindūs this form was spelt *Hindusthānī* (Sanskrit *sthāna* is cognate to Persian *-stān*). Any hopes the movement had of establishing this hybrid as a national language for India were never high, and seemed to recede completely during the 1939-45 war; afterwards there was no necessity for its resuscitation. (J. Burton-Page)

HINGLĀDJ [see las-bēla].

ḤINNĀʾ, henna (known to botanists as the *Lawsonia alba* of Lamarck, a name preferable to the *L. inarmis* of Linnaeus, which corresponds only to the young form of the plant, the adult form being *spinosa*), shrub whose leaves possess medical properties and are used as a dye. In Arabic, the word most commonly used is *ḥinnāʾ*, but in the earlier language there were used other words which, however, were applied also to other dye-producing plants: saffron (*zaʿfarān*), safflower (*ḳurṭum, ʿuṣfur*) and curcuma (*kurkum*); these are *yarannā* and *raḳūn, riḳān, irḳān*; the three last are perhaps connected with *yaraḳān* "jaundice" and with the root *ḳnʾ* which conveys the idea of "to dye dark red", but which has no corresponding noun.

The whitish flower of henna was called *fāghiya* or *faghw*. It has a sweet and strong perfume which is reminiscent of that of mignonette (in Cairo today mignonette bears the unexpected name of *tamr ḥinnā*) and it is for this perfume that henna is cultivated in the gardens of the Near East. The flower was used to make a scented oil (*duhn al-faghw*).

Henna and its uses are known from the Atlantic to the Ganges. It was not grown in Muslim Spain. In Africa it is cultivated in semi-desert regions around the Sahara: Sūs, Darʿa, Tuwāt, Bilād al-Djarīd, Ḳābis, Tripolitania, Egypt, Nubia, Nigeria. In Morocco, surprisingly, henna is grown in abundance, much further to the north, in the suburb of Azammūr [*q.v.*] at 33° 17′ N.; it was probably introduced by the Shtūka, moved there from Sūs.

In Asia, henna is cultivated throughout the Near East (that of ʿAsḳalān [*q.v.*] was famous at the beginning of the Middle Ages), in Iran and in western India. It appears to be a native of the last two regions.

In medicine, the astringent properties of the leaves were used, in a decoction, for treating burns, thrush and swelling accompanied by inflammation. Applied as poultices to the palms of the hands and the soles of the feet, they closed the pores and reduced perspiration. But it is as a cosmetic that henna is most generally used and has finally acquired a ritual use as a prophylactic. Its dried leaves, finely crushed or ground, then sieved, are mixed to a paste with a little water; this paste, applied as a poultice overnight, dyes a reddish orange colour of varying intensity. Old men use it to dye their beards and both sexes to dye their hair a tawny blonde. Young women use it, mixed with other ingredients (tan, indigo, etc.) to dye their hair black and to strengthen it. Women also, to make themselves attractive, decorate with henna their nails, the backs of their hands and the tops of their feet on all festive occasions. Almost everywhere throughout the Muslim world, one of the feast days preceding the consummation of a marriage is set aside for the ritual dyeing of the bride's hands and feet with henna; a parallel but simpler ceremony may take place for the bridegroom. It is also not uncommon to see a fine horse with its forelock, mane, tail or feet dyed with henna; or perhaps a fine sheep destined for sacrifice.

In all these cases the true aim of the dyeing is probably less to embellish than to protect against the evil eye: there is considerable evidence that prophylactic powers are attributed to the colour red.

So long as the henna is not applied so as to form designs similar to tattooing (parts of the skin being left undyed by masking them) Islam readily permits it and its virtues are proclaimed in many *ḥadīths*.

The Arabic name for henna has spread to most of the Muslim languages. In Persian it is pronounced *ḥinā*, without *shadda*; in Turkish it is *ḳına*. The Spanish *alheña* (with the stress on the *e*) derives from a form with a shortened final vowel: *ḥinnat* which has become general in dialectical Arabic. It should be mentioned that here and there, in North Africa, the euphemism *ḥannet əl-bḳər* "henna of the cattle" indicates a mixture of dung and chaff used as plaster for threshing-floors, walls, etc. In Hindi, henna is called *mehndī* (*meṅhdī*) from the Sanskrit *mendhika.*

The properties of the leaves and the flowers of henna were known and used by the ancient Egyptians and by the Hebrews.

HINTĀTA, a famous Berber confederation in the central Moroccan High Atlas, of the stock of the sedentary Maṣmūda [*q.v.*]; according to Ibn Khaldūn (*ʿIbar*, French trans. de Slane, *Histoire des Berbères*, ii, 281), *Intī* was the current ethnic designation of these mountain-dwellers. During the 6th/12th and 7th/13th centuries they played an important part in securing the success of the Almohad movement and in strengthening the Muʾminid dynasty by being the first to support the Mahdī Ibn Tūmart [*q.v.*]. Their chief Faska-u-Mzal then received the name of a Companion of the Prophet, Abū Ḥafṣ ʿUmar [*q.v.*]. This eminent figure held a leading position in Almohad history and his grandson, Abū Zakariyyāʾ, later founded the Ḥafṣid dynasty in Tunis, in 625/1228 [for the Hintāta of Tunisia see ḥafṣids]. The Hintāta fought on every battlefield in the cause of the Almohads, and provided the dynasty with chiefs of real worth and unassailable fidelity. Those who remained in the country settled down permanently in the upper valleys of the Wādī Drāʿ. After the tragic events that marked the end of the Almohads in 667/1269, the family of the Awlād Yūnus, whose origin seems to have been connected with Abū Ḥafṣ ʿUmar, gave their support unreser-

vedly to the Marīnids, and for a long period played an important political and fiscal part in South Morocco. It was among them that sultan Abū ʿInān found refuge and solace, in 759/1358, before his death. Their representatives acted as more or less independent viziers under the Marīnid princes who were appointed as governors of Marrākush and its neighbourhood. One of these, ʿAmīr, had a distinguished career (Ibn al-Khaṭīb wrote his praises) and ruled at his pleasure over vast territories. Intoxicated by power, he married the widow of a sultan and finally led a revolt. He was besieged in his mountains, captured after a long siege, brought to Fās and flogged to death in 771/1370. In conformity with an old Berber tradition, his family did not lose its authority but continued to command the town and the tribe. Funerary inscriptions found at Marrākush, in the royal metropolis of the *Ḳaṣaba*, confirm that at the very time when the Portuguese settled at Safi, the kings of Marrākush were the actual descendants of the Hintātī *shaykhs*. From Portuguese sources we can see that, when the Marīnids finally lost their authority, the chiefs of the Hintāta received a share of the power thus vacated in South Morocco and quietly established themselves in the ruined *Ḳaṣaba*. The same sources confirm that, even at the time of their fullest power, the "kings of Marrākush" never had any great authority outside the town and its suburbs. Their relations with their mountain kinsmen were far from cordial, and they won no renown in their encounters with the Portuguese who, after the conquest of Azammūr [*q.v.*], had made Marrākush the avowed object of their ambitions. Nuno Fernandes of Ataide attacked the town on 23 April 1515, but unsuccessfully, as a result of the help brought to the town's defence by the Saʿdid *sharīf*s. Ten years later these same Saʿdids seized Marrākush for themselves by securing the assassination of the last known Hintātī *amīr*, Muḥammad b. al-Nāṣir Bū-Shanṭūf. From that date, the Hintāta vanished from Moroccan history. Even their name has disappeared.

HIPPOCRATES [see Supplement, s.v. BUḲRĀṬ].

HIPPODROME [see MAYDĀN].

HIPPOLOGY [see BAYṬĀR, FARAS, FURŪSIYYA].

ḤIRĀʾ also written ḤARĀʾ, and without *hamza*), a mountain three Arabian miles to the north-east of Mecca, often mentioned along with another mountain opposite, Thabīr [*q.v.*]. It was near the *shiʿb* or quarter of the family of al-Akhnas, on the left of the pilgrim road to ʿIrāḳ.

Muḥammad is said to have been in the habit of spending a month each year in a cave on Ḥirāʾ engaged in *taḥannuth*, presumably some form of religious devotion, and to have been visited here by an angel (Ibn Hishām, 152; cf. Ṭabarī, i, 1147 f., 1155); this experience is sometimes identified with the beginning of revelation; and hence the present name Djabal al-Nūr, "The Mountain of Light". He is also said to have gone to Ḥirāʾ on his return from the visit to al-Ṭāʾif in about A.D. 620, and to have waited there until he was assured of protection in Mecca (Ibn Hishām, 251).

(T. H. WEIR-[W. MONTGOMERY WATT])

AL-ḤĪRA, name of the capital of the Lakhmids [*q.v.*].

The name is comparable with Syriac *ḥirtā* "encampment", and the locality was no doubt so named from having been at first a camp settlement; several of the legends about the beginnings of Ḥīra, summarized in Yāḳūt's *Muʿdjam al-buldān*, imply that this was so. This sense of the word is not extant in classical Arabic, but is found in the Epigraphic South Arabian *ḥrt/ḥyrt* (see A. F. L. Beeston in *Le Muséon*, n.s. lxvii (1954), 311-3), while the Classical lexica record analogous senses for the verb *taḥayyara* (= *aḳāma*) and the noun *ḥayr*.

(A. F. L. BEESTON)

The facts of geography—salubrious air, a fertile neighbouring region, and proximity to the Euphrates —all adequately explain the choice of the site for the settlement, which was located to the south-east of present-day Nadjaf in ʿIrāḳ. But it was a political factor which transformed al-Ḥīra from a relatively obscure locality to the most important Arab city in the Fertile Crescent during the three centuries preceding the rise of Islam, namely, the emergence of the powerful Lakhmid dynasty, who made it their capital and advanced it to a position of dominance which became still more apparent with the decline of Hatra, Edessa, and Palmyra, in the 3rd century A.D. Al-Ḥīra became so much a Lakhmid city that it was referred to as "Ḥīra of Nuʿmān" after one of the Lakhmid kings. These adorned the city and its environs with castles and palaces, *e.g.*, al-Khawarnaḳ and al-Sadīr, while Christian princesses of the Royal Family founded some famous monasteries, *e.g.*, Dayr Hind. The city reached its heyday during the reign of the illustrious Mundhir III (A.D. 503-554) when it became the centre of political, diplomatic, and military activities in which Persia, Byzantium, and the Arabian Peninsula were involved. For the Sāsānids, however, it remained a fortress for the protection of Mesopotamia against the raids of the nomads and a caravan city of vital importance for the transit trade between Persia and the Arabian Peninsula.

Owing to its geographical location, al-Ḥīra became the confluence of three interacting cultural currents: the Persian, the indigenous pagan Arab, and the Byzantine, represented mainly by Nestorian Christianity; and herein lies its more enduring significance. It was most probably at al-Ḥīra that the Arabic script was first developed. As the seat of a Nestorian bishop, it was a centre whence Christianity was transmitted to the Arabian Peninsula. As the capital of the Lakhmids, it attracted to their royal court Arab poets from the Peninsula, *e.g.*, ʿAbīd, Ṭarafa, and al-Nābigha, and thus gave an impetus to the cultivation and perfection of the Arabic panegyric. It also produced a major pre-Islamic poet, ʿAdī b. Zayd [*q.v.*], who belonged to its famous Christian community, the *ʿIbād*, and whose poetry reflects the various facets of Ḥīra's urban culture.

Although it was captured and ravaged by the

Ghassānids [*q.v.*] twice in the 6th century A.D., it was with the decline of the Lakhmids and their eventual downfall that the city started to lose its importance and prestige: after the death of Nuʿmān III in A.D. 602, it received a Persian governor; in 12/633 it capitulated to a Muslim army under Khālid and undertook to pay tribute. As the pre-Islamic world to which it belonged came to an end, the city with its Christian associations and monuments led a precarious and anachronistic existence, witness the events which affected it during the reigns of Hārūn al-Rashīd (170-93/786/809) and al-Muḳtadir (295-320/908-32). Al-Kūfa, the new Muslim foundation, totally eclipsed it, and finally, it vanished from the face of the earth. But for the Arab poet it remained an example of fallen greatness and *vanitas vanitatum*, even as late as the 4/10th century, when it inspired a famous ʿAbbāsid poet, al-Sharīf al-Raḍī, to compose two elegies.

HIRAḲLA [see EREGLI].

ḤIRBĀʾ (A.), chameleon. Triptote with the meaning of "the head of nails joining the links of a coat of mail", this word, because of its ending, is often treated as diptote and feminine, although it is masculine and for its feminine form has *ḥirbāʾa*. However, the female chameleon is most often called *umm ḥubayn*, while the male is referred to by a number of *kunyas*, of which the most frequent in Muslim Spain, *abū barāḳish*, often leads translators into error (see E. Lévi-Provencal, *En relisant le Collier de la colombe*, in *al-Andalus*, xv/2 (1950), 353).

This reptile, which is classified with the *aḥnāsh* and is close to the *ḍabb* [*q.v.*], is well known to the Arabs, among whom it is proverbial for its "chameleonism" (*talawwun*), its ability to become invisible by turning the same colour as that of any object on which it happens to be. Its natural colour is grey when it is young, and yellow when adult, but it becomes green in sunlight. It lives by warmth, and can be seen, from morning to night, following the path of the sun (in order, it is said, to shade its body with its head); thus the poets compare it with the adherents of various religions, who turn to pray in different directions. At midday, when the ground is too hot, it climbs to the top of a tree, and is then compared to a monk in his cell; but when the sun is at its zenith, it appears to go mad because it can no longer see it. Since it is slow-moving, God has given it an eye which can move in all directions and enables it to look out for its prey without having to move. Thanks to its tongue, which is rolled up in its throat but which can stretch a cubit or three spans when it is extended, it snaps up insects coming within its reach without needing to make any other movement, so much so that it immediately resumes an immobility so complete that it seems to be part of whatever it is sitting on. However, it mostly hunts its food at night. Should a man disturb it, it swells up and appears threatening, but is in fact quite harmless. It has four paws and a hump similar to that of a camel, but the physical description of the animal is scarcely touched on in zoological works.

Besides its "chameleonism", it is proverbial also for its caution (*ḥazm*), for it will not let go of one branch until it has a firm grip of another when moving about.

It is not forbidden to eat the flesh of this animal, but it is scarcely sought after. Certain parts of its body have medicinal properties, and a chameleon seen in a dream portends various happenings.

Bibliography: Djāḥiẓ, *Ḥayawān*, index; Damīrī, s.v.; Ḳazwīnī, *ʿAdjāʾib*, s.v.; see also ABŪ ḲALAMŪN and the bibliography to the article ḌABB. (CH. PELLAT)

ḤIRFA [see ṢINF].

HIRMIS (HARMAS, HARMĪS, HIRMĪS), Hermes Trismegistus, that strange god incarnate, on the one hand the Hellenistic name of the Egyptian god Thoth, on the other hand the author of philosophical, scientific and magical works (see Pauly-Wissowa, art. Hermes Trismegistos, by W. Kroll), passed in both of his capacities into Islam. Islam, it is true, transformed the god into one of the heroes of olden times, who, according to his name Trismegistus (*al-muthallath bi 'l-ḥikma* and the like), appears divided into three individuals. The "first Hermes" is identified with Akhnūkh (Enoch) and Idrīs. He lived in Egypt before the Flood and built the Pyramids (see HARAM, their name being connected with his) and other sanctuaries (*barābī*); on their walls he wrote down the scientific achievements of the first men, in order to preserve them from destruction and loss by the Flood. The second (*al-Bābilī*) lived after the Flood in Babylonia and revived the study of the sciences, but migrated, according to one version (*Fihrist*, 352, see below), to Egypt. The third wrote after the Flood in Egypt about various sciences and crafts.

This relation originates from Abū Maʿshar's *K. al-Ulūf* (Abū Sulaymān al-Manṭiḳī, *Ṣiwān al-ḥikma*, Ms. Br. Mus. Or. 9033, fol. 32v: *Akhbār al-umam*) and is reproduced by Ibn Djuldjul, *Ṭabaḳāt* (written 377/987-8), ed. Fuʾād Sayyid, 5 f. (with ample annotation), Ṣāʿid al-Andalusī, *Ṭabaḳāt al-umam*, ed. Cheikho, 18 f., 38 f., Ibn al-Ḳifṭī, ed. Lippert, 6 f., 346 ff., and Ibn Abī Uṣaybiʿa, 16 f. A different report is given in the *Fihrist* (238 f.) on the authority of Abū Sahl b. Nawbakht; at 351 ff. he spokes of the Babylonian Hermes only, whom he obviously confounds with the "First Hermes", cf. J. W. Fück's annotated translation, *Ambix*, iv, 1951, 89 f. The origin from ancient Babylonia of the main lines of Abū Maʿshar's report, as well as the endowment of the three Hermes with features deriving from the earliest history as related in the Bible and Apocrypha, was shown by M. Plessner, *St. Isl.*, ii (1954), 45 ff. The difficulty of admitting that the Flood had taken place in Egypt too, was evaded by al-Mubashshir b. Fātik, *Mukhtār al-ḥikam*, ed. Badawi, 7 f., where he separates the pre-flood Hermes from the Egyptian, and assumes two floods, the second of which "drowned the inhabitants of Egypt only", obviously a reminiscence of the Exodus of the Children of Israel.

A variant of Abū Maʿshar's account appears in the alchemical *K. Dhakhīrat al-Iskandar*. Hermes hid the writings on pre-flood science in a tunnel (*sardāb*) near the sea-shore, from whence they were recovered by Balīnūs [*q.v.*], to be passed on to Aristotle; he in his turn presented them to Alexander, who before his death ordered Antiochus I to conceal them in the wall of a monastery in Amorium (ʿAmmūriya [*q.v.*]), where the book was discovered after the conquest of the town by al-Muʿtaḍid. Yet another

account, which does not mention the Flood, is given in the introduction to the *K. Sirr al-khalīḳa* by Balinūs. The thaumaturgist, incited by the inscription on a statue of Hermes, digs beneath it and meets the threefold Sage in a subterranean crypt as an aged man holding an emerald tablet in his hand and having by his side the book eventually published by Balinūs; this book ends with the text on the table. Both the last-mentioned works have been analysed by J. Ruska, *Tabula Smaragdina*, 1926, cf. M. Plessner, in *Isl.*, xvi (1927), 77-113; the story of the discovery as told in the *sirr* served as a pattern for further Hermetic writings in Arabic. A new translation of the story and the tablet text was published by F. Rosenthal, in *Das Fortleben der Antike im Islam*, 1965, 332 ff.

Abū Maʿshar's account has survived in Latin translation in several texts (*e.g.*, J. Ruska, *AGMNT*, xi (1928), 28-37) and influenced other texts, *e.g.*, the *Summa philosophiae* by Ps.-Robert Grosseteste, ed. L. Baur, 1912, 275 ff.; cf. L. Thorndike, *History of Magic*, ii, 1923, 449, and the Breslau doctoral thesis by August Bertsch, *Studien zur Summa philosophiae des Pseudo-Robert Grosseteste*, Brunswick 1929 (typescript), 37. On the survival of the story in mediaeval Hebrew literature see M. Plessner, in *St. Isl.*, ii, 53 f.

Traces of the story of three Hermes also occur in the legendary history of ancient Egypt as reported by numerous authors on the authority of the still puzzling Ibn Waṣīf Shāh (Ṣāʿid, *Ṭabaḳāt*, 39 calls him al-Waṣīfī). G. Wiet, *L'Égypte de Murtadi*, 1953, 19, points to that Hermes who lived under al-Būdashīr b. Ḳufṭarīm; see now the references and parallels in *Picatrix*, tr. H. Ritter and M. Plessner, 1962, 322 ff. The connexion with the Alexander Romance, already recognizable in the above-mentioned *Dhakhīrat al-Iskandar*, is still further elaborated in other Arabic Hermetica; the ps.-Aristotelic *Sirr al-asrār* (*Secretum secretorum*) also contains the *Tabula Smaragdina*. The Hermetic book *al-Iṣṭamākhīs* (see below) appears as the *vademecum* given by Aristotle to Alexander in which some talismans to help the king on his expedition to India are enumerated; the main contents of the text have been incorporated by al-Makīn [*q.v.*] in the Alexander portion of his history, cf. also M. Plessner, in *OLZ*, 1925, 912-20.

In the stories about the Ṣābiʾans, Hermes appears partly as a god (*e.g.*, *Fihrist*, 322,24), partly as a prophet with philosophical features, cf. the analysis of the account of the *Fihrist*, 318 ff., by F. Rosenthal, *Aḥmad b. aṭ-Ṭayyib as-Saraḫsī*, 1943, 41 ff. (at p. 47 add D. Chwolsson, *Ueber die Ueberreste der babylon. Literatur in arab. Uebersetzungen*, 1859, 93 ff., and against it A. von Gutschmid, in *ZDMG*, xv (1860), 42 ff. [*Kleine Schriften*, ii, 1890, 694 ff.], where the influence of the account on Ibn Waḥshiyya's *al-Filāḥa al-Nabaṭiyya* is implicitly discussed).

The large number of extant Arabic writings bearing the name of Hermes, and the still larger number of quotations from Hermetic books not preserved induced L. Massignon to exaggerate the rôle of "Hermes" as the promotor of the Hellenistic tradition in Islam; he also claims for some books a Hermetic character which are simply Neoplatonic or gnostic (A. J. Festugière, *La révélation d'Hermès Trismégiste*, I, Appendice III, 384-400: *Inventaire de la littérature hermétique arabe*, cf. his Addenda in the second edition, 438-9). Unfortunately, his paper read to the *Eranos-Tagung* 1942 and alluded to at the beginning of the *Inventaire* has never appeared. So long as Hermes is not explicitly quoted, we have no right to style books as Hermetic simply because of their general character as described by Massignon, 388-9; it is the make-up of these books as revelations that constitutes their belonging to the Hermetica. About the list of alchemical books (p. 391) cf. now Fück, *l.c.* Here are given a few comments on Massignon's list of extant books (pp. 393 ff.).

III A 1: The books of Crates and al-Ḥabīb contain sermons from the *Turba Philosophorum*, as stated by Ruska (*T.Ph.*, 1931), but are not its sources, rather its derivates (cf. M. Plessner, *Vorsokratische Philosophie und griechische Alchemie in arabisch-lateinischer Ueberlieferung*, to appear shortly).

III B 2: The books containing philosophical and ethical sayings of Hermes are much more numerous; to the collections in Ibn al-Ḳifṭī and al-Shahrastānī quoted by Massignon, add Ḥunayn b. Isḥāḳ, *Ādāb al-falāsifa*, part II, Ch. 13 (supplement to Loewenthal's translation in K. Merkle, *Die Sittensprüche der Philosophen*, 1921, 45 f.), Miskawayh, *Djāwīdān khirad*, ed. Badawi, 1952, 214-6, Ibn Durayd, *Mudjtanā*, 1342, 75, al-Mubashshir, *l.c.*, 7-26, Abū Sulaymān al-Manṭiḳī, *l.c.*, fol. 32v-34v. A great many sayings are common to all or almost all these sources; every text has, however, sayings not shared by the others. A comparison, also with Greek anthologies, is badly needed. In al-Mubashshir's account Hermes shows strong monotheistic features similar to those described by al-Sarakhsī (see above), but more elaborate and more specific.

III B 4: The talismanic texts are to be supplemented by the magical stone-books [see ḤADJAR]. An example is MS Berlin, Wetzstein II 1208 (Ahlwardt 6216, cf. A. Siggel, *Katalog der arab. alch. Handschriften Deutschlands*: *Berlin*, [1949], 135 f.). For these texts and the astrological ones (III B 5) see now the introduction and indices to *Picatrix*, tr. H. Ritter and M. Plessner, 1962, and the forthcoming volume of studies on the book by the author of this article. Certain passages of the cosmology found in *al-Iṣṭamāṭīs* are quoted in al-Masʿūdī, *Akhbār al-zamān*, 1938, 7 f. = *Abrégé des marveilles*, tr. Carra de Vaux, 13.

V A: The sayings of Hermes quoted by Ibn Umayl have been translated and discussed by H. E. Stapleton, G. L. Lewis and F. Sherwood Taylor in *Ambix*, iii, 1949, 69-90.

The so-called Postumus (Festugière, 340, and addition, 436 f.) has been published by G. Levi Della Vida, *La dottrina e i Dodici Legati di Stomathalassa, uno scritto di ermetismo popolare* (*ARANL*, Memorie, VIII, iii, 8), 1951. A number of Arabic hermetical texts and accounts have appeared in English translation in vol. iv of W. Scott, *Hermetica*, 1936. According to al-Masʿūdī, *al-Tanbīh*, ed. De Goeje, 31, Hermes assumed the existence of seven southern *climata* corresponding with the northern. The influence of Arabic Hermetica on Renaissance thought is in part discussed by Frances A. Yates, *Giordano Bruno and the Hermetic tradition*, 1964. An attempt to explain Kyot's account of Flegetanis in Wolfram's *Parzival* with the help of Arabic Hermetica in order to strengthen the hypothesis of the hermetical character of the epic has been made by H. and R. Kahane, *The Krater and the Grail*: *Hermetic sources of the Parzival*, 1965.

Bibliography: In the article and in L. Massignon's *Inventaire*; see also A. E. Affifi, *The influence of Hermetic literature in Muslim thought*, in *BSOAS*, xiii (1950), 840-55; J. Kraemer, *Das arabische Original des "Liber de pomo"*, in *Studi*

orientalistici in onore di G. Levi Della Vida, i, 484 ff.; A. Siggel, *Das Sendschreiben das Licht über das Verfahren des Hermes der Hermesse*, in *Isl.*, xxiv (1937), 287-306; F. Rosenthal, *Al-Mubashshir ibn Fâtik*, in *Oriens*, xiii-xiv (1961), esp. p. 145; al-Bīrūnī, *Āthār*, index.

(M. Plessner)

ḤIRZ [see TAMĀʾIM].

ḤISĀB, "account to be rendered to God". Although the Ḳurʾān sometimes uses *ḥisāb* in the sense of computation (X, 5 and XVII 12), it is very often used by antonomasia as the "reckoning" which God will require from a man on the Day of Judgement. The expression *yawm al-ḥisāb* (XL, 27; XXXVIII, 16, 26, 53; cf. XIV, 41), "the Day of the Rendering of Accounts", is synonymous with *yawm al-dīn*, "the Day of Judgement". The eschatological *ḥisāb* is to be given to God alone (XIII, 40; XXVI, 113); He will require it from all men, but especially from the ungodly (LXXXVIII, 26; XIII, 18 and 21; XXIII, 117). And God "is prompt in demanding an account" (II, 200; III, 19 and 199, etc.). Each man will receive a "book" which is a statement of accounts, a "roll" on which his actions are inscribed. If the good deeds outnumber the bad, he will receive it "in his right hand" and the *ḥisāb* will be in his favour (Ḳurʾān, LXXXIV, 7-10; LXIX, 19-20; cf. XVII, 71); those to whom the account is unfavourable will receive it in their left hand (LXIX, 25-6), and will be punished.

These Ḳurʾānic statements may be compared with many earlier traditions, Iranian, Jewish and Christian. The rendering of accounts and the weighing of actions was known to Mazdaism (see J. Pavry, *The Zoroastrian doctrine of a future life*, New York 1929, and P. J. de Menasce, *Škand-Gumānīk Vičār*, text and French tr., Fribourg (Switzerland) 1945, 58-9). Approximate equivalents are found in post-Biblical Judaism (*Aboth* III and IV; cf. Volz, *Jüdische Eschatologie*, 266) and in early Christianity (analysis and references *apud* Tor Andrae, *Der Ursprung des Islams und das Christentum*, in *Kyrkohistorisk Årsskrift*, 1925). Later, certain Ḳurʾānic commentaries and in particular certain works of popular edification drew for this subject on Jewish or Christian accounts, *isrāʾīliyyāt* and *masīḥiyyāt*, which were clearly recognized as such. Each religious milieu, however, developed and applied to its own spirit this common basis of eschatological ideas (cf. the remarks of Tor Andrae, *op. cit.*, 255). The imagery used in their descriptions is irrelevant to our discussion of the treatment of these matters by the Muslim theological schools (*ʿilm al-kalām*).

To survey all these data would involve a comprehensive discussion of the whole problem of the "retribution for deeds", of "promise and threat" (*al-waʿd wa'l-waʿīd* [*q.v.*]) in the next world. We select for treatment here only some problems which concern the nature of the *ḥisāb* itself, or its forms, and give a brief indication of the general solution given by the different schools.

1. The "weighing" (*al-wazn*). The very term *ḥisāb* evokes the ideas of counting, measuring, evaluating. The majority of the Muʿtazilīs, and to an even greater extent the *Falāsifa*, gave it a metaphorical meaning. The "Pious Men of Old" and, with certain reservations, the Ashʿarīs, adhered to the literal meaning (see below): the just Judge will present everyone with an account of his deeds, which will be "added up" and "weighed". With the "book" (*kitāb*) containing the statement of the account, as mentioned above, there then appears the "balance" (*mīzān*), with reference to Ḳurʾān, XLII, 17; LV, 6-8; LVII, 25. The "Reckoning" of the Last Day is also "the weighing", *al-wazn* (VII, 8): good deeds will be heavy and bad deeds light (VII, 8-9).

2. The question of "merit" (*al-istiḥḳāḳ*). Every human act is repaid by God with either a reward or a punishment. For the Muʿtazilīs, a good deed thus of necessity "merits" reward and a bad deed punishment. On the day of the Reckoning, the "merits" attached to the deeds are either added or subtracted. The majority of the Muʿtazilīs and Khāridjīs believe that the evaluation is qualitative, considering that one single "great sin" (*kabīra*) may render void the "merit" earned by any earlier good deeds, and be punished with eternal fire. However the later Muʿtazilīs of Baṣra, al-Djubbāʾī and his son Abū Hāshim, believed that a quantitative evaluation is concerned, in which good and bad deeds are set against and cancel out each other. The group which prevails in number and in "weight" necessarily determines the reward, in the case of good deeds, and the punishment, in the case of bad (for summary of arguments see, *e.g.*, Fakhr al-Dīn al-Rāzī, *Muḥaṣṣal*, Cairo n.d., 173).

Ashʿarī tradition, on the other hand, holds that there is no "merit" attached to human deeds (al-Rāzī, *op. cit.*, 172-3; al-Djurdjānī, *Sharḥ al-mawāḳif*, Cairo 1325/1907, viii, 305 ff.); and that it is impossible for one set of acts to cancel the other. For, as the Ḳurʾān says (XCIX, 7-8): "Whoso has done an atom's weight of good shall see it, and whoso has done an atom's weight of evil shall see it". The value of faith would never be compromised by sins, however grave and numerous, in view of the famous *ḥadīth*, "Those whose heart contains even one atom of faith will come out of hell" (al-Bukhārī, *Īmān*, 33). Furthermore, every good deed of the believer will be "multiplied" simply by the freely-given grace of God, while each of his bad deeds counts "as one only". In fact all rests in the hands of God. And it is known, thanks to the promises which He has given, that God will not condemn the believer, even if he is sinful, to eternal hell. He can either condemn him in His justice to a limited period in hell, or, in His mercy, grant him complete pardon. It is therefore not *certain* that there are, even temporarily, any sinful believers in hell.

This is a point upon which the Ḥanafīs-Māturīdīs disagree with the Ashʿarīs (cf. ʿAbd al-Raḥmān b. ʿAlī, *Naẓm al-farāʾid*, Cairo n.d., 2nd ed., 38-9). For the Māturīdīs indeed, God may certainly pardon this or that sinner, but not all. "It is obligatory that some of those who have committed a great sin should be punished" by a period in hell (al-Laḳānī, *Djawharat al-tawḥīd*, ed. Luciani, Algiers 1907, verse 117). For God has attached a punishment to great sins (*kabāʾir*)—a temporary punishment if the sinner is a believer—and God's "promises" cannot be "vain".

This question of retribution for deeds, the very object of the *ḥisāb*, leads to the two related questions of repentance (*tawba* [*q.v.*]) and of the intercession of the Prophet (*shafāʿa* [*q.v.*]).

3. Method by which the Account will be rendered. As we have seen, the Ḳurʾānic verses mention, in connexion with the *ḥisāb*, the "book", a statement of his deeds, which will be given to every man on the Day of Judgement; and tradition makes the *mīzān*, the Ḳurʾānic "balance", the instrument for the "weighing" of the deeds. The Muʿtazilīs and some later Ashʿarīs interpret both in a metaphorical sense. The "book" is "the knowledge of the debit and credit" which God will make clear to every man

at the time of the resurrection, while the "weighing" of the deeds symbolizes the justice and equity of God; but God has no need of a "real" weighing to pronounce His sentence. And human actions, since they are only transitory accidents, are unable to "return again" to existence once they have been "reduced to nothing" (for a summary of this argument see *e.g.*, al-Ghazālī, *Iḳtiṣād*, Cairo n.d., 8, and al-Djurdjānī, *op. cit.*, 321). Furthermore they cannot possess the attributes of lightness or weight which the act of weighing presupposes (al-Djurdjānī, *ibid.*). Abu 'l-Hudhayl of Baṣra and Ibn al-Muʿtamir of Baghdād state, however, that the existence of the Balance is "possible", but they make no pronouncement on its factual reality.

On the other hand, Ḥanbalīs, Ḥanafīs-Māturīdīs, and the great majority of the Ashʿarīs, relying on the *ḥadīth*s and "the religion of the Ancients", agree in recognizing the existence of these eschatological *entia*. The Balance in particular is called "reality" (*ḥaḳḳ*) in the *Waṣiyyat Abī Ḥanīfa*, the *Fiḳh Akbar II*, and later the *Fiḳh Akbar III* (cf. A. J. Wensinck, *The Muslim creed*, Cambridge 1932, index), as well as in the profession of faith of al-Ashʿarī (*Ibāna*, Cairo n.d., 9) and the various Ḥanbalī creeds (cf. H. Laoust, *La profession de foi d'Ibn Baṭṭa*, Damascus 1958, 95 and note 2). The Wahhābī profession of faith adds to it "the registers of actions" (H. Laoust, *Ibn Taimīya*, Cairo 1939, 621). The Ḥanbalīs state that it is a question of real things; but the Ashʿarīs and Māturīdīs qualify this by saying that we cannot know the exact conditions under which they exist. It is vain to try to discover whether "the weighing of deeds" is useful or not: God acts as He wills. And al-Ghazālī adds (*Iḳtiṣād*, 89) that it will be of use not to God but to man, who will thus understand the just Divine decision.

There are many traditional accounts which expound and elaborate this basic eschatology with a very abundant imagery. A résumé of them is found in al-Bādjūrī's popular manual of *kalām*, *Ḥāshiya . . . ʿalā Djawharat al-tawḥīd*, Cairo 1352/1934, 101-6. A subsidiary part in the Reckoning is also played by "the witness of the members" (Ḳur'ān, XXIV, 24) and the test of the Bridge, the *Ṣirāṭ* (XXXVI, 66; XXXVII, 23-4).

The third form of the root *ḥsb* was to be used in Ṣūfism, in a sense which is no longer eschatological but spiritual, to indicate the account of his conscience which the devout person presents to God. Hence arose the by-name of al-Muḥāsibī given to Ḥārith b. Asad: "he who excels in the examination of his conscience".

Bibliography: in the article. To this may be added many *ḥadīth*s, devotional works or works of popular preaching, and various manuals of *ʿilm al-kalām*, in the chapters on "The Last Things" (*al-waʿd wa 'l-waʿīd*). (L. Gardet)

ḤISĀB, in the sense of "arithmetic", "mathematical calculation" [see ʿilm al-ḥisāb]; in the sense of "accountancy" [see muḥāsaba].

ḤISĀB AL-ʿAḲD (— al-ʿuḳad, — al-ʿuḳūd, — al-ḳabḍa bi 'l-yad, — al-yad), dactylonomy, digital computation, the art of expressing numbers by the position of the fingers. Some indications prove that the ancient Arabs not only at times used to show their outstretched hands, bending down one or more fingers when necessary, to indicate some small numbers (see I. Goldziher, in *Arabica*, viii/3, 272), but also had the ability to express larger numbers by holding their fingers in a given position (see G. Levi Della Vida, in *Isl.*, x (1920), 243), and it is not impossible that certain gestures used by the Prophet were described or interpreted by his contemporaries as indicating numbers according to a system already in use (cf. H. Ritter, in *Isl.*, x (1920), 154-6), particularly the position of his hand in the *tashahhud* [*q.v.*], although the traditional accounts are far from agreeing with later practice (see I. Goldziher, *op. cit.*). The practice of dactylonomy in Persia is mentioned by Plutarch (Fr. tr. Ricard, *Vies*, ii, 514, n. 25); and from the first centuries of Islam, Arab or Persian poets would for example make a subtle and veiled allusion to some person's lack of generosity by saying that his hand made 93 (the figure indicated by the closed hand, the sign of avarice), which suggests that the system of which we possess later descriptions was known at a very early stage, perhaps through the medium of the Persian scribes. Ḥamd Allāh Mustawfī credits Ibn Sīnā with having invented, in 420/1029, calculation by dactylonomy, and thus freed accountants from the bother of using counters; thus al-Ṣūlī (d. 335/946) wrote in his *Adab al-kuttāb* (Cairo 1341/1922, 239): "The scribes in the administration refrain, however, from using these [Indian] numerals because they require the use of materials [writing-tablets or paper ?] and they think that a system which calls for no materials and which a man can use without any instrument apart from one of his limbs is more appropriate in ensuring secrecy and more in keeping with their dignity; this system is computation with the joints (*ʿaḳd* or *ʿuḳad*) and tips of the fingers (*banān*), to which they restrict themselves". Nearly a century earlier this method of calculating on the fingers must have been already in use, for al-Djāḥiẓ (d. 255/868) advises schoolmasters (*K. al-Muʿallimīn*, B. M. MS, Rieu 1129, 13r.) to teach the *ḥisāb al-ʿaḳd* (*al-ʿuḳad*) instead of the *ḥisāb al-Hind*, i.e. calculation by means of the "Indian" numerals; the same author placed among the five methods of expression (*bayān*) what he called *ʿaḳd* (or *ʿuḳad*, according to the reading of G. E. von Grunebaum, who identifies it with digital computation [see bayān]), and which for him is a calculation (*ḥisāb*) needing "neither spoken word nor writing"; now, the verses of the Ḳur'ān (VI, 95, 96, X, 5, XVII, 13/12, LV, 4/5) which he quotes in support of his affirmation of the virtues of *ḥisāb* (*Bayān*, ed. Hārūn, i, 80; see also i, 76; *Ḥayawān*, i, 33) all refer to the cycle (*ḥusbān*) of the sun and moon, to the calculation of years and to computation; thus it might perhaps refer to counting on the fingers, following a method curiously reminiscent of that expounded by the Venerable Bede in the 7th century A.D., in *De temporum ratione* (in Migne, *Patrol.*, xc, 295; text and trans. in J.-G. Lemoine, 14-7).

What makes this hypothesis quite probable is that the same English writer, in the first chapter (*De computa vel loquela digitorum*) of the work named, expounds a system of dactylonomy almost exactly identical with that contained in the very much later Muslim treatises of al-Mawṣilī, Ibn al-Maghribī, Ibn Shuʿla, Ṭaybughā, and Ibn Bundūd (see *Bibl.*), which did not seem earlier than the 8th/14th century, and also in the *Farhang-i Djahāngīrī* (between 1005 and 1017/1597-1608), which reproduces a text of ʿAlī Yazdī (d. 850/1446) in Persian, but in the Arab tradition.

Under this system, the figures are represented as follows:

1, by bending down the little finger;
2, by also bending down the third finger;
3, by adding the middle finger to them;

4, by bending down the third and middle fingers only;
5, by bending down the middle finger only;
6, by bending down the third finger only;
7, by bending the little finger very low;
8, by bending both the little and the third fingers very low;
9, by adding the middle finger to them;
10, by placing the tip of the forefinger on the middle of the thumb;
20, by extending the thumb and forefinger simultaneously;
30, by putting together the tips of the thumb and the forefinger;
40, by stretching out the thumb over the base of the forefinger;
50, by bending down the thumb at right angles;
60, by curling the forefinger round the thumb;
70, by placing the tip of the thumb on the central joint of the forefinger;
80, by placing the tip of the forefinger on the thumbnail (but there are variations);
90, by placing the tip of the forefinger on the base of the thumb;
100, by opening the hand (but there are variations);

"the gesture which, in the right hand, serves as a sign for units from 1 to 9, in the left hand indicates the same number from 1,000 to 9,000; ... and what, in the right hand, serves as a sign for tens from 10 to 90, in the left hand indicates hundreds from 100 to 900". From 10,000, the system described above differs fairly considerably from Bede's, but on the whole the two methods are practically identical; it has been possible to establish that the figure 1 is not obtained by stretching out the forefinger, as Muslim tradition would have us believe.

This system was known in the West from antiquity, but it was no longer used after the early Middle Ages; in the East, it is very probable that it was known to the scribes of whom al-Ṣūlī speaks (see above) and that it remained in use until quite recently, being practised to perform arithmetical operations (apart from division). No ancient description of the method being available, here is one still known to old men in Tunisia (communication by M. Souïssi): to multiply, e.g., 6 by 8: bend the little finger of the hand (= 6) and the first three fingers of the right hand (= 8); the total of the bent fingers (1 + 3 = 4) indicates the tens and the product of the fingers unbent (4 × 2 = 8) the units.

On the other hand, another method is also used for certain commercial transactions involving rare and very costly merchandise, especially pearls, when buyer and seller do business in the presence of witnesses and do not wish to reveal the terms of the transaction concluded. The two negotiators, sitting face to face, have their right hands hidden under a covering, and touch each other's fingers according to a precise code; although the units in the different numerical series are not distinguished, those concerned know what is meant:

1, 10, 100, 1,000 are indicated by taking hold of the forefinger (which here retains its value; see above);
2, 20, 200, 2,000: by taking the forefinger and middle finger;
3, 30, 300, 3,000: by taking the forefinger, middle and third fingers;
4, 40, 400, 4,000: by taking all four fingers;
5, 50, 500, 5,000: by taking the whole hand;
6, 60, 600, 6,000: by pressing twice on the forefinger, middle and third fingers (3 × 2);
7, 70, 700, 7,000: as for 4 and then as for 3 (4 + 3);
8, 80, 800, 8,000: by pressing twice on all four fingers (4 × 2);
9, 90, 900, 9,000: as for 5 and then as for 4 (5 + 4).

This system, recorded by Ṭāshköprüzāda, *Miftāḥ al-saʿāda*, Ḥaydarābād, i, 329-31 (reproduced by Ḥādjdjī Khalīfa, cf. von Hammer, *Encyclopädische Übersicht der Wissenschaften des Orients*, 315) and by Niebuhr, (*Description de l'Arabie*, French trans., 1779, i, 145, in particular), is still practised in the island of Baḥrayn, in the Red Sea and probably elsewhere (cf. Père Anastase, in *Machriq*, 1900; H. de Monfreid, *Secrets de la mer Rouge*, Paris 1931, 100). H. Fisquet, *Histoire de l'Algérie*, Paris 1842, 171, records it for Algeria. A similar procedure, in use in Bengal, utilises the joints and not the whole finger, but it has not been recorded in the Middle Eastern countries.

The origin of the systems briefly described above is obscure; in any case, those which are, or were, in use in the Arab countries do not seem to be in any way indigenous (see I. Goldziher, *op. cit.*) or at least do not go back to Arab antiquity; on the other hand, tesserae found in Egypt indicate the numbers according to the method of bending the fingers, and it is not unreasonable to see in this the possible origin of the system described by the Arabic and Persian sources. In another connexion, the terms employed raise a difficulty, for although *ḥisāb al-yad* or *ḥ. al-ḳabḍa bi 'l-yad* are clear, this is not the case with words taken from the root *ʿḳd* which, apparently, denote the knuckles and joints, but also signify "contract". In the last analysis it is possible that an earlier method than those of which records have been preserved may have consisted of counting on the finger joints and that the terminology was later applied to other systems.

Bibliography: The chapter of the *Farhang-i Djahāngīrī* of Djamāl al-Dīn Ḥusayn Indjū has been translated by S. de Sacy, *De la manière de compter au moyen des jointures des doigts usitée dans l'Orient*, in *JA*, iii (1823); by A. Rödiger, *Über die im Orient gebräuchliche Fingersprache für den Ausdruck der Zahlen*, in *ZDMG*, 1845, 112-29; and by S. Guyard, *Chapitre de la préface de Farhangi Djihangiri sur la dactylonomie*, in *JA*, 1871, 106-24. The *ḳaṣīda* of Muḥ. b. Aḥmad al-Mawṣilī *fī ḥisāb al-ḳabḍa bi 'l-yad* (MS. Paris, Bibl. Nat. 4441) has been published by Père Anastase, *ʿUḳūd*, in *Machriq*, iii (1900), 169 ff. (see also 119 ff.), and translated in A. Marre and Boncompagnoni, i, 309: *Manière de compter des anciens avec les doigts de la main* (comment. of Aḥmad al-Ṭarābulusī published and trans. by H. Ritter, in *Isl.*, x (1920), 154-6, 243 ff.). The texts of Ibn al-Maghribī, Ibn Shuʿla and Ṭaybughā al-Ashrafī al-Baklamishī al-Yūnānī have been published by J. Ruska, *Arabische Texte über das Fingerrechnen*, in *Isl.*, x (1920), 87-119. The chapter entitled *Fī maʿrifat ʿaḳd al-aṣābiʿ* of the *Maḳālāt* of Ibn Bundūd has been translated by G. S. Colin, in *REI*, 1932/1, 59-60. — Studies: I. Goldziher, *Über Gebärden- und Zeichensprache bei den Arabern*, in *Zeits. für Völkerpsychologie*, xvi (1866), 369-86 (analysis by G.-H. Bousquet, in *Arabica*, viii/3 (1961), 269-72) deals generally with sign-language; idem, in *ZDMG*, lxi (1907), 756-7; the principal work on the question examined in the present article is that of J.-G. Lemoine, *Les anciens procédés de calcul sur les doigts en Orient et en Occident*, in *REI*, 1932/1, 1-58; see also M. B. al-Athārī, in *MMIA*, v (1925), 70-9; A. Fischer, *Über Finger-Zahlen-*

figuren bei den Arabern, in *Islamica*, vi (1934), 48-57, as well as the art. ISHĀRA.

ḤISĀB AL-DJUMMAL, method of recording dates by chronogram. It consists of grouping together, in a word (significant and appropriate) or in a short phrase, a group of letters whose numerical equivalents, added together, provide the date of a past or future event. Such a chronogram is known as a *ramz*, and in Turkish a *taʾrīkh* [*q.v.*].

A more complex variety is called *mudhayyal*; here the principal chronogram is completed by a supplementary chronogram (*dhayl*) and it is the sum of the two which provides the date.

For the correct interpretation of these chronograms it is of course necessary to take into account the difference in numerical value which, for certain letters, exists between the *abdjad* [*q.v.*] of the East and that of the Maghrib (including Muslim Spain). It has been noticed that this involves six of the characters which, in the Cadmean order, come after the *nūn*: *sīn*, *shīn*, *ṣād*, *ḍād*, *ẓāʾ* and *ghayn*. In Persian and in Turkish, the letters which are peculiar to those languages (P, Č, Ž, G) have the same numerical value as the Arabic homographs.

The *tāʾ marbūṭa* may be counted as a *hāʾ* or as a *tāʾ* according to whether it occurs in pause (*waḳf*) or in liaison (*dardj*). The doubled (*mushaddada*) letters may be counted as one or as two. Similarly, the initial and terminal *alifs* may be added in or ignored, as necessary.

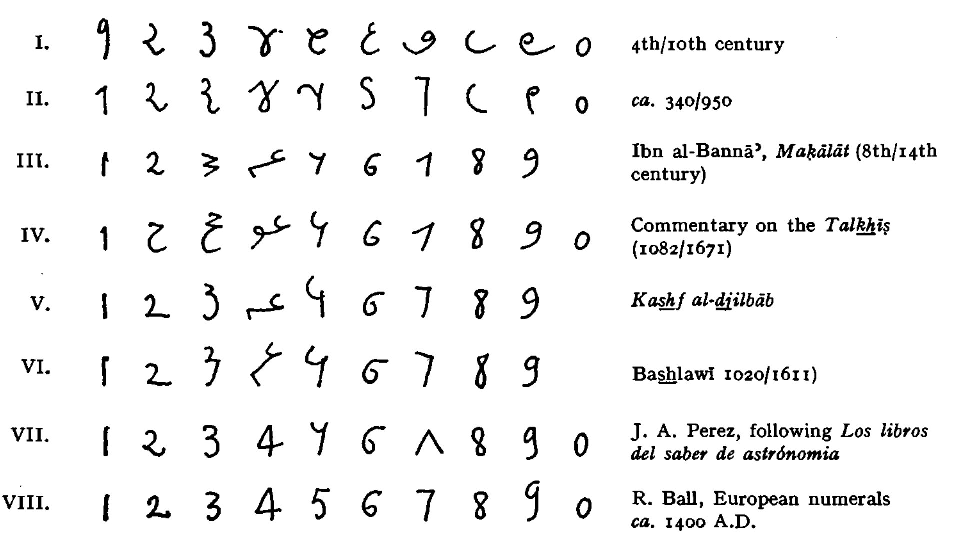
These chronograms are commonly employed in inscriptions (generally in verse) commemorating a foundation. They are equally common in didactic historical summaries of the *urdjūza* genre, particularly in obituaries (*wafayāt*).

In epigraphical texts, the chronogram is sometimes painted in a colour which stands out from that of the rest of the inscription. In manuscripts it is found written in larger letters. The phrase which constitutes the chronogram is nearly always announced by the preposition *fī*, "in", or by one or other of the words *ʿāma*, or *sanata* "in the year . . ."

In Morocco it was in the 11th/17th century, during the period of the Saʿdid dynasty [*q.v.*], that particularly frequent use began to be made of chronograms, not only in inscriptions on monuments but also in obituaries.

The principal author in the latter category was the secretary and court poet, Muḥammad b. Aḥmad al-Maklātī (d. 1041/1631), the author of a *lāmiyya* which was a continuation of a similar work by Muḥammad b. ʿAlī al-Fishtālī (d. 1021/1612).

In the following century, Muḥammad al-Mudarraʿ (d. 1147/1734) composed an *urdjūza* of the same type on the notabilities of Fez. ʿAbd al-Wahhāb Ādarrāḳ (d. 1159/1746) was the author of another, on the saints of Meknès.



Wide use has been made of all these rhymed obituaries with chronograms by the historians and biographers of Morocco, notably Muḥammad al-Ḳādirī (d. 1187/1773) in his *Nashr al-mathānī*, and Muḥammad b. Djaʿfar al-Kattānī (d. 1339/1920) in his *Salwat al-anfās*.

The process of adding the numerical value of all the letters forming a word (in this case a proper name) is the basis of a divinatory procedure, known as *Ḥisāb al-nīm*, by which it can be predicted which of two rulers at war will be the victor and which the vanquished. This process has been described at length by Ibn Khaldūn in his *Prolegomena* (see ed. Quatremère, 210-4; Fr. tr. De Slane, i, 241-5; Eng. tr. Rosenthal, i, 234-8); see further SĪMIYĀʾ and ZĀʾIRADJA).

Bibliography: The subject has been treated very briefly by Carra de Vaux at the end of his article TAʾRĪKH in *EI*[1]; E. Lévi-Provençal, *Les historiens des Chorfa*, 79-80 (see also, in the index to his work, the names of the writers mentioned above); Ufrānī, *Nuzhat al-Ḥādī*, tr. Houdas, 28, 55, 66, 82, 168, 190, 191, 195, 234, 265, 341, 451; Salāwī, *al-Istiḳṣāʾ*, Cairo 1312/1894, i, 179-80; iv, 281; G. S. Colin, *Une nouvelle inscription arabe de Tanger*, in *Hesp.*, iv (1924), 94.

(G. S. COLIN)

ḤISĀB AL-GHUBĀR "calculation [by means] of dust", method of calculation borrowed from Persia which owes its name to the use of a small board (*takht*) on which the calculator spread, by shaking a cloth or by another method, a fine layer of dust; he then used a small stick to draw the figures known as *ghubār* numerals and eliminated a partial

result by covering it with a little dust, which he then gathered up for use again when he had finished his operation. On the various operations thus performed, see ʿILM AL-ḤISĀB.

This procedure supplemented those already known to the Arabs: dactylonomy (*ḥisāb al-ʿaḳd* [*q.v.*]), counting by means of pebbles (*ḥaṣā*, whence *iḥṣāʾ*; cf. *calculus*), and mental calculation (*ḥisāb maftūḥ* or *hawāʾī*), etc., but little is known of its origin and in particular the question arises whether the use of dust is not the accidental result of a mistranslation of a Persian or other term, the tablet originally having been plastered with clay, a material on which figures could much more easily be engraved and erased by means of a stylus flattened at one end.

In any case this procedure was possible only from the time when figures became known. The *devanagari* figures were introduced in Baghdād in about 155/770, but it is known that although Muḥammad b. Mūsā al-Khuwārizmī (d. *ca.* 232/846) helped to spread *al-ḥisāb al-hindī*, the mathematicians, astronomers, etc. for long preferred to continue using the old system of referring to numbers by the letters of the alphabet [see ABDJAD, ḤISĀB AL-DJUMMAL]; on the other hand the *ghubār* figures which derive from *al-ḥisāb al-hindī* seem to have spread fairly soon to the Maghrib and to Spain, where they were adopted by the mathematicians, and the history of their development finally became blended with that of the numerals known as "Arabic", which are used in Europe. The table opposite shows the development of the *ghubār* numerals up to the point where they passed into use in the Christian West.

Bibliography: Ibn al-Bannāʾ, *Maḳālāt fi 'l-ḥisāb*, MS Tunis 10301; Ḳalaṣādī, *Kashf al-astār (al-asrār) ʿan ḥurūf al-ghubār*, MSS Tunis 3292, 3934, 4775; idem, *Kashf al-djilbāb ʿan ʿilm al-ḥisāb*, MS Tunis 2043; Sharishī, *K. al-Talkhīṣ baʿd al-sabk wa 'l-takhlīṣ* (treatise on mental calculation), MS Tunis 2046; Bashlawī, *Risāla fi 'l-ḥisāb al-maftūḥ*, MS Tunis 2043; Rouse Ball, *History of mathematics*, Cambridge 1889; J. A. Sanchez Perez, *La aritmética en Roma, en India y en Arabia*, Madrid-Granada 1949, 120 ff.; M. Cohen, *La grande invention de l'écriture*, Paris 1958, 385. (M. SOUISSI)

ḤIṢĀR, siege. The following articles deal with siegecraft and siege warfare. On fortification see BURDJ, ḤIṢN, ḲALʿA and SŪR.

i. — GENERAL REMARKS

Siege warfare was one of the essential forms of warfare when it was a matter of conquest, and not merely of plundering raids, in countries in which, from ancient times, most of the large towns had been protected by walls and where, during the Middle Ages, the open countryside was to an ever increasing extent held by fortresses [see ḤIṢN and ḲALʿA]. Although the forces available were rarely sufficient to impose a complete investment, they blocked the normal ways of access to the stronghold under siege and thus brought about its surrender by famine or threat of famine, unless relief brought from outside or a sortie by the besieged dispersed the assailants; nevertheless, their stocks of supplies made it possible for the besieged to hold out for quite a long time, if their morale was strengthened by the hope of rescue and by devotion to their prince, and it sometimes happened that the besiegers, being ill-prepared for lengthy operations [see ḤARB] or sceptical of the advantages to be gained by others than the prince, lost heart and gave up the struggle. The nomads, who had no siege engines at their disposal and who attached little value to cultivation, sometimes secured the surrender of important towns by devastations that brought lasting ruin to the inhabitants; but the regular troops, who realized the advantage that lay in safeguarding the revenues from the land and who shared the general opinion as to the enormity of the crime of actual destruction in countries where physical conditions rendered any rapid recovery impossible, generally abstained from destroying plantations of trees and irrigation works; apart from military operations properly speaking, their chief aim was to secure some complicity inside the stronghold or, by means of a ruse, the capture of a local lord whose liberation would be made conditional upon the surrender of the stronghold.

The actual operations were carried out with the help of siege machines—apart of course from the personal weapons—which, while continuing ancient traditions, had nevertheless achieved some measure of technical progress and, during the latter half of the Middle Ages, were employed far more extensively than hitherto. At first, whenever possible, they tried to fill in part of the moat, so that it could be crossed. In the case of towns, attempts might be made, either by a surprise attack or as the result of treachery, to scale the walls with the help of ladders, when the first to enter would run to open a gate for those following, a manœuvre that had no serious chance of success except at night. More usually, when the nature of the ground allowed it, they tried to push forward to the foot of the fortifications wooden towers with several storeys—*burdj*, *dubbāba*—from the top of which the assailants could fight their opponents on the walls and ultimately leap down on them. Above all, they made efforts to breach the ramparts of towns, or to pierce openings in castle walls or make them collapse, by the use of either mines or engines. Mines (*naḳb*), in the use of which the Khurāsānīs appear to have had an enduring aptitude, were excavated from points situated outside the ramparts and if possible hidden from the sight of the defenders; supported by wooden props, they were extended forwards until they came underneath the chosen target; the wood was then set alight, as a result of which the ground subsided (if it was not solid rock), and with it the building standing above; the besieged defended themselves by digging countermines, in time to intercept the route taken by the enemy sappers. Siege engines were, roughly speaking, of two categories: some caused a certain point in the wall to be battered by direct blows, these being the battering-rams (*kabsh*, *sinnawr*) known throughout the Middle Ages; others hurled a missile, these in turn being divided into three groups, according to the method of propulsion—mangonels (*mandjanīḳ* [*q.v.*]), in which the swinging of a beam forced back by a team of men or (as in the Western "trébuchet") worked by a counterpoise, struck the missile with great force and thus propelled it against the point under bombardment, light ballistas (*ʿarrāda* [*q.v.*]), in which the same effect, with a less heavy projectile, was obtained by the twisting of a cord; and lastly, from the end of the 6th/12th century, the huge "wheel cross-bow" (*ḳaws al-ziyār*), operated like the ordinary cross-bow to shoot a powerful arrow, but requiring several men to operate it. For most of the time, these engines were built or at least assembled

almost on the spot, on account of difficulties of transportation, and wheeled forward on wagons to the exact place required; for their successful use, certain conformations of ground were obviously necessary, and these conditions were often absent from fortresses in mountainous country.

The defenders protected themselves by showering arrows on the soldiers operating the siege engines, and these then had to be protected by huge shields and palisades. When they were at the foot of the walls, they threw down stones, pitch, etc. onto them. Above all, they tried to set fire to the machines by throwing naphtha [see NAFṬ], with such success that the machines, and especially the towers which offered a large area for attack, had to be covered with hides rendered fire-proof by vinegar. For the construction or adjustment of these machines it might happen that engineers were used who (strictly speaking not being combatants) were non-Muslim, particularly in the early centuries.

Bibliography: see DJAYSH and ḤARB, in particular the work of K. Huuri and the notes by Cl. Cahen to the *Traité d'Armurerie*. All the chronicles contain descriptions of sieges, which have not been the subject of any systematic analysis; of particular interest are those referring to the wars between Saladin and the Franks and, in the following century, to the Mongol conquest and the Mamlūk counter offensive. Artillery in the age of fire-arms has been omitted from this article; for this subject, see BĀRŪD. (CL. CAHEN)

ii.—MUSLIM WEST

The methods of warfare used by besiegers and besieged were basically the same in the West as in the East; the differences were mainly those of vocabulary. For basic details see E. Lévi-Provençal, *L'Espagne musulmane au Xe siècle*, 1932, 150; H. R. Idris, *La Berbérie orientale sous les Zīrides*, ii, 533; R. Brunschvig, *La Berbérie orientale sous les Ḥafṣides*, ii, 87.

Among siege engines, the mangonels of the Marīnid period had become very powerful. During the famous sieges of Tlemcen for example, they were capable of bombarding the town with cannon-balls made of marble, some of which have been found there, the largest with a circumference of two metres and weighing 230 kilograms, whereas at the siege of al-Mahdiyya (601/1204) by the Almohad Sultan al-Nāṣir, the largest of the projectiles weighed only 120 pounds (*al-Ḳirṭās*, tr. Beaumier, 329). During the Marīnid period there appeared also a new engine: the *ḳaws al-ziyār*, which seems to have been a huge ballista or sling; it took eleven mules to carry it when dismantled. The small ballistas (*raʿāda*, *ʿarrāḍa*, for the classical *ʿarrāda* [*q.v.*]) became more numerous: the besiegers used them on the platforms of their approach-towers while the besieged used them for throwing fire-balls to set fire to these towers.

As regards portable arms, it is noted that, from the first half of the 5th/11th century, the besiegers were liberally armed with very deadly crossbows (*ḳisī ʿaḳḳāra*) with which they prevented the besieged from appearing at the loop-holes to shoot at the sappers. To enable him to supervise the operations, the leader of the besieging army had an observation post (*marḳaba*, *daydabān*, more rarely *s͟hirāʿ*).

Exact details of the siege operations themselves are rare. There exist interesting passages on the siege of Barbastro in 457/1065 (Ibn ʿId͟hārī, *al-Bayān al-mug͟hrib*, iii, éd. Lévi-Provençal, 227), on the siege of Saragossa in 512/1118 (*al-Ḳirṭās*, tr. Beaumier, 233, Rabat ed., ii, 88), on the two sieges of Gafsa by the Almohads (Ibn ʿId͟hārī, section on the Almohads, ed. Huici, 1963, 165-8; *Hespéris*, xxviii (1941), 45, 62), on the two sieges of Tlemcen by the Marīnids (Ibn K͟haldūn, *al-ʿIbar*, vii, 94, 221, 257, tr. de Slane, iii, 373, iv, 143, 221) and on that of Almeria in 709/1309 (*al-ʿIbar*, vii, 249, tr. iv, 204).

A most unusual procedure was employed by the Almohad ʿAbd al-Muʾmin, in 540/1146, to demolish a part of the ramparts of Fez: he built a dam upstream on the river which flowed through the town, then, when enough water had accumulated, broke the dam so that the resulting torrent swept away the ramparts (Lévi-Provençal, *Documents inédits d'histoire almohade*, 164 and note 1).

Some sieges lasted for several years: the Marīnid Sultan Yūsuf b. Yaʿḳūb blockaded Tlemcen for eight years and three months, and the siege ended only when the besieging ruler was assassinated, this causing his army to disintegrate. In fact the surrounding wall of a town would enclose not only buildings but also extensive open spaces which could be cultivated or serve as pasture land. There exist some details of the prices which the besieged inhabitants of Valencia (*al-Andalus*, xiii (1948) 140) and of Tlemcen (*al-ʿIbar*, vii, 96, tr. de Slane, iii, 377) had to pay for food.

The very long duration of some sieges led to the besieging army transforming its military camp (*maḥalla*) into an actual town with its own fortified walls, its Great Mosque, its baths and its markets. The best known of these were al-Manṣūra [*q.v.*] (or rather al-Manṣūriyya) in front of Tlemcen, and Santa Fé, built in 1491 by the Catholic Monarchs during the siege of Granada, but many others are mentioned by the historians. (G. S. COLIN)

iii.—PERSIA

The techniques of investing fortresses and the use of siege machinery were certainly known in pre-Islamic Persia, for there were skilled engineers in the armies of the Sāsānids (cf. Christensen, *L'Iran sous les Sassanides*², 212-13), and it was, of course, allegedly a Persian, Salmān al-Fārisī, who showed the Muslims how to build a defensive trench (*k͟handaḳ*) on the western side of Medina against the attacking Ḳurays͟h in 5/627. Moreover, the Persians had built defensive walls against outside barbarians in several strategic zones, such as at Darband on the western shore of the Caspian and at Čālūs and Ḳazwīn against the depredations of the Daylamīs (cf. Masʿūdī, *Murūd͟j*, ii, 196-7, on Anūs͟hirwān's wall-building activity, and also *ibid.*, ix, 5 ff.), and this tradition was kept up in Islamic times (cf. Ṭabarī, iii, 1275, on the walls built at Tamīs͟hā in Gurgān by a local Iranian commander in 224/839).

The Arabs of the desert were almost total strangers to the use of siege techniques—within the Arabian peninsula, only al-Ṭāʾif had any defensive walls—and had the psychological dislike common to nomadic peoples of solid walls and buildings. Yet as they advanced eastwards into the Islamic world, it was necessary for them to acquire these skills, for Persia abounded in castles and fortified places, above all in such regions as Ād͟harbayd͟jān, Fārs, the Caspian region and K͟hurāsān (cf. Spuler, *Iran*, 499-502). Further east still, and not to be reached by the Arabs for some decades, were the fortified villages and estates of K͟hʷārazm, recently revealed by Soviet archaeology (see S. P. Tolstov, *Auf den Spuren der altchoresmischen Kultur*, Berlin 1953, 73 ff.). When the Arabs attacked Ctesiphon in 16/637, the Persians

employed heavy catapults or mangonels (*madjānīḳ*, sing. *mandjanīḳ*) and lighter ones (*ʿarrādāt*) against the Arab forces, but a man named Saʿd Shīrzād built twenty *mandjanīḳ*s for the Arabs, and thirteen years later the Arabs were using mangonels at the siege of Iṣṭakhr (Ṭabarī, i, 2427; Ibn al-Athīr, ii, 396; Balādhurī, 389).

During the Umayyad period, the sources frequently mention the Arabs' use of siege techniques against the city walls and strong points of the Iranian east. In 92/710, the governor of Khurāsān, Ḳutayba b. Muslim, besieged Shūmān in Khuttal, using a powerful mangonel called *al-Faḥdjā'* "the wide-legged", whose stones fell in the local ruler's palace and killed a man; and at Samarḳand two years later, Ḳutayba's Arabs destroyed the city walls with catapults (Ṭabarī, ii, 1230, 1244-5; Ibn al-Athīr, iv, 437, 453). As is implied by the Sāsānids' use of catapults against the attacking Arabs at Ctesiphon, these machines—or at least the lighter and more mobile ones—could be used in normal, open fighting, as well as in sieges. Thus it is recorded that in 121/739 the Tamīmī and Azdī troops of Naṣr b. Sayyār were opposed by two *ʿarrāda*s of the rebel al-Ḥārith b. Suraydj (Ṭabarī, ii, 1692; Ibn al-Athīr, v, 178).

In the ʿAbbāsid period, techniques became more complex, and many new ways were developed in the fighting with the Byzantines on the Anatolian frontiers, where heavily-fortified strongholds abounded [see ʿAWĀṢIM]. It was probably here that the use of flaming naphtha, hurled either in pots from slings or by mechanical means into the enemy's positions, was learnt, and corps of specialist soldiers for hurling naphtha, *naffāṭūn*, are often mentioned. They were employed, for instance, by al-Muʿtaṣim's general al-Afshīn in the campaigns against the Khurramī rebel Bābak [*q.v.*] in the difficult and mountainous terrain of Ādharbaydjān, especially at the siege of Bābak's stronghold of Badhdh (Ṭabarī, iii, 1211, year 222/837); and in the next century, Caliphal troops in Fārs hurled spears to which pots of naphtha were attached (*mazārīḳ al-naft*) against the incoming Daylamīs (Miskawayh, in *Eclipse of the ʿAbbasid Caliphate*, i, 282, tr. iv, 321, year 322/934). More of terror value than anything else must have been the sacks of serpents hurled by means of catapults into the enemy's camp by the Ṣaffārid Amīr Khalaf b. Aḥmad in 354/965 when he was besieged by rebels in one of the strongholds of Sīstān (ʿUtbī-Manīnī, i, 101).

The Ghaznavid army, as developed by the great Sultan Maḥmūd, was probably the most highly-developed fighting machine ever known in the Islamic world, and we would expect it to be suitably equipped for siege warfare. Heavy machinery was drawn along by elephants, and these beasts were themselves fitted with rams for battering down walls and buildings (for a slightly later, similar use of these beasts, see Djuwaynī-Boyle, ii, 360, when elephants captured from the Khʷārazmian army were used by the Ḳarā Khiṭāy to batter down the gates of Balāṣaghūn). Specialist personnel such as engineers, sappers and miners were used in the Ghaznavid army to work the catapults and to mine beneath walls. Their skills were particularly necessary during the campaigns of Maḥmūd and his son Masʿūd in Ghūr in central Afghānistān, where the local chiefs' resistance was centred on towers and strong points. These towers were bombarded with rocks, and mines were driven beneath them; Bayhaḳī says further that lassoes were thrown up to the battlements of one fortress so that the Ghaznavid troops might scale the walls (see C. E. Bosworth, *Ghaznevid military organisation*, in *Isl.*, xxxvi (1960), 65, 68; *idem*, *The Ghaznavids, their empire in Afghanistan and eastern Iran 994-1040*, Edinburgh 1963, 118, 121).

The Saldjūḳs, as a Turkish steppe people, had to learn the techniques of siegecraft when they entered the Islamic world, and for some time they retained a respect for solid buildings and fortifications. Bundārī, 37, mentions Alp Arslan's admiration for the walls of Āmid in Diyār Bakr, which were celebrated for their strength (cf. Nāṣir-i Khusraw, *Safar-nāma*, ed. Dabīrsiyāḳī, Tehrān 1335/1956, 9); he touched the walls with his hands and then passed his hands over his breast in order to acquire for himself something of the walls' strength (*li 'l-tabarruk*). The Saldjūḳs overran Persia and drove the townspeople there into submission by cutting them off from their agricultural supply regions rather than by direct assault, but Ṭoghrīl in 442/1050 kept up the siege of Iṣfahān for nearly a year till the Kākūyid Abū Manṣūr Farāmurz surrendered (Ibn al-Athīr, ix, 384-5). The army of the Great Saldjūḳs soon acquired a special division for siege warfare, with engineers, sappers and naphtha-throwers; as in the ʿAbbāsid period, contact with the Byzantines doubtless hastened this process. During Alp Arslan's Georgian campaign of 456/1064, the Sultan used his corps of *naffāṭūn* against the wooden barricades of Ānī, and then pushed westwards from there into Anatolia. In the course of sieges there, he constructed platforms from sacks filled with straw and earth for his archers, crossbowmen and naphtha-throwers, and he also built a wooden tower with an awning of felt soaked in vinegar to protect the attackers on the tower from having boiling liquids and fire hurled at them; from this tower, the Saldjūḳ troops battered down the walls (Ṣadr al-Dīn al-Ḥusaynī, *Akhbār al-dawla al-Saldjūḳiyya*, 39-40). In the early part of Malik Shāh's reign, after the suppression of Ḳāwurd's rebellion in 465/1073, the Sultan gave special charge of the mangonels and siege machinery of the army to one of his foremost commanders, the slave eunuch ʿImād al-Dīn Sāwtigin (Bundārī, 49).

The sources are particularly full of information on siege techniques during the period of the Khʷārazm-Shāhs, Ghūrids and Mongols (6th-7th/12th-13th centuries), when the science reached the peak of its development in mediaeval Islam. It was recognized that bombarding a town with catapults not only pounded down the walls—which in the Iranian world were usually only of sun-dried brick anyway—but also had a psychological effect, making life inside the town insecure from the continual hail of missiles. It was by such a process of spreading despair and terror that the Khʷārazmians brought the Ghūrid defenders of Harāt almost to surrender in 600/1203 (Djuwaynī-Boyle, i, 320-1). Coming as they did from a low-lying region intersected by canals and river channels, the Khʷārazmians had an eye for the skilful utilization of rivers and waters in sieges. After the Ghūrid Sultan Muʿizz al-Dīn Muḥammad's death in 602/1206, the Khʷārazmian army again invested Harāt. The attackers dammed up the Harī Rūd so that the city walls became surrounded by water, and carried on the onslaught from boats. When the Shāh ʿAlā' al-Dīn Muḥammad arrived in person, he ordered the dam to be broken down and the pent-up waters released; the rushing floods caused a long section of the walls to collapse, and after some fighting the city was taken by the Khʷārazmians. Shortly afterwards, the governor of Harāt, Ḥusayn Kharmīl, rebelled against the Khʷārazm-

Shāh, so this time the latter had the Harī Rūd diverted into a moat round the city, whose banks were artificially raised by tree-trunks and débris. The increased water-level soaked the foundations of the walls; then the water was let out from the moat with a rush, causing part of the walls to collapse, and the attackers were able to climb across the débris to the city gates (Djūzdjānī, *Ṭabaḳāt-i Nāṣirī*, tr. Raverty, i, 259-60; Djuwaynī-Boyle, i, 335). An interesting example of the Trojan horse technique occurred on the death of the Ghūrid Ghiyāth al-Dīn Maḥmūd in 609/1212, when rival members of the dynasty intrigued for possession of the capital Fīrūzkūh; eighty men were smuggled into the city inside treasure-chests, but the plot was betrayed and the men seized and killed (Djūzdjānī, *op. cit.*, i, 408-9).

It is well-known, both from Islamic sources and from the accounts of European travellers within the Mongol dominions, that the Mongols developed the techniques of siege warfare to a high degree. Čingiz Khan's corps of *mandjaniḳīs* or mangonel-operators, headed by the Nōyīn Ābaḳā, is said to have numbered several thousands (*ibid.*, ii, 1047), and the personnel here included many Chinese and some Europeans. Hülegü's army included Chinese *mandjanīḳīs*, naphtha-throwers and men to operate multiple-shooting bows (*čarkh-andāzān*). It was the Mongols who brought the multiple-shooting bow (*čarkh-kamān*) into the Islamic world for the first time; some of these were used by Čingiz for his attack on Nīshāpūr in 618/1221. Concerning foreign specialists in Mongol service, Marco Polo mentions a Nestorian Christian and a German artillery master employed by Ḳubilāy; and for the invasion of Khurāsān, Čingiz had a renegade Persian soldier from the district of Ustuwā in northern Khurāsān, who was in charge of the catapults and the deployment of infantry (Nasawī-Houdas, 53-4, tr. 90-1). The Mongols' siege machinery was usually transported on carts, and John of Plano Carpini says that a standard item in the Mongol soldier's equipment was ropes for dragging this machinery along, *funes ad machinas trahendas* (cf. K. Huuri, *Zur Geschichte des mittelalterlichen Geschützwesens aus orientalischen Quellen*, Helsinki-Leipzig 1941, 123-4, 180-92).

In their siege tactics, the Mongols showed considerable resourcefulness. They usually began by herding together as cannon-fodder a group of the local population (*ḥashar*), who were then used as a protective shield behind which the Mongol soldiers could fight or as carriers of ammunition for the catapults (cf. Djuwaynī-Boyle, i, 92-3, siege of Khodjand, and *ibid.*, i, 107, attack on Dabūsiyya and Samarḳand). The catapults and heavy artillery would then be brought as close to the invested walls or fortifications as possible; at Djand in 616/1219 the defensive moat had first of all to be filled in, after which the catapults, battering-rams and scaling-ladders could be used (*ibid.*, i, 89). At Multān, the Mongol general Törbei Toḳshīn apparently mounted his mangonels on rafts in the Indus river (*ibid.*, i, 142), and at Nīshāpūr, the Mongols are said to have set up 200 mangonels in a single day; they used timber felled in the nearby, well-wooded oasis of Būshtaḳān to build protective bulwarks and to construct catapults, testudines (*dabbābāt*) and battering-rams (Nasawī-Houdas, 54, tr. 91-2). Where there were no stones available as ammunition for the catapults, *e.g.*, at the siege of Gurgāndj in Khʷārazm in 617-18/1220-1, blocks of mulberry wood were soaked in water and then used; at the same time as this bombardment, the moat was filled with débris and a peasant *ḥashar* was pushed forward in a crescent formation to demolish the defensive earthworks.

The use of gunpowder and artillery in the Islamic world naturally had a profound effect on siege techniques; for a consideration of these new methods in Persia, see BĀRŪD. v.—The Ṣafawids.

Bibliography: Material has largely to be gleaned from the historical sources extending over the whole period, but there are specific sections on siege warfare in Spuler, *Iran*, 493-4, 499-502, and idem, *Mongolen*, 413-16. Quatremère's notes on the use of *naft*, on peasant *ḥashars* and on catapults and engines of war in his *Hist. des Mongoles de la Perse*, i, 132-7, 204-5, 284-92, are still valuable. Finally, Huuri's work (see above), esp. 123 ff., 180-92, should be consulted for the technical details of the various types of catapult and mechanical bow.

(C. E. BOSWORTH)

iv.—THE MAMLŪK SULTANATE

The history of siege warfare in the Mamlūk Sultanate has to be dealt with against the following background.

Most of the great wars of the Sultanate were fought in the early decades of its existence. These wars were conducted mainly against the Crusaders, where siege warfare was the decisive, indeed almost the only, factor, and against the Mongols, where field battles were the decisive factor [see ḤARB], though sieges played a by no means negligible rôle. Thereafter the Mamlūks fought only minor wars; the two notable exceptions were the war against Tīmūrlang, where siege warfare had some importance, and the final war against the Ottomans, where it had none. In the minor wars sieges were very numerous, but these conflicts were too trivial to promote the development of siege methods and siege instruments.

During most of the Mamlūk period, the main machine employed for throwing heavy missiles in sieges was the *mandjanīḳ* [*q.v.*], but its heyday was in the 7th/13th century, particularly in its closing decades. With the final expulsion of the Crusaders, or shortly after that date, the great history of that machine comes to an end.

For seventy to eighty years after the end of the Crusades the heavy siege artillery of the Mamlūks consisted solely of *mandjanīḳs*. During the sixties of the 8th/14th century, however, the revolutionary weapon of gunpowder was introduced into the Mamlūk Sultanate, which was one of the first Muslim countries to employ it. The Mamlūks used artillery, up to the end of their rule, solely as a siege weapon; yet in spite of its revolutionary character, it served for a very long time only as an auxiliary to the *mandjanīḳ*. Only towards the end of Mamlūk rule did it succeed in superseding it, and even then not completely. Some time during the second half of the 9th/15th century firearms became the main siege weapon, but never reached the point, as in parts of contemporary Europe and the Ottoman Empire, of breaking the immense superiority which defence had enjoyed over attack in siege warfare in the later Middle Ages. (For additional information see D. Ayalon, *Gunpowder and firearms in the Mamlūk Kingdom—a challenge to a mediaeval society*, London 1956, and art. BĀRŪD).

What is characteristic of siege warfare under the Mamlūks is that a machine hurling missiles, whether it was the *mandjanīḳ* or artillery, was in fact the only really important siege machine which they used.

Other siege instruments, like the penthouse (*dabbāba*), the moveable tower (*burdj*) and naphtha (*naft*) had their heyday in the pre-Mamlūk period. In the Mamlūk period they did not count for very much (see below). During the early decades of their rule the Mamlūks employed in their sieges very frequently, and with considerable success, the system of mining (*naḳb*) side by side with their extensive use of the *mandjanīḳ*.

Despite the lack of direct evidence, there are many indications that counterpoise *mandjanīḳ*s were extensively used by the Mamlūks (and also, though perhaps on a much smaller scale, by other Muslim and Eastern states).

One of the outstanding features of the employment of the *mandjanīḳ* in Syria and Egypt in the 6th/12th and 7th/13th centuries, particularly in the struggle against the Crusaders, is the great increase in their numbers in the sieges of the Mamlūks in comparison with the sieges of the Ayyūbids. The Ayyūbid Sultans, including Ṣalāḥ al-Dīn, used a maximum of ten *mandjanīḳ*s in a single siege, and very frequently much fewer: one, two or three such engines are a common phenomenon (*al-Fatḥ al-Ḳussī*, 331; Ibn al-Athīr, xi, 120, 320, 331; xii, 6, 34, 42; Abū Shāma, ii, 129, 135, 184, 192, 235; *RHC, Hist. Or.*, iv, 254; *Sulūk*, i, 84; Deschamps, *Les châteaux des Croisés*, ii, 52, 64. For a notable exception see Ibn al-Athīr, xi, 37). For additional information on the employment of *mandjanīḳ*s under the Ayyūbids see *al-Fatḥ al-Ḳussī*, 154; Sibṭ, 435, 447; *Sulūk*, i, 95, 96, 97, 243). Towards the end of Ayyūbid rule a certain increase may be noticed (*Sulūk*, i, 331; *Nudjūm* (ed. Cairo), vi, 329). The only rulers within the boundaries of the Islamic territories who came near the Mamlūks in the extensive use of *mandjanīḳ*s were the Ilkhānid Mongols of Persia, who quite frequently used twenty to twenty-five of these engines in a single siege (Ibn Kathīr, xiii, 234, 269; *al-Nahdj al-sadīd* (in *PO*), xii, 437; Ibn al-Furāt, vii, 41; *Sulūk*, i, 426, 475. See also Huuri, 191-2, where some exaggerated numbers are included, and note 4 on p. 191). The numbers of the *mandjanīḳ*s which the Mamlūks employed against the Crusader castles were similar, though in all probability some of these engines were of a more developed type than those of the Mongols (see below) (*Sulūk*, i, 565-6; Zettersteen, *Beiträge*, 16; Ibn Kathīr, xiii, 313, 327; *al-Nahdj al-sadīd*, xiv, 553; Ibn al-Furāt, viii, 80, 136; *Sulūk*, i, 608, 778, and note 2; Djazarī, 16; the best description of the distribution of Mamlūk *mandjanīḳ*s in a siege is that concerning Ḳalʿat al-Rūm). But all the former records were broken in al-Ashraf Khalīl's siege of Acre (690/1291). Abu 'l-Fidāʾ, who witnessed the siege of Acre, states that it was besieged by a greater number of big and small *mandjanīḳ*s than any other town ever was (Abu 'l-Fidāʾ, iv, 24). According to some of the Mamlūk sources they numbered 92; according to others, 72 (al-Djazarī, Sauvaget's tr., 5; Ibn al-Furāt, viii, 111, 112; *Sulūk*, i, 764; *Nudjūm* (ed. Cairo), viii, 5-6 (and note on p. 6); *Manhal*, iii, fol. 62 b; Ibn Iyās, i, 123). The numbers of Mamlūk *mandjanīḳ*s in that siege quoted by Barhebraeus (300) or by the anonymous writer of *Excidium Acconis* (666) (cf. Huuri, 173, note 3; see also J. Prawer, *A history of the Latin Kingdom of Jerusalem* (in Hebrew), Jerusalem 1963, ii, 529) should be regarded as a gross exaggeration, to be explained perhaps by the desire of the Christian authors to inflate the power of the besieging Muslims. In 671/1272-3 Baybars I, who expected a Frankish attack by sea, fortified the port of Alexandria with 100 *mandjanīḳ*s (*Khiṭaṭ*, i, 175; *Sulūk*, i, 608). It should be noted in this connexion that the sources mention much more often the number of *mandjanīḳ*s of the besiegers than of the besieged. For numbers of *mandjanīḳ*s in sieges see also Huuri, 164-5, 172-3 (some of the numbers quoted there are certainly exaggerated). For references on the use of *mandjanīḳ*s in the Crusading period cf. *ibid.*, 156, note 1.

After the expulsion of the Crusaders from Syria and Palestine the Mamlūk sources quote only very rarely the number of the *mandjanīḳ*s taking part in sieges, although they were used frequently. There are, however, some clear indications that their numbers declined considerably (see, *e.g.*, Ibn Kathīr, xiv, 213, 281, 282; also *ibid.*, 203-9). Whereas our information on the number of *mandjanīḳ*s participating in a siege in the Mamlūk Sultanate is fairly rich, that on the number of cannons employed in sieges is very meagre; this is one of the greatest drawbacks in the study of the history of firearms under the Mamlūks (Ayalon, *Gunpowder and firearms* . . ., 30).

The characteristic feature of the sieges of the 7th/13th century is the great increase in the number of missile-throwing machines, as well as the considerable variety of their types in comparison with the past. The new type, the trebuchet, developed into several kinds of machines based on the same principle. The Muslims often hurled naphtha by means of trebuchets which seem to have been of the lighter kinds of this type of machinery.

The Mamlūk sources speak of four kinds of *mandjanīḳ*s: "Frankish" (*frandjiyya*), Maghribine or "Western" (*maghribiyya*), "black bullish" (*ḳarābughāwiyya*) and "devilish" (*shayṭāniyya*). These types are mentioned far more frequently under the Mamlūks than under the Ayyūbids, and perhaps more frequently than under any other Muslim mediaeval ruler. Before the 7th/13th century these names are hardly mentioned in the sources, and quite shortly after the end of that century they disappear completely or almost completely from them, or at least from the chronicles. This fact reflects the abrupt halt, indeed decline, in the development of the *mandjanīḳ*, when the great challenge of the Crusaders' presence in Muslim territory was removed. The sources do not explain the differences between these four types, but certain important conclusions can be drawn from the information they furnish (see further MANDJANĪḲ).

Mining (*naḳb*), a system of siege warfare which had been known for many centuries but which had been used quite rarely before the 6th/12th century, reached the peak of its success in the late 6th/12th and in the 7th/13th centuries, used particularly by the Muslims. It was carried out in the following way. An underground tunnel (*naḳb*, pl. *nuḳūb*, and much more rarely *sirb*, pl. *asrāb*, or *surūb*) would be started a certain distance from the fortification or wall, and would be dug towards it. Immediately under the fortification, it would be widened, deepened and strengthened with timber props; then it would be filled with brushwood, straw and other combustible materials, and the whole construction would be set alight. The wooden props, together with all the combustibles, would be burnt, and the undermined fortification would collapse. Mines were, of course, effective mainly against fortifications built on a more or less soft soil; they were much less effective on those which were built on rock foundations, or were surrounded by deep water (for an interesting attempt to overcome the hardness of the soil, see Abū Shāma,

RHC, Hist. Or., iv, 254-5). The great advantages of this system were that the sappers were completely safe from the missiles and naphtha of the defenders, to which the *burdj* and the *dabbāba* were so dangerously exposed, and that the besieged garrison, unaware of the operation, was frequently taken by surprise. The best defence against such attack was for the besieged to dig a counter-tunnel, and, when the enemy's line of approach was discovered, to dig into it, kill the miners or smoke them out, and to destroy their work. Mining was used in Syria during the Crusades much more frequently than in Europe and by the Muslims much more often and more systematically than by the Crusaders: Richard the Lion Heart employed, in his siege of Dārūm in 1192, highly skilled Muslim miners from Aleppo, whom he had captured in the siege of Acre (Grousset, ii, 86, and references in note 3). It is noteworthy that Saladin, in his siege of Ṣahyūn in 584/1188, had with him many Aleppine foot soldiers who were famous for their bravery (Ibn al-Athīr, xii, 5-6). It may well be no accident that Saladin had in his service an élite of miners and foot soldiers, trained in siege warfare, both from the same town. The Mamlūks employed mining on a far larger scale than the Ayyūbids, and especially in their sieges of the last Crusaders' castles (*Mir'āt al-zamān*, 225, 462, 467, 474; al-Djazarī (Sauvaget's tr.), 16; *al-Nahdj al-sadīd*, xii, 470, 490; *Sīrat al-Malik al-Manṣūr*, 152; Ibn al-Dawādārī (ed. Roemer), ix, 131, 261; Bar Hebraeus (Budge's tr.), 492-3; al-Yūnīnī, ii, 317-8; Ibn al-Furāt, viii, 80, 112; *Sulūk*, i, 69, 84, 489, 491, 498, 747, 767; al-ʿAynī, *RHC, Hist. Or.*, ii/1, 242; *Nudjūm* (ed. Cairo), v, 36, 40; vii, 138; viii, 6; *ibid.* (ed. Popper), vi, 407, 462, 467; vi, 52, 370. See also Quatremère, *Mongols*, 252-5, note 81; Rey, *Études sur les monuments* ..., Paris 1871, 36, 37 and *passim*; Oman, i, 134; ii, 50-2; Grousset, ii, 550; iii, 703-4, 743, 755, 762; Deschamps, ii, 66; Fedden, 38-9; Prawer, ii, 50, 452, 456-7, 460, 488, 539, 541).

The sappers were called *naḳḳābūn* (more rarely *naḳḳāba*). The act of mining was called *naḳaba* or *naḳḳaba*. Those engaged in extracting stones from the fortifications were called *ḥadjdjārūn*. Carpenters (*nadjdjārūn*) were also employed in the mining operations. The act of setting the combustible material alight was called *ʿallaḳa* (rarely *aḥraḳa*). (In addition to the above references see also *al-Fatḥ al-Ḳussī*, 166; *Sīrat al-Malik al-Manṣūr*, 89; Ibn al-Furāt, viii, 80; *Sulūk*, i, 1003; *Nudjūm* (Cairo), viii, 6; *ibid.* (ed. Popper), v, 407; Quatremère, *Mongols*, 284 note 95; Anṣārī (ed. Scanlon), 92). After the Crusades the employment of *nuḳūb* declines considerably, though it by no means disappears (see the references pertaining to the post-Crusade period quoted above). Of particular interest and importance are the descriptions of the *nuḳūb* dug by the Mamlūks in their sieges of Arsūf (663/1365) (*Sulūk*, i, 528-9), and al-Marḳab (684/1285) (Abu 'l-Fidā', iv, 27; *Sīrat al-Malik al-Manṣūr*, 78-9; Ibn al-Furāt, viii, 17-8. See also *Nudjūm* (Cairo), vi, 40).

One of the reasons for the Mamlūks' success in their mining operations was that, in their sieges of the Crusaders' coastal fortresses, they were free to use their siege methods more thoroughly and with less restraint than under ordinary conditions, because they did not intend to keep or repair these fortresses after their capture, but to raze them to the ground.

The two main siege weapons by means of which the Mamlūks succeeded in capturing the castles of the Crusaders, and thus bringing to an end their rule in Syria and Palestine, were the *mandjanīḳ* and the *nuḳūb*.

Mamlūk siege warfare and naval power. One of the greatest weaknesses of the Mamlūks in their sieges of the Crusaders' coastal towns and fortresses was that they could never invest them completely, for the sea was always open to the besieged. In the whole Mamlūk offensive against the Crusaders there was not a single case of a simultaneous siege from land and sea, not even in the reign of Baybars I, when the Mamlūk navy was at its peak. All the Mamlūk sieges along the coastal strip were carried out almost as if a Mamlūk navy did not exist at all. Never in a Muslim offensive against the Crusaders was the weakness of the Muslim navy so apparent as in the great and final offensive.

In the siege of Acre Frankish warships, specially protected against fire, attacked the besiegers from the sea (Abu 'l-Fidā', iv, 25; *RHC, Hist. Or.*, i, 164); and Mamlūk warships did not hinder the Franks from bringing reinforcements, evacuating refugees from besieged or captured fortresses, or landing them in ports which were still in Crusader possession (see *e.g.*, Ibn Kathīr, xiii, 321; *al-Nahdj al-sadīd*, xii, 539-40; Ibn al-Furāt, viii, 80, 112; *Sulūk*, i, 747, 764, 765; *Nudjūm* (Cairo), viii, 8, 11; see also Prawer, ii, 454-541, *passim*, and the evidence and instances below. For a rather isolated and feeble intervention of the Mamlūk navy see Stevenson, *The Crusaders in the East*, 355). The Mamlūk navy would certainly have been unable to impede the landing of a Frankish expeditionary force at any point of the Syro-Palestinian coast, including the besieged fortresses, had such a force been sent. It was even less capable of doing so than in the time of Saladin, when, after the battle of Ḥiṭṭīn [*q.v.*], the Muslims were within sight of a total expulsion of the Crusaders, but lost their chance because of European naval supremacy.

The capture of Crusader towers or fortresses built in the sea gave the Mamlūks particular difficulty. Such structures were in front of Sidon (the famous Château de Mer), Maraḳiyya, Lādhiḳiyya and Ayās (in the Gulf of Alexandretta); there was also the fortified island of Arwād, northwest of Tripoli.

Ayās and Arwād were left to be dealt with after the expulsion of the Crusaders. Sidon's "sea-castle" was handed over to the Muslims almost without fighting, when the capture of Acre made the position of the Crusaders hopeless (Deschamps, i, 64, 73-6; ii 17, 18, 227-30, 253-4; Grousset, iii, 762, and note 2; Prawer, ii, 498, 544). As for Maraḳiyya, the fortress or tower (*ḥiṣn, burdj*) which commanded the entrance of its port constituted its main fortification. It rose in the sea at a distance of two bowshots from the shore and was strongly fortified. Sultan Ḳalāwūn decided that "the siege of this fortress is impossible, because it is in the sea, and *because the Muslims have no ships* to cut off its provisions and to stop those who want to enter or leave it" (Ibn ʿAbd al-Ẓāhir, *Sīrat al-Malik al-Manṣūr*, Cairo 1961, 88). This statement reflects the ineffectiveness of the Mamlūk navy, not only in the case of Maraḳiyya, but also in all the other sieges of the Frankish coastal fortifications. No less revealing is an episode which occurred during the capture of Tripoli: a group of Franks took refuge on the small islet of St. Thomas situated opposite the town, "which could be reached only by ships", but "because of the eternal good fortune of the Muslims (*al-saʿāda al-azaliyya li'l-muslimīn*)" an exceptionally low ebb enabled the attackers to reach the islet on foot and horse, and round up the fugitive Franks (Ibn al-Furāt, viii, 115-21; for a

corroborative, though somewhat different version, see Abu 'l-Fidā', iv, 23, and cf. Grousset, iii, 744). This reflects the chronicler's feeling that but for divine intervention the Muslims would have been incapable, even in the flush of victory, of coping with such a small defenceless target, so near the shore.

Unable to conquer the sea-fortress of Maraḳiyya by his own means, Sultan Ḳalāwūn brought pressure to bear on Bohemond of Tripoli, who forced its defenders to hand it over to the Mamlūks. It was destroyed with great difficulty by a joint effort of the Mamlūks and the Franks (683/1285) (*Sīrat al-Malik al-Manṣūr*, 87-90; see also *Nudjūm* (Cairo), vii, 315-7; Grousset, iii, 704). The tower (*burdj*) protecting the entrance to the port of Lādhiḳiyya could be captured only because it was damaged by an earthquake (*Sīrat al-Malik al-Manṣūr*, 151-2; see also Grousset, iii, 734). The island of Arwād was the only stronghold which was captured (702/1302) by a naval operation (warships from Egypt and army from Tripoli) (Abu 'l-Fidā', iv, 47; Ibn al-Dawādārī, ix, 80; Zetterstéen, *Beiträge*, 108; *al-Nahdj al-sadīd*, xx, 21; *Sulūk*, i, 923; *Nudjūm* (Cairo), viii, 154-7; Ibn Khaldūn, v, 416; *Durar*, iii, 269; *Khiṭaṭ*, ii, 195). The fortifications of Ayās [*q.v.*] included a fortress and three towers, the strongest of them a sea-tower one and a half bow-shots from the shore; it was captured (722/1322) only after a bridge 300 ells long was built between it and the shore (the same method was employed in the capture of the Lādhiḳiyya tower: *Sīrat al-Malik al-Manṣūr*, 152; see also Deschamps, ii, 231, concerning the capture of Sidon's "sea-castle"; Zetterstéen, *Beiträge*, 150, 194; Abu 'l Fidā', iv, 91, 115, 119; Ibn Kathīr, xiv, 102; *Sulūk*, ii, 420-1, 429-30, 436; *Manhal*, ii, fol. 11b; Ibn Khaldūn, v, 430). See also BAḤRIYYA and D. Ayalon, *The Mamlūks and naval power—a phase in the struggle between Islam and Christian Europe*, in *Proceeding of the Israel Academy of sciences and humanities*, i/8 (Jerusalem 1965).

The *dabbāba*, the *burdj* and the *naft*. These three siege weapons, which earlier played a very important role in the struggle between the Muslims and the Crusaders, were of small significance in the final stages of that struggle, or in the period that followed the expulsion of the Crusaders.

The *burdj* and the *dabbāba* were mainly Frankish weapons (Cahen, *Traité*, 57, note 2), which were not really adopted by the Muslims, or, at best, adopted by them on a very limited scale. Because these two machines were only little known to the Muslims when they appeared on the scene of battle, and because they caused, for a certain time, great fear and admiration, they were described in the Muslim sources in greater detail than the *mandjaniḳs*. The best descriptions of the *dabbāba* are from the siege of Alexandria by the Sicilian navy in 570/1174 and from the siege of Acre in 586/1190-1 (see, *e.g.*, Abū Shāma, *Kitāb al-Rawḍatayn*, i, 235; ii, 162-4, 166, 180, 185; *Sulūk*, i, 56-7; Ibn al-Athīr, xi, 272; xii, 33; *JA*, (1849), 225; Quatremère, *Mongols*, 284-6, note 95). The best descriptions of the *burdj* are from the siege of Acre in 586/1190-1 and the sieges of Damietta in 615/1218 and 647/1249 (see Ibn al-Athīr, xii, 28, 42; Abū Shāma, i, 98; ii, 153 ff., 162; *Sulūk*, i, 103, 104, 189, 207, 339, 348 and note 6; *Khiṭaṭ*, i, 215-6; Quatremère, *Mongols*, 286, note 95; *JA*, (1849), 225; Reinaud, *Extraits*, 291; Joinville, 47, 52; see also Cahen, *Traité*, 18-9). Only on extremely rare occasions did the Muslims employ this kind of siege machine against the Crusaders either in the Ayyūbid or the Mamlūk period. Saladin used *dabbābāt* in his siege of Karak in 580/1184-5 (*RHC, Hist. Or.*, v, 254-5) and one *dabbāba* in his siege of Tyre in 583/1187, several months after the battle of Ḥiṭṭīn (Ibn al-Athīr, ix, 366; see also Deschamps, ii, 66, on the siege of Karak in 1184). In the siege and capture of Caesarea and Arsūf by Baybars I in 663/1265 *dabbābas* were employed (*Sulūk*, i, 526-7; Prawer, ii, 450, 452). In all the big sieges of the Crusader castles which followed the siege of Caesarea and which sealed the fate of the Crusaders, there is hardly any mention of either the *dabbāba* or the *burdj* amongst the siege machines of the attackers. (In Frankish sources additional instances of the use of these two weapons by the Muslims may be found, but the fact that the Muslim sources hardly mention them indicates their minor rôle. For Muslim protective measures in the siege of Acre see Prawer, ii, 542-7. On Crusader siege machines see *ibid.*, 47-50.) More than a century was to pass before the ephemeral re-appearance of this kind of siege machine took place. Tīmūrlang used a "wooden fortress" or "tower" in his siege of Damascus in 803/1400, which was burnt down by the defenders. He built another which served him no better (*Nudjūm* (ed. Popper), vi, 65; *al-Ḍaw' al-lāmiʿ*, iii, 48). Sultan Barsbāy erected a *burdj* when he laid siege to Āmid in 836/1433, but it was ineffective (*Nudjūm* (ed. Popper), vi, 705). Neither Ibn Faḍl Allāh al-ʿUmarī (d. 749/1349) nor al-Ḳalḳashandī (d. 821/1418) mentions the *burdj* or the *dabbāba* in their chapters on siege machines (*Taʿrīf*, 207-9; *Ṣubḥ*, ii, 136-8), though they include a number of obsolete weapons in their descriptions.

A siege machine which seems to have been similar to the *dabbāba* or the *burdj* and which was called *zaḥḥāfa*, was used by Baybars I in his siege of Caesarea [see above]. Its use by the Mamlūks is mentioned occasionally at later dates (*Sulūk*, ii, 428, 429; *Ta'rīkh Bayrūt*, 38). This machine is thus described by Ibn Ṣaṣrā, whose chronicle covers the period 786-99/1384-97: *zaḥḥāfāt tadjrī ʿalā 'l-arḍ mithla 'l-ʿadjal wa-ʿalayhā djulūd* (*al-Durar al-muḍiyya*, ed. W. M. Brinner, text, 81, Eng. tr., 113). For a description of *ālat al-zaḥf*, which seems to have been identical with *zaḥḥāfa*, see Dozy, *Supplément*, s.v.; for the mention by Abū Shāma of *abrādj al-zaḥf*, see Huuri, 158 note 1.

The rise of naphtha (*naft* [*q.v.*]) as a major weapon in siege warfare during part of the Crusading period was caused primarily by the appearance of the *burdj* and the *dabbāba* on the scene of action; it was the Muslim answer—and a most effective one—to the great menace caused by these new Frankish weapons (see, *e.g.*, Ibn Shaddād, *RHC, Hist. Or.*, iii, 221-2; *al-Fatḥ al-Ḳussī*, 227; *Sulūk*, i, 57, 103-4; Sibṭ, 498; *Duwal al-Islām*, ii, 117; Joinville, 47, 52; *JA*, (1850), 219, 244; Oman, ii, 46, 48-9; also most of the references given above for the *burdj* and the *dabbāba*, many of those given below in this section and in general NAFṬ. On the different versions concerning the origin (Damascus or Baghdād) of the Muslim naphtha employed in the siege of Acre in 1189-91, see Ibn al-Athīr, xii, 29; Abū Shāma, ii, 153; Ibn Shaddād, 102).

One of the main reasons for the decline of naphtha, together with the *burdj* and the *dabbāba*, was that it was such an effective counter-measure to them; another was that since the castles of the Crusaders were built of stone, with hardly any wood in them (Smail, *Crusading warfare*, 228), the effective use of naphtha as an offensive weapon, during this period when the initiative passed definitely and finally from the Franks to the Muslims, was precluded. At

that period it is mentioned rarely (for its mention as an offensive weapon by the Mamlūks in their struggle against the Crusaders, see Ibn al-Furāt, vii, 46; viii, 80; *Sulūk*, i, 747) and (in contrast to the near past) no particular importance is attached to it. On its decline and almost complete disappearance after the Crusaders, see *Gunpower and firearms*, 12-3, and NAFṬ.

The arbalest. The heavier types of arbalest or crossbow were employed in siege warfare (both by the attackers and the defenders), in sea warfare and in naval attacks on coastal fortifications. It could hurl both non-inflammatory and inflammatory missiles (lighter types were used in field battles, particularly by the infantry). The commonest name in Arabic in the Mamlūk period for the crossbow type of weapon was *ḳaws al-ri*ḏ*jl wa'l-rikāb* (often shortened to *ḳaws al-ri*ḏ*jl*), which seems to have been given to crossbows of various sizes, including those employed in sieges. The arbalest does not seem to have been a very important weapon in Mamlūk battles either against the Crusaders or against the Mongols. For a full discussion, see ḲAWS.

v.—OTTOMAN EMPIRE

The Ottomans at first, in the 8th/14th century, had little of the knowledge and few of the means needed for siege warfare. Their acquisition of such towns as Bursa (1326), Nicea/Iznik (1331) and Nicomedia/Izmid (1337) was the result not of formal siege, but rather of prolonged blockade. The Ottomans sought—and with success—to cut off each of these towns from contact with the outside world. Towards the population of the adjacent lands the Ottomans adopted an attitude of *mudārā*, *i.e.*, of mildness and restraint designed to reconcile them to Muslim rule, to win, if possible, their co-operation and also to demonstrate to the beleaguered towns that submission would not mean ruin (on "*vire*", *i.e.*, the surrender of a fortress, as carried out later between the Ottomans and the Christians in the 10th/16th and 11th/17th centuries see, *e.g.*, (i) L. Bonelli, *Il trattato Turco-Veneto del 1540* (in *Centenario della nascita di Michele Amari*, 2 vols., Palermo 1910), ii, 353 ff., also P. Wittek, *The Castle of Violets: from Greek Monemvasia to Turkish Menekṣ͟he*, in *BSOAS*, xx (1957), 604 ff. and M. Tayyib Gökbilgin, *Venedik arşivindeki vesikalar külliyatında Kanuni Sultan Süleyman devri belgeleri*, in *Belgeler* (*Türk Tarih Belgeleri Dergisi*), i/2 (1964), Ankara 1965, 203 ff.—all on the surrender of Monemvasia and Napoli di Romania to the Ottomans in 1540; (ii) Bosio, iii, 618 (a brief truce during the siege of Malta in 1565); (iii) Pečewī, ii, 181 ff. (on the fall of Gran to the Imperialists in 1595); and (iv) Anticano, *Frammenti*, 173, 318 (the surrender, to the Ottomans, of Canea and Retimo during the Cretan war of 1645-69).

As the Ottoman state grew in size and resources, so its command increased over the techniques and instruments of siege-craft as elaborated and brought to high perfection during and following the time of the Crusades—, *e.g.*, mantlets, moveable towers, mangonels, ballistas, etc. (cf. in general, K. Huuri, *Zur Geschichte des mittelalterlichen Geschützwesens aus orientalischen Quellen*, Helsingfors 1941; also Kananos (Bonn 1838), 460, 462, 469 on one of the earlier examples of Ottoman siege warfare, *i.e.*, the unsuccessful attempt of Murād II to take Constantinople in 1422. As late as the sieges of Candia (1667-9) and of Vienna (1683) the Ottomans would seem to have made use of the sling (Scheither, 77) and of the "pioulitza" (Cacavelas, 138, 139, 177), a device (perhaps the catapult?) for the throwing of bombs and stones).

The art of siege warfare was changing, however, even as the Ottomans acquired these older techniques. Gunpowder and cannon had begun to exert an influence more and more decisive on the conduct of sieges. None the less, the Ottomans long continued to use, side by side with newer modes of procedure, techniques derived from the practice of an earlier age (cf., *e.g.*, (i) mantlets at Otranto in 1480 (Foucard, 163), at Malta in 1565 (Cirni, 113r, 114v), at Nicosia in 1570 (Lorini, 71: "palchi di tavole, coperti con pelle di bufali a guisa di testuggine, per difendersi da' fuochi") and also at Hamadān in 1724 (L. Lockhart, *The fall of the Ṣafavī Dynasty* . . ., Cambridge 1958, 269); (ii) wooden towers at Malta in 1565 (Bosio, iii, 673, 684: "un'altra Machina di legnami . . . in modo di Torre", furnished with a platform designed to hold five or six arquebusiers and to be raised or lowered at will); and (iii) "trabuchi" at Rhodes (Sanuto, xxxiii, 573 and xxxiv, 67) during the siege of 1522). The Ottomans also retained the old method for bringing down the walls of a fortress, *i.e.*, to dig approach trenches, to excavate the foundation of the walls, wooden beams being employed to support the stone-work, and then to set fire to the beams, so that the walls would collapse, once the timber was burnt through (cf., at Rhodes in 1522, Bosio, ii, 574 and Tercier (1759), 754; also Montecuculi, 345).

The offensive weapons prominent in earlier times—*i.e.*, the ram and the bore, the ballista, the mangonel and the trebuchet—began to decline in importance, as the gun was elaborated into an effective means of siege warfare. Guns, it would seem, came into use amongst the Ottomans in the reign of Meḥemmed I and perhaps even at an earlier date (cf. BĀRŪD, 1061). Artillerists recruited from the German and Italian lands, from Serbia and Bosnia (cf. BĀRŪD, 1062) soon made available to the Ottomans an efficient train of siege guns. Experts of European origin would indeed constitute a major and enduring element in the Ottoman technical services (cf. BĀRŪD, 1062) connected with siege warfare—the artillerists (*Ṭopd͟jular*), the transport corps (*Ṭop ʿArabad͟jilar*), the

bombardiers (*Khumbaradjilar*) and the sappers (*Laghimdjilar*).

At first the Ottomans often carried into the field not the ponderous guns indispensable for siege work, but supplies of metal for the casting of cannon, as need dictated in the course of a given campaign (cf. Barletio, ii, 306r, 307r; Promontorio-de Campis, 61, 85; da Lezze, 103; Sanuto, xxxi, 86; also BĀRŪD, 1061). Guns cast before a fortress might be broken into pieces at the termination of a siege, the metal being carried off for re-use on a future occasion (cf. N. Iorga, *Notes et extraits pour servir à l'histoire des Croisades* ..., 4e sér., Bucarest 1915, iv, 368). These modes of procedure, in due course, fell into desuetude. A late example, however, can be seen in the Cretan War of 1645-69, when the Ottomans, transporting clay for the moulds from Kāghidkhāne to ʿInādiyye, found it more convenient to cast some at least of their cannon in the field than to bring them whole from the mainland (cf. Silihdār, i, 307, 467, 481; Rāshid, i, 198, 205-6; Hammer-Purgstall, *Histoire*, xi, 312-3). The Ottoman Grand Vizier Aḥmed Köprülü, in the course of the siege of Candia (1667-9), ordered guns to be made, in Crete, of a calibre which would allow the *topdjular* to use the cannon-balls that the Venetians had fired from the fortress (cf. Hammer-Purgstall, *Histoire*, xi, 310).

Ottoman siege guns, in the time of Meḥemmed II and for long thereafter, tended to be of vast weight and size (on the large cannon of Meḥemmed II cast in 868/1464 and now preserved in the Tower of London see BĀRŪD, 1061, 1065). Abundant evidence can be gathered about these guns from the sources which describe the great Ottoman sieges—, *e.g.*, of Constantinople in 857/1453 (Barbaro, 21, 27, 35, 39, 44), of Skutari (Ishkodra) in 883/1478-9 (Barletio, 310r-v, 313r, 314r-v), of Rhodes in 885/1480 (*Germanicarum rerum scriptores varii*, ed. Freher, ii, Frankfort 1602, 158, 159; C. Foucard, *Fonti di storia Napoletana nell'Archivio di Stato in Modena. Otranto nel 1480 e nel 1481*, in *Archivio Storico per le Provincie Napoletane*, vi/1 (Naples 1881), 135 ff.; Vertot, ii, 308, 602); of Otranto in 885/1480 (Laggetto, 23) and of Diu in 945/1538 (Ribeiro, 255 ff.). One of the large *badjalushka* guns that the Ottomans carried to Malta in 973/1565 weighed "ciento y ochenta quintales de metal, y tira una bala de un quintal de peso de hierro colado" (*Verdadera relacion*, 21r-v; Cirni, 125r; Bosio, iii, 534-5, 695). The power of a *badjalushka* was notable indeed: there is mention at the same siege of "quatro basiliscos, que el uno dellos passava veynte y un pues de terrapleno de claro en claro" (*Verdadera relacion*, 78r)—and the shot fired from them still entered to a depth of "sette palmi", even after the Christians had devised an ingenious means to make their defences less penetrable (Cirni, 98r-v; Bosio, iii, 545, 625).

The Ottomans also made use of mortars: *hawāyī* (Ibn Kemāl, facs. 50, 307, 496 = transcr. 45, 289, 448; *Fâtih ve Istanbul*, i/3-6 (1953-4), 307; Selāniki, 8; BĀRŪD, 1063) or *hawān* (Ewliyā Čelebi, viii, 398; Silihdār, i, 244, 443, 485 and ii, 395; Marsigli, ii, 30-1). Of these mortars there is frequent mention—, *e.g.*, at Belgrade in 860/1456 (L. Wadding, *Annales minorum* ..., Rome 1731, xii, 344); at Negroponte in 874/1470 (dalla Castellana, 435: "xxx mortali, cioè bonbarde, tanto larghe quanto lunghe ... la petra di ciascuna dugiento rotoli, che monta libre siecento, e butavano in aere, e al cascare cascavano entro la terra"); at Skutari (Ishkodra) in 883/1478-9 (Barletio, 313v, 314r: a mortar throwing shot of "mille e dugento libbre in aria"); at Rhodes in 928/1522 (de Bourbon, 13r-v: mortars hurling "pierre de marbre" and "boulletz de cuyvre ou bronze pleins d'artiffice de feu"); and at Malta in 973/1565 (Cirni, 125r and Bosio, iii, 512, 613: "due Morlacchi Petrieri, l'uno de'quali tirava la palla di due palmi di diametro, e l'altro di tre palmi").

On the rate of fire the sources offer no more than scattered and incomplete data. At Skutari (Ishkodra) in 1478-9 the Ottomans, with eleven great guns in action, fired per diem on different occasions 178, 187, 183, 168, 178, 182, 194, 131, 193 and 173 shots against the fortress (Barletio, 310r-v, 313r-v; da Lezze, 104). Twelve basilisks, at Rhodes in 1522, are said to have fired 130 times in all per diem (Fontanus, in Lonicerus, ii, 390). A large Ottoman gun, throwing shot three quintals in weight, was discharged 20 times per diem at the siege of Napoli di Romania in 1538 (Hammer-Purgstall, *Histoire*, v, 285).

Information about the range of the Ottoman siege guns is rare. At Malta in 1565 some of the Ottoman batteries (later moved closer to the fortress walls) fired at first from a distance as great as "mil passos, y mas de Sant Ermo" (*Verdadera relacion*, 31v, 39v, 41r; cf. also Bosio, iii, 534: "in distanza di 180. canne da Architetto, secondo la nota, che ne lasciò Girolamo Casser, Ingegniere della Religione". M. Roberts, *Gustavus Adolphus*, London 1958, ii, 228, note 3, suggests that 720 metres would be a liberal estimate for the effective range of large cannon in the 16th and the 17th centuries). Also infrequent are references to the range of the arquebus. Ulloa, describing the Djerba campaign of 1560, observes of the Ottoman "schioppettieri" that "quei loro schioppetti erano si lunghi, che tirando arrivavano a cinquecento passi" (Ulloa, 8v). Ottoman arquebusiers fighting at Malta in 1565 and using "las escopetas del largor de ix. palmos de cañon, y las q̃ menos de siete" maintained an accurate fire at a distance of "seyscientos passos" (*Verdadera relacion*, 34v, 68r; also Bosio, iii, 597, referring to "archibusoni da posta").

The gunpowder that the Ottomans used was often excellent. It gave off, at Malta in 1565, a white smoke—an effect of its fineness—clearly distinguishable from the black smoke of the Christian powder (*Verdadera relacion*, 102v; Cirni, 85r; Bosio, iii, 614). Montecucculi also praised it for an excellence which revealed itself in "le bruit, la force et la longueur des coups" (Montecuculi, 283-4). Ewliyā Čelebi describes the "*ʿothmānli bārūtlari*" as moist and inclined to befoul the touch-hole of the cannon, whereas the powder from Egypt and Baghdād was well made—indeed he compares it on a number of occasions with the gunpowder obtained from the English (Ewliyā Čelebi, iv, 413; vi, 314; x, 175, 454, 727. Much powder—some of it among the best at their command—came to the Ottomans from Europe and in particular from the English and the Dutch: cf. BĀRŪD, 1063). A passage in the *Tuḥfat al-kibār* notes, however, of the gunpowder from Egypt that it was not over-clean, had no great propulsive force and did harm, moreover, to the touch-hole of the cannon (*Tuḥfat al-kibār*, 71r; also Naʿimā, iii, 52; other adverse comments of much later date, in *Peter Businello Staatsekretärs der Republik Venedig historische Nachrichten* ... *der osmanischen Monarchie*, in C. W. Lüdeke, *Beschreibung des Türkischen Reiches*, Zweyter Theil, Leipzig 1778, 131, and in Schels, 306-7).

The cannon-balls fired from the Ottoman guns might be of stone, iron, lead and even bronze (cf., at

Rhodes (1522), Sanuto, xxxiv, 64, 78; at Gran (1543), Hammer-Purgstall, *Histoire*, v, 372; and at Malta (1565), *Verdadera relacion*, 121v). Often, where possible, the cannon-balls would be collected after firing for further use against a fortress (cf., at Malta (1565), Cirni, 104r and Bosio, iii, 636). With problems of windage in mind the Ottomans often wrapped their shot in sheepskins, thus ensuring a better effect from the explosiòn of the charge (Montecuculi, 280-1). At Malta in 1565 the Ottoman gunners, in preparing the charge for their cannon, used sacks of powder proportionate in size to the range and to the result which it was desired to achieve (cf. Bosio, iii, 614). The great size of their siege cannon and the thickness of the gun-barrels led the Ottoman *ṭopdjular* at times to fire the guns without giving them sufficient time to cool (cf. *Verdadera relacion*, 40v, 68r; and, on the cooling of guns, Ducas (Bonn 1834), 273 and Foucard, 165).

The Ottoman gunners—a large proportion of whom came from Europe—made use of their cannon in accordance with methods practised in the armies of Christendom: *e.g.*, concentrated fire from batteries directed at one particular section of a fortress wall (Anticano, 147-8: Crete, 1646; cf. also Pečewi, ii, 193—on the Christian gunners at Gran, 1595); cross-fire from various batteries of guns (Bosio, iii, 538-9: Malta, 1565); and, in addition, the use of medium cannon to cut deep into the walls of a fortress and then of the heavier guns to bring down the stone-work through the violent impact of large cannon-balls (Collado, 24v-25r; Stella, in Schwandtner, i, 610-1; also BĀRŪD, 1062. On the methods practised in Europe cf., *e.g.*, Mendoça, 51r-v and Marsigli-Veress, 29-30). Sometimes the Ottomans fired groups of guns in a regular sequence (Bosio, iii, 309: Tripoli in North Africa, 1551). A number of batteries might combine to cover the defences of a fortress with a "curtain barrage" destined to be raised at, but not before the precise moment when the Ottoman forces stormed the walls (Bosio, iii, 648: Malta, 1565). A device employed at Malta in 1565 was the placing, close to the fortress walls, of "alcune picche . . . havendo nella cima certo fuoco artificiato", the Ottoman gunners being thus enabled to maintain an accurate cannon-fire at night-time (*Verdadera relacion*, 98r; Cirni, 113r-v; Bosio, iii, 628, 676. The sources for the same siege note, too, the superb skill and precision of the Ottoman arquebusiers, even when firing in moonlight: Viperanus, 10v; Bosio, iii, 539-40, 561, 611).

Much care and effort was given to the siting of the siege guns: there are references, *e.g.*, to emplacements with "doors" opening and closing, as the cannon fired at the fortress (Barletio, 310r: Skutari in 1478-9); to "bastioni di terra, chiusi e serrati di vimine e virgulti, intorno à grossi pali contesti" (Bosio, ii, 330: Rhodes in 1480); and to "mantelletti foderati di fuori di grossi tavoloni di legno incastrati con travi, e dentro erano pieni di terra, molto ben pestata e battuta" (Bosio, ii, 553: Rhodes in 1522—cf. also Fontanus, in Lonicerus, ii, 390). Where earth was lacking (as in rock-bound Malta), "sacas de lana, gumenas viejas, tiendas viejas, y velas" might be used to build "bestiones, trincheas, y hinchir fossos" or "cueros de bueyes para reparos, y muchos de cabras . . . para hazer bestiones" or even "paglia con del lino a fare ripari da piantare l'artiglieria" (*Verdadera relacion*, 22v, 23r and Cirni, 53v: Malta in 1565). There is mention, too, of pre-fabricated materials and devices, *e.g.*, at Malta in 1565: (i) wooden frames filled with earth and employed as "cestones para las piecas" (*Verdadera relation*, 37v); (ii) "tronere di legno fatte à posta per piantare l'artiglieria, le quali fermavano con certi chiodi grossissimi" (Cirni, 46v); and (iii) "i fusi di ferro, i ceppi, le piatteforme, i gabbioni, e le troniere di legnami, tutte fatte, e pronte" (Bosio, iii, 512). At Rhodes in 1522 some of the Ottoman guns, set on "tavoloni", fired on the fortress at night, being covered over with earth and sand in the day-time, so that the Christians might not locate them (Bosio, ii, 554). Each gun emplacement was furnished, it would seem, with flags equal in number to the cannon established there (*Verdadera relacion*, 77v-78r and Cirni, 53v: Malta in 1565). The Ottomans also built defences for the protection of their arquebusiers—, *e.g.*, during the Djerba campaign of 1560, "tre bastioni in forma rotonda, à modo di torrione, di legname fortemente con travi incatenati, terrapienati di fascine, e terra" (Ulloa, 36v) and, at Szigetvár in 1566, "certi bastioni di molte sacca di lana, e bambace, dietro a' quali stando i Gianizzari, senza pericolo assaltavano le mura" (*Impresa di Zighet*, in Sansovino, 454r-v). How great was the forethought given at need to the exact location of the guns and of the arquebusiers can be inferred from the fact that Meḥemmed II—with the siege of 1480 in mind—caused drawings to be made beforehand of the fortifications at Rhodes (Bosio, ii, 315).

The Ottomans had at their command instruments of siege warfare other than guns and mortars. Amongst them was the *khumbara* (*ḳumbara*), *i.e.*, bombs and grenades of various kinds—, *e.g.*, "*khumbara ḥawānlarî*" (Siliḥdār, i, 244 and ii, 47); a large *khumbara* weighing 70 okkas (Siliḥdār, i, 595); "*ḳazān* (*ḳazghān*) *ḳumbara*" (Ewliyā Čelebi, viii, 398, 414); "*sepet khumbarasî*" (Siliḥdār, ii, 395, also *Nusretnâme*, ed. İ. Parmaksizoğlu, i/1-3, Istanbul 1962-4, i, 81); "*fıçı humbarası*" (*Nusretnâme*, i, 81); "*čömlek ḳumbarasî*" (Ewliyā Čelebi, v, 191); and "*shîsheden maʿmûl khumbaralar*" (Naʿīmā, iv, 140. Cf. also on the *khumbara* BĀRŪD, 1063). As for hand grenades (*e.g.*, of glass (*sirča* (*shîshe*) *el ḳumbaralarî*) or of bronze (*tundj el khumbarasî*)—cf. Ewliyā Čelebi, ii, 119 and viii, 414, 432; Rāshid, i, 208; also Cacavelas, 138, 139 and BĀRŪD, 1063) much use was made of them, above all in 1667-9 during the siege of Candia in Crete (Rāshid, i, 208: the Ottomans manufactured per diem in the course of the siege 1000 bronze hand grenades—cf. also Siliḥdār, i, 484 and Scheither, 77. Marsigli, ii, 33 observes, however, that the Ottoman "granata da mano, pure mal fatta, è di effetto assai tenue").

The sources mention quite often other techniques and devices that the Ottomans used in their siege warfare—, *e.g.*, (i) the firing, from their cannon, of small shot, lengths of chain (Ewliyā Čelebi, x, 676; Siliḥdār, i, 337: "*ṣačma ve demir zendjîrler*" and i, 705: "*zendjîr dolu ṭoplar*") and also pieces of iron (A. N. Kurat, *Prut Seferi*, ii, Ankara 1953, 752: "*demir parčalarî*"—cf. in addition the *Lettera scritta . . . da Venetia*: "un Pezzo di Bronzo carico di Lanterne, e Balle da Moschetto". Bosio, iii, 641-2 mentions that the Ottomans, at Malta in 1565, constructed a "barile cerchiato di ferro" and furnished with an explosive charge and a fuse, the inside being full of "scaglie di ferro, di pezzi di catene, e di sassi"); (ii) the use of "*günderlü khumbara*" (explosive and combustible devices affixed to long poles or pikes: Selānikī, 40—cf. also Bosio, iii, 562) and of *khumbara* filled with iron fragments (Naʿīmā, i, 304); and (iii) the employment of "palle di fuoco" compounded of resin, pitch, sulphur, wax, oil and the like (Barletio,

313), of "boulletz de cuyvre ou bronze plains d'artiffice de feu" (de Bourbon, 13r-v) and of gunpowder in "peaux de chevre" furnished with a mêche or fuse (Marsigli, ii, 34). The Ottomans made use, moreover, of "*nafṭ, ḳaṭrān, kaynar ṣu*" and of "*kol, kireč, nafṭ ve ḳaṭrānlî pačavra ve yorg͟han parčalar*" (Ewliyā Čelebi, v, 191, 201; cf. also Naʿīmā, iv, 140: "*nafṭ ile bulas͟hmîs͟h baʿḍî kirbās parčalar*").

There is frequent reference to the Ottoman use of "sacchi di polvere" provided with a fuse and intended to be thrown at close quarters—cf., *e.g.*, *Verdadera relacion*, 252v; Cirni, 60r, 65r-v; Bosio, ii, 571 and iii, 559 ("certi sacchetti loro di fuoco artificiato, ne' quali era una pignattina di terra fragilissima piena di fuoco, la quale nel percuotere in terra, o ne' capi de' nostri rompendosi, accendeva, s'infiammava una mistura, che tenacissimamente attaccandosi, fin al ferro istesso voracemente, et efficacemente ardeva, e consumava"), 628, 643; Veress, *Campania Crestinilor*, 59; Brusoni, *Candia*, ii, 162; Dietz, 62; Marsigli, ii, 33 ff.; Röder von Diersburg, i, 207 ("dass schlimmeste aber ist Ihr verfluchtes pulver, welches sie ... in säckhen werffen": letter of Ludwig von Baden, dated 1686). Inflammable materials also served as smoke-screens covering the Ottoman forces engaged in the digging of trenches (Anticano, *Frammenti*, 83; Brusoni, *Candia*, i, 26; Ferrari, 132), as fire-balls intended to give illumination at night (de La Solaye, 77-78) and as poisonous mixtures useful in combat underground in the galleries of mines and counter-mines (Brusoni, *Candia*, ii, 157: "misture malefiche, e velenose, che col fumo, e col fetore ammazzano"). Against the artificial fire and other combustibles of the Christians oxhides, sheepskins and goatskins offered protection to the Ottoman forces in their siege operations (*Verdadera relacion*, 98r; Bosio, ii, 572; *Éphémérides Daces*, ii, 266).

Other devices and stratagems are noted in some of the sources. It was in the course of the long Hungarian war of 1593-1606 that the Ottomans came to know the "*ag͟hadj̲ ṭop*", *i.e.*, the petard (Pečewī, ii, 212-3; Naʿīmā, i, 190; Ewliyā Čelebi, vii, 312-3; Brusoni, *Candia*, i, 42; Hammer-Purgstall, *Histoire*, vii, 353). Ropes and hooks served at times to pull down the defences of a fortress (Cirni, 103r, 114v; Bosio, iii, 556, 644, 679; Vivonne, 248). Bombs might be thrown with increased effect in groups, when the sun was in the eyes of the foe, and grenades could be used at long range, if cast from slings (Scheither, 75, 77). Examples are not wanting, moreover, of false attacks at night with the intention to wear down the resistance of the besieged forces (*Verdadera relacion*, 49v, 79v), of feigned sounds of marching (drums, pipes, etc.) and the astute placing of "padiglioni finti" to draw off hostile gun-fire (Brusoni, *Candia*, i, 26) and of cannon firing blank shot in order to deceive a beleaguered garrison (*Verdadera relacion*, 85v).

The Ottomans—over and above guns and ammunition—took with them perforce into the field large supplies of equipment: *e.g.*, pick-axes, shovels, crow-bars, axes, anvils, bellows, timber, ropes, nails of various kinds, cauldrons, stores of pitch, tar, linseed oil and petroleum, of iron and lead, of wool and cotton, quick-match (*fitil*), saltpetre, sacks, hides of oxen, sheep and goats—all relevant to siege warfare (cf., *e.g.*, the supplies gathered for the siege of Candia in 1667-9 (Rās͟hid, i, 204-5) and for the campaign of 1683 against Vienna (Grzegorzewski, 265 ff., nos. 2 and 30; cf. also Ch. Boethius, *Ruhmbelorbter und Triumph-leuchtender Kriegs-Helm*, Nürnberg 1686, i, 153; *Assedio di Vienna ... 1683 ... Racconto Istorico ... di L. A*[nguisciola?], Modena 1684, 77; Cacavelas, 138 ff.; and Zenarolla, 99 ff. for the spoils which fell to the Christians at Vienna in 1683 and at Alba Regalis (Stuhlweissenburg) in 1688). On the munitions that the Ottomans assigned to some of their Hungarian fortresses cf. *Magyarországi Török Kincstári Defterek* (A Magyar Tudományos Akadémia Történelmi Bizottsága. Forditottá Dr. Laszlofalvi Velics Antal), 2 Köt., Budapest 1886-90, i, 189 ff. and ii, 3 ff. (Buda, Gran, Pécs, Siklos, Szeged, etc.) and also Veress, *Gyula Város Oklevéltára*, 452 ff.

The actual investment of a fortress involved the digging of approach trenches (*sîčan yollarî*) vertical to the walls, but sinuous rather than rectilinear, in order to give protection from the fire of the besieged foe; lateral trenches (*meteris*) parallel to the walls branched off from the *sîčan yollarî*; and redoubts ("domus dame") covered with timber and earth had to be constructed on the outer rim of the fosse, over against the glacis of the fortress (de La Feuillade, 45-6, 56; de La Solaye, 325; Marsigli, ii, 138-9). At times ingenious devices seem to have been used for throwing earth excavated from the trenches forward into the fortress ditch (Bosio, iii, 614: Malta in 1565). Bridges or ramps of wooden beams plastered with wet earth as a defence against artificial fire aided the assault forces to cross the ditches and storm the walls (cf., at Rhodes in 1480, Bosio, ii, 327; and, at Malta in 1565, Cirni, 56v, 68r, also Bosio, iii, 547-8, 568, 609-10, 611).

The subterranean mines (*lag͟hîmlar*) hollowed out beneath the walls of a fortress might consist of several galleries each with its terminal chamber, often containing a large amount of gunpowder (cf. Ewliyā Čelebi, viii, 424: a mine with three galleries and three chambers; Naʿīmā, iv, 143: 150 *ḳanṭārs* of powder in a single mine; Montecuculi, 345: "des mines simples, doubles et triples l'une sur l'autre ... très profondes ... de 120 et de 150 barils de poudre et davantage". See also, however, Scheither, 72, who, in writing of the Ottoman mines at Candia in 1667-9, observes that "massen sie nicht den vierdten Theil so viel als die Unserige gesprengt so auch nur Vocaten gewesen und die meisten ohne sonderlichen Schaden abgelauffen"). Numerous data on Ottoman mines are to be found in the sources for the war in Crete (1645-69)—cf. BĀRŪD, 1063; further references in Ewliyā Čelebi, v, 135 ("*pusḳurma barutlu lag͟hîmlar*"); Rās͟hid, i, 143 ("*ḳubūrlar ve pusḳurmalar ve lag͟hîmlar*"); also Bosio, iii, 618-9; J. D. Barovius, *Commentarii de rebus Ungaricis*, in M. G. Kovachich, *Scriptores rerum Hungaricarum minores hactenus inediti*, Buda 1798, ii, 370; István Szamosközy, *Történeti Maradványai*, ed. Sandor Szilágyi, Masodik Kötet (1598-9), in *Magyar Történelmi Emlékek: Írók*, xxviii (Budapest 1876), 176-7; *Feldzüge des Prinzen Eugen*, i, 623-4; Marsigli, ii, 37 ff.; and J. B. Schels, *Militär-Verfassung des türkischen Reiches*, in *Oestreichische militärische Zeitschrift* (Zweyte Auflage der Jahrgänge 1811 und 1812, Bd. 2, Vienna 1820), 322-3.

Ottoman siege warfare—practised with remarkable success at Constantinople (1453), at Rhodes (1522) and, although without ultimate triumph, at Malta (1565), all fortresses of vast defensive strength—reached perhaps its culmination in the siege of Candia (1667-9). The techniques exemplified in this siege warfare derived in general from the procedures and methods current in Western Europe, experts of Christian origin holding from the first a vital rôle in

the transmission, to the Ottomans, of the siege lore familiar to the armies of Christendom (cf. BĀRŪD, 1062, 1063-4)—at Candia, *e.g.*, the Dutch, the English and the French did much to bring about the final success of the Ottoman forces (I. Dujčev, *Avvisi di Ragusa. Documenti sull'Impero Turco nel secolo XVII e sulla guerra di Candia* (Orientalia Christiana Analecta, no. 101), Rome 1935, 159; Brusoni, *Candia*, i, 23: "numero grande d'Ingegnieri Francesi e Fiaminghi"; and N. Barozzi and G. Berchet, *Le Relazioni degli Stati Europei lette al Senato dagli Ambasciatori Veneziani nel secolo decimosettimo, ser. 5: Turchia*, Venice 1866-71, ii, 231-2: a statement of Giovanni Morosini di Alvise, formerly bailo of Venice at Istanbul, that the bombs and grenades which the English supplied to the Ottomans and which the Dutch, in particular, taught them how to use with the best effect had contributed "sommamente alla caduta di Candia").

The success of the Ottomans at Candia and elsewhere also rested, however, on factors enabling them to excel in the practical and manual aspects of siege-craft such as the digging of trenches and emplacements or the preparation of mines—, *i.e.*, on their command over large resources of human labour (*e.g.*, *ʿazab* troops and levies amongst the local populations) and on the existence, within the empire, of skilled mining communities available for use in war (cf., in general, R. Anhegger, *Beiträge zur Geschichte des Bergbaus im osmanischen Reich* (Istanbuler Schriften, nos. 2, 14 and 14a), Istanbul 1943-5; also BĀRŪD, 1063). Of like importance, moreover, was their access to vast quantities of the munitions (gunpowder, metals, timber, etc.) indispensable for siege warfare on the grand scale (cf. *Feldzüge des Prinzen Eugen*, i, 623).

And yet these factors tended to diminish in value. The 11th/17th and 12th/18th centuries saw, in Europe, a rapid development in the art of warfare. There was, through the efforts of men like Vauban, a marked advance in the science of fortification. Austria, having acquired Belgrade in 1718, fortified the town anew. Among the French officers present with the forces of the Sultan before Belgrade in 1739 the common view was that the Ottomans, with their accustomed methods of siege warfare, would not be able to capture the fortress (de Warnery, *Remarques sur le Militaire des Turcs*, Leipzig and Dresden 1770, 51-2). Even more significant was the growth, in Europe, of better techniques for the manufacture of cannon. The disasters which befell the Ottoman armies during the Hungarian war of 1683-99—at the siege of Buda in 1686 no less than on the field of battle as at Zenta in 1697—must be ascribed in no small degree to the effectiveness of the Christian field-guns (cf. *Mémoires du Maréchal de Villars*, ed. de Vogüé, i, Paris 1884, 380, where the Maréchal writes of the Austrians that "leur artillerie de campagne est très belle et très bien servie, et c'est peut-estre ce qui a le plus contribué aus aventages qu'ils ont remportés pendant cette guerre sur les Turcs"). At a later date Maurice de Saxe, bearing in mind perhaps the recent advances in fortification and also the appearance—as in the last phases of the Austrian Succession War (1740-8)—of cannon powerful enough to overcome the new defences (cf. G. von Scharnhorst, *Handbuch für Offiziere, Erster Theil: Artillerie*, Hanover 1804, i, 18), was constrained to observe of fortresses in general that "tous les anciens ne valent rien, les modernes ne valent guère mieux" (Maurice Comte de Saxe, *Mes rêveries*, ed. Pérau, Amsterdam and Leipzig 1757, ii, 11). The old tradition of siege warfare was in fact becoming obsolete. It was imperative that the Ottomans acquire the latest techniques evolved in Europe—but it was also difficult for them to abandon methods which had for long been crowned with great and undeniable success. Of their grave misfortunes in war against Austria and Russia between 1683 and 1792 it can, with justice, be said—as it was indeed said of their operations before Belgrade in 1739—that "ils ne se laissent pas gouverner des Chrétiens, et ne se fient pas assez à eux, pour suivre leurs conseils" (de Warnery, 51-2).

vi. — INDIA

Walled towns and fortifications had existed in India long before the beginning of the Christian era; they increased in number from the 6th century A.D. onwards because of the lack of a central government, the increasing dominance of the local chieftains, and the peculiar administrative system of the Rād̲j̲pūts, which in many ways resembled the European feudal system. In the north Indian plains, where the ground was level, these fortifications were built on artificial mounds, the earth for which was obtained from the foot of the site, thus providing an enclosure of a ditch or a large pond for the protection of the fort. Thick jungles and impenetrable screens of bamboos made them inaccessible. A number of smaller forts which stood on the route of the march of the G̲h̲aznawid and G̲h̲ūrid armies were levelled to the ground by them while the strongholds of Multān, Thāneswar, Lahore, Delhi, Ḳannawd̲j̲ and Ad̲j̲mēr, which offered stubborn resistance, were blockaded, stormed and captured. In the Deccan, the forts constructed on the precipitous rocky hills or boulderstrewn hills with wide moats defending the curtain were impregnable for the siege engines and the devices of those days. Similarly numerous summits of the hill range running north-east through the south of Rād̲j̲asth̲ān and the hills of Mālwā are provided with strong fortifications, which even in their present condition are most imposing structures.

Strongholds were defended by the garrison from the thick outer walls, at places 31 to 35 feet wide (Bīd̲j̲āpur), with bastions, parapets and battlements. Gateways in some cases were defended by barbicans and loopholed crenellations and machicolations at parapet level (Golkondā). They were provided with strong guard-rooms, which existed at other strategic points. Considerable improvements were made by the Turks and the Mug̲h̲als to the existing fortifications and new ones were also added. Flame-shaped battlements were introduced by ʿAlāʾ al-Dīn K̲h̲ald̲j̲ī in the fortified town of Sīrī, lying two miles north-east of Old Delhi, which was built for checking the Mongol invasions. Sultan G̲h̲iyāth̲ al-Dīn Tug̲h̲luḳ made arrangements of defence from three tiers carried all round the walls and bastions in his Tug̲h̲luḳābād. The internal faces of the walls of ʿĀdilābād, built by Sultan Muḥammad b. Tug̲h̲luḳ, are constructed with continuous wall arcades, which provide ample posts for guards and have the additional advantage of localizing any breach made by the besiegers. Most of the strongholds of the Deccan built under the Bahmanids or their successors were a bulwark against huge armies from the north. The defensive works of Mālwā, when occupied by the provincial dynasties, were further fortified by them and imposing citadels added.

The gateways bore the main brunt of the enemy's onslaught. The curtain walls of hill fortresses are reached by sinuous paths or through long serpentine loops, protected by a strong wall on one side and the precipitous hills on the other. The gateways of the forts on level ground, often eight in number (Fatḥpur Sīkrī), are flanked by a bastion on either side and were defended by two or more tiers of guard rooms or a strong barbican, which in some cases took the form of a large bastion. Forts built on the bank of a river were defended on one side by the river and on the other by ditches with draw-bridges at the gates. Parapets, barbicans, bastions and battlements not suited to the use of artillery were later remodelled to adjust them to artillery fire. The citadels of most of the old fortifications rebuilt by the Muslims are formidable structures with powerful double walls and strongly fortified gates.

Siegecraft offered little scope for the genius of the Turkish or the Mug̲h̲ul method of warfare, which lay more in the active work of attack. It was only as a last resort that the Turks, Mug̲h̲uls or Rād̲j̲pūts took refuge in their strongholds. Even then they did not seek to tire out the patience or the resources of the besiegers but often rushed out to give battle on a slight provocation from the assailants. Generally with no openings near the ground to be battered in, the forts had an almost endless capacity for passive resistance. Even a small garrison could hold out so long as its provisions lasted or it was not demoralized. Fak̲h̲r-i Mudabbir, the earliest Turkish authority, who wrote on warfare under Iletmis̲h̲, attached the utmost importance to the use of stratagem and treachery and to winning over the besieged by promises. S̲h̲ēr K̲h̲ān in his early career obtained possession of Rōhtās (945/1538) by treachery. Bands of soldiers were deputed by the besiegers to ravage the neighbourhood and the garrison was isolated from the outer world by cutting off supplies. Starvation was the one form of siege craft which the garrison was wholly unable to withstand. Scaling-ladders, though of little use against an efficient defence, were the most convenient of all the tools for capturing a fort. Attempts were made to fill the moat round the fort by throwing in stones, logs, sand-bags etc. Rope-ladders and nooses remained in use till the end of the

12th/18th century. Three hundred assailants scaled the ramparts of the Čampānīr fort on a moon-lit night by driving spikes into a smooth surface of the wall of the fort at a place discovered by Humāyūn himself, who had seen a party of grain dealers emerging from the thicket which surrounded the fort (943/1536). Only very active espionage or a sheer stroke of luck saved the garrison from the disastrous consequences of such surprises. Attempts were made to secure entrance by battering a way in with the help of elephants provided with a frontlet of steel, for the outer gates were generally made of very heavy timber about 6 inches thick, plated and studded with sharp iron spikes of different shapes 3 to 13 inches long, arranged in horizontal tiers and further strengthened by large battens behind.

Along with the above devices *pās͟hīb* and *gargad͟j* were constructed by the besiegers to breach the fortress with *mand͟janīḳ*s or *ʿarrāda*s, and later with mortars. The *pās͟hīb* was a raised platform constructed by filling the space between the top of the fort wall and the base of the besieger's camp below, with bags of sand or earth. *Gargad͟j*es were movable towers, such as ʿAlāʾ al-Dīn used in the siege of Ranthambor. They were similar to the *sarkob* or *muḳābil kob* which Rūmī K͟hān constructed on large boats on the Ganges (945/1538) for battering in the walls of Čunar, as it could not be captured from the parts lying on the land-side. These towers were very strong structures with solid beams covered by raw hides, tiles, or earth to protect them from the liquid combustibles thrown by the garrison. They could be destroyed only by hurling heavy stones or by a sortie. *Sābāṭ*, which is also mentioned by Amīr K͟husraw, "is a word", according to Niẓām al-Dīn Aḥmad Bak͟hs͟hī, "used to express two walls, the foundations of which are laid at a distance of about one musket-shot (from the fort), and under the protection of planks, which are fastened together by raw hides, and are made strong, and forming something like a lane are carried to the wall of the fort". Ten horsemen could ride abreast inside the *sābāṭ* which was carried forward from Akbar's battery for the conquest of Čitor (975/1567-8). A man mounted on an elephant and with a spear in his hand could pass inside it. *Mand͟janīḳ*s and *ʿarrāda*s were the engines which the assailants and defenders both used, before they were gradually replaced by artillery, though Akbar during the siege of Asīrgarh used *mand͟janīḳ*s too. They were of different varieties. *Mand͟janīḳ i-ʿarūs* hurled stones in all directions. The *mand͟janīḳ-i dew* (gigantic *mand͟janīḳ*), *mand͟janīḳ-i rawān* (*mand͟janīḳ* which threw missiles briskly), *ʿarrāda-i yak-rūy* (simple *ʿarrāda*), *ʿarrāda-i gardān* (rotating *ʿarrāda*), *ʿarrāda-i k͟hufta* (stationary *ʿarrāda*), *ʿarrāda-i rawān* (*ʿarrāda* throwing missiles briskly) mentioned by Fak͟hr-i Mudabbir are nowhere described and their nature can be guessed only from their names. They worked on the principles of torsion or counterpoise and consisted of two stout posts joined by a double or quadruple set of ropes, which untwisting themselves hurled the rock or ball with a high elliptic trajectory. *Mag͟hribī* was another variety of *mand͟janīḳ* or *ʿarrāda*, and was used by both the besiegers and the besieged. The *Mand͟janīḳ-i ʿarūs* which Muḥammad b. Ḳāsim used in the siege of Dēbal [see DAYBUL] in Sindh (92/711-2) is said to have required five hundred men to work it. The *k͟harak* (drill) was identical with the ram in construction. The workers drew its chain or rope back as far as they could and then released it to dash the sharp iron point against the wall. The *čark͟h*, identical with the ballista, was a magnified form of cross-bow, and was used for discharging heavy bolts and long shafts at objects out of the range of ordinary arrows and spears. The *zambūrak* and *nīm čark͟h* were varieties of the above. The *toda* (heap) ensured a more perfect use of the bows and arrows; mantelets, shields and a temporary wall of planks or earth protected the workers who were employed to work the siege-engines from the fire or stone hurled by the besiegers. *Falāk͟hans* or *gōphans* (slings) were also used for discharging stones and lighter missiles. Other implements required by the besiegers were palisades, fire-shovels, pick-axes and spades. Besides stones, boiling pitch, naphtha and darts were generally used as missiles.

The use of artillery in the 10th/16th and the 11th/17th centuries did not greatly lighten the task of besiegers. At the siege of Čandīrī (934/1528) the stone discharge of the mortar could produce no tangible result. During the assault on Ray Sēn (950/1543) all the brass that could be procured from the bazaar and the tents of the besiegers (pots, dishes and drinking vessels) had to be used for mortars, which bombarded the fort from all directions. Though Akbar had, at the siege of Ranthambor, had *sābāṭ* prepared, fifteen culverins, each of which could discharge boulders weighing five maunds and seven maunds and *haft d͟jos͟h* (made of seven metals) balls, were carried by 500 labourers to the top of the hill and were placed opposite the fort for bombarding the citadel. The defending garrison, along with musket and cannon fire, rolled down large masses of stone from hill fortresses, which bounded along with great velocity and crushed to pieces all those on whom they fell, and the assailants were swept down.

Mining was certainly the most effective of all the devices for capturing a stronghold not situated on solid rocks or high ground. Muḥammad b. Ḳāsim sought to demolish the walls of Rāwar Fort in Sindh (92/712) through mining. Amīr Masʿūd had mines sprung at five places in the walls of the fort of Hānsī before it could be stormed (428/1037). The best device which the besieged could employ against mining was to counter-mine and fill up the cavity. Ḳambar Dīwāna, who was besieged in the fort of Badāūn at the end of Humāyūn's reign (962/1555), was able to detect the mine that was being dug from outside the fort by putting his ears to the ground, exactly at the spot where the finishing touches were being given to it by the besiegers, and so thwarted their efforts. Before the invention of gun-powder the cavity was filled with straw, wood and other combustible material. When the beams which supported the cavity were burnt, the wall collapsed into the hole, and a breach was produced. Subsequently the mine was filled with gun-powder and fuses were laid. Often more than one mine was laid to ensure speedy reduction of the fort, but the process was nevertheless fraught with grave risks. At the siege of Čitor (December 1567), Akbar had two mines laid under the bastions which were close to each other. Fire was set to both simultaneously but the match of one, being shorter, exploded earlier, hurling that bastion into the air. The Mug͟huls rushed forward to force their entry through the breach. At that moment, the fire reached the other mine and the second bastion was also blown up, killing a large number of the imperial forces. The countermining done by the officers of Abu 'l-Ḥasan, the ruler of Golkondā, proved highly disastrous to the Mug͟huls, who had carried three mines from the siege trenches under the bastion. The garrison quietly abstracted all the powder with the fuses from one

mine and leaving some powder in the other two, filled them with water. The explosion from the two mines caused terrible havoc to the imperial forces, while the firing of the third mine was a fiasco.

Burton-Page, *A study of fortification in the Indian subcontinent from the thirteenth to the eighteenth century A.D.*, in *BSOAS*, xxiii/3 (1960), 508-22. (S. A. A. RIZVI)

ḤIṢĀR, in Turkish 'castle, fortress, citadel, stronghold', a common component of place-names in Turkey. The best-known are the two castles which control the narrowest point of the Bosphorus [see BOGHAZ-IČI]: on the Asiatic side Anadolu Ḥiṣārī [*q.v.*], also called in earlier times Güzel Ḥiṣār ('beautiful castle'), on the European side Rumeli Ḥiṣārī [*q.v.*], also called Boghaz-Kesen ('the barrier of the Bosphorus'). The former, situated between Kandilli and Kanlıca, was built by the Ottoman sultan Bāyezīd I in 797/1395 in preparation for the siege of Constantinople which he was planning; the latter, situated between Bebek and Emirgân, was built by Meḥemmed II in 856/1452 at the beginning of his reign and for the same purpose, to block the passage through the Bosphorus of grain ships from the Crimea.

Ḥiṣār is further found as a component of numerous place-names in Anatolia, notably: Karacahisar, a ruined site south of Eskişehir; Afyonkarahisar ('Opium black castle'), in earlier times also Ḳara-ḥiṣār-i Ṣāḥib (so called after the Seldjūḳ vizier Fakhr al-Dīn); Şebinkarahisar ('Alum black castle') in north-east Anatolia (in the *vilâyet* of Giresun); Develikarahisar (*vil.* Kayseri); Güzelhisar Aydın (nowadays called only Aydın, chef-lieu of the *vilâyet*), the ancient Tralles; Akhisar ('White castle', *vil.* Manisa); Koçhisar ('Rams' castle', near Tuz gölü, *vil.* Ankara); Eski Hisar, a ruined castle near Gebze, which occupies the site of the ancient Lybissa; Koyulhisar on the Kelkit (*vil.* Sivas); Sivrihisar ('Pointed castle', *vil.* Eskişehir); Uchisar ('Frontier castle') and Ortahisar ('Middle castle'), places in the cave-district of Ürgüp-Göreme (*vil.* Kayseri). Ibn Baṭṭūṭa mentions (ii, 269 = tr. Gibb, ii, 424) a Ḳulḥiṣār (*i.e.*, probably Gölḥiṣār, 'Lake castle') in the district around Egridir, but the exact location is not known; in older sources there frequently appears mention of a place Ḳaraḥiṣār-i Behrāmshāh (F. Taeschner, *Wegenetz*, index), which must have been situated in the bend of the Halys (Kızıl Irmak) in central Anatolia; Yarhisar, not far from Bilecik, is mentioned in the early Ottoman chronicles.

In Rumeli was Aladja Ḥiṣār, the Ottoman name for Kruševac in Yugoslavia. Hisarcık ('Little castle') is a village near Alacam (*vil.* Samsun); Hisarlık in the *vilâyet* of Çanakkale marks the site of Troy.

(CL. HUART-[FR. TAESCHNER])

ḤIṢĀR, main town of a district in Transoxania, is situated on the Khānaka, a tributary of the Kāfirnihān, 675 metres above sea level, in a fertile but humid and unhealthy region, bounded by the Zarafshān and the Ḳîzîl Ṣu (cf. Cleinow and R. Olzscha, *Turkestan*, Heidelberg 1942, 187; illustration of the town at the beginning of the 19th century in Fr. v. Schwarz, *Turkestan*, Freiburg/Br. 1900, 233).

At the time of the Arab conquest of Transoxania early in the 2nd/8th century, the place was called Shūmān and constituted a small independent principality, which later came under the rule of Čaghāniyan [*q.v.*] (Barthold, *Turkestan*, 74, 185). In early Islamic times, the place was well known for its cultivation of saffron, which was widely exported (Iṣṭakhrī, 298 = Ibn Ḥawḳal, 477; Muḳaddasī, 284, 289 f.). The inhabitants were considered prosperous, but unruly and inimical to stable government; this was a matter of some seriousness, since Shūmān remained for centuries a last bulwark against the Turks of Central Asia (Yāḳūt, iii, 337 = Beirut ed. 1957, iii, 373 f., s.v. Shūmān; also, *ibid.*, iii, 88, iv, 196). At this period Ḥiṣār was smaller than Tirmidh [*q.v.*] and formed one community with Wāshgird.

It was only at the beginning of the 8th/14th century, in the time of Tīmūr [*q.v.*], that the name Shūmān was replaced by that of Ḥiṣār-i Shādmān, or simply Ḥiṣār(ak). This name has survived ever since. In the middle of the 8th/14th century Ḥiṣār had a local Beg (*amīr*), and later became one of Tīmūr's armouries (*zarrādkhāna*) ('Alī Yazdī, *Ẓafar-nāma*, ed. Iláhdád, Calcutta 1885-88, ii, 49, 52, 450, 452, 464; Niẓām al-Dīn Shāmī, *Ẓafarnāma*, ed. F. Tauer, Prague 1956, ii, 14). Thereafter Ḥiṣār formed part of the territory ruled by the Tīmūrids [*q.v.*], amongst whom Maḥmūd Mīrzā (873/1469-899/1494), a son of Abū Sa'īd, was particularly outstanding. His influence extended as far as the Hindū Kūsh (*Bābur-nāma*, ed. A. S. Beveridge, *GMS*, i, 26 b, 56b). During the battles which raged repeatedly back and forth between Bābur and the Shaybānids [*q.v.*], Ḥiṣār was greatly devastated in the winter of 917/1511-12; starvation drove the people to cannibalism, and only 600 inhabitants are said to have survived (*Ta'rikh-i Rashīdī*, ed. Denison Ross, 260-3). After the collapse of the Shaybānids Ḥiṣār fell into the hands of the Turkmen tribe of Yüz and—like four other *begliks*—was able to maintain what was to all intents and purposes an independent position in relation to the *Amīrs* of Bukhārā. The town was at this time surrounded by strong walls. Only after the Russian conquest of Bukhārā in 1868 was the town (transcribed in Russian *Gissar*) and its hinterland really subject to the *Amīrs*. Nevertheless the district continued to be an independent province, in which Özbeks, Tādjīks (on the mountain slopes) and gipsies lived (Schwarz, 47). It enclosed the southern part of the Amīrate of Bukhārā on the lower reaches of the Wakhsh and on the Kāfirnihān, and had its own governors, these being at times princes of the ruling family. The region was first opened up for scientific investigation by a Russian expedition in 1875. The last of its governors, Ibrāhīm Beg, of the Tādjīk tribe of Lakai, remained loyal to his overlord even after the overthrow of the dynasty by the Bolsheviks in 1920, and defended Ḥiṣār against them until 1923. Then in 1926 he retreated through Tādjīkistān to Afghānistān (A. Z. V. Togan, *Bugünkü Türkili*, Istanbul 1942-7, 206, 255 f., 438 f., 466 f.; B. Hayit, *Turkestan*, Darmstadt 1956, 182, 519). Since 1924 Ḥiṣār has formed part of Tādjīkistān (a Republic of the USSR from 1929). The ancient saffron industry has died out. In the 19th century corn and flax were the principal crops. In the 20th century there was a substantial production of silk and silk poplin, and of cutlery. The southern border of the *beglik* of Ḥiṣār extended to the Alai mountains; thus the southern watershed of the Zarafshān valley acquired the name of Ḥiṣār mountains (with elevations of up to 5700 m.).

HİSAR, ʿABD AL-ḤAḲ(Ḳ) SHINĀSĪ (mod. Turkish Abdülhak Şinasi Hisar), 1888-1963, Turkish writer, born in Rumelihisarı, a summer village on the European shores of the Bosphorus. His family were of the upper-class Ottoman Civil Service. His father Maḥmūd Djelāl al-Dīn was an enlightened modernist of his day having had two years' education in Paris and being the editor of various literary magazines, particularly of *Khazīne-i Ewrāḳ*, to which leading writers of the Tanẓīmāt School and their followers contributed. An ardent supporter of modernism, he named his eldest son ʿAbd al-Ḥaḳḳ Shināsī, a combination of the names of the pioneer Tanẓīmāt writers (Ibrāhīm) Shināsī and ʿAbd al-Ḥaḳ Ḥāmid [*qq.v.*]. (His second son Selim Nüzhet Gerçek, 1891-1945, was the author of well-documented books on the history of the Turkish theatre and printing).

Abdülhak's mother was a descendant of Ottoman pashas. Her grand-father was the last commander of the Fortress of Belgrade. His childhood was spent in turn in their *yalı* at Rumelihisarı, or on Büyükada, the island resort of the Marmara, and on the slopes above Çamlıca, where he witnessed all the fading splendour of the Ottoman upper-classes at the turn of the century, which he was later to evoke so vividly in most of his works. In 1894 he went to Beirut to join his father, temporarily exiled there by the Sultan as Director of Education, because of his progressive ideas. Abdülhak was put in the charge of a French governess, who later accompanied the family back to Istanbul. The young Abdülhak was educated at the Imperial Lycée of Galatasaray, where most of the teaching was in French. In 1905, like many of his contemporaries, he escaped to Paris where he made friends with many of the Young Turks there and became acquainted with French poets and writers of the day, and for three years attended the courses of the École Libre des Sciences Politiques.

On the restoration of the Constitution in 1908, like most exiles, he returned to Istanbul; thereafter he devoted himself to literature, making his living as an employee in various foreign and Turkish private firms.

From the 1930's onwards he accepted various Government posts in Ankara, mainly in an advisory capacity, on foreign affairs. He retired in 1948 and settled in an apartment in Beyoğlu (his *yalı* in Rumelihisarı had been burnt down in the 1920's). He died in 1963.

Abdülhak Şinasi Hisar is, in many ways, a very unusual writer. Although he started his career as a poet at the end of the First World War and wrote many critical articles and essays, he was appreciated only among a limited circle. By 1920 his contemporaries had already made their names as novelists or poets. But in 1941, at the age of 53, he swept to fame overnight, upon the publication of his first novel *Fahim Bey ve biz*.

Apart from many essays, short stories and articles published in various newspapers and reviews, particularly in *Ileri*, *Dergāh*, *Yeni Mecmua*, *Akşam*, *Varlık*, *Türk Yurdu* (New Series), most of which have not yet been collected in book-form, he is the author of the following works: (1) *Fahim Bey ve biz* (1941), German tr. by Fr. von Rummel *Unser gute Fahim Bey* (Copenhagen 1954), French tr. by B. de Siyèves (Paris 1961). It won third prize for the best novel competition in 1942 (the first prize went to Halide Edib, the second to Yakub Kadri). This is a powerful character study of an Istanbul type at the turn of the century, a weak, inefficient and dreamy civil servant turned businessman, who is an utter failure in real life but who lives in an imaginary world where he realizes his dreams; (2) *Boğaziçi mehtapları* ('The moonlight on the Bosphorus' 1942), an evocative description and detailed narrative of the traditional moonlight processions of rowing-boats on the Bosphorus, originating in the 17th century, which consisted of Oriental music and serenades and which were held on three or four occasions each summer; (3) *Çamlıcadaki eniştemiz* ('Our brother-in-law at Çamlıca' 1944), a series of sketches loosely connected in the form of a novel about life on the Çamlıca hillside overlooking Istanbul and the Bosphorus, with picturesque descriptions of landscape and the character study of a strange man with Oriental tastes and habits, his superstitions and love affairs in a Tanẓīmāt villa, which comes to life with all its decor, furniture and people; (4) *Ali Nizami Beyin alafrangalığı ve şeyhliği* (1952), the story of a young westernizing snob, a bon-vivant who in the early 1900's, after spending a reckless life in the cosmopolitan society of Büyükada, ruins himself and becomes unbalanced, ending up as a Bektashi 'Baba' in a tumble-down 'convent' on Çamlıca Hill; (5) *Boğaziçi yalıları* (1954), a description of these typical summer residences on the Bosphorus and the care-free and relaxed life of the Ottoman upper-classes in them, with personal reminiscences of some of the most famous sea-side villas of the period; (6) *Aşk imiş her ne var âlemde* (1955): the title is taken from the famous couplet of Fuḍūlī: *ʿAshḳ imish her ne var ʿālemde/ʿIlm bir ḳīl u ḳāl imish andjaḳ* ('[I realized at last that] everything in the world is nothing but Love, and Learning is but gossip'), an anthology of popular quotations (single verses or couplets) mainly from *dīwān* poets on topics of love, beauty, wine, separation, etc.; (7) *Geçmiş zaman köşkleri* (1956), the description of some typical old Ottoman villas where the author had lived as a child in Büyük ada and Çamlıca and his reminiscences about the life, customs, people and setting of these villas; (8) *Geçmiş zaman fıkraları* (1958), a collection of anecdotes, mostly humorous, on the Ottoman period, covering mostly the 19th century; (9) *Istanbul ve Pierre Loti* (1958), a guide with bibliography to the well-known French Turcophile writer's works on Turkey, his life among the Turks and the memories associated with him; (10) *Yahya Kemal'e veda* ('Farewell to Yahya Kemal', 1959) and (11) *Ahmed Haşim* (1963), the author's personal reminiscences and appreciation of these two leading poets, who were his contemporaries and with whom he was closely associated.

Abdülhak Şinasi Hisar's complete works are now (1966) being published by the Istanbul publishers Varlık.

Uysal, *Abdülhak Şinasi Hisar*, Istanbul 1961; Behçet Necatigil, *Edebiyatımızda isimler sözlüğü*[3], Istanbul 1966; Yakup Kadri Karaosmanoğlu, *Gençlik ve edebiyat hatıraları*, in *Hayat*, August 1965 (valuable new data on Hisar's youth, which shed light on his later work). (FAHİR İZ)

ḤIṢĀR FĪRŪZA, (now simply known as Ḥiṣār; Anglo Indian: Hissār), a citadel town in the Indian Pandjāb, situated in 29° 10′ N. and 75° 44′ E. on the railway from Lahore to Delhi via Bhaṭṭinda

[*q.v.*]. It is the headquarters of the district, of the same name, which lies in a dry sandy plain, known from ancient times as Harīāna. It was founded by Fīrūz Shāh Tughluḳ (reigned 752/1351-790/1388) in 757/1356, after whom it takes its name, on the site of two villages known as Kadās Buzurg and Kadās Khwurd (cf. Shams Sirādj ʿAfīf, *Taʾrīkh-i Fīrūz Shāhī*, Calcutta 1891, 24), close to the deserted town of Agrōha, which had been depopulated by the terrible famine of 736/1335. Frequented by merchants and travellers from ʿIrāḳ and Khurāsān on their way to Delhi, it was irrigated by two canals, cut by the orders of Fīrūz Shāh Tughluḳ from the Ghaggar, which flows past Ambāla [*q.v.*], and the Djamuna. One of these canals still exists and is known as the Western Djamuna Canal. The fortress, surrounded by a lofty wall built by Fīrūz Shāh, came to be originally known as the Ḥiṣār-i Fīrūzābād, with a large tank within the enclosure, which drained off into a moat girdling the citadel. It soon grew into a large and prosperous town with palaces, mansions and kiosks and residential blocks constructed by the various nobles and grandees of the kingdom. It took 2½ years to build, with fruit and vegetable gardens laid out all over the city. In 809/1407 it was captured by Khiḍr Khān, the Sayyid governor of Multān, who had rebelled against Maḥmūd Tughluḳ (*reg.* for the second time, 801/1399-815/1413), but was recovered in 811/1408 by the sultan in person. In 817/1414, on Khiḍr Khān's proclaiming himself king of Delhi, Dawlat Khān Lōdī (*reg.* 815/1413-817/1414), the deposed ruler, was held here as a prisoner. It remained in the possession of the Sayyid dynasty till *ca.* 840/1436, when it was seized by Buhlūl Lōdī from Muḥammad Shāh, the Sayyid ruler of Delhi (*reg.* 837/1434-847/1444). It was in this town, where his father Ḥasan Khān was stationed as a private soldier in the employ of the local *djāgīrdār*, that Farīd Khān (*scil.* Shēr Shāh Sūr) was born (cf. ʿAbbās Khān Sarwānī, *Taʾrīkh-i Shēr Shāhī*, Dacca 1964, 9). Early in 933/1526 it fell to Bābur's army under Humāyūn, who defeated the Lōdī *shiḳḳdār*, Ḥamīd Khān, with a great slaughter of his troops. It was later assigned by the emperor to Humāyūn for his maintenance, and he, soon after his accession to the throne, formally bestowed it on his brother Kāmrān, who had seized it (cf. *Indian Antiquary*, cliii (1941), 219-24). It was, however, resumed by Humāyūn and assigned to Shams al-Dīn Atka, the foster-father of Akbar, for the maintenance of the young prince. Under Akbar it was constituted into a separate *sarkār* of the *ṣūba* of Dihlī; comprising 27 *maḥalls*, it yielded an annual revenue of 52,554,905 *dāms*. A well-known centre of horse- and cattle-breeding, it supplied *ghee* (clarified butter) for the imperial kitchens. Long a place of strategic importance, it remained a mint-town where copper coins were struck during the rule of Humāyūn, Shēr Shāh and Akbar [*q.v.*]. Towards the closing years of Awrangzīb's reign Nawwāb Shāhdād Khān, a Khweshgī Paṭhān of Ḳaṣūr [*q.v.*], was the *nāẓim* of the *sarkār* of Ḥiṣār, and under his rule, from 1119/1707 to 1150/1737, peace and prosperity prevailed. It was sacked and ravaged by Nādir Shāh Afshār [*q.v.*] in 1152/1739, during his victorious march to Delhi, and on his withdrawal to Iran it became the scene of a triangular sanguinary struggle between the rising Sikh power of the Pandjāb, the local Bhaṭṭī Rādjpūts and the enfeebled Delhi empire. During this anarchical period it was held by the Nawwābs of Farrukhnagar (district Guṛgāon), who ruled as the vassals of the Mughal emperor till 1175/1761. As a result of the marauding raids of Ālā Singh Djāṭ, the founder of the former princely state of Paṭiāla, it suffered heavily and was badly sacked in 1171/1757. By 1188/1774 after many encounters with the imperial troops, it passed into the possession of the chief of Paṭiāla, Amar Singh. On his death in 1197/1781 it reverted to the Mughals, in accordance with an agreement reached between the Sikhs and the Delhi government. After the devastating famine of 1198/1783 it relapsed into anarchy and was seized in 1212/1797 by a European military adventurer, George Thomas, who held it for three years and built a fort named Georgegaṛh (corrupted by the illiterate local people into Djāhdj), for consolidating his gains. However, in 1217/1802 he had to surrender it finally to the Marāṭhas under Sindhia's French general Perron. The very next year the Marāṭhas had to vacate it in favour of the British, who took another 15 years firmly to establish their rule. During the military uprising of 1857 the district was badly disturbed; all the Europeans who could not escape were murdered and Ḥiṣār was temporarily lost to the British. After the Mutiny, peace was restored and Ḥisār was made a part of the newly-formed province of the Pandjāb. During the disturbances that occurred in the wake of Partition, the entire Muslim population of the district migrated to Pakistan. A famous centre of cattle-raising, the stud-bulls of Ḥiṣār are in great demand for breeding purposes. The only antiquity of note is the fortress built by Fīrūz Shāh, which is now in a sad state of neglect and disrepair.

ḤISBA, non-Ḳurʾānic term which is used to mean on the one hand the duty of every Muslim to "promote good and forbid evil" and, on the other, the function of the person who is effectively entrusted in a town with the application of this rule in the supervision of moral behaviour and more particularly of the markets; this person entrusted with the *ḥisba* was called the *muḥtasib*. There seems to exist

no text which states explicitly either the reason for the choice of this term or how the meanings mentioned above have arisen from the idea of "calculation" or "sufficiency" which is expressed by the root.

i.—General: Sources, Origins, Duties.

The duality in the meaning of *ḥisba* is the reason why information on it is found in such a diversity of sources. Apart from the allusions to *muḥtasibs* which can be found in chronicles, biographical dictionaries, etc., information on one meaning of *ḥisba* is found in all that has been written on public morality and against *bidaʿ* (such as the *Madkhal* of Ibn Ḥādjdj), and in all that has been written on trade or commercial law. We shall limit ourselves here to mentioning those works of which *ḥisba*, in one or the other of its meanings, is the primary and formal subject. They can be divided broadly into two categories, which do, however, overlap to a certain extent. Some works deal in a general way with the content of the virtue of *ḥisba*, the obligations arising from it for the *muḥtasib*, and the religious and juridical aspects of his office; the others set out mainly to enlighten the *muḥtasib* on the practical and technical details of the supervision which he must exercise; and, since this supervision applied principally to the various crafts and trades, these works are practical guides to the administrative control of the professions. We shall attempt to give a detailed list of the latter works, whereas for the former a very general mention will suffice.

The works which include a general examination of the *ḥisba* are in fact very numerous, but it is remarkable that they first appear only in the 5th/11th century, *i.e.*, two centuries after the appearance of the office. The two principal works are *al-Aḥkām al-sulṭāniyya* of al-Māwardī, ch. xx, chiefly juridical (which, however, refers, though sometimes to refute it, to an earlier treatise by the Shāfiʿī *muḥtasib* of Baghdād at the beginning of the 4th/10th century, Abū Saʿīd al-Iṣṭakhrī), and the *Iḥyāʾ ʿulūm al-dīn* of al-Ghazālī, ii, 269 f., which is chiefly moral. Among the other writers there should be mentioned the early and Spanish Ibn Ḥazm (*al-Faṣl fi 'l-milal*, iv, 171 f.); and then, later: under the Mamlūks, the Ḥanbalī Ibn Taymiyya (*al-Risāla fi 'l-ḥisba*, cf. H. Laoust, *Essai sur ... Ibn Taymiyya*, index), al-Nuwayrī (*Nihāya*, vi), Ibn Djamāʿa, al-Subkī (*Muʿīd al-niʿam*), al-Ḳalḳashandī, al-Maḳrīzī, etc.; in Central Asia, the *Niṣāb fi 'l-iḥtisāb* of al-Sināmī (?), the title of which refers to the author's own position as *muḥtasib* (7th/13th century?), and which, to judge by the number of manuscripts (cf. K. ʿAwād, in *RAAD*, xvii (1942), 433 f.), must have had a considerable success in Irano-Turkish countries; and in the West, the *Muḳaddima* of Ibn Khaldūn, iii, 31.

The works in the second category are of a different type. As has been said, they are not only devoted to the technical details of the supervision which must be exercised, particularly over the trades, but they are treatises intended specifically for the *muḥtasib*, and, while they are of course in agreement with the Law, are of an administrative and not a juridical character. The *Aḥkām al-Sūḳ* of the Mālikī of Ifrīḳiya, Yaḥyā b. ʿUmar (second half of the 3rd/9th century) is often considered as the oldest work of this type (the basic text, surviving in a later compilation, ed. Maḥmūd ʿAlī Makkī, in *RIEEI*, iv (1956); Spanish tr. by E. García Gómez, in *al-Andalus*, xxii (1957); two complete direct manuscripts exist in Tunisia: Zaytūna 3137, and one in a private collection); but, apart from the fact that the word *ḥisba* is not mentioned in it, it is in fact more a chapter consisting of a collection of juridical consultations on the *sūḳ* etc. than an administrative treatise for the use of the *muḥtasib*. A little nearer to the genre with which we are concerned, and containing the word *ḥisba*, is the Zaydī manual published by R. B. Serjeant, in *RSO*, xxviii (1953) (composed *ca* 300/910); it is probably not accidental that a treatise of this sort was produced among the Zaydīs, who attached such importance to the precise interpretation of the Law, but its contents suffer from the backwardness of the economic and social situation of Ṭabaristān within the framework of which it was conceived.

There exists no real treatise of *ḥisba* in the exact meaning of the word until the end of the 5th/11th century in the West (particularly in Spain) and the end of the 6th/12th century in the East (Syria and Egypt); none has been recorded earlier than these or in any other countries. Those which are known are the following:

(A) In the West: The *K. fī ādāb al-ḥisba* of al-Saḳaṭī of Malaga (about 500/1100; ed. E. Lévi-Provençal and G. S. Colin, in *JA*, 1931) and the *Risāla fi 'l-ḳaḍā wa 'l-ḥisba* of Ibn ʿAbdūn of Seville (6th/12th century, ed. E. Lévi-Provençal, in *JA*, 1934; reprinted in his *Trois traités hispaniques de hisba*, 1955; with Fr. tr. by E. Lévi-Provençal in *Séville Musulmane au début du XIIe siècle*, 1947; Spanish tr. in collaboration with García Gómez, *Sevilla musulmana*..., 1948; Italian tr. by F. Gabrieli, in *Rend. Lin.*, 6th series, xi, 1935). Next, in the same *Trois traités*..., come Ibn ʿAbd al-Raʾūf and al-Djarsīfī, Fr. tr. by Rachel Arié in *Hespéris-Tamuda*, i (1960), Engl. tr. of the former by G. M. Wickens, in *IQ*, iii (1956) (but see J.D. Latham in *JSS*, v (1960), 124 f.). The following are partly in the genre of a treatise on *ḥisba* and partly in that of *nawāzil*—juridical consultations: the chapter *ḥisba* in the *Tanbīh al-ḥukkām fi 'l-aḥkām*, of Ibn al-Munāṣif (563-620/1168-1223), MS Zaytūna 1919, and the *Tuḥfa* of Muḥammad al-ʿUḳbānī of Tlemcen, Zaytūna 2978 and 6234, Algiers 1353, analysed by Muḥammad Talbī, *Quelques données sur la vie sociale en Occident au XVe siècle*, in *Arabica*, i (1954).

(B) In the East: Several eastern treatises, slightly more substantial than those of the West, have as their prototype the *Nihāyat al-rutba fī ṭalab al-ḥisba*, of ʿAbd al-Raḥmān b. Naṣr al-Shayzarī (d. 589/1193) (ed. with Fr. tr. under the name of Nabrawi by Bernhauer, *Les institutions de police chez les Arabes*..., in *JA*, 1860-61; good modern ed. by al-ʿArīnī, Cairo 1946); these are, first, the longer treatise of the same title by Ibn Bassām (7th/13th century, composed in Syria or Egypt), analysed by Cheikho in *al-Mashriḳ*, x (1907), and, still more detailed, the *Maʿālim al-ḳurba fī aḥkām al-ḥisba* by the Egyptian Ibn al-Ukhuwwa (beginning of the 8th/14th century, ed. with abridged Engl. tr. by R. Levy, *GMS*, N.S. xii (1938)); then a series of other works, the majority of which are apparently only worked-over editions of the works just mentioned, sometimes attributed to false authors (al-Māwardī), but the manuscripts of which, being still unpublished and not studied, cannot at present be classified: see the articles by M. Gaudefroy-Demombynes in *JA*, ccxiii (1938) and K. ʿAwād, in *RAAD*, xviii (1943) and, for the *K. al-Ḥisba* of Ibn ʿAbd al-Hādī (d. 909/1503), the note by Ḥabīb Zayyāt in *al-Khizāna al-Sharḳiyya*, ii (1937), 112. For the

Zaydīs see R. Strothmann, *Das Staatsrecht der Zaiditen*, Strasburg 1912, 90 ff.

In addition to these treatises, there exist some diplomas of appointment of *muḥtasib*s, which have not received the attention they deserve: one, from the 4th/10th century, included in the *inshā'* collection of the *Ṣāḥib* Ibn ʿAbbād, 39, others, Irano-Turkish of the 6th/12th century, in the *Rasā'il* of Rashīd al-Dīn Waṭwāt, 80, and the *K. ʿAtabat al-kataba* (in Persian) of Muntadjab al-Dīn Badīʿ Atābek al-Djuvaynī, Tehran 1329s., 82 ff., and finally others, from Ayyūbid and Mamlūk Syria and Egypt, in the correspondence of Ḍiyā' al-Dīn b. al-Athīr (see *BSOAS*, xiv/i, 38) and the *Ṣubḥ al-aʿshā* of al-Ḳalḳashandī, x, 460 (by the *ḳāḍī* al-Fāḍil), xii, 339, and extracts *passim*; probably many others could be found.

Such are the sources on which a study of the *ḥisba* can be based. In its broad sense this is therefore the obligation incumbent in principle on every Muslim to promote good and to combat evil. He may do this in the normal course of events by information and remonstrance,more particularly by legal intervention, and, in special circumstances, in the case of absence of public authority, by constraint if he is able to do so—even, according to Ibn Ḥazm, in the case of a public authority which is not valid, by revolt against it. In reality the obligation is only theoretical, subordinate to the duty of the Muslim to do as well as possible in the situation, and he is forbidden to set himself up in place of the public authority when this exists. The idea of *ḥisba*, therefore, although it can play a certain rôle in social behaviour, has in practice only an insignificant influence and it is difficult to understand in what conditions its theory nevertheless developed.

The origin, apparently very old, of the office of *ḥisba* is no clearer. Originally neither the word *ḥisba* nor *muḥtasib* was used, but instead the term *ṣāḥib* (or *ʿāmil*) *al-sūḳ* for the latter. Thus there are two questions: that of the origin of the *ṣāḥib al-sūḳ* and that of his transformation into the *muḥtasib*. It is generally admitted that the former was the successor of the *agoranomos* of the Hellenistic cities: his duties were broadly similar and the Arabic expression can be seen as a translation of the Greek term. However, there exists no record of the *agoranomos* in the Greek inscriptions for three hundred years before the Arab conquest (Pauly-Wissowa; West and Johnson, *Byzantine Egypt*, 1955, index), and it is possible that both the office and the name were introduced in the Muslim period without there being any connexion: the name may have survived in popular use (as is suggested by its appearance in the Talmud), and the old towns probably retained their early institutions, whatever they may have been, but this is no reason to insist that at Baṣra, Kūfa, etc., which (like Mecca and Medina) had their *sūḳ*, a *ṣāḥib al-sūḳ* could not have appeared without inspiration from outside.

However this may be, about the time of the caliphate of al-Ma'mūn, the *ṣāḥib al-sūḳ* was replaced by the *muḥtasib*, a name which until then had been used only of a private individual who practised the virtue of *ḥisba*. This change in nomenclature evidently took place within the framework of the Islamization of institutions carried out by the ʿAbbāsids, particularly during the period of the Muʿtazila; but it is difficult to tell to what extent there really took place a transformation in the spirit and the content of the office of *ḥisba*. The change having occurred in the East after the split in the Muslim world between East and West, the title of *ṣāḥib al-sūḳ* remained predominant in the Maghrib and in Spain, where the idea of *ḥisba* was adopted primarily by the lawyers (explicit reference to this is found in Ibn Bashkuwal, and many examples, among others, in the *Bayān* of Ibn ʿIdhārī). But from the time that it is possible to describe the details of the office, there appears no great difference between the two halves of the Muslim world.

The classical *muḥtasib* then was characterized by the integration of his task as controller of the market within the wider duty, basically religious, of maintaining the seemly ordering of social life.

The division between his duties and those of the *ḳāḍī* and the chief of the *shurṭa* [*q.v.*] was not strictly defined, and the difference lay, in certain matters, less in their intrinsic nature than in the method by which they were approached: the *ḳāḍī* judged matters concerning which there had been a complaint and held an inquiry to discover the truth, and the *shurṭa* intervened over offences and crimes which demanded police action; the *muḥtasib*, on the other hand, concerned himself only with obvious and incontestable facts: he did not hold an inquiry, but intervened of his own accord, without waiting for a complaint. The questions with which he had to concern himself were in general decided at a fairly early date by a usage which has scarcely varied up to the present day; none of them was purely formal but it goes without saying that, apart from the affairs of the *sūḳ*, the way in which he carried out some of his obligations depended very much on the social background and on his own personal character. Apart from the *sūḳ*, they can be divided into three groups: the *muḥtasib* had to supervise the performance of religious obligations (public attendance at the Prayer, the proper use and upkeep of the mosques), the propriety of the behaviour between the sexes in the streets (and at the baths), and finally the application of discriminatory measures against the *dhimmī*s. And cases are cited of a courageous *muḥtasib*'s even criticizing *ḳāḍī*s who had judged wrongly or denouncing doctors guilty of teaching which did not conform with the *idjmāʿ*.

As far as the public is concerned however the basic and permanent duty of the *muḥtasib* was the control of the *sūḳ*. This duty above all came to be formally defined right from the beginning in the diploma of nomination: he had to check the weights and measures which, being so complex and diverse, readily permitted fraud. More generally, he had to watch for and combat all the types of shortcomings and dishonesty which could arise both in the manufacture and in the sale of commodities (and on which there exists—apart from the consideration given to them in *fiḳh*—a whole specialist literature, the best known example of which is the *Kashf al-asrār* of al-Djawbarī, 7th/13th century). The manuals of *ḥisba* in the strict sense list then the principal trades, and for each of them provide the *muḥtasib* with the technical information which enables him to test the quality of the products and to trace malpractices or bad workmanship—all of this being most important documentation for the study of economic conditions. The *muḥtasib* might even, when there existed no special officer in charge of this, test the genuineness of coins. In addition he had to ensure that merchants and agents did not resort to dissimulation, nor use practices calculated to deceive the customer over the merchandize or the price charged for it. He also made sure, from the point of view of the law, that the merchants did not

indulge in any operation which was connected with the prohibited practice of usury (*ribā*). His competence extended even to professions which we should not nowadays normally consider as being connected with the *sūḳ*: he thus controlled apothecaries and physicians, and in the schools warned or punished any masters who were excessively severe. The *muḥtasib* did not go beyond the limits of the town however, and consequently the *tudjdjār*, or traders with other districts, did not come under his control.

There is one point concerning this economico-moral activity which should be stressed in relation to the economic traditions of Islam: the *muḥtasib* checked prices but he did not normally have power to fix them. He reprimanded and even punished the merchant whose prices were higher than the accepted rate and, particularly in periods of scarcity, he dealt severely with hoarding; but the Law considers that prices are determined by God, *i.e.* are beyond the scope of human authorities. In a period of famine, however, at the end of the Middle Ages, there was a growing tendency to official price fixing [see NARKH, TASʿĪR].

Linked with these tasks was another which has caused modern scholars to stress the view that the traditions of antiquity concerning the councillors of the town were perpetuated in the duties of the *muḥtasib*. He had to ensure that, in the building and repair of houses and in the erection of shops, nothing was done which was prejudicial to public safety or which impeded the passage of pedestrians or vehicles. He was responsible for the cleansing of the streets and, if necessary, for the repair of the city walls, for ensuring the supply and regular distribution of water, etc... All these are duties which have sometimes caused the *muḥtasib* to be considered as a (and in Islam the only) municipal official: however he was no more one than was the *ḳāḍī* by nature of his office, since he was not appointed by any urban or professional organization; yet in fact he was concerned specifically and exclusively with urban matters.

The *muḥtasib* was appointed by the State, sometimes directly, more often through the governors or the *ḳāḍīs*, to whom it delegated officially the function of *ḥisba*, not, in principle, in order that they should perform it themselves, but so that they might ensure that it was carried out. The *muḥtasib* had to be a man known for his moral integrity and for his competence in matters concerning the Law; he was therefore usually a *faḳīh*, but, although this was less often insisted upon, the experience of professional life which he had to have caused him also to be chosen when possible from among the merchants. In any case, in the division of occupations into political and religious, the *ḥisba*, like the post of *ḳāḍī*, was a *dīniyya* office. The recruitment for and the performance of this office presented difficulties concerning the sphere and the methods of action of the *muḥtasib*. In cases where he was unable personally to supervise a large area he designated for each trade an *amīn* or *ʿarīf* belonging to that profession; in addition, he had a number of subordinate officers who enabled him to be represented rapidly anywhere, to summon delinquents, etc. Nevertheless these methods were rarely adequate, and it was essential for there to be collaboration between the *muḥtasib*, the *ḳāḍī* and the *shurṭa*. For the same reason it often happened that there were joined together in the same person either the offices of *ḳāḍī* and *muḥtasib* or of *ḥisba* and *shurṭa*; in spite of the breadth of his field of action and the religious quality of his office, the *muḥtasib* was in general considered as a specialist subordinate of the *ḳāḍī*, and the recruitment of the holders of *ḥisba* was made from among persons of lesser importance, the post being less esteemed than that of *ḳāḍī* (for which it sometimes served as a preliminary step).

In the majority of Muslim states the *muḥtasib* of the capital was invested with a certain responsibility for the supervision of those of the provincial towns. At the beginning of the 7th/13th century, the caliph al-Nāṣir, within the framework of his general policy of a theoretical and religious unification of Islam under his own guidance, tried to establish, at least in the Near East, a general control over the *ḥisba*, which however did not really materialize (see *Oriens*, vi (1953), 21).

The penalties which the *muḥtasib* could inflict without resort to other juridical authorities were normally, after a reprimand, beating and a parade in disgrace through the streets; incorrect weights and measures and faulty products might be confiscated; in exceptional cases, repeated offenders might be forbidden to continue to exercise their profession or even be banished.

At the end of the Middle Ages, with the economic decline and the social crises then existing, the office of *muḥtasib* often declined in esteem. Under the Mamlūks, it was, like other offices, obtained by payment, the purchaser recouping himself from the merchants by means of illegal taxes. There were frequent quarrels between the candidates, an example being the well-known one between al-Maḳrīzī and al-ʿAynī; and it sometimes happened that, for mercenary reasons or out of concern for efficiency, the post was given, against all tradition, to a member of the military class.

The *muḥtasib* continued to exist throughout the greater part of the Muslim world until the reforms of the modern period; he still existed for example at the beginning of the 20th century in Morocco and at Bukhārā. From the Saldjūḳid period, in Irano-Turkish territory and occasionally elsewhere, the office was more usually called *iḥtisāb*, the name of *ḥisba* being reserved for the virtue which the holder must exhibit (see next section). The Latin East which arose from the Crusades adopted it in a limited and lay form called the "mathessep".

Bibliography: The sources and the modern works about them have been mentioned in the article. There is as yet no general and thorough study of the subject as a whole. The main work, chiefly juridical, is that of E. Tyan in the final chapter of his *Histoire de l'organisation judiciaire en Islam*, ii, 1943, together with the reviews of it by M. Gaudefroy-Demombynes, in *Journal des Savants*, 1947, J. Sauvaget, in *JA*, ccxxxvi (1948), 309-11, and J. Schacht, in *Orientalia*, xvii (1948), 518. See also the prefaces by E. Lévi-Provençal and Maḥmūd ʿAlī Makkī to their editions and the recent restatement by J. Schacht in his *Introduction to Islamic Law*[2], 1966, index, and bibliography pp. 231-2. There is a useful chapter by A. Darrag in *L'Égypte sous le règne de Barsbay*, 1961, 76-82. N. Ziyāda, *al-Ḥisba wa 'l-muḥtasib fi 'l-Islām*, 1963, is of value chiefly as a collection of texts. Imāmuddīn, *al-Ḥisba in Spain*, in *IC*, 1963, gives biographies of Andalusian *muḥtasibs*. See also the article *muḥtasib* in *EI*[1] (R. Levy). The works devoted to the Muslim town of course mention the *muḥtasib*; they cannot all be cited here but from our point of view there should be mentioned especially G. Marçais, *Con-*

sidérations sur la ville musulmane et le muhtasib, in *Recueils de la Société Jean Bodin*, vi (1954), and the excellent monograph by R. Le Tourneau on Fez. For Bukhārā, P. I. Petrov, *Bukharskiy mukhtasib*, in *Problemî Vostokovedeniya*, 1959/1, 139-42. On the Latin East, Cl. Cahen, *La féodalité et les institutions politiques de l'Orient Latin*, in *Accad. Naz. d. Lincei, XII Convegno Volta*, 1956, 22-3.

ii.—Ottoman Empire

The term *ḥisba* does not occur in the registers and documents of the Ottoman administration; instead, we find *iḥtisāb*, an official term used both in the capital and in the provinces, its basic meaning being the levying of dues and taxes, both on traders and artisans and also on certain imports. However, the word *iḥtisāb* finally came to denote the whole aggregate of functions that had devolved upon the *muḥtasib* or *iḥtisāb āghāsî* (more rarely *iḥtisāb emîni*); it has often be translated as "market police", which implies a restrictive meaning; in the same way, the *muḥtasib* has been regarded as an "inspector of markets", but his exact responsibility went beyond that of merely superintending and inspecting markets and members of the trade-guilds. The regulations concerning the duties of the *muḥtasib* were codified in the *iḥtisāb ḳānūnnāmeleri*, in which that official could find everything relating to this duties of supervision, inspection, punishment and, particularly in regard to the provinces, of the levying of taxes. These regulations included on the one hand a list of the prices (*narkh-i rūzī*—see narkh) which had to be observed for the sale of commodities, manufactured or other articles, the permitted profit margins, and the penalties to be exacted from delinquent traders and artisans; they also gave the total amount or the percentage of the taxes, dues, charges and other contributions collected in the name of *iḥtisāb* and levied on the members of the trade-guilds. A reminiscence of the original function of the *muḥtasib* is to be found in certain articles in these regulations, in which it is stated that he must supervise behaviour and morality in public or sacred places and the respect shown by Muslims for their religious duties. It was he also, at least in Istanbul, who superintended the division of merchandise between wholesalers, traders or artisans. In the collection of taxes the *muḥtasib* was assisted by agents called *ḳol oghlānlarî* (15 in number in Istanbul in the 10th/16th and 11th/17th centuries, the number subsequently being raised to 56) and by 16 *mulāzims* (candidates) known as *senedli* [*q.v.*], holders of an official warrant of nomination. The office of *muḥtasib* or *iḥtisāb āghāsî* was farmed out annually (*iltizām*), the holder receiving a *berāt* of nomination after approval by the *ḳāḍī* (to whom the *muḥtasib* was directly responsible), the Grand Vizier or the governor of the province, and after he had paid a certain sum called the *bedel-i muḳāṭaʿa* or cash-value of the right to farm.

The first known *iḥtisāb* regulations go back to sultan Bāyazīd II (886/1481-918/1512), at the beginning of the 10th/16th century; later, other regulations were enacted by sultans Selīm I, Süleymān I, Selīm II, Murād III, Murād IV, Meḥemmed IV, etc. . . .; for the provinces, regulations concerning *iḥtisāb* were included in the wider regulations for the administration of the provinces, the *ḳānūnāmes*, the oldest of which date from the reign of Bāyazīd II; it is not impossible that other regulations of this kind had been promulgated earlier. In certain provinces annexed to the Ottoman Empire in the 10th/16th century, the sultans, immediately after the conquest, had at first contented themselves with enforcing the earlier regulations, as for example in Damascus.

In the financial sphere, the *muḥtasib* levied those taxes that derived from *iḥtisāb* properly speaking (*iḥtisāb rüsūmu*), but also some taxes which might be described as import or entry taxes, and lastly the tax (*yewmiyye-i dekākīn*) paid by shop-keepers to provide emoluments for the *muḥtasib* and his subordinates. In Istanbul, the town was divided into 15 tax areas for this last tax. The *iḥtisāb* taxes, in Istanbul and in the principal cities of the Ottoman Empire, were as follows:—*bādj-i pāzār* [see bādj], market tax, already in existence in the time of the Saldjūḳids and Īlkhānids, but the regulations governing it seem to go back to Meḥemmed II; this tax was levied on all merchandise coming from outside and sold in a market in the town; *bitirme*, an annual tax levied on merchants in foodstuffs; *dāmgha resmi*, stamp or brand duty [see tamgha] levied on textiles and metals, whether precious or not; *ḥaḳḳ-i ḳapan* or *resm-i ḳapan* or *ḥaḳḳ-i ḳanṭār* [see ḳapan] weighing dues paid in kind on cereals and dried vegetables, and in cash on other produce; according to certain authors, these weighing dues were also known as *mīzān* (scales dues), *ewzān* (dues for weights and measures) and *ekyāl* or *keyyāliyye* (dues for measuring grain). According to the locality, other *iḥtisāb* taxes could be imposed, such as (in Istanbul) the *rüsūmāt-i iḥtisābiyye* or entry dues on merchant shipping, *ḥaḳḳ-i ḳapî* or dues levied at the Edirne Gate, and *bāyiʿiyye* or dues on sales which mainly appeared in the 18th and 19th centuries. Certain abusive taxes imposed by *muḥtasibs* were on occasion cancelled by the sultans, on the grounds that they constituted blameworthy innovations prejudicial to the population.

The system of farming out the *iḥtisāb* was abolished in Istanbul in 1242/1826 and replaced by an administration (*iḥtisāb naẓāreti*) controlled by an *iḥtisāb nāẓiri*, a government official. In 1271/1854 the office of *iḥtisāb nāẓiri* was abolished and passed into the hands of the *shehir emîni*.

iii.—Persia

The *muḥtasib* and his office, the *ḥisba* (or *iḥtisāb*), together with many other offices of the religious institution, continued to be found in the various empires and kingdoms formed in Persia after the break-up of the ʿAbbāsid caliphate. It did not finally disappear until the 19th century. Public morals and the due performance by Muslims of their religious duties were under the general care of the *muḥtasib*. He was also charged with the oversight of what might be called public amenities. He was not to allow slaves to be ill-treated or animals over-burdened. It was also his duty to see that *d̲h̲immīs* complied with the regulations imposed upon them to distinguish them from Muslims. His main task, however, was to oversee the markets and prevent dishonest dealing by merchants and artisans and to exercise supervision over the guilds and corporations. He was empowered to inflict summary punishment on offenders (see further R. Levy, *The social structure of Islam*, Cambridge 1957, 334 ff.).

Niẓām al-Mulk states that a *muḥtasib* should be appointed in every city to oversee weights and prices, to watch over commercial transactions, to prevent the adulteration of goods and fraud, and "to enjoin what is good and forbid what is evil". The sultan and his officials should support the *muḥtasib* because, if they did not, "the poor would be in trouble and the people of the bazaar would buy and sell as they liked, middle-men (*faḍla-k̲h̲ʷur*) would become dominant, corruption open, and the *s̲h̲arīʿa* without prestige" (*Siyāsat-nāma*, ed. Schefer, Persian text, 41). Ḥusayn Wāʿiẓ Kās̲h̲ifī (d. 910/1505), who wrote under the Timurids, regards the existence of the *muḥtasib* as a guarantee that public life would be conducted in accordance with the precepts of Islam. He writes, "Every sultan who strives to put into practice the precepts of the *s̲h̲arīʿa* and to execute the decrees of religion is the deputy of God and His shadow upon earth. But since the sultan, by virtue of the multiplicity of state affairs, cannot look into the details of this matter [the execution of the decrees of religion] he must appoint *muḥtasib*s in his kingdom. The *muḥtasib* must be strong in the faith and powerful in his zeal for Islam, and distinguished by virtue (*ʿiffat*), abstinence, trustworthiness, uprightness, and lack of greed. Whatever he does he should do for the strengthening of religion, and he should be free from ulterior motives, hypocrisy, self-seeking, and lust, so that what he says may impress itself upon the hearts of men" (*Ak̲h̲lāḳ-i Muḥsinī*, ed. Mīrzā Ibrāhīm Tād̲j̲ir S̲h̲īrāzī, lith., Bombay 1308, 159). Muḥammad Mufīd, writing in the 11th/17th century, also emphasizes the importance of the *ḥisba* as one of the offices of religion (*D̲j̲āmiʿ-i Mufīdī*, ed. Īrad̲j̲ Afs̲h̲ār, Tehrān 1340s., iii, 380-1).

The holder of the office of *muḥtasib* was normally a member of the religious classes. A number of documents for the appointment of the *muḥtasib* survive. One, issued from the *dīwān* of Sand̲j̲ar, the last of the Great Seld̲j̲ūḳs, is for the appointment of a certain Awḥad al-Dīn to the office of *muḥtasib* of Māzandarān. He is commanded to enjoin what is good and forbid what is evil, to exert himself in the equalization and control of weights and measures, so that no fraud would be committed in buying and selling and that Muslims would not be cheated or suffer loss; to ensure that the requirements of the *s̲h̲arīʿa* were duly carried out in mosques and places of worship, and that the *muʾad̲h̲d̲h̲in*s and other officials performed their duties in the proper way and at the stated times; to strive for the suppression of corrupt persons and for the prevention of notorious conduct in public by them, the open commission of vice, and dealing in intoxicating drink in the neighbourhood of mosques, burial places and tombs; to cause the *d̲h̲immī*s to wear distinguishing clothing to mark their inferiority to Muslims; and to prevent women mixing in the assemblies of the *ʿulamāʾ* (*mad̲j̲lis-i ʿilm*) or listening to homilies (Muntad̲j̲ab al-Dīn Badīʿ Atābeg al-D̲j̲uwaynī, *ʿAtabat al-kataba*, ed. ʿAbbās Iḳbāl, Tehrān 1950-1, 82-3; see also H. Horst, *Die Staatsverwaltung der Grosselǧūqen und Ḫōrazmšāhs (1038-1231)*, Wiesbaden 1964, 97, 161-2; and 112-3 and 162 for documents belonging to the K̲h̲ʷārazms̲h̲āh period).

During the Īlk̲h̲ān period the *muḥtasib*, like other officials of the religious institution, either continued to exist or was re-appointed after the conversion of the Īlk̲h̲āns to Islam. When G̲h̲āzān K̲h̲ān decided to unify weights and measures throughout the kingdom, he ordered this to be done in every province in the presence of the *muḥtasib* (Rašīd al-Dīn, *Geschichte Ġāzān-Ḫāns*, ed. K. Jahn, GMS, 1940, 288). In Timurid times the functions of the *muḥtasib* and the qualities required for his office were broadly the same as in Seld̲j̲ūḳ times. Three documents for the appointment of the *muḥtasib* are preserved in the *S̲h̲araf-nāma* of ʿAbd Allāh Marwārīd (see H. R. Roemer, *Staatsschreiben der Timuridenzeit*, Wiesbaden 1952, 53-7, 150-2). One of these documents, appointing a certain ʿAbd Allāh Kirmānī *muḥtasib* of Herāt, states that he was to hold the office jointly with a certain Rukn al-Dīn ʿAlāʾ al-Dawla (*ibid.*, f. 24a).

Under the early Ṣafawids there was a *muḥtasib* in most, if not all, of the large cities. He performed the traditional functions of the office, but with the difference that the orthodoxy which he now supported was S̲h̲īʿism of the It̲h̲nā-ʿas̲h̲arī rite. In a diploma for the office of *muḥtasib* of Tabrīz dated 1072/1662 the official appointed was charged with the preservation of public morality, including the prevention of drinking, gambling, and other offences against the *s̲h̲arīʿa*, the collections of *k̲h̲ums* and *zakāt* and the distribution of the proceeds of these taxes among those who were entitled to them, and the upkeep of mosques, schools, and charitable endowments; he was also enjoined to control weights and measures, to see that passage along the streets was unimpeded, and to supervise certain groups and guilds, such as the *mullās*, *muʾad̲h̲d̲h̲in*s, and washers of the dead. The *kalāntar*s, *kadk̲h̲udā*s, *dārūg̲h̲a*s, and

officials administering customary law (*ʿummāl-i ʿurf*) were ordered to refrain from interfering in the fixing of prices and to see that the *muḥtasib* was paid the customary dues of his office (see A. K. S. Lambton, *Islamic society in Persia*, (inaugural lecture), London (S.O.A.S.), 1954).

The chief *muḥtasib* of the kingdom was known as the *muḥtasib al-mamālik*. This office under Ṭahmāsp was held by an Astarābādī, Mīr Sayyid ʿAlī, who was also the *khaṭīb* of the royal court, and later by a Ṭabāṭabāʾī *sayyid*, Mīr Djaʿfar, who was succeeded on his death in the reign of Shāh ʿAbbās by Mīrzā ʿAbd al-Ḥusayn, formerly the *kalāntar* of Tabrīz (Iskandar Beg, *ʿĀlam-ārā-yi ʿAbbāsī*, lith., Tehrān 1896-7, 111-2). According to the *Tadhkirat al-mulūk* an undertaking from the elders of each guild concerning the prices of the goods they sold was submitted month by month to the *muḥtasib al-mamālik* for his approval. He then sent this to the *nāẓir-i buyūtāt* (the superintendent of the royal workshops) for his confirmation so that documents for the purchase of goods might be drawn up. Contravention of this price-list was visited by heavy penalties (ed. V. Minorsky, GMS, Persian text, ff. 79b-80a). Chardin, who travelled in Persia in late Ṣafawid times, states that prices were fixed in Iṣfahān every Saturday by the *muḥtasib* and that any vendor exceeding the prices fixed was liable to heavy penalties. But he also alleges that there was corruption over the settling of prices and that vendors gave the *muḥtasib* presents to induce him to fix prices at a high level (*Voyages*, ed. Langlès, Paris 1811, x, 2 ff.).

The *muḥtasib al-mamālik* appointed deputies to act on his behalf to ensure that the guilds sold their goods in each place at the prices fixed (*Tadhkirat al-mulūk*, f. 80b). He was paid 50 *tūmān*s per annum and in addition levies on various provincial towns, totalling some 253 *tūmān*s 3,000 *dīnār*s, were made in his favour (*ibid.*, ff. 90a-b).

After the Ṣafawid period the office of *muḥtasib* appears to have declined and to have become increasingly secularized. Those of his functions which were concerned with the administration of *sharʿī* law were in effect removed from his competence and administered by the *marādjiʿ al-taḳlīd*. These functions included the collection of *khums* and *zakāt*, the administration of inheritances and wills, and the appointment of guardians for minors and others, matters which were known collectively as *umūr-i ḥisbī*. The *marādjiʿ* issued *idjāza*s for the supervision on their behalf of the *umūr-i ḥisbī*. The qualifications required by the recipient of such an *idjāza* were that he should be a believer (*muʾmin*), 'just' (*ʿādil*), and instructed in the decrees (*aḥkām*) of the *sharīʿa*. He was permitted to retain from the sums he collected by way of *khums* and *zakāt* enough for his subsistence; the remainder was to be handed over to the *mardjaʿ* who had issued his *idjāza* for its distribution among those who had a right to it.

So far as the *muḥtasib*'s functions in relation to the guilds in the large cities and to the cleanliness of the city were concerned, they were to some extent taken over by the *dārūgha* and the *kalāntar*. His duties were increasingly restricted to the regulation of prices and the inspection of weights and measures but in this he was subject to the orders of the *dārūgha* (cf. E. Scott Waring, *A tour to Sheeraz*, London 1807, 68-9). Tancoigne, like Chardin, alleges that the *muḥtasib* was not inaccessible to bribery and often consented to sell his protection to dealers (*A narrative of a journey into Persia*, London 1820, 239-40). During the course of the 19th century the *muḥtasib* disappeared in most cities. Binning, writing about 1857, states that the office had recently been abolished in Shīrāz (*A journal of two years travel in Persia, Ceylon, etc.*, London 1857, i, 337-8). In Iṣfahān the office had ceased to be in effective operation by 1294/1877-8 (Mīrzā Ḥusayn Khān b. Muḥammad Ibrāhīm, *Djughrāfiyā-yi Iṣfahān*, ed. M. Sutūdeh, Tehrān 1963, 80). The traditional dues levied for the payment of the *muḥtasib* nevertheless continued to appear in the tax-rolls for many years after the office had, in effect, disappeared. By the law of 20 Ādhar 1305/1926 an item of 150 *ḳirān*s levied on the guild of butchers in Tehrān for the *muḥtasib* was abolished (*The second yearbook of the municipality of Tehrān: statistics of the city of Tehrān for the years 1925 to 1929*).

There is mention of an *iḥtisāb-āḳāsī* in Tehrān in the year 1853. His functions were *inter alia* to issue lists of prices for foodstuffs and other goods (cf. *Rūznāma-i Waḳāyiʿ-i Ittifāḳiyya*, No. 127, 29 Ramaḍān 1269/1853). The office to which he belonged was known as the *iḥtisāb* and its main duty was the cleaning of the streets. Shortly after a police administration on modern lines was set up by Nāṣir al-Dīn Shāh in 1298/1880 the *iḥtisāb* was placed under its jurisdiction (Iʿtimād al-Salṭana, *Rūznāma*, under dateline 5 Ṣafar 1299/1881, ms. in the library of the Shrine of the Imām Riḍā at Mashhad). In 1312/1894-5 the *iḥtisāb* department in Tehrān consisted of a director, two deputy-directors, and a number of subordinate officials, *farrāsh*es, stablemen, and water-carriers, etc. (Iʿtimād al-Salṭana, *Taʾrīkh wa Djughrāfiyā-yi Sawādkūh*, lith., Tehrān 1311, appendix). An item in the newspaper *Tarbiyat*, No. 58, 26 Shaʿbān 1315/30 January 1898, addressed to Munaẓẓam al-Salṭana, the *wazīr-i naẓmiyya wa iḥtisābiyya*, praises him for his efforts to clean the streets, to facilitate passage through them, to modify prices, to prevent evil conduct and theft, and to prevent the ill-treatment of [pack] animals. Thus, by the end of the 19th century the *muḥtasib* as an official of the religious institution in charge of the public conscience had ceased to exist, and such of his functions as survived were taken over by the police administration.

The *umūr-i ḥisbī* continued to be administered during the 19th and early 20th centuries under the supervision of the *marādjiʿ al-taḳlīd*, but after the institution of modern courts during the reign of Riḍā Shāh Pahlavī the *umūr-i ḥisbī* were restricted to the collection of *khums* and *zakāt*; such matters as the administration of inheritances and wills, the care of minors, appointment of guardians, etc., were transferred to the courts (see the law entitled *Ḳānūn-i umūr-i ḥisbī*, dated Tīr 1319/1940).

Bibliography: In the article.

iv.—The Indian subcontinent

The institution of *ḥisba* in the strict classical sense did not exist in the Indo-Pakistan subcontinent during the period from the 5th/11th century to the 13th/19th century. The main obstacle was the complexion of the population, the majority of whom consisted of non-Muslims. Except for Balban (664/1266-686/1287), Fīrūz Shāh Tughluḳ (752/1351-790/1388), Sikandar Lōdī (894/1489-923/1517) and Awrangzīb ʿĀlamgīr [*q.v.*], and they too only in certain respects, none of the Muslim rulers of India ever attempted to enforce the *Sharīʿa* law, either for fear of disaffecting the local Hindu population or by way of political expediency, of which the many

heretical measures adopted by Akbar [*q.v.*] are a glaring example. From the very beginning of their rule in a country held mainly by conquest, the Sultans (7th/13th-10th/16th century) realized that the Muslims, situated as they were in India, could not be allowed to grow lax in religion or morals except at the expense of the solidarity, integrity, and, at times, the very existence of their newly established state. Hence, wherever a Muslim colony was established or a town garrisoned, a *muḥtasib* and a *ḳāḍī* [*q.v.*] were invariably appointed (cf. Minhādj-i Sirādj, *Ṭabaḳāt-i Nāṣirī*, 175; al-ʿUtbī, *Taʾrīkh-i Yamīnī*, 288; *Tādj al-maʾāthir*, fol. 85a). Balban, who considered an efficient *ḥisba* department to be a primary necessity of good government, did not neglect, as his predecessors had done, even small and insignificant places. We read in the *Safar-nāma-i Ḳāḍī Taḳī Muttaḳī* (Bidjnor 1909, 2 ff.), of Iletmish (608/1211-633/1236) having appointed a *ḳāḍī* at Ambāla [*q.v.*], which was then no more than a hamlet of a few hundred houses of mixed population. During the Sultanate period the functions of the *muḥtasib* and the *ḳāḍī*, and the relations between them, were much the same as in the central lands (see above, i).At times the Sultan intervened personally to deal with customs or innovations considered heretical or un-Islamic or in matters which lay beyond the ordinary jurisdiction of the *muḥtasib*. Fīrūz Shāh Tughluḳ, for instance, forbade many popular practices which he regarded as irreligious (cf. *Futūḥāt-i Fīrūzshāhī*, ed. Sh. Abdur Rashid, Aligarh 1954, 6-11). However, the stronger and the more religiously-minded a Sultan was, the greater was his anxiety to promote the moral and religious welfare of his people. Amīr Khusraw [*q.v.*] speaks highly of ʿAlāʾ al-Dīn Khaldjī's *ḥisba*, as being especially concerned with the flow of supplies and the control of food prices. This Sultan rigorously suppressed drinking, gambling and other social and moral vices, believing that unless public morals were tightened up the deterrent punishments meted out to various offenders against the *Sharīʿa* would be meaningless. Muḥammad Tughluḳ (725/1325-752/1351) in his own days inflicted these punishments with unwonted severity. He was so keen to enforce *iḥtisāb* that at times he personally acted as the *muḥtasib* and examined Muslims on the elementary rules of their faith. Under him, the *muḥtasib* was an officer of great dignity and, according to al-Ḳalḳashandī (*Ṣubḥ al-aʿshā*, v, 94; partial Eng. trans. by O. Spies, Stuttgart 1936, 72) and Ibn Faḍl Allāh al-ʿUmarī (*Masālik al-abṣār*, partial Eng. tr. by Sh. Abdur Rashid, Aligarh 1944, 32), enjoyed a monthly salary of 8,000 *tankas*. The Sultan paid special attention to the regular saying of prayers. According to Ibn Baṭṭūṭa (iii, 292; tr. von Mžik, 149), a lady of the royal household found guilty of adultery was stoned to death. Similarly, drunkards received the full measure of *ḥadd* punishment in addition to three months' solitary confinment. Both Baranī (*Taʾrīkh-i Fīrūzshāhī*, 441) and Ibn Baṭṭūṭa (*loc. cit.*) testify to the high level of *ḥisba* maintained by the Tughluḳ Sultan Ghiyāth al-Dīn (720/1320-725/1325). His son Muḥammad Tughluḳ did not brook any laxity in the observance of religious rites even at his court. Sikandar Lōdī was equally keen on enforcing *ḥisba* throughout his kingdom. He boldly did away with a popular and time-honoured custom of carrying 'lances' (*nīzas*) to the tomb of the legendary hero Ghāzī Masʿūd Sālār [*q.v.*] and revived Fīrūz Tughluḳ's ordinance prohibiting women from visiting tombs and graveyards. It must at the same time be stressed that *iḥtisāb* was enforced only in the case of Muslims, the non-Muslims being subject to their own religious or personal laws or the common law of the land.

Another important function of the *muḥtasib* was to uphold orthodoxy and to suppress heresy. Teachers and professors in religious institutions as well as popular preachers had to be very cautious in their lectures and utterances for fear of the *muḥtasib*. The Ḳarmaṭīs, who created great disturbances in Delhi during the reign of Raḍiyya (634/1236-637/1240), were successfully combated by Fīrūz, as we hear no more of their activities subsequently. We do not hear much of the *muḥtasib* during the rule of the Lōdī or the Sayyid dynasties, but that does not mean that he had by then completely ceased to exist. While Shēr Shāh Sūr (945/1538-952/1545) was largely occupied with the consolidation of his kingdom and with administrative reforms, his successor Islām Shāh (952/1545-960/1552) paid due attention to religious matters. For instance he took very strong measures against the Mahdawīs, *i.e.*, followers of Sayyid Muḥammad al-Djawnpūrī [*q.v.*], whom he regarded as a heretic, and had two of his disciples, ʿAbd Allāh Niyāzī Sirhindī and Shaykh ʿAlāʾī, severely punished—the former being almost beaten to death while the latter was put to death. (Cf. A. S. Bazmee Ansari, *Sayyid Muḥammad Jawnpūrī and his movement*, in *Islamic Studies* (Karachi), ii/1 (March 1964).

As against this, some modern historians are of the opinion that while theoretically speaking it is correct to say that state policy during the Sultanate period was directed towards enforcing the *ḥisba*, in practice little attention was paid to the dictates of the *Sharʿ*. For instance Baranī is quoted as saying that the punishments awarded to the Muslims went against the Ḳurʾānic laws. Similarly, the injunctions governing the use of *ḥalāl* (permissible) and *ḥarām* (prohibited) things were seldom observed. Amīr Khusraw also is reported as saying that the charging of interest was a common practice in his day, and that when a written contract between the parties existed even the *ḳāḍī* had to recognize the fact (cf. Muḥammad Habibullah, *The foundation of Muslim rule in India*², Allahabad 1961, 349). But these are solitary instances, which may be the exception rather than the rule.

During the anarchy following the death of Shēr Shāh, the institution of *ḥisba* appears to have collapsed, and the Mughals, for both personal and political reasons, did not consider it expedient to revive the institution, which consequently suffered a heavy set-back. Bābur was a great lover of wine; Humāyūn was addicted to opium; Djahāngīr too was no exception, wine being his greatest weakness. His son and successor Shāhdjahān, although of sober habits, did not have the courage either to break away completely from the traditions of his family or to enforce *ḥisba* strictly. During one of his visits to the Pandjāb, when it was brought to his notice that certain Hindus in Gudjrāt had married Muslim women, he ordered the annulment of these marriages and the restoration of the women to their families (cf. ʿAbd al-Ḥamīd Lāhorī, *Bādshāh-nāma*, ii, 57-8). It was only Awrangzīb who showed the highest respect for religion and strictly enforced *ḥisba*. He included a specific provision in his penal laws (cf. M. B. Ahmad, *The administration of justice in Mediaeval India*, Aligarh 1941, Appendix C, 6-7) for the punishment of persons found guilty of drinking or using narcotic drugs such as hemp and opium. He ordered the execution of Sarmad (d. 1070/1659),

a convert to Islam and an eclectic *ṣūfī*, on the ground that he had refused to cover his nudity—a serious offence against public morals. In fact there is little ground to differ from the statement "that the Mughal emperors (never) strictly adhered to the Islamic principles ... in the case of certain crimes their punishments were practically the same as prescribed by the Quran. In other matters they greatly departed from the Quranic laws and the reasons for this departure were that firstly, there were many cases which did not come exactly within the ambit of the Quranic law, and secondly, in many cases social and political needs and the attendant circumstances demanded a different treatment" (cf. P. Saran, *The provincial government of the Mughals*, 381-2). Moreover, there is every reason to believe that the *muḥtasib* of the Sultanate period came to be replaced by the *kōtwāl* [*q.v.*], a secular officer whose duties resembled very closely those of the *muḥtasib*, the only difference being that while the former dealt with all sorts of crimes and offences, the latter was primarily concerned with offences against Islamic law. The Mug͟hals found it administratively convenient to entrust the duties of the *muḥtasib* to the *kōtwāl*, with harmful effects first on the religious and moral welfare of the Muslims in India, then on their social and cultural life, and ultimately on their rule.

HIS͟HĀM, tenth caliph of the Umayyad dynasty, who reigned from 105 to 125/724 to 743. He was born in Damascus in 72/691, son of ʿAbd al-Malik and of ʿĀʾis͟ha bint His͟hām, of the clan of the Banū Mak͟hzūm, who named him after her father. Preceded in the order of succession by his older brothers (al-Walīd, Sulaymān, Yazīd II) and kept from the throne by the unexpected accession of ʿUmar b. ʿAbd al-Azīz, he was finally nominated heir in 101/720 by Yazīd, ascended the throne on the latter's death in S͟haʿbān 105/ January 724, and reigned until his death on 6 Rabīʿ II 125/6 February 743. His long reign, which equalled in length those of Muʿāwiya and of ʿAbd al-Malik, marks the final period of prosperity and splendour of the Umayyad caliphate.

On his accession, he appointed to the post of governor of ʿIrāḳ K͟hālid al-Ḳasrī, a versatile and skilful man, who lacked the fierce energy of al-Ḥad͟jd͟jād͟j, but possessed the same devotion to the caliphs of Damascus. During the fifteen years he was in office, he devoted himself primarily to the agricultural and economic development of the country, continuing the work of providing a pure water supply which had been begun by al-Ḥad͟jd͟jād͟j, though this did not insure him against incurring hatred and rancour, in his own province and even at the caliph's court, which finally led, in 120/738, to his dismissal. His rival and successor, Yūsuf b. ʿUmar al-T͟haḳafī, had to suppress in 122/740 the S͟hīʿī revolt of Zayd b. ʿAlī, who was killed in arms at Kūfa after a brief affray, a small enough episode in itself, but one which was to enrich S͟hīʿī martyrology and re-kindle the propaganda of the Hās͟himī opposition. Apart from this revolt and some other small S͟hīʿī and K͟hārid͟jī acts of sedition, the internal peace of the empire under His͟hām was not seriously threatened, although the underground work of the *daʿwa* continued unabated. It was rather in the frontier regions of the empire that the most outstanding events of this caliphate took place.

To the east the Arab offensive had, under Ḳutayba b. Muslim, made its final advance. After that, it was a matter no longer of further progress but of retaining and consolidating the positions gained, and particularly of containing the pressure of the Turkish counter-offensive which was carried on with vigour at this time. The many successive governors whom His͟hām appointed to K͟hurāsān (among them As͟hras al-Sulamī, D͟junayd b. ʿAbd al-Raḥmān al-Murrī, Asad al-Ḳasrī, brother of K͟hālid, and the courageous Naṣr b. Sayyār) all had to face the menace of the Türges͟h under the command of the intrepid leader Bog͟hā Ṭark͟hān (the "Ḳūrṣūl" of the Arabs) and of the K͟hāḳān Su-lu. After suffering many setbacks and even risking disaster (*yawm al-s͟hiʿb* in 112/730, *yawm al-at͟hḳāl* in 119/737) the Arabs finally broke the Turkish offensive at K͟harīstān, near S͟huburḳān to the west of Balk͟h (119/737) and, under Naṣr b. Sayyār, advanced in the following year as far as the Jaxartes. By a wise taxation policy, Naṣr was even able to achieve in his province a certain degree of pacification, the ephemeral nature of which however was to be revealed a few years later by the outbreak of the ʿAbbāsid revolt.

The empire experienced another grave threat during this period, from the north, with the irruption of the K͟hazar Turks in Armenia and in Ād͟harbayd͟jān (defeat of D͟jarrāḥ b. al-Ḥakam at Ardabīl in 112/730). The invaders were driven back however by the intervention of massive reinforcements led by skilled captains such as Saʿīd al-Ḥaras͟hī, and later Maslama b. ʿAbd al-Malik and Marwān b. Muḥammad. There followed a whole series of campaigns which led the Arabs beyond the Caucasus as far as the mouths of the Volga (foundation of Derbend by Maslama in 113/731), without however achieving any stable conquest to the north of the Caucasus. Further west, the hostilities with the Byzantines continued throughout His͟hām's reign, but without any large-scale operations: the great offensive of the Arabs had spent itself with the siege of Constantinople by Maslama in 98/716-7, and operations were limited to *ṣawāʾif*, in which the Muslims were not always the conquerors (defeat of Akroinos, 122/740, and death of the famous *g͟hāzī* al-Baṭṭāl [*q.v.*], destined to become later the hero of romance of this frontier-war).

Events on a large scale, however, were taking place in Africa and in Spain, undermining in these distant provinces the direct domination of the central power. The harsh régime of fiscal exploitation under the governor ʿUbayd Allāh b. al-Ḥabḥāb (116-23/734-41) provoked, in 123/740-1, a great revolt of the Berbers, who inflicted a first crushing defeat on an Arab army near Tangier (the *ghazwat al-ashrāf*, so called from the great number of Arab warriors who lost their lives there). Upon the news of this disaster, the caliph Hishām himself assembled and sent from Syria a second army, under the command of Kulthūm b. ʿIyāḍ, who was hacked to death by the Berbers on the banks of the Sebū. While Kulthūm's nephew, Baldj, succeeded with the remnants of this army in reaching Ceuta and then in crossing into Spain, the whole of the Maghrib was plunged into anarchy and revolt, in which Berber ethnic loyalty was allied with Khāridjī heresy: and it was the task of a new governor sent by Hishām, the Kalbī Ḥanẓala b. Ṣafwān [*q.v.*], to recover in a despairing effort (battle of al-Aṣnām near Ḳayrawān, 124/742) what could still be saved of Arab hegemony and of Umayyad power in Ifrīḳiya. From this time, the direct authority of the caliphs of Damascus (and later of Baghdād) does not seem to have extended beyond the boundaries of present-day Algeria. The crisis in the Maghrib involved the new province of Spain, whose governors had up to then been answerable to the governors of Africa: whereas before 122/740 the Arabs of Spain had carried out their razzias beyond the Pyrenees (battle of Poitiers and the death of ʿAbd al-Raḥmān al-Ghāfiḳī, 114/732), after 122/740 they wasted their strength in internal quarrels, aggravated by the arrival of the Syrians under Baldj; these were finally ended, fifteen years later, by the foundation of the Umayyad emirate under a nephew of Hishām who had fled to the west from the ruin of the Umayyad dynasty.

It is not easy, among all the facts briefly sketched here, to distinguish the part played personally by the ruler, who was living sometimes several hundred miles away and who limited himself in general (if we follow the literal interpretation of the texts) to appointing and dismissing the governors, who are presented in the sources as the leading figures in events. It is possible however to discern several main lines which can be traced to the supreme authority of the empire and are characteristic of its policy. This policy appears as one of recovery and of conservation of the immense patrimony of the conquests, which reached its greatest extent thanks to the demographic, economic and spiritual forces of the Arab element but which, while still retaining its vitality and vigour as a coherent Muslim society, was destined to disintegrate as an Arab empire. Hishām seems to have been aware of this danger, and to have acted, together with a chosen group of capable and devoted assistants, so as to confront it and to delay it as much as possible. This seems to be proved particularly in the policy which he followed (unlike his brothers who had reigned before him) of maintaining an equilibrium between the rival tribal groups of the Muḍarīs and the Yamanīs, both of whom he skilfully used to staff the administration, in order to forward the interests of the State. Some scholars, such as H. A. R. Gibb, even go so far as to attribute to this caliph the initiative in a general reform and reorganization of the tax system in answer to the complaints of the *mawālī*, although the sources provide details only of local measures which were taken, probably with the caliph's consent, by governors in their own provinces (for example the work of Ashras al-Sulamī and of Naṣr b. Sayyār in Khurāsān and in Transoxania, and the harsh tax policy of ʿUbayd Allāh b. al-Ḥabḥāb in Ifrīḳiya). In fact there has survived no explicit documentation which would lead us to attribute to Hishām, as to ʿUmar II, measures which in principle applied throughout the empire; it cannot however be denied that he was aware of the problem and applied himself to its solution, particularly as the sources agree in describing him as a strict administrator, sober and frugal almost to the point of meanness, and paying great attention to the regular ordering of the revenues and the expenditure. The only ostentatious facet of his character, which he shared with the other members of his family, was his enthusiasm for building: there dates from his reign a whole series of castles, palaces and even "towns" in the Syrian desert, some of which have been known for a long time and other only recently revealed by excavation; of some of them he was actually the founder. First, the two Ḳaṣr al-Ḥayr to the east and to the west of Palmyra (it has been suggested that the former, Ḳaṣr al-Ḥayr al-Sharḳī—and not the Christian Sergiopolis—is the real Ruṣāfat Hishām; in the latter, Ḳaṣr al-Ḥayr al-Gharbī, there has been found, among the splendid remains of its decoration, perhaps the portrait of the caliph himself); and in addition Ḳaṣr al-Milḥ, Khirbat al-Mafdjar [*q.v.*], Ḳaṣr al-Ṭūbā, etc. There is hardly any Umayyad ruin discovered or excavated in Syria and Jordan in recent years which is not connected, by epigraphical evidence or by fairly probable conjecture, with Hishām's reign and with Hishām himself.

The final years of his reign were clouded by troubles concerning the succession: after trying in vain to get one of his own sons recognized as his heir (at first his elder son Muʿāwiya and, after his premature death, his younger son Maslama), he resigned himself to considering as his successor his nephew al-Walīd b. Yazīd, who had already been nominated by Yazīd II and whose character, tastes and education were the complete opposite of his own. But he wrangled with him and embittered him in every way, thus undermining the solidity of his own political and administrative achievements, which his offended successor was to lose no time in overthrowing. The accession of al-Walīd II, when Hishām died from a heart attack in his residence at Ruṣāfa after a reign of twenty years, in fact saw the beginning of the *fitna*, which was fatal for the dynasty. But the long reign of the fourth son of ʿAbd al-Malik may nevertheless be considered as a period which on the whole was glorious for the Arabs and fruitful in the development of Islamic faith and culture. In this connexion there should be mentioned the strict orthodoxy of Hishām (who was the friend of the great traditionists al-Zuhrī and Abū Zinād and the persecutor of the Ḳadarī heretics, though at the same time tolerant towards the Christians), and in addition his interest in the historical and administrative traditions of the Sāsānids, and the elaboration among his entourage (Abrash al-Kalbī and his pupil ʿAbd al-Ḥamīd b. Yaḥyā) of the Arabic chancery style, which was to have such a great development during the first years of the ʿAbbāsid caliphate.

HISHĀM I, ABU 'L-WALĪD, called AL-RIḌĀ, the second Umayyad ruler of Muslim Spain, succeeded his father ʿAbd al-Raḥmān I [*q.v.*] on 1 Djumādā I 172/October 788, or according to Ibn al-Abbār one year earlier. He was then 30 years old, having been born in Cordova in 139/757, *i.e.* after his father's arrival in al-Andalus. Though the designated heir, Hishām I was obliged to fight for his inheritance and campaigned successfully in person against his elder brother Sulaymān and another brother, ʿAbd Allāh al-Balansī, 'the Valencian', in 172 and 173/788-89 and 789-90. At the same time or later, disturbances at Saragossa on the Upper Frontier (*al-thughr al-aʿlā*) and a Berber revolt in Tākurunna (region of Ronda) were dealt with by others. So also in the campaigns against the Christians of the North, which became feasible owing to the generally peaceful internal conditions (cf. Ibn ʿIdhārī, ii, 68), Hishām relied on his generals, among whom Abū ʿUthmān ʿUbayd Allāh b. ʿUthmān and the brothers ʿAbd al-Karīm and ʿAbd al-Malik, sons of ʿAbd al-Wāḥid b. Mughīth, are the most notable. From 175/791 the military activity of the Umayyad government was practically continuous. Every year until the end of the reign expeditions were sent out against the Christians, several times north to Alaba (Alava) and al-Ḳilāʿ (Old Castile), several times north-west to Djalīḳiya ('Galicia', *i.e.*, the Asturias) as far as Oviedo, which was sacked in 178/794, and once north-east to Gerona (Ifrandja, Djarunda) and Narbonne (Arbūna). This appears to have been the last occasion on which Narbonne was attacked by a Muslim army (177/793). The campaign is represented as a great victory: the fifth part of the captives taken, *i.e.*, their price when sold, amounted to 45,000 gold pieces. According to al-Maḳḳarī (i, 218), earth from the wall of the French city was brought to Cordova and used in the construction of a mosque. We hear of Hishām's additions to the Great Mosque at Cordova and of his repairing an ancient bridge over the Wādī al-Kabīr ([*q.v.*], Guadalquivir), which had been damaged by the current. The funds for both undertakings, says Ibn al-Ḳūṭiyya (43), were provided by the fifth of the spoils of Narbonne.

Hishām I, whose public and private conduct was guided by religion, has been compared to his relative ʿUmar b. ʿAbd al-ʿAzīz [*q.v.*]. With his encouragement, the new Mālikī school began to make headway in al-Andalus. He died in Ṣafar 180/April 796 after a comparatively short reign of 7½ years.

HISHĀM II, AL-MUʾAYYAD BI'LLĀH, Umayyad Caliph of Cordova, son of al-Ḥakam II [*q.v.*] and a Basque mother. He succeeded in Ṣafar 366/October 976, at the age of 10 years. The Slav officers of the palace tried to secure the election of the boy's paternal uncle al-Mughīra, with Hishām as heir-presumptive. The plan miscarried. Al-Mughīra was killed on the orders of the *ḥādjib* Muḥammad b. Abī ʿĀmir al-Manṣūr [*q.v.*], who subsequently used the authority of Hishām for his own ends and held him in tutelage which proved permanent. From 370/981 al-Manṣūr ruled openly on his own account, and it is in this period that his numerous and successful expeditions against the Christians of the north took place. In 386/996 Hishām, by then a man of thirty but principally urged on by his mother, attempted unsuccessfully to assert his authority, and had to remain dependent on al-Manṣūr till the latter's death in 392/1002. Al-Manṣūr's place as the effective ruler of al-Andalus was taken by his son ʿAbd al-Malik al-Muẓaffar [*q.v.*], who outwardly recognized Hishām's authority, but the Caliph in fact remained a political nonentity, rarely appearing in public and occupying his leisure with the collection of relics (Ibn al-Khaṭīb). Al-Muẓaffar died in 399/1008 and was succeeded by a younger brother, ʿAbd al-Raḥmān al-Nāṣir, also called Shandjūl (Sanchuelo). Forsaking the traditional policy of his family, ʿAbd al-Raḥmān associated himself closely with the Caliph, who conferred on him the honorific title al-Maʾmūn, referred to himself as his maternal uncle (their mothers were both Basques) and soon, on ʿAbd al-Raḥmān's urgent requesting, proclaimed him as his heir. This act of unprecedented rashness, at a stroke transferring the Caliphate of Cordova from the Umayyad to the ʿĀmirid house, raised immediate indignation and opposition in the capital, and proved fatal not only to the ʿĀmirid hegemony but also indirectly to the Spanish Caliphate. For now began the *Fitna*, or period of troubles, which continued for more than 20 years and ended only with the deposition of the last of the Caliphs of Cordova [see HISHĀM III]. An Umayyad claimant, Muḥammad b. Hishām b. ʿAbd al-Djabbār, rose in Cordova, and in the absence of ʿAbd al-Raḥmān on a military expedition gained control of the city. ʿAbd al-Raḥmān, deserted by his men, was murdered before he could reach Cordova (399/1009). When requested, Hishām was willing to abdicate, and even sent Muḥammad clothes to wear when he was inaugurated as Caliph with the title al-Mahdī [*q.v.*]. Muḥammad al-Mahdī gave out that Hishām was dead (the so-called 'first death'). Later, when threatened in Cordova by Sulaymān b. al-Ḥakam and the Berbers, he produced the ex-Caliph from obscurity in a vain attempt to rally the people. Sulaymān occupied the capital in 400/1009-10, and was proclaimed Caliph as al-Mustaʿīn. Muḥammad al-Mahdī, who had fled to Toledo, reappeared with Wāḍiḥ, the governor of that city, and a large army, including a large Christian contingent. Sulaymān yielded to necessity and left Cordova. When al-Mahdī was again proclaimed, Hishām is said to have been the first to take the oath. But Sulaymān returned and besieged his enemies in Cordova. It proved impossible to dislodge the Berbers, and under the stress of siege Wāḍiḥ determined to have done with al-Mahdī and restore Hishām. The ex-Caliph again received the oath of allegiance (Dhu 'l-Ḥidjdja

400/July 1010), and Muḥammad al-Mahdī appeared before him to answer for his conduct, before being removed for execution. Hishām then nominally ruled, with Wāḍiḥ as his *ḥādjib* and the real power. The siege dragged on, since Sulaymān would have none of Hishām as Caliph, till 403, when after the attempted flight and death of Wāḍiḥ and further unavailing resistance, Cordova surrendered on 26 Shawwāl/9 May 1013. The entry of the Berber army and the subsequent sack were the virtual end of Umayyad Cordova [see ḲURṬUBA]. Hishām did not long survive the disaster to his capital. He was killed by a son of Sulaymān al-Mustaʿīn in Dhu 'l-Ḳaʿda 403/May 1013 (Ibn al-Khaṭīb). This was the 'second death'. (There was also a 'third death' much later, in 451/1059, when the ʿAbbādid al-Muʿtaḍid [*q.v.*] ceased to make prayer for Hishām, whose existence he and his father by a convenient fiction had maintained for many years.)

HISHĀM III, AL-MUʿTADD BI'LLĀH b. Muḥammad b. ʿAbd al-Malik b. ʿAbd al -Raḥmān III, the last of the Umayyad Caliphs of Cordova. Born in 364/974-75, he is said to have been the elder brother of ʿAbd al-Raḥmān IV, al-Murtaḍā [*q.v.*], whom he accompanied in the rout at Granada in which the latter was killed (408/1018). Hishām escaped to Ḳaṣr al-Bunt (Alpuente) in the province of Valencia, where he was received by the ʿĀmirid *mawlā* ʿAbd Allāh b. Ḳāsim al-Fihrī. Proclaimed Caliph by the Cordovans in Rabīʿ II 418/June 1027, he remained at Ḳaṣr al-Bunt for more than 2 years, making his official entry into Cordova only in Dhu 'l-Ḥidjdja 420/December 1029. Owing principally to his *wazīr* Ḥakam b. Saʿīd al-Ḳazzāz, a man of obscure origin, whose financial measures were supposed to favour the Berbers, the Caliphate of Hishām III soon became unacceptable to the Cordovans. The disaffection resulted in the murder of the unpopular *wazīr*, and Hishām was at the same time deposed (Dhu 'l-Ḥidjdja 422/November 1031). But this time no new Caliph was elected. A council of notables headed by Abu 'l-Ḥazm b. Djahwar took control. The last Umayyad Caliph was allowed to retire, and ended his days at Lārida (Lerida) in Ṣafar 428/December 1036. A new era of Spanish Muslim history had begun—that of the Party Kings (*mulūk al-ṭawāʾif, reyes de Taifas*). The governor of Lerida with whom the last Umayyad found refuge was Sulaymān b. Hūd [see HŪDIDS].

HISHĀM B. ʿAMR AL-FUWAṬĪ (or AL-FAWṬĪ), a Muʿtazilī of Baṣra, where he was the pupil of Abu 'l-Hudhayl [*q.v.*]. After having probably been a wandering propagator of *Iʿtizāl* (Ibn al-Nadīm, *Fihrist*, ed. Fück, in *Prof. Muḥ. Shafīʿ presentation volume*, Lahore 1955, 68-9), he went to Baghdād during the caliphate of al-Maʾmūn and died there at a date not known exactly, but probably before 218/833.

His personal doctrine, which had a certain influence on al-Ashʿarī [*q.v.*], differs appreciably, according to Ibn al-Nadīm (*op. cit.*), from the teachings of the other Muʿtazila, but the data given by the heresiographers are not always in agreement. Thus, according to al-Baghdādī (*Farḳ*, 150), he forbade murder of any kind, whereas according to al-Shahrastānī (*Milal*, on the margin of Ibn Ḥazm, *Fiṣal*, i, 94) he allowed the assassination of opponents of *Iʿtizāl* and in that respect showed a fanaticism unusual among the Muʿtazila. Al-Shahrastānī (*op. cit.*, i, 91) emphasizes the extremism of his theory of free-will, for al-Fuwaṭī denies the intervention of God in the affairs of man, even when a verse of the Ḳurʾān states that God caused men to do such and such a deed. "Things" not being eternal, God cannot know them before having given them existence (al-Ashʿarī, *Maḳālāt*, ed. Ritter, 157, 488, 489; al-Shahrastānī, *op. cit.*, i, 94), for a "thing" is the realization of the essence within existence, that which has been created by God. He rejects the doctrine that God can be seen 'with the heart' (al-Ashʿarī, *op. cit.*, 157) and holds that it is not the accidents that prove that God is creator, but material things (al-Shahrastānī, *op. cit.*, i, 92; al-Khayyāṭ, *Intiṣār*, ed. and trans. A. Nader, Beirut 1957, text 49, trans. 54), that is to say the substances which are realized when God gives them existence. Al-Fuwaṭī regards as infidels those who believe that heaven and hell already exist, since these are for the moment unnecessary (al-Baghdādī, *op. cit.*, 150; al-Īdjī, *Mawāḳif*, 375; al-Shahrastānī, *op. cit.*, i, 93). In politics, he tends to the Sunnī view; he holds that the *imām* ought to be elected, but he would allow this only in a time of calm and order, which al-Shahrastānī (*op. cit.*, i, 93) considers a sign of hostility towards the caliphate of ʿAlī (cf. al-Baghdādī, *op. cit.*, 150; idem, *Uṣūl al-dīn*, 271; Pellat, in *St. Isl.*, xv, 39).

The basic points of the doctrine of al-Fuwaṭī are now known only from the heresiographers, but Ibn al-Nadīm attributes to him the following works: *K. al-Makhlūḳ*; *K. al-Radd ʿala 'l-Aṣamm fī nafy al-ḥarakāt*; *K. Khalḳ al-Ḳurʾān*; *K. al-Tawḥīd*; *K. Djawāb ahl Khurāsān*; *Kitāb ila ahl al-Baṣra*; *K. Uṣūl al-khams* (*sic*); *K. ʿala 'l-Bakriyya*; *Kitāb ʿalā Abi 'l-Hudhayl fi 'l-naʿīm*.

HISHĀM B. AL-ḤAKAM ABŪ MUḤAMMAD, the most prominent representative of Imāmī *kalām* [*q.v.*] in the time of the Imāms Djaʿfar al-Ṣādiḳ and Mūsā al-Kāẓim. A client of the tribe of Kinda, he was born and raised in Wāsiṭ, but later lived in Kūfa among the Banū Shaybān. He is said to have been a Djahmī before his conversion to Shīʿism by the Imām Djaʿfar al-Ṣādiḳ. Other accounts, however, point to his early association with representatives of dualist religions, notably with Abū Shākir al-Dayṣānī. It is certain that after his conversion to Shīʿism he held disputations with Abū Shākir and

other dualists, and some of his conceptions of physics are evidently influenced by their doctrines. He became closely associated with Imām Dja'far and then with Mūsā al-Kāẓim, whom he, unlike many other Shī'ī leaders, recognized immediately after Dja'far's death (148/765). In Kūfa he owned a shop together with the Ibāḍī scholar 'Abd Allāh b. Yazīd, with whom he maintained a close partnership all his life despite their doctrinal differences. In his later life Hishām belonged to the circle of theologians who held disputations in the presence of Yaḥyā b. Khālid al-Barmakī and apparently presided over some of the discussions. He lived and carried on his trade in al-Karkh. He was accused by some Shī'īs of having been partly responsible for the arrest of Mūsā al-Kāẓim. The Caliph Hārūn al-Rashīd is said to have taken an interest in his views and then, finding them dangerous, reacted by ordering the arrest of the imām. Hishām was forced to go into hiding and died shortly afterwards in the year 179/795-6. Other accounts, which state that his death occurred either shortly after the downfall of the Barmakids (186/803), or in the year 199/814-5, or during the caliphate of al-Ma'mūn, do not appear reliable. In any case, there are no reports indicating any activity of his during the imāmate of 'Alī al-Riḍā (183-203/711-818).

The theory of the imāmate which Hishām elaborated has remained at the basis of the Imāmī doctrine. It rests on the idea of the permanent need for a divinely guided imām who could act as the authoritative teacher of mankind in all religious matters. The imām thus was the legatee (*waṣī*) of the Prophet. He was infallible (*ma'ṣūm*) in all his acts and words, but unlike the prophets did not receive divine messages (*waḥy*). In contrast to the later generally accepted Imāmī doctrine, Hishām held that the prophets, since their acts could be criticized by divine messages, did not have to be infallible, and that Muḥammad and the other prophets had, indeed, at time committed acts of disobedience. Muḥammad had installed 'Alī as his legatee and lieutenant (*khalīfa*) by explicit appointment (*naṣṣ*). The whole community with only a few exceptions, such as al-Miḳdād, Salmān, Abū Dharr and 'Ammār, had apostasized by turning away from 'Alī and accepting Abū Bakr as caliph. The imāmate was to be transmitted among the descendants of 'Alī and Fāṭima until the day of the resurrection. Each imām installed his successor by an explicit appointment. Whoever obeyed the imām was a true believer, whoever opposed or rejected him, an infidel (*kāfir*). To safeguard the faith and the community of believers, the imām and his followers in case of necessity were permitted or obliged to practice dissimulation (*taḳiyya* [*q.v.*]) concerning their religious beliefs. The imām was not expected to revolt against the existing illegal government, and rebellion without his authorization was unlawful.

Hishām defined God as a finite, three-dimensional body (*djism*) and as radiant light. God had been in no place, then He produced space by His movement and came to be in a place, namely the Throne. The doctrine that God was a body was based on Hishām's general view that only bodies have existence. At the same time Hishām rejected the doctrine of other contemporary Imāmī theologians like al-Djawālīḳī and Mu'min ("Shayṭān") al-Ṭāḳ that God had a shape like that of man. He thus represented a rather anti-anthropomorphist attitude within the contemporary Imāmiyya, and only from the perspective of the Mu'tazila and the later Imāmiyya could he be accused of gross anthropomorphism (*tashbīh* [*q.v.*]). Hishām held that God did not know things or events before they came into being and argued that God's knowing them from eternity would entail their existence from eternity. The objection that this view would necessitate God's being originally ignorant and knowing only through a knowledge produced in time was met by Hishām with his general theory concerning the attributes of God. Knowledge, power, life, sight, hearing etc. were descriptive attributes (*ṣifāt*), rather than accidents (*a'rāḍ*), and could not be further described as being eternal or produced. Since these attributes could not be described as being either God, or part of Him, or other than Him, Hishām by this view also evaded the problem raised by the Mu'tazilīs concerning the multiplicity of God's accidents, which threatened the concept of His unity. By considering the Ḳur'ān as a descriptive attribute of God, he could furthermore maintain that it was neither creator, nor created, nor uncreated. This neutral position in the dispute concerning the createdness of the Ḳur'ān tallied with a statement attributed to Imām Dja'far. The reciting of the Ḳur'ān, however, according to Hishām's view was created.

In agreement with the Muslim predestinarians Hishām considered the acts of men as created by God. With the majority of contemporary Imāmīs he thus upheld the doctrine of divine determinism (*ḳadar*). On the other hand, he attempted to maintain man's responsibility by defining his acts as being in one respect his choice (*ikhtiyār*), resulting from his will, and as being in another respect compulsion, because of the need for an additional efficient cause. He also supported the distinctively Imāmī doctrines of the return (*radj'a* [*q.v.*]) of the dead before the day of the resurrection, the admissibility of a change of God's decisions (*badā'* [*q.v.*]) and of the suppression and corruption of parts of the Ḳur'ān in the official version. His views on physics, such as the rejection of atomism, the opinion that two particles may interpenetrate each other (*mudākhala*), that a particle may pass from one place to another without passing through all intervening places (*ṭafra* [*q.v.*]), and his identification of man with the spirit (*rūḥ*) to the exclusion of the body have influenced the views of the Mu'tazilī al-Naẓẓām.

After Hishām's death his doctrine was propagated and defended by his disciple Yūnus b. 'Abd al-Raḥmān (d. 208/823-4), by Muḥammad b. Khalīl al-Sakkāk, and later by the Nīsābūrī al-Faḍl b. Shādhān (d. *ca.* 260/874-5). He and his school were opposed on some points by rival Imāmī schools of *kalām* and on principle by Imāmī traditionists opposed to *kalām* in general. With the progressive adoption of Mu'tazilī theology, particularly from the 4th/10th century, Hishām's school became extinct. Although many of his opinions were highly objectionable from the point of view of later Imāmī doctrine, the Imāmī attitude toward him has generally remained favorable.

Of Hishām's many writings listed in the *Fihrist* of al-Nadīm none is extant. His *K. Ikhtilāf al-nās fī 'l-imāma* was probably used by al-Ḥasan b. Mūsā al-Nawbakhtī as the basis of his own *K. Firaḳ al-shī'a*. Hishām's discussions with other theologians and heretics are frequently quoted in both Sunnī and Shī'ī works.

HIS͟HĀM B. MUḤAMMAD AL-KALBĪ [see AL-KALBĪ].

ḤIṢN (A.), "fortress", is a fairly common element in place-names, *e.g.*, Ḥiṣn al-Akrād, Ḥiṣn Kayfā [*qq.v.*], etc. This article surveys, so far as the present state of knowledge permits, the development of fortifications in certain areas of the Islamic world. Some aspects of this subject, the military architecture of the donjon and the bastion, are treated s.v. BURD͟J and others s.vv. ḲALʿA and SŪR. Offensive operations, the techniques of siege-craft, are dealt with in general s.v. ḤIṢĀR; for siege-engines employed before the invention of gunpowder, see ʿARRĀḌA, ḲAWS and MAND͟JANĪḲ; for the use in defence of "Greek fire", etc., see NAFṬ; for the use of cannon in warfare generally see especially BĀRŪD, and also ṬOPČĪ. In view of the lack of substantial general monographs for many areas, this article covers only (i) the Western territories of the Islamic world, Spain and the Mag͟hrib, (ii) Persia, (iii) Central Asia, and (iv) Indonesia and Malaysia. The Editors hope to make good the deficiencies in the Supplement, s.v. ḤIṢN. Readers will, however, find much information in the articles dealing with individual fortresses, *e.g.*, the "Crusader castles" (ḤIṢN AL-AKRĀD, MARḲAB, ṢĀFĪT͟HĀ, etc.), the citadels of major cities, Ottoman fortress-towns, etc. (ED.)

i.—MUSLIM WEST

The detailed forms, and the evolution, of military architecture in the Muslim West have been dealt with in the article BURD͟J. In this article we shall see how the Muslim West solved the major problems of fortification, and how the various types of fortified works—town enceintes, isolated castles, fortified ports or arsenals—are laid out and organized; we shall see also how it overcame the difficulties of flanking, of gates, and, from the 8th/14th century, of modifications for guns.

Town enceintes. Since the period of the Late Empire, unfortified towns had become rare in the western world. Because of unrest caused by invasions, urban centres had been fortified with ramparts, thereby in many cases reducing their original extent. However, many cities in the Berber country which were primarily agricultural markets remained unwalled. The disturbed history of the Muslim dynasties, especially in the Berber country, led to the fortification of towns or the maintenance of their walls in good repair. From the very beginning dynastic foundations always provided for a rampart. The need for a fortified wall round every town of any size led to the maintenance of the Late Empire practice, perforce universal in the early Middle Ages.

The plan of the enceinte. In Spain and Africa Muslim walls sometimes adopted the general trace of a former enceinte, making use of the bases and other parts of it, as at Karmūna and at Cáceres. The prosperity of certain state or provincial capitals often led, in the Middle Ages, to the enlargement of town walls to take in important suburbs.

On level ground, town enceintes were often modelled on the trace of a pre-existent settlement. In new foundations they are more regular in shape, with long alignments of ramparts. On uneven sites modification to suit the terrain was effected very simply: the principle was to use towers sparingly while the curtain wall ran along rocky outcrops, following them as closely as possible; salients and marked re-entrants are rare. Most enceintes are in the form of an irregular, but convex, polygon.

In many cases, however, it was necessary that the nearest points of high ground, which could have commanded the ramparts, should also be held. The town wall of Granada, in the 5th/11th century, extended as far as two small fortresses guarding the slopes and the summit of the Alhambra hill. At S͟hāṭiba (Játiva) ramparts ran up to two small fortresses on the crests of high ground dominating the town from above. It was equally important to ensure protected access to water supplies: walls terminating in a bastion ran down to the river at Badajoz (Baṭalyaws). At Seville such a terminal tower has become, as the Golden Tower, a powerful bastion.

The *ḳaṣaba*, the residence of the ruler or his government, usually occupies the higher part of the town, from which it is separated by a rampart; but if its site is distinct from that of the town settlement, then walls join the two enceintes, as at Almeria (al-Mariyya). At Malaga, where the Alcazaba was in the centre of the city, it had its own enceinte, and the town was connected by long ramparts to the outer citadel of Gibralfaro; similarly at Jaen (D͟jayyān).

When the *ḳaṣaba* achieved the dimensions of a governmental town, it would have its own separate system of fortification, whether or not in contact with the residential and commercial quarters. The Alhambra was distinctly separated from Granada, as was Fās al-D͟jadīd from Fās al-Bālī. On the other hand, the Almohad *ḳaṣaba* at Marrākus͟h, and the palaces of Mawlāy Ismāʿīl at Meknès, while partly constituting a fortified whole, are in contact with the town itself. In every case, two fortified systems are either close to each other or are juxtaposed.

Certain *ḳaṣaba*s were built to house garrisons to keep under surveillance a town where there was some apprehension of disturbances. Such was the case with the "Conventual" of Marīda, built by ʿAbd al-Raḥmān II. In the 10th/16th century the Saʿdids kept such a watch over Fez by the north and south *burd͟j*es.

Plans of the enceinte. — The double wall enclosing a narrow corridor is to be found at Madīnat al-Zahrāʾ. Long passages between high ramparts are

frequent in the palaces of Mawlāy Ismāʿīl at Meknès. The outer wall, well known in Byzantine fortification, seems not to have been employed in Muslim fortresses in the early Middle Ages. It became almost the rule in the walls of Spanish fortresses from the 5th/11th century. It existed also at al-Mahdiyya. In the Maghrib it remained rare. However, it is found at Tlemcen and Taza, and a continuous outer wall surrounded the ramparts of Fās al-Djadīd. These outer walls, of variable height, were generally furnished with towers. The ditch was common from the beginning of the 5th/11th century in Spanish Muslim fortifications. Elsewhere it remained very exceptional. These were generally dry ditches, designed to stop cavalry and to make sapping operations more difficult. In dry and often broken country the ditch could not be, as in flat and wet countries, the best of defences.

Isolated castles. — The functions of isolated castles were very variable. A certain number were frontier castles marking out the battlefronts: so in Muslim Spain, from the end of the 3rd/9th century, where the frontier long remained on the line of the Duero and was until the end of the kingdom of Granada guarded by a continuous line of fortresses on the west and north, which were subject to Castilian attacks. Under the *reyes de taifas* the rivalries among the local *amīr*s also led to the construction of lines of fortifications. In the Berber country there was hardly any definite frontier between the Muslim states; it was considered sufficient to fortify only those places possession of which was likely to be disputed; however, the ʿAbd al-Wādids did set up the Soummam line against the Ḥafṣids. These frontier castles could not, in wars in which rapid destructive and pillaging expeditions were the commonest operations, prevent completely the passage of enemy troops. But although they allowed the razzias to pass, they required, for any lasting conquest, long and costly siege operations. They were often, especially in the Granada period, built on scarped peaks; they could not block the entry routes, but they were ideal for keeping the country under surveillance and were difficult to take by storm.

In Spain, in the rich plains exposed to enemy raids, were to be found castles of refuge, usually dominating a village. The Naṣrids increased their number in the richest parts of the country, which were menaced by Castilian incursions.

On the north African coasts, in particular those of Tunisia and to a less extent the Atlantic coast, *ribāṭ*s [*q.v.*] were built, *i.e.*, fortified enclosures where pious Muslims, while leading a very strict religious life, could prepare for the holy war. The Ifrīḳiyan *ribāṭ*s are doubtless explained by Sicilian expeditions of conquest; there was then no Christian danger threatening the Tunisian coasts. On the other hand, the *ribāṭ*s of the Atlantic coast of Morocco and certain Andalusian *ribāṭ*s seem indeed to have originated from fear of Norman invasions. But it seems that there was never any warfare with an outside enemy under the walls of these *ribāṭ*s; they were not true maritime fortifications, but gathering places for soldiers of the faith, afterwards becoming rather centres of ascetic, even mystic, life. Certain Moroccan *ribāṭ*s, such as the first *ḳaṣaba* of the Ūdāya at Rabāṭ and the enceinte of Tīṭ, seem to have guarded the northern and southern limits of the heretic confederation of the Barghwāṭa.

Under the Almohads, Rabāṭ acquired the dimensions of a city through the activities of the third caliph Abū Yūsuf Yaʿḳūb al-Manṣūr, and was the gathering place for warriors whose destination was Spain.

Sometimes castles were grouped together or formed a line to keep watch over countries where rebellion was threatening, or to block the routes of parties of open rebels. Thus, the Almoravids guarded the Rif by the stronghold of Bani Tawda and the castle of Amergo. When the Almohad revolt had reached the great mass of the Moroccan Atlas, they built castles for obstructing the enemy on the foothills or at the mouth of a mountain defile. Mawlāy Ismāʿīl, faced with Berber dissensions in the Middle Atlas region and the Rif, also built lines of *ḳaṣaba*s.

This same sovereign engaged in the military occupation of his own states, and built, even in the subjugated plains, castles where his garrison troops, the *ʿabīd*, were quartered. Their main rôle was to raise taxes, both in money and in kind. The enceintes of these castles contain, besides the governor's house and a mosque, great silos.

There were numerous castles built to ensure the security of the major trade routes, to accommodate travellers at the end of a day's journey, and sometimes also to provide for the relay stages of a system of official couriers [see BARĪD], where a fortified town could not fulfil these functions. The routes leading from Cordova to the larger towns in Muslim Spain were so marked out by castles built a day's stage apart. Sometimes secondary fortresses and watchtowers guarded mountain defiles.

Naturally, bridges over large rivers were under the protection of a fortress, often an important one. Thus the Conventual of Marida guarded the Guadiana crossing as well as the town. Almost all the bridges of the Tagus were guarded by a castle or at least by a tower.

The plan of the castle. — The Roman and Byzantine tradition is often continued in the plans of these castles, and also sometimes those of the Umayyad castles of Syria, themselves strongly indebted to the *castella* of Rome and Byzantium. On flat ground the plan of the fortresses is always very regular, square or oblong, with angle bastions and intermediate flanking towers varying in number. The very geometric forms of ancient fortification were faithfully followed in Moroccan official buildings, and also in Berber architecture.

But many castles were built on hill-tops or on rocky outcrops. In such cases modification to suit the terrain was necessary. The perimeter of the castle is very variable, in size as well as shape. Sometimes above escarpments the curtain-wall needed no towers. In very mountainous country the necessity of finding firm foundations resulted in an irregular spacing of the towers. Abrupt changes of direction are frequent, the trace often appearing as a zigzag. The double enceinte scarcely appears at all except in Naṣrid fortification under Christian influence, and the outer wall remains very rare.

It is exceptional for a Muslim castle to include a reduit or a donjon. However, the *ribāṭ*s of Ifrīḳiya often have watch-towers, and the citadel of Sūsa also has one. At the Ḳalʿa of the Banū Ḥammād the great bastion of the *manār* formed a sort of reduit. In Naṣrid fortification the use of the donjon, sometimes surrounded by a reduit, was introduced in the 7th/13th century in imitation of Christian castles. But in the 8th/14th and 9th/15th centuries the Naṣrid castles returned more and more to the classical forms of Hispano-Moorish fortification.

Fortified ports and arsenals. — These were

both known to western Islam. The port of Tandja Bāliya, to the east of Tangier, might date from the Muslim period. It included an interior dock, now filled with sand, defended by a bastioned enceinte. The entry to and exit from the port were by two large gates flanked by towers; but of this complex there are now only remains at ground level. On the other hand, the maritime arsenal of Salé, now filled in, preserves its two gates with their towers. This arsenal occupied one of the corners of the town enceinte. From the 4th/10th century a similar solution had been adopted at al-Mahdiyya. The enceinte embodied an interior port, the entrance to which was defended by two towers between which a chain could be stretched. A large arch of carved stone gave access to the port of Ḥunayn, built in the 8th/14th century; likewise at the port or arsenal of Bougie (Bidjāya) and at the arsenal of Malaga. The great arch under which shipping passed would seem to belong to the Spanish tradition.

Building material. — Ashlar often persisted in the Aghlabid fortification of Ifrīḳiya. It was often used for the entire curtain wall, and always for the more important works. The rubble walls themselves were bonded with dressed stone. The Umayyad fortifications of Spain, in its most beautiful works, used bonding of regularly alternating headers and stretchers. But in African fortification, up to the 6th/12th century, rubble was by far the most frequently used material. It was often bonded with dressed stone, and also on many occasions trimmed and bedded in regular courses, sometimes even with alternation of thick and thin beds. In Almoravid fortresses the joints which surround the large rubble stones are dotted with small black pebbles.

In Spain rubble was often used in the building of secondary fortresses, sometimes with lacing courses and snecks of brick; this last use is particularly frequent in the Toledo school. Sometimes false joints extend the angle bonding courses into the rubble facing. In the Naṣrid period imitation of Christian fortresses increased the use of rubble.

Large fortifications of brick are rare in the Muslim west. However, the ramparts of Ḳayrawān were from the beginning built of brick. Those of Baṣra [*q.v.*], in the north of Morocco, were so in part. In Spain brick was not used throughout buildings except in comparatively late Mudéjar work. But in gates of ashlar or rubble, whether combined with concrete or not, brick was generally used for certain arches and for vaults, sometimes even for façades of doorways where the basic framework was constructed entirely of concrete.

From the 4th/10th century, the building material most frequently used in Spanish fortresses was a concrete made from a clayey or pebbly soil, more or less rich in lime, tamped in shutterings about 80 cm. thick. This method came to the Maghrib in the 6th/12th century and persisted until the 20th. The use of concrete brought about a simplification of forms, and thus came the pre-eminence of the rectangular tower. Brick was associated with it for arches and their jambs, for vaults, and sometimes for the façades of doorways.

Problems of flanking. — It is very rare for the projections and re-entrants of the curtain wall to be in themselves sufficient to provide good flanking. Hence it was necessary to rely on towers and bastions flanking the enceinte wall. Bastions on enceintes on flat ground are never spaced more than 30 m. apart, in order to leave between two towers no area uncovered by missiles. But towers could be closer together than this. In Spain in the 4th/10th and 5th/11th centuries towers of small dimensions and very close together were often used.

The circular or almost circular tower is met with only rarely: this shows Christian influence. The semicircular tower was employed in Aghlabid fortification, where it marks an eastern influence: it is found in certain Umayyad castles in Syria, and it is common in ʿAbbāsid building. Most frequently, in Spain as in north Africa, the oblong tower, of greater length than projection, is used. Towers set cantwise are rare. Bastions of irregular quadrilateral form are sometimes found at the corners of enceintes. The polygonal bastion appears in Spain in the 6th/12th century, but was little used in the Maghrib. Altogether Muslim architecture in the west shows little variety in the form of the bastions. In most of the Hispano-Moorish enceintes, series of similar towers are spaced along the line of curtain walls.

In the 7th/13th century Muslim Spain invented a new tower, the *albarrana* or exterior tower, which is detached from and in front of the curtain wall, to which it is connected by a projecting element of wall. The tower and its base are connected with the chemin-de-ronde of the rampart. In such a case the outer wall of the defences would pass round the foot of the *albarrana*. Sometimes also the *albarrana* is thrown far forward, at the end of a section of the curtain wall with a double parapet. This innovation, later adopted often in Mudéjar fortification, does not seem to have reached the Maghrib.

On the whole these towers contain only a minimum of fittings. Sometimes they have a plain base and a crenellated platform, sometimes an interior room at the level of the chemin-de-ronde and an upper platform consisting of a floor carried on joists, to which a ladder gives access. However, from the 6th/12th century, the large polygonal bastions have two or three floors of vaulted rooms and an internal staircase. These large towers are almost all *albarranas*. They contributed greatly to the defence at the more vulnerable points of the enceinte.

Gates. — Barbicans and chatelets are never found in front of the principal gateway. Until the 5th/11th century there is only, in Spain as in the Berber country, the system of gateways opening between two towers, with a vaulted corridor of varying length and pilasters supporting the entry (sometimes also the exit) arch and protecting the hinges of the leaves of the doors.

In the 6th/12th century there appears in Spain the simple bent entrance, known in Byzantine fortification; this passed into the Maghrib in the 6th/12th century together with the other forms of the Hispano-Moorish fortress, and in the 7th/13th century to Tunisia. Some of these gates have an open passage instead of a central vaulted hall. These gates open sometimes between two towers, sometimes on the flank of a massive bastion. In the 6th/12th century gateways with a double or treble bent entrance appear under the Almohad caliphs. The interior way consists of a series of vaulted halls almost always broken by an open passage. The leaves of the entry and exit doors are rebated between two pilasters which support the archways.

All these entrances with angle passages open between two towers. In the Almohad period towers and façade are constructed in stone and covered with a richly carved decoration. In the Marinid and Naṣrid entrances brick replaces stone, and the decoration of the façades is much more restrained. The thick mass of construction which forms these

doorways projects behind the inner face of the rampart; only the two towers which flank the entrance archway stand out in front of the curtain wall, not greatly larger in dimensions than the rest of the towers. The great Almohad entrances, whose value is as much decorative as functional, are among the most perfect creations of Hispano-Moorish architecture; they are probably among the most beautiful and certainly the most rich of the whole of Islam.

The doorway with a long corridor, of oriental type, is found in the 4th/10th century only at the principal entry of the Fāṭimid town of al-Mahdiyya, the Saḳīfa al-Kaḥlā'. This form does not appear to have had any imitation in the Muslim West.

The portcullis is rare in Muslim Spain, and has never been reported from the Maghrib. The simple bent entrance remained in use at all periods, from Spain to Ifrīḳiya.

Modification for cannon. — The Naṣrids did no more than furnish low platforms as cannon emplacements at the feet of certain towers and certain doorways of the Alhambra. In Morocco the Saʿdid sultans, in the 10th/16th century, made use of two systems. In the enceinte of the *ḳaṣaba* of Marrākush, which was likely to be attacked only by tribes who did not possess cannon, it was sufficient for them to enlarge the dimensions of the oblong towers flanking the curtain wall in order to house a small mortar in the defensive chamber of each. Elsewhere, at the Bastyūn of Taza and at the north and south *burdj*es of Fez, they imitated (thanks no doubt to information from renegades) European fortresses with vaulted casemates, with thick and often battered walls, sometimes even of a star-shaped plan. These imitations of European fortresses were in use in all the coastal regions of north Africa, in Morocco as well as in the two Ottoman provinces, where European reprisals were to be feared. They were intended to do no more than stand up to a bombardment from the sea and to reply to it. These works were set fairly high up; low-level fortification, in the Vauban manner, was never employed. The defences were simple enough, merely a wall and a ditch with a ramp of earth forming a counterscarp.

Beside these more or less modern fortresses, the old style of fortification of the Middle Ages, under its most simple forms, was continued throughout the Berber country.

Thus the Muslim West remained faithful to the tradition of the Later Empire and to Byzantium. The only additions to this tradition by the creation of new forms were Spanish. The *albarrana* tower, and the entrance with a series of bends and with an open passage, appeared in Muslim Spain. Influences from the Christian world were unable to stimulate Naṣrid fortification. The more or less skilful imitations of European fortifications which were erected on the Barbary coasts in the modern period did not prevent north African fortification from remaining generally archaic and sketchy.

Bibliography: There is no general work dealing with the military architecture of the Muslim West. Numerous studies, by country and by period, will be found in: H. Terrasse, *L'art hispano-mauresque des origines au XIIIe siècle*, Paris 1932; G. Marçais, *L'architecture musulmane d'Occident*, Paris 1954; M. Torres Balbás, *Arte almohade, Arte nazarí, Arte mudéjar*, Madrid 1949 (*Ars Hispaniae*, iv); idem, *Arte hispano-musulmán hasta la caída del Califato de Córdoba*, Madrid 1957. (H. Terrasse)

ii.—Iran

Fortified sites of the mediaeval period are extremely numerous in Iran. According to the author of the *Fārsnāma* (G. Le Strange, *Description of the province of Fars in Persia*, 74) there were more than 70 notable castles in the Province of Fārs alone, of which 20 are described in the text. Yet despite this wealth of remains, the military architecture of Muslim Iran has been little studied, no doubt because the poor preservation of many of the structures makes them uninformative. Taking advantage of the mountainous terrain, many of these fortresses depended more for their protection on a strong natural position than on man-made fortifications. For example, according to Yāḳūt, iii, 490, the fortress of Ṭāḳ in Ṭabaristān, the stronghold of the Iṣfahbad Khurshīd (120/738-149/766) was surrounded by unscaleable mountains, and entered only by a long tunnel. The entrance was closed by a stone so large that 500 men were required to move it. Inside the fortress was a stream of water. Ṭāḳ was regarded as impregnable, but eventually capitulated to the Arabs on account of an outbreak of plague. Awliyā' Allāh Āmulī, *Ta'rīkh-i Rūyān*, 45, states that in later years Ṭāḳ was known as ʿĀyisha Kargīlī Diz, and that it stood to the south of Sārī, beyond the gorge of Kūlā.

For such hill-top castles a reliable water-supply was an important need. Thus a few possessed springs, or wells of water—as in the case of the Ismāʿīlī castle of Girdkūh, near Dāmghān, which assumed major importance only after the appearance of water in a previously dry well, as the result of an earthquake. However, the majority had to depend on water stored in cisterns, the remains of which are often visible at the present day. At Bahmandiz, some 50 miles south of Shāhrezā in Iṣfahān Province, the castle crowned a precipitous rocky bluff in the centre of a great plain. The only entrance was by crawling through a crevice between two rocks, and water was stored in two large cisterns outside, and below, the castle. At this site an Arabic inscription, apparently the earliest known in Iran, records the construction of the fortifications by Khāzim b. Muḥammad in 265/878-9.

In the mountains, fortifications had generally to be adapted to the lie of the ground, but those in the plains more often had a geometrical ground-plan. In the Gurgān plain a characteristic layout consists of a square perimeter with a smaller square keep in one corner (cf. E. F. Schmidt, *Flights over ancient cities of Iran*, Pl. 61, 67 and 68). To judge by the example at the site of the mediaeval town of Tammīsha at Kharābshahr in Gurgān Province, such fortifications may date from the eighth or ninth centuries A.D. Also in Gurgān Province are linear systems of fortification designed to guard against incursions from the steppe. One of these is the famous Sadd-i Iskandar ('Alexander's Barrier'), whilst a lesser wall, situated near Kharābshahr, consisted of a baked-brick curtain wall running along the crest of an earthen rampart, and strengthened by semi-circular or semi-elliptical towers. Both these lines of defence appear to have been built by the Sāsānid king Khosraw I (A.D. 531-579) before the advent of Islam.

Amongst the best-studied Islamic fortresses of Iran are the castles of the Ismāʿīlī sect in the Alburz range, for example Alamūt [*q.v.*], Lamasar and Maymūndiz to the north of Ḳazwīn; and Girdkūh, near Dāmghān. These strongholds are sited on precipi-

tous crags, and have ingenious arrangements for water-supply. At Maymūndiz, recently located near Shams Kilaya, off the Alamūt Valley, a spring was found on the summit of the castle spur, and three more on the side of the feature; whilst a stream had been diverted to bring water to the foot of the castle, details all reported by Djuwaynī (tr. J. A. Boyle, ii, 627). At Lamasar, there is a catchment area with cisterns on the summit of the rock. In addition, Willey describes a tunnel 600 yards long leading to a tower which overhangs the river Naina Rūd. From this tower water could be drawn up out of the river with buckets. Ivanow, however, gives a slightly different description of this feature.

All the major cities of Iran were in the middle ages protected by walls, few of which survive to the present day. Pope describes the walls of Yazd, still partly extant. They are of mud-brick, guarded by circular bastions, and provided with machicolations (Persian *sang-andāz*), and an entrance-tower which performs the function of a barbican. The elaborate mud-brick fortifications of the citadel also survive at Bam.

As an element in place-names Ḥiṣn is somewhat rare in Iran. The Arab geographers refer to a settlement called Ḥiṣn Mahdī on the Kārūn below Ahwāz, but the site has not been identified in modern times. Ḥiṣn al-Ṭāḳ in Afghān Sīstān (not to be confused with the previously-mentioned castle of Ṭāḳ in Ṭabaristān) was a powerful fortress situated about 22 miles south of Zarandj (modern Nād ʿAlī). Le Strange (*Eastern Caliphate*, 343) was in error in stating that this site lay north of Zarandj. It is correctly identified by G. P. Tate, *Seistan, a memoir of the history, topography, ruins and people of the country*, Calcutta 1910-12, 225, with the group of ruins known at the present day as Sar-o-tar (or Tar-o-sar), which stand on the high plain overlooking the valley of the Helmand. The site was investigated by J. Hackin in 1936, and consists of a massive mud-brick keep surrounded by two outer perimeters. A particular feature of these fortifications is the use of the bent entrance. It was at Ṭāḳ that the Ṣaffārid Khalaf b. Aḥmad (352/963-393/1002) withstood a siege by his rebellious son Ṭāhir, and subsequently prepared to receive the onslaught of Maḥmūd of Ghazna, to whom, however, he finally surrendered on terms.

iii.—Central Asia

Light is thrown on the long development of mud-brick fortification in Central Asia by the researches of S. P. Tolstov in the territories of ancient Khʷārazm. The earliest fortified sites are the so-called 'wall-dwelling settlements' of about the 6th century B.C., in which the living-quarters are formed by a series of vaulted corridors extending along the inner face of the wall. The ground-plan of the fortifications is usually rectangular, as at the site of Kalaly-Gyr, and the walls are provided with numerous spear-shaped arrow-slits, and occasional square towers or salients for enfilade fire. The main purpose of these enclosures appears to have been for the safeguarding of flocks and herds, since the internal court-yards were not built up with houses.

Fortresses of considerably greater sophistication were, however, developed in the 3rd and 2nd centuries B.C., when Chorasmia (Khʷārazm) came to constitute an independent state. There was some variation in the ground-plans at this period. Thus at Koi-Krylghan-Kala there was a circular perimeter with semi-circular towers, enclosing a circular keep. This whole lay-out is reminiscent of fortifications of the Parthian period in Iran, for example the cities of Dārābgird and Gūr (Fīrūzābād) in Fārs. At Djānbas Ḳalʿa the more traditional rectangular ground-plan is used, without flanking towers but once more well-provided with arrow-slits, and with specially-constructed oblique arrow-slits to protect the corners of the wall. The most remarkable feature of this site is however an outwork which screens the gate, and forms a species of bent entrance. Creswell argued from its occurrence at Djānbas Ḳalʿa that this refinement of fortification was first developed in Central Asia, reaching the Muslim and Mediterranean worlds only in the eighth century A.D.

In the second and third centuries A.D. under the local dynasty of the Afrīghids a new type of fortification became general in Khʷārazm. The main feature in this case, within one or two rectangular perimeters with rounded towers, was a massive square central keep with battered walls, standing on a solid base of mud-brick, and entered from the perimeter gate-house by a bridge at the first storey. These fortifications are interpreted by Tolstov as the residence of a local nobility, the *dehḳāns*. Similar principles of fortification persisted into the Muslim period in Central Asia. Ground-plans remained basically rectangular, but there was a tendency to adapt the lay-out to the contours of the ground. Where extensions were required, it became customary to enlarge the perimeter here or there on an *ad hoc* basis, rather than to adhere throughout to a predetermined geometrical plan. Powerful flanking towers remained an important feature of the defences, and gates were furnished with semicircular outworks having a single entrance so arranged as to oblige the attackers to present their unshielded right sides to the missiles of the defenders. It was in the 12th and 13th centuries that the art of fortification reached its fullest development with the massive structures of the Khʷārazm-shāhs.

iv.—Indonesia and Malaysia

In the sense in which historians of Muslim architecture understand the word *ḥiṣn*, it is absent from Indonesia and Malaysia. Though these countries, and their several components, were converted to Islam at various times from the end of the 7th/13th century onwards, the habits of fortification and defence had already been formed by local requirements of site, materials and tactics rather than by conventional architectural principles.

Thus, though the Javanese, for instance, built superb and very large stone temples from as early as the 10th century, by the time Islam reached them 500-600 years later, their society was already based on maritime and coastal trade rather than war on

land. Their forts, and others in Sumatra, Malaya and Borneo, were usually sited to control river-mouths and junctions, or in defence against pirates. They were often occupied only temporarily—for a few days or weeks at a time—and usually consisted of earth or turf walls and ramparts strengthened with timber and surrounded by ditches, wooden stockades or calthrops. Sometimes stone, locally-made brick and rubble were used, but timber was the commonest material, apart from earth, as it was everywhere available in quantity, while stone was relatively rare.

These structures are called either *kota* (from Sanskrit) or *kubu* in both Indonesian and Malay. Both words mean 'fort', the former type being larger and more permanent than the latter and more likely to be made of stone.

Some forts mounted cannon from before 1500 A.D. but exchange of shot was often a ritual performance containing little rancour: real fighting was by sword, spear and *kĕris* at close quarters and in conditions where fortification was irrelevant. In these circumstances, and in terrain often thickly covered with jungle, the Middle Eastern style of military architecture deriving from long-range archery, sieges and mounted sorties was accordingly never called into existence.

The defences of royal cities were grander and more substantial, according to early travellers' accounts, and included towers and great gates but, so far as is known, there was nothing specifically Islamic about them.

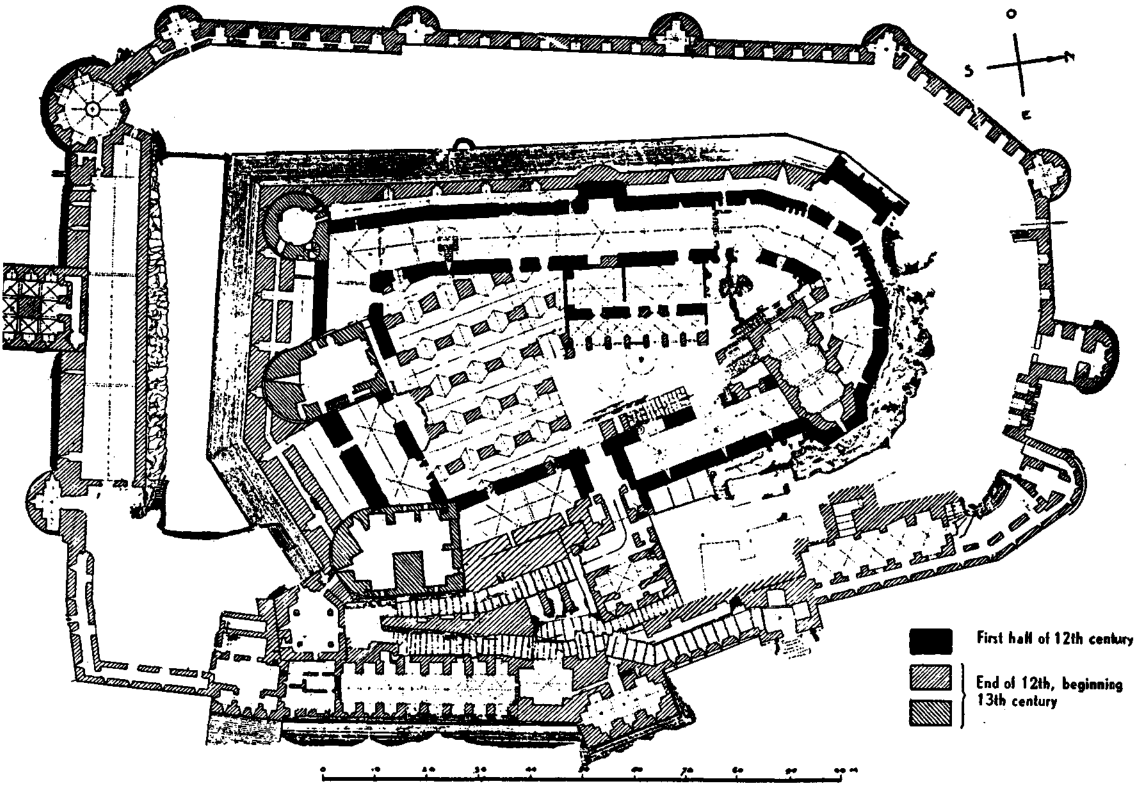
(J. C. BOTTOMS)



ḤIṢN AL-AKRĀD ("Fortress of the Kurds"), a castle in Syria known in Europe by the name of "Crac des Chevaliers". The castle crowns a rounded and almost isolated summit, mount Khalīl, the last southerly inclination of the Djabal Anṣāriyya, some 60 km. to the north-west of Ḥimṣ. Situated like an eagle's nest at a height of 750 m. on a spur flanked by two ravines on the north-east and north-west, it overlooks from a height of 300 m. the plain of the Buḳayʿa [*q.v.*] which extends eastward and south-eastward. In the Frankish period this very fertile cultivated region contained numerous farmsteads in its fields shaded by fig-trees and olive-trees. Ḥiṣn al-Akrād commands the ridge between the Djabal ʿAkkār and the Djabal Baḥrāʾ which allows of communication between the coastal plain to the north of Tripoli, crossed by the Nahr al-Kabīr (the Eleuthera) which flows at the foot of the castle, and the plain of Ḥimṣ, which is watered by the ʿĀṣī (Orontes). This strategic position permits the interception of any movement between Tripoli and Ḥimṣ, and also observation of the northern outlet of the Biḳāʿ [*q.v.*]. The castle also defended the frontier of the County of Tripoli to the north-east and constituted a forward position threatening Muslim territory. Two roads passed by here, already in use in Roman times, that from Ḥamāt to Tripoli and that from Rafaniyya to Ṭarṭūs.

Ḥiṣn al-Akrād was in communication with some of the neighbouring fortresses by visual signals or by flares. From the top of the castle the square keep of Ṣāfīthā and Ṭarṭūs [*qq.v.*] by the sea can be seen very clearly to the west; to the south-east, beyond the plain of the Buḳayʿa, the lake of Ḥimṣ and the fringe of the Palmyra desert can just be seen. Towards the south liaison was easy with the castle of Ḳulayʿa in the coastal plain of Tripoli and with the castle of ʿAkkār on the foothills of the Djabal ʿAkkār, which is snow-capped for most of the year.

Since the very earliest times the site of Ḥiṣn al-Akrād has been occupied by a fortress. According to ancient Egyptian texts, a township called Shebton or Shabtuna occupied the site at the time of the invasion of Rameses II. Its earliest mention in Arabic texts appears in the first half of the 5th/11th century, when the Mirdāsid prince of Aleppo, Shibl al-Dawla Naṣr, settled a military colony of Kurds there in 422/1031, giving them the adjacent fields in return for the protection of the roads from Ḥimṣ and Ḥamāt towards Tripoli against attacks from the west. There seems to have been no more than a simple tower surrounded by a rampart: this was the "castle of the Slope", *Ḥiṣn al-Safḥ*, of which no trace remains. On the arrival of the Kurds the site came to be known as Ḥiṣn al-Akrād. The etymology of the mediaeval Frankish name "Crac de l'Ospital" is uncertain. The term *akrād* was probably the origin of the Frankish *cratum*, later *crat* and then *crac*: but this latter might also be derived from *karak*, the origin of which is the Syriac *karkā*, "fortress". The expression "Crac des Chevaliers" is modern, and in no way corresponds to the modern Arabic name *Ḳalʿat al-Ḥiṣn*, an obvious pleonasm.

First Frankish period, 503-37/1110-42. During the first Crusade, Raymond of Saint-Gilles seized the Crac in Ṣafar 492/January 1099. The capture of the castle had some repercussions, and Raymond received ambassadors from Ḥimṣ and Tripoli; but the Franks remained there for only a few days, since then the principal objective was Jerusalem. In Djumādā II 495/April 1102 Raymond attempted to recapture the place. After the capture of Tripoli (end of 502/July 1109) the Franks encountered Tughtakīn [*q.v.*], the *atabeg* of Damascus. Their negotiations resulted in the Muslims' surrendering a third of the harvests of the Buḳayʿa and the castles of Munayṭira and ʿAkkār, in return for which the Franks were no make no attempts against Ḥiṣn al-Akrād, which was compelled to pay them tribute. Shortly afterwards, at the end of 503/June 1110, Tancred of Antioch appeared and seized the castle from the Kurdish *amīr* Ḳaradja and installed a Frankish garrison. On the death of Bertrand of Saint-Gilles, in Shaʿbān 505/February 1112, Tancred took Pons, the grandson of Raymond, into his care, and granted him the Crac as an appanage. The end of 508/spring 1115 saw the first Muslim attack; the *amīr* Alp Arslan marched from Aleppo and besieged Ḥiṣn al-Akrād in vain. No other significant event occurred before 536/1142.

Second Frankish period, 537-670/1142-1271. The *atabeg* Zangī [*q.v.*] had just captured Bārīn and Rafaniyya, and the Muslim threat was now taking shape. Raymond II, son of Pons, made over the Crac to the Order of the Hospitallers, with all its surrounding territory and the nearby small forts and observation posts, and surrendered to them also fishing rights in the lake of Ḥimṣ. William of Cratum, the feudatory of the castle, was compensated, and the villagers of the neighbourhood remained under Frankish protection. In Radjab 552/August-September 1157 a violent earthquake shook the castle; the damage was quickly repaired by Raymond of Le Puy, Grand Master of the Hospitallers, who had received a handsome donation from Wladislas II,

king of Bohemia. It was the old Kurd castle, enlarged by the castellan, on which Nūr al-Dīn [*q.v.*] set eyes in 557/1163 before being obliged to flee towards the lake of Ḥimṣ in the siesta hour. In 565/1170 the place suffered severely from a second earthquake, as a result of which important repair works were undertaken, which were sufficiently advanced in 584/1188 to resist Ṣalāḥ al-Dīn [*q.v.*]. Further earthquakes in 597/1201 and 598/1202 made extensive repairs necessary, and the general appearance of the castle dates from this period. The first thirty years of the 7th/13th century were the heyday of Ḥiṣn al-Akrād. In 613/1207 the Knights repulsed an attack by al-Malik al-ʿĀdil Abū Bakr; in 624/1218, during the fifth Crusade, the army of al-Malik al-Ashraf came from Aleppo to camp beneath it. In the same year King Andrew II of Hungary made an assignment of revenue for the upkeep of the fortress where he had been a guest. Frederick II excluded the Hospitallers and the Crac from the peace treaty concluded in Rabīʿ I 626/February 1229 with the Ayyūbid sultan al-Malik al-Kāmil [*q.v.*]; the latter tried in vain to seize the place in Djumādā II 626/May 1229.

At this time the masters of Ḥiṣn al-Akrād exacted a tribute of 4,000 *dīnārs* from the principality of Ḥamāt, 800 *dīnārs* from the canton of Abū Ḳudays, and 1,200 *dīnārs* and 100 *mudd* of wheat and barley from the Ismāʿīlī territory (*bilād al-daʿwa*). They had to forgo this income in 665/1266 after the signing of a ten years' peace treaty with Baybars [*q.v.*] (Maḳrīzī, ed. Quatremère, *Hist. Maml.*, i, 2, 32, 42).

The Crac, which in normal times had a garrison of some sixty Knights of St. John, was used as an assembly point for the expeditions which were often made against Ḥamāt. In 630/1233 more than 2000 combatants gathered at the castle: 100 Knights of Cyprus, 80 of Jerusalem, 30 of Antioch, and 100 Hospitallers, as well as 400 serjeants and 1500 infantrymen.

It was after the failure of the seventh Crusade at al-Manṣūra [*q.v.*] in 647/1249 and the departure of Saint Louis that the first difficulties began, since there were no further reinforcements coming from Europe. Moreover, the Muslims were gaining in strength; at the end of 649/beginning of 1252 a Turkoman army from Shayzar [*q.v.*] invaded the region, although its attack on Ḥiṣn al-Akrād failed.

In 658/1260, after the Muslim victory over the Mongols at ʿAyn Djalūt [*q.v.*], a new champion of Islam emerged, Baybars I [*q.v.*]. From this time onward disaster followed disaster for the Christians. In Djumādā II 668/January 1270 the sultan sent out a reconnaissance party of 40 cavalry; in Ṣafar 669/September-October 1270, learning of the death of Saint Louis and being no longer threatened from the west, he led a powerful expedition into Syria. Baybars appeared before Ḥiṣn al-Akrād; on 19 Radjab 669/3 March 1271 he occupied the forward defences and battered the outer enceinte; on the 21st, after the arrival of reinforcements from Ḥamāt, he captured the first barbican (*bāshūra*); ten days later, on 1 Shaʿbān/15 March, the second barbican, at the elbow of the access-ramp, also fell, and finally, on 15 Shaʿbān/29 March, an entry was forced into the central courtyard and the besieged defenders withdrew into the donjon. Baybars attacked with ballistas; on 25 Shaʿbān/8 April the keep surrendered, and the Knights were allowed to withdraw, under safe-conduct, to Tripoli. The spurious letter from the Grand Master of the Order calling on the Knights to surrender, a letter which was said to have been forged

by Baybars, seems to be a legend given currency by al-Nuwayrī. Baybars himself directed the repair work, and left the castle on 15 Ramaḍān/27 April having appointed Ṣārim al-Dīn Ḳaymāz as governor. In 680/1281, after the capture of Tripoli by Ḳalāwūn [*q.v.*], Ḥiṣn al-Akrād, mentioned by al-ʿUmarī as still being an important fortress, lost its importance, but a garrison was kept there to guard against any attack from Europe or Cyprus on Ṭarṭūs or Tripoli.

Being remote from the major communication routes, the region was sheltered from attack, and was untouched by the invasion of Tīmūr Lang [*q.v.*] in 803/1401 just as it was by the Ottoman conquest more than a century later.

In 1859, at the time of Rey's first journey, the castle was still almost intact, but van Berchem records that in 1895 it was already occupied by a village. In November 1933 Ḥiṣn al-Akrād was ceded to France by the ʿĀlawī state, the village was evacuated, and restoration work was begun in earnest. In 1947 the restored castle was returned by France to Syria. Today it is one of the wonders of mediaeval military art, and its present appearance recalls what it was like seven centuries ago.

Description. The general outline of the castle, which occupies a surface area of two and a half hectares (just over six acres), is in the shape of a trapezium of which the smaller base is to the north and the obliques on the eastern and western fronts. The outer enceinte broadens from north to south. The main entrance is on the east front in an oblong salient in the outer enceinte; this enceinte, the layout of which is dictated by the terrain, includes round or square towers at intervals according to the exigencies of defence. The east front has three oblong salients protected by brattices rebuilt by the Muslims in the 7th/13th century. The north front includes a postern and is protected by two square towers, the salient parts of which were rounded off at the time of Baybars. Five Frankish towers, dating from the end of the 6th/12th century, are connected by curtain walls which, retaining their crenellated chemin-de-ronde and their brattices, bring a fine architectural beauty to the western front. The south front, where there are no natural defences, was protected by a triangular outwork surrounded by three ditches, of which the trace remains. The powerful rampart of the Frankish period, behind which there extends a hall sixty metres in length, was reinforced in the Muslim period by a rebuilding of the great angle towers and by the construction in the middle of the wall of a huge square structure, the work of Baybars.

An arched ramp, in two sections, leads from the main entrance and is defended at its elbow as well as at its two ends; it gives access either to the entrance leading to the interior court or to the terreplein between the two enceintes. This system of a double concentric enceinte seems to have been borrowed from the Byzantine tradition. The inner enceinte corresponds to the ramparts of the original Frankish fortress which, between 1110 and 1142, had replaced the small Muslim castle of the 5th/11th century; it enclosed a small hill and was originally furnished with square towers, some of which were later rebuilt as round towers. This enceinte, which commands all the exterior defences, may be described as follows: the east front has a square tower defending the entrance and a salient which corresponds with the chevet of the chapel. This salient and the neighbouring curtains are in a rusticated bond of moderate size, which indicates the oldest parts of the construction. At the north-west corner a large square tower forms a rectangular salient, the face of which carries three machicolations on large arches. Machicolation had been known in the east since Greco-Roman times, as the brattices of Ḳaṣr al-Ḥayr al-Gharbī [*q.v.*] show, although this system of defence spread in Europe only after the end of the 6th/12th century. The small north side of the salient has a side entrance which is bent, on the classical Byzantine model, to the right, to allow better protection for defenders carrying shields. The west front has only a single tower. On the south front, which because of the nature of the terrain is the most exposed, there is an impressive group of three tall towers scarfed into the batter and joined by two curtains; this formidable redoubt was used as a donjon. The south-west tower, the hall of which was decorated with fine sculpture, is known as the "Master's Lodging". The central tower was the best defended, its wall, over 6 metres thick, being pierced by two long embrasures. Finally, to the south-east, beside the corner tower, there stands between the two enceintes a pentagonal structure, rebuilt by Baybars, which was a control-point for intercommunication between the two enceintes, and which overlooks the great moat and commands the access ramp to the interior court. The inner enceinte underwent modifications at the beginning of the 7th/13th century after the earthquakes which had shaken the fortress. A massive battered embankment was built up against the wall, which in addition to its rôle as a buttress provided resistance against further seismic shock. The round towers are set in this powerful revetment, whilst at the foot of the original enceinte, which can be recognized by the nature of its rusticated stonework, runs a narrow corridor pierced by loopholes. On the south front a great masonry reservoir (*birka*) fed by a small aqueduct and serving for men and animals, affords additional protection between the two enceintes.

All the works of the interior defences and the guard-rooms, which are equipped with latrines and drains, date from the Frankish period. They are situated in the wall, and open out onto a vast central courtyard which is reached by a ramp in the east front. The southern half of this courtyard is occupied by vaulted store-rooms, the roofs of which form a vast terrace. Opposite the entrance, to the west, there is a large council-room with an elegant portico of pointed arches which are "a gem of Rayonnant Gothic art". To the north is a Romanesque chapel, barrel-vaulted and with a semi-circular apse, dating from the end of the 6th/12th century. It was converted into a mosque by Baybars, and has three *miḥrāb*s, one of which is in the apse, and a massive stone *minbar*.

All daily necessities were available in the interior of the enceinte. Rain-water was led into cisterns through earthenware channels, and supplemented the well in the central courtyard. In the southern part of the outer enceinte large stables were built, 60 m. long by 9 m. wide, which also served to shelter cattle during sieges. The north-west tower had a windmill. Barns and storehouses for reserve rations, silos for grain, cellars for oil and wine, millstones, wine-presses, and an oven provided for the victualling of the garrison under any circumstances.

Lower down the hill a terraced village called Ḥiṣn houses a farming community which cultivates the surrounding land and depends on cereal-crops, pasture-lands, fruit-trees and vegetables. Ḥiṣn, which was enclosed by a wall with two gates in the

Middle Ages, is divided into two quarters, the Ḥārat al-Turkmān to the south, and the Ḥārat al-Sarāʾya. In the latter is the principal mosque, a former church which was adapted for Islam by Baybars. The minaret dates from the 8th/14th century, probably from the time of the governor Baktakīn (719/1319). In the cemetery there are still the tombs of two *amīrs* of Baybars killed during the assaults, and the mausoleum of one of the sultan's grooms who was killed at his side.

ḤIṢN AL-GHURĀB, name ("Crow Castle") of a mountain bearing on its summit the ruins of an ancient castle, situated on the southern coast of Arabia in the territory of the Wāḥidī [*q.v.*] sultanate at the eastern end of the South Arabian Federation, near the small town of Bīr ʿAlī (14° N., 48° 19′ E.). The mountain, which is of volcanic origin like several small islands in its vicinity and has its name because of its conspicuous blackish brown colour, is connected with the mainland, as it was already in the 1st century A.D., by a low strip of sandy ground. In the form of a promontory it covers from the south-west a small bay, in the north-east corner of which lies the trade port Bīr ʿAlī, a walled place of modest dimensions. This bay offers the best harbour on the coast of South Arabia east of Aden. Ḥiṣn al-Ghurāb stands at about 4 km. from Bīr ʿAlī; not there, but on the flat ground immediately adjacent to the mountain on its northern side are the remains of constructions in stone, identified as the ruins of *Cane Emporium* (Κανὲ ἐμπόριον) of the *Periplus* and Ptolemy, *ḲNʾ* of the South-Arabian inscriptions, the port and place of transit to overland traffic in the incense trade and the trade between Egypt and India in Ptolemaean and Roman times. Some, and recently H. von Wissmann, have suggested the possibility that this port is also meant by *Ḳanne* in Ezekiel xxvii, 23; but no remains that might bear this out have been found in recent, superficial archeological surveys.

On top of the mountain are the ruins of a castle, several cisterns, and the traces of a watch-tower and various other buildings. A zig-zag path connects the site of the ancient port with the castle, and along its upper part are the inscriptions, first discovered by Lt. Wellsted in 1834, testifying to the ancient name of mountain and castle, *ʿUrr MWYT*, and to the close connexion between this and Cane (*ḲNʾ*). It is now generally accepted that the site of Cane is at Ḥiṣn al-Ghurāb, and not at Bal-Ḥāf to the west nor at Madjdaḥa, 10 km. to the east of Bīr ʿAlī.

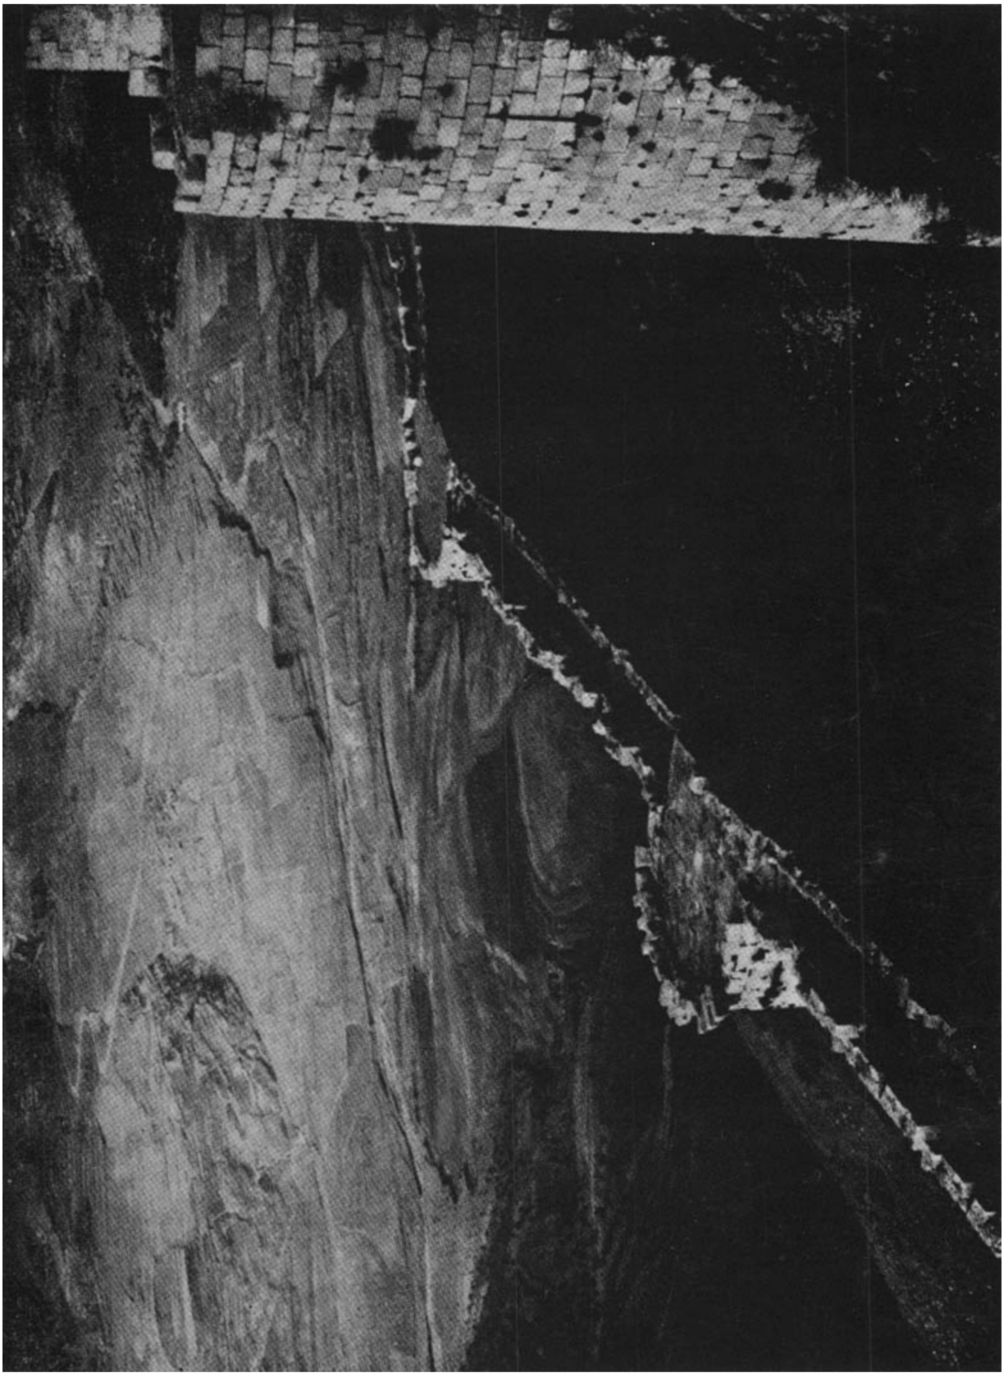
(J. SCHLEIFER-[L. O. SCHUMAN])

ḤIṢN KAYFĀ, town in Turkey (Hasankeyf in modern Turkish) situated in Djazīra (Upper Mesopotamia) on the right bank of the Tigris (37° 40′ North and 41° 30′ East) about halfway between Diyār-Bakr and Djazīrat Ibn ʿUmar (Cizre), which in the Middle Ages was reputed to have an unhealthy climate.

The word Kayfā appears to be of Syriac origin (*Kifo* = rock), in which case the town would take its name from its castle, built on the rock which overhangs the Tigris. The historians of the Roman period refer to it under the name of Κιφας or *Cepha* and *Ciphas*. According to Taylor (see *Bibl.*), in early Arab traditions it was called *Sabʿat Aghwāl* which refers to the caves hollowed out in the seven converging ravines. Yāḳūt mentions it under the name of Ḥiṣn Kaybā, which he takes to be an Armenian word; according to Taylor, the place was known in ancient Armenian as Kentzy. The modern name, Hasankeyf, is obviously merely a deformation of the name Ḥiṣn Kayfā. The various Turkish etymologies: *Ḥasan keyfi* = Ḥasan's pleasure, *hüsnü keyf* = good humour and *ḥiṣn-i keyf* = castle where cares are forgotten, are fantasies of popular interpretation.



The region has been inhabited from very early times. Many grottoes and caves cut out of both banks of the river and in the neighbouring ravines date from the Chaldean period. Taylor found there many Parthian, Greek, Roman, Byzantine and Arab coins. But no precise information on these early settlements is available.

During the Roman period, the castle of Ḥiṣn Kayfā marked the frontier between the Roman and Persian territories. Because of its remarkable situation on the edge of the regions of Ṭūr ʿAbdīn, which guards communications with the region of the Diyār Rabīʿa, and being at a point on the route between the valleys of the Batman Su and the Nahr al-Sarbaṭ, this castle was for centuries of great strategic importance.

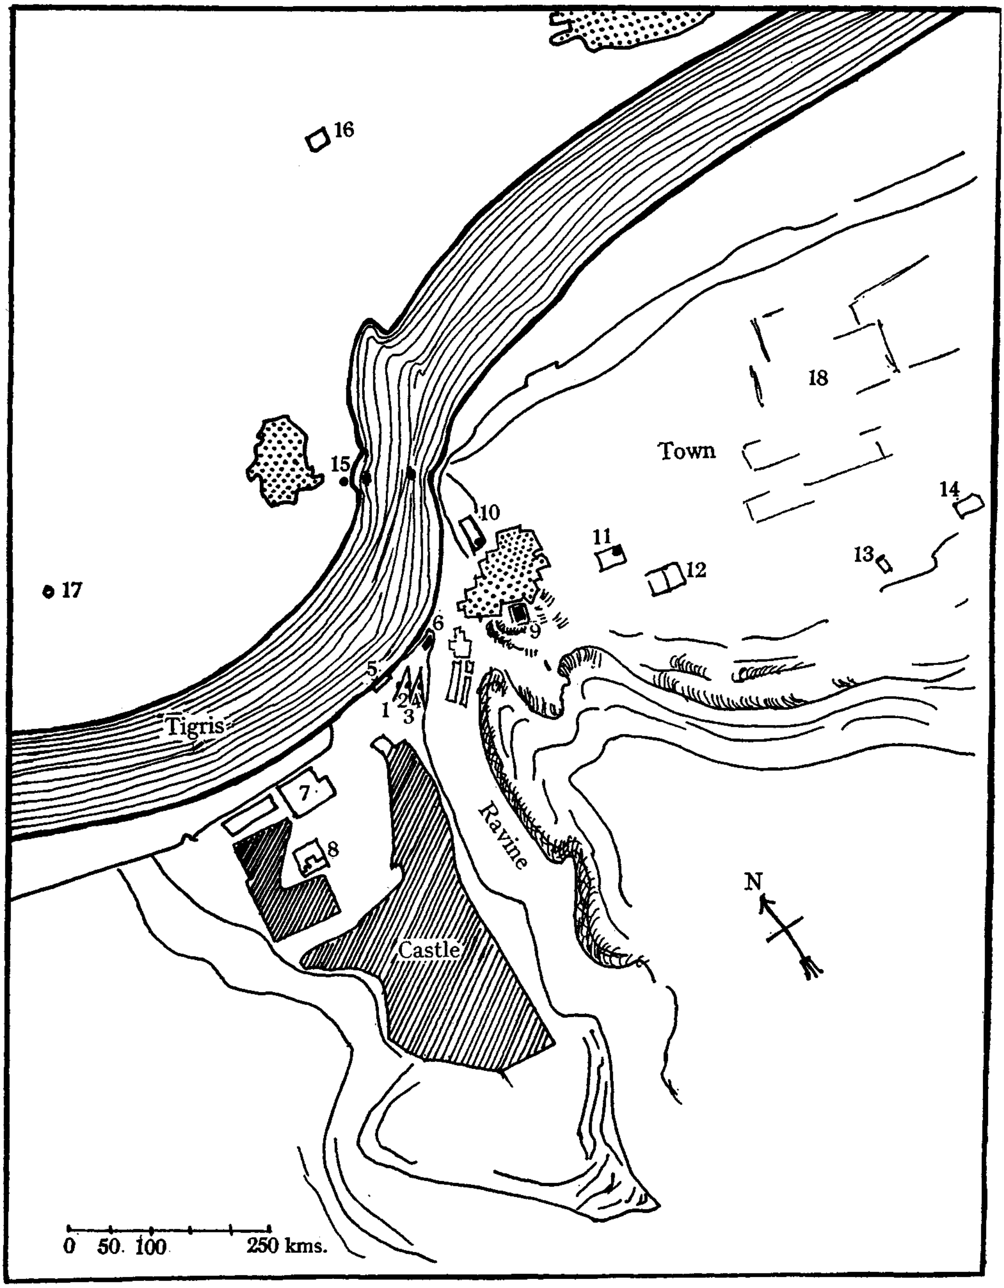
In the 5th century A.D. the town was the seat of a Nestorian bishopric and possessed many churches; indeed there were always many Christians there. At the beginning of the Artuḳid dynasty they possessed considerable influence, which was reinforced by the resistance of the Arabs and the Kurds to the Turcoman invasion. It was not until the 6th/12th century that the district of Diyār Bakr became involved in the movement of Muslim reaction aroused by Nūr al-Dīn. Nevertheless the Christian element did not entirely lose its importance, and in the 7th/13th century Ḥiṣn Kayfā was joined to the district of Ṭūr ʿAbdīn to form a patriarchate independent of that of Mardīn.

No details exist of the Arab conquest of the Byzantine fortress of Ḥiṣn Kayfā With the decline of the ʿAbbāsid dynasty the town came under the domination of the Ḥamdānids, as did the whole of the Diyār Bakr, in which Sayf al-Dawla was particularly interested, making long and frequent visits to Mayyāfāriḳīn. The Marwānids supplanted the Ḥamdānids and were themselves driven out by the Seldjūks; the Diyār Bakr became an integral part of the empire of Malikshāh. It was at this time that there appeared a new dynasty of Turcoman origin, that of the Artuḳids [*q.v.*] under whom Ḥiṣn Kayfā flourished. Sukmān b. Artuḳ, in the service of the Seldjūks, made his masters give him this town in 495-6/1102 and Ḥiṣn Kayfā, which thus became the seat of a princely dynasty, was for more than a century the political centre of a state which, though nominally a vassal of the Seldjūk sultanate, was in fact almost totally independent. Dāwūd b. Sukmān suceeded his father and was himself replaced on his death by his son, Ḳara Arslan, to whom is attributed the restoration, in 510/1116, of the famous bridge over the Tigris which will be mentioned later. Nūr al-Dīn Muḥammad, the son and successor of Ḳara Arslan, was more or less the vassal of the Zangid Nūr al-Dīn. On his death the Artuḳid princes became increasingly the dependants of Ṣalāḥ al-Dīn. In 629/1232 they were completely dispossessed of Ḥiṣn Kayfā by the Ayyūbids. In 658/1260, the town, captured by the Mongols, was pillaged and partly destroyed, though the branch of the Ayyūbids in Ḥiṣn Kayfā survived for more than two centuries under the Mongols and their successors; it even survived the upheaval of Timur's invasion, maintaining in the declining town a centre of Arabic culture. The Ayyūbid dynasty succumbed to the Aḳ Ḳoyunlu [*q.v.*], who imposed their rule on Ḥiṣn Kayfā but rebuilt it from its ruined state, particularly under the sons of Uzun Ḥasan. At the beginning of the 10th/16th century the Persians invaded the region and defeated the Aḳ Ḳoyunlu, Ḥiṣn Kayfā then coming under the sovereignty of the Ṣafawid Shāh Ismāʿīl. The final capture of the region in 922/1516 by the Ottomans caused no change in the condition of Ḥiṣn Kayfā, which gradually dwindled to a small and unimportant town (pop., 1960: 1058). Today it forms part of the *vilâyet* of Mardin but is very little visited because of the poor communications.



During its period of prosperity, Ḥiṣn Kayfā was a flourishing commercial centre, its situation on the Tigris making it an important entrepôt on the river route linking Diyār Bakr and Djazīrat Ibn ʿUmar. The town was surrounded by several suburbs with prosperous markets.

The present ruins of the town bear witness to its importance in the Middle Ages. Among the monuments still existing should be mentioned: (1) The castle built on an enormous rock overlooking the Tigris on its north side and surrounded on its three other sides by ravines. Access to it is by the north-east side of the ravine along a ramp provided with fortified gates. This castle contained, according to Ibn Shaddād, palaces (of which some remains may still be seen), a mosque (on which there survives an inscription of 796/1394), some other buildings, a hippodrome and some ground which was cultivated. To the north of the castle was a first suburb with *sūḳs*, *madrasas*, baths, cemeteries and mausoleums of the Marwānid and Artuḳid princes. The town had no walls but possessed a fortress on a rock. (2) The Djāmiʿ al-Rizḳ to the north-west of the town on the banks of the Tigris. Built in 811/1409 by the Ayyūbid Sulaymān, this mosque has an imposing minaret 30 metres high with a cylindrical shaft and square base, ornamented with a cornice of stalactites and crowned by a lantern. (3) The Djāmiʿ Sulaymān, a little further inside the town, with a varied arrangement of cupolas and a richly decorated dome. The minaret, of the same type as the preceding one, is divided into four storeys by bands of moulding. Several inscriptions are still to be read: 752/1351, 809/1407. (4) The Ḳoč Djāmiʿi, a vast ensemble dating from the end of the 8th/14th and the beginning of the 9th/15th centuries and consisting of a number of buildings grouped around a rectangular court; only the southern wing exists today. (5) A small mosque probably founded by the Ayyūbid Sulaymān b. Ghāzī. (6) A mausoleum of the 9th/15th century. (7) The convent of the *imām* ʿAbd Allāh on the summit of a mound on the left bank of the Tigris, bearing an inscription which refers to a restoration and is dated 883/1478 in the name of ʿAlī, son of Uzun Ḥasan. A porcelain plaque with the formula of benediction of the twelve *imāms* proves that it was a Shīʿī sanctuary, perhaps of the Shīʿī Ḳara Ḳoyunlu, the rivals of the Aḳ Ḳoyunlu, who themselves were Sunnīs. (8) The tomb of Zaynal Beg, son of Uzun Ḥasan, on the left bank of the Tigris, a mausoleum with a cylindrical exterior and octagonal interior. (9) Finally, the bridge over the Tigris, which Yāḳūt described as one of the most beautiful works he had ever seen. Its decoration, similar to that on the walls of the castle, would seem to prove its Artuḳid origin. According to the account of the traveller Barbaro, who saw it still complete in 1510 and who is the last so to describe it, this bridge had five arches. Today there remain standing only three masses of masonry: the beginning of the abutment pier with an arch and parts of the first pier, the second pier and the third pier.

There may also be mentioned the many rock dwellings, more numerous here than anywhere else in Mesopotamia.

(S. Ory)

ḤIṢN MANṢŪR [see ADIYAMAN].

ḤIṢN ZIYĀD [see KHARPŪT].

ḤISS (A.), "sense-perception", but sometimes appearing to be used with the meaning of *ḥāssa*, pl. *ḥawāss* = "(individual) sense". A distinction, not always observed, also exists between *ḥiss* and *iḥsās*, the former being a mechanical, the latter a conscious operation. This distinction is perhaps best illustrated by the definitions given by the Ikhwān al-Ṣafā': "*Al-ḥiss* is the change produced in the temperament of the senses by their contact with the sensibilia; *al-iḥsās* is the consciousness of the sensory faculties of these changes in the quality of the temperaments of the senses" (*Rasā'il Ikhwān al-Ṣafā'*, Bombay 1305, ii, 261).

The Islamic philosophers, in general, follow the Aristotelian theory of sense-perception as far as what they term the "external" (*ẓāhira*) senses are concerned. The sensibilia are apprehended by means of the change caused by them in the appropriate sense organ. This change, however, is not merely a passive one, but rather an actualization in the organ of a quality, corresponding to the quality perceived, which already exists potentially in that organ. Ibn Sīnā describes the process as an *istikmāl* = "a perfecting" (*Avicenna's De Anima*, ed. F. Rahman, London 1959, 66).

Al-Kindī, in his *Risāla fi 'l-ʿaḳl*, describes the process as follows: "The image that is in matter is that which is actually sensible ... When the soul apprehends it, it is in the soul. The soul apprehends it only because it is potentially in the soul. When the soul comes into contact with it, it is then actually in the soul; it is not present there like something in a container, or like an image in a body, for the soul is incorporeal and indivisible: it is in the soul, and the soul is one thing ... In the same way the sensory faculty is nothing other than the soul: it is not in the soul like a member in a body—it is the soul, which is that which senses ... In the soul, then, that which is sensed is that which senses (*fa-idhan al-maḥsūs fi 'l-nafs huwa 'l-ḥāss*)" (*Rasā'il al-Kindī al-falsafiyya*, ed. Abū Rīda, Cairo 1950, 354-5).

No sense organ perceives by direct contact with the sensibilia, and indeed it cannot do so: it operates through an intermediary, which for most of the senses is either air or water. The Islamic philosophers, however, unlike Aristotle, make an exception of touch in this respect, regarding the flesh as the organ, rather than as the intermediary, of this sense. Even Ibn Rushd, in his *Talkhīṣ Kitāb al-ḥāss wa-'l-maḥsūs li-Arisṭū*, excepts touch, and taste as a form of touch: "*wa-yakhuṣṣ ḳuwwat al-lams wa-'l-dhawḳ annahā lā taḥtādj fī fiʿlihā ilā mutawassiṭ*" (ed. Badawī, Cairo 1954, 193); "*wa-ammā ālat al-lams fa-hiya 'l-laḥm*" (*ibid.*, 194).

It is, however, in their descriptions of the operation of what they call the "internal" (*bāṭina*) senses that the Islamic philosophers really diverge from Aristotle. These are the faculties of the soul that receive the percepts of the "external" senses, more or less divorced from their material attachments, retain them, consider them, combine them, discriminate between them and recognize, from their former experience, the other attributes of their objects. The various philosophers differ somewhat in the number of faculties that they recognize, the functions that they assign to these faculties, and indeed the terms by which they refer to them; it will be sufficient to touch on a few aspects of this confusing subject here.

The Aristotelian *sensus communis* appears nominally in most of the Islamic theories (*al-ḥāssa al-mushtarika* or *al-ḥiss al-mushtarik*), but is divested of many of its Aristotelian functions, for it serves merely to coordinate the percepts of the individual "external" senses. It is true that it may be said to apprehend the "common sensibilia"—for example, it observes the motion of a body in a straight or a curved line, since it retains the various images of the body in the series of positions that make up this motion (*Al-Fārābī's philosophische Abhandlungen*, ed. F. Dieterici, Leiden 1890, 75; Ibn Sīnā, *Tisʿ rasā'il*, Cairo 1908, 64 (word for word copy of al-Fārābī); Ibn Sīnā, *Avicenna's De Anima*, 44-5)—but it does not retain these percepts for any length of time, or form judgments about them; these functions belong to *al-ḳuwwa al-muṣawwira* (or *al-khayāl*) and *al-ḳuwwa al-mufakkira* (or *al-mutakhayyila*), to which the percepts are transmitted in turn. The Ikhwān al-Ṣafā' list *al-ḥāssa al-mushtarika* in the index to the *Rasā'il* (i, 8), but omit it in the actual *Risāla* (ii, 258-70), where *al-ḳuwwa al-mutakhayyila* assumes its function, in addition to its own.

Al-Fārābī appears to assign a somewhat different role to this faculty: "*fi 'l-ḥadd al-mushtarik bayn al-bāṭin wa-'l-ẓāhir ḳuwwa hiya tadjmaʿ ta'diyat al-ḥawāss wa-ʿindahā bi-'l-ḥaḳīḳa al-iḥsās*" (*op. cit.*, 75), *i.e.*, that of coordinating the percepts of the senses and those of *al-wahm* = "imagination" (the "internal" faculty of animals, whereby, for example, a sheep confronted by a wolf realizes that it should run away, since the wolf is an enemy). This "true perception", however, can mean little more than that all the individual percepts are, in fact, united, for they are immediately transmitted to *al-ḳuwwa al-muṣawwira* (the "store-house" for the percepts of the senses) and *al-ḳuwwa al-ḥāfiẓa* (the "store-house" for the percepts of the imagination).

In al-Fārābī *wahm* appears to operate on a similar level to that of *ḥiss*; in Ibn Sīnā *al-ḳuwwa al-wahmiyya* (the highest faculty of judgment in animals) seems to be ranked above *al-ḳuwwa al-mutakhayyila* (corresponding to the human *ḳuwwa mufakkira* = "cogitative faculty"), and also, incidentally, to perform a function of the Aristotelian *sensus communis* that is disregarded in the other Islamic theories, that of perceiving the fact that perception is taking place. Ibn Rushd rejects as unnecessary the concept of *wahm* in animals, and maintains that *al-ḳuwwa al-mutakhayyila*, as an active faculty, is capable of performing the function assigned to *wahm* (*Tahāfut al-tahāfut*, ed. M. Bouyges, Beirut 1930, 546-7).

The clearest and most systematic of the Islamic theories are those of the Ikhwān al-Ṣafā' (*loc. cit.*) and Ibn Sīnā (*loc. cit.*). See also MAḤSŪSĀT.

HĪT, town in ʿIrāḳ situated in about 33° 35′ N. and 42° 48′ E. on the right bank of the Euphrates, on a hill which may be man-made. The mediaeval Arab travellers estimate the distance between Hīt and Baghdād at 33 parasangs (*ca.* 130 miles) or 5½-6 days' journey, cf. M. Streck, *Babylonien nach den arab. Geographen*, i, 8. Some Arab geographers (al-Iṣṭakhrī and Ibn Ḥawḳal) include Hīt in the Djazīra; it was generally considered, however, to be a frontier town of ʿIrāḳ. In al-Muḳaddasī's time (4th/10th century) it was of some importance; at the beginning of the 7th/13th century Yāḳūt describes it as a small place; at the beginning of the 19th century Olivier estimated the number of its inhabitants at about 1000, Černik about 70 years later at 2000; Chesney counted 1500 houses; ʿAlī Djewād put the population at 3000. The Ottoman *Sālnāme* of 1323 lists 500 houses, about 10 shops, 1 *djāmiʿ*, 2 *masdjids*, 1 *madrasa* and 1 *khān* (243-4). The population of the *nāḥiya* in 1957 was 6,892. The situation of Hīt is picturesque; the walls and two gates have survived; otherwise there is no prominent building. Ibn Ḥawḳal (227; French trans. 222) and Yāḳūt mention the tomb of the distinguished jurist ʿAbd Allāh b. al-Mubārak who died in Hīt in 181/797; cf. also al-Masʿūdī, *Murūdj*, vi, 294, 503, and the reference in Yāḳūt, vi, 508.

Hīt is a very ancient settlement, being mentioned under the name Id as early as the beginning of the 9th century B.C. in an Assyrian inscription. Herodotus and apparently also Isidorus Characensis knew the town as Ἴς; in Zosimus it is called Σῖθα. Hīt is the Syriac form of the name, which was adopted by the Arabs; the name is apparently derived from its most characteristic product, asphalt (Assyr. *iddû*, *ittû*). Hīt was occupied by the Arabs in 16/629; it was the scene of a battle against the Carmathians in 315/927, and seems to have been absorbed by the Ḥamdānids in the mid-4th/10th century. Ottoman from the 10th/16th century, it was occupied by British troops in March 1918, and became part of the modern state of ʿIrāḳ.

Hīt is a town of some commercial, industrial, and, in earlier times, strategic importance. The fact that caravans trading between ʿIrāḳ and Syria, particularly between Baghdād and Aleppo, crossed the Euphrates here gave rise to a flourishing transit trade. Even in ancient times the district of Hīt was famous for its asphalt and naphtha [see NAFṬ]. A small river which flows into the Euphrates near Hīt carries down with its current many lumps of asphalt. Bitumen was used in different ways in Hīt: ships were caulked with it or it was burned in kilns for lime (from ancient times asphalt has been used in Babylonia as cement). There was a considerable export of bituminous products from Hīt; they were carried down the river in boats and the busy shipbuilding trade of Hīt was also directly due to the asphalt. Bitumen is still collected in Hīt and there is some boat-building, but neither activity is nowadays of great importance. South of Hīt are several quarries which were worked even in ancient times. The mediaeval Arab geographers also note the wealth of date-palms and the extensive cultivation of cereals around Hīt. It was further noted for its excellent wine; cf. the poems of Abū Nuwās (ed. Kremer, no. 12, p. 46), and the *Mā bukāʾu* of al-Aʿshā (ed. R. Geyer, in *SBAk. Wien*, cxlix/6, p. 145, l. 14). Near Hīt a ruined area, called Ulāya al-Maḳlūba (= "the transformed city"), is pointed out; there is a legend attached to it which, as Mez points out (*Zeitschr. für Assyriol.*, xxiii, 220), strikingly recalls the Frau Hitt legend in Innsbruck.

ḤIṬṬĪN or **ḤAṬṬĪN**, in the Talmud Kefar Ḥaṭṭiye, a village to the west of and above Tiberias on a fertile plain, the southern border of which is formed by a steep limestone ridge. At both the western and eastern ends of the ridge there is a higher summit called Ḳurūn Ḥaṭṭīn. A tradition, known in the 6th/12th century, the origin of which is uncertain, places the tomb of the prophet Shuʿayb (Jethro) here; the little chapel, which has been rebuilt in modern times and is still annually visited by the Druzes, lies on an elevation in a rocky valley at the western summit. On the uneven tableland south-east of the rocky ridge was fought the battle which destroyed the power of the Crusaders, when Ṣalāḥ al-Dīn won a great victory over the Christians on 5 July 1187. After some of the Frankish troops, tormented by heat and thirst, had been cut down, and others put to flight, the remainder retired to the eastern summit, where many were thrown over the steep southern side. In memory of this the victor built a small chapel on the summit, called Ḳubbat al-Naṣr.

ḤIYAL, plural of *ḥīla* (A.), artifice, device, expedient, stratagem, a means of evading a thing, or of effecting an object. The word is used in several technical meanings.

1. *Ḥiyal* is a technical term for stratagems in war (synonyms are *makāʾid* and *ādāb*). The use of stratagems in war is justified by a saying attributed to the Prophet, really an old proverb, *al-ḥarb khudʿa*, "war is deceit". The term occurs in the titles of works on military art, as well as in their text. The earliest of these works known to us is the *Kitāb al-Ḥiyal* of a certain al-Harthamī al-Shaʿrānī who dedicated it to the caliph al-Maʾmūn; the *Fihrist* (314, lines 23-27)

gives detailed information on its arrangement but unfortunately not on its contents. A popular work of a later period is ʿAlī b. Abī Bakr al-Harawī's *al-Tadhkira al-Harawiyya fi 'l-ḥiyal al-ḥarbiyya* (Brockelmann, S I, 879; the author died 611/1215), which was analysed by H. Ritter, together with other works on the art of war, in *Isl.*, xviii (1929), 144 ff. It was edited, with an important introduction and a French translation, by J. Sourdel-Thomine, in *BEO*, xvii (1962), 105-268. Popular, too, was the *Kitāb al-ḥiyal fi 'l-ḥurūb wa-fatḥ al-madāʾin wa-ḥifẓ al-durūb*, spuriously attributed to Alexander the Great but the work of a Muslim author, earlier than 622/1225; see Ritter, *loc. cit.*, 151 ff.; cat. Leiden[1], 1914 and 1915 (P. Voorhoeve, *Handlist*, 116 f.). See also the second section of the last chapter in Ibn al-Naḥḥās al-Dimashḳī (d. 814/1411), *Mashāriʿ al-ashwāḳ ilā maṣāriʿ al-ʿushshāḳ* (Brockelmann, II, 91 f., S II, 83).

2. *Ḥiyal* denotes, secondly, mechanical artifices, automata, etc. The two most popular works on this subject are the *K. al-Ḥiyal* of the sons of Mūsā b. Shākir (2nd half of the 3rd/9th century; Brockelmann, I, 241, S I, 383, where "Isis" is to be corrected into "*Isl.*"), and the *K. fī maʿrifat al-ḥiyal al-handasiyya* of Ibn al-Razzāz al-Djazarī (wrote 602/1205; Brockelmann, I, 651, S I, 903; see *Isl.*, xi (1921), 214, n. 1, for a list of translations of sections of this work; K. Weitzmann, *The Greek sources of Islamic scientific illustrations*, in *Analecta Orientalia ... Herzfeld*, New York 1952, 244-6; R. Ettinghausen, *Arab painting*, 1962, 93, 95 f.). We may mention, too, the treatise on geomantics called *K. al-Ḥiyal al-rūḥāniyya*, falsely attributed to al-Fārābī (Brockelmann, I, 234, no. 6).

3. In a literary genus which merges into the preceding one, *ḥiyal* denotes the tricks of beggars, conjurers, forgers, etc. This was the subject of a few treatises by al-Djāḥiẓ (Brockelmann, S I, 244 f., nos. 55, 66; cf. *Arabica*, iii/2 (1956), nos. 95, 111, and al-Djawbarī (wrote about 622/1225; Brockelmann, I, 655, S I, 910), in his *Kitāb al-Mukhtār fī kashf al-asrār* (detailed table of contents in Ahlwardt, cat. Berlin, no 5563; see also Ḥādjdjī Khalīfa, iii, 118 f ., no. 4657, *Isl.*, xv (1926), 227, n. 14), from which many extracts were made, wrote the main work exposing them. Tricks, and witty solutions of dfficulties of all kinds, play, of course, a prominent part in the literature of *adab*, with Abū Yūsuf as a prominent performer (*Isl.*, xv (1926), 228); this reflects the deep impact which the legal *ḥiyal* made on early Islamic society. (See also several sections of the *Kitāb al-adhkiyāʾ* of Ibn al-Djawzī, d. 597/1200).

4. The legal devices, which form an integral part of Islamic law as applied in practice, can be described as the use of legal means for extra-legal ends, ends that could not, whether they themselves were legal or illegal, be achieved directly with the means provided by the *sharīʿa*. They enabled persons who would otherwise have had no choice but to act against the provisions of the sacred Law, to arrive at the desired result while actually conforming to the letter of the law. For instance, the Ḳurʾān prohibits interest, and this religious prohibition was strong enough to make popular opinion unwilling to transgress it openly and directly, while at the same time there was an imperative demand for the giving and taking of interest in commercial life. In order to satisfy this need, and at the same time to observe the letter of the religious prohibition, a number of devices were developed. One, very popular, device consisted of a double sale (*bayʿatān fī bayʿa*), of which there are many variants. For instance, the (prospective) debtor sells to the (prospective) creditor a slave for cash, and immediately buys the slave back from him for a greater amount payable at a future date; this amounts to a loan with the slave as security, and the difference between the two prices represents the interest; the transaction is called *mukhāṭara* (from which the term *mohatra* of the medieval law merchant is derived) or, more commonly, *ʿīna*. Euphemistically, it is also called *muʿāmala*, "transaction", and the money-lender *tādjir*, "trader", because traders also acted as money-lenders. This custom prevailed in Medina as early as in the time of Mālik (d. 179/795). There were hundreds of these devices, many of them concerned with highly technical points, but all with a scrupulous regard for the letter of the law. The acknowledgement (*iḳrār* [*q.v.*]) plays a very important part in the construction of numerous *ḥiyal*, because it creates an abstract debt and is therefore particularly suitable for their purpose.

The first and simplest *ḥiyal* were presumably thought out by the interested parties who felt the need for them, the merchants in particular, but it was quite beyond them to invent and apply the more complicated ones; they had to have recourse to specialists in religious law, and these last did not hesitate to supply the need. The inventors of *ḥiyal* had to calculate the chances of legal validity to a nicety if the *ḳāḍī*, who was bound to apply the sacred law, was not to upset the real effects of the business transaction which their customers, the merchants, had in mind, effects which depended upon the validity of every single element in an often complicated series of formal transactions. The activity of the authors of *ḥiyal* who catered for the practice, is intrinsically parallel with that of the early specialists who had first elaborated the theory of Islamic law. The early specialists had warned their contemporaries against acts incompatible with the Islamic way of life; the authors of *ḥiyal* helped theirs not to conclude contracts which would be considered invalid by the fully developed system of Islamic law. The *ḥiyal* are a natural outcome of that cleavage between theory and practice which has accompanied Islamic law from its very beginnings, and one of our most important sources for the knowledge of the legal practice of the Muslims in the middle ages.

Written documents often formed an essential element of *ḥiyal*. (Cf. Sarakhsī, *Mabsūṭ*, xxx, 150, l. 16 ff., on Ibn Abī Laylā; Ikhwān al-Ṣafāʾ, *Rasāʾil*, iii, 155.) The more complicated *ḥiyal* normally consisted of several transactions between the parties concerned, each of which was perfectly legal in itself, and the combined effect of which produced the desired result. Each transaction was, as a matter of course, recorded and attested in a separate document. Taken in isolation, a document recording a single transaction or an acknowledgement made by one of the parties might be used by the other party to its exclusive advantage and for a purpose contrary to the aim of the whole of the agreement. In order to prevent this happening, the official documents were deposited in the hands of a trustworthy person (*thiḳa*) or intermediary, together with an unofficial covering document which set out the real relationship of the parties to each other and the real purport of their agreement. (This kind of document is technically called *muwāḍaʿa*, "understanding".) The intermediary, then, acting on the contents of the covering document, handed to each party only those papers which they were entitled to use at any given stage,

and prevented the unauthorized use of any document by producing, if necessary, the document of a compensating transaction or acknowledgement which had been prepared and attested beforehand for this very purpose.

A special branch of *ḥiyal* is concerned with the evasion of obligations undertaken under oath, to which Islamic law assimilates undertakings with a self-imposed penalty for non-fulfilment and, in general, declarations by which a unilateral disposition is made dependent on the occurrence of a certain event, such as "if I do such and such a thing, or if such and such a thing happens, my wife is repudiated, or my slave is manumitted". Islamic law has the tendency to interpret declarations restrictively in this case, to mitigate the resulting religious and legal obligation, and the *ḥiyal* take full advantage of this. The use of ambiguous terms and expressions is often suggested, and it is justified by a saying attributed to ʿUmar: *inna fī maʿāriḍ al-kalām la-mandūḥa ʿan al-kadhib*, "ambiguous expressions obviate (outright) lying" (Bukhārī, *Ṣaḥīḥ, adab* 116). The social need for this kind of evasion appears from the fact that the poet and philologist Ibn Durayd (d. 321/933) composed the *Kitāb al-Malāḥin*, a treatise on equivocal expressions, for the benefit of people who were forced to take the oath against their will. The legal attitude is expressed in the maxim, transmitted by Shaybānī—Abū Yūsuf—Abū Ḥanīfa—Ḥammād—Ibrāhīm al-Nakhaʿī, *i.e.*, with the official *isnād* of the school of Kūfa: "If a man is put to the oath whilst he is treated unjustly (*wa-hwa maẓlūm*), his oath is ruled by what he (himself) means, but if he is put to the oath whilst he (himself) is acting unjustly (*wa-hwa ẓālim*), his oath is ruled by the intention of the person who makes him take it". Abū Ḥanīfa, Ḥammād and Ibrāhīm are credited with numerous *ḥiyal* of this kind, and Ibrāhīm is reported to have recommended the use of this kind of *ḥīla* to his own visitors when he was in hiding from the government (a standing feature in the biographies of ancient authorities). Even farther goes a saying attributed to the Prophet: "Every lie is counted as a lie except in three cases: if a man lies to make peace between two men, if he lies to his wife by making her promises, and if he lies in war" (Mubarrad, *Kāmil*, 632, l. 5 ff.). Ibn Ḳutayba (d. 276/889), who, as an extreme partisan of the Traditionists, was strongly opposed to the *ḥiyal* developed by the systematic lawyers (see below), nevertheless vigorously defended the lawfulness of the kind of mental reservation in question, expressed in a saying of Ḥudhayfa b. al-Yamān, a famous Companion of the Prophet: "I buy (or we may translate : I sell out) part of my religion for another lest it may disappear altogether" (*Mukhtalif al-ḥadīth*, 27, 42 ff.; transl. G. Lecomte, Damascus 1962, 25, 38 ff.). Ghazālī (d. 505/1111), too, who regarded certain *ḥiyal* in legal transactions as forbidden and invalid, approved and even recommended verbal *ḥiyal* and mental reservations in order to evade the effects of an undesirable oath (*Streitschrift*, 73-80; H. Bauer, *Islamische Ethik*, i, 80). This attitude to declarations and engagements under oath in Islam derives directly from that of the pre-Islamic and the early Islamic Arabs (*e.g.*, Nābigha al-Dhubyānī, ed. Ahlwardt, *The Divans*, 2, 5; Djarīr, *Naḳāʾiḍ*, ed. Bevan, 754, 3; see also J. Pedersen, *Der Eid bei den Semiten*, Strassburg 1914, esp. 191 ff., 217 ff., 228 f.).

There are certain differences of degree in the attitudes of the several schools of Islamic religious law towards the *ḥiyal*. The Ḥanafīs are the most favourably inclined, and it was they, in fact, who produced the first special works on *ḥiyal*; these are the treatises of Abū Yūsuf (d. 182/798) and of Shaybānī (d. 189/805); the treatise of Shaybānī has survived, and it incorporates long extracts from that of Abū Yūsuf. It was edited and commented upon several times, among others by Shams al-Aʾimma al-Sarakhsī (d. 483/1090) in his *K. al-Mabsūṭ*, and by several reputed Ḥanafī scholars of the 5th/11th and the 6th/12th centuries, extracts from whose works exist in the detailed chapter of the *Fatāwā al-ʿĀlamgīriyya* on *ḥiyal*, in which the legal devices from the more important works of the school are collected. (A shorter collection of this kind, though without mention of the sources, is found in the fifth *fann* of the *K. al-Ashbāh wa-ʾl-naẓāʾir* of Ibn Nudjaym, d. 970/1563). Shaybānī's treatise was more or less plagiarized by Khaṣṣāf (d. 261/874), the court lawyer of the ʿAbbāsid caliph Muhtadī, who became the most reputed author on *ḥiyal* in the Ḥanafī school of law. But his reputation was based on an extensive treatise on *ḥiyal* which was presumably written in ʿIrāḳ in the 4th/10th century and attributed to Khaṣṣāf; this, too, was commented upon several times. Shāfiʿī, and the first few generations of his school after him, regarded the *ḥiyal* as forbidden or reprehensible, although the majority recognized them as legally valid. The success of the *ḥiyal* in the Ḥanafī school, however, caused several Shāfiʿī authors, from the 4th/10th century onwards, to compose books on *ḥiyal*, of which that of Maḥmūd b. al-Ḥasan al-Ḳazwīnī (d. 440/1048) has been preserved, and a distinction was made between *ḥiyal* which are allowed (and which form the great majority) and those which are reprehensible or forbidden. The legal validity of all *ḥiyal* was strongly and definitely upheld by the great Shāfiʿī authority Ibn Ḥadjar (cf. Snouck Hurgronje, *Verspreide Geschriften*, ii, 423-5). Mālik strongly disapproves (in effect, declares forbidden) the particular *ḥīla* of the double sale, mentioned above (*Muwaṭṭaʾ*, *k. al-buyūʿ, mā djāʾ fī bayʿ al-ʿurbān*), without considering the question of its validity; the Mālikī school admits some *ḥiyal* and rejects others, but generally regards them as valid.

The Traditionists (*ahl al-ḥadīth*), in keeping with their general approach to questions of religious law, rejected *ḥiyal*, and Bukhārī (d. 256/870) devoted a whole "book" (no. 90) of his *Ṣaḥīḥ* to combating them; the commentators ʿAynī and Ḳasṭallānī point out that Bukhārī's polemics go beyond the wording of the traditions which he adduces, and corfirm that they are directed against Abū Ḥanīfa and his school. In this connexion, Bukhārī gives 14 quotations from the writings of his opponents, one at least taken either from the work of his contemporary Khaṣṣāf or from its source, the work of Shaybānī. Al-Khaṭīb al-Baghdādī (d. 463/1071), another traditionist and a follower of the Shāfiʿī school, did not fail to include in his unsympathetic biographical notice on Abū Ḥanīfa alleged sayings of the Traditionist ʿAbd Allāh b. al-Mubārak (d. 181/797), who declared that the author of the *Kitāb al-ḥiyal* attributed to Abū Ḥanīfa and its users were unbelievers and apostates, etc. (*Taʾrīkh Baghdād*, xiii, 426-8). Some Ḥanbalīs, too, are on record as opponents of *ḥiyal*. The *ḳāḍī* Abū Yaʿlā (d. 458/1066) wrote a *Kitāb Ibṭāl al-ḥiyal* (H. Laoust, *Méthodologie canonique*, 170, n. 1). Ibn Taymiyya (d. 728/1328), in a special work of his (*Iḳāmat al-dalīl ʿalā ibṭāl al-taḥlīl*), attacked and declared invalid the *ḥiyal* in general and the so-called *taḥlīl* in particular; this last aims at removing the impediment to remarriage between the former hus-

band and wife after a triple repudiation by arranging for the marriage of the woman to another husband with the understanding that this marriage would be immediately dissolved after (real or pretended) consummation (see also Laoust, *Essai*, 454 f.). Ibn Ḳayyim al-Djawziyya (d. 751/1350), in his *Iʿlām al-Muwaḳḳiʿīn* (iii, 103-109, 119-377), discusses the *ḥiyal* at great length with numerous references to the works concerning them; he distinguishes *ḥiyal* which are lawful, by which a lawful end is to be achieved by lawful means, from those which are forbidden and which he declares invalid; the first group comprises numerous devices in the field of commercial law. (Summary and part translation in J. P. M. Mensing, *De bepaalde straffen*, Leiden 1936, 121-7).

The Ḥanafīs, on their part, whilst they state that *ḥiyal* which cause prejudice to another are forbidden, and are loth to suggest *ḥiyal* which comprise acts that are in themselves reprehensible, let alone forbidden, are not really concerned with the moral evaluation of *ḥiyal* in detail, and they take their being legally valid for granted. According to them, many *ḥiyal* are not even reprehensible, for instance those which aim at evading the incidence of the right of pre-emption (*shufʿa*); and the device of *taḥlīl* has been widely practised, by Ḥanafīs, Mālikīs and Shāfiʿīs, down to the present generation (cf., *e.g.*, the short story *El Mohallel*, in Yvonne Laeuffer, *Oeil pour Oeil*, Cairo 1930; B. Board, *Newsgirl in Egypt*, London 1938, 117). The legal thought of modernist Muslims is not favourable to *ḥiyal* because they are part of the traditional doctrine of *fiḳh*.

The works on *ḥiyal*, together with works on written documents and other subjects of importance for the application of Islamic law in practice, form part of a well-defined branch of the literature of the Ḥanafī school of religious law.

(J. Schacht)

ḤIZB (A., pl. *aḥzāb*) means primarily "a group, faction, a group of supporters of a man who share his ideas and are ready to defend him", and this is why the term has been adopted in modern Arabic to mean a political party (see below); it means also "part, portion" and it is from this meaning that it has come to indicate a portion of the Ḳurʾān as well as a group of liturgical formulae.

In this meaning the term is probably a borrowing from Ethiopic (see Th. Nöldeke, *Neue Beiträge zur sem. Sprachw.*, 59, n. 8) for, in Arabic, the verb *ḥazaba* means "to happen (speaking of a misfortune); to be painful". In the Ḳurʾān, the expression *ḥizb Allāh*, "the party of Allāh" is used twice (V, 61/56, LVIII, 22) but in the other examples the word is used in a bad sense, in the singular (XXIII, 55/53, XXVIII, 14/15, XXX, 31/32), in the dual (XVIII, 11/12 where it has the sense of *farīḳ*) and also in the plural (XI, 20/17, XIII, 36, XIX, 38/37, XXXVIII, 10/11, 12/13, XL, 5, XLIII, 65). *Sūra* XXX, *sūrat al-Aḥzāb*, deals with the siege of Medina by the Jewish tribes allied with those of Mecca, Nadjd and Tihāma; in verse 31/30 of *Sūra* XL, the "day of the factions" alludes to the Battle of the Ditch [see AL-KHANDAḲ], while in verses 11-12/12-13 of *Sūra* XXXVIII, the *aḥzab* are the people of Noah, the ʿĀdīs, Pharaoh, the Thamūd, Lūṭ and the *aṣḥāb al-Ayka*.

From the meaning of "part, portion" there derives the technical use of the term to indicate first a definite portion of the Ḳurʾān (see *LA*, s.v.) which a believer binds himself to recite. This practice led the Muslims of certain countries (*e.g.*, in Egypt, see Lane, *Modern Egyptians*, ch. XXVII; in North Africa, see W. Marçais, *Textes arabes de Tanger*, 189, n. 2), to divide the Ḳurʾān into 60 *ḥizb*s, which are thus half the length of the 30 *djuz*'s attested from a very early period (see R. Blachère, *Introduction au Coran*, 137); this division appears to be comparatively recent, for al-Ghazālī, in the part of his *Iḥyā*ʾ in which he deals with the recitation (*tilāwa*) of the Ḳurʾān (1st quarter, book viii, *bāb* 2), mentions the 30 *djuz*'s but refers only to the seven *aḥzāb* of the Companions. Among the Muslims of India and Pakistan the division in question is not made, and the word *ḥizb* does not appear in either the *Dict. of Islam* by Hughes or in the *Dict. of technical terms*. The division into *ḥizb*s is intended to facilitate the individual or collective recitation of the Ḳurʾān in certain circumstances, particularly during the nights of the month of Ramaḍān. In Algeria, *ḥazzāb*s, placed under the authority of a *bāsh-ḥazzāb*, were attached to certain mosques; they had to recite each day a *ḥizb* at noon and another in the afternoon, so as to achieve a complete recitation of the Ḳurʾān in one month; the pupils of the Ḳurʾān schools also came to recite what they had learned, under the supervision of the *bāsh-ḥazzāb* (see J. Desparmet, *Coutumes, institutions, croyances*, ii, 145). Generally speaking, a collective recital of a *ḥizb* takes place once or several times a day after certain prayers; when the payment of the *ḥazzāb*s was not provided for by a pious foundation, this pious work was carried out by devout *ṭolba*. Some Moroccan scholars considered the recital of the *ḥizb* as a *bidʿa* (see Muḥ. b. ʿAlī Djannūn (Gennūn) on al-Rahūnī, on ʿAbd al-Bāḳī al-Zurḳānī, on Khalīl, Būlāḳ 1306, ii, 47).

The edition of the Ḳurʾān published in Cairo in 1342/1923 under the patronage of King Fuʾād gives in the margins the two divisions into *djuz*'s and into *ḥizb*s. This innovation was perhaps due to the influence of the Egyptian religious fraternities, with which the word *ḥizb* was closely associated.

In Egypt, in effect, each fraternity is a *ḥizb* (Lane, *Modern Egyptians*, ch. XVIII) but this term means also the "office" of each fraternity, which consists of the recital, during the Friday service (*ḥaḍra* [*q.v.*]) in the *zāwiya* or the *takiyya*, of long extracts from the Ḳurʾān and of other prayers [see DHIKR]. It is from this that there seems to spring a narrower meaning of the word, namely its application to formulae of "supererogatory liturgy" [see DUʿĀ] at a fairly late date, for this use of the word *ḥizb* is found for the first time in ʿAbd al-Ḳādir al-Djīlānī (d. 561/1166); it is found again in Ibn ʿArabī (d. 638/1240), Aḥmad al-Badawī (d. 675/1276), al-Nawawī (d. 676/1277), etc. The most famous of all these *ḥizb*s is the *Ḥizb al-baḥr* of al-Shādhilī, also called *al-Ḥizb al-ṣaghīr* to distinguish it from another, longer but less well known, by the same author; it is recited in particular by travellers who are crossing the sea, because its chief aim is to "subject" (*taskhīr*) it to them; it was composed in the very year that the author died (656/1258), and he is reported to have said that the Mongols would not have taken Baghdād if this *ḥizb* had been recited; it is poor devotionally, but the Ḳurʾānic citations and the use of the mysterious letters which appear at the beginning of certain *sūra*s confer a talismanic character upon this prayer,

which has become very popular (the most complete text is given by Ibn Baṭṭūṭa, i, 40-4; Engl. tr. H. A. R. Gibb, i, 25-7; cf. *ZDMG*, vii, 25). According to Ahlwardt, *Verzeichnis der ar. Handschriften zu Berlin*, iii, 407-14, these prayers were called *ḥizb* because "in them the invocations to God are divided into certain groups", but he does not state on what this explanation is based.

Bibliography: in the text.

(D. B. MacDonald*)

ḤIZB, 'political party'. The use of the word *ḥizb* in the sense of a political party is a recent one, dating from the beginning of the twentieth century or thereabouts, but this modern usage was in a way a natural and legitimate extension of the traditional and classical one (see preceding article). This traditional sense is the one found in the nineteenth-century dictionaries. Thus Kazimirski's *Dictionnaire* (1860) defined *ḥizb* as a 'troupe d'hommes'; Lane's *Lexicon* (1863 *et seq.*) as a 'party or company of men, assembling themselves on account of an event that has befallen them'; Bustānī's *Muḥīṭ* as a *ṭā'ifa*; Dozy's *Supplément* (1881) records an interesting variant, where it lists among the meanings of the word, 'ordre religieux'. Later dictionaries begin to record the political connotation which the word was beginning to acquire: Badger's *English-Arabic Lexicon* (1881) translates 'party' as *ḥizb* and Hava's *Arabic-English Dictionary* (1899) translates *ḥizb* as 'party of men, confederacy, division'.

The following articles deal with political parties in Muslim countries. For associations, see also anDJUMAN and DJAMʿIYYA.

i.—The Arab Lands

Literary evidence, in support of the lexicographical, does tend to show that in the last two decades of the nineteenth century, *ḥizb*, though it was not yet a fully recognized part of the political vocabulary, was coming, albeit slowly, unconsciously and hesitatingly, to have a certain political connotation. An excellent illustration of this ambiguous and fluctuating usage occurs in the minutes of Aḥmad ʿUrābī's trial at Cairo in 1882. ʿUrābī was asked how he allowed himself to be described on a document as *ra'īs al-ḥizb al-waṭanī*; he replied that it was well-known that Egypt was inhabited by different races (*adjnās*) and that every one of these races may be considered a *ḥizb*, 'and further, the natives of the country are a *ḥizb* on their own, denominated *fallāḥīn* in order to humble them (*kamā inna ahl al-bilād ḥizb ḳā'im bi-dhātihi yuṭlaḳ ʿalayhi lafẓ fallāḥīn idhlālan lahum*)'. But ʿUrābī went on to say that every people had *aḥzāb* engaged in preserving their liberty and defending their rights (Salīm Khalīl al-Naḳḳāsh, *Miṣr li'l-miṣriyyīn*, vii, Alexandria 1884, 44-5). It is clear that in this passage *ḥizb* stands in ʿUrābī's mind for two different meanings, which he cannot clearly distinguish, *viz.* the older and general one of a group, and the later and specific one of a political party. A saying attributed to ʿUrābī's contemporary Djamāl al-Dīn al-Afghānī [*q.v.*] during his sojourn at Istanbul (1892-1897) indicates a use of the word *ḥizb* more definitely in the sense of a political party. He is reported as saying that there should be nothing to prevent the oriental from joining one party after another (*al-ḥizb baʿd al-ḥizb*) until individuals appeared in the East—as they have in the West—who would consider death for the sake of their *waṭan* a gain (Muḥammad al-Makhzūmī, *Khāṭirāt Djamāl al-Dīn al-Afghānī al-Ḥusaynī*, Beirut 1931, 86-7). Finally, an illustration drawn from the first decade of the twentieth century shows how *ḥizb* has come to be stabilized in meaning and to signify unambiguously a political party. In an article of 1906, discussing whether a nationalist party can be said to exist in Egypt, Faraḥ Anṭūn states that a *ḥizb* signifies in politics 'the organized struggle of one group against another owing to a difference of opinions and interests between the two sides (*ta'allub djamāʿa ʿalā djamāʿa ukhrā li-'khtilāf ārā' al-farīḳayn wa maṣāliḥihim*)', and he goes on to say that by *ta'allub* he means that the group would become a single, solidary entity working to attain its aim, '*idjtimāʿuhā ʿiṣba wāḥida wa taʿāḍuduhā tawaṣṣulan ilā bulūghm urādihā*' (*Ḥizb al-nāsyūnālist fī Miṣr*, in *al-Djāmiʿa*, New York, v/6 (1906), 224).

In the article just cited, Faraḥ Anṭūn came to the conclusion that, on his definition, there was no nationalist party in Egypt for the reason that the crucial element of organization was lacking. His conclusions may be considered to apply generally to the Arabic-speaking areas for the greater part of the period in which people became accustomed to think of parties as a usual political phenomenon. There is no doubt that they came so to think as a result of contact and familiarity with European politics, in which parliaments and estates, having continuously existed since mediaeval times, provided a natural context and an indispensable setting for parties and party organization. Such representative institutions were absent in the Muslim world, and it is therefore not surprising that it is only contact with Europe which made organization into parties for political action familiar and attractive. Familiar and attractive, that is, to the small minority which was open to European influences, and which was therefore critical of native and traditional institutions. Parties were therefore at first usually organized or inspired by radicals who were intent on drastic reforms, and because such parties had, in the absence of representative institutions, little scope to manoeuvre, their radicalism became intensified; this very radicalism alienated the authorities who, often trying to suppress these parties, forced them underground. In short, all these factors meant that parties in the Arabic-speaking areas were, at the outset, small groups of people, influenced by European ideas, who were or affected to be dissatisfied with existing political conditions, whose organization was loose and ephemeral, and whose action was usually clandestine.

Egypt.—One of the earliest of such groupings in Egypt—calling itself, however, not a *ḥizb* but a *djamʿiyya* [*q.v.*]—was *djamʿiyyat ittiḥād Miṣr al-fatāt*, which existed in Alexandria in 1879 at the beginning of the reign of Khedive Tawfīḳ. It would seem to have been the outcome of Afghānī's political teachings and to have been formed by his followers. A letter to Afghānī from his follower Ibrāhīm al-Laḳḳānī dated Beirut 7 Rabīʿ II 1300/15 February 1883 explains that the Young Egypt Society consisted of members of the Sursuḳ, Ḳitta, Zughayb and Mukhallaʿ families—all Syrian Christians—who had induced some Muslims to join them and published an Arabic-French newspaper preaching Afghānī's views and calling on the Khedive to institute political reforms. Muṣṭafā Riyāḍ Pasha, then Chief Minister, banned the newspaper; the Group tried to publish a second one, but the Muslim members seceded and, according to Laḳḳānī, even tried to harm the Syrian Christians, who thereupon gave up in disgust, saying that they had no personal interest in the matter—since they were all protected by European Powers—

but had merely wished to serve the Egyptians (Iraj Afshar and Asghar Mahdavi, eds., *Documents inédits concernant Seyyed Jamāl-al-Din Afghani*, Tehrān 1963, plates 106-117).

Another early grouping in Egypt was that known as *al-ḥizb al-waṭanī*, which also seems to have been organized in 1879 after Tawfīḳ's accession. This group was also opposed to the Khedive and his minister Muṣṭafā Riyāḍ, but seems to have had no connexion with the Young Egypt Society. Its members were ex-ministers, like Muḥammad Sharīf Pasha, who were Muṣṭafā Riyāḍ's rivals and who disliked his administrative reforms; some of them worked for the restoration of the ex-Khedive Ismāʿīl, and some to advance the claims of ʿAbd al-Ḥalīm Pasha, the last surviving son of Muḥammad ʿAlī Pasha, to the Khediviate which he had long desired. This group became connected with the officers who under Aḥmad ʿUrābī's leadership, and moved by military grievances, carried out a *coup d'état* against Tawfīḳ and his government on 9 September 1881. The ostensible aims of this *ḥizb* were a constitutional and parliamentary régime for Egypt and the cessation of foreign interference. These aims were taken over by ʿUrābī and his followers when, the *coup d'état* having demonstrated their power, they supplanted Sharīf Pasha and the other notables in political leadership. These officers in fact became *al-ḥizb al-waṭanī*, and with their defeat by the British Army in 1882 the party ceased to exist.

There is no trace of party activity in Egypt until after the accession of the Khedive ʿAbbās Ḥilmī in 1892. ʿAbbās tried in the early years of his reign to break loose from British control, and one of his methods was to inspire political agitation by young Egyptians, graduates of European universities or European-type schools in Egypt. Aḥmad Luṭfī al-Sayyid has recorded that in 1896, when he had just graduated from the Law School, ʿAbbās saw him in audience, and he was afterwards enrolled in a secret society of which the Khedive was the President and the members of which included Muṣṭafā Kāmil and Muḥammad Farīd; this group, according to Luṭfī al-Sayyid, was the nucleus of what came to be later known as *al-ḥizb al-waṭanī* (*Ḳiṣṣat ḥayātī*, Cairo 1962, 36). Of this group, the most prominent was Muṣṭafā (1874-1907). As his letters to the Khedive's Arabic Secretary (published in 1962 by M. Anīs) show, his political activities at the outset of his career were directed and financed by ʿAbbās. From a letter cited by ʿAbd al-Raḥmān al-Rāfiʿī in his biography of Muṣṭafā Kāmil, it appears that relations between him and the Khedive remained very close until 1904. Thereafter Muṣṭafā Kāmil seems to have worked on his own, and increasingly in opposition to ʿAbbās. In 1907 he formally launched a party which was called *al-ḥizb al-waṭanī*, dedicated to securing the British evacuation of Egypt. At the first annual conference of the party he was elected president for life, but he died soon afterwards. His successor was Muḥammad Farīd (1868-1919), who in 1912 left Egypt to avoid imprisonment for alleged subversion against the Khedive's government. It is difficult to see that the Nationalist Party had much influence on Egyptian politics. When it was founded in 1907, the influence of Muṣṭafā Kāmil, after his parting with the Khedive, was already on the wane. The Party, after his death, had some reputation and influence based on the newspapers which Muṣṭafā Kāmil had started in the days when he had the Khedive's support, namely *al-Liwāʾ*, *The Egyptian Standard* and *L'Étendard Égyptien*; the Party also attracted many sympathizers among the intellectual and official classes: ʿAbd al-Raḥmān al-Rāfiʿī gives a long list of Muṣṭafā Kāmil's sympathizers and disciples (*Muṣṭafā Kāmil*, 364-8); of these the majority cannot have been actual members of the Party, while the best known of those who were, *e.g.*, Muṣṭafā al-Naḥḥās, Ḥāfiẓ ʿAfīfī, Ismāʿīl Ṣidḳī, had, in their active political careers after the first World War, nothing at all to do with the Nationalists. It is quite symbolic of the Party's fortunes that a statue of Muṣṭafā Kāmil which it had made after his death remained shut up in a school until 1938, because no Egyptian government could be induced to offer a public site for its erection (*Muṣṭafā Kāmil*, 301-2). The Party's rôle in Egyptian parliamentary life under the Monarchy (1923-1952) was insignificant. The Party were occasionally allotted a handful of seats in the preliminary bargaining between politicians in Cairo which often determined the exact composition of Egyptian Parliaments. This handful of seats represented such influence and power as the Party still had and which it exercised in coalition with other parties against the *Wafd*. Nationalists very rarely exercised political office. Ḥāfiẓ Ramaḍān, the president of the Party, was a Minister in Muḥammad Maḥmūd's second ministry (30 December 1937-5 April 1940), in Ḥasan Ṣabrī's ministry (27 June 1940-14 November 1940), in Aḥmad Māhir's first and second ministries (5 October 1944-24 February 1945), and in Maḥmūd Fahmī al-Nuḳrāshī's first ministry (25 February 1945-26 November 1945); but in holding office in these administrations, Ḥāfiẓ Ramaḍān was acting against the wishes of his Party colleagues, and may therefore be considered more as an Independent than as a Nationalist representative. In 1946, the breach between him and his colleagues was healed, and three Nationalists accepted office in two subsequent administrations as the avowed representatives of their Party: Muḥammad Zakī ʿAlī and ʿAbd al-ʿAzīz al-Ṣūfānī in Ibrāhīm ʿAbd al-Hādī's ministry (28 December 1948-25 July 1949), and ʿAbd al-Raḥmān al-Rāfiʿī together with Muḥammad Zakī ʿAlī in Ḥusayn Sirrī's third ministry (26 July 1949-3 November 1949). The Nationalist Party, in common with all other Egyptian political parties, was dissolved and its financial assets confiscated by decree of the Revolutionary Command on 18 January 1953.

Muṣṭafā Kāmil's foundation of the Nationalist Party in 1907 was followed in the same year by the foundation of other groups, calling themselves parties, which proved to be more ephemeral and to be even less organized than *al-ḥizb al-waṭanī*. The first which falls to be mentioned is *ḥizb al-umma*, which was founded in September-October 1907, and which consisted of a group of notables and landowners, who promoted the publication of the newspaper *al-Djarīda*. The common denominator of the group, as ʿAbbās Maḥmūd al-ʿAḳḳād put it, was that they were under the Khedive's displeasure (*maghḍūb ʿalayhim*) and that they could hope therefore to curry favour with the British Residency (*Saʿd Zaghlūl*, Cairo 1936, 152-3). Whether this was so or not, the fact is that the British presence enabled them to express opposition to the Khedive's ambitions. Some of the prominent members of this Party became associated with *ḥizb al-aḥrār al-dustūriyyīn*, which was founded in 1922. The name of another party to be recorded is that of *ḥizb al-iṣlāḥ ʿala 'l-mabādiʾ al-dustūriyya*, which again came to be spoken of in 1907. It is difficult to say that it was more than a label invented by the Khedive's men to counteract the effect of Muṣṭafā Kāmil's founding of the Nationalist Party; it seems,

in fact, possible to associate only one name with it, namely that of ʿAlī Yūsuf, the editor of *al-Muʾayyad,* which, after Muṣṭafā Kāmil's defection, became the Khedive's main newspaper organ. J. M. Landau records the names of four other so-called Parties, which existed after 1907 and which seem to have been, in fact, one-man affairs disappearing from the scene soon after their foundation was proclaimed; these were *al-ḥizb al-waṭanī al-ḥurr,* founded by Muḥammad Waḥīd al-Ayyūbī, the Party of Nobles (*sic*) associated with Ḥasan Ḥilmī and Thabāt Faradj al-Djirdjāwī, the Party of Independent Egyptians (*sic*) founded by the Copt Akhnūkh Fānūs, and the Young Egypt Party (*sic*) founded by Idrīs Rāghib.

The end of the first world war inaugurated a new chapter in the history of Egyptian political parties. Widespread agitation in Egypt for some three years was finally successful in persuading the British government to abolish the Protectorate which it had assumed over Egypt in 1914. This was done by the unilateral Declaration of 28 February 1922, one of the consequences of which was the transformation of the Sultanate into a constitutional Monarchy and the setting up of a parliament composed of a house of representatives elected by indirect suffrage and a senate partly elected and partly appointed. The general scheme of the Egyptian Constitution—promulgated by a Royal Rescript in 1923—was that a cabinet drawn from the majority in Parliament would hold office so long as it retained the confidence of this majority. Such a state of affairs gave obvious scope for the creation and the functioning of parties on the European model. The first of these parties which must be considered is the *Wafd,* which has its origin in the struggle which led to the abolition of the Protectorate. In this struggle Saʿd Zaghlūl (1857-1926), who came to lead and indeed embody the *Wafd,* had taken, by the play of circumstance and his own considerable shrewdness, a leading part. The appellation *Wafd* originated in a demand which Zaghlūl, together with ʿAbd al-ʿAzīz Fahmī and ʿAlī Shaʿrāwī, put before the British High Commissioner on 13 November 1918, to be allowed to proceed in a delegation (Ar. *wafd*) to Great Britain to discuss Egypt's relations with the Protecting Power and her constitutional future. This demand was made with the knowledge and approval of Sultan Fuʾād and his Ministers, but the three personalities who lent their names to it came inevitably to be the focus of the political agitation which followed its rejection and the repressive action taken by the British authorities. Between 1919 and 1923 many Egyptian public men were associated with Zaghlūl in the political movement which came to be known as the *Wafd,* but Zaghlūl managed to capture the public sentiment and to be exclusively identified with the successful struggle against Great Britain. His earliest and most prominent associates broke with him and became his fierce opponents. Of the three personalities who saw the British High Commissioner in November 1918, ʿAlī Shaʿrāwī resigned formally from the *Wafd* in 1921 and played no further part in politics, and ʿAbd al-ʿAzīz Fahmī became a Liberal Constitutionalist and later entirely forsook politics. Others, such as Muḥammad Maḥmūd, Ismāʿīl Ṣidḳī, ʿAlī Māhir, Muḥammad ʿAlī ʿAllūba, became declared opponents of the *Wafd.* By 1923, Zaghlūl was surrounded by younger men who were little known and newcomers to Egyptian politics, necessarily very much under his domination: his nephew Muḥammad Fatḥ Allāh Barakāt, Muṣṭafā al-Naḥḥās, who had been a magistrate in Ṭanṭā and who had been delegated by the Nationalist Party to represent them in the original *Wafd,* William Makram ʿUbayd who had been a civil servant, Muḥammad Nadjīb al-Gharāblī, Aḥmad Māhir, Maḥmūd Fahmī al-Nuḳrāshī, ʿAlī al-Shamsī, all of whom came to be prominent in the Wafdist movement at one time or another between 1924 and 1952. The *Wafd* as a formal body was organized in 1919 at the inception of the anti-British agitation. It took the form of a central committee composed of public men, the ostensible business of which was to direct from Cairo the collection by provincial committees of signatures to a petition praying the British authorities to allow an Egyptian delegation to proceed to London. It is not known how effective such a country-wide organization was, and there is a suspicion that the *Wafd* committees benefited, at the outset at any rate, from the support of the Sultan and his government. After 1921, the prominent members of the original *Wafd* left it and Zaghlūl became the undisputed leader of those who remained, the committee being his creature and instrument. But Zaghlūl then and later refused to be considered as the leader of a mere faction, holding that he was the sole authorized delegate of the Egyptian people, and that it was his opponents who were guilty of factionalism. A characteristic claim of his, made in a speech of 2 July 1924, was 'I am not the president of a party, but the delegate of a nation (*wakīl umma*)' (Muḥammad Ibrāhīm al-Djazīrī, ed., *Āthār al-zaʿīm Saʿd Zaghlūl,* i, Cairo 1927, 211). His followers indeed acclaimed him as the *zaʿīm,* the Leader (a title which devolved on his successor Muṣṭafā al-Naḥḥās), his house came to be called *bayt al-umma,* and his wife Ṣafiyya *umm al-miṣriyyīn.*

Zaghlūl won the elections held in December 1923 under the new Constitution, and his followers constituted the overwhelming majority of the House of Representatives. He formed a government almost half the members of which—it is interesting to note—were non-Wafdists. This is not how the constitution was supposed to work, and it is generally explained by the fact that the King's and the administration's influence had been exerted on Zaghlūl's behalf during the elections, because the King did not wish the latter's rivals, the Liberal Constitutionalists, to win, and that one of the conditions of his cooperation was the appointment of a number of his nominees to ministerial posts in Zaghlūl's cabinet. The importance of this incident is to underline what henceforth became a feature of Egyptian politics under the monarchy, namely that the decisive struggles for power occurred outside parliament, the composition and working of which merely ratified decisions reached elsewhere. This meant that Egyptian parties could not have the same character or function in the same way as those found in the normal kind of representative and constitutional régimes. The subsequent history of the *Wafd* shows this clearly. Zaghlūl's overwhelming majority did not prevent him from resigning when assassins, who were later shown to be Wafdist sympathizers, murdered Sir Lee Stack in Cairo in November 1924. The parliament elected at the beginning of the year was dissolved by royal rescript in December. New elections were held in March 1925, but, the Wafdists being in the majority in the new parliament, Aḥmad Zīwar Pasha, the Prime Minister, dissolved it. This election was perhaps the only one in the political history of Egypt under the constitutional monarchy when an election went against the wishes of the effective authority in the country. The reason is not absolutely clear, but it would seem that Aḥmad Zīwar's adminis-

tration had had little time to dismantle the network of Wafdist committees in the countryside which Zaghlūl in his year of power must have overhauled and strengthened. Zīwar dispensed with a parliament until the British High Commissioner, fearing unfettered palace rule, which Zīwar's ministry in effect signified, pressed for new elections. The palace being checkmated, the electorate ratified its defeat by electing a Wafdist parliament in May 1926. But since Zaghlūl, the leader of the *Wafd*, was not acceptable to the British authorities as Prime Minister, the normal play of party politics in a constitutional and representative régime was again frustrated, and ʿAdlī Yakan, the Liberal Constitutional leader, took office at the head of a coalition of Wafdists and Liberal Constitutionalists. The coalition subsisted until March 1928, when the Liberal Constitutionalist ʿAbd al-Khāliḳ Tharwat, who succeeded ʿAdlī in April 1927, having failed to negotiate a treaty with Great Britain, found his position untenable and yielded his place to Muṣṭafā al-Naḥḥās—on whom had fallen Zaghlūl's mantle—who formed the first wholly Wafdist administration. Al-Naḥḥās soon found himself at loggerheads with both the King and the British authorities; in June 1928 the King dismissed al-Naḥḥās, dissolved parliament, and called on Muḥammad Maḥmūd, now president of the Liberal Constitutionalist Party, to form a government. The new Prime Minister obtained from the King authority to suspend elections and parliamentary government for a period of three years. But in 1929, a new government in London having made clear that it would negotiate only with a Wafdist government (whom it regarded as the only legitimate representative of Egypt), Muḥammad Maḥmūd resigned and new elections took place; they ratified the decision of the British government and returned a Wafdist government, which took office on 1 January 1930. Negotiations between al-Naḥḥās and the British government having failed, and the King disliking a Wafdist government, he dismissed it in June of the same year, commissioned Ismāʿīl Ṣidḳī to form an administration, dissolved the parliament and promulgated a new constitution and a new electoral law. Elections under the new dispensation were held on 1 June 1931, and a new parliament was returned with a satisfactory governmental majority. A complicated series of events in 1935-6 forced the King to seek an accommodation with the Wafdists. He re-established the constitution which he had abrogated in 1930. This was a victory for the Wafdists, and the elections which were held in May 1936 ratified it by returning a parliament with an overwhelming Wafdist majority. King Fuʾād died in April 1936, to be succeeded by his son Fārūḳ, who attained his majority in July 1937. A clash between him and the *Wafd* was not long in coming. In December 1937 he dismissed al-Naḥḥās and shortly afterwards dissolved the parliament. The new parliament had an insignificant Wafdist minority, thus ratifying the victory of the King. This parliament itself was also dissolved as a result of an extra-parliamentary clash of power. By the *coup d'état* of 2 February 1942, the British authorities forced a Wafdist government on the King. This government dissolved the parliament of 1938 and obtained an overwhelming majority at the subsequent elections. It ruled until October 1944, when the King found the power to dismiss it and dissolve its parliament. The ensuing elections were boycotted by the *Wafd*, and the parliament elected in January 1945 was wholly anti-Wafdist. This parliament was dissolved in November 1949, and the election of January 1950 gave an overwhelming Wafdist majority; the course of events which led to this result is still very imperfectly known, but there is reason to suppose that it was the outcome of a reconciliation between the King and the *Wafd*. The Wafdist government lasted until January 1952, when it was dismissed by the King. Its parliament, the last under the constitutional monarchy, was dissolved shortly thereafter.

The course of events here briefly set out indicates that in the Egyptian parliamentary régime, contrary to the intentions of its founders, and indeed to its normal working elsewhere, it was the government—or rather the actual effective authority in the country at any given time—which determined the character and composition of a parliament, and not the other way round. This had a fundamental bearing on the character and functions of the political parties. These could not function as coherent parliamentary and electoral organizations dedicated to the acquisition of popular support and the exercise of political power within a legislative assembly. These so-called parties could rather more intelligibly be described as either movements or factions. The *Wafd* was clearly a movement; Zaghlūl claimed to be above all parties and interests, to be the representative and the leader of the nation; he thus inaugurated a new style of politics of which appeal to the mass was the most significant characteristic. This new style, which depends on a leader with a hypnotic popular appeal who is the ultimate depositary of unfettered power, was made possible by the disintegration of traditional society, the erosion of traditional authority, the increase of literacy, the improvement in communications, and the existence of a new urban amorphous mass of recent migrants from the countryside, leading lives of material poverty and spiritual disorientation. All these created new conditions of political action, new possibilities of canalizing hitherto untapped sources of political power by organizing the passive and malleable mass into a formidable phalanx round a leader and his slogans. It is evident that the *Wafd* under Zaghlūl and al-Naḥḥās attempted this. They were only intermittently successful, and they ultimately failed. The reasons for their failure may possibly have been an imperfect grasp of the new techniques, the presence of British power and influence as a check and a disturbing factor, the existence of other, more traditional, forms of authority which still had some life in them and, of course, sheer accident. But the *Wafd* again and again tried to create various organizations for the recruitment and control of their supporters. Foremost among these, and the least known in their detailed working, are the *Wafd* committees which spread over the whole country. When the *Wafd* was either expecting or exercising power, it attempted to create specialized organizations to cater for different sections of the population, particularly students, industrial labour, etc. The example of Fascists and Nazis no doubt stimulated the creation of a Wafdist para-military group, *al-ḳimṣān al-zarḳāʾ*, which functioned in 1936-7 and which had some analogy in both name and function with Blackshirts and Brownshirts. The *Wafd* were not the only ones to experiment with these new possibilities; one writer has indeed claimed that the Nationalist Party was the first to organize Blueshirts, and that the *Wafd* filched the idea from it (Muṣṭafa al-Ḥifnāwī, *al-Sifr al-khālid*, Cairo n.d. [after 1936], 5-6). Be this as it may, the Nationalist Party never succeeded in becoming a movement, and remained what may be called a faction. One organization which from the outset attempted to be a movement was

Miṣr al-fatāt, founded by Aḥmad Ḥusayn in 1933, it is claimed at the inspiration of King Fu'ād (P. Graves, *The story of the Egyptian crisis*, in *The nineteenth century and after*, March 1938). Its slogan was *Allāh, al-waṭan, al-malik*, and it attempted to organize its adherents into Greenshirts (*al-ḳimṣān al-khaḍrā'*), which frequently clashed with the Blueshirts. Another organization which became a political movement had, at its inception, quite a different character. *Al-Ikhwān al-muslimūn* [*q.v.*], founded in 1928 by Ḥasan al-Bannā' [see AL-BANNĀ'], was at the outset dedicated to a renewal of the religious life, to the fight against laxity, scepticism and unbelief prevalent among Muslims as a consequence of European influence. Some ten years later, the Brotherhood was an extensive organization covering a large part of Egypt. Because Islam is *dīn wa-dawla*, and because the circumstances after 1940 became propitious, the Brotherhood under its *murshid* came to play an increasingly political rôle. Al-Bannā''s political transactions are still quite obscure, but the Brotherhood was a formidable weapon which he and his successor Ḥasan al-Huḍaybī could use in pursuance of their aims in the troubled years between the end of the second world war and the final dissolution of the Brotherhood by the Egyptian Revolutionary Command in January 1954. The tight organization of the Brotherhood enabled al-Bannā' and his collaborators to set on foot a secret terrorist apparatus (*al-djihāz al-sirrī*) which was used to enforce the wishes of those who controlled it until an attempt on the life of Colonel Djamāl ʿAbd al-Nāṣir in October 1954 resulted in the arrest and trial of the most prominent Brethren—al-Huḍaybī included—the execution of six of them, and presumably the final destruction of the apparatus.

In contrast to these organizations, which may be called political movements, other groupings in Egyptian politics under the constitutional monarchy may be termed factions. They consisted of people who, by virtue of their educational attainments or an inherited position, were members of the official classes and therefore had the necessary knowledge and connexions for filling political office and exercising power. Such men were loosely grouped under party labels which they acquired by accident at some point or another. They may be called factions rather than movements, because they seldom or never sought to involve the masses in politics in the manner of the *Wafd* or the Muslim Brethren, and yet were not strictly parties, since the constitutional régime in Egypt worked in such a fashion that parties could not function, let alone flourish. These groupings may not therefore all be dismissed as a mere collection of placemen eager for office and ready to do the bidding of whoever gave them office; but whatever their original aims and motives were, the situation was such that if they desired to take part in politics they had to acquiesce in measures and combinations quite remote from their proclaimed principles. A good case in point is the Nationalist Party, which started with an articulate ideology, but the activity of whose leaders under the constitutional monarchy had, as has been seen, little to do with this ideology. Another party between whose activities and principles a great gap opened was the Liberal Constitutionalist Party (*ḥizb al-aḥrār al-dustūriyyīn*). The Party was formed in October 1922 as an answer to Zaghlūl and the *Wafd* by some of the most prominent of Egyptian statesmen who earlier that year, in collaboration with Allenby and his British advisers, had induced the British government to issue the Declaration of 28 February. The President was ʿAdlī Yakan and the main leaders were ʿAbd al-Khāliḳ Tharwat, Ḥasan ʿAbd al-Rāziḳ, ʿAbd al-ʿAzīz Fahmī, Ismāʿīl Zuhdī and Muḥammad Maḥmūd. Some of them had belonged to the pre-war *Umma* Party, and some had, from the end of 1918 to the end of 1921, formed themselves into a group, *al-ḥizb al-dīmūḳrāṭī*, which included Muḥammad Ḥusayn Haykal, Muṣṭafā ʿAbd al-Rāziḳ, Manṣūr Fahmī, Maḥmūd ʿAzmī and ʿAzīz Merhom. This small group of educated men looked forward to an Egypt where the rule of law would be supreme, and where political liberty and economic equity would be assured. Most of this group passed into the Liberal Constitutionalist Party and greatly influenced the formulation of its objectives and policies. But we find that, in fact, sheer political expediency very frequently determined the *ministrables* of the Party in taking office, and that this opportunism was on the increase as time went on. Liberal Constitutionalists took part in Zīwar's second ministry of 1925-26, but when ʿAbd al-ʿAzīz Fahmī was dismissed as Minister of Justice following the ʿAlī ʿAbd al-Rāziḳ affair (see E. Kedourie, *Egypt and the Caliphate, 1915-1946*, in *JRAS*, 1963), his two Liberal Constitutionalist colleagues resigned in protest. But it was a Liberal Constitutionalist, Muḥammad Maḥmūd, who took office when King Fu'ād dismissed al-Naḥḥās in 1928 and who, regardless of his Party's principles, governed without a parliament for fifteen months. Again, it was Muḥammad Maḥmūd who took office when King Fārūḳ dismissed al-Naḥḥās in 1937 and for some eighteen months, until the King dismissed him, presided over a government which, whatever its exact label, was in fact purely one of King's men. The further history of the Liberal Constitutionalists until their extinction in 1952 is that of a faction enjoying office and power as and when they could. Five other such factions remain to be enumerated, two specifically set up as organizations providing support for governments chosen and inspired by the King, and three formed out of seceders from the *Wafd*. The first two were *ḥizb al-ittiḥād* set up in 1925 as an organization of King's men during Zīwar's administration, and *ḥizb al-shaʿb*, a similar organization created in 1931 during Ismāʿīl Ṣidḳī's administration. Both parties effectively disappeared from the scene as political circumstances changed. The three organizations of seceders from the *Wafd* were *al-ḥizb al-saʿdī*, formed when Ḥāmid al-Bāsil seceded from the *Wafd* in 1930, which proved quite ephemeral; *al-hay'a al-saʿdiyya*, formed when Maḥmūd Fahmī al-Nuḳrāshī and Aḥmad Māhir fell out with the *Wafd* in 1937, which went on as a political grouping until 1952 and which provided three Prime Ministers and other ministers in anti-Wafdist governments; and *al-kutla al-wafdiyya al-mustaḳilla*, formed when Makram ʿUbayd was expelled from the *Wafd* in 1943, which consisted of his own personal following and provided two or three ministers in three coalition governments which succeeded the *Wafd* government of 1942-44.

The Ottoman Empire.—The earliest parties in the Arabic-speaking areas of the Ottoman Empire were in their origin and character somewhat similar to the earliest Egyptian parties. They were groups of young men touched by Western influences and discontented with what they considered to be the constricting and stagnant conditions of the Empire under ʿAbd al-Ḥamīd II [*q.v.*]. In those years there was little scope for overt political action, nor were the generality of the subjects much inclined to

question the established and traditional order. Such groups were small, clandestine and ephemeral. One of the earliest of these groups was one formed by some Christian students at the Syrian Protestant College at Beirut in the early 1880s; they had fallen under the influence of a Maronite who taught French at the College and who was imbued with French libertarian and revolutionary ideas. These young men conceived the project of fomenting a movement to end Ottoman supremacy in the Lebanon. They went so far as to write and surreptitiously post up in public places placards in this sense, but as no response was forthcoming the group dissolved itself in 1882-3. Another group was the one which came into being at Damascus in the early years of the twentieth century. It was composed of young Muslims who were disciples of Shaykh Ṭāhir al-Djazāʾirī, who was Inspector of Education in the Damascus *wilāyet* and who lived in Damascus from 1880 to 1905. The group is known as *ḥalaḳat Dimashḳ al-saghīra*, and it included Shaykh Djamāl al-Dīn al-Ḳāsimī, Shaykh ʿAbd al-Razzāḳ al-Bīṭār, Shaykh Salīm al-Bukhārī. These were among the original members, who were joined by younger men including Muḥibb al-Dīn al-Khaṭīb, Ṣalāḥ al-Dīn al-Ḳāsimī, ʿAbd al-Ḥamīd al-Zahrāwī, Shukrī al-ʿAsalī, ʿAbd al-Raḥmān al-Shābandar, Muḥammad Kurd ʿAlī, Fāris al-Khūrī and Salīm al-Djazāʾirī. The circle apparently discussed literary, religious, and increasingly, when the younger men joined it, political questions. Muḥibb al-Dīn al-Khaṭīb was apparently the mainspring of this later development. Some of the younger members of the circle went to Istanbul in about 1905, and in 1906 Muḥibb al-Dīn al-Khaṭīb and his friend ʿĀrif al-Shihābī founded there a secret society, *djamʿiyyat al-nahḍa*, and asked two friends still in Damascus, Ṣalāḥ al-Dīn al-Ḳāsimī and Luṭfī al-Ḥaffār, to found a branch in the city. The *djamʿiyya* consisted entirely of a small group of young educated Damascenes, and in spite of its foundation at Istanbul Damascus was its centre. After the Young Turk Revolution, the *djamʿiyya* applied for permission to function openly, and interested itself for a few years thereafter in spreading knowledge of Arab history and Arabic literature and in providing a local forum for discussing such political issues as it was safe to raise publicly. Another group, or at any rate the name of a group which existed at the beginning of the twentieth century, falls also to be recorded. It is the *Ligue de la patrie arabe*, founded by Nadjīb ʿAzūrī, a Syrian Christian who had studied in Paris and then become an official in the Jerusalem *wilāyet*; this post he left in apparently suspicious circumstances and he was condemned to death *in absentia* by an Ottoman court in 1904 for treasonable activities in Paris. Who, apart from the French retired official E. Jung (who has chronicled his activities) collaborated with him, and whether he was the agent of one or more European powers, is obscure. The programme of his *Ligue* was the creation of an Arab empire extending over Mesopotamia, Arabia and the Levant and the creation of a 'spiritual' Caliphate. But the *Ligue* seems to have been of little consequence and to have sunk into obscurity when his periodical, *L'Indépendence Arabe*, of which eighteen numbers came out in 1905-6, ceased publication.

It was only after the restoration of the Ottoman Constitution in 1908 that many Arab parties were formed, and became quite active for a time. Because of the vicissitudes of the Ottoman parliamentary régime of 1908-14, these parties could not function as normal parliamentary parties, nor could they, owing to the state of society then obtaining, aspire to enlist mass support. They were small, ephemeral factions made up of members of the official classes and such others as had access to European ideas. It is commonly agreed that the first of these groupings was *djamʿiyyat al-ikhāʾ al-ʿarabī*, founded by the Damascene Shafīḳ al-Muʾayyad and other, mainly Syrian, officials and notables in Istanbul in 1908. A report in *The Arab Bulletin* (24 May 1918) records that the group came into being as a consequence of the 1908 Parliament refusing to accept Yūsuf Shitwān as member for Benghazi and Shafīḳ al-Muʾayyad as member for Damascus. The group seems to have lasted for a few months and then to have been dissolved in April 1909. In this year was founded in Istanbul *al-muntadā al-adabī*, which was ostensibly a cultural club for Arab youth in Istanbul, but many of the activities of which were political. It was shut down by the Ottoman authorities in 1915, at which time its secretary, the Syrian ʿAbd al-Karīm Ḳāsim al-Khalīl, was accused of treason and executed. Two groupings dating from this period, among Syrian and Lebanese living in Egypt, may be noticed. The first is an ephemeral group called *djamʿiyyat al-ikhāʾ al-ʿuthmānī*, which apparently lasted for only a few weeks, among the members of which were Rafīḳ al-ʿAẓm, Rashīd Riḍā, Yaʿḳūb Ṣarūf, Djurdjī Zaydān, Naʿūm Shuḳayr and Dāʾūd ʿAmmūn. The second grouping was *al-ittiḥād al-lubnānī* (*l'Alliance libanaise*) formed by Maronite notables in Cairo in November 1909. It was founded by Iskandar ʿAmmūn, Anṭūn al-Djumayyil and Dāʾūd Barakāt. Before the war, its programme consisted in demanding better commercial facilities within the Empire for Mount Lebanon, widening the suffrage for its assembly, increasing the number of its members and widening its powers, and annexing the Biḳāʿ, Tripoli and Beirut to Mount Lebanon, to form what came to be known under the French mandate as the Grand Liban. This last point came to form the main issue for which the *ittiḥād* worked after the outbreak of war, when the partition of the Ottoman Empire became a possibility. The *ittiḥād*—the president of which from 1917 was Auguste Adīb—lost its *raison d'être* with the French occupation of the Lebanon. Apart from these groups which functioned publicly, a number of secret groupings are also recorded. Towards the end of 1909, there was formed in Istanbul a secret group composed of officers and university students mainly from Syria, *al-djamʿiyya al-ḳaḥṭāniyya*. The group was dedicated to the encouragement of Arab nationalism, and among its prominent members were the two officers Amīn Luṭfī Ḥāfiẓ and Salīm al-Djazāʾirī, nephew of Shaykh Ṭāhir, ʿAbd al-Karīm al-Khalīl and ʿĀrif al-Shihābī, all of whom were executed for treason by the Ottomans in 1915-16. Another secret grouping was one founded by students, again mainly Syrian, in Paris in 1909. This was *djamʿiyyat al-umma al-ʿarabiyya al-fatāt*, which was founded by Aḥmad Ḳadrī, ʿAwnī ʿAbd al-Hādī and Rustum Ḥaydar. The aim of the society was Arab independence. It is of course difficult to know the extent and effectiveness of the operations of a secret society, but the members of *al-fatāt* are said to have taken the initiative in calling for an Arab Congress (which met in Paris in June, 1913), and seem to have carried on conspiratorial activities against the Ottomans in the Levant until the end of the first world war; many of them became prominent later on in Syrian, Palestinian and Iraqi politics. Another secret society was *al-ʿalam al-akhḍar*. It was founded by students in Istanbul in September 1912,

but seems to have been more ephemeral than most and there is no record of any activity for which it was responsible.

The internal and external vicissitudes to which the Ottoman Empire was subject in the years immediately preceding the first world war created fears and tensions and afforded occasions for political action and openings for political ambition, so that in 1912 and 1913 new Arab political groupings come into being. Of these new groups, the best-known was *ḥizb al-lāmarkaziyya al-idāriyya al-ʿuthmānī*, which was founded in Cairo in December 1912, and which, as its name showed, was dedicated to the achievement of administrative decentralization and provincial self-government in the Ottoman Empire. The founders were again Syrians, the most prominent among them being Muḥammad Rashīd Riḍā, Rafīḳ al-ʿAẓm, Shiblī Shumayyil, Iskandar ʿAmmūn and Muḥibb al-Dīn al-Khaṭīb. The programme of the Party was obviously akin to the ideas of Prince Ṣabāḥ al-Dīn and the *Ḥürriyet we iʾtilāf firḳasi* [*q.v.*] in Istanbul, which was opposed to the Committee of Union and Progress. It may well be that the activities of *ḥizb al-lāmarkaziyya* are to be understood not so much in terms of their formal programme as of the complicated struggle of Istanbul politics, which eventually led to the complete hegemony of the Committee of Union and Progress. Again, their programme cannot explain, rather contradicts, their activities at the beginning of the 1914-18 war when they seem to have organized spying in Syria and Mesopotamia on behalf of the British authorities in Egypt (see E. Kedourie, *England and the Middle East*, 1956, 47 and 62). The same political struggle between Iʾtilāfists and Unionists would seem to account for a similar development in Beirut, where a number of notables, both Christian and Muslim, were encouraged by Kāmil Pasha's government towards the end of 1912 to form a group, *al-djamʿiyya al-ʿumūmiyya al-iṣlāḥiyya*, to work for decentralization and provincial self-government; but when the Committee of Union and Progress took power at the beginning of 1913, it set itself to eradicate any influence its opponents might have, and the Unionist *wālī* of Beirut, who had replaced the Iʾtilāfist one, declared the Society illegal and dissolved it on 4 April 1913. Kāmil Pasha's government attempted to organize support for itself in Damascus as well, but Unionist influence was there strong enough to prevent the formation of a *djamʿiyya* like the Beirut one. The same attempt was made at Baṣra, where the Iʾtilāfist leader was Sayyid Ṭālib al-Rifāʿī al-Naḳīb. Sayyid Ṭālib had attempted, without success, to be recognized as the Unionist boss in Baṣra; he was merely returned as deputy for Baṣra in the Istanbul parliament, and there earned the gratitude of Kāmil Pasha by his attacks on the Committee of Union and Progress (*The Arab Bulletin*, no. 17). At the beginning of 1913 the same conjunction of events which led to the creation of *ḥizb al-lāmarkaziyya* and the Beirut *djamʿiyya* led also to the formation by Sayyid Ṭālib of a similar group in Baṣra, which he also called *al-djamʿiyya al-iṣlāḥiyya*, ostensibly dedicated to the same objects. He attempted to extend his activities to Baghdād and Mosul; in the former a group of his followers led by Muzāḥim Amīn al-Pačadji formed *al-nādī al-waṭanī al-ʿilmī* which, in spite of its name, was a mere adjunct of the Baṣra group; to the latter he sent his follower Sulaymān Fayḍī in an attempt to drum up support for the Iʾtilāfists. In neither city was the attempt very successful, and the Unionist government found little difficulty in snuffing it out. It was otherwise in Baṣra, where Sayyid Ṭālib's family was powerful and influential and where he himself was acquainted with local men and issues, and moreover had no hesitation in employing hired assassins to enforce his desires. But the Unionists eventually succeeded in gaining him over and at the outbreak of the first world war he and they were friends.

The period between the Italian conquest of Tripoli and the outbreak of the first world war saw also the creation of two secret Arab groups. The first of these was *djamʿiyyat al-ʿahd*, which was founded on 28 October 1913 by Binbashi ʿAzīz al-Miṣrī. Its members were army officers and included Salīm al-Djazāʾirī, Nūrī al-Saʿīd, Yāsīn al-Hāshimī, his brother Ṭāhā, Djamīl al-Madfaʿī, Taḥsīn ʿAlī, Mawlūd Mukhliṣ, Amīn Luṭfī, ʿAlī Djawdat al-Ayyūbī and ʿAbd Allāh al-Dulaymī. Its official programme was to promote autonomy for the Arabic-speaking countries of the Ottoman Empire, and to transform the Empire into a dual monarchy on the lines of the Austro-Hungarian monarchy. But the fact that it was a secret society composed of army officers ready to take action in support of their political views and that many of the members deserted from the Ottoman army before and during the first world war is at least as important as the tenor of the official programme. The other secret grouping was that formed by Rashīd Riḍā under the name of *djamʿiyyat al-djāmiʿa al-ʿarabiyya*. Rashīd Riḍā has stated (*Āthār Rafīḳ al-ʿAẓm*, i, p. viii) that the group was founded following the Ottoman defeat in the Balkan wars when 'the founders decided that the strength of the Arabs lay in their peninsula, and that this strength would be useless unless the rulers of the peninsula were united in an alliance'. Rashīd Riḍā seems to have enrolled various potentates of the peninsula in this Society, but apart from a long and fearsome oath (reproduced in Amīn Saʿīd, *al-Thawra al-ʿarabiyya al-kubrā*, i, 49-50) no activity by the group is recorded.

When the Ottoman Empire entered the war in November 1914, political activity by Arab groups and parties, such as it had been in the six years from 1908, virtually came to a stop. It was only at the end of the war, in 1918, that a new grouping came into being in Cairo known as *al-ittiḥād al-sūrī*. This comprised a number of Syrians who had become opposed to Ḥusayn, Sharīf of Makka and King of the Ḥidjāz, whose ambitions in Syria they mistrusted. Their views are to be gathered from the memorial they addressed to the British government in the summer of 1918, which elicited the reply known as the Declaration to Seven Syrians (E. Kedourie, *England and the Middle East*, 113-5). The group included Michel Luṭf Allāh as president, Rashīd Riḍā as vice-president, ʿAbd al-Raḥmān al-Shābandar and Salīm Sarkīs as joint secretaries. When eventually Sharīf Fayṣal was installed in Damascus at the head of an Arab government, the conditions in Syria became such that the grouping had no longer a *raison d'être* and, in fact, its members are later found adopting a variety of positions in Syrian politics.

The short-lived Sharīfian régime in Syria (November 1918-July 1920) was characterized by an active, not to say turbulent, political life. The *fatāt* society was reconstituted, with some of the most prominent Sharīfians, such as ʿAlī Riḍā al-Rikābī, Yāsīn al-Hāshimī, Aḥmad Ḳadrī and Nasīb al-Bakrī as leaders. But the *fatāt* never seems to have made its existence or membership public; instead a political party was organized to work in public for the aims

of the secret society: this was *ḥizb al-istiḳlāl al-ʿarabī*, the declared purpose of which was the liberation of all Arab countries from foreign domination. The pan-Arab inclinations of the leaders of the *istiḳlāl* and the *fatāt*, many of whom were then young, unknown, and with no local standing in Damascus, evoked some opposition among Damascene notables, who organized *al-ḥizb al-waṭanī al-sūrī*, the secretary of which was Muḥammad al-S͟harīḳī and the declared aim of which was to work for a Syria 'independent within its natural frontiers'. Another group concerned with the political future of Syria was one organized by some Syrian Christians in Cairo in 1919 to work for a United States mandate in Syria. The group was called *al-ḥizb al-sūrī al-muʿtadil*, and its members included Fāris Nimr, Saʿīd S͟huḳayr, Yaʿḳūb Ṣarrūf and Ilyās ʿĪsāwī. The group delegated two of its members, Fāris Nimr and K͟halīl K͟hayyāṭ, to put its views before Charles Crane of the King-Crane Commission which visited the Levant in the summer of 1919. When it became clear that there was no possibility of the U.S.A. accepting such a mandate, nothing more was heard of the group.

The aftermath of war saw Mesopotamia, which was under British occupation, in an unsettled condition. The tribes and cities of the Middle and Lower Euphrates, predominantly S͟hīʿī, were in effervescence, as were the Kurdish areas; Bag͟hdād was full of disgruntled ex-Ottoman officials and officers, and the S͟harīfian régime in Syria encouraged warlike activities against the British authorities. The S͟harīfian officers in Syria who had been members of the pre-war *ʿahd* sent emissaries to Bag͟hdād, and secretly constituted a group of their sympathizers under the name of *d͟jamʿiyyat al-ʿahd al-ʿirāḳī*. This was a predominantly Sunnī group. Some S͟hīʿī leaders of Bag͟hdād and Kāẓimayn formed their own secret political society to protect S͟hīʿī interests in the anti-British struggle. The society was known as *d͟jamʿiyyat ḥaras al-istiḳlāl*. Its founders included ʿAlī al-Bāzirgān, S͟hayk͟h Muḥammad Bāḳir al-S͟habībī, Hādī Zwayn, Muḥammad D͟jaʿfar Abu'l-Timman and Sayyid Muḥammad al-Ṣadr. With the installation of Fayṣal as King of Iraq in 1921, new issues and new groupings led to the disappearance of both the *ʿahd* and the *ḥaras*.

Iraq.—The Kingdom of Iraq was supposed to be a constitutional, parliamentary monarchy [see DUSTŪR]. But as in Egypt, though here the circumstances and reasons were quite different, parliament never functioned in a normal or representative fashion but was rather the instrument of whatever effective authority existed in the country at any moment. Parties therefore during the monarchical régime (1922-1958) may be described as more or less factions composed of politicians manoeuvring on the restricted and artificial political scene of the capital. The first parties to be formed under the monarchy were *ḥizb al-nahḍa al-ʿirāḳiyya* and *al-ḥizb al-waṭanī*, both founded in August 1922. They were composed of public men who were dissatisfied with the second ministry of Sayyid ʿAbd al-Raḥmān al-Naḳīb and who were prepared to adopt an intransigeant stance towards the mandatory power. The leaders of the *nahḍa* group included Ḥamdī al-Pačad͟ji and Nād͟jī al-Suwaydī, whilst *al-ḥizb al-waṭanī* was, and remained until the mid-thirties, when it disappeared from view, identified with Muḥammad D͟jaʿfar Abu 'l-Timman whose following it in fact constituted. Al-Naḳīb's government also organized its supporters in a party known as *al-ḥizb al-ḥurr*, which disappeared from view when al-Naḳīb finally relinquished power in November 1922. The *nahḍa* seems to have disintegrated some time between 1924 and 1925. The next party to be recorded is *ḥizb al-taḳaddum*, formed in June 1925, which was in fact the following of ʿAbd al-Muḥsin al-Saʿdūn who formed his second administration at that time; the party disappeared when this ministry fell in November 1926. Another party, even more ephemeral, dating from this period, was *ḥizb al-s͟haʿb*, which Yāsīn al-Hās͟himī formed in November 1925 in order to muster opposition to the government. Parties are no more heard of until 1930 when an Anglo-Iraqi treaty was being negotiated, and political rivalries and passions were at a high pitch. Nūrī al-Saʿīd was Prime Minister—in his first administration—and in order to muster support for his policies formed *ḥizb al-ʿahd*—appropriating the name of the secret society of which he had been a member in Ottoman times; this party stayed in being until Nūrī al-Saʿīd relinquished power in October 1932. The chief opponent of the administration, Yāsīn al-Hās͟himī, also formed a party in 1930, which was known as *ḥizb al-ik͟hāʾ al-waṭanī*. The *ik͟hāʾ* group included Ras͟hīd ʿĀlī al-Gaylānī, Ḥikmat Sulaymān, Nād͟jī al-Suwaydī, ʿAlī D͟jawdat al-Ayyūbī, Kāmil al-Čadird͟ji and ʿAbd al-Ilāh Ḥāfiẓ. The group remained in being until April 1935 when it voluntarily dissolved itself, its leader Yāsīn al-Hās͟himī having just then formed his second administration. The group played an important rôle in Iraqi politics, organizing conspiracies and fomenting tribal rebellions in the Euphrates against the governments then in power. During the brief administration of Nād͟jī S͟hawkat (November 1932-March 1933) an ephemeral parliamentary group, *al-kutla al-barlamāniyya*, was formed in order to support the government, and the group went out of existence when it fell. A similar group, similarly ephemeral, was *ḥizb al-waḥda al-waṭaniyya*, which was formed to support the first administration of ʿAlī D͟jawdat al-Ayyūbī (August 1934-February 1935). From the *coup d'état* of General Bakīr Ṣidḳī al-ʿAskarī (October 1936) until April 1946, Iraqi politicians did not seem to find it necessary or feasible to group themselves into parties, but in this period two political groups deserve mention because they embody ideological trends which were to reappear after the second world war. The first of these groups was *d͟jamʿiyyat al-iṣlāḥ al-s͟haʿbī*, formed in November 1936, the founders of which were Kāmil al-Čadird͟ji, Yūsuf Ibrāhīm, Nād͟jī al-Aṣīl, and Muḥammad D͟jaʿfar Abu 'l-Timman. The tone of the group was set not by its founders but by a younger group of members who held socialist views and who had been informally associated since 1931 round the newspaper *al-Ahālī*, and who were therefore known as *d͟jamāʿat al-Ahālī*; this younger group included Ḥusayn D͟jamīl, ʿAbd al-Ḳādir Ismāʿīl and his relative ʿAbd al-Fattāḥ Ibrāhīm, Muḥammad Ḥadīd and K͟halīl Kanna, all of whom had some rôle to play in Iraqi politics after 1945 and all of whom, except for the last-named, remained faithful to the socialist ideology. This younger group in *d͟jamʿiyyat al-islāḥ al-s͟haʿbī* seem to have been in hopes that their ideas would be adopted as the official programme of the government, but the resignation of three of their founders from the Ḥikmat Sulaymān administration in June 1937, and the fall of Ḥikmat Sulaymān shortly thereafter, spelt in fact the end of the society and its activities. The other group worth mentioning in the period 1936-1946 is *nādī al-Mut͟hannā*, which existed from about 1937 to the collapse of Ras͟hīd ʿĀlī al-Gaylānī's *coup d'état* in May 1941. The Club was dedicated to the spread of pan-Arabism; its

ideas were influential at the time and many of its members participated in Iraqi politics after 1945, notably in *ḥizb al-istiḳlāl.*

After the second world war, the Regent ʿAbd al-Ilāh in a speech of December 1945 gave an impulsion to the formation of political parties, and in April 1946 five parties were licensed: *ḥizb al-aḥrār, ḥizb al-istiḳlāl, al-ḥizb al-waṭanī al-dīmūḳrāṭī, ḥizb al-s̲h̲aʿb* and *ḥizb al-ittiḥād al-waṭanī. Ḥizb al-aḥrār* was founded by eight men, none of whom was prominent in politics; it does not seem to have had any noticeable political activity, and it decided to 'freeze' itself in December 1948, after which date nothing more was heard of it. *Ḥizb al-istiḳlāl* was formed by a group which included Muḥammad Mahdī Kubba, K̲h̲alīl Kanna and ʿAbd al-Razzāḳ al-Ẓāhir; it was pan-Arab in its views and included many of those who had followed or sympathized with Ras̲h̲īd ʿĀlī al-Gaylānī's *coup d'état* of 1941. The Party remained active in opposition to successive governments until it went out of existence in September 1954, when a decree was issued at the beginning of Nūrī al-Saʿīd's twelfth administration dissolving all existing associations and clubs in Iraq. *Al-ḥizb al-waṭanī al-dīmūḳrāṭī* was formed by some of the old members of *d̲j̲amʿiyyat al-iṣlāḥ al-s̲h̲aʿbī*; the founders included Kāmil al-Čadird̲j̲i, Muḥammad Ḥadīd, Ḥusayn D̲j̲amīl, ʿAbd al-Wahhāb Mird̲j̲ān and Ṣādiḳ Kammūna; it declared itself dedicated to the reform of land tenure, equality, social welfare and economic planning. The Party was active in opposition to successive governments, but it decided to suspend activities between December 1948 and March 1950 when it considered that the repressive policy of the authorities allowed it no scope to function; the government dissolved it in September 1954. The founders of *ḥizb al-s̲h̲aʿb* included ʿAzīz S̲h̲arīf, Tawfīḳ Munīr and ʿAbd al-Amīr Abū Trāb; the Party was socialist and more to the left than *al-ḥizb al-waṭanī al-dīmūḳrāṭī*; it was banned for subversion in September 1947. The founders of *ḥizb al-ittiḥād al-waṭanī* included ʿAbd al-Fattāḥ Ibrāhīm and Muḥammad Mahdī al-D̲j̲awāhirī; it too, was leftist in sympathies and was also banned for subversion in September 1947. It will be observed that contrary to the pattern of Iraqi political parties in the nineteen-twenties and thirties, these five parties were not combinations of politicians competing among themselves for power, but were rather—except for *ḥizb al-aḥrār*—ideological groups who remained strangers to political power, and whose weapons—mostly ineffectual—were the public speech, the newspaper article and the occasional demonstration.

But the more usual kind of Iraqi political party is also met with after 1945. Sāmī S̲h̲awkat and a few of his associates formed a party, *ḥizb al-iṣlāḥ*, in November 1949; this group was not successful in attaining office and amalgamated in July 1951 with *ḥizb al-umma al is̲h̲tirākī*, which Ṣāliḥ D̲j̲ābir and his associates had formed the previous month to act as a rival grouping to Nūrī al-Saʿīd and his associates. The latter had himself formed a party in November 1949 (which he voluntarily dissolved in August 1954) and gave it the name of *ḥizb al-ittiḥād al-dustūrī*. It remains finally to notice a hybrid group of politicians and ideologists which was formed in May 1951 under the name of *al-d̲j̲abha al-s̲h̲aʿbiyya al-muttaḥida*. The founders included Ṭāhā al-Ḥās̲h̲imī, Muzāḥim al-Pačad̲j̲i, Muḥammad Riḍā al-S̲h̲abībī, Naṣrat al-Fārisī, Ṣādiḳ al-Baṣṣām, Burhān al-Dīn Bās̲h̲aʿyān, Maḥmud al-Durra, Nad̲j̲īb al-Ṣāyig̲h̲ and ʿAbd al-Razzāḳ al-S̲h̲ayk̲h̲lī. The *d̲j̲abha* was dedicated to the principle of neutralism in foreign policy; it therefore opposed the Anglo-Iraqi Treaty of Alliance and the governments who were in favour of upholding it. It was not a homogeneous group, being composed of politicians hoping for office and using the front as a lever for their ambitions, and of ideologists whose hopes of office were remote; rifts between members appeared, and in August 1954 the front ceased all activity.

Syria.—The early years of the French mandate in Syria show little party political activity. Syrian nationalists protested now and again at French rule in Syria, but until 1925 such protest was little organized. In May of that year, the Syrian leader ʿAbd al-Raḥmān al-S̲h̲ābandar founded, together with other Syrian nationalists, including Ḥasan al-Ḥakīm, Luṭfī al-Ḥaffār and Fāris al-K̲h̲ūrī, *ḥizb al-s̲h̲aʿb*; but this Party was short-lived, since the French authorities banned it the following August on suspecting it of involvement in the Druze rebellion which had just started. In the anti-French troubles which followed, S̲h̲ābandar took a prominent part, and when the French were successful in pacifying the country, he went into exile and remained absent from Syria until 1937. The next Syrian political grouping was *al-kutla al-waṭaniyya*, formed in about 1929, which was organized formally at a meeting in Ḥimṣ in November 1932. The National Bloc was dedicated to the attainment of Syrian independence and Arab unity; it was led by Ibrāhīm Hanānū and Hās̲h̲im al-Atāsī, and among its prominent members were Saʿd Allāh al-D̲j̲ābirī, D̲j̲amīl Mardam, S̲h̲ukrī al-Ḳuwwatlī, ʿAbd al-Raḥmān al-Kayyālī, Luṭfī al-Ḥaffār, Edmond Rabbath, Fak̲h̲rī al-Bārūdī and Mik̲h̲āʾīl Ilyān. The Bloc was the main political grouping in Syria in the nineteen-thirties. Its leaders were influential in the country and frequently enjoyed a considerable following in their localities; the Bloc was essentially a coalition of notables united by struggle against the French, but here and there, now and again, they succeeded in mobilizing the mass and organizing it in towns like Damascus, Ḥamāt and Aleppo, but only by fits and starts. Their success in this enterprise was greater between 1936 and 1939 when they exercised power with French help and consent, dominating the legislature and dispensing administrative patronage; in this period, they organized a paramilitary youth movement, *al-s̲h̲abāb al-waṭanī*, the uniform of which was an iron-grey shirt. Along with the *kutla*, there were in the nineteen-thirties a variety of evanescent political groups which came and went depending on French encouragement, political rivalries or foreign (whether European or Iraqi) inspiration. Of the groups, the best known are *ʿuṣbat al-ʿamal al-ḳawmī, ḥizb al-waḥda al-ʿarabiyya, ḥizb al-inḳād̲h̲, al-d̲j̲abha al-waṭaniyya al-muttaḥida*, and *al-hayʾa al-s̲h̲aʿbiyya*, which constituted S̲h̲ābandar's own political following when, on his return to Damascus in 1937, he fell out with his colleagues of the Bloc. Overt political activity in Syria ceased between the outbreak of the second world war and 1943, when parliamentary elections were held, but in 1941 a small political group dedicated to the support of Ras̲h̲īd ʿĀlī al-Gaylānī in Iraq was formed by two Damascus schoolteachers, Michel ʿAflaḳ and Ṣalāḥ al-Dīn al-Bīṭār; the group was known as *d̲j̲amāʿat nuṣrat al-ʿIrāḳ*; it was the nucleus of what later became *ḥizb al-baʿt̲h̲ al-ʿarabī*, which in 1953 amalgamated with a group founded in the late nineteen-forties by Akram al-Ḥawrānī, *al-ḥizb al-ʿarabī al-is̲h̲tirākī*, in order to become *ḥizb al-baʿt̲h̲ al-ʿarabī al-is̲h̲tirākī*, dedicated to pan-Arabism and socialism and oper-

ating not only in Syria but also in the Lebanon, Jordan and Iraq as well, and, with the support of sympathetic army officers, actually exercising power in both Syria and Iraq. The elections of 1943 resulted in an overwhelming majority for the National Bloc, which took power and, with British support, succeeded in securing French departure from Syria. The Bloc, a coalition of politicians, suffered from fissiparous tendencies; this was the case in 1936-39, when jealousy and dissensions between different leaders and areas were already visible, and also after 1943, when the very extent of its victory aroused jealousies and cupidities. In 1947 some politicians seceded from the Bloc and formed *ḥizb al-sha*ʿ*b*. Another group of politicians, constituting the following of Khālid al-ʿAẓm, was formed in 1955 under the name of *al-kutla al-dīmūḳrāṭiyya*. But political factions such as the National Bloc, the People's Party and the Democratic Bloc, became of little importance when after 1949 army officers constantly intervened in politics. It was these officers who increasingly determined the character of political life in Syria after 1949.

The Lebanon.—Political activity in the Greater Lebanon, which the French authorities constituted in 1920, was somewhat different in character from that obtaining in the autonomous *mutaṣarrifiyya* of Mount Lebanon. In Mount Lebanon the main political problem arose out of the rivalries and mutual fears of Druzes and Maronites; whereas in Greater Lebanon, the presence of a sizeable Muslim contingent predominantly Sunnī meant that political rivalries and combinations were more complex, but the parliamentary institutions as devised by the mandatory government (see P. Rondot, *Les institutions politiques du Liban*, Paris 1947) ensured that the political divisions between parties did not reproduce, reflect and hence exacerbate religious differences. An early political grouping which was more like a discussion group than a political party proper was *ḥizb al-taraḳḳī*, which existed for a few years after 1920. It was headed by the Marquis de Freij and included among its members Émile Edde, Bishāra al-Khūrī, Yūsuf al-Djumayyil and Michel Shīḥā. It was, however, not until the early nineteen-thirties that a stable and relatively long-lived political grouping came into being. This was *al-kutla al-dustūriyya*, which was a grouping of deputies in the Chamber elected at the beginning of 1934 headed by Bishāra al-Khūrī who, for the next decade, was to contend for office and power with his fellow Maronite Émile Edde. *Al-kutla al-dustūriyya* was so called because one of its members had asked before the elections of 1934 for the restoration of constitutional and parliamentary government. Émile Edde's supporters were grouped in *al-kutla al-waṭaniyya*, which in 1945 changed its name to *ḥizb al-sha*ʿ*b*. Other factions composed of politicians and their clients appeared after the withdrawal of French authority in 1943; they were all ephemeral, coming into being under particular circumstances and disappearing with their disappearance: thus a group calling itself *ḥizb al-istiḳlāl* came into being in 1944 to oppose Riyāḍ al-Ṣulḥ, then in office; it included ʿAbd al-Ḥamīd Karāme, Ṣāʾib Slām, ʿAbd Allāh al-Yāfī and Henry Pharaon; in 1946 another such group, calling itself *kutlat al-iṣlāḥ*, was formed by ʿAbd al-Ḥamīd Karāme, Yūsuf Karam, Kamāl Djunblāṭ, ʿUmar Bayhum and ʿUmar al-Dāʿūḳ to oppose Sāmī al-Ṣulḥ, then in office; 1947 saw still another group, *kutlat al-taḥarrur al-waṭanī*, similar in aim and slightly different in composition. Besides these political factions, the Lebanon has seen other political groupings. In 1932, Anṭūn Saʿāda formed *al-ḥizb al-sūrī al-ḳawmī al-idjtimāʿī*; this was an ideological movement dedicated to the formation of a political entity embracing the Lebanon, Syria, Transjordan, Palestine, Iraq and Cyprus, this area being, according to the founder, the homeland of the Syrian nation. Anṭūn Saʿāda attempted—with some success—to create a mass movement in Syria and the Lebanon which inclined to violence and conspiracy in politics; the Party consequently had many ups and downs both in Syria and the Lebanon before and after Anṭūn Saʿāda's execution in July 1949 after his conviction before a Lebanese military court for taking part in armed rebellion. 1936-7 saw the formation of two movements with paramilitary features: *ḥizb al-nadjdjāda*, which grew out of the Muslim Boy Scout movement, and *ḥizb al-katāʾib al-lubnāniyya* (*les Phalanges libanaises*) founded by Pierre Djumayyil for the protection of Maronite interests. Finally, in 1949, Kamāl Djunblāṭ founded *al-ḥizb al-taḳaddumī al-ishtirākī*, which advertized a socialist ideology, but which remained, by and large, a group consisting of the founder's personal following.

Palestine.—Zionism was the main issue in terms of which the Arabic-speaking population of Palestine had to define its political divisions and rivalries. Leadership in the anti-Zionist struggle was disputed between two prominent families, the Ḥusaynīs and the Nashāshībīs. A member of the former family, Muḥammad Amīn al-Ḥusaynī, became early in the nineteen-twenties *muftī* of Jerusalem and president of *al-madjlis al-islāmī al-a*ʿ*lā*, which was set up by the Mandatory authorities to supervise and administer Muslim religious endowments and establishments in Palestine. A member of the latter family, Rāghib al-Nashāshībī became mayor of Jerusalem. These two personalities became the focus round which their respective followers were gathered, and in the nineteen-twenties Arabic-speaking Palestine was divided between two factions, the *madjlisiyyūn*, who constituted the Ḥusaynī following, and the *mu*ʿ*āriḍūn* who opposed them. In 1931, a number of politicians who believed in Pan-Arabism formed *ḥizb al-istiḳlāl*; the group included Akram Zuʿaytar, Ṣubḥī al-Khaḍrā, ʿAwnī ʿAbd al-Hādī, Muḥammad ʿIzzat Darwaza, Muʿīn al-Māḍī and ʿAdjdjādj Nuwayhiḍ; in December 1934, the Nashāshībī faction was formally constituted into a Party, *ḥizb al-difā*ʿ *al-waṭanī*, and in April of the following year the Ḥusaynī faction also constituted itself into a Party, *al-ḥizb al-*ʿ*arabī al-filasṭīnī*, the president of which was Djamāl al-Ḥusaynī. In June of the same year Dr. Ḥusayn al-Khālidī (hitherto in opposition to the *muftī*) organized his following into *ḥizb al-iṣlāḥ*, and, opposing the Nashāshībī faction, captured the office of mayor of Jerusalem. In October 1935 a Nablus group formed itself into *ḥizb al-kutla al-waṭaniyya*. All these different groupings proved quite ephemeral, for in April 1936, at the beginning of the long drawn-out Palestine troubles, they agreed to form a body, *al-ladjna al-*ʿ*arabiyya al-*ʿ*ulyā*, in which they were all represented, in order to coordinate the struggle against the Mandatory Power. The subsequent events in Palestine between 1936 and 1948 allowed no further opportunity for the formation of party groups. But some of the parties formed earlier, notably *ḥizb al-istiḳlāl* and *al-ḥizb al-*ʿ*arabī*, resumed their activities between 1943 and the end of the Mandate.

The Sudan.—Political parties in the Sudan were quite late in making an appearance, and when they did, their activities were governed by their connexion with the heads of the two leading *ṭarīḳa*s, the Khāt-

miyya and the Anṣār, and the attitude they adopted toward union with or separation from Egypt. In March 1938 the formation of a group, *mu'tamar al-khirrīdjīn al-ʿāmm*, was announced, the aim of which was to promote the general welfare of the country and its graduates (by the term 'graduate' was meant someone who had finished school at the intermediate grade or above). The group wished for a greater share in government to be given to the Sudanese. A split in the ranks of the Congress led after 1942 to the formation of another group, the *ashikkā'* led by Ismāʿīl al-Azharī, which was allied with the Khātmiyya *ṭarīḳa* and dedicated to unity with Egypt. Opposing them was *ḥizb al-umma*, which called for the complete independence of the Sudan, and was backed by the Anṣār. In August 1949 another group, *al-djabha al-waṭaniyya*, was formed which aimed at Dominion status for the Sudan under the Egyptian crown. To this group Khātmiyya support was given for a time. In 1951 a group dedicated to the formation of a Sudanese republic immune from Mahdist influence was formed: it was called *al-ḥizb al-djumhūrī al-ishtirākī*; it never had much influence. In 1952 the *ashikkā'* and the *djabha* combined to form *al-ḥizb al-waṭanī al-ittiḥādī* which, led by Ismāʿīl al-Azharī, proclaimed unity with Egypt as its objective. This group came to power in January 1954 and remained in office until the *coup d'état* of 1958 put an end to party political activity. In spite of its professed aims, the Party, when in power, found that it had to acquiesce in separation from Egypt.

Tunisia.—The French Protectorate of Tunisia dating from 1881 was the framework within which organized Tunisian political activity took place. This Protectorate facilitated the settlement of Frenchmen and other Europeans in the country and slowly led to increasing French control over Tunisian administration. Such a situation led a small number of educated Tunisians to form a group in 1907 known as the *Parti Jeune Tunisien*, whose aim was to work for a constitution and a greater scope for Tunisians in public affairs. The group included ʿAlī Bāsh Ḥamba and ʿAbd al-ʿAzīz al-Thaʿālibī. At the end of the First World War, the group came to be known as the *Parti Tunisien*. It presented a memorandum to President Wilson in April 1919 and published a book in Paris in 1920, *La Tunisie Martyre*, which was written by Thaʿālibī and Aḥmad Saḳḳā and which set out Tunisian grievances. In June of the same year, the *Parti Tunisien* changed its name to *Parti Libéral Constitutionnel* (*al-ḥizb al-ḥurr al-dustūrī*), commonly known thereafter as the Destour. Towards the end of the nineteen-twenties the Party became revitalized through the efforts of a younger generation of members, including Habib Bourguiba (al-Ḥabīb Abū Ruḳayba), al-Shādhilī Khayr Allāh and Maḥmūd Māṭirī. The younger men led by Bourguiba soon clashed with their elders, and at the Party Congress of Ḳaṣr Hilāl in March 1934 Bourguiba captured the organization, which he continued henceforth to lead in spite of many challenges and vicissitudes. The Party came henceforth to be known as the neo-Destour to indicate the rejection by the new leaders of the ideas of those whom they called '*archéos*'. Under Bourguiba's leadership, the neo-Destour stood for Tunisian independence. Bourguiba also transformed the Party into a mass movement with a country-wide organization and a pyramidal chain of command with himself at the apex. The Party was composed of branches (*shuʿab*) of two kinds: territorial (*shuʿba turābiyya*) and non-territorial (*shuʿba ghayr turābiyya*), the latter being found in a large city like Tunis, and comprising members from the same home-town or locality. The Party also organized the youth in special formations, *al-shabība al-dustūriyya*, and controlled the Tunisian trade union movement, *al-ittiḥād al-ʿāmm al-tūnisī li'l-shughl*. The new technique of canalizing mass emotions for political ends is described in a remarkable passage by one of Bourguiba's prominent followers, in which he says that when Bourguiba made speeches orator and audience became as one flesh, the mass responding to the inflexions of the speaker's voice 'being moved by his emotion, angered by his anger, and reflecting if he compelled it to think' (ʿAlī al-Bahlawān, *Tūnis al-thā'ira*, Cairo 1954, 73.) After the attainment of Tunisian independence, the neo-Destour consolidated its position in the country, and is today the only political organization in Tunisia.

Algeria.—It is only after the First World War that purely Algerian organized political activity emerges. And it emerges not in Algeria itself, but among the Algerian proletariat in France. In 1926, the French Communist Party tried to organize Algerian workers into a grouping known as the *Étoile Nord-Africaine*; in 1927 this grouping came to be led by the Algerian Meṣṣālī al-Ḥādj who had served in the French army and been demobilized in France. The *Étoile* was a left-wing anti-colonial proletarian organization which operated in France, not in Algeria. It had many ups and downs, its leaders were repeatedly prosecuted and the association itself banned for alleged subversion. In 1936, Meṣṣālī al-Ḥādj, having fled to Switzerland to escape the police, met there the Amīr Shakīb Arslān and, under his influence, gave up his Communist sympathies and began to work for an Arab Islamic Algeria. In 1937 he founded the *Parti du Peuple Algérien* which recruited its members and organized them in cells in Algeria itself, and worked for Algerian independence. On the outbreak of the second world war, the authorities banned the Party and imprisoned its leader. In 1946, having been allowed to return to Algeria, he organized his followers into a new party, the *Mouvement pour le Triomphe des Libertés Démocratiques*, which called for a sovereign Algerian republic and for the unity of the Maghrib. The *Mouvement* was the public and legal front of the *Parti du Peuple Algérien*, which had worked underground since its banning in 1939. An even more secret grouping which was set up by Meṣṣālī al-Ḥādj and his colleagues was the paramilitary *Organisation Spéciale*, the head of which was Aḥmad bin Bella. In April 1954, he and eight of his colleagues set up in Cairo the *Comité Révolutionnaire d'Unité et d'Action* which organized insurrection against the French authorities in Algeria. The *Comité* launched the *Front de Libération Nationale*, to whom the French Government eventually conceded Algerian independence. The Front has become the only political movement in the Algerian Republic.

Other political groupings appeared on the Algerian scene in the nineteen-thirties and forties. In 1934, Muḥammad Ṣalāḥ bin Djilūl (Ben Djellul) organized the Muslim local representatives of the *département* of Constantine into a *Fédération des Élus musulmans du département de Constantine*. Other *fédérations* were also set up and these groups, loosely organized as they were, did attempt to adopt a common line of policy towards the authorities. What they desired was a lessening of Algerian disabilities and a greater share in government. Algerian independence was not an objective of theirs; neither was it the objective of the *Rassemblement franco-musulman algérien*, which bin Djilūl organized in 1938, or of the *Union Populaire al-*

gérienne which Farḥāt ʿAbbās set up in the same year. Neither of these groups was destined to have a long life. In March 1943 Farḥāt ʿAbbās addressed a manifesto to the Governor-General of Algeria entitled *L'Algérie devant le conflict mondial. Manifeste du peuple algérien*, asking for justice for the Algerian Muslims and Algerian autonomy. In 1944 Farḥāt ʿAbbās organized *Les Amis du Manifeste et de la Liberté*, which he designed as a mass movement to take the place of the *Parti du Peuple Algérien*. Whether or not his methods in 1944-5 contributed to the rising of May 1945 in the Constantinois, the authorities did arrest him and dissolved his organization. On his release in 1946 he organized the *Union Démocratique du Manifeste Algérien*, forsaking mass agitation, his watchword being: 'Ni assimilation, ni nouveaux maîtres, ni séparatisme'. In April 1956, he joined the National Liberation Front.

Morocco.—Organized political party activity in Morocco dates from the nineteen-thirties. Its origin lies in the protest organized by some young Moroccans in 1930 against the Berber dahir [see ẒAHĪR] and French policy, which they took to aim at separating the Berbers from the Moroccan polity. A group of these young men produced in 1934 a *Plan de réformes marocaines*, and organized themselves into a *Comité d'action marocaine*. The group included Muḥammad Ḥasan al-Wazzānī and ʿAllāl al-Fāsī, who were the two most prominent members, ʿUmar ʿAbd al-Djalīl, Muḥammad al-Makkī al-Nāṣirī, Maḥmūd al-Yazīdī and Muḥammad Duyūrī. The *Comité* was banned in March 1937 and reconstituted the following month as the *Parti national pour la réalisation du plan de réformes*, which also was banned the following October. In April 1937 Muḥammad Ḥasan al-Wazzāni, who had fallen out with his fellow-members of the *Comité*, organized a political group under the name of *Action nationale marocaine*, which was likewise banned in October 1937. These early political groupings were much influenced by the political ideas of Shakīb Arslān, who had visited Tetuan in 1930 and to whom Muḥammad Ḥasan al-Wazzānī had for some time acted as secretary; they were also encouraged in their activities by the sympathy of some French socialists, notably Robert-Jean Longuet who had started the periodical *Maghreb* in Paris in 1932.

Between October 1937 and 1943 there was little political party activity in the French zone of Morocco. In the Spanish zone, the Spanish Civil War starting in 1936 had a direct and important influence on the character of political party activities. The Spanish Nationalist authorities, who speedily came to control the zone, wished to secure political support among the Moroccans and encouraged the formation in June 1936 of a party led by ʿAbd al-Khāliḳ al-Ṭurays (Torrès) under the name of *ḥizb al-iṣlāḥ al-waṭanī*. In February 1937 Makkī al-Nāṣirī was encouraged to form a rival group, *ḥizb al-waḥda al-maghribiyya*. The two groups remained in existence until the end of the Protectorate, intermittently enjoying the favour and support of the authorities.

Towards the end of 1943, conditions inside and outside Morocco making political activity in the French zone once more possible, the *Istiḳlāl* Party was formed. It was led by the same group who had formed the *Comité d'action marocaine* and the *Parti national*; its most prominent members were Aḥmad Balāfridj, ʿAbd al-Raḥīm bū ʿAbīd, Muḥammad al-Yazīdī and ʿUmar ʿAbd al-Djalīl. But the *Istiḳlāl* Party differed from earlier groupings by the fact that it succeeded in organizing from 1945 onwards a countrywide network of cells (*djamāʿāt*, sing. *djamāʿa*) with a pyramidal chain of command; it could thus mobilize the masses in the struggle against the French Protectorate which ended successfully in 1956. The *Istiḳlāl* Party during the period 1945-1956 thus functioned as a movement. Alongside it there were a number of groupings which were more in the nature of factions: Muḥammad Ḥasan al-Wazzānī organized in 1946 the *Parti démocratique de l'indépendance* (which after independence became the *Parti démocratique constitutionnel*); the *Sharīf* Mūlāy Idris organized in 1947 the *Parti démocrate marocain des hommes libres*, and in 1948 Bashīr Zimrānī formed the *Parti du peuple marocain*. These two latter parties supported the Protectorate and in turn enjoyed official protection.

After independence the *Istiḳlāl* party emerged as the most powerful political organization in the country, but in 1959 there was a split in its ranks, and two of its leaders, Mahdī bin Barka and ʿAbd Allāh Ibrāhīm, led a new party with leftist leanings, the *Union nationale des forces populaires*, which seems to enjoy some mass support.

Communist Parties.—From the end of the first world war, small, usually clandestine, groups of communists have existed in the Arab East; their formation has sometimes been assisted or influenced by emissaries of the Third International, by communists in the Palestine Jewish settlement or by Armenian refugees with leftist sympathies. Details concerning them are found in W. Z. Laqueur, *Communism and nationalism in the Middle East*, London 1956, which, for Iraq, should be supplemented by John Batatu, *Some preliminary observations on the beginnings of communism in the Arab East*, in J. Pennar, ed., *Islam and Communism*, Munich 1960. In the Maghrib, communist parties were rather offshoots of the French Communist Party which gradually separated off from it; details of their activities may be found in the works of Le Tourneau, Rézette and Robert listed below. On communism in Arab countries, see further SHUYŪʿIYYA.

ii.—Ottoman Empire and Turkey

Political parties became a regular feature of Turkish political life only after the revolution of 1908. Their precursors were coteries engaged in conspiracy within the Ottoman Empire or in agitation from exile [see djamʿiyya]. These included societies formed among non-Muslim or non-Turkish groups aiming at autonomy or independence and groups of Ottoman Muslims dedicated to a change of rulers or of the constitution—*e.g.*, the *Ethnike Hetairia* (Odessa 1814, later headed by Alexander Hypsilanti) which prepared Greek independence; the Social Democrat Hunchakian (or Hinčak) Party (Geneva 1887, the name dates from 1898) and the Dashnaktsutiun Committee (Caucasus 1890) (see L. Nalbandian, *The Armenian revolutionary movement*, Berkeley 1963); the *Fedāʾīler Djemʿiyyeti* ('Society of Zealots'), which attempted to depose ʿAbd al-ʿAzīz in the Kuleli Incident of 1859; *Yeñi ʿOthmānlılar Djemʿiyyeti* ([*q.v.*] Istanbul 1865), whose members after a period in exile played prominent rôles in the constitutional revolution of 1876; and the *Ittiḥād we Teraḳḳī Djemʿiyyeti* ([*q.v.*] Istanbul 1889, subsequently in exile and founded anew in Salonica in 1906). This last group, known to Europeans as the Committee of Union and Progress or more loosely as the Young Turks, was responsible for the restoration of the constitution in July 1908 and the suppression of the counter-revolutionary movement in April 1909 (*Otuz-Bir Mart Waḳʿasi*).

The revolution of 1908-9 was a triumph of conspiracy and of party; yet the C.U.P. remained somewhat in the background and did not fully seize power until the *coup d'état* of January 1913. Meanwhile a large number of parties were formed inside and outside of the parliament, mainly among opponents or dissidents of the C.U.P. who objected to its intense partisanship and to its increasing Turkish nationalist bias; the most notable of these was the *Ḥürriyet we Iʾtilāf Fırḳasi* [*q.v.*] or *Entente Libérale* of 1911. Secret conspiracy also resumed, *e.g.*, among the *Khalāṣkār Ḍābiṭān* who forced the appointment of an anti-C.U.P. cabinet in 1912. After the assassination of Maḥmūd Shewket Pasha in June 1913, however, the C.U.P. government suppressed all opposition, sending the leading liberals into banishment or exile.

Intense party activity recommenced after the armistice of October 1918. In Istanbul the C.U.P., whose leaders had fled [see enwer pasha], reconstituted itself as the *Tedjeddüd Fırḳasi* or Renewal Party; others revived various anti-C.U.P. groupings, promoted separatist interest (*e.g.*, the *Kürdistān Teʾālī Djemʿiyyeti* of Seyyid ʿAbd al-Ḳādir); advocated close collaboration with the British (the *Ingiliz Muḥibbler Djemʿiyyeti* of Saʿīd Molla); or invoked national self-determination for the Turks (the *Wilson Prensipleri Djemʿiyyeti* of Khālide Edīb and others). These manoeuvres, however, remained without much consequence because in Istanbul power was in the hands of the occupying forces and in Anatolia of the nationalists. Nationalist organization in the peripheral provincial towns (Edirne, Adana, Izmir, Erzurum, etc.) formed around local C.U.P. leaders and other notables; its aim was to resist encroachments by Allied authorities or non-Turkish groups. The local societies were coordinated in a series of regional congresses and in a national congress at Sivas (4-11 September 1919) under Muṣṭafā Kemāl [Atatürk], at which they merged in the *Anadolu we Rūmeli Müdāfaʿa-i Ḥuḳūḳ Djemʿiyyeti*, or Society for the defence of rights of Anatolia and Rumelia. This group dominated the first Grand National Assembly at Ankara, although a more conservative faction, the so-called "Second Group", informally organized and opposed to Muṣṭafā Kemāl's personal leadership, split off in 1922 (one of its leaders was Djalāl al-Dīn ʿĀrif [*q.v.*]). In 1923, Kemāl transformed the *Müdāfāʿa-i Ḥuḳūḳ* into the Republican People's Party (R.P.P., or *Djumhūriyyet Khalḳ Fırḳasi* [*q.v.*]), which dominated the Turkish political scene until 1950.

The one-party period was briefly interrupted by the appearance of two opposition parties. The first of these, the Progressive Republican Party (*Teraḳḳī-perver Djumhūriyyet Fırḳasi*) was formed late in 1924 among Kemāl's early close collaborators, including ʿAlī Fuʾād [Cebesoy], Kāẓim Karabekir, Raʾūf [Orbay], and Bekir Sāmī, rallied a total of 28 deputies, and was dissolved under the Law for the restoration of order (*Taḳrīr-i sükūn ḳānūnu*) on 3 June 1925. The other, called the Free Republican Party, was founded and dissolved at Kemāl's behest by his good friend ʿAlī Fetḥī [Okyar] (12 August-

18 December 1930). The transition to a multiparty system was announced by President Ismet Inönü in his speech of 19 May 1945, and as many as 27 parties were founded by 1950. The most prominent among these were the Democratic Party (*Demokrat Parti*), founded in 1946 by Celâl Bayar, Adnan Menderes, and other R.P.P. dissidents; and the Nation Party, formed in 1948 by Fevzi Çakmak [*q.v.*], Osman Bölükbaşı, and other dissidents from the D.P. The Democrats campaigned for a liberalization of the economy, for agricultural development, and a relaxation of the R.P.P.'s secularism; the Nation Party took a more intransigent tone of opposition toward the R.P.P. and later the D.P. and favoured religious conservatism.

The following table indicates the strength of the parties since 1946.

	1946(a)	1950	1954	1957	1961(b)	1965
% of eligible voters participating		89.1	88.8	77.2	81.8	71
% of votes						
Republican People's Party		40.0	35.3	40.9	36.7	53
Democratic Party		53.5	56.6	47.7		
Justice Party					34.8	29
Nation Party		3.3	4.9	7.2	14.0	8(d)
Others		3.2	3.2	4.2	14.5(c)	10
Republican People's Party	397	67	31	178	173	134
Democratic Party	59	416	504	424		
Justice Party					158	240
Nation Party		1	5	4	54	42
Others	6	3	1		65(c)	34
Total	462	487	541	610	450	450

Notes to Table: (a) No election figures available. (b) National Assembly only. (c) New Turkey Party 13.7% and 65 seats. (d) Nation Party and Republican Peasants' Nation Party.

Party organization, which between 1908 and 1945 had been limited to the cities and the educated class, since then has spread to the small towns and villages. It would appear that traditional local factions (*e.g.*, old residents versus recent migrants or clients of rival leading families) are easily absorbed into national parties. Election participation has been higher than in many Western countries, and the tendency has been toward a two-party system, both under the multiple-member plurality system that prevailed until 1960 and under the proportional system in effect since then. The suffrage, which had been limited to taxpayers under the Empire, was extended to all adult males in 1924 and females in 1934; and after 1946 the ballot became secret and direct. The elections of 1946 were held before the opposition had a chance to organize fully, and the count was not honest; those of 1954 and 1957 were marred by systematic harassment of the opposition; and in 1961 martial law prevented criticism of the governing junta. But the elections of 1950 and 1965 were free and honest, and the developments since the 1950's show that even mounting severity does not always suffice to suppress party division.

The D.P. was dissolved in 1960 and its leaders put on trial, Menderes and three others being executed. But the party revived in 1961 in the form of the Justice Party, which soon absorbed the smaller New Turkey Party. The Nation Party has changed its name and composition a number of times; in 1965 one of its offshoots was joined by Colonel Türkeş, the leader of the authoritarian dissidents of the 1960 junta. The Turkish Workers' Party (*Türkiye İşçi Partisi*) has attracted some intellectuals and trade union leaders and espoused a programme of radical or even revolutionary social and economic reform. Between 1961 and 1965 a number of coalition governments were formed, and for a time the military hierarchy continued to play an important political rôle behind the scenes; but the political contest increasingly has turned into one between the R.P.P. and the Justice Party, and in 1965 the chief issue between them was socialism versus free enterprise.

Bibliography: The leading work, Tarik Z. Tunaya, *Türkiyede siyasî partiler 1859-1952*, Istanbul 1952, contains a complete listing of all parties and similar groups founded during this period, together with the names of their founders and copious reprints from programmes and other documents. See also Frederick W. Frey, *The Turkish political élite*, Cambridge, Mass., 1965; K. H. Karpat, *Turkey's politics: the transition to a multi-party system*, Princeton 1959; B. iii.—Persia

The history of the emergence of political parties in Persia does not conform to the general Western liberal concepts of a polarization of communities of interest into organizations formed to carry out political action, which then enter the political arena via a variety of already established or revolutionary routes. In the writings and speeches of the reformers and modernizers of the last quarter of the 19th century—particularly those who were active outside Persia—there is a general awareness of the desirability of concerted group organization and action in order to achieve political goals, but there is no definition or advocacy of political parties, and the term *ḥizb* retains its traditional religio-sectarian connotation. Although the communities of interest which agitated

on behalf of the Constitutional Movement and participated in it can be differentiated and identified, the nature of the preparations which they made and the associations which they formed had neither the form nor the substance of "party" activity. Both the notions and the rudimentary formations of political parties in Persia emerged after the initial phases of the constitutional régime within the parliamentary framework which the constitution had created; and only to a limited degree had they any generic relationship to the various groups existing prior to the constitutional era. But even in the early years of the constitutional régime, when proto-partisan factions were developing in the *Madjlis*, it is difficult to ascertain the beginning of the accepted political usage of the term "*ḥizb*". Not until the period of the First World War and its immediate aftermath did *ḥizb* become the exact and commonly understood term for "political party" in Persia, and the acceptance of this usage coincides with the appearance of embryonic political parties having some semblance of a public base and an organizational apparatus, as distinct from mere parliamentary factions.

The factional lines were already emerging towards the end of the first session of the *Madjlis* (1906-8); and after the military conquest of Tehrān by the Constitutionalist forces in 1909 and the inauguration of the second session in the same year, two distinct groups known as *Dimūkrāt-i ʿĀmmiyyūn* ("Popular Democrats") and *Idjtimāʿiyyūn-i Iʿtidāliyyūn* ("Social Moderates") were formed. Although in their pronouncements and in the newspapers supporting them the terms *djamʿiyyat*, *firḳa*, and occasionally *ḥizb* were used interchangeably by these groups to describe themselves, their formal parliamentary organizations went by the French term *fraction*. The Democrats saw themselves as the revolutionary group, and were, in general, composed of Western-educated bourgeois elements. Their platform included general and vague references to: (1) 'separation of religion and politics', (2) 'distribution of land among the peasantry', (3) 'preference for indirect over direct taxation', and (4) 'opposition to the *Madjlis-i Aʿyān* (House of Notables)'. Some direct and residual influence of the Caucasian Social-Revolutionaries of 1905, as well as generally recognized western ideological influences, were present in this group. Their chief spokesmen were Sayyid Ḥasan Taḳizāda and Sulaymān Mīrzā. They were the minority *fraction* in the second *Madjlis*, numbering 28. The Moderates were made up of the aristocracy and the influential *ʿulamāʾ*; they were led by Mīrzā Muḥammad Ṣādiḳ Ṭabāṭabāʾī and were supported by the Regent himself. With 36 members and 38 supporters, they were the effective majority in the second *Madjlis*. In the same period several smaller "parties"—including one with the evocative name of *Ittifāḳ wa Taraḳḳī* ("Union and Progress")—appeared on the scene but made no impact.

The Democrats were defeated in their attempt to retain the American financial adviser Morgan Shuster, and the second *Madjlis* was dissolved in 1911 as a result of Russian pressure. In the three-and-a-half-year hiatus between the second and the third *Madjlis*, the Democrats underwent a subtle transformation. Their vague social revolutionary objectives receded in the crisis of national integrity and survival. And in the absence of a parliamentary stage on which to play their liberal rôle at the capital, they became the focus of the growing nationalistic sentiment in provincial towns. Inevitably they looked to the Central Powers as the source of hope and support against Russia and Britain. The presence of a number of Democratic leaders in Berlin and Istanbul helped the spread of this sympathy. The elections for the third *Madjlis*, the outbreak of the Great War, the end of the regency of Nāṣir al-Mulk, and the early reverses of the Allies are the factors that brought the Democratic party once more to the forefront of Persian politics. The stage was now set for the most drastic and symbolically the most significant, but in reality the completely futile step taken by that party, namely the establishment in 1915 of a Committee of National Defence, first in Ḳumm, and later at Kirmānshāh. This was in fact an attempt to set up a rival government in defiance of the Allies and in close contact with the Central Powers. The Great War brought about a virtual collapse of order and authority in Persia, but this period saw also the spread and intensification of nationalism. The Democratic party stood to benefit from the rising nationalist temper, but, being split by factionalism, it dissipated its opportunity. In the fourth *Madjlis* (1919-21) it forfeited its majority and, by dividing over the ratification of the proposed Anglo-Persian Agreement of 1919, it paved the way to its own dissolution.

The decisive event affecting the development of political parties in Persia—immediately and in the years to follow—was the October Revolution in Russia. The first avowedly communist party, *Ḥizb-i ʿAdālat* ("Justice Party"), was formed among the Persian nationals working in the oilfields of Baku soon after the October Revolution, and was imported into Soviet-dominated Gīlān in 1920. Its first congress was held in May 1920 in Enzeli (now Pahlavi) during the Bolshevik occupation of that city. Although *ʿAdālat* remained the only official communist party of Persia and was affiliated to the Comintern, yet, except for giving some impetus to an embryonic trade union movement, it did not make a significant and genuine penetration of the Persian scene. After the suppression of the Kūčik Khān revolt in Gīlān in 1921, *ʿAdālat* went underground and its membership dwindled. In 1927 it held its second congress jointly and in secret with the Turkish communist party in Urmiya (Riḍāʾiyya). It had already virtually withdrawn from Persia by 1931, when communist parties (*aḥzāb-i ishtirākī*) were formally outlawed.

Between 1921 and 1923 there emerged a number of pro-Soviet parties with socialist programmes, having a small popular base but with some influential journalists as their leaders. Under the leadership of Sulaymān Mīrzā (the former leader of the Democratic Party) and Riḍā Rūstā (both later members of the *Tūda* Party), these groups joined in a *Djibha-yi Millī* ("National Front") and took a vigorous part in the elections for the fifth *Madjlis*. They were severely suppressed by the government and only a few *Djibha-yi Millī* deputies were elected.

With the rise to power of Riḍā Khān, there appeared a few nationalist parties of the centre and the right, such as *Īrān-i Djavān* ("Young Iran") and *Ḍidd-i Adjnabī* ("Anti-Foreign"), led by his supporters but often acting as instruments of their personal intrigues. During the reign of Riḍā Shāh, political parties were proscribed. On one occasion in the 30's, probably in emulation of the Turkish model, it was decided to create a party as an aid for étatist propaganda and control, but preparations were interrupted in mid-course and the plan was dropped. In 1937 53 men were convicted for communist conspiracy. Their leader, Dr. Taḳī Arānī, was a German-educated

professor of physics at the University of Tehrān, who died in prison. Among the group were a few veterans of the leftist parties of the early 20's, but the majority, including Arānī, were intellectuals with no political and party experience. They later played a part in the formation of the *Tūda* ("Masses") Party in 1941.

The abdication of Riḍā Shāh, caused by the entry of British and Soviet troops into Persia in September 1941, brought about a revival in political life. The first reaction in the *Madjlis* and in the press was to view the last twenty years as an unhappy interlude. Outside the *Madjlis*, however, a development of true political parties was taking place. On 20 September 1941 the *Ḥizb-i Tūda-yi Īrān* was organized, and was launched publicly on 2 February 1942. Its platforms and propaganda characterized it from the start as a "democratic bourgeois national liberationist" party; its organization was strictly on communist models, although it was not until 1959 that the *Tūda* Party, from its exile in East Germany, officially called itself the Communist Party of Persia. By August of 1944, when its first congress was held in Tehrān, it claimed to have some 30,000 members. From 1942 to 1944 a number of parties were founded by various political figures. These all had liberal nationalistic programmes, very similarly worded, but in fact they ranged over the political spectrum from the socialistic Anti-Fascist League to the pro-Nazi *Ḥizb-i Milliyyūn-i Īrān*. In between were to be found *Ḥizb-i Hamrāhān, Ḥizb-i Sosyālist, ʿAdālat, Mardān-i Kār, Millat, Millī, Mīhan-parastān, Āzādī-khwāhān, Istiḳlāl*, and *Paykār*. None of these parties had any influence on the government and its policies, and they were little more than extensions of the political ambitions and intrigues of their leaders. Late in 1943, Sayyid Ḍiyāʾ al-Dīn Ṭabāṭabāʾī, the leader of the 1921 *coup d'état* which had brought Riḍā Khān to power, returned from exile and served as the focus of attempts to create an anti-*Tūda* party, which was first called *Waṭan* and was re-named *Irāda-yi Millī* in 1945. The *Tūda* was the only party to take part as an organized party in the electoral campaigns and the inauguration of the fourteenth *Madjlis* in 1944, eight of their members being elected. Shortly after the opening of the fourteenth *Madjlis*, two nationalist bourgeois parties were formed: *Ḥizb-i Īrān*, with a leftist intellectual membership, and *Ḥizb-i Mardum*, with a traditionalist leadership.

The years 1944-6 were a period of rapid growth and consolidation for the *Tūda*, owing to the growing power of the Soviet Union. By 1946 it claimed to have approximately 100,000 members. Meanwhile, more immediate Soviet support created separatist movements, which were spearheaded by *Ḥizb-i Djangal* in Gīlān, *Firḳa-yi Dimūkrāt* in Ādharbaydjān, and *Ḥizb-i Kōmala* (also called *Firḳa-yi Dimūkrāt*) in Kurdistān.

On 23 June 1946 the *Ḥizb-i Dimūkrāt-i Īrān* was founded by Aḥmad Ḳawām, then Prime Minister. The apparatus of the state and bureaucratic patronage were used to foster the rapid development and organizational spread of this party. First Ḳawām co-operated with the parties of the left, to the extent of including three *Tūda* members in his cabinet, and brought about the disintegration of *Irāda-yi Millī* and other rightist splinters. The collapse of the separatist régimes in Ādharbaydjān and Kurdistān, and in general the thwarting of Soviet aims in Persia in December 1946, were crucial factors in the decline of the *Tūda*, which was seriously weakened by loss of membership and by the defection of an anti-Soviet nationalist faction led by Khalil Malikī in 1947. Ḳawām and the *Ḥizb-i Dimūkrāt-i Īrān* entered the fifteenth *Madjlis* in near complete triumph. His only opposition came from Dr. Muḥammad Muṣaddiḳ who, together with a few remnants of *Ḥizb-i Īrān* and *Ḥizb-i Mardum*, formed the *Djibha-yi Millī* in the fifteenth *Madjlis*. The *Ḥizb-i Dimūkrāt-i Īrān* was split, and disintegrated just as rapidly as it had grown. From the end of 1947 began another period of general fragmentation and insignificance of political parties in Persia. *Tūda* efforts at regaining strength suffered another eclipse when, following an attempt on the life of the Shāh, it was formally outlawed in February 1949.

When the first disagreement with the Anglo-Iranian Oil Company served as the magnet of new nationalistic groupings and political activity, a new group of the extreme right, *Fidāʾiyyān-i Islām* [*q.v.*], took the limelight from the left as being the most radical anti-imperialist force in Persia. This was essentially a religious secret organization led by Nawwāb-i Ṣafawī. It first appeared in 1948 and drew its support mainly from some sections of the *ʿulamāʾ* (the most prominent of whom was Kāshānī), the urban proletariat, and traditional elements in the *bāzār*. Its distinctive political feature was the employment of terrorist gangs, which were successfully used against politicians accused of pro-British ties.

On 24 October 1949, during the electoral campaign for the sixteenth *Madjlis*, the *Djibha-yi Millī*, previously formed as a parliamentary *fraction*, was re-organized as a partisan political coalition. It included the *Fidāʾiyyān-i Islām*, and Muṣaddiḳ was only one of the leaders. Large numbers of their supporters, with the widespread support of nationalist bourgeois elements, were elected, and the stage was set for the virtual control of governmental policy by the *Djibha-yi Millī*. On 15 March 1951, the *Madjlis* passed the oil nationalization law; shortly afterwards a cabinet, composed mainly of *Djibha-yi Millī* members headed by Muṣaddiḳ, was formed and began efforts for the implementation of that law.

There followed another period of relatively free and vigorous political activity in Persia. A number of left-of-centre parties, the most important of which were *Nīrū-yi Siwwum* ("Third Force"—the *Tūda* dissidents led by Khalil Malikī) and *Ḥizb-i Zaḥmatkashān-i Īrān* ("The Toilers' Party of Iran") led by Dr. Baḳāʾī, appeared and joined the *Djibha-yi Millī*. A group of leftist front organizations also developed; this included the *Djamʿiyyat-i Ṭarafdārān-i Ṣulḥ* ("Partisans of Peace"), who demonstrated against the Korean war and United States advisers in Persia, and collected 50,000 signatures for the Stockholm Proclamation, and the *Djamʿiyyat-i Millī-yi Mubāriza bā Istiʿmār* ("League of Struggle with Imperialism"), which demanded the legalization of the *Tūda* Party. The *Tūda* itself made a comeback in support of nationalization policies. Although its chances of popular support were pre-empted by the *Djibha-yi Millī*, it succeeded in strengthening its secret structure and its striking ability among its civilian and military supporters. In 1953, when a number of nationalist supporters of Muṣaddiḳ moved to oppose him, the *Tūda*, though remaining ostensibly loyal, was acting to gain control of Muṣaddiḳ. Arrayed against the forces of the left, apart from the *Fidāʾiyyān-i Islām*, which split in two in 1951, were a number of ultra-nationalist and fascist-type parties, such as the Pan-Iranists and the *Sūmkā*.

The fall of Muṣaddiḳ in 1953 drove the *Djibha-yi Millī* into a circumscribed and largely futile opposition. The organization of the *Tūda* was broken and

its membership was decimated as much by suspicion of its anti-national rôle as by the vigilance of the new régime. The party was proscribed; some of its leaders were seized and others were sent into exile. Its central organization has been maintained in East Germany since the mid-50's. A number of extreme right parties: *Fidā'iyyān-i Shāh, Khalḳ, Āryā, Dhu 'l-Fiḳār*, and *23 Murdād* flourished briefly after 1953.

The development and activity of political parties in Persia has, by and large, been in recess since 1953. In 1960, attempts to create a loyal two-party system, of *Ḥizb-i Mardum* led by Asad Allāh ʿAlam and *Ḥizb-i Milliyyūn* led by Manūčihr Iḳbāl, failed. Since 1965 a *Ḥizb-i Īrān-i Nuwīn* ("Modern Iran") has been discreetly promoted more as an informal motivational framework for the members of the government than as a political party.

In general, it may be concluded that the period for the true political significance of parties in Persia has not arrived. Only the *Tūda* Party in certain stages of its history and Ḳawām's *Ḥizb-i Dimūkrāt-i Īrān* for a brief span have succeeded in creating the structure and organization of political parties of a totalitarian nature, and only the *Tūda* has had the element of ideological popular appeal. No broadly based, liberally oriented, loosely organized, viable party has developed. The ruling classes have continued to assume that the form of an institutional borrowing is conducive to the content desired. The interaction of the newly emerging phenomenon of political parties in Persia with the patterns of the exercise of power and the pull of tradition has profoundly affected the configurations and rôles of these parties. The electoral system and practices in Persia reflecting traditional patterns of power have rendered political parties largely irrelevant; while political traditions have often made the parties indistinguishable from personal schemes and functional tools of a recognizable traditional mould. As such, they have proved inadequate levers.

iv. — RUSSIAN AZERBAIJAN

No political parties existed in Transcaucasia until the last quarter of the 19th century. Before then, opposition had taken the form of peasant uprisings or conspiracies by the nobles against Russian rule. Modern political activity began in the reign of Alexander II (1855-81) in Georgia and Armenia, as a development from the cultural revivals, with strong nationalist overtones, which had grown up there in the middle of the century.

In comparison with Georgia and Armenia, Azerbaijan was politically backward. Only in Baku, a boom town, was there political activity, conducted mostly by Russians and Armenians. Never having been a nation, Azerbaijan was at a disadvantage. Its rising middle class and the intelligentsia had to solve the problem of their national identity before they could act.

Every Russian political party was represented in Baku, but none attracted a native following. Some wealthy Azerbaijanis associated themselves with the Constitutional Democrats (*Kadets*), while simultaneously promoting Muslim organizations.

In 1904 a small group of Bolsheviks made a conscious effort to attract Muslim workers in the Baku oil industry. Though they considered it most unorthodox to form a party on ethnic-religious lines, the Bolsheviks organized one, naming it *Hemmat* ("Endeavour", = *Himmat*, Russ. *Gummet*). This was essentially a front organization. Most of its early leaders were foreign Bolsheviks such as S. Shaumian, I. Stalin, and A. Japaridze. The *Hemmat* never assumed much importance and disappeared after the Sovietization of Azerbaijan in 1920.

During the revolution of 1905 the Muslims of the Volga, Crimea, Azerbaijan, and Turkestan formed a loose political party named *Ittifāḳ-i Muslimīn* (Union of Muslims). Its chairman was an Azerbaijani, ʿAlī Mardān Bek Topčibashev, who was politically close to the Russian *Kadets*. The *Ittifāḳ-i Muslimīn* elected Topčibashev to the first Duma in 1906. In the second Duma, Azerbaijanis were represented by Muslims who were members of the Russian *Kadet* party. On the whole *Ittifāḳ-i Muslimīn* accomplished very little, though some of its members later held important positions in the government of independent Azerbaijan.

The most important Azerbaijani party was the *Musāwāt* (Equality), founded in 1911 by a group of Azerbaijani intellectuals who had been previously associated with the Russian Social-Democratic Workers' Party. The leader of the *Musāwāt* was the journalist Muḥammad Amīn Rasūlzāde, who had taken part in the Persian revolution against Muḥammad ʿAlī Shāh Ḳādjār. Like many of his contemporaries, he had been exposed simultaneously to European nationalism, Russian Marxism, and the Pan-Islamism of Djamāl al-Dīn Afghānī. The *Musāwāt*'s programme reflected all these irreconcilable theories: the unity of all Muslims irrespective of nationality or sect, the restoration of the independence of all Muslim peoples, aid to all Muslims, the development of Muslim economic life.

In spite of its ideological and organizational weakness, the *Musāwāt* emerged as the strongest force in Azerbaijan (but not in Baku, where the Bolsheviks and the Dashnaks predominated) after the collapse of Russian authority in 1917. It participated, though unenthusiastically, in the formation of the Transcaucasian Federation and, in spring 1918, proclaimed the independence of Azerbaijan. The *Musāwāt* was the strongest party in the government which was established in Baku in September 1918 after the Turks had occupied the city.

The rule of the *Musāwāt* was brief. The party was beset with insoluble problems. It failed to implement its promises of land reform, but did open a university in Baku. Neither the *Musāwāt* nor anyone else could defend Azerbaijan against Soviet Russia. In April 1920 the Red Army occupied Baku and the *Musāwāt* ceased to exist.

v. — Volga region and Central Asia

Before 1905, in European Russia as in Central Asia, the formation of organized political parties was as difficult among the Muslims as among the Slav inhabitants. Nevertheless, their possession of a common language and creed (almost all the Muslims were Turks, except for a few Caucasian tribes and the Tādjiks; and, except for the Ādharbaydjānīs, almost all of the Muslim inhabitants were Sunnīs) had already in the 19th century led to the formation of a strong community feeling on a common basis, which was to prove a solid foundation within the framework of the party structure. Furthermore the number of Muslims and Turks was greatly increased through the Russian conquests in Central Asia in the second half of the 19th century; old ties were revived between those lands and the Volga region with the possibility of mutual influences. This led to a great increase in the self-assertion of the Muslims.

The political revolution of 1905 with the formation of an imperial Duma unleashed a powerful movement among the Muslims. Under the leadership of prominent citizens, among whom the Tatars very soon played a leading rôle, it was decided on 8 April 1905 to convene a "First all-Russian Muslim Congress" in Nižniy Novgorod (now Gor'kiy) for 15 August 1905; this was followed by two further congresses in 1906 and 1907. They were of great importance also for the formation of parties, since at them the representatives of all the individual peoples, and also of all political opinions, met together and discussed common action. They concerned themselves mainly with the publication of newspapers and periodicals, with the establishment of elementary and secondary schools of truly Turkish-Muslim character and free from interference from the Russian authorities, with questions of cultural autonomy, and with relations with the Russian state and people.

There emerged, however, two basic schools of thought which, although they were fundamentally in agreement over many issues, yet led to the formation of two parties: (1) progressive-minded clerics, merchants, landowners and others formed the group of the "Muslim Union" which occupied itself principally with the furthering of national and religious interests and which (since they thought that among them they would most readily find understanding of their aims) inclined towards the "Constitutional Democrats" (generally abbreviated to "*Kadets*"), a bourgeois leftist-liberal group consisting of the educated Russian middle-classes and many professors; (2) a number of younger representatives, among them teachers, lawyers and publicists, rejected co-operation with any Russian political party, since they would thus bind themselves ideologically, and advocated—at least as an objective—complete independence and socialist ideals; this policy, which they tried to carry out chiefly against the Russian government, led them into the company of the Russian social-revolutionaries. Many of their leading personalities later, especially during the emigration, became ardent nationalists. In the first Duma (10 May-22 July 1906), with a majority of "*Kadets*", the Muslims were represented by 25 members, of whom six had signed the "Viborg manifesto" of the socialists. In the second Duma (5 March-16 June 1907), there were 35 Muslim members, among them 29 members of the "Union". The remaining six constituted the "Muslim Work Group" (*Müsülmānlarnïñ khidmet ṭā'ifesi*) which, under the leadership of Ayāz Isḥāķī, represented socialist ideas, while recognizing Islam and "Turkishness" as the basis of their national life. After the sweeping limitation of the franchise the third Duma (14 November 1907-1912) included only nine Muslim members (3 from Ufa, 2 each from Kazan and the Caucasus, one each from Orenburg and the Crimea; the inhabitants of Central Asia had lost their right to vote). The fourth Duma (1912-1917) included only seven members, six of whom were members of the "Islamic group" and one Lesghian.

On the whole the Muslims very rarely got a hearing during the proceedings and furthermore met with the rejection by the Russians of their claims, especially in the third and fourth Dumas. Nevertheless there was the possibility of joint discussion, the activity of a press (though frequently suppressed by the Russian censorship) and the ventilation of topical questions of concern to Muslims. The Muslims became conscious of their numbers and their influence, and began gradually to break away from their hitherto characteristic alignment with Ottoman Turkey and to concentrate on coming to an arrangement with the Russians from whom, as the bearers of European ideas, they also learned and adopted much. Yet a part of the Muslim clergy (who opposed all Western ideas as being harmful to Islam) supported complete isolation.

In any case the Muslims in Imperial Russia gained the principle of equality of rights when the two revolutions of 1917 gave a new status to all the population. Among the Turks in the Volga region there came into prominence at the "National Congresses" of 1917 and 1918 the question of whether they should advocate merely cultural autonomy or also a territorial autonomy (within the frame of the Idel-Ural state: Idel is the Tatar name for the Volga), and also the question of relations with Communism. In addition to this there was the question of a choice between an amalgamation of Tatars, Bashkirs and possibly Čuvashes, and their separate organization. In the Crimea the "National Party" (*Millī Fïrķa*), as representatives of the Crimean Tatars, who were a minority, came to an agreement in 1917 with the Ukrainians, whose leading rôle was recognized also for the Crimea. In addition, efforts which had been made during 1918, partly in co-operation with German troops which had arrived there, to achieve a territorial secession of the Crimea broke down in November 1918, and ceased entirely, as did all other party-political activity, with the occupation of the Crimea by Bolshevik troops in November 1920.

In Central Asia, the two 1917 revolutions gave rise to various movements which were directed as much against the Russian settlers or the Russian administration as against the conservative Muslim clergy or the rule of the *amīrs* in Khīva or Bukhārā. Among the Ķazakhs, the National Council (*Alash-Orda*) strove in several congresses for a merely federal incorporation into the new Russia and turned against the Bolsheviks. But as early as 1919-20 the country was subdued by the Russians (= Bolsheviks). In Turkestan, the conservative and the progressive (*Djedīd*) circles united in discussions which went on for months on the formation of a "Decentralization Party", which rejected the Russian policy of centralization and obtained from the Bolsheviks guarantees of their religious and national freedom, of the reten-

tion of private property and of a Sharīʿa system of jurisdiction; until, in 1922, the Bolsheviks prevailed in fierce struggles against the Basmačí [q.v.] movement and had also brought under their control the two emirates, where the "Young Bukhāran" party co-operated with them.

For both the Volga region and Central Asia, the victory of Bolshevik rule within the former boundaries of Imperial Russia (which were finally fixed in 1895) meant the sole rule of the Communist Party. Within the framework of its changing policy, which during the 1920's was quite open with regard to national claims, there were repeated political struggles, which finally led the the eradication of the so-called "National Deviations" (named Sultangalievshčina after one of the prominent Tatar leaders, Sultan Galiev [q.v.]) and to the establishment of the Communist Party also in the Muslim districts in the federative states of that time. However, since national aspirations remained alive and had to be accommodated to the demands of the state party, the leadership of the Communist Party in these districts had frequently changed. The very responsible position of Second Secretary remained for the most part in the hands of a Russian or a Ukrainian, while the party leadership was usually given to a native inhabitant (for 1966, see the lists published in *Ost-Probleme*, xviii/10 (Bonn 1966), 318 f.). There cannot, however, after this be said to have been any independent party-political activity among the Muslims of the U.S.S.R.

vi.—India and Pakistan

The word *ḥizb* in the sense of political party occurs almost exclusively in compound expressions modelled on Arabic and Persian. The opposition party would be *ḥizb-i mukhālif* or *ḥizb al-ikhtilāf*; similarly *ḥizb al-aḥrār*, *ḥizb al-ʿummāl* and *ḥizb al-mustabiddīn* would denote respectively the Liberal party, the Labour party and the Conservative party. But in the general sense of political party, the current expression is *siyāsī djamāʿat*, although we also find the term *pārti*, taken directly from English.

In India, the modern notion of a political party is relatively recent and, before the partition of the Indian sub-continent in 1947, two major parties represented the two political groups which led to the creation of the new India (*Bhārat*) and Pakistan: the Congress Party, with nationalist, pan-Indian tendencies, and the All-India Muslim League which favoured the re-grouping of Indian Muslims in an autonomous territory.

The All-India Muslim League was set up on 30 December 1906 at Dacca on the suggestion of the Agha Khān. At the start it constituted a cautious move in the attempt to obtain recognition by the British authorities of certain political rights for the Muslims. When the Agha Khān and Amīr ʿAlī, alarmed by the nationalistic demands of the Muslim League, withdrew from the party, a reconciliation took place between the Congress Party and the Muslim League: after 1915, the two organizations held their annual meetings simultaneously and in the same town. It was at that point that Muḥammad ʿAlī Djināḥ tried to make himself the representative of Indian unity and to reconcile the somewhat divergent points of view of the Congress Party and the Muslim League. This tactical unity lasted throughout the whole period of effervescence caused by the abolition of the Caliphate but, from the end of 1927, the two organizations grew apart, never again to combine their efforts for Indian independence. Djināḥ therefore realized that the Muslim League must become a popular movement, and no longer remain a clique of landed proprietors and the rich if it wished to attain its avowed objectives—the defence of the Muslim element among hostile surroundings (mainly Hindu), the establishment of separate electoral colleges, and the setting up of an Islamic nation in the Indian sub-continent. The resolution adopted by the Muslim League in 1940, during the special session held at Lahore, called specifically for the partition of India on a religious basis in order to safeguard the interests of the Muslim community; and in 1942 the Muslim League could claim to be the only organized party capable of leading an effective political course of action in favour of an Islamic State still unborn. Until 1947, the three expressions Muslim League, Islam and Pakistan were to be practically synonymous for the majority of the Muslims of North India.

After the partition of India, the *Ḳāʾid-i Aʿẓam* Muḥammad ʿAlī Djināḥ, President of the Muslim League, became the first Governor-General of Pakistan and Liyāḳat ʿAlī Khān the Prime Minister. These two men made it possible for the new State, in its first months, to overcome the considerable obstacles posed by a deficient economy and a social situation rendered tragically critical by the influx of Muslim refugees. After the death of Muḥammad ʿAlī Djināḥ in 1948 and that of Liyāḳat ʿAlī Khān in 1951, the Muslim League lost its dynamism and suffered severe electoral defeats, especially in East Pakistan. Until 1956, the leaders of the party did in fact hold the reins of government. Early in 1956 the new President of the Muslim League, Sardār ʿAbd al-Rabb Nishtār, followed by the other party leaders, decided that in future ministers could no longer hold office within the party and asked the deputies of the provincial Assembly of West Pakistan who were members of the Muslim League to form themselves into a parliamentary party. Despite these salutary measures, the Muslim League was unable to regain its earlier popularity. It was, however, disbanded like the other political parties when martial law was proclaimed in October 1958.

The Aḥrār Party was organized in 1930 with the aim of enabling a Muslim group to participate directly in the Civil Disobedience campaign launched by Gandhi. For several years it took a part in the struggle alongside the Congress Party, but its activities were for the most part limited to the province of the Pandjāb, where it showed itself to be fiercely anti-British and attempted to deprive the Muslim League of a section of its electoral supporters. Its success depended too greatly on the personality of its leaders, outstanding among whom was ʿAṭā' Allāh Shāh Bukhārī, a brilliant orator and consummate demagogue. From 1942, when the Muslim League had become a popular party, the influence of the Aḥrār Party declined rapidly, and many of its followers rejoined the ranks of the Muslim League. In 1947, at the time of the Partition, the Aḥrār Party disappeared almost completely. It was only in 1953, during the riots directed against the Aḥmadiyya community, that it reappeared for a time and appealed, with some success, to popular religious emotions.

Among the groups representing Islamic nationalism, the Khāksār movement had a brilliant period between 1930 and 1942. Its undisputed leader, ʿAllāma Mashriḳī, imposed an extremely rigid discipline upon it; military training and social service were the two essential characteristics of the party. The imprisonment of ʿAllāma Mashriḳī and a large number of its members almost entirely crippled the movement which, after 1945, existed only in theory.

The party of the Khudā'ī Khidmatgār (Servants of God) exerted any real influence only in the North-West Frontier Province, where it gave support to the Indian Congress Party. Its leader, ʿAbd al-Ghaffār Khān, turned it into a religious movement that was destined to organize and discipline Pathan nationalism. Its members were familiarly known as "Red Shirts". After Partition, the movement lost much of its prestige when ʿAbd al-Ghaffār Khān asked his followers not to take part in the struggle for Kashmir.

The Krishak Pradjā Party (Peasant Party) was founded by Faḍl al-Ḥaḳḳ as early as 1927, and was always confined to the province of Bengal. In 1937, Faḍl al-Ḥaḳḳ became Prime Minister of a coalition government in Bengal, but as the Congress Party did not give him the overall support that he demanded, he decided to abandon his party and to join the Muslim League, which however expelled him at the end of 1941. In May 1944 his government was compelled to resign, and it was then that the Muslim League came to power in Bengal. Faḍl al-Ḥaḳḳ became a member of the Constituent Assembly of Pakistan in 1947, and then Advocate-General for East Pakistan in 1951. In September 1953 the opponents of the Muslim League formed the Krishak Srāmik Party (Labour and Peasant Party), once again headed by Faḍl al-Ḥaḳḳ, who demanded the provincial autonomy of Bengal within the framework of Pakistan. Faḍl al-Ḥaḳḳ, now over eighty, was once again appointed Prime Minister of Bengal in 1954, but the central government dismissed him shortly afterwards. Minister of the Interior in the central government in 1955, and then Governor of East Pakistan, Faḍl al-Ḥaḳḳ was once again forced to resign. The Krishak Srāmik Party, believing his personality to be indispensable, invited him to resume leadership of the party some time before the proclamation of martial law in October 1958.

The ʿAwāmmī League (People's Party) owes its existence to the repeated efforts of Ḥusayn Shahīd Suhrawardī to organize a parliamentary opposition group of the Western type. Despite the establishment of parties with almost the same title in the North-West Frontier, Pandjāb and Sind provinces, and despite the congress held in Lahore in December 1952 to set up the Djināḥ ʿAwāmmī Muslim League, it was in fact only in Bengal that the movement was able to play a very significant part. Its social aims included the abolition of the great landed estates, nationalization of the jute and tea industries, and the rapid development of education and social services. Politically, it called for the autonomy of Bengal within the framework of Pakistan, and also the recognition of Bengali as a national language. When Suhrawardī became Prime Minister of the central government in September 1956, the President of the organization, Mawlānā ʿAbd al-Ḥamīd Khān Bhashānī, gave up his position as a protest against Suhrawardī's political manoeuvre whereby he went straight from the opposition to power. Mawlānā Bhashānī even formed a new party with the name National ʿAwāmmī Party, which, as a result of the banning of political parties in October 1958, had only a brief existence.

The Republican Party was set up in April 1956 by Dr Khān Ṣāḥib to take advantage of the conflicts among the various factions of the Muslim League in West Pakistan. Its programme, which throughout its two congresses held in September 1956 and September 1958 was far from precise, called for a democratic and liberal policy on the part of the government. These good intentions were belied by the actions of the Republican Party when in power. By its devious tactics, first in coalition with the Muslim League and then with the ʿAwāmmī League, it precipitated the crisis which was to lead the army to seize power in October 1958. The bloodless revolution carried through by Field-Marshal Ayyūb Khān put an end to the corrupt parliamentary régime, which threatened to provoke a national catastrophe in Pakistan.

The political parties, banned in Pakistan from 1958, were able to reappear on 14 July 1962, on which date the National Assembly voted an amendment to the Constitution of 1 March 1962. This amendment stipulated that no political party should prejudice the Islamic ideology, the stability or the integrity of Pakistan, or receive any aid whatsoever from a foreign country.

The Muslim League immediately resumed its activities, but the two provincial sections of the movement disagreed over certain points: while the Western group intended to bring younger blood into its organization, thereby following the advice given by Field-Marshal Ayyūb Khān, the Head of State, the Eastern group wished to adhere to the tradition of the old Muslim League. The first party congress was held in Karachi on 4 and 5 September 1962; it nominated Khalīḳ al-Zamān as chairman of the organizing committee of the League. A second congress was held in Dacca on 27 October, attended by a certain number of former "counsellors" of the party, who elected as president Khwādjā Naẓīm al-Dīn, the former Governor-General and Prime Minister.

Furthermore Suhrawardī, who had been arrested on 30 January 1962 on a charge of treason, was released from prison and, on 4 October 1962, he succeeded in forming the Democratic National Front which included among its members various former politicians of both East and West Pakistan.

Finally, Field-Marshal Ayyūb Khān, Head of State of Pakistan, who since the promulgation of the Constitution of March 1962 had made clear his wish

to remain above party, decided to become a member of the rejuvenated Muslim League: he joined it on 22 May 1963.

After the Partition of 1947, the All-India Muslim League ceased to play an essential part in politics in the new India. An Indian Muslim League does however exist, which is of some slight influence in the South only, in the states of Madras and Kerala. In 1960, this Muslim League conducted a victorious electoral campaign in co-operation with the Congress Party and the Indian Socialist Party to prevent the Communists from returning to power in the state of Kerala.

vii.—Indonesia

In the years before independence, Indonesia did not succeed in developing any equivalent of the Indian National Congress. Political parties came into existence, splintered, coalesced and disappeared, in numbers and with a fertility reminiscent of the Indonesian islands themselves. The first party to achieve a mass following was *Sarekat Islam* [*q.v.*] (Islamic Union), founded, on the basis of an earlier and more limited association of Muslim merchants, in 1912. Its following grew rapidly on the tide of Muslim revival and anti-colonialism, but it was increasingly penetrated and controlled by more secular political elements, and its influence and popular backing thereafter declined. Its place was to some extent taken by the Islamic reform organization *Muhammadijah* and the Islamic traditionalist organization the *Nahdatul Ulama*. In 1920 the more radical Marxists founded the Communist Party of Indonesia (*PKI*), which, until its eclipse following an abortive coup in the years 1926 and 1927, took up the running. In 1927, leading Indonesian nationalists, including Dr. Sukarno, founded the Nationalist Party of Indonesia (*PNI*), in the hope of creating a united nationalist movement. In this they were unsuccessful, but the name and the initials survived as important political symbols, to be resurrected in the post-independence period. Under the Japanese, as under the Dutch, political movements proliferated and were characterized by impermanence, but one significant move was the welding together of *Muhammadijah* and *Nahdatul Islam* into one Muslim organization, *Masjumi*.

Independence was declared on 17 August 1945, and all significant groupings rallied to Dr. Sukarno as President of the new Republic of Indonesia. It was at first intended that there should be a single political organization, but calls soon arose for the legalization of political parties. When this was permitted, three assumed prominence. These were the *Masjumi* (Consultative Council of Indonesian Muslims), partly based on the earlier war-time organization; the Indonesian Nationalist Party (*PNI*), many of whose leaders had once been active in the old *PNI*; and the Socialist Party, which was soon to split into a democratic wing taking the name of the Socialist Party of Indonesia (*PSI*), and a left wing. The latter was largely absorbed in a re-formed *PKI*, but this, like its precursor, was to have a short effective life, for it was again suppressed after an unsuccessful coup (1948).

After the Dutch conceded independence, in 1949, there followed a period of experiment with constitutional democracy on the Western pattern. At first two parties—the *Masjumi* and the *PNI*—dominated the governing coalitions, and by and large the *PSI* was sympathetic to their aims, which were moderate. After 1953, however, new alignments began to emerge. The recovery of the *PKI* had become noticeable after 1952, and it tended to throw its weight behind the more radical wing of the *PNI*, thus detaching it from *Masjumi* and the *PSI*. The new coalitions, supported by the communists, included the *PNI*, the *Nahdatul Ulama* (which had broken away from the *Masjumi* in 1952; being more strongly anti-Western, it could reconcile more conservative religious attitudes domestically with more anti-imperialistic policies externally), and a number of minor nationalist and Islamic parties. After the first, and so far the last, general election in 1955, four main parties emerged—the *PNI*, *Masjumi*, *Nahdatul Ulama* and the *PKI*. An attempt was made to govern by means of coalitions embracing all the major non-communist parties, but this failed. The parties continued to show themselves incapable of constructive co-operation and, outside the *PKI*, incapable of sustaining even internal cohesion. In the years 1956 to 1958, the existing Parliamentary system was replaced by "Guided Democracy", in which real power ebbed away from the parties and lodged instead in the President and the Army. The *PKI*, however, continued to play a crucially important rôle, enabling President Sukarno to maintain his own position in relation to the armed forces.

The 1945 Constitution was re-enacted by Presidential decree in July 1959. This temporarily put an end to an ideological debate which had racked the young republic from the beginning, and had underlain many of the political divisions, namely what was to be the rôle of Islam in a predominantly Muslim country. Ninety per cent of Indonesians were said to be Muslims, but on the other hand there was a clear distinction inside this majority between the devout and the nominal. President Sukarno had consistently argued and manœuvred against making Indonesia an Islamic state, on the grounds that all opinions represented in the republic must be tolerated and embraced. The 1945 Constitution was based, largely on his insistence, not on Islam, but on his own *panča šila* ("five foundations", see dustūr, p. 663), of which the first was, not acceptance of Islam, but simply belief in one God. Parties wishing to retain a legal position under Guided Democracy had to be prepared to acknowledge and accept the *panča šila*, and this a handful of parties, including paradoxically the *PKI*, did. The *PKI*, which had earlier in its career antagonized Muslims by a dogmatically Marxist position vis-à-vis religion, was now guided by leaders who had drawn the moral of the two disasters of 1926-27 and 1948, and were con-

vinced that the only way to power was through slow and careful building up of support by legitimate means throughout the country without risking further suppression. The *Masjumi* and the *PSI* were, in contrast, banned in 1960, partly as a result of the complicity of a number of their leaders in the anti-Sukarno revolt of 1958 in Sumatra. In 1961 and 1962, a number of troublesome Islamic revolts were also crushed, including a major one; led by *Darul Islam*, a fanatically Muslim organization, which had lasted for thirteen years in West Java. A National Front was formed in August 1960, in which the surviving parties were obliged to participate, for example by helping to disseminate Sukarnoist ideas. As compared with the pre-1958 period, the parties had suffered badly by the introduction of Guided Democracy in respect of their freedom of political action and movement. The banning in 1965 of *Partai Murba*, a left-wing nationalist but anti-communist party, continued the process of political simplification and polarization.

However, Islam continued to play a vital political rôle in the opposition which its organized manifestations put up at all levels, from the village to the Governmental, and in all social organizations and strata, to the steady accretion of strength to the *PKI* and its various "front" organizations. Clashes between Muslims and communists were common, and culminated in the aftermath of the "September 30 Affair". This was an attempted pre-emptive left-wing coup in the face of threatened suppression of the *PKI* by the Army in 1965, and its failure precipitated nation-wide massacres in which untold thousands of communists and their supporters were killed. At the time of writing (March 1966), it is not yet clear what the attitudes of the new Army leaders in Indonesia will be either to Islam or to the political parties, but already the *PKI* has been banned.

(J. A. M. CALDWELL)

ḤIZḲĪL, the biblical prophet Ezekiel. His name does not occur in the Ḳur'ān, but traditional exegesis regards him as that prophet of the people concerning whom the Ḳur'ān speaks in these words (II, 243/244): "Hast thou not regarded those who went forth from their habitations in their thousands fearful of death? God said to them "Die!", then He gave them life" (tr. A. J. Arberry). According to exegetic tradition, this took place in the time of the prophet Ḥizḳīl b. Būdhī (or Būzī, corrupted into Būrī; in the Bible בוזי Buzi—Ezekiel, I, 3); the immediate cause of this mortality was an outbreak of plague (*ṭā'ūn*); and the description given of the resurrection (a temporary one, until the predetermined term of life—*adjal* [*q.v.*]) of these people is manifestly inspired by Ezekiel, XXXVII, 1-10, amplified by rabbinical narrations (see especially Babylonian Talmud Sanhedrin 92b). In certain recensions the episode is dated to the intermediate period between Joshua and David; others place it in the reign of Daḥḥāk [see ZUHĀK] or even in the time of the prophet Daniel.—Ḥizḳīl (his name is also written Hizḳīl) is said to have been *ibn al-'adjūz*, a child born late in life to a mother who, at a very advanced age invoked God, begging for offspring, and whose prayer was answered (a garbled reminiscence of the birth of Samuel). A tradition of obscure origin gives the name Ḥizḳīl (or Ḥirbil) to the "believer in Pharaoh's family" left unnamed in the Ḳur'ān (XL, 28/29). This man is said to have constructed the casket in which Mūsā [*q.v.*] was entrusted to the river.

(J. EISENBERG-[G. VAJDA])

ḤMĀD U-MŪSĀ (SĪDĪ), great saint of southern Morocco and patron saint of Sūs, was born about 864-5/1460 at Bū Merwān in the territory of the Ida u-Semlāl, at the western extremity of the Anti-Atlas. He died, after living more than a century, in 971/1563, and is buried in the region of Tazerwalt where crowds still come to venerate his tomb.

Ḥmād u-Mūsā adhered to the *ṭarīḳa* [*q.v.*] founded in the 9th/15th century by Abū 'Abd Allāh Muḥammad al-Djazūlī [see AL-DJAZŪLĪ]. This last had devoted himself to spreading the teaching of al-Shādhilī (7th/13th century), himself a disciple of the famous 'Abd al-Salām b. Mashīsh [*q.v.*], whose master was the great Andalusian *ṣūfī*, Abū Madyan [*q.v.*].

Al-Shādhilī's school recalls, in some aspects of its teaching, that of the unworldly Franciscans. It forbids monasteries and bids its members lead a wandering and contemplative life, without resorting to begging. This suited Ḥmād u-Mūsā, who enjoyed travelling. In the course of his stormy youth, he liked to wander across the country in cheerful company. Touched by divine grace, he undertook the classic journey to the East and went as far as Baghdād. On his return to Morocco, he visited Marrākush, Taroudant, and finally Bū Merwān, his native village. Then he gave up these lengthy journeys to found a *zāwiya* in the Tazerwalt region, situated at the south-west edge of the Anti-Atlas.

By a kind of transmutation well known in the Maghrib, and upon which there is no need to elaborate here, the saint became a Marabout, spiritual head of a community and father of a vigorous dynasty destined to reign in the Tazerwalt, which became a kingdom independent of the Makhzen.

In the 10th/16th century, Ḥmād u-Mūsā supported the Sa'dī Shorfa who were fighting the Portuguese; but very soon his successors cut themselves off from the central power and founded the kingdom of Tazerwalt with Iligh as its capital.

The first half of the 11th/17th century was the

apogee in the history of this kingdom. Sīdī ʿAlī, grandson of the Marabout and the foremost member of the dynasty, felt strong enough to make a bid for the S̲h̲arīfian throne against Aḥmad al-Manṣūr's successor. However, towards the end of his reign, the power of Ḥmād u-Mūsā's descendants, which extended greatly beyond the boundaries of Tazerwalt, was threatened by the progress of the ʿAlawī S̲h̲orfa of Tafilelt. The second half of this century brought the temporal power of the Marabout's descendants to an end for at least a hundred years. Indeed, the kingdom was unable to withstand the strength and energy of the ʿAlawī sultans, Mawlāy al-Ras̲h̲īd and Mawlāy Ismāʿīl.

Between the end of the 18th century and the end of the 19th, the Ulād Sīdī Ḥmād u-Mūsā regained their power, but the Sultan Mawlāy al-Ḥasan (1290-1311/1873-94) took it from them again.

From then on, although the princes of Tazerwalt had lost their kingdom, yet their spiritual authority, thanks to Ḥmād u-Mūsā, still remained intact down to the beginning of the 20th century. Large crowds continue to assemble for the three annual pilgrimages (March, April and September) around the tomb of Ḥmād u-Mūsā, who has remained the patron saint of travellers and the great saint of the Sūs.

Bibliography: A few lines on him can be found scattered among a dozen or so pages (see index s.v. Ahmad Ou Mousa) in R. Montagne, *Les Berbères et le Makhzen dans le Sud du Maroc*, Paris 1930. In the first place one should consult: L. Justinard, *Notes sur l'histoire du Sous au XVIe siècle*, in *AM*, xxix (1933); Dj. Jacques-Meuniz, *Greniers-Citadelles au Maroc*, Paris 1951 (the chapter *Chronique du royaume de Tazeroualt*, 198-217, very clearly expressed, is an excellent résumé of the history of the house of Tazerwalt from the 16th to the 20th century); L. Justinard concluded his research on the kingdom of Tazerwalt by publishing his notes as a small treatise called *Un petit royaume berbère, le Tazeroualt, un saint berbère Sidi Ahmed ou Moussa*, Paris 1954; the author gives here the Arabic manuscript sources for the life and legends concerning the saint. HOMILETICS [see WAʿẒ].

HONOUR [see ʿIRḌ, MUFĀK̲H̲ARA].

HORDE, term originating from the Turkish *ordu*, via the Russian *ordá* and Polish *horda*, and assimilated into European languages from the 16th century onwards, is the name given to the administrative centre of great nomad empires, particularly also to the highly adorned tent of the ruler (cf. the Golden Horde); then to such nomad confederacies themselves, insofar as they formed a tenuous association linked to no particular place, substantially different in their way of life and government from the settled population, and inflicting considerable damage on this population by their marauding attacks. In the Islamic world it was mainly the Turkish and Mongol conquerors of the 7th/13th century onwards who ruled their empires from a tented encampment. The rulers of such states often remained for decades in this non-sedentary life, migrating with their court and the nucleus of their people according to the rhythm of the seasons, between northern and southern (high and low-lying) areas. Their tents, not only living quarters, but mosques and churches, as well as the harem, were transported on carts (*araba*). The wanderings of such a horde (for the Golden Horde, see BATUʾIDS) were described in detail by the Flemish traveller William of Rubruck, 1254-56, and by Ibn Baṭṭūṭa [*q.v.*] in 1333 (Ibn Baṭṭūṭa, ii, 379-87, 398-412, trans. Sir Hamilton Gibb, ii, Cambridge 1962, 481-5, 490-8; condensed in Spuler, *Horde*², 264-6). When the peoples of these nomad empires gradually became sedentary, they grew accustomed to a particular place of residence and to permanent wooden or stone houses, and their rulers built themselves palaces (Sarāy, Tabrīz, Sulṭāniyya, Ḳara Ḳorum, K̲h̲ānbalik = Peking, Ḳars̲h̲i in Central Asia, etc.; see these articles). Thus the original "horde" gradually disappeared from the Islamic world from the 11th/17th century onwards; nevertheless, the raids of the Crimean Tatars in Podolia and Wolhynia (well into the 12th/18th century) and the marauding attacks of the Turkmens into northern Persia as late as the 19th century kept alive the memory of this kind of state. For a long time, too, in Islamic states, military units were quartered in tented encampments or barracks, which (like the Roman Pretorian Guard or the bodyguard of the ʿAbbāsids) were situated at some distance outside the capital and other large cities, to prevent their becoming a danger to the rulers or the population, or lending support to insurrections. Soldiers in such military encampments (to which too the name of *ordu* was given) could usually be quickly installed (cf. the Janissaries). A lingua franca often developed amongst them. In these camps in central and western Asia in the 8th/14th century, Turkish replaced Mongol as the language of the nomad invaders and of the court. A similar function was fulfilled by the military encampments of the Muslim rulers of Northern India, particularly the Great Moguls. The language which developed here, a mixture of Hindu, Persian and Arabic elements, was recognized after 1947 as the official language of Pakistan, and still bears today the name which reveals its origin, Urdu [*q.v.*].

HUBAL, an Arabian god whose worship was fostered in Mecca by the K̲h̲uzāʿī ʿAmr b. Luḥayy [*q.v.*] in the first half of the 3rd century A.D. Represented at first by a baetyl, like most of the Arab deities, it was later personified, with human features, by a statue made of cornelian, with the right arm truncated (cf. Judges III, 15, XX, 16) and which the

Ḳurayshīs are said to have replaced by a golden arm (al-Azraḳī, *Akhbār Makka*, ed. Wüstenfeld, Leipzig 1858, 74). It was from a town with thermal springs (*ḥamma*) that it was apparently brought to the Ḥidjāz. Having come there to bathe in the waters and thereby being cured of a serious illness, ʿAmr b. Luḥayy, it is said, had taken back this statue with him. As to its place of origin, tradition hesitates between two towns. For al-Azraḳī (31, 58, 73), this town is Hīt in Mesopotamia, a town situated on the Euphrates, and on the edge of the desert (al-Masʿūdī, *Murūdj*, iii, 328; Yāḳūt, 997-8; cf. R. Dussaud, *La pénétration des Arabes en Syrie avant l'Islam*, Paris 1955, 86, n. 2), and today still renowned for its springs of bitumen (cf. E. Dhorme, *Recueil*, Paris 1951, 749); for others (Ibn Hishām, 51; al-Masʿūdī, *op. cit.*, iv, 46; Yāḳūt, iv, 652 ff.; al-Shahrastānī, 431), it is Maʾāb, in the district of al-Balḳāʾ, in Transjordania.

Having asked the local inhabitants what was the justification of their idols, ʿAmr b. Luḥayy is said to have received the following reply: "These are the lords (*arbāb*) whom we have chosen, having [simultaneously] the form of the celestial temples (*al-hayākil al-ʿulwiyya*) and that of human beings [cf. Iamblichus, *De Myst.*, III, 30]. We ask them for victory over our enemies and they grant it to us; we ask them for rain, in time of drought, and they give it to us" (al-Shahrastānī, *loc. cit.*).

In the Kaʿba, Hubal must have preserved this original character of a stellar deity; but his most characteristic role was that of a cleromantic divinity. Indeed, it was before the god that the sacred lots (*istiḳsām* [*q.v.*] *bi 'l-azlām*) were cast. The statue stood inside the Kaʿba, above the sacred well which was thought to have been dug by Abraham to receive the offerings brought to the sanctuary (al-Azraḳī, 31). Another somewhat surprising fact indicates a connexion with Abraham: in the mural paintings of the pre-islamic Kaʿba, Hubal, represented as an old man holding arrows, seems to have been assimilated with Abraham (al-Azraḳī, 111).

The earliest mention of the name Hubal occurs in a Nabataean inscription (*CIS*, ii, 198), in which it appears as an associate of Manawāt. According to al-Azraḳī (73), its cult was the best organized in the Kaʿba: a *ḥādjib* guarded the idol; he received the offerings and sacrifices that were brought; he shook the arrows of divination before it. When a Meccan returned from travelling, he used to go to give thanks to the god before going to his own home. In the field of popular piety at least, it eclipsed the other deities in the Meccan pantheon, to such an extent that there has been some speculation whether the unanimity regarding this cult did not help to prepare the way for Allāh (cf. J. Wellhausen, *Reste*², Berlin 1897, 75; Dussaud, *op. cit.*, 143 ff.; an opinion disputed, though wrongly, by Lammens, *Les Chrétiens à la Mekke*, in *BIFAO*, xiv (1918), 24).

Bibliography: In addition to the authors referred to in the text, see Yāḳūt, iv, 949-50. The essential facts concerning this deity will be found in T. Fahd, *Une pratique cléromantique à la Kaʿba préislamique*, in *Semitica*, viii (1958), 55-79, particularly 58 ff., 73 ff. (T. Fahd)

ḤUBUS [see WAḲF].

AL-**ḤUBŪS** (ḤABSĪ), a tribe, for the most part settled, of al-Sharḳiyya district in ʿUmān, south-eastern Arabia. Al-Ḥubūs belong to the Hināwī political faction (see HINĀ, BANŪ) of ʿUmān, and members of the tribe are adherents of the Ibāḍiyya [*q.v.*]. They, together with al-Ḥirth and al-Hadjariyyūn, formed the tribal block upon which the Imāmate relied in al-Sharḳīyya until the events of 1377/1957 [see ʿUMĀN].

Al-Ḥubūs are settled in a group of villages, known collectively as Balādīn al-Ḥubūs, in upper Wādī ʿAndām. Their tribal capital is Muḍaybī, which since 1377/1957 has been administered by a *wālī*, ʿAlī b. Zāhir al-Hināwī. Other important villages of Balādīn al-Ḥubūs are al-Rawḍa, Samad, al-Fatḥ, Muṭayliʿ, al-Wāfī, al-Radda, al-Shāriḳ, al-Zāhib, and al-ʿAynayn. Muḥammad b. Saʿūd b. Muḥammad of the Awlād Rushayd section, residing in al-Fatḥ, was paramount *shaykh* of al-Ḥubūs in 1384/1965. Final authority in the area, however, rested with the appointed governor. Important tribal sections of al-Ḥubūs are al-Ghanānima, al-ʿAsāsira, Awlād Ḥaban, and Āl Shabīb. Al-Djawābir and al-Shamāṭira are Bedouin sections that share the northern part of Ramlat Āl Wahība with Āl Wahība.

HŪD, the name of the earliest of the five "Arab" prophets mentioned in the Ḳurʾān (Hūd, Ṣāliḥ, Ibrāhīm, Shuʿayb and Muḥammad). In his history, which is related three times (on this repetition, see al-Djāḥiẓ, *Bayān*, ed. Hārūn, i, 105) in slightly different forms (in chronological order: XXVI, 123-40, XI [*Sūra* of Hūd], 52-63/50-60, VII, 63-70/65-72, XLVI, 20/21, merely a restatement), the Ḳurʾān represents him as an ʿĀdī sent to this people [see ʿĀD] to exhort them to adore the One God; but, like Muḥammad later in Mecca, he found only incredulity and insolence among the people and his followers were few; God therefore punished the ʿĀd, destroying them with a "roaring wind" (XLI, 15/16, LIV, 19, LXIX, 6). Later tradition adds that, having suffered three years of drought, the ʿĀd sent a deputation to Mecca to pray for rain. God made three clouds appear in the sky, one white, one red and one black. One of the deputation, called Ḳayl, was given the choice of one of the three by a voice from heaven. He chose the black one, with the result that a terrible storm broke over the ʿĀd and destroyed the whole people with the exception of Hūd and his followers; they went to settle in Mecca, where the prophet stayed until his death at the age of 150 (according to another tradition, he did not make the pilgrimage to Mecca and until his death never left his people; Ibn Rusta, 26, trans. Wiet, 24).

There exist several traditions concerning the genealogy of Hūd, going back to ʿĀd b. ʿŪṣ b. Aram b. Sām b. Nūḥ; but he is sometimes assimilated with ʿĀbar (the biblical Heber, ancestor of the Hebrews) or regarded as a son of the latter. Since the word Hūd is also, in the Ḳurʾān, a collective noun denoting the Jews (II, 105/111, 129/135, 134/140) and that the root *h.w.d.* there has the meaning "to practice Judaism, to profess the religion of the Jews" (II, 59/62, IV, 48/46, etc.), the proper name certainly appears to be derived from this root, which would also confirm the identification of Hūd with the

ancestor of the Jews; thus Hirschfeld is perhaps correct when he calls Hūd an allegorical figure (*Beiträge z. Erklärung des Ḳorān*, Leipzig 1886, 17 n. 4).

The South Arabian tradition transmitted by Wahb b. Munabbih [*q.v.*] gives other details about Hūd, making him a brown-skinned merchant with handsome features and flowing hair.

The *Ḳabr Hūd*, situated at the mouth of the Barhūt [*q.v.*], in the Ḥaḍramawt, is a place of pilgrimage still frequented. R. B. Serjeant (*Hūd*, 129) verified on the spot the facts related by al-Harawī (*Ziyārāt*, 97/220-1), who described, at the gate of the mosque, on the west side, the rock onto which Hūd climbed to make the call to prayer and mentioned, at the bottom of the ravine, the well (or rather grotto) of Balhūt.

As often happens, however, the grave of Hūd is located in several places. For example, it is said to be between the well of Zamzam and the angle of the Kaʿba (al-Harawī, 86/198) or in the south wall of the mosque at Damascus (al-Harawī, 15/38; Ibn Baṭṭūṭa, i, 205, ii, 203 [trans. H. A. R. Gibb, i, 128, ii, 386] adds that there is an inscription stating "This is the tomb of Hūd b. ʿĀbar", but he thinks it more likely that his tomb is in the Aḥḳāf [*q.v.*]); another tradition even makes the prophet the builder of the walls of the Great Mosque of Damascus (see J. Sourdel-Thomine, *Pèlerinages damascains*, in *B Ét. Or.*, xiv (1952-4), 75, n. 7; Ibn Baṭṭūṭa, i, 205, speaks only of the south wall); this is certainly the reflexion of a local tradition, giving proof of the interest which the Muslims attached to the prophet of the ʿĀd.

HŪD, Banū [see hūdids].

HUDĀʾ [see ghināʾ].

HÜDĀʾĪ, Maḥmūd b. Faḍl Allāh b. Maḥmūd, better known under his *makhlaṣ* Hüdāʾī, born at Ḳoč̣ḥiṣār in 950/1543-4 (Hüdāʾī, *al-Tibr al-maskūk*, Istanbul, Selim Ağa, Hüdayi collection no. 250, vol. i, fol. 71v., 81v., 87r.; *op. cit.*, Bursa, Orhan, Ulu Cami collection no. 1753, fol. 258v., 290r., 404v.). Almost nothing is known of the first twenty-seven years of his life except that he was an orphan from early childhood (*op. cit.*, Selim Ağa, Hüdayi collection, no. 250, vol. i, fol. 76v., vol. ii, fol. 64v.), and that he spent a number of years at Sivriḥiṣār where he was in contact with the disciples of *shaykh* Baba Yūsuf (*op. cit.*, vol. i, 27v., vol. ii, 15v., 69v.). In 978/1570-1, he entered the service of Nāẓirzāde, in the *medrese* of Selīm II at Edirne (ʿAṭāʾī, *Dhayl al-Shaḳāʾiḳ al-nuʿmāniyya*, Istanbul 1268, 760, cf. 241). He followed his master when the latter was appointed *ḳāḍī*, first at Damascus, then at Cairo and finally at Bursa (Muḥarram 981/May-June 1573). He was given the post of *ḳāḍī*'s deputy (*nāʾib*) in the tribunal of the old mosque (*Djāmiʿ-i ʿatīḳ*), and of teacher (*müderris*) at the Farhādiyya *medrese* (ʿAṭāʾī, *op. cit.*, 760, cf. 241). There then followed a period of misfortune which coincided with a religious crisis. He lost his position as *nāʾib*, perhaps because of an error which he made over a legal matter (Ismāʿīl Beligh, *Güldeste*, Bursa 1302, 335). When his patron was transferred to Edirne, on 4 Radjab 983/9 October 1575, he remained at Bursa and on 1 Dhu 'l-Ḳaʿda 984/18 January 1577 he became the disciple of Shaykh Üftāde, the founder of the Djilwatiyya [*q.v.*] order. At the end of 986/1578, he also lost his post at the *medrese* and fell into poverty. His period of initiation under Üftāde lasted for three years. On Saturday, 1 Dhu 'l-Ḳaʿda 987/19 December 1579, only a few months before Üftāde's death in 988/1580 (see I. Beldiceanu-Steinherr, *Scheich Üftāde, der Begründer des Ǧelvetijje-Ordens*, Munich 1961, 131 f.), the latter sent him on a mission to Sivriḥiṣār. Other journeys followed (ʿAbd al-Ghanī al-Nābulusī, *Sharḥ-i Tadjalliyāt-i Hüdāʾī*, Ankara Dil ve Tarih-Coğrafya Fakültesi, I. S. Sencer collection, i/3515, fol. 2v.). He settled finally at Istanbul, on the Asiatic side, at first in the district of Čamlîdja and later at Üsküdar. In Djumādā II 1002/February-March 1594, he was appointed preacher (*wāʿiẓ*) in the mosque of Meḥemmed II through the good offices of the *ḳāḍīʿasker* of Rumeli, Ṣunʿ Allāh, and received 100 *aḳče* from the foundation (Pečewī, ii, 36; ʿAṭāʾī, *op. cit.*, 761). On the completion of his own mosque, in 1003/1594-5, he resigned from this post. Instead, he preached on Thursdays in the Mihrimāh mosque and, from 1020/1611-2, on the first Monday of each month in the Sultan Aḥmed mosque (ʿAṭāʾī, *op. cit.*, 761). He died in 1038/1628-9. His *türbe* is adjacent to his mosque.

Hüdāʾī enjoyed a very great prestige in his own day. His convent was a refuge for dignitaries who had fallen out of favour (Pečewī, ii, 357; Naʿīmā, *Taʾrīkh*, 1280, ii, 155, 159; Hammer-Purgstall, *Histoire*, viii, 168, 233, 251, 272). Although Üftāde must be considered as the founder of the Djilwatiyya order, there is no doubt that it was due to Hüdāʾī that the order survived. Faithful to his master, Hüdāʾī gave it a firmly orthodox bias (cf. his attitude to the disciples of Badr al-Dīn: M. Sharaf al-Dīn, *Samāwna-ḳāḍîsî-oghlu shaykh Badr al-Dīn*, Istanbul 1340, 72).

There exist some poems by him of a mystic character and some short works relating to religious matters, some of which have been edited by M. Gülshen (*Külliyāt-i ḥaḍrat-i Hüdāʾī*, Istanbul 1338), some letters and a journal in Arabic which he began at the time he attached himself to Üftāde (and from which have been taken the main dates of his life). The section which runs from Muḥarram 985 to 9 Shawwāl 987/March-April 1577 to 27 November 1597, has the heading *Kalimāt..ʿan al-Tibr al-maskūk fīmā djarā bayna ḥaḍrat al-shaykh wa bayna hādha 'l-faḳīr fī athnāʾ al-sulūk* (autograph: Istanbul, Selim Ağa, Hüdayi collection no. 250, 2 vols.). The section from 1 Dhu 'l-Ḳaʿda 987 to Rabīʿ I 1021/19 December 1579 to May 1612, which is very fragmentary, is found in libraries under the title of *Tadjalliyāt*. A commentary was written on one part of this section by ʿAbd al-Ghanī al-Nābulusī. On the copies and translations, see I. Beldiceanu-Steinherr, *op. cit.*, 2-5, 10-21.

(I. Beldiceanu-Steinherr)

al-ḤUDAYBIYA, or al-Ḥudaybiyya, a medium-sized village on the edge of the *ḥaram* or sacred territory of Mecca, one *marḥala* from Mecca itself. Both the village and the Mosque of the Tree (presumably on the site of the pledge described below) were unknown in the time of al-Fāsī (d. 832/1429). One authority says the name was derived from a dome-shaped or hump-like (*ḥadbāʾ*) tree, but this may be conjecture.

The village gave its name to an important Muslim expedition from Medina, led by Muḥammad, in D̲h̲u 'l-Ḳaʿda of the year 6 (March 628). Muḥammad had a dream (cf. Ḳurʾān, XLVIII, 27) in which he saw himself performing the rites of the lesser pilgrimage (*ʿumra*) at Mecca, and decided to make an expedition to Mecca for this ostensible reason, though in so doing he would also demonstrate to the pagans of Mecca that Islam was an Arabian religion and would not threaten the prestige of their sanctuary. Muḥammad hoped that the nomadic tribes near Medina would join him, but they saw little prospect of booty and were afraid the expedition might end in disaster. He set out with only about 1400 followers, mostly from Medina itself, and they had with them camels for the sacrifice. The Meccans, realizing that after the failure of their attempt to besiege Medina they would be considered weaklings if they let Muḥammad enter Mecca even as a pilgrim, sent out 200 cavalry to bar his way. These Muḥammad eluded by taking an unusual and very difficult route, and so reached al-Ḥudaybiya on the edge of the *ḥaram*. Here he decided to halt and negotiate.

A number of emissaries came and went between himself and the Meccans. Eventually a treaty to last ten years was agreed on, of which the following were the chief provisions: for the present, Muḥammad and his followers were to withdraw, but in the next year Mecca would be evacuated for three days to let them perform the *ʿumra*; there was to be no raiding between the two parties; Muḥammad was to send back to Mecca anyone of Ḳurays̲h̲ (presumably minor or woman) who came to him without permission of his or her protector; and others than Ḳurays̲h̲ were to be free to enter into alliance with either side. On the conclusion of the treaty Muḥammad and his followers sacrificed their animals and returned to Medina. Many were disappointed; some thought Muḥammad's policy mistaken. The expedition to K̲h̲aybar about six weeks later was in part to console them for this disappointment. A year after the original expedition Muḥammad performed the pilgrimage with a party of about 2000. The treaty continued in force for only about ten months more, because a quarrel between allies of the contracting parties led to Muḥammad's victorious entry into Mecca (Ramaḍān 8/March 630).

While the Muslims were at al-Ḥudaybiya negotiating, it came to be believed that one of their envoys, ʿUt̲h̲mān b. al-ʿAffān, had been killed. Muḥammad then called on them to take an oath to support him, known as the Pledge of Good Pleasure (*bayʿat al-riḍwān*) or the Pledge under the Tree. It is usually said to have been an oath not to flee, but it is more likely that (as stated by one authority in al-Wāḳidī) it was an oath to follow Muḥammad in whatever he decided. If the latter, the oath marked an increase in Muḥammad's constitutional powers. *Riḍwan* is used because Ḳurʾān, XLVIII, 18 says God was "well pleased (*raḍiya*) with the believers when they pledged themselves under the tree".

(W. Montgomery Watt)

al-ḤUDAYDA, name of the principal coast-town between D̲j̲udda and Bāb al-Mandab, in Tihāmat al-Yaman (14° 48′ N., 42° 57′ E.). It is the most important strategic and commercial seaport in the Yaman, and also the capital of its province (*liwāʾ*) of the same name. It is situated on the low sandy coast 10 km. south-east of the base of the peninsula stretching northward to Raʾs al-Katīb. Perhaps this place may be identified with the *Marsā al-ḥadīt̲h̲* mentioned by Ibn Baṭṭūṭa, although from a notice of al-K̲h̲azrad̲j̲i under the year 797/1395 it would seem that at that time the name al-Ḥudayda referred merely to this part of the coast, where not even a village was in existence. As an inhabited place it is first mentioned in the chronicles of al-Daybaʿ and Abū Mak̲h̲rama in connexion with the recognition of the first Ṭāhirid sultan in Aden (859/1454-5). It was raided by the Egyptian Mamlūk Sultan al-G̲h̲ūrī's expeditionary force in 921/January 1516, but had not yet any strategic importance then. It remained of secondary importance next to Mocha during the 11th/17th and 12th/18th centuries, when it functioned as the port through which part of the coffee produced in the region of Bayt al-Faḳīh [*q.v.*] was conveyed in coastal trade. When C. Niebuhr was there in 1763, a *dola* on behalf of the Imām resided in a small sea-side castle and took in a substantial amount of customs, but his jurisdiction was restricted to the town itself, the surroundings being under that of the *dola* in Bayt al-Faḳīh. Only in the course of the 19th century did al-Ḥudayda gain some new importance. After the Wahhābī uprising and its suppression by Ibrāhīm Pas̲h̲a, the town was on various occasions occupied by forces of Egypt, ʿAṣīr, the Imām of Ṣanʿāʾ, and then the Turks, first in 1849 and more definitely in 1872. The sultan's *wālī* over the Yaman had al-Ḥudayda for his capital, but its facilities as such and as the sea-port for Ṣanʿāʾ and the country as a whole were hardly improved. The constructions undertaken in 1902 to install a modest harbour in the place of what was only an open roadstead, were inadequate, and the efforts made in 1911-3 to build a railway linking the port with Ṣanʿāʾ were abortive; but there was a telegraph line covering this distance. Lightly bombarded by the Italian navy in 1911 and by the British in 1918, the town was given by the latter in that year to the S̲h̲arīf of ʿAṣīr, but re-occupied by the Imām in 1925, and again in 1934 after a brief occupation by Saudi Arabian forces. It has been estimated that in 1961, 70 to 80% of the Yaman's overseas trade still went through Aden. In that year a new harbour under construction by Soviet Russian engineers since 1958 was completed, although by special order of the Imām, according to El Attar, it lacked the lighting system necessary to operate it at night; this was improved under the revolutionary régime in 1962. In the meantime, Communist Chinese technicians had finished the construction of a new road connecting al-Ḥudayda with Ṣanʿāʾ

(227 km.), thus replacing the old motor track by the country's first asphalt road. Besides its harbour, comprising quays to a length of 9.5 km. and a basin in which ships 140 m. long and drawing 8 m. of water can be accommodated, the town, with an estimated number of 50,000 inhabitants in 1964, has little in the way of modern equipment. Before the arrival of Egyptian troops there was one hospital, and a landing-ground for aircraft. To the traditional textile handicrafts were added in recent years some primitive cotton manufactories, in connexion with a rapid expansion of cotton cultivation in parts of Tihāma. An attempt to establish a modern cotton mill at Bādjil failed. Projects have been made for a cement factory in that place, and also for prospective oil drilling operations.

The population in the *liwā'* of al-Ḥudayda is estimated at 660,000. In addition to the district (*ḳaḍā'*) of the capital, it comprises those of Bayt al-Faḳīh, Bādjil, al-Zaydiyya, and Luḥayya.

AL-ḤUḌAYN (not al-Ḥuṣayn) B. AL-MUNDHIR B. AL-ḤĀRITH B. WAʿLA AL-RAḲĀSHĪ AL-BAKRĪ, ABŪ SĀSĀN, a notable and poet of Baṣra ranking among the leading *Tābiʿūn* (d. *ca.* 100/718-9). His family was well-known even before Islam; some at least of its members had a reputation for avarice, which al-Ḥuḍayn seems to have justified, if we may judge by the words attributed to him by al-Djāḥiẓ, which leave no doubt as to his love of riches. While still quite young, he took part in the battle of Ṣiffīn [*q.v.*] and fought bravely; he carried the standard of the Rabīʿa in the army of ʿAlī b. Abī Ṭālib, but owed this honour to the rivalries between the Bakrī notables who were seeking to secure the command. Subsequently, no further mention of him occurs except as a poet—in particular he sang the praises of the chief of the Bakr of Baṣra, Mālik b. Mismaʿ—and as a transmitter of secular traditions, some of which concerned the kings of Persia; his *kunya* Abū Sāsān would indeed appear to indicate that his family had been subject to some sort of Persian influence.

(CH. PELLAT)

HUDHAYL, a tribe of Northern Arab descent in the vicinity of Mecca and al-Ṭā'if. Belonging to the branch of Muḍar known as Khindif, Hudhayl was closely related to Kināna and consequently to Ḳuraysh [*qq.v.*]. Since early times Hudhayl has occupied much of the territory immediately west and east of Mecca and on up into the mountains towards al-Ṭā'if; there is no tradition of its having migrated here from elsewhere. This territory, which has been called "the heart of al-Ḥidjāz", includes the valley of Baṭn Marr or Marr al-Ẓahrān (modern Wādī Fāṭima) between Mecca and the present port of Djudda and the valley's main tributaries, Nakhla al-Sha'miyya (or al-Sha'āmiyya) and Nakhla al-Yamāniyya [see AL-ḤIDJĀZ]. The tribe had a market, Dhu 'l-Madjāz, near ʿArafa.

According to Ibn al-Kalbī, the people of Hudhayl were the first among the descendants of Ismāʿīl to become idolators. At a place called Ruhāṭ they had the idol Suwāʿ. Although Ibn al-Kalbī locates Ruhāṭ in the environs of Yanbuʿ, it was more probably close to Mecca and may have been in Nakhla al-Yamāniyya (see Yāḳūt, *s.v.*, and al-Azraḳī, i, 78, n. 7; al-Sukkarī, i, 165, however, identifies Baṭn Ruhāṭ, the only Ruhāṭ mentioned by the poets of Hudhayl, as being in the land of Banū Hilāl, three nights from Mecca). The custodians of Suwāʿ were Banū Liḥyān [*q.v.*], a division of Hudhayl. Hudhayl also had ownership, or shared it with Khuzāʿa, of one of "the daughters of Allāh", Manāt [*q.v.*], a stone at Ḳudayd on the way from Mecca to Yathrib reputed to be the oldest of the Arab idols.

In the legendary accounts, Hudhayl plays a leading rôle in the visit of *tubbaʿ* Asʿad Kāmil (Abū Karib) to Mecca and in the expedition of Abraha [*q.v.*] against the town. During the pre-Islamic period Hudhayl engaged in numerous feuds with the neighbouring tribes. The famous ode of vengeance by Ta'abbaṭa Sharr^{an} [*q.v.*] of Fahm was directed against Hudhayl, who had killed his uncle. Hudhayl used to sell prisoners taken in battle as slaves in Mecca.

During the struggle between the Prophet and Ḳuraysh, most of the members of Hudhayl, with Liḥyān in the forefront, sided with their kinsmen of Mecca. The Muslim commander given a stick by the Prophet as guerdon for his victory over Hudhayl was ʿAbd Allāh b. Unays (not Uwais, as in *EI*¹, ii, 329) of Banū Wabra, known as al-Djuhanī. When the men of Hudhayl captured a handful of Muslims, they sold them to Ḳuraysh. After the conquest of Mecca, the Muslims obliterated the idols of Hudhayl. ʿAmr b. al-ʿĀṣ destroyed Suwāʿ, and various persons, including ʿAlī, were credited with the destruction of Manāt. Hudhayl joined Ḳuraysh in embracing Islam.

Although most of Hudhayl were slow in coming in, one man prided himself on being among the earliest converts. This was ʿAbd Allāh b. Masʿūd [see IBN MASʿŪD], who may have been a client of the tribe, though Ibn Ḥazm lists him as a Hudhalī by descent; he became a faithful companion and servant of the Prophet and a prolific traditionist. The historian al-Masʿūdī [*q.v.*] claimed him as an ancestor.

Hudhayl stands out among the Arab tribes for its bountiful poetry, its renown in this field being due in part to the fact that its tribal *dīwān* is the only one to have survived *in extenso*. Among the scores of poets of the stock of Hudhayl were Abū Dhu'ayb, Abū Kabīr, Abū Khirāsh, and Abū Ṣakhr [*qq.v.*]. Not many of the Hudhalī poets lived wholly in the Djāhiliyya; a number began life in that period and ended as Muslims.

Among the sparse references to Hudhayl given by al-Hamdānī in the 4th/10th century is the statement that in his time Hudhayl was driven from its accustomed range by Banū Saʿd (Saʿd b. Bakr?) with

the aid of ʿUdjdj b. Shākh (given in other sources as ʿUdjdj b. Ḥādjdj), whom al-Hamdānī calls "the Sultan of Mecca" (probably a Turkish slave of the ʿAbbāsids appointed to be governor of the Holy City).

Given the proximity of Hudhayl to Mecca, it is surprising that the chroniclers of the city provide very little information on the doings of the tribe. Hudhalīs often took part in the campaigns of the Hāshimid *sharīfs*, but in general the tribe had a bad name for harassing pilgrims. Out of fear of Hudhayl, travellers often chose the blistering road along the coast to Medina in preference to the cooler road east of the mountains of al-Sarāt.

In the 19th century J. Burckhardt gave these notes on Hudhayl: "They muster one thousand matchlocks, and are reputed the best marksmen in the whole country. They are a famous tribe, eminent for their bravery. The Wahabys killed above three hundred of their best men before the tribe would submit". The most attractive villages of Hudhayl were in the mountains west of al-Ṭāʾif, including Karā. Hudhalīs were settled in the Meccan quarter of al-Maʿābida, and the division of Liḥyān was established in Ḥaddāʾ and Baḥra, the main stations on the road from Mecca to Djudda.

Coming down the old road from al-Ṭāʾif to Djudda, Doughty met Hudhalīs: "Their skins were black and shining; and their looks (in this tropical Arabia) were not hollow, but round and teeming". Philby found members of the tribe along the same road, leading a hard life "in worsted booths ... perhaps not more than three or four feet in height, ... tending bees and sheep and doing a certain amount of cultivation on the torrent-irrigated terraces ...; they also rear camels of a diminutive and extremely hardy highland breed, of which it is said that they can climb up the steep flanks of the hills as surely as goats".

The old grouping of the tribesmen into Hudhayl al-Shaʾm and Hudhayl al-Yaman is still preserved. Perhaps the most important centre of the tribe is the oasis of al-Zayma at the point where the old road from al-Ṭāʾif leaves Wādī al-Yamāniyya (the modern name of southern Nakhla) to run southwards and then westwards to Mecca, though the oasis is likely to become a backwater now that a new and more direct paved road to Mecca is in use.

The people of Hudhayl are relatives and close friends of the Djaḥādila, whose range lies near the coast south of Djudda, with headquarters at al-Saʿdiyya. Yalamlam (now shortened to Lamlam), the *mīḳāt* for pilgrims coming overland from the south along the coast, is in the territory of the Djaḥādila.

For the dialect of Hudhayl, see ch. 8 of C. Rabin, *Ancient West-Arabian*, London 1961, and Farrādj's ed. of al-Sukkarī. (G. Rentz)

HUDHUD, the hoopoe, belongs to the order *Scansores* and bears a remarkable tuft of feathers on its head. Only a part of what is related concerning its habits and character can be mentioned here. Its piety is particularly emphasized. In Umayya b. Abi 'l-Ṣalt (ed. Schulthess, in *Beiträge zur Assyriologie*, viii, 26, 84 f.; cf. also Ibn Ḳutayba, *al-Shiʿr*, 279 f.) there is a story that the hoopoe enshrouded its dead mother and carried the body on its back and head till it found a resting-place for it; this is why its back is brown; but it is also related that the tuft of feathers was a reward for this act.—When its mate dies, the hoopoe does not look for a new wife.—When its parents grow old, it feeds them. It bears different *kunyas* in Arabic, *e.g. Abū ʿIbād, Abu 'l-Sadjdjāda*, after the numerous bows of its tuft as it walks. It makes its nest in dung so that it has an unpleasant smell. Its feathers, heart etc. are used in various ways. The Prophet is said to have forbidden it to be killed; hence, according to some, its flesh is forbidden (though other schools regard it as permissible). The hoopoe plays a prominent part in the legend of Solomon and Bilḳīs [*q.v.*], which was apparently already developed by Muḥammad's time as may be concluded from Sūra XXVII, 20 ff. In this passage we are told that Solomon assembled the birds and the hoopoe was missing. When he arrived late, he gave an account of the queen of Sabaʾ and was entrusted by Solomon with the bearing of a letter to the Sabaeans.

The later writers as a rule give the whole story as follows. The hoopoe possesses the power of seeing where water is through the earth. He was therefore used by Solomon on his pilgrimage to Mecca to find water. But on one occasion the hoopoe whom Solomon had appointed for this purpose, named Yaʿfūr, or Yaghfūr, while on the journey, took a trip to the south and reached the garden of Bilḳīs where he made the acquaintance of another hoopoe named ʿUfayr. The latter told him a great deal about the queen of Sabaʾ. In the meanwhile Solomon was looking in vain for water for his army (or according to another versions for ritual ablution). He sent the vulture (*nasr*) to assemble the birds and as the hoopoe was missing the eagle (*ʿuḳāb*) was sent to fetch him. But he was already on his way back and was brought by the eagle before Solomon, who talked to him severely but finally, after hearing his account of Bilḳīs, sent him with a letter to the Sabaeans.

Another version of the beginning of the story relates that Solomon on his pilgrimage was being carried with all his retinue on a carpet by the winds to Arabia. The birds were ordered to fly above the carpet in such a compact mass that those sitting on it should be entirely protected from the sun. But Solomon detected a little ray of light in one place; so he concluded that one bird was missing. He then held a roll-call and it was found that the hoopoe was absent; the story continues as before.

It is also related that the hoopoe once invited Solomon and his army to a feast on an island. When the guests had arrived, he threw a dead locust into the sea and said "Now eat, O thou Prophet of God! if

the meat be lacking, there is at least plenty of sauce". Solomon and his soldiers laughed for a year at this joke.

On the relationship of the Jewish hoopoe-legend to the Muslim, see M. Grünbaum, *Neue Beiträge zur semitischen Sagenkunde*, Leiden 1893.

In North Africa, hoopoes are made out of silk, feathers, etc., and used for magical purposes (Doutté, *Magie et religion dans l'Afrique du Nord*, 270).

HŪDIDS, in Arabic Banū Hūd, 'sons of Hūd', a family of Arab extraction, as rulers of Saraḳusṭa (Saragossa) among the more important of the Party Kings (*mulūk al-ṭawāʾif, reyes de Taifas*) in 5th/11th century Spain. Hūd [*q.v.*] was well known as the name of a prophet sent to the people of ʿĀd (Sūra VII, 63 ff., etc.); his descendants, the Banū Hūd, are mentioned in legend (*e.g.* Ibn Khaldūn, Beirut ed., iv(v), 484). The ancestry of the historical Banū Hūd is traced to an eponymous Hūd, said to have been the first of the family to enter al-Andalus. He was, according to some, a great-grandson of Sālim, the freedman of Abū Ḥudhayfa, a famous Companion of Muḥammad. But Sālim is stated to have died childless (Ibn Kutayba, *Maʿārif*, 139), and, since the *nisba* of members of the family is regularly given as Djudhāmī, it seems slightly more probable that, as others claimed, the Banū Hūd of Saragossa were descended from the celebrated Rawḥ b. Zinbāʿ al-Djudhāmī. The first Hūdid to come into prominence was:

1. Abū Ayyūb Sulaymān b. Muḥammad b. Hūd al-Djudhāmī, later styled al-Mustaʿīn bi'llāh (al-Mustaʿīn I). Sulaymān is mentioned before the revolution which produced the Party Kings as a military officer on the Upper Frontier (*al-thughr al-aʿlā*). He supported the Tudjībids [*q.v.*] of Saragossa and took part in the disastrous campaign of the caliph al-Murtaḍā against Granada (408/1018). While governor of Lārida (Lerida) he entertained the unfortunate ex-caliph Hishām III al-Muʿtadd [*q.v.*] till the latter's death in 427 or 428 (Ibn al-Athīr, ix, 199, cf. ʿAbd al-Wāḥid al-Marrākushī, 41). Shortly after the murder of the Tudjībid Mundhir II b. Yaḥyā, Sulaymān b. Hūd occupied Saragossa (Muḥarram 431/September-October 1039) and became ruler of an extensive kingdom which included most of the Ebro valley and, in addition to Saragossa itself and Lerida to the east, Huesca to the north, Tudela and Calatayud to the west, and territory to the south in the direction of Valencia. In 435/1043-44, according to Ibn Ḥayyān (quoted Ibn ʿIdhārī, *al-Bayān*, iii, 219), Sulaymān was head of one of the political parties in Muslim Spain, and he blames him and Ibn Dhi 'l-Nūn [see dhu 'l-nūnids] for inviting the Christians to attack Muslim territory on the Upper and Lower Frontiers, which they did in 437/1045-46. Sulaymān survived his successful *coup* for only a few years. Having divided his possessions among his five sons, he died in 438/1046 and was followed at Saragossa by:

2. Abū Djaʿfar Aḥmad I b. Sulaymān b. Hūd al-Muḳtadir. He set aside his brothers in turn, pursuing with the eldest, Yūsuf of Lerida, called al-Muẓaffar, an especially bitter struggle which went on till the last years of his reign. In 453/1061 al-Muḳtadir obtained control of Ṭarṭūsha (Tortosa), and in 468/1075-76 he expelled the ʿĀmirid ʿAlī b. Mudjāhid Iḳbāl al-Dawla from Dāniya (Denia) on the Mediterranean coast. Before this, his recapture of the important frontier fortress, Barbastro (which had fallen temporarily into Norman hands in 456/1064, see barbashturu), increased his reputation in the Peninsula. Though al-Muḳtadir is represented as constantly engaged in 'plying the wine-cups and plucking off the heads' (Ibn Saʿīd) he attracted to his court men of distinction, such as Abu 'l-Walīd al-Bādjī, who wrote a reply on behalf of al-Muḳtadir to the letter of a 'monk of France' inviting him to accept Christianity [see al-bādjī], and Ibn ʿAmmār [*q.v.*], the famous poet of Silves, who took refuge at Saragossa from Ibn ʿAbbād of Seville. The Aljaferia in Saragossa, the remains of which still stand, goes back to Abū Djaʿfar al-Muḳtadir. It is remarkable that this powerful ruler was at various times tributary to or under the protection of the Christians of the North, and shortly before his death (474/1081 or 475/1082) he invited the Cid to his court. He was succeeded by his son:

3. Abū ʿĀmir Yūsuf b. Aḥmad I b. Hūd al-Muʾtaman ('Almuctamam'), who reigned till 478/1085. He was a student, author of a book or books on mathematics (Ibn Khaldūn, also al-Ḳifṭī, *Ḥukamāʾ*, 319), which are said to have attracted the favourable attention of Maimonides and his pupil, Ibn ʿAḳnīn.

4. Abū Djaʿfar Aḥmad II b. Yūsuf b. Hūd, called, like his ancestor Sulaymān, al-Mustaʿīn bi'llāh (al-Mustaʿīn II), succeeded his father, and was distinguished for his warlike conduct against the Christians of the North (cf. Ibn al-Athīr, x, 129, *s. a.* 484). In 487/1094 the enemy advanced on Washḳa (Huesca), near which al-Mustaʿīn suffered a great defeat (at Alcoraz, November 1096). Saragossa itself was attacked by the Castilians of Alfonso VI, but by this time Yūsuf b. Tāshifīn had crossed to al-Andalus, and the arrival of an Almoravid army near Saragossa caused the Christians to withdraw. It was in this reign that the Cid, who had been in the service of al-Mustaʿīn, as previously of al-Muʾtaman, became ruler of Valencia. Yūsuf b. Tāshifīn, who wished to retain the kingdom of Saragossa as a buffer state between himself and the Christians, left al-Mustaʿīn in possession, while removing the other Party Kings. Al-Mustaʿīn died fighting the Christians at the battle of Valtierra, near Tudela, on 1 Radjab 503/24 January 1110. The threat from the North had indeed gradually increased during the whole period of Hūdid rule, and now matters came to a crisis under:

5. Abū Marwān ʿAbd al-Malik b. Aḥmad II b. Hūd ʿImād al-Dawla. The new Almoravid ruler, ʿAlī b. Yūsuf b. Tāshifīn, acting, it is said, on the advice of the *faḳīhs*, decided to take over the lands of the Upper Frontier. On 10 Dhu 'l-Ḥidjdja 503/30 June 1110, the Almoravid *ḳāʾid* Muḥammad b. al-Ḥādjdj entered Saragossa, and ʿImād al-Dawla withdrew, passing now or later to the stronghold of Rūṭa (Rueda de Jalón). For nine years the Almoravids held Saragossa, first under Muḥammad b. al-Ḥādjdj, then under Abū Bakr b. Ibrāhīm al-Sahrawī, called Ibn Tīfalwīt, who ruled in princely style, and whose *wazīr*, the celebrated philosopher Ibn Bādjdja (Avempace), when on an embassy to ʿImād al-Dawla, was thrown into prison by him. The pressure from the north continued,

and on 3 Ramaḍān 512/18 December 1118 Alfonso I of Aragon, el Batallador, took Saragossa after a siege of 7 months (May-December). ʿImād al-Dawla held out in Rueda, while the Christians began to occupy the lands of the Frontier piecemeal. ʿImād al-Dawla died in Rueda in S̲h̲aʿbān 524/1130 (the date 513, frequently accepted, in the text of Ibn K̲h̲aldūn is a slip for 523, cf. Dozy, *Scriptorum Arabum Loci de Abbadidis*, ii, 144, n. 11). He was succeeded by his son, the last of the line:

6. Abū D̲j̲aʿfar Aḥmad III b. ʿAbd al-Malik b. Hūd Sayf al-Dawla ('Zafadola') al-Mustanṣir bi'llāh. In 534/1140 or earlier he exchanged Rueda with Alfonso VII for what Ibn al-Abbār calls 'half the city of Toledo', but more probably was territory in the province of Toledo and perhaps Estremadura (Codera, Prieto y Vives). In 539/1144, when the revolt against the Almoravids was general, al-Mustanṣir b. Hūd, as representing ancient native royalty, found himself with partisans everywhere in Muslim Spain, and, taking the field, occupied successively Cordova, Jaen, Granada, Murcia and Valencia. Ultimately, in a battle with the Christians in the east of Spain near D̲j̲and̲j̲āla (Chinchilla) in S̲h̲aʿbān 540/February 1146, al-Mustanṣir was defeated and killed, and with him the dynasty came to an end. (The account of the death of al-Mustanṣir given by Ibn K̲h̲aldūn with the date in the text, A.H. 536, is not right.)

It remains only to notice Muḥammad b. Yūsuf b. Hūd al-D̲j̲ud̲h̲āmī, called al-Mutawakkil, who claimed descent from al-Mustaʿīn b. Hūd. He was active and successful against the Almohads from 625/1228, and became Sultan in Granada.

ḤUD̲J̲ARIYYA [see ḥud̲j̲ra].

ḤUD̲J̲D̲J̲A (a.), pl. ḥud̲j̲ad̲j̲, both proof and the presentation of proof. The term is Ḳurʾānic, and is applied to any argument—one that attempts to prove what is false ("worthless argument"), as well as one that attempts to prove what is true ("decisive argument"). Men should have no *ḥud̲j̲d̲j̲a* against God (IV, 165); if they argue (*yuḥād̲j̲d̲j̲ūna*) against Him, this argument is worthless in His eyes (XLII, 16; cf. XLV, 25). It is to God that "the decisive argument" belongs (VI, 149), and it was God who gave Abraham the (decisive) argument against his people (VI, 83). In the sense of "proof", *ḥud̲j̲d̲j̲a* is very close to *dalīl* [*q.v.*]; in the sense of "argument", it is very close to *burhān* [*q.v.*]. But whereas *dalīl* is, in the first place, the "indication", the "guide" that leads to certainty, *ḥud̲j̲d̲j̲a* suggests the conclusive argument that leaves an opponent without a reply; and whereas *burhān* is, in the first place, as it were the clear evidence of an irrefutable proof, and, consequently, the correct reasoning that leads to it, *ḥud̲j̲d̲j̲a* retains the idea of a *contrary* argument. "Dialectical proof" would perhaps be the translation that best renders the primary meaning of *ḥud̲j̲d̲j̲a*.

This shade of meaning, however, is often almost (but not quite) lost sight of. *Ḥud̲j̲d̲j̲a* also assumes a precise technical meaning in the "science of *ḥadīt̲h̲*", and moreover becomes one of the initiatory degrees of the Ismāʿīlī gnosis. When used by the *mutakallimūn* and the *falāsifa* (in treatises on logic or discussions of methodology), it remains, according to the authors' inclinations, somewhat imprecise. An exhaustive recension would be very long, but a few references may be given here.

Ibn Sīnā. In Avicenna *dalīl* may refer to any argument or demonstration; in a narrower sense it denotes the *burhān al-inna* (or *al-in*), the demonstration of existence. The meaning of *ḥud̲j̲d̲j̲a* in Avicenna is very wide. The section of the *S̲h̲ifāʾ* that deals with logic takes it in a general sense as a process of argumentation, for it subdivides it into syllogism (*ḳiyās*), induction (*istiḳrāʾ*), analogy of like with like or parable (*tamt̲h̲īl*) and "other things". On the following page *ḥud̲j̲d̲j̲a* is defined as the point of arrival (*mawḳaʿa*) of acceptance or judgment (*taṣdīḳ*) (cf. *al-S̲h̲ifāʾ, al-Manṭiḳ, i* (*al-madk̲h̲al*), Cairo 1371/1952, 18-9). It is characteristic that the old Latin translations should here have rendered *ḥud̲j̲d̲j̲a* by *ratio* (cf. A.-M. Goichon, *Lexique de la langue philosophique d'Ibn Sīnā*, Paris 1938, no. 120). We find the same idea, contained in the plural form *ḥud̲j̲ad̲j̲*, in the *Is̲h̲ārāt*, and the same three-fold division (ed. Forget, 64 ff.); the *Manṭiḳ al-mas̲h̲riḳiyyīn* (Cairo 1328/1910, 10) also repeats the idea of the *S̲h̲ifāʾ* (*Madk̲h̲al*, 19): *ḥud̲j̲d̲j̲a* is the point of arrival of judgment or acceptance. However, in the *Aḳsām al-ʿulūm al-ʿaḳliyya* (in *Tisʿ rasāʾil*, Cairo 1326/1908, 117) *ḥud̲j̲ad̲j̲* are distinguished from *burhān*, and resume the more precise meaning of "dialectical arguments" (*fi 'l-d̲j̲adal*), designed to convince an opponent. Alpago translates as *argumentatio* (cf. A.-M. Goichon, *ibid.*).

ʿIlm al-kalām. The object of the science of *kalām* being to reply to "doubters and deniers", the term *ḥud̲j̲d̲j̲a* is often used in it, concurrently with *dalīl*, in the presentation of arguments (e.g. al-Baḳillānī, *al-Bayān ʿan al-farḳ bayn al-muʿd̲j̲izāt wa-'l-karāmāt*, ed. R. J. McCarthy, Beirut 1958, index). But it only rarely receives the force of an exclusively technical term. The "proof" of *ʿilm al-kalām* is primarily *dalīl* (pl. *adilla*), or *dilāla*, in several

Muʿtazilī texts as well as in al-As͟hʿarī (*Kitāb al-Lumaʿ*, ed. R. J. McCarthy, Beirut 1953, 6, 12; *Istiḥsān*, *id.*, 91). In the prefaces to the *Irs͟hād* (ed. Luciani, Paris 1938, 5/18-9), al-Dj̲uwaynī, after speaking of reasoning (*naẓar*), devotes a paragraph to "proofs": he uses *adilla*, and distinguishes between rational (*ʿaḳliyya*) proofs and traditional or authoritative (*samʿiyya*) proofs. Many other examples could be listed.

Al-Dj̲uwaynī (*ibid.*) and al-Bāḳillānī before him, define proof, *dalīl*, as giving knowledge of what is hidden. Now, al-Bāḳillānī states in the *Kitāb al-Tamhīd* (ed. McCarthy, Beirut 1957, 14) that this *dalīl*, which is also referred to as *dilāla*, and which is that by which something is proved (*mustadall*), is the *ḥudj̲dj̲a*. In fact, the demonstration of that which is not immediately and necessarily known, the actual definition of *dalīl*, is that which, in the context of *kalām*, can convince an opponent, and be the decisive *ḥudj̲dj̲a* against him. In speaking of "rational proofs" the *Tamhīd* sometimes uses *adilla* (13, 343), and sometimes *ḥudj̲adj̲* (102, 119). When, however, it is a matter of distinguishing clearly between rational (and "necessary") proofs and textual proofs, al-Bāḳillānī prefers to use *adilla* (*Tamhīd*, 9, 12, 14).

In the methodology of his *Bayān ʿan uṣūl al-īmān* (MS 577 of *al-Maktaba al-ʿUt̲h̲māniyya* in Aleppo, communication of S͟hayk͟h Kawt̲h̲ari and G. C. Anawati), Abū Dj̲aʿfar al-Sumnānī, a disciple of al-Bāḳillānī, faithfully following the "line of the Ancients", also uses *adilla* to denote the arguments for, and the proofs of, *kalām*. He defines "rational proof", however, as a *ḥudj̲dj̲at al-ʿuḳūl* which operates according to five processes: elimination, verification, attribution, generalization, and attribution and generalization simultaneously (cf. Anawati and Gardet, *Introduction à la théologie musulmane*, Paris 1948, 365-7); the last four processes are described as dependent on a *ḳiyās* in the primary sense of the word, an analogy of like with like. This, in *kalām*, is one of the clearest instances that we have of awareness of the "logic of two terms". One might say that *ḥudj̲dj̲a* was here most definitely seen as dialectical argument.

Al-G͟hazālī. The vocabulary of al-G͟hazālī is often as it were at the meeting point between those of *falsafa* and *kalām*. He readily employs *dalīl*, *adilla*, in a sense very close to that used by Ibn Sīnā. At the beginning of the *Munḳid͟h* it is specifically stated that *dalīl* (here = reasoning) presupposes recourse to first principles. However, al-G͟hazālī's personal attitude is known—he was, besides, influenced by Dj̲uwaynī—as is his mistrust of recourse exclusively to *dalīl*, thus understood: it is *takāfuʾ al-adilla*, where proofs that balance each other disappear before an interior illumination of a different order. More often still, it is true, al-G͟hazālī leaves to *dalīl* its primary meaning of a suggestive indication leading to manifest certainty. He who was to be called *ḥudj̲dj̲at al-Islām* certainly uses *dalīl* more than *ḥudj̲dj̲a* to denote rational proof.

He does, however, use *ḥudj̲dj̲a* with the common meaning of "convincing argument", which demands, or should demand, acceptance. Finally, using the term in a more technical sense, when he presents his own theses on formal logic, he repeats almost word for word the definitions and distinctions of the *Madk͟hal* of the *S͟hifāʾ*: *ḥudj̲dj̲a*, which is used to mean any argumentative process, "is of three sorts: syllogism, induction, analogy of like with like or parable (*tamt̲h̲īl*)" (*Miʿyār al-ʿilm*, Cairo 1346/1927, 86). Cf. also Farid Jabre, *La notion de certitude selon G͟hazālī*, Paris 1958, index s.vv. *dalīl* and *ḥudj̲dj̲a*.

In the methodology of *falsafa* and *kalām*, the term *ḥudj̲dj̲a* receives fairly widely differing meanings, sometimes being almost identified with *dalīl*, and sometimes being distinguished from it; sometimes suggesting any process of argumentation, the syllogism (and induction) of three terms as well as reasoning of two terms, sometimes signifying rather the dialectical argument that confounds and convinces an opponent. It is apparently in this last case that it retains its most specific meaning. *Ḥudj̲dj̲a*, as translated by H. Laoust (*La profession de foi d'Ibn Baṭṭa*, Damascus 1958, 90, n. 2), is the *titre*, "title", that one produces against an opponent; it is the victorious proof, whether it is a matter of prophetic teaching, the merits of the Companions (*id.*, 116) or the dialectical effort of the human reson.

In S͟hīʿī terminology

The notion that something or someone was visible "proof" of God's presence or will seems to have antecedents among monotheists before Islam. Among S͟hīʿīs, the term *ḥudj̲dj̲a*, "proof", has been used in at least three ways. It refers most generally to that person through whom the inaccessible God becomes accessible, who serves at any given time as evidence, among mankind, of His true will; thus the Prophet was *ḥudj̲dj̲a* of God. Very early, the term received a more specialized meaning: among some of the *G͟hulāt* [*q.v.*], it referred to a particular function within the process of revelation, sometimes identified with the rôle of Salmān as witness to ʿAlī's status as imām. The term was also sometimes used to refer to any figure in a religious hierarchy through whom an inaccessible higher figure became accessible to those below.

In It̲h̲nāʿas͟harī dogmatics, the first use of the term was systematized. It designates the category formed by prophets and imāms together, in that either a prophet or an imām must always be present as guide to God's will. Thus the section in Kulīnī's *al-Kāfī* dealing with prophethood and imāmate is entitled *ḥudj̲dj̲a*. The argument is that if there were no representative of God among mankind, God would remain unknowable and human beings could not serve him; and there must always be such a representative, for records of a former representative, even the Ḳurʾān itself, will give rise to disputes and uncertainty unless there is an authorized interpreter. The present *ḥudj̲dj̲a* is the hidden twelfth imām.

Among the Ismāʿīlīs, the term usually referred to a particular figure in the religious hierarchy, thought of as fulfilling a function in revelation. In Fāṭimid times, it was used for the chief *dāʿīs*, directing the ordinary *dāʿīs*. In numerological passages, the *ḥudj̲dj̲as* are twelve, presiding over twelve districts; or, occasionally, twenty-four—presumably twelve as *dāʿīs* in their districts and twelve at the court of the imām. A chief *ḥudj̲dj̲a* is mentioned, identical with the chief *dāʿī*. The Ṭayyibī Ismāʿīlīs (Bohras) have retained Fāṭimid usage in their dogmatics, but not in their organization. Among the Nizārīs, the term had a complex development. It was probably used for Ḥasan-i Ṣabbāḥ [*q.v.*] as visible head of the movement when the imām was hidden. Later, when the restored imām was treated as the locus of divine self-revelation, there was one *ḥudj̲dj̲a* (identified with Salmān, the ideal believer), who alone, by divine inspiration, could fully perceive the reality of the imām. The exact rôle of this *ḥudj̲dj̲a* passed through several phases as Nizārī teaching evolved;

eventually, the *ḥudjdja* was normally the imām's heir-apparent. In the present *ḥudjdja* lists of the Nizārīs (Khodjas), each imām is assigned a *ḥudjdja* as spokesman or visible token; the *ḥudjdja* need not be a man or even a person.

Bibliography: For the Ithnāʿasharī position, see Muḥammad al-Kulīnī, *Kitāb al-ḥudjdja*, in *al-Kāfī*. For earlier Ismāʿīlī usage, there is no one chief source; but Naṣīr al-Dīn Ṭūsī, *Rawḍat al-taslīm* or *Taṣawwurāt*, ed. W. Ivanow (in The Ismaili Society Series A, no. 4, Leiden 1950) is especially useful for the later period (the translation is not dependable). H. Corbin, *Histoire de la philosophie islamique*, i, Paris 1964, discusses all usages (see index); on the Nizārīs, he is to be supplemented by M. G. S. Hodgson, *The Order of Assassins*, The Hague 1955, which traces the variations in the concept in various historical circumstances.

For legal proof see BAYYINA, IḲRĀR, SHAHĀDA.

ḤUDJR B. ʿADĪ AL-KINDĪ, a Shīʿī agitator of the earliest period of Islam. The oldest authorities deny that he was a Companion of the Prophet and reject the legend that he conquered the district of Mardj ʿAdhrāʾ, in Syria. Ḥudjr threw himself heart and soul into ʿAlī's cause and fought for him at the 'battle of the Camel' [see DJAMAL] and at Ṣiffīn. We later find him in Egypt with Muḥammad, son of the Caliph Abū Bakr, who was governing this province in ʿAlī's name. After ʿAlī's son Ḥasan had given up his claim to the Caliphate, Ḥudjr became the moving spirit in all the ʿAlid intrigues in Kūfa, but the governor Mughīra b. Shuʿba [*q.v.*] was reluctant to resort to violence to put an end to his intrigues. Mughīra's successor Ziyād apparently succeeded in bringing him to reason, but Ḥudjr still continued his agitation, particularly by inviting al-Ḥusayn b. ʿAlī to come to take command of his followers at Kūfa. During Ziyād's absence in Baṣra Ḥudjr attempted to stir up a revolutionary movement. Ziyād hurried back with all possible speed and endeavoured to settle the affair peacefully. But when the negotiations fell through, Ziyād had Ḥudjr arrested along with those leaders of the Shīʿa party who were most deeply compromised. The matter was taken to the courts and an indictment prepared and signed by the most prominent men in Kūfa; finally Ḥudjr was taken with his companions to Muʿāwiya in Syria. After the Caliph had arranged a new trial and asked the advice of the leading men of Syria, he sentenced Ḥudjr to death and had him executed in Mardj ʿAdhrāʾ near Damascus. His tomb there is still "indicated by a small ruined construction which the local people call Shaykh ʿUdī" (see J. Sourdel-Thomine, *Guide des lieux de pèlerinage*, 27). His death opens the martyrology of the Shīʿa; hence the importance assigned, even in circles hostile to Shīʿī extremists (see, *e.g.*, al-Djāḥiẓ, *Nābita*, in *AIEO Alger*, x (1952), 315), to this rather everyday episode, which was really nothing more than an incident in the domestic troubles of ʿIrāḳ. Ziyād "throughout maintained a correct attitude and Muʿāwiya even inclined to the side of leniency" (Wellhausen), for he pardoned the majority of Ḥudjr's accomplices.

(H. LAMMENS*)

ḤUDJRA (A.), room, apartment, used (with the definite article) especially of the room of ʿĀʾisha where the Prophet and his two successors, Abū Bakr and ʿUmar, were buried; it is now one of the holiest places of Islam [see AL-MADĪNA].

From the same word is also derived *Ḥudjariyya*, a term used in Egypt for the slaves who were lodged in barracks near to the royal residence. Under the Fāṭimids, these slaves were organized by al-Afḍal into a sort of military bodyguard under the command of an *amīr* who held the title of al-Muwaffaḳ. They consisted at this period of 3000 men (see al-Maḳrīzī, *Khiṭaṭ*, i, 443).

(ED.)

See further KHALWA.

ḤUDJRIYYA (Ḥogariyya), name of a tribe, and of an administrative division (*ḳaḍāʾ*, district) in the Yaman, one of the four districts in the province (*liwāʾ*) of Taʿizz. It is to the east of the *ḳaḍāʾ* of al-Makhāʾ and to the south-west of Taʿizz, on the frontier of the South-Arabian Federation. The area is entirely mountainous, well-cultivated (coffee, cereals) and rich in livestock; according to Heyworth-Dunne it is famous for producing a kind of ass called *sawriḳiyya*. The number of inhabitants in this district was given by the same author in 1952 as 192,392, about one-third of the total population in the *liwāʾ* of Taʿizz. Its principal town is Turbat al-Dhubḥān, belonging traditionally to the important clan of the Shardjabīs (Shirdjāb); Von Malzan rated the number of its inhabitants at about 500, and that of the Jews among them at about one-fifth; the place has the remains of old Ḥimyar buildings. Another powerful clan is that of Ḥammād, whose town is called Dār Shawwār.

The Ḥudjriyya claim to be true descendants of ancient Ḥimyar, and are said to have at one time formed one tribe with the Ṣubayḥīs, who live to the south of their territory. Shāfiʿīs like all the other inhabitants in what is now the *liwāʾ* of Taʿizz, and having a tradition of political independence under a ruler of their own, they have become subject to the *imāms* of Ṣanʿāʾ only since the latter part of the 19th century, gradually and at first indirectly by being subjugated by the tribe Dhū Muḥammad, an offshoot of the Bākil of the country to the north of Ṣanʿāʾ, who established small garrisons in the Ḥudjriyya area. To escape this oppression, many of the Ḥudjriyya emigrated to Aden, where they earned a living as labourers.

Several features of the topography of Ḥudjriyya are mentioned by al-Hamdānī, such as the high mountain Ṣabir (Ṣabr). H. von Wissmann and Maria Höfner have established the identity of (Turbat al-) Dhubḥān with the ancient South-Arabian place Dhubḥān of Ḳashr and Shirgāb.

(J. Schleifer-[L. O. Schuman])

HUDJWĪRĪ, Abu 'l-Ḥasan ʿAlī b. ʿUthmān b. ʿAlī al-Ghaznawī al-Djullābī al-Hudjwīrī, Iranian mystic, born at Hudjwīr, a suburb of Ghazna (on the last page of the old Lahore edition of his *Kashf al-maḥdjūb*, he is named: Ḥaḍrat-i Dātā Gandjbakhsh ʿAlī al-Ḥudjwīrī). What is known of his life comes mainly from his own references to it in his *Kashf al-maḥdjūb*. On his teachers in mysticism and his numerous journeys, see the introductions to the *Kashf* by Nicholson, pp. xvii-xviii, and by Žukovskiy, 4 ff. He appears to have lived for a time in ʿIrāḳ, where he first grew rich and later fell into debt. His married life was brief and unhappy (tr. Nicholson, 364). According to the *Riyāḍ al-awliyā'*, he ended his life at Lahore; he was imprisoned, and hindered during the composition of the *Kashf* by the lack of the books which he had left at Ghazna. Nicholson dates his death between 465 and 469/1072 and 1077 (for his arguments, see introd. xviii-xix). After his death he was revered as a saint and his tomb became a place of pilgrimage.

Of the ten or so works which he states that he wrote (see list in Nicholson's introd., xix-xx, and Žukovskiy's introd., 10-1), there remains only the *Kashf al-maḥdjūb* (entitled *Kashf al-maḥdjūb li-arbāb al-ḳulūb*, "The unveiling of that which is hidden, for people of heart", in Ḥādjdjī Khalīfa, v, 215). There is disagreement over the date of its composition (see Žukovskiy's introd., 29), but it was probably written in Lahore, and thus during the last years of Hudjwīrī's life, in reply to questions put by a certain Abū Saʿīd al-Hudjwīrī. Its aim is to present the complete system of Ṣūfism, setting out and discussing its doctrines and its practices—a method of exposition which is found even in the biographies of Ṣūfīs (tr., 70-175). Before giving his own opinion, the author usually examines the opinions of earlier writers on the subject, refuting them if necessary; these discussions of the problems of mysticism are illustrated by examples drawn from the writer's own experience. Although he was a Sunnī and a Ḥanafī, he succeeded, like many other Ṣūfīs before and after him, in reconciling his theology with an advanced mysticism, in which the theory of annihilation (*fanā'*) holds a pre-eminent place; but he rarely goes to such extremes as would provoke an accusation of pantheism; he declares to be heretical the doctrine according to which the human person became absorbed in the Divine Being; he compares *fanā'* to combustion by a fire which changes the nature of everything into its own nature, but without changing the essence of the thing burned. He frequently and persistently warns his readers that no Ṣūfī—not even one who attains the supreme degree of sanctity—is dispensed from obeying the religious law. On other points—for example ecstasy provoked by music and singing, or the use of erotic symbolism in poetry—his judgement is more or less circumspect.

The most interesting section of the *Kashf* is the 14th: "Doctrines professed by the various Ṣūfī sects": he lists twelve of them and explains the doctrine of each. One only, that of the Malāmatīs, appears to be mentioned in older works on Ṣūfism; brief references to other sects found in later works (*e.g.*, the *Tadhkirat al-awliyā'*) are probably borrowed from it. It is not clear whether these sects actually existed or whether they were invented by Hudjwīrī in his desire to systematize the doctrine of Ṣūfism; but there is every reason to suppose that he often mingled his own personal views with his exposition of the doctrines which he attributed to the founder of each school. It is possible that the main source of the information in the *Kashf* was oral, but Hudjwīrī does mention a treatise on Ṣūfism, the *Kitāb al-Lumaʿ* (in Arabic) of Abū Naṣr al-Sarrādj (d. 377 or 378/987-8), one of the earliest of this type (a passage from it is included in the *Kashf*, tr. 341); a comparison of the two works reveals that the plan of the *Kashf* coincides with that of the *Lumaʿ*; the *Kashf* includes references to three other mystic writers (tr. 26 and 114).

In the introduction to his translation of the *Kashf* (2nd ed., revised), Nicholson has this to say: "Though Hujwírí was neither a profound mystic nor a precise thinker, his work on the whole forms an admirable introduction to the study of Sufiism: it ... has the merit ... of bringing us into immediate touch with the author himself, his views, experiences, and adventures, while incidentally it throws light on the manners of dervishes in various parts of the Moslem world. His exposition of Sufí doctrine and practice is distinguished not only by wide learning and first-hand knowledge but also by the strongly personal character impressed on everything he writes".

In addition, Žukovskiy, in his important introduction, gives a list of the works which Hudjwīrī consulted (21-5) and a list of the Muslim writers who used the *Kashf* (36 ff.); he examines carefully the peculiarities of the author's language (40-51) and gives a judgement of the book as a whole (31 ff.).

(Hidayet Hosain-[H. Massé])

HUDNA, abstract noun from the root *h.d.n.* with the sense of "calm", "peace". Other terms which have the same meaning are *muwādaʿa*, *muṣālaḥa*, *musālama*, and *mutāraka*, the general meaning of which in Islamic law is the abstention of the parties concerned from hostilities against each other. The process of entering into a peace agreement with the enemy is called *muhādana* or *muwādaʿa*, but the instrument of peace is *hudna* (peace agreement).

In Islamic legal theory, normal relations between the *dār al-Islām* [*q.v.*] and the *dār al-ḥarb* [*q.v.*] were not peaceful, and there existed a state of latent or open hostilities which jurists nowadays call a state of war. Short intervals of peace were, however, permitted by divine legislation (Ḳur'ān VIII, 63; IX, 1 and others) and the Muslims could establish peaceful relationships with non-Muslims, individually and collectively, if such a peace was not inconsistent with the interests of the Muslims. On

the individual level, the *ḥarbī* (person from the *dār al-ḥarb*) could enter the *dār al-Islām* unmolested, provided he obtained an *amān* ([*q.v.*] see also MUSTAʾMIN) beforehand from any believer, whether in an official or an unofficial capacity. But as a territorial group, the unbelievers could obtain such a temporary status only by an official act, either directly or indirectly granted by the *Imām*, which conferred upon the inhabitants of the territory whose ruler entered into a peace agreement with the Muslims the benefits of the *amān* obtained by a single individual. It is clear that the *muhādana* or *muwādaʿa* is, as Kāsānī observes, a form of *amān*. But the *amān* is a temporary peace given to an individual *ḥarbī*, although his country is still in a state of war with Islam, while the *muhādana* is a temporary peace extended to a certain town or a country (including its people) by an official act. *Hudna* in Islamic law is thus equivalent to "international treaty" in modern terminology. Its object is to suspend the legal effects of hostilities and to provide the prerequisite conditions of peace between Muslims and non-Muslims, without the latter's territory becoming part of the *dār al-Islām*.

The Ḳurʾān provided for the Muslims not only the possibility of entering into a peace agreement with the enemy, but also the obligation to observe the terms of the agreement to the end of its specified period (Ḳurʾan IX, 4; XVI, 93), once the agreement was accepted by the Muslims. This is the principle *pacta sunt servanda*, stressed both in divine legislation and juridical writings. Thus *hudna* in Islamic law was established by practice (*i.e.*, agreement and consent of the parties concerned) and validated by authoritative sources. The treaty-making power rested in the hands of the *Imām*, but this power might be delegated to commanders in the field who were empowered to negotiate with the enemy if the latter was willing to come to terms with Islam. However, the *Imām* reserved the right to repudiate the treaty if it proved to be inconsistent with the interests of the Muslims. The *Imām*'s approval or ratification was, therefore, necessary to make the treaty binding upon the Muslim community. Even after the treaty was ratified, the *Imām* had the power to terminate the treaty by denunciation (*nabdh*), provided a prior notice was sent to the enemy to that effect. The Ḥudaybiya treaty, concluded by the Prophet Muḥammad with the unbelievers of Mecca in 6/628, provided a precedent for subsequent treaties which the Prophet's successors made with non-Muslims. Although this treaty was violated within three years from the time it was concluded, most jurists concur that the maximum period of peace with the enemy should not exceed ten years, since it was originally agreed that the Ḥudaybiya treaty should last ten years.

The Prophet and his successors concluded treaties with the People of the Book [see AHL AL-KITĀB], but these treaties were not temporary in nature, since both the people and the territory were incorporated in the *dār al-Islām* and the *ahl al-kitāb* became subjects of the *Imām*. Since these were not required to become Muslims, they were regarded as protected members of the state and called *dhimmīs* [*q.v.*]. The treaties with *ahl al-kitāb* were, accordingly, not strictly international treaties, but covenants (*ʿahd*) or a form of constitutional charters which fall under Islamic constitutional law, not under the Islamic law of nations (for a model text of such a charter, see Shāfiʿī, *al-Umm*, iv, 118-9).

An examination of the treaties concluded by the Prophet and his successors leads us to establish certain general characteristics which may be summed up as follows: (1) the treaties were, on the whole, brief and general, and no attempt was made to supply details as to their applications; (2) the preamble consisted of the *basmala* ("in the name of Allāh"), the names of the parties and their representatives, and their titles; (3) treaties were temporary agreements, the duration of which was specified, except those with *ahl al-kitāb*, although it was understood that a treaty might be renewed; (4) the provisions were stated in written form and most jurists are agreed that the text of the treaty must be written and signed by the parties and often the names of the witnesses were added at the end of the text. The writing as well as the signing and the dating of the treaty are not, strictly speaking, legal prerequisites; but Ḥanafī jurists insisted that treaties, in order to be binding, must be written and duly signed.

(M. KHADDURI)

ḤUḌNA, current orthography HODNA, a low-lying region in the centre of the upper plains of Algeria, at the foot of the mountains of Wennougha, Hodna and Belezma, and lying open to the south-east towards the Saharan region of Zāb (Biskra). It covers an area of 8,600 sq. km and is made up of the hills of the Djerr in the north and east, immense alluvial plains in part flooded by water from the wadis that come down from the chain of mountains, a large *sebkha* of 760 sq. kms and, in the south, a sandy region, the Rmel. The country, which is very hot in summer and very dry (annual rainfall 200 to 300 mm), is a sub-desert steppe devoid of alfa-grass. It is quite well supplied with water, thanks to a number of springs which emerge from the limestone mountains, the abundant but very irregular flooding by the wadis (Oued el-Leham, el-Ksob, Selman, Magra, Barika, Bitham), and the high water-table (partly artesian) in the sub-soil. The Hodna has thus always been a country of both agriculture and stock-breeding, inhabited alike by a sedentary population and by nomadic herdsmen. In ancient times it formed part of the Roman *limes*, and a series of towns marks the route leading to the east and north from the Sebkha, while forts guard the south. In the early Middle Ages, along with Zāb it formed a military, political and economic march for Ifrīḳiya, facing the pastoral steppes of the central Maghrib and the Sahara. Fortified agricultural centres, often marking the site of ancient cities, are scattered throughout the nomads' pasturages—Tobna (Tubunae), Ngaous (Nicivibus), Maggara (Macri); Msila was founded in the 4th/10th century close to the ruins of Zabi; in the following century it was momentarily eclipsed by Ḳalʿa, a temporary capital set up in the mountains

by the Banū Ḥammād. The invasions of the Banū Hilāl in the 5th/11th century cut off Hodna from Ifrīḳiya but, with Zāb, it continued to be a zone of influence for the Ḥafṣid rulers of Tunis; its population was to some extent reinforced by the settling of Riyāḥ nomads, the Athbedj and the Dawāwida. Towns and cultivation disappeared, except for Msila and Ngaous. In the 10th/16th century the Turks brought Hodna into the Beylik of the East (of Constantine); it was to remain united with the province, and later with the French *département* of Constantine.—The principal tribes of Hodna are the Ouled (*awlād*) Madhi in the west and the O. Derrādj in the east; they are very heterogeneous; the O. Soltan and the O. ʿAlī from the mountains along the eastern border have remained Berber-speaking (Chaouïa). The essential feature of the economy still remains the breeding of sheep, goats and camels: summer migration to the upper plateaux of Constantine entails a semi-nomadism for most of the inhabitants. But the fields of wheat and barley covered by floodwaters from the wadis are increasing; so too are irrigated garden-orchards (of apricots, figs, olives; date-palms at Mdoukal). The collection and sale of the salt of the Djebel Metlili, in the south-east, and of the Sebkha, a little handicraft and, more particularly, temporary emigration towards the towns on the coast and in France help the people to exist. Hodna has 100,000 inhabitants, and its principal centres are Msila (8,500 inhabitants), Mdoukal (3,500) and Ngaous (2,000).

ḤUDŪD, pl. of ḤADD [*q.v.*]; see also, for frontier-zones and frontier-warfare: ʿAWĀṢIM, GHĀZĪ, THUGHŪR; and for the delimitation of frontiers: TAKHṬĪṬ AL-ḤUDŪD.

ḤUDŪTH AL-ʿĀLAM, "the beginning of the world". *Ḥudūth* is the *maṣdar* of *ḥadatha*, which signifies: (1) to appear, to arise, to have come into being recently; (2) to take place, to happen. With Muslim thinkers the term has two meanings: one denotes the existence of a thing, after its non-existence, in a temporal extension: this is *al-ḥudūth al-zamānī*, to which temporal eternity (*al-ḳidam al-zamānī*) corresponds. For the *mutakallimūn*, *ḥudūth al-ʿālam* bears only the sense of a beginning in time. They take this "beginning" of the world as their basis for proving the existence of God. Al-Ghazālī, for example, establishes his syllogism as follows: every being that has a beginning in time (*ḥādith*) necessarily has a cause that brings it into existence; now the universe is a being that begins to exist; therefore it necessarily has a cause. A detailed analysis of this proof can be found in S. L. de Beaurecueil and G. C. Anawati, *Une preuve de l'existence de Dieu chez Ghazzālī et S. Thomas*, in *MIDEO*, iii (1956), 207-58.

The other meaning is that of the hellenizing philosophers, in particular Avicenna: *ḥudūth* denotes contingency, that is to say, the fact of a being's existing after not having existed, but in an ontological or essential extension, which does not necessarily involve time. This is *al-ḥudūth al-dhātī*. From this point of view the *falāsifa* affirm the *ḥudūth al-ʿālam* and its eternity. For details see the article referred to above, and also: *Dustūr al-ʿulamāʾ*, Ḥaydarābād 1333, ii, 5-8; Djuwaynī-Taftāzānī, *Sharḥ al-Mawāḳif* (*al-mawḳif al-khāmis fi 'l-ilāhiyyāt, al-marṣad al-awwal*); Abu 'l-Bāḳī, *Kulliyyāt*, Būlāḳ 1281, 166.

HUELVA [see WALBA].

HUESCA [see WASHḲA].

ḤUFĀSH, high mountain in South Arabia, belonging to the al-Maṣāniʿ range of the Sarāt group, on the Wādī Surdud near Ḥarāz [*q.v.*]. It is often mentioned by Hamdānī, along with the adjacent large mountain of Milḥān (called after the Ḥimyarī Milḥān b. ʿAwf b. Mālik) the real name of which was Rayshān. In Hamdānī's time the latter was said to possess no fewer than ninety-nine springs and had a large mosque (called Masdjid Shāhir) on its summit, Shāhir. It was popularly believed (also according to Hamdānī) that not far away there lay a treasure which many Arabs sought but could never reach, as a snake barred the way in the shape of a high mountain, as soon as they tried to approach it. In Niebuhr's time, Ḥufāsh formed a separate district to which Djabal Milḥān also belonged. Among places of some importance in Ḥufāsh he mentions Sefekīn, a small town surrounded by a wall, the residence of the Dawla (Dōla) and the two villages of Bayt al-Nushēli and Bayt al-Shumma.

AL-**HUFŪF**, or AL-HUFHŪF according to an older form, and in English most frequently Hofuf, a town in eastern Saudi Arabia, capital of the oasis of al-Ḥasā [*q.v.*]. The name derives from *haffa*, to hiss, or blow (of a wind), and was first given to a group of gardens near the old capital of al-Ḥasā. The population is estimated at about 80,000 inhabitants, some 40% of whom are Shīʿīs.

Until the 1370's/1950's, al-Hufūf was surrounded by a large wall with a number of defensive towers. Six gates gave access to the town. The wall enclosed the town's three main quarters: al-Kūt, al-Rifāʿa, and al-Naʿāthil. Al-Kūt, which contained the administrative offices, the garrison, and the homes of officers and functionaries, was itself fortified by another wall and surrounded by a moat. The gradual modernization of the town has necessitated the demolition of most of the walls, and to avoid overcrowding two extramural suburbs, al-Ṣāliḥiyya and al-Ruḳayyiḳa, have grown at the southern edges of al-Hufūf and have substantial populations.

Al-Hufūf succeeded al-Ḥasā, which itself had succeeded Hadjar, as the administrative centre of the oasis as well as of the region which since 1371/1952 has been called the Eastern Province of Saudi Arabia. During the Turkish occupation, 1289/1871 to 1322/1913, al-Hufūf was the residence of the Mutaṣarrif Pasha, who governed the *sandjaḳ* of al-Ḥasā (misnamed Nedjd) under the jurisdiction of Basra. After the conquest of al-Hufūf by ʿAbd al-ʿAzīz Ibn Suʿūd in 1322/1913, the town continued to be the provincial administration centre until 1371/1952 when the capital was moved to al-Dammām [*q.v.*].

Besides its administrative functions, al-Hufūf, as the capital of Saudi Arabia's richest and largest oasis, has long been an important trade and manufacturing centre. Its production of textiles, coffee-pots, weapons, and jewellery was long well known in the Persian Gulf, and its weekly Thursday market still attracts large crowds from the entire province. Al-Hufūf is now connected by asphalted road and by railroad with both the provincial capital at al-Dammām and the national capital at al-Riyāḍ.

ḤUKM (A., pl. *aḥkām*), verbal noun of *ḥakama*, which originally means "to withhold, restrain, prevent", is used in a number of technical meanings in the field of religious law [see AḤKĀM], philosophy (see below, I), and grammar (see below, II). On the different meanings of the term *ḥukm*, see *Dict. of technical terms*, i, 372 ff.; L. Gauthier, *La racine arabe* حكم *et ses dérivés*, in *Homenaje a Don Fr. Codera*, Saragossa 1904, 435-54.

I. *Ḥukm* means in philosophy, the judgement or act by which the mind affirms or denies one thing with regard to another, and thus unites or separates them. According to al-Djurdjānī, it is "the act of establishing a relation between one thing and another by affirmation or denial" (*Taʿrīfāt*). Ibn Rushd explains the combining of certain concepts which are *judged* in relationship to one another, which is then accomplished by the mind, as an act of the reasoning faculty, which follows, by a necessity of this faculty itself, from the comprehension of the concept. The *Ikhwān al-ṣafāʾ* had already noticed this necessity: "Judgement on things is the product of the intelligence. (. . .) A man may say the opposite of what he knows, but he cannot know the opposite of what he understands (*yaʿḳilu*)". The word *ḥukm* covers both the meaning of *taṣdīḳ*, a judgement that a certain statement is true and approved, and *takdhīb*, a judgement that a certain statement is false and denied.

Arab logic studies *ḥukm* not in itself, but in relation to the proposition, *i.e.*, a statement which expresses a judgement. Ibn Sīnā describes the proposition thus: "Any statement in which a relation is established between two things in such a way that either a truthful or an untruthful judgement follows from them" (*Nadjāt*, 17). And further: "The attributive proposition is of such a kind that, by uttering it, we enunciate a judgement either affirming or denying that a certain thing either is or is not another" (*Dāneshnāme*, 53, French trans., 36-7).

A judgement is expressed only in those propositions which demand either assent or denial, those in which the utterer of the statement can be called either truthful or untruthful; but this does not include someone who asks a question, makes a plea, or expresses a wish or hope. Three sorts of propositions formulate a judgement, "because the judgments (*aḥkām*) which are connected with assent (*taṣdīḳ*) are three in number": either the judgement refers to a *mufrad*, a simple [attribution], and is of the kind which some call *ḥamlī*, attributive [judgement]; e.g. "the body is—or is not—created". Or it refers to a fact dependent on a certain condition and is known as *sharṭī*, conditional. But this can occur in two different ways. In the first case, the condition involves only one consequence, either positive or negative: the judgement is then expressed in a conjunctive conditional proposition (*muttaṣila*); e.g. "if the sun rises it is daylight". In the second case, the consequent implies an alternative of which one member necessarily excludes the other; *e.g.*, "This number is either odd or even"; the statement of such a judgement is called a "disjunctive conditional proposition" (*munfaṣila*) (*Manṭiḳ al-mashriḳiyyīn*, 60-1, see also 62). This passage is among the few which make of the judgement the central point of explanation; it is not even mentioned in a closely related text (*Ishārāt*, 22-3; Fr. trans., 114-6). This theory of conditional judgement and those of the proposition and syllogism which arise from it, are not of Aristotelian inspiration. Together with other indications, they pose the problem of other sources, notably Stoic, of Arab philosophy.

"The definite proposition has four forms" according as "the judgement applies to all by way of affirmation", then it is "a universally affirmative statement", or "applies to all by way of negation", "a universally negative one", or "applies to some by way of affirmation" or "to some by way of negation," particular propositions either affirmative or negative. Moreover "an indefinite judgement is the same as a particular judgement". According to another series of distinctions, the judgement expressed in any proposition is either necessary, possible, or impossible, the necessary being to some degree included in the possible (*Dāneshnāme*, 35-45, trans. 36-41; *Manṭiḳ*, 63 and *Nadjāt*, 19-20). *Nadjāt*, 18, explains the subject and the predicate in connexion with their place in the judgement.

Ḥukm means also sensory intuition, where assent of the mind immediately follows perception, *e.g.* "our judgement that fire burns"; the judgement of experience which follows repeated sensory intuitions, *e.g.*, "our judgement that a blow administered with a piece of wood is painful"; the practical judgement, *e.g.*, "our judgement that the sun exists"; the judgement which follows a strong intellectual intuition (the principle of the discovery of a scientific explanation); the judgement that follows on the fundamentals of what our education has taught us without that having compelling force on our intelligence as such, *e.g.* "our judgement that it is wicked to steal the property of another". But in order to distinguish judgements relating to first principles, by an absolute necessity of the human mind, Ibn Sīnā uses *ḳaḍāʾ*, which expresses the ineluctable character of the act, *e.g.*, "our judgement that the whole is greater than the part" (*Ishārāt*, 56-9, trans. 176-80).

In the statement of the attributive proposition, and therefore in the formulation of the judgement, there is an important difference between Persian, where the grammatical copula is explicit, as in European languages, and Arabic where it can be omitted. It nevertheless exists in the mind, and the two juxtaposed terms of the bipartite statement are set forth as a judgement and a proposition only if the copulative—verb or personal pronoun—is understood by implication (*Ishārāt*, 27, trans. 126-7).

Goichon, Paris 1951; *Dāneshnāme*, Tehrān 1331s./1371h., French trans. Achéna and Massé, Paris 1955; *Manṭiḳ al-mashriḳiyyīn*, Cairo 1328/1910. The logic of the proposition, in the edition of the *Shifāʾ* begun in Cairo, has still to be published. *Rasāʾil Ikhwān al-ṣafāʾ*, ed. 1957, i, 426; Ibn Rushd, *Kitāb al-Nafs*, ed. A. F. al-Ahwānī, Cairo 1950, 68.

(A.-M. Goichon)

II. In grammar, *ḥukm* can be understood only if the term, in the world of thought of the Arab grammarians, is assigned its proper place in the whole grammatical system that they elaborated. In this system,

the Arabic language is considered as a logical and harmonious entity, subjected to the rules of wisdom, intelligence and justice. The organization of this entity has been achieved especially:

(a) by the establishment of hierarchies (see especially *K. al-Inṣāf*, 35, lines 14-6), of subordinations: the governing power of the verbs is the strongest; among the *ḥurūf*, the particles governing nouns, *ʿawāmil al-asmāʾ*, are stronger than the particles governing verbs (*op. cit.*, 233, 3), etc.; among the words, there are primary forms: a typical example is the *maṣdar*, called *maṣdar* because it is the "origin" of the other forms of the verb (see question 28 of the *K. al-Inṣāf*); we may also cite the singular considered as prior to and stronger than its corresponding internal plural or plurals. These last considerations influence the explanation of syntactical relationships.

(b) by the search for the *aṣl*, the base: the basic meaning of words, of grammatical constructions: "we [the Baṣrans] are attached to the *aṣl*, and he who is attached to the *aṣl* is exempted from establishing the proof (*al-dalīl*)" (*op. cit.*, 199, 1); pointing out this *aṣl* is as it were a conclusive argument (cf. in the *Lumaʿ al-adilla*, of the same author, 106, line 11). Examples: for *aw*, *Inṣāf*, 198, 19; for the vocative form *allāhumma*, *ibid.*, 151, 19. In the case of words, one determines its basic position, its *martaba* or *rutba*, that is to say its "rank". This rank is a consequence of the preceding factors, or may be simply an affirmation, sanctioned by the consensus (*idjmāʿ*) of the grammarians (of Baṣra), but it is a particularly important element of the system; for it is exactly at its *martaba* in which it is placed that the word exercises or has to exercise its *ḥukm*.—Besides this, there is an extensive use of *ḳiyās*.

As for *ḥukm*, it means: (i) the proper function which the word *performs* at its *martaba* in which it is placed, its activity; (ii) the proper function *to be performed* by the word at its *martaba* in which it is placed. It may be translated by "part played or to be played", but this translation gives no indication of the whole system in which *ḥukm* is involved. The distinction indicated may sometimes not be obvious in the use of *ḥukm* in the texts; there are times when it can be taken in the one sense or the other. The following examples allow this distinction to be clearly recognised:

For (i): (a) *Inṣāf*, 121, 19-24 (cf. 39, 20-1): *lawlā* (= *law* + *lā*) is compounded (*rukkibat*); the word loses the *ḥukm* (specific activity) of its components and acquires a new *ḥukm* (a new activity); therefore this is compared with the *adwiya*, remedies, which are compounded of various ingredients: their compounding annuls the *ḥukm* (efficiency) of each one in its separate state, and confers upon them a new *ḥukm* (power to act). According to the present example, it should be understood not to mean "intrinsic task in performance", but rather "faculty, power of acting in respect of some specific task", which would introduce an ontological aspect.

(b) *Inṣāf*, 178, 10-12: in an oath one can say *amu 'llāhi*. The *aṣl* is *aymunu 'llāhi*; *yāʾ sākina* has been suppressed, but, as this suppression was not necessary, its *ḥukm* (activity) remains.

(c) *Inṣāf*, 199, 11-12: to be astonished one must first know; this is why it can be said, in determining the meaning of *al-taʿadjdjub*: *mā ẓahara ḥukmuh wa-khafiya sababuh*, "its intrinsic task has not [yet] appeared and its cause is [still] hidden".

(d) *Inṣāf*, 123, 15-6: on the subject of *illā*, the particle denoting exception: *illā* cannot have the meaning of *wa-lā*, for *illā* with the meaning of "except" excludes the word following from the *ḥukm* (field of activity) of the preceding one; but *wa-* joins together; and in joining together it necessitates (*yaḳtaḍī*) the introduction of the word following into the *ḥukm* (task being performed) of the preceding one.

For (ii): (a) *Inṣāf*, 175, 12-3: in the construction *la-zaydᵘⁿ afḍalu*, the grammarians of Kūfa perceive a *lām* coming after an oath (*wa-'llāhi*) which is not expressed. The Baṣrans regard it as the *lām al-ibtidāʾ*. Their argument against the Kūfans is: if the *lām* in question were the *lām* of the oath (*djawāb al-ḳasam*), its *ḥukm* (task to be fulfilled) would be to cancel the governing influence of the verb *ẓanna*, when it is introduced into the phrase; one says *ẓanantu zaydᵃⁿ ḳāʾimᵃⁿ*, and with the *lām*: *ẓanantu la-zaydᵘⁿ ḳāʾimᵘⁿ*; now the *ḥukm* (task to be fulfilled) of the *lām al-ḳasam* (*lām* of the oath) *fī kull mawḍiʿ*, in any circumstances, is to exert no governing influence, either before or after it.

(b) *Inṣāf*, 173, 15: *a-'llāhi mā faʿaltu kadhā*. This form of oath can be used only with the divine name Allāh: *wa-'khtiṣāṣ hādha 'l-ism bi-hādha 'l-ḥukm ka-'khtiṣāṣ lāta bi-ḥīnⁱⁿ*, "and the particular use of this name for this *ḥukm* (task to be fulfilled = vocative with the particle *a*) is the same as the particular use of *lāta* with *ḥīna*."

(c) *Inṣāf*, 184, 23 and 185, 1: one says, *marartu bi-kilā akhawayka*, and *marartu bi-himā kilayhimā*, *wa-kadhālika ḥukm iḍāfat kiltā ila 'l-muẓhar wa-'l-muḍmar*, "so this is the *ḥukm* (task to be fulfilled) of the grammatical annexion (in an *iḍāfa*) of *kil(t)ā* to a noun (*muẓhar*) and a pronoun (*muḍmar*)".

Other examples can easily be found in grammatical literature; thus: al-Zadjdjādjī, *al-Djumal*, 129, line 3, 312, foot; al-Zamakhsharī, *Mufaṣṣal*², § 517, title of § 667; Ibn Yaʿīsh, 187, line 13, 628, l. 3, 1144, ll. 20-1; Ibn Djinnī, *Sirr ṣināʿa*, i, 35, l. 2; Ibn al-Ḥādjib, in *Sharḥ al-Kāfiya* of Raḍī al-Dīn al-Astarābādhī, i, 297, l. 4.

In determining the meaning of *ḥukm*, we have restricted ourselves to a single author, Ibn al-Anbārī, in a work of unique importance for the method of the Arab grammarians, his *Kitāb al-Inṣāf*. All the examples given refer to arguments of the Baṣrans; but at *Inṣāf*, 92, 18-21, it is the Kūfans who are speaking: "... because we say: that is permitted only because the *ḥurūf* (particles), when they are compound (*rukkibat*), have their *ḥukm* changed, after their being compounded, from what it was before they were compounded; do you not see that in the case of *hal* that which follows after it is not permitted to exercise a governing influence over what comes before it, whereas when it is compounded with *lā* and when the sense of exhortation (*maʿnā al-taḥḍīḍ*) has penetrated into it, this particular *ḥukm* is changed from what it was before the compounding; it is then permitted that what follows after it should exert a governing influence over what comes before it, and that one should say *zaydᵃⁿ hallā ḍarabta*". The first use of *ḥukm* can be compared with that of i (a). The second use of *ḥukm*, which refers to the behaviour of *hal* before the compound is formed, could have the meaning of "task being performed". But as the Kūfans do not accept the doctrine of the *martaba* or this system of Baṣra mentioned above (see G. Weil, *Einleitung*, 30-1), it is natural that they should understand *ḥukm* in a more ordinary sense, as when we translate it by "part to play".

The word in its *martaba* possesses a right, *ḥaḳḳ*, to give due weight to its *ḥukm*, according to whether it accomplishes its task partially or wholly. This is the

ḥaḳḳ al-ḥukm, as Ibn Yaʿīs͟h says (1071, l. 11), "the right of *ḥukm*". The word is thus endowed with a sort of juridical personality. A good example, the case of the *fāʿil* (*Muf.*², § 20), will help us to enter into this highly individual systematization: the *fāʿil* is that on which a verb or word comparable with a verb depends [*usnida ilayhi*] [this is its definition in grammatical logic], which is always placed before it [this is its *martaba*]: *ḍaraba zaydᵘⁿ*; *ḥaḳḳuh al-rafʿ*, "its right and its duty is to be put into the nominative"; and its *rāfiʿ*, the *ʿāmil* occasioning this use of the nominative, is that which depends on it—*al-musnad*, the verb itself. Thus we have, for the *fāʿil*: definition, *martaba*, right, *ʿāmil*. The *ḥukm* is not expressly indicated; according to the explanations of Ibn Yaʿīs͟h for this § 20 (89, lines 15-6), it is the grammatical rôle indicated above: to receive the *isnād* of the verb, in its position in the *martaba*.

The *fāʿil* must come after the verb, this is its fundamental place, its *aṣl*, its *martaba*, *liʾannahū ka'l-d̲j̲uzʾ minhu*, "because it is as it were a part of it" [this is the justification of the *martaba*]. Placed before the verb, the *fāʿil* has left its *martaba*: *zaydᵘⁿ ḍaraba*; its *ḥukm* is attained, and also the possession of its rights. The true *fāʿil* is then its representative: a pronoun, a *ḍamīr*, not expressed, but present in the verb: *fa-tanwī fī ḍaraba fāʿilᵃⁿ wa-huwa ḍamīr yard̲j̲iʿu ilā zaydⁱⁿ* (§ 21). [To understand this, it may help to compare the French turn of phrase "Zayd il a frappé"]. The *rafʿ* is no longer assured to this *fāʿil muḳaddam ʿalā fiʿlihī*, placed before its verb: it may be liable to undergo the *ʿamal*, the governing influence of a *ḥarf* assimilated to a verb, such as *inna*, which will put it in the *naṣb*: *inna zaydᵃⁿ ḍaraba* (see Ibn Yaʿīs͟h, 89, 17).

In other respects, in grammar, the *ḥukm* is an essential element in the system of the *ḳiyās*. Indeed the *ḳiyās* (see its definition in the *Lumaʿ al-adilla* of Ibn al-Anbārī, Damascus 1377/1957, 93) involves a communication of *ḥukm*, from the *aṣl* to the *farʿ*, in accordance with the recognized resemblance between the *farʿ* and the *aṣl*, by virtue of the principle (enunciated, *ibid.*, 109, lines 16-7) that the resemblance necessitates a similarity of *ḥukm*.

On this relationship between resemblance and *ḥukm*, see also the chapter of al-Suyūṭī, *al-As͟hbāh wa'l-naẓāʾir fi 'l-naḥw*², Ḥaydarābād 1359, i, 217-21. On some different behaviours of *ḥukm*, see Ibn D̲j̲innī, *K̲h̲aṣāʾiṣ*, iii, 51-6, 59-67, 157-64, and the chapter of al-Suyūṭī, *op. cit.*, 221.

If such is the meaning of *ḥukm* in grammar, why then the choice of such a word for such a meaning? In fact, *ḥukm* is the infinitive of *ḥakama yaḥkumu ḥukmᵃⁿ* "to pronounce a sentence", with *bi-* "on", with *li-* "in favour of", with *ʿalā* "against". In law, *ḥukm* means "judge's decision, his judgement in a disputed question and also in a less litigious matter like the nomination of a guardian". *Ḥukm* in grammar, into which the concepts of law penetrate, must itself also imply the expression of an authoritative decision, a judgement. In the background of *ḥukm* there is indeed the idea of the divine origin of language, which is *waḥy wa-tawḳīf* "closed revelation" (see H. Fleisch, in *Oriens*, 1963) and, more particularly for the Muslim Arab grammarian, the belief in the Arabic language as the organ of expression of the divine Absolute in the Ḳurʾān, *kalām Allāh* (in this connexion, see, in *Mufassal*², § 522, Ibn Yaʿīs͟h, 1123, lines 14 ff., the audacity, *al-d̲j̲urʾa ʿala-'llāh* [*Muf.*], *al-iḳdām ʿalā kalām Allāh* [I.Y.], which was alleged against al-Ḥad̲j̲d̲j̲ād̲j̲ b. Yūsuf). In this *kalām Allāh*, this utterance of Allāh, the word can accomplish only the task allotted to it by the decision of the *Wāḍiʿ*, its sovereign Founder. *Ḥukm* "judgment" is to be understood in the passive sense, which the infinitive can have—judgement on the word in relation to its activity, the task it has to perform.

The plural of *ḥukm* is *aḥkām*, in the event of a plurality of *ḥukm*, *e.g.*, *Inṣāf*, 64, line 13, 76, line 4; or Ibn His͟hām al-Anṣārī, in the *S͟harḥ* of his *S͟hud̲h̲ūr al-d̲h̲ahab* (Cairo 1371/1951, 416, line 7); but this seldom occurs in the current texts. It is not rare in chapter-headings, *e.g.*, al-Dānī, *Kitāb al-Nuḳaṭ* (*Biblioth. Islam.*, iii), 140, 142, 144, 146, 147; Ibn D̲j̲innī, *K̲h̲aṣāʾiṣ*, ii, Cairo 1374/1955, 108; al-Zad̲j̲d̲j̲ād̲j̲ī, *al-D̲j̲umal*, 277, *aḥkām al-hamza fi 'l-k̲h̲aṭṭ* (cf. al-Dānī, *Muḳniʿ* (*Biblioth. Islam.*, iii), 63). The meaning can be expanded and so translated by "behaviour, situation, conditions", while in the previous example it would be "situation of the *hamza* in writing".

Weil, Abu 'l-Barakāt Ibn al-Anbārī, *Die Grammatischen Streitfragen der Basrer und Kufer*, Leiden 1913, *Kitāb al-Inṣāf fī masāʾil al-k̲h̲ilāf bayna 'l-naḥwiyyīn al-baṣriyyīn wa'l-kūfiyyīn*, *Einleitung*, pp. 1-93, particularly 15; idem, *Zum Verständnis der Methode der moslemischen Grammatiker*, in *Festschrift Sachau*, Berlin 1915, 380-92; H. Fleisch, *Traité de philologie arabe*, Beirut 1961, 1-18. In addition, the authors cited in the text. (H. Fleisch)

On the political and administrative use of *ḥukm*, see AḤKĀM, DIPLOMATIC, FARMĀN.

ḤUḲŪḲ, pl. of ḤAḲḲ [*q.v.*], legal rights or claims, and corresponding obligations, in the religious law of Islam. One distinguishes the *ḥuḳūḳ Allāh*, the rights or claims of Allāh, *e.g.*, the *ḥadd* [*q.v.*] punishments, and the *ḥuḳūḳ al-ādamiyyīn*, private, and essentially civil, rights or claims. Used of things, *ḥuḳūḳ* signifies the accessories necessarily belonging to them, such as the privy and the kitchen of a house, and servitudes in general; this term is of common occurrence in the legal formularies (*s͟hurūṭ* [*q.v.*]). In contemporary terminology, *ḥuḳūḳ* means merely "law" in the modern meaning of the term, and *Kulliyyat al-Ḥuḳūḳ* is "Faculty of Law".—In the terminology of the Ṣūfīs, *ḥuḳūḳ al-nafs* denotes the essential requirements for the existence of the soul, as opposed to any additional elements which are called *ḥuẓūẓ*.

Bibliography: Mīk̲h̲āʾīl ʿĪd al-Bustānī, *Mard̲j̲iʿ al-ṭullāb*, Beirut 1914, 39-41; J. Schacht, *Introduction to Islamic Law*, index, s.vv. *ḥaḳḳ ādamī* and *ḥaḳḳ Allāh*; Tahānawī, *Dictionary of the technical terms*, s.v. *ḥuḳūḳ al-nafs*. (Ed.)

ḤUKŪMA, in modern Arabic "government". Like many political neologisms in Islamic languages, the word seems to have been first used in its modern sense in 19th century Turkey, and to have passed from Turkish into Arabic and other languages. *Ḥukūma* comes from the Arabic root *ḥ.k.m*, with the meaning "to judge, adjudicate" (cf. the related meaning, dominant in Hebrew and other Semitic languages, of wisdom. See ḤIKMA). In classical usage the verbal noun *ḥukūma* means the act or office of adjudication, of dispensing justice, whether by a sovereign, a judge, or an arbitrator, as for example in some enumerations of the hereditary functions of Ḳurays͟h in Mecca (the Jerusalem concordance lists occurrences in *TA*, ix, 68, l. 9; *LA*, xiv, 95, l. 17, xv, 31, l. 24, 177, ll. 11 and 16, 304, l. 25; xvi, 41, l. 13; *Ag̲h̲ānī*³, xi, 63, ll. 4-5, 165, l. 7; xiii, 134, l.1; references communicated by Dr. M. J. Kister. The last example is particularly clear: *fa-ʾinnaka ḳāḍⁱⁿ bi'l-ḥukūmati ʿālim*. Other examples in Ibn Ḳutayba,

ʿUyūn al-akhbār, Cairo ed., i, 67, l. 11; al-Djāḥiẓ, *Tarbīʿ*, § 20. Cf. the oft-cited dictum, attributed to the Prophet, that "an hour of justice in judgment [*not* government] is better than sixty years of worship"; Ibn ʿAbd Rabbihi, *al-ʿIḳd al-farīd*, i, Cairo 1953, 5).

In time, the root *ḥ.k.m* came to be used more and more frequently in the sense of political, as well as judicial, authority. Under the Seldjūks and after, the term *ḥukūma* (Pers. and Turkish *ḥukūmat*, *ḥukūmet*) denotes the office or function of governorship, usually provincial or local. In Ottoman times, in addition to the judicial sense, it is normally used to indicate the seizure, tenure or term of office (*müddet-i ḥukūmet*) of a governor. A special use occurs in the Kurdish lands, where we find a number of regions called *ḥukūmet* listed among the components of certain Ottoman *eyālets*. These are hereditary sanjaks, under Kurdish chiefs, with a large measure of political and financial autonomy (ʿAyn-i ʿAlī, *Ḳawānīn-i Āl-i ʿOthmān*, Istanbul 1280, 29-30; Hammer, *Staatsverfassung*, ii, 245, 263-4, 277; Gibb and Bowen, i/1, 163, 203). By the end of the 12th/18th century the word seems to have acquired the more general sense of rule, the exercise of authority. Thus, in the letter of Menou to the *Dīwān* in Cairo, dated 15 Shaʿbān 1215/11 January 1801, he is described as the commander of the armies of the French republic (*dawlat djumhūr*) in the East, and the representative of its authority (*muẓāhir ḥukūmatihā*) in Egypt (Djabarti, *Muẓhir al-taḳdīs*, Cairo n.d., ii, 91). In the Turkish translation of Botta's *Storia d'Italia* (*Bonapart taʾrīkhi*, Cairo 1249/1834, repr. Istanbul 1293/1876, 4, 6, 10, 13, 16, 17, 33, etc.) *ḥukūmet* is commonly used in the senses of rule, political authority, dominion, and occasionally régime; it has the same meaning in the Arabic translation of the first part of William Robertson's *History of the reign of Charles V* (*Itḥāf al-mulūk* ..., Būlāḳ 1258/1842; cf. Shayyāl, *Taʾrīkh al-tardjama*..., Cairo 1951, 221). This usage appears to have been new in Arabic. The unpublished Arabic translation of Machiavelli's *Prince* made in 1824-5, as cited by Shayyāl (*ibid.*, 216), still uses the words *siyāda* and *amīriyya*; and even Shaykh Rifāʿa al-Ṭahṭāwī, in his translation of the French constitutional charter, still renders 'gouvernement' by *tadbīr al-mamlaka* (*Takhlīṣ al-ibrīz*, [1st ed. 1250/1834], ed. Mahdī ʿAllām *et al.*, Cairo n.d. [? 1958], 142).

In the early 19th century the word acquired a new meaning, derived from Europe—government, in the sense of the group of men exercising the authority of the state. Ṣādiḳ Rifʿat, in his political writings, still frequently uses the word *ḥukūmet* in the sense of type of government, régime. In an essay written *ca.* 1837, he goes a step further, and speaks of *düwel-i Avrupa ḥukūmetleri*—the governments of the states of Europe (*Avrupaniñ aḥwāline dāʾir risāle*, 5, in *Müntekhabāt-i āthār-i Rifʿat Pasha*, Istanbul n.d.). Thereafter both Turkish and Arabic, following European practice, maintain this distinction between the state (*devlet*, *dawla*) and the government (*ḥukūmet*, *ḥukūma*), and at the same time continue to use the word *ḥukūma* in the general, abstract sense of government, régime (see Djewdet, *Taʾrīkh*[2], i, Istanbul 1309, 17-20; Ḥusayn al-Marṣafī, *al-Kilam al-thamān*, Cairo 1298, 30-5). Persian, however, has not adopted this distinction, and still uses *dawlat* for both the state and the government, while *ḥukūmat* has the more general sense of political authority. (B. Lewis)

Government in the Islamic states before the 19th century is examined in the articles on KHILĀFA, SULṬĀN, WAZĪR, etc. The articles that follow here are concerned with the introduction and development of the modern apparatus of government in the 19th and 20th centuries. See further DJAMʿIYYA, DJUMHŪRIYYA, DUSTŪR, ḤIZB, etc.

i.—Ottoman Empire

The introduction of the modern European type of governmental apparatus in the Ottoman Empire began in the reign of Sultan Maḥmūd II [*q.v.*], 1808-39. He came to the throne at a particularly critical period of Ottoman history, when the authority of the central government was almost non-existent. The *aʿyān* and *derebeys* [*qq.v.*] were supreme in the peripheral provinces of the Empire, while the Janissaries continued to terrorize the capital. Maḥmūd's first task, therefore, was to restore the authority of the centre, and in this he was largely successful during the first half of his reign. The Janissaries, who had become the main stumbling block to military reform—and all other reform was incidental to this, were suppressed in 1826, when they rebelled against the measure to establish a new style army. Their destruction marked the end of the purely military phase in Turkish modernization, and Maḥmūd was now able to proceed with the reform of institutions.

The Serʿasker replaced the Agha of the Janissaries [see BĀB-I SERʿASKERĪ]. He performed the functions of a commander in chief and Minister of War; by the end of the 19th century the Serʿasker was occasionally a civilian appointment (see Shaykh al-Islām Djemāl al-Dīn, *Khāṭirāt-i siyāsiyye*, Cairo 1917, 10-12). But it was only after the revolution of 1908 that the Serʿaskerate was transformed into the War Ministry. The religious institution was also bureaucratized and brought firmly under the Sultan's control. This was marked by the creation of an official office for the Shaykh al-Islām known as the *Bāb-i Mashikhat* [*q.v.*] or *Fetwākhāne*. Maḥmūd ended the financial independence of the religious institution by setting up an inspectorate of the *waḳf*s, which later became a ministry. The Shaykh al-Islām was now no more than a civil servant with advisory and consultative functions. After the introduction of the cabinet system, he became a member of the cabinet, though he enjoyed the privilege of being appointed directly by the Sultan and not by the Grand Vizier.

In 1835 Maḥmūd turned his attention to the Sublime Porte [see BĀB-I ʿĀLĪ], for the past two centuries the very heart of Ottoman government. The old office of the *Kāhya* first became the Ministry of Civil Affairs (*Mülkiyye*) and later the Ministry of the Interior (*Dākhiliyye Neẓāreti*), while the office of *Reʾis al-Küttāb* became the Ministry of Foreign Affairs (*Khāridjiyye Neẓāreti*). Two years later (1837) the *Defterdārlïḳ* was transformed into the Ministry of Finance. These ministers assumed many of the prerogatives traditionally belonging to the Grand Vizier, and the abolition of that title was, therefore, no more than the reflection of his declining position. On 30 March 1838 the Grand Vizier (*Ṣadr-i aʿẓam*) was given the modern title of Prime Minister (*Bashwekil*) and in the Council of Ministers he became *primus inter pares*. But the new title was dropped in the following year; despite brief reappearances in the period 1878-82, it came into permanent use only after the fall of the Empire, when at times it took the form of *Başbakan*.

Maḥmūd's reforms and innovations in government

were not intended as an exercise in western governmental practice. Their prime aim was to centralize and consolidate in the person of the Sultan the power released by the break-up of the traditional order. As the central government grew stronger and more confident it increased its area of activity. The Ministry of Public Works was set up in 1839. With the steady secularization of government following the Imperial Rescripts of 1839 and 1856 [see TANẒĪMĀT] and the promulgation of the constitution of 1876 the government extended its control over areas which had been part of the religious domain. A Ministry of Education was set up in 1857 and a Ministry of Justice in 1879. Police duties had already been taken away from the *Serʿasker* in 1845, and in 1870 the Ministry of Police was established [see ḌABṬIYYA]. The Serʿaskerate was renamed Ministry of War in 1879, but this was soon dropped in the interest of tradition and was only re-adopted by ʿAbd al-Ḥamīd on 22 July 1908 as a concession to the constitutionalists. The nucleus of a European type of governmental structure was formed by the creation of these departments. There were later additions, such as the Ministry of Trade and Agriculture [see FILĀḤA, iv, 908b], the Ministry of Posts and Telegraphs [see POSTA], the Ministry of Marine [see BAḤRIYYA, iii, 948b], and in 1918 the Ministry of Food.

But the introduction of ministers and ministries with European titles did not at once lead to the practice of Western government with ministerial responsibility. Just as these modern institutions had emerged as a result of growing centralization and the increased power of the Sultan, so ministerial responsibility was to be the outcome of the Sultan's declining position and the emergence of a new bureaucratic élite, itself the child of centralization and determined to have a share in the government.

Consultation (*meshweret* [see MASHWARA]) has always been regarded as a fundamental principle of Islamic government. Its rôle in the Ottoman State, however, always depended on the relative strength of the Sultan and his ministers. Thus, under Maḥmūd, the Privy Council (*Medjlis-i Khāṣṣ*) represented little more than the Sultan's will; he appointed and dismissed its ministers. But the gradual modernization of the government and the growing complexity of the administration led to the formation of specialist bodies such as the Council of Justice, the Council of Reform and the Council of Military Affairs. All this increased the importance and independence of ministers and their committees, and in time, such ministers as Fuʾād Pasha [*q.v.*] and ʿĀlī Pasha [*q.v.*] were even able to challenge the authority of the Sultan.

It was the Constitution of 1876 which first gave legal recognition to a Council of Ministers presided over by the Grand Vizier and dealing with "all important matters of State, both internal and external" (article 28). Now for the first time there was a cabinet but no cabinet responsibility. The Sultan continued to appoint the Grand Vizier and the Shaykh al-Islām and to nominate the other ministers by Imperial *irāde* (article 27). All ministers were individually responsible to him (article 30). The principle of cabinet government had been firmly established; the support to make it a practical reality was still missing. Parliament was inexperienced and divided and the Sultan retained full control. He promulgated the Constitution in 1876. In 1877 he revealed his complete authority by proroguing parliament and putting the Constitution in abeyance for the next thirty years.

After the revolution of July 1908 the Imperial Charter (*Khaṭṭ-ı Hümāyūn*) of 1 August was an important landmark in the evolution of the cabinet system of Turkey. Article 10 of this Charter conceded to the Grand Vizier the right to appoint all ministers other than the Ministers of War and Marine, who, like the Grand Vizier and the Shaykh al-Islām, were to be appointed by the Sultan. The Young Turks, not satisfied with this concession, forced the Sultan to surrender his prerogatives of appointing ministers other than the Grand Vizier and the Shaykh al-Islām. The constitutional amendments of 1909 made the Grand Vizier responsible for forming the cabinet (article 27; amendments to the 1876 Constitution are given in A.S. Gözübüyük and Suna Kili, *Türk Anayasa metinleri*, Ankara 1957, 70-3; see also DUSTŪR). For the first time the principle of collective responsibility of the ministers for the overall policy of the government was stated (article 30). The Sultan became a figure-head and power passed into the hands of the ministers and parliament. Right through the decade (1908-18) the Young Turks struggled to define the legal relationship between the Cabinet, the Sultan and Parliament.

Perhaps the most important effect of the introduction of a modern governmental structure was the creation of a new civil service and the growth of a bureaucratic class. It was easy to establish a European type ministry; the real problem was manning it with officials having a modern outlook. And wherever a traditional institution was replaced by a modern one there arose the need for men with a modern education. Maḥmūd had opened the Translation Bureau (*Terdjüme Odasi* [*q.v.*]), where Turks learned the languages of Europe and replaced the traditional Greek dragomans. In the same way, trained revenue collectors had to be found to replace the old taxfarmer (*mültezim*) and provincial administrators to rule in place of the *aʿyān* and *derebeys*. A civil service school (*Mekteb-i Mülkiyye*) was set up to provide men for the new ministries, but the problem of recruitment remained acute into the present century.

By the 1850s the civil service had become stratified. Recruitment was by patronage and apprenticeship, making the bureaucracy a closed shop. In many ways it soon became traditional in outlook, so much so that the present-day bureaucracy of Turkey seems to have inherited some of this traditionalism. But in the latter half of the 19th century, right up to the fall of the Empire, the new-style bureaucrat had replaced the soldier as the spearhead of modernization in the Ottoman Empire.

Bibliography: In addition to the works mentioned in the text, see ʿAbd al-Raḥmān Sheref, *Taʾrīkh-i Dewlet-i ʿOthmāniyye*, 2 vols., Istanbul 1309, and idem, *Taʾrīkh muṣāḥabeleri*, Istanbul 1340. The first is a general survey of the period, while the second work is a series of essays on personalities and events in the 19th and early 20th centuries. See also Aḥmed Luṭfī, *Taʾrīkh-i Luṭfī*, 8 vols., Istanbul 1290-1328 (not seen); Muṣṭafā Nūrī Pasha, *Netāʾidj al-wuḳūʿāt*, 4 vols., Istanbul 1294-1327; and Aḥmed Djewdet Pasha, *Tezâkir*, ed. Cavid Baysun (Ankara 1953-); idem, *Maʿrūḍāt*, in *TOEM*, 78-93. The best modern historical survey for the period 1826-1907 is Enver Ziya Karal, *Osmanlı tarihi*, v-viii, Ankara 1947-62; in this work both Turkish and western sources have been extensively used. The volume *Tanzimat*, consisting of a collection of essays published in 1940 to commemorate the

100th anniversary of the first reform edict, is particularly valuable; E. Engelhart, *La Turquie et le Tanzimat*, 2 vols., Paris 1882-4, is a fundamental work. For the constitutional developments during this period see B. Lewis, article DUSTŪR, ii (slightly revised version in *Dustur*, Leiden 1966, 6-24) which gives an excellent comprehensive bibliography. Apart from articles mentioned in the text, see also BAŞVEKIL and DAFTARDĀR; articles *Bala* and *Defterdar* in *IA*; and *Bab-i Ali*, *Başvekil* and *Defterdar* in (*Inönü*) *Türk Ansiklopedisi*; all of them give additional bibliography. For the period after the 1908 revolution see Feroz Ahmad, *The Committee of Union and Progress in Turkish politics 1908-13* (unpublished thesis, London 1966). Finally there are studies, both general and detailed, such as B. Lewis, *The emergence of modern Turkey*, revised ed., London 1968; R. H. Davison, *Reform in the Ottoman Empire, 1856-76*, Princeton 1963; and N. Berkes, *The development of secularism in Turkey*, Montreal 1964.

(F. AHMAD)

ii.—PERSIA

The administration of the Ḳād̲j̲ār dynasty, which came to power in 1779 and the last ruler of which was deposed in 1925, followed, until the constitutional revolution of 1905-6, the general pattern of medieval Persian administration, although certain changes, mainly of form, were introduced during the second half of the nineteenth century. The chief minister was known as the *ṣadr-i aʿẓam* and in the early period held the title Iʿtimād al-Dawla (as had the chief minister in Ṣafawid times). The chief financial official was the *mustawfī al-mamālik* and the head of the chancery the *mun̲s̲h̲ī al-mamālik*. The number of ministers from the time of Fatḥ ʿAlī S̲h̲āh (1797-1834) tended to increase. The shah was absolute, and elevated and degraded his ministers at will. A council of state composed of ministers, leading members of the Ḳād̲j̲ār tribe and others was occasionally summoned to discuss matters of importance and to submit its views to the shah. Its functions were purely advisory. It did not meet regularly and its composition was of an *ad hoc* nature. It was summoned, for example, when Muḥammad S̲h̲āh (1834-48) contemplated marching in person against Herāt in 1836, and advised against this (*Correspondence relating to Persia and Affghanistan*, London 1839, No. 25, Mr. Ellis to Viscount Palmerston, Tabreez, June 2, 1836). In 1859 Nāṣir al-Dīn set up a council called the *maṣlaḥat k̲h̲āna* under the chairmanship of ʿĪsā K̲h̲ān Iʿtimād al-Dawla, a leading member of the Ḳād̲j̲ār tribe. Its membership included ministers, *mustawfī*s, various other officials and members of the religious class. It was apparently intended that similar councils should be set up in the provinces but the project appears to have been abortive (Mustawfī, *S̲h̲arḥ-i zindagī-i man*, Tehrān 1945, i, 126; *Rūznāma-i waḳāyiʿ-i ittifāḳiyya*, No. 452, 21 Rabīʿ II 1276).

The two great obstacles to reform were the fear of successive shahs lest their power be curtailed and the tendency on the part of ministers, induced by centuries of irresponsible and arbitrary government, to accept the *status quo*. The shah interfered in the smallest details of the administration. If the *ṣadr-i aʿẓam* succeeded (as some of them did) in obtaining some measure of power, this, like the power of the shah, was arbitrary and despotic, and in measure as it increased aroused the suspicion of the shah and the opposition of officials and others, and tended, moreover, to become increasingly venal. Ḥād̲j̲d̲j̲ī Mīrzā Āḳāsī, the *ṣadr-i aʿẓam* of Muḥammad S̲h̲āh, from the first exercised great influence over his master and eventually completely dominated him. He held besides the office of *ṣadr-i aʿẓam*, the ministries of foreign affairs, finance, and the interior, command of the artillery, charge of the foundry and arsenal, and the office of *nāʾib al-tawliyya* of the shrine of the Imām Riḍā at Mas̲h̲had. By the end of the reign of Muḥammad S̲h̲āh his administration had become highly unpopular and he fell on the death of Muḥammad S̲h̲āh. Nāṣir al-Dīn S̲h̲āh, who succeeded Muḥammad S̲h̲āh, was young and inexperienced and Mīrzā Taḳī K̲h̲ān Amīr Niẓām, his first *ṣadr-i aʿẓam*, concentrated great power in his own hands. He had seen, when Persian commissioner on the Turco-Persian frontier commission, the introduction of the *tanẓīmāt* [*q.v.*] in the Ottoman Empire and had earlier visited Russia with the mission of K̲h̲usraw Mīrzā, which was sent to that country after the murder of the Russian envoy Griboyedov. When he became *ṣadr-i aʿẓam* confusion prevailed in almost every branch of the administration and he made vigorous efforts to abolish certain abuses, notably in the financial administration. He is generally regarded in Persia as the initiator of a movement of administrative reform, but he made no pretence of setting up any consultative machinery or of government by cabinet. The relative success of his efforts gave rise to opposition and intrigue, to which the shah eventually lent his support, and he was dismissed and murdered in 1851. The efforts and energies of his successor, Mīrzā Āḳā K̲h̲ān Nūrī, were also largely occupied in defeating the machinations of numerous rivals and in a contest with the shah for the sole exercise of power. In 1854 he threatened to resign because, unknown to him, the shah had entered into communication with the Russian mission on public affairs. On his urgent remonstrances the shah sent him an autograph stating that he would follow in future the policy of his minister. As time went on the administration of Mīrzā Āḳā K̲h̲ān became increasingly arbitrary and venal. He survived various intrigues to overthrow him but eventually fell in 1858.

By this time a belief, not yet clearly formulated, was beginning to spread that Persia's backwardness and weakness vis-à-vis Russia and Britain was perhaps due to her system of government. Nāṣir al-Dīn accordingly decided to abolish the post of *ṣadr-i aʿẓam* and to appoint six ministers (interior, foreign affairs, war, finance, justice, and *awḳāf*) to carry on the government of the country. The announcement of this decision in the official gazette on 16 September 1858 stated that the various functions hitherto discharged by the *ṣadr-i aʿẓam* would be carried out by a cabinet or council of ministers, each of whom would be directly responsible to the shah. A number of other ministries, including court, education, and commerce, were subsequently added. Under the new system the ministers still had no responsibility, collective or individual. Often public business was transacted by the shah over their heads; and already in 1858 Amīn al-Dawla, the minister of the interior, felt constrained to protest to the shah on this account.

Meanwhile Mīrzā Malkam K̲h̲ān Nāẓim al-Dawla, who in 1872 became Persian minister in London and after his dismissal in 1889 published in London the Persian newspaper *Ḳānūn*, had begun to write a series of political essays in which he advocated reform.

In an essay entitled *Kitābča-i g̲h̲aybī yā daftar-i tanẓīmāt*, written between 1858 and 1860, he urged the separation of the legislative from the executive power. He pointed out that the institution of a council of ministers after the fall of Mīrzā Āḳā K̲h̲ān Nūrī had, in fact, made little difference because of the failure to separate these two powers. He proposed that a council of eight ministers, presided over by the shah, should be set up. This would propose legislation to an assembly to be called the *mad̲j̲lis-i tanẓīmāt*. He also proposed that a civil service law and regulations for the organization of the various ministries should be drawn up (*Mad̲j̲mūʿa-i āt̲h̲ār-i Malkam K̲h̲ān*, ed. Muḥammad Muḥīṭ Ṭabāṭabāʾī, Tehrān 1948-9). Malkam K̲h̲ān sent this essay to Mīrzā Ḥusayn K̲h̲ān Mus̲h̲īr al-Dawla, who became *ṣadr-i aʿẓam* in 1871. In another essay, *Daftar-i ḳānūn*, Malkam K̲h̲ān stated that the fundamental mistake of the Persian system of government was the failure to separate the legislative power from the executive. In *Tanẓīm-i las̲h̲kar wa mad̲j̲lis-i idāra yā intiẓām-i las̲h̲kar wa mad̲j̲lis-i tanẓīmāt* he stated that the greatest achievement of the Ḳād̲j̲ārs was the establishment of different ministries, but that this was not enough: a *mad̲j̲lis-i tanẓīmāt* was also needed, and in *Nidā-yi ʿadālat* he urged the need for the collective responsibility of ministers (*ibid.*).

In 1871 a council of state (*dār al-s̲h̲awrā-yi kubrā*) composed of sixteen members was set up on the orders of Nāṣir al-Dīn to carry on the affairs of government (Mustawfī, i, 152). On 12 December 1871 Mīrzā Ḥusayn K̲h̲ān Mus̲h̲īr al-Dawla, who had been appointed minister of war with the title *sipahsālār-i aʿẓam* on 27 September 1871, became *ṣadr-i aʿẓam*, the office being filled once more after some thirteen years. He began a thorough-going reform of the administration. On 23 November 1872 an imperial decree was issued reorganizing the council of state, which was now called the *darbār-i aʿẓam* (though it subsequently reverted to its earlier title), and dividing the affairs of the kingdom into nine ministries (interior, foreign affairs, war, finance, justice, education, public works, commerce and agriculture, and court) under the presidency of the *ṣadr-i aʿẓam*, who was to be the leader of the government (*s̲h̲ak̲h̲ṣ-i awwal-i dawlat*) and the president of the council of state (*raʾīs-i darbār-i aʿẓam*). The appointment and dismissal of ministers was to be by the order of the shah on the recommendation of the *ṣadr-i aʿẓam*. There was also to be a council of ministers (*mad̲j̲lis-i wuzarā*) which the decree stated was "called a cabinet by Europeans"; it was to be presided over by the *ṣadr-i aʿẓam*, Each minister was to be in full control (*kāmil*^{an} *musallaṭ*) over his ministry and not to interfere in the affairs of other ministries. The ministers were to meet regularly to consult on all matters of concern to the government and were to be collectively responsible for the affairs of government. They were to report to the shah through the *ṣadr-i aʿẓam*, who was responsible to the shah (Mustawfī, i, 163 ff.). The council of ministers was opened on 3 December 1872.

Neither the council of state nor the council of ministers had in fact much in common with the cabinet of Western European constitutions. The council of state, perhaps, most closely resembled the Imperial Council of Russia, upon which it was probably modelled. It was a purely consultative body convened sometimes to advise the shah beforehand or, more commonly, to discuss the fulfilment of his orders when already delivered. The shah continued to be the sole executive.

Mīrzā Ḥusayn K̲h̲ān was dismissed in 1873. His reforms proved largely abortive. In 1888-90 the council of state numbered thirty members, but in the later years of Nāṣir al-Dīn and under Muẓaffar al-Dīn (1896-1907) it seldom met. The number of ministers with and without portfolios varied. In 1900 there were ministers of foreign affairs, war, finance, the court (*darbār*), justice, commerce, education, telegraphs, posts, agriculture, crown lands, public works, *awḳāf* and pensions, publications, crown buildings, the shah's cabinet (*wazīr-i k̲h̲alwat*), mines and industry, the mint, army accounts and the arsenal, the last two being subordinate to the minister of war. The *ṣadr-i aʿẓam* held the ministries of the interior, treasury and customs. Some of the ministries existed only in name and some of the ministers were rarely consulted.

Among those who campaigned for governmental reform in the early years of the nineteenth century little attention appears to have been paid to the powers and functions of the government. At a meeting of the *and̲j̲uman-i mak̲h̲fī* on 9 March 1905 a demand for the codification of the law was formulated; and in the code envisaged the duties of ministers were to be laid down, and limits set to the powers of governors (Nāẓim al-Islām, *Taʾrīk̲h̲-i Bīdārī-i Īrāniān*, Tehrān n.d., 182-3). It was not until the constitution was granted by Muẓaffar al-Dīn on 30 December 1906 that a fundamental change was brought about in the position of the council of ministers, who, although not members of the National Consultative Assembly, were made responsible to it and given the right to be present at its sessions and to speak (Fundamental Laws, arts. 29, 31, 40 and 42). The Supplementary Fundamental Laws of 7 October 1907 further laid down that no one could attain to the rank of minister unless he was a Muslim by religion, a Persian by birth and a Persian subject (Art. 58), and excluded from the office of minister princes of the first degree, *i.e.*, the sons, brothers or uncles of the reigning shah (Art. 59). The ministers were made individually responsible for the affairs pertaining to their own ministry and collectively responsible for one another's actions and affairs of a more general nature to the National Consultative Assembly and the Senate (Arts. 60, 61 and 65). Article 67 laid down that if the National Consultative Assembly or the Senate by an absolute majority declared itself dissatisfied with the Cabinet or with one particular minister, the cabinet or minister should resign their or his ministerial functions, and that ministers could not divest themselves of their responsibility by pleading verbal or written orders from the shah (Art. 64). The constitution thus marked the beginning of a new period in the government of Persia in which the ministers were no longer simply the servants of the shah, but were individually and collectively responsible to an elected assembly.

iii.—Egypt and the Fertile Crescent

In Egypt, and in the countries of the Fertile Crescent (modern Syria, Lebanon, Jordan, and Iraq), the expansion of the administrative system, of the scope and function of government (*i.e.*, generally of the temporal power of the state), occurred under the Mamlūks and the Ottomans. In fact, long before the disintegration of the Islamic Empire and the sack of Baghdād by the Mongols in 656/1258, the political and military fragmentation of the realm had been a reality. Thus the caliph, the *imām* of the community, had not only been shorn of all temporal power, but his spiritual authority had been greatly compromised and, in fact, curtailed. Provincial governors in Egypt and Syria, for instance, had established their own autonomous governments and often founded independent dynasties. Government in Muslim lands became a plain monarchy, in which the will of the strong ruler was supreme. Government was more often than not tyrannical and harsh. Satraps who could legitimize their power by sheer might abounded everywhere. In the Fertile Crescent, traditional sectarian, ethnic and tribal differences and conflicts came to constitute once more the real substrata of politics and government.

The rise of a modern secular government and administration in Egypt is associated with the reign of Muḥammad ʿAli [*q.v.*] "the Great" (1805-49). He founded an autonomous modern state ruled by himself and his heirs after him. In addition to creating a strong, modern army modelled on European lines, Muḥammad ʿAlī established a powerful central administration that closely supervised and controlled all the affairs of state. From Europe he borrowed and applied two major—and for Egypt, novel—notions of government: rational-secular administrative techniques, and wide governmental functions and regulatory powers. The latter extended over every aspect of public endeavour: agriculture, commerce and trade, industry, and education. Only matters of personal status were left to the jurisdiction of the *Sharʿī* law and courts. Yet even this area of life was, under Muḥammad ʿAlī's policy of centralization, subjected to closer governmental control. Thus, there was the deliberate further bureaucratization of the *ʿulamā*ʾ, the gradual administration reform of al-Azhar and its institutions, and the eventual fiscal control imposed by the government over *waḳf*s and other properties of religious institutions.

Very early in his reign, Muḥammad ʿAlī formed a governmental council, *al-Dīwān al-ʿĀlī*, to assist him in all the affairs of government and administration. The Council was headed by his deputy, the Katkhudā Bey, who had extensive powers in all governmental matters. This Council may be considered the forerunner of the modern Council of Ministers; for, until 1878, it was known as the Khedivial Diwan, or Council of Assistance (*Dīwān al-Muʿāwana*). Simultaneously, Muḥammad ʿAlī organized separate councils for each branch of government, *e.g.*, War (*Djihādiyya*), Navy (*Baḥriyya*), Commerce, Education, Public Works, and Foreign Affairs. These served as executive agencies, or departments, of the government's Council of State. The expansion of governmental functions led in 1834 to the creation of a new Higher Council of State consisting of the heads of the separate departmental councils. The ruler included in its membership *ʿulamā*ʾ leading merchants, and notables from the provinces. A Consultation Council (*Madjlis al-Mashwara*) founded earlier in 1829 had no more than advisory functions and was intended by the ruler simply to associate with his régime a wider number of local, tribal and other native leaders of the country.

Most significant for the establishment of orderly government and systematic administration in the country (in addition to the ruler's successful imposition of public order) was the Organic Law of 1837, known as *Ḳānūn al-Siyāsatnāma*. This was actually a government reorganization measure, which defined the system of government and the area of responsibility as well as the functions of each department. It reorganized the government in seven councils, *i.e.*, departments, or incipient ministries. The original Higher Council of the State (which later became the Khedivial Diwan) possessed, in addition to its responsibility for general internal policy, judicial powers in certain criminal cases involving the maintenance of public order and security in Cairo, as well as responsibility for the administration of state buildings, hospitals, *waḳfs*, and other institutions. A department of revenue supervised all revenue from the provinces in Egypt, from Crete, the Sudan and other foreign territories. It was also responsible for customs revenues and had the authority to appoint provincial and other inspectors. In addition to the War and Navy departments, the Diwan of Schools supervised and controlled the new state school system, the state printing press at Būlāḳ, and related activities. A Department for "Frankish" Affairs was an embryonic ministry of foreign relations and commerce. Finally, a Department of Factories looked after state industrial enterprises.

Along with this sweeping reorganization, Muḥammad ʿAlī formed a Special (private) Council (*Dīwān Khāṣṣ*) to deal with general matters of policy, to initiate legislation, and to issue directives to all government departments. A special council in the department of finance and revenue dealt with fiscal policy matters.

Muḥammad ʿAlī's government reorganization and reform constituted the introduction of the first modern administration in the country. All departments of government and all councils had strictly executive functions and were responsible to him. Furthermore, he reorganized the administrative division of the country into seven provinces and five governorates, for which he appointed the first provincial and district governors as public officials of the central government. He also organized a modern police force headed by a governor, or commissioner, who had under his command officers stationed in the various parts of the country.

Even the judiciary was affected by Muḥammad ʿAlī's new system. Although this branch of government continued to be largely the function and responsibility of the religious institutions, Muḥammad ʿAlī had, by the 1830s, granted judicial powers to his Council of State. In 1842, he introduced a novel institution, *al-Djamʿiyya al-Ḥaḳḳāniyya*, a precursor of an Administrative Council of State, and empowered it to try higher government officials, and to deal with administrative offences referred to it by the various departments of government. He also founded a Commercial Court (*Madjlis al-Tidjāra*) to adjudicate commercial disputes among natives and between natives and foreigners. With this, the tentacles of modern, secular governmental power began to encroach further upon an area of state authority until then reserved for the *Sharīʿa*.

Another area where traditional authority was eroded was education. State secular schools, new colleges, trade and technical schools, and educational missions to Europe produced a new group of native Egyptian administrators and technicians in the employment of the state, who were to influence further the development of secular administration and modern government in Egypt.

The second major stage in the evolution of modern government in Egypt was under the Khedive Ismāʿīl [*q.v.*] (1863-79). During this period there was a large influx of Europeans into the country. Ismāʿīl's development programme in all fields was too ambitious and rapid for the resources of the country. This was to lead to his indebtedness to European creditors, to his eventual bankruptcy, to the imposition of European financial and political control over the Egyptian government, and ultimately to the British occupation in 1882. All these factors, however, prompted further changes in the administrative system. The most significant of these was the establishment of a Council of Supervisors (*i.e.*, ministers), *Madjlis al-Nuẓẓār*, in August 1878, responsible for the administration of the country. What this meant was that an absolute ruler like Ismāʿīl was obliged, under pressure, to introduce a modified version of the European system of cabinet government. Members of this Council, or cabinet, were responsible for the policy and administration of their respective departments. They were also given control over all public officials, or civil servants, in these departments. The Council had a president, or chief minister, who was now responsible for the selection of the other ministers.

Until that time the Special Council had assisted the ruler of Egypt with the administration of the country. Its members as well as the heads of the various government departments were employees of the ruler without any responsibility of their own. With the new Council, the *dīwān*s, or departments (*e.g.*, Interior, Justice, War, Navy, etc.), became in effect ministries, and the Council superseded the old "Special Council" as the legal body recognized as the government of Egypt.

Ismāʿīl reorganized the administrative division of Egypt into 13 provinces and 8 governorates, a division which persists almost unaltered today.

The most far-reaching changes occurred in the fields of legislation and the judiciary. While matters of personal status remained within the jurisdiction of the *Sharʿī* and ecclesiastical courts, the encroachment of man-made law in all other areas became pervasive. Commercial, civil, criminal and penal codes modelled on European ones were prepared and promulgated. By the 1880s they became the basis of a national judiciary. Under Ismāʿīl a number of magistrate's courts and courts of first instance were organized throughout the country. The work for the creation of National Courts begun under Ismāʿīl was completed under Tawfīḳ Pasha [*q.v.*] in 1883. The Mixed Tribunals to deal with litigation between nationals and foreigners were founded in 1876. The new Ministry of Justice was responsible for the new National Courts and for all other grades of the judiciary in the country.

With the institution of Dual Control over Egypt's finances in 1876, direct European influence reached the Egyptian government and administration. Budgetary control, fiscal solvency and administrative efficiency became the most important areas of governmental reform for the next thirty years, and especially during the British occupation. A system of European—later British—advisers to key ministries, directors of public utilities, works and communications, and inspectors became an essential prop of Egyptian administration, particularly under Cromer.

From independence in 1923 to the overthrow of the *ancien régime* in July 1952, the administrative machinery in Egypt was substantially that first developed by Muḥammad ʿAlī and Ismāʿīl, and reformed under British tutelage. The rapid growth of population and the rise of a small native industry, and with it a small labour force, called for the further extension of governmental functions and regulatory powers. Most significant was the formation in 1939-40 of a Ministry of Social Affairs and within it a department of the Fellāḥ. This Ministry soon came to deal with matters of labour, social security and welfare, presumably on a national scale. The general working force increased during the Second World War so that a Ministry of Labour became inevitable. The War also produced a Ministry of Supply.

Perhaps because until recently Egypt's economy remained basically agricultural, and dependent on the proper distribution and utilization of the Nile waters, one of the most crucial functions of government has been since Muḥammad ʿAlī that performed by the Ministry of Public Works and Irrigation.

The political situation after the War was such as to create a wide gulf between the ruling classes of politicians, whatever their political persuasion, and the masses. The hardships of the War and subsequent unemployment raised new problems that called for administrative action. After the War the idea quickly spread that the major function of state and government is to provide social services and welfare on a grand scale. Moreover, state and government came to be viewed by the people as agencies for change and development. Meanwhile Egyptian governments were preoccupied with domestic squabbles involving the political parties and the king, as well as with the evacuation of the British forces from the Suez Canal area. In this interlude (1946-52), the police and security forces—one of the agencies of government most effectively organized and developed over the previous fifty years with British help—sustained the administration. Harassed by opposition, sometimes violent, from such groups as the *Ikhwān al-muslimīn* [*q.v.*], governments were using their security agencies and the various departments of the police to their maximum capacity.

When the parliamentary system collapsed and the monarchy was overthrown by the "Free Officers" in July 1952 and the following months, the latter simply took over the existing government services and placed them under military supervision. After the abolition of the monarchy in June 1953, a republic was proclaimed and by 1956 a presidential form of government was established. This has been characterized ever since by a strong and highly centralized executive power. With its emphasis upon and concern with economic development, social justice, and welfare policies, the new régime made radical changes in the administration in that its functions were greatly expanded. A number of new ministries emerged, as it were automatically, from the régime's commitment to national planning of the economy, rapid industrialization, and mass political mobilization (a small Ministry of Industry had existed before 1952; a Ministry of National Guidance and Culture, for instance, was an innovation).

The extensive nationalization of economic and commercial enterprises in 1961, which inaugurated a socialist policy, further transformed the functions

of government to embrace practically every field of national and private endeavour. Pursuance of a policy of agrarian reform, land reclamation, and the redistribution of land to peasants (with the resultant organization of farmers' and consumers' cooperatives) further expanded the activities of the government in these fields.

Although the state has been committed to free and compulsory education for all Egyptians since 1950-1, governmental activity in this area has recently increased greatly, especially at the higher levels of technical and university training.

The nationalization of the press in 1960 and the take-over of publishing houses by the government has rendered such organizations and occupations too agencies of the state and its administration. The governmental, or public, corporation has also appeared in Egypt under the present régime, of which the most prominent example has been the Suez Canal Authority. The Aswan Dam project, begun in 1960, has been so colossal as to require its own special ministry.

At present (1966) the cabinet in Egypt is strictly an administrative executive. The President, together with one or more vice-presidents whom he may choose to appoint, makes national governmental policy. Under the March 1964 Provisional Constitution, the cabinet is a presidential cabinet, that is, with no strictly independent juridical status. Cabinet ministers administer the affairs of government by guiding and coordinating the work of their respective ministries and by drafting legislation for the President's consideration. But the President in consultation with his government (the vice-presidents and cabinet ministers) draws up the general policy of the State. He issues all security regulations and orders, and supervises their implementation.

Since 1962, a mass political organization has been formed by the state to encourage the participation of the people in national programmes. The Arab Socialist Union is reported in 1966 to have 6 million members. It is organized on the local, the provincial and the national levels. The President is Chairman of its Supreme Executive Committee, whose members he appoints. On the other hand, local government arrangements still follow essentially the system that has evolved from the past. Local government officers are by and large public officials subject to the Ministry of the Interior.

The organization of the judiciary still follows the old pattern of a Court of Cassation, under which function six Courts of Appeal, several Primary Courts (*i.e.*, courts of first instance), and many more summary courts. One radical change was wrought by the new régime when it abolished the S͟harʿī courts in 1955-6.

To govern Iraq had been for the Ottomans before 1914 both difficult and expensive. Even though the country was by then organized into four major administrative units, namely, the *wilāyet*s of Mosul, Bag͟hdād and Baṣra, and the *mutaṣarrifiyya* of Dayr al-Zōr, the authority and control of the various governors appointed from Istanbul were for long rather nominal. Inhabited by an ethnically and religiously fragmented society—Kurds, Turcomans, "Assyrians", S͟hīʿis, Yazīdīs, marshland and other tribesmen—Iraq was difficult to subject to a central authority or to its representatives in Bag͟hdād. The development of some communications and postal services in the 19th century might ultimately have led to its pacification and subjection to central control.

It took the British occupation forces two years (1918-20) to impose some semblance of order and security throughout the country. A civil commissioner under the British Commander-in-Chief founded the nucleus of an administration to govern Iraq by creating new and modern departments of government in Bag͟hdād. The most important were those concerned with public order and security, especially since several regions of the country were openly defiant of the authority of Bag͟hdād. Important also were those dealing with agriculture, public works and irrigation, health and sanitation, not to speak of finance. The administrative authority of the new government departments was exercised throughout the country by means of a provincial organization. This was virtually the same as the system of administrative units which had existed before the First World War, sixteen in number. Today there are fourteen such units.

When military rule ended in October 1920, an Iraq Council of State was formed as the state agency responsible for administration, but advised by British officials. This system of an Iraqi cabinet government under a measure of British tutelage in all departments continued under the monarchy from 1922 to 1932, when Iraq achieved independence and was admitted to the League of Nations. The British Mandate was then formally ended and replaced by an Anglo-Iraqi Treaty.

The formation of a relatively strong army, air force, and police force in Iraq was essential for the governing of the country. By 1936, all three executive arms of the government were greatly advanced in comparison to those in other states of the Fertile Crescent. Equally essential was the development of a good judiciary, in view of the sectarian, tribal and ethnic divisions in the country. In fact, despite the greater centralization of power in Bag͟hdād, special arbitration courts and administrative procedures for the tribes were maintained.

The development of national resources early became a government responsibility in Iraq, particularly in the fields of irrigation and agriculture. Municipalities were encouraged and financially aided to develop their localities (Municipal Law of 1929). As communications improved, direct government administration from Bag͟hdād progressed at the expense of local and other forces, especially the tribal leaders.

The system of provincial courts of first instance closely resembles that in Egypt. In Iraq, however, the Ottoman Civil Code, *Med͟jelle* [*q.v.*], remained in force until 1951-2, when it was replaced by new codes. But as in Egypt, provincial administration in Iraq is controlled by the Ministry of the Interior, in the capital, so that local initiative remains limited. This is of greater importance in Iraq, where so many groups tend to challenge the authority of the central government. Nonetheless, over the years, a body of permanent civil servants was created, which has increased in number, as in other Arab states, and particularly since the military coups beginning in July 1958 which tended to incorporate wider welfare functions into the state administration. The civil service generally continues to absorb the largest number of educated Iraqis. A law in 1957 has improved Civil Service procedures and established a Public Service Council. As in Egypt, the administration of the labour and social security services became a state responsibility in 1939-40, and was further extended in 1956. A major governmental function since 1953 has been the rational utilization of revenue from oil royalties for major development projects.

Compulsory free education has also been a state responsibility administered by the government since 1940. Yet political instability, as reflected partly in the continuous involvement of the military in politics, various tribal uprisings in the past, and the current conflict between the government and the Kurds has adversely affected the smooth operation of administrative agencies. Efficient government has also been eroded since August 1958, when the Law against Conspiracy led to purges and with it to the rise of parliamentary organizations in political parties, popular militias and other such groups.

Since the 1958 coup d'état, there has been a greater tendency for the military to control the state and the government. This has resulted in a more haphazard functioning of governmental processes. The new Constitution of May 1964 introduced greater executive power (greater than under the monarchy) in a presidential system of government. The President appoints and dismisses cabinet ministers, and governs in conjunction with a National Defence Council. As in Egypt, a single state political organization, the "Iraqi Arab Socialist Union", has been announced. Moreover, there is a pronounced state commitment to planning which guides the national economy, a wider cooperative system, and recently a series of nationalizations of enterprises.

In Syria and Lebanon, just as in Iraq and perhaps indeed to a greater extent, political, social and ethnic fragmentation has hampered government at all times. The Ottomans had attempted to maintain some form of administration there, based on a varying division of the country into provinces. Yet, until the Egyptian invasion and occupation in 1831-3, Ottoman governors were able to administer directly only Damascus and other major towns. Elsewhere, tribal chiefs and local potentates ruled undisturbed. The short-lived Egyptian domination attempted to establish a strong central government and to impose regular taxation to counter these separatist local tendencies. As part of the *Tanẓīmāt* reforms, the Ottoman authorities introduced some measure of administrative reform in terms of regular payment of salaries to local officials, and extended the educational facilities. Soon afterwards European and American influence in the form of religious-educational missions entered the area. This coincided with the development of communications in the country.

Lebanon, or at least the Mountain part of it, was until the mid-19th century governed as a Principality of two powerful families. The last, that of the S̲h̲ihābīs, was destroyed in 1842, and the Ottomans divided the province into a Druze and a Maronite district, each with a governor and administrative council representing the religious communities. This amounted to the informal recognition of the sectarian basis of government and administration in Lebanon, but it also led to serious trouble in the period 1856-60, culminating in the communal massacres and the intervention of the Powers. Consequently in 1861-4 an organic statute made Lebanon an autonomous *sand̲j̲aḳ* with a non-Lebanese Christian as governor appointed by the Sultan and approved by the Powers; this governor administered the country with the aid of an elected administrative council. The latter again embodied the communal-sectarian principle of government and administration.

The French mandate in 1920 created the State of Greater Lebanon by adding the coastal areas of Tripoli, Sidon, Tyre, Baalbek, Biḳāʿ and Beirut to the original *sand̲j̲aḳ* of Mount Lebanon. The first constitution in 1926 also formalized the communal-sectarian basis of government, making the Lebanese President of the republic responsible for administration to the French High Commissioner. During the period 1926-32 a native Lebanese government carried out administrative functions but under French tutelage. The French High Commissioner appointed the government personnel of the four states into which Syria was initially divided in 1920 (see below). The French authorities, however, administered such services as the Customs and the Posts and Telegraphs directly and jointly for both Lebanon and Syria.

Since 1934, the President of the Lebanon has by accepted convention been a Maronite and the Prime Minister a Sunnī Muslim. The emphasis in government has been on a powerful executive authority residing in the President and exercised through the Council of Ministers. The President and Council can initiate legislation and actually issue laws. The machinery of the central government extends to the provinces, since the Minister of the Interior supervises and controls local or provincial administration. There are five administrative provinces (Beirut, North Lebanon, Mount Lebanon, South Lebanon, and Biḳāʿ). The governmental administration is highly centralized, so that provincial governors are actually representatives of the central authority and local councils have only advisory functions. Since 1955 there has been an attempt to decentralize the administration to some extent.

Because of the peculiar sectarian basis of Lebanese politics and government, there has been a popular tendency to view cabinet ministers and heads of government departments as representatives rather of communal interests than of the specialized activities of their respective ministries. The allocation of civil service posts, as of cabinet portfolios, has for long been based on the balancing of communal interests. Under the pressure of modern nationalist notions, administrative reform was attempted in 1958-9, and a Personnel Law was passed in 1959, which also set up a Public Service Council. The purpose of this new legislation is to set up generalized, impartial standards and criteria for appointments to the public service.

In many respects, the state in Lebanon governs by adjudicating between the interests of the various religious communities rather than by administering sanctions directly for the enforcement of its effective judgements. It also administers services. There is therefore much government by the "entourage" which one finds surrounding a President, a Prime Minister or a Cabinet Minister. As the President wields considerable power, the Chamber of Deputies (in an unicameral legislature) tends to be subservient to the executive.

In the field of the administration of justice, new civil and penal codes replaced the Ottoman laws as early as 1931-2. The Minister of Justice, however, has merely an executive function. Justice is administered by a Supreme Council of Justice, which has control over judges. Courts are organized much as in Syria and Iraq; that is, there are first instance courts, appellate courts in each major provincial centre, and a Court of Cassation in the capital. There is also a State Council to dispense administrative justice. Unlike the situation in Egypt, however, *S̲h̲arʿī* and ecclesiastical courts continue to function in matters of personal status.

Whereas the political history of Syria during and

since the French Mandate has been more turbulent, the administrative machinery of government followed similar lines, although it lacked the communal or sectarian basis which was formalized and tacitly accepted in the Lebanon. After separating what is now the Republic of Syria into four states (Latakia for the ʿAlawīs, Aleppo, Damascus, and Dj̲abal Druze), the French incorporated all of these into one state in 1936. They divided the new state into nine administrative provinces, in addition to the City of Damascus, administered by appointed governors who were assisted by local councils. The 1950 Constitution provided for a Cabinet government responsible to a unicameral legislature. In 1953, under the new S̲h̲īs̲h̲aklī constitution, these were made responsible to the President, so that in Syria too the trend has been towards greater executive power. The State moreover, as in the other countries, took on greater responsibility for the organization and planning of the national economy.

During the brief union with Egypt in 1958-61, Syria was administered by a separate Regional Executive Council for the Northern Region (*i.e.*, Syria) of the United Arab Republic. Gradually an attempt was made by the central authorities in Cairo to streamline administration in both regions of the U.A.R. Efforts were made to impose greater control over the Syrian economy. After some political difficulties, Cairo virtually abolished the Regional cabinet in 1961, and Syria came to be administered by a sort of proconsul responsible to the President of the U.A.R. and/or his deputy in Syria.

The organization of the judiciary in Syria closely resembles that of Lebanon and Iraq, although in Syria there have been separate administrative courts and a Council of State. The 1950 constitution introduced a Supreme Court to test the validity of legislative acts and decrees.

Considering the frequent political upheavals in Syria, it is fair to conclude that at present (1966) the administration of the country is controlled by the military.

Jordan, as a constitutional monarchy, places the responsibility of government and administration upon a cabinet, whose members have been since 1952 (when the 1952 Constitution superseded that of 1947) responsible to the National Assembly. Further control of the Council of Ministers by the Assembly was introduced in 1955, especially as regards questions of votes of confidence in the government and its resignation in case of a dissolution of the Assembly.

Under the British Mandate (1922-46), the monarch ruled in Jordan (then the Emirate of Transjordan) with the assistance of a Legislative Council (set up in 1929 in accordance with the Organic Law of 1928) and an Executive Council. With independence in 1946, and the proclamation of a kingdom, the latter Council became the Council of Ministers.

As in Iraq, there were in Transjordan British advisers. The representatives of the British High Commissioner to Palestine resident in ʿAmmān advised the Transjordan administration on all important matters of policy. In fact, all decisions dealing with defence, finance, and external relations had to have his concurrence. The security forces and the Army in particular were, until 1956, organized and trained by British officers and financed by subsidies and loans from the British Government.
